blog. This term, referring to a kind of internet diary, is a
shortened form of the phrase web log. Bloggers, the people
who publish such logs, have been described as "self-styled social
commentators who blend reportage, opinion, and personal views
on Internet postings." Apparently there is no connection with

PREFACE TO THE FOURTH EDITION

In writing, or compiling, this book, I have again tried to include as many new selections as possible, if only to make it one of the most complete American works on the subject (15,000 entries and still counting). The fabulous *Oxford English Dictionary*, however, still far outdistances any contender in the field, covering some 600,000 words and phrases and taking a full 40 years to produce. No doubt those tenacious *O.E.D.* people will be doing the same thing again a century from now.

Foreign sources won't be ignored in this new fourth edition. Neither will timely words, U.S. dialects, technical words, slang words, sports words, echoic words, coined words, eponymous words, classical words, "war words," and many other stimulating terms. No word or phrase has been eliminated because it might offend someone's sensibilities, and you will find all the famous four-letter words here (and then some!).

Perhaps I have erred in devoting too much space to fascinating but speculative stories about word origins, but I don't think so, for the wildest of theories often turn out to be correct ones. In any case, while no good tale here is omitted merely because it isn't 100 percent true, I've tried to at the very least include as many plausible theories about the origins of these words as possible.

Many fine scholars have contributed unusual words and phrases to this fourth edition, including Professor Masayoshi Yamada, trustee and professor of linguistics at Japan's Shimanu University, for his explanations of the numerous forms of "Japanized" English.

In closing, many thanks are due to my editors, Jeff Soloway and Anne Savarese. I should also thank the scores of readers who have contributed to the book, whose names are often noted in its pages.

PREFACE TO THE ORIGINAL EDITION

This book is, I believe, the longest collection of word and phrase origins in print.

In any case, I've tried to make all the selections as accurate and entertaining as possible and tried to use words illustrating all of the many ways words and phrases are born (words deriving from the numerous languages and dialects that have enriched English, echoic words, coined words, slang, words from the names of places, people, animals, occupations, leisure activities, mispronunciations, etc.). Yet in the final analysis any selection from such a vast semantic treasure house (the 5–10 million or so general and technical English words) must be highly subjective. Perhaps I have erred in devoting too much space to fascinating but speculative stories about word origins, but I don't think so, for the wildest theories often later turn out to be the correct ones. In any case, while no good tale is omitted merely because it isn't true, where stories are apocryphal or doubtful, they are clearly labeled so. I've tried to include as many plausible theories about the origins of each expression as possible and also attempted to show the first recorded use of a word or phrase wherever possible, something lacking in many word books but a great, sometimes indispensable, help to anyone using the work as a linguistic or historical reference. The only limitations I have imposed are those of importance and interest. Some expressions, no matter how prosaic the stories behind them, have been included because they are commonly used; on the other hand, interesting and unusual expressions have often been treated even if obscure or obsolete. No word or phrase has been eliminated because it might offend someone's sensibilities, and you will find all the famous four-letter words here (and then some!). I consider myself no judge of what is or is not obscene, and such self-appointed

lobotomizers of language remind me of Kurt Vonnegut's dictator who eliminated noses in order to eliminate odors. Though there has been a renewed general interest in word origins recently—thanks mainly to magazines like *Verbatim*, the work of Stuart Berg Flexner, Professor Frederic Cassidy's monumental *Dictionary of American Regional English*, or *DARE*, and William Safire's excellent and entertaining syndicated column "On Language"—etymology remains something less than an exact science. Scholars like Professor Gerald Cohen of the University of Missouri-Rolla do devote years and pages enough for a book in scientifically tracking down the origins of a single word, but a great number of the word derivations on record amount to little more than educated guesswork. I agree, however, with the late, great, and "always game" word detective Eric Partridge that even a guess is better than nothing—even if it's just inspired fun, or if it merely stimulates thinking that leads eventually to the expression's true origin.

The debts for a work of this nature and length are so numerous that specific thanks must be confined to the many sources noted in the text, and due to space limitations even these are only a relative handful of the works I have consulted. On a personal note, however, I would like to thank my editor, Gerard Helferich, for all his herculean labors (just toting the manuscript about was a herculean labor), and of course my wife, Marilyn—this book, like every line I write, being as much hers as mine. Nevertheless, despite all the help I've gotten, any errors in these pages result from my own wide-ranging ignorance and are solely my responsibility. They cannot even be blamed on a committee or a computer.

A

A. Like Chinese characters, each letter in our alphabet began with a picture or drawing of an animal, person, or object that eventually became a symbol with little resemblance to the original object depicted. No one is sure what these pictographs represented originally, but scholars have made some educated guesses. *A* probably represented the horns of an ox, drawn first as a *V* with a bar across it like the bar in *A*. This may have been suggested by early plowmen guiding oxen by lines attached to a bar strapped across the animal's horns.

Adulterers were forced to wear the capital letter *A* as a badge when convicted of the crime of adultery under an American law in force from 1639 to 1785. Wrote Nathaniel Hawthorne in his story "Endicott and the Red Cross" (1838): "There was likewise a young woman, with no mean share of beauty, whose doom it was to wear the letter *A* on the breast of her gown, in the eyes of all the world and her own children . . . Sporting with her infamy, the lost and desperate creature had embroidered the fatal token in scarlet cloth, with golden thread; so that the capital *A* might have been thought to mean Admirable, or anything rather than Adulteress." Hawthorne, of course, also wrote about the *A* of adultery in his novel *The Scarlet Letter* (1850).

Perhaps only UGH! has been deemed by dime novels and Hollywood to be more representative of American Indian speech than the omission of *a* as an article. Willa Cather made an interesting observation on this American Indian habit (and there is no telling how widespread the habit really was) in *Death Comes for the Archbishop* (1927): "'Have you a son?' 'One. Baby. Not very long born.' Jacinto usually dropped the article in speaking Spanish, just as he did in speaking English, though the Bishop had noticed that when he did give a noun its article, he used the right one. The customary omission, therefore, seemed a matter of taste, not ignorance. In the Indian conception of language, such attachments were superfluous and displeasing, perhaps."

aa. *Aa* for rough porous lava, similar to coal clinkers, is an Americanism used chiefly in Hawaii, but it has currency on the mainland, too, especially among geologists, or where there has been recent volcanic activity, mainly because there is no com-

parable English term to describe the jagged rocks. The word *aa* is first recorded in 1859, but is much older, coming from the Hawaiian *ʻāʻā*, meaning the same, which, in turn comes from the Hawaiian *a*, for "fiery, burning."

AAA. The AAA, standing for Agricultural Adjustment Administration, was among the first of the "alphabet agencies" (government agencies, administrations, authorities, offices, etc.) created for relief and recovery in the early days of the New Deal during America's Great Depression. The New Deal itself took its name from Franklin Delano Roosevelt's acceptance speech at the Democratic National Convention on July 2, 1932: "I pledge you, I pledge myself, to a new deal for the American people." Coined by Roosevelt's speech writers, Raymond Moley and Judge Samuel Rosenman, the phrase incorporated elements of Woodrow Wilson's New Freedom and Teddy Roosevelt's Square Deal. Among the many alphabet agencies spawned by the New Deal are the CCC (Civilian Conservation Corps), FCA (Farm Credit Administration), FDIC (Federal Deposit Insurance Corporation), SEC (Securities and Exchange Commission), and the WPA (Works Progress Administration).

A & P. These familiar initials have become the common name of the supermarket chain they were once an abbreviation for. The Great Atlantic and Pacific Tea Company began life in 1859 as a partnership between George Huntington Hartford and George Gilman. The new company originally bought tea directly off ships bringing it to America and sold it to consumers, eliminating the middleman. Within 20 years the company became the first American grocery chain.

Aardsma. The huge *Baseball Encyclopedia* lists pitcher David Aardsma, now of the Boston Red Sox, as first on the alphabetical list of players who have played in the Major Leagues since 1876. Before Aardsma made the San Francisco Giants roster in 2004, home run king Hank Aaron topped the *Encyclopedia* list.

aardvark; aardwolf. Both these animals dig in the earth for termites and ants, the former somewhat resembling a pig, the latter looking a little like a striped wolf. Thus the Boers in

South Africa named them, respectively, the armadillo (from the Dutch *aard*, "earth," plus *vark*, "pig") or "earth pig," and armadillo, or "earth wolf."

Aaron lily; Aaron's beard; Aaron's rod; Aaron's serpent. Numerous plants are named for the patriarch Aaron. Mention in the 133d Psalm of "the beard of Aaron" led to *Aaron's beard* becoming the common name of the rose of Sharon (which in the Bible is really a crocus), icy-leaved toadflax, meadowsweet, *Aaron's-beard* cactus, and the Jerusalem star, among others, in reference to their beard-like flowers. *Aaron's rod* comes from the sacred rod that Aaron placed before the ark in Num. 17:8, a rod that Jehovah caused to bud, blossom, and bear ripe almonds. Many tall-stemmed, flowering plants that resemble rods, such as mullein, goldenrod, and garden orpine, are called *Aaron's rod*, and the term is used in architecture to describe an ornamental moulding entwined with sprouting leaves, a serpent, or scrollwork. *Aaron lily* also honors Aaron, but the name derives from the folk etymology of arum lily. *Aaron's serpent*, denoting a force so powerful as to eliminate all other powers, alludes to the miracle in Exod. 7:11–12, when the Lord commanded that Aaron cast down his rod before Pharaoh: "Then Pharaoh also called the wise men and the sorcerers: now the magicians of Egypt, they also did in like manner with their enchantments. For they cast down every man his rod, and they became serpents, but Aaron's rod swallowed up their rods." Linguists have found that the word *tannen* given in the Exodus sources really means "reptile," but there is little chance that "Aaron's reptile" will replace *Aaron's serpent* in the language.

aarschnoddle. See FARTLEBERRY.

AB; able-bodied seaman. *AB* stands for an *able-bodied seaman*, a first-class sailor who is a skilled seaman and has passed his training as an ordinary seaman. The expression *able-bodied* dates back to 17th-century England, when apprentices or boys formed the other, inexperienced class among the crews on sailing ships.

abacus. Our name for this incredibly efficient instrument, which a skilled person can operate as fast and as accurately as an adding machine, is from the Greek *abax*, meaning a tablet for ciphering. The abacus was invented by the Chinese, but they call the beaded ciphering machine a *suàn pán*, which is the source for the Japanese abacus called the *soroban*.

abash. See BAH!

abassi. Though of interest primarily to collectors, the abassi is the first of many coins named after famous persons. It is a silver piece worth about 29 cents that was formerly used in Persia, and it honors Shah Abas II.

abbreviations. Unlike ACRONYMS, abbreviations aren't usually pronounced as words, but they do serve the same purpose as time- and space-savers. They have been popular since the earliest times, a good example being SPQR, the abbreviation for *Senatus Populusque Romanus*, the famous insignia of Rome. Most abbreviations merely suggest the whole word they represent to the reader (as Dr.), but many have become almost words

themselves: the letters spoken, as in I.Q. for intelligence quotient. A few are even spoken as words, such as *vet* for veterinarian or armed service veteran, *ad* for advertisement, and *ad lib*. There are entire dictionaries devoted to the tens of thousands of abbreviations we use, and a complete list of abbreviations of government agencies can be found in the *United States Government Organization Manual*. Below are a handful of interesting and humorous abbreviations from slang and standard English that illustrate the diverse and complex ways such coinages are formed. Included are *eusystemisms*, "initials used in the interest of delicacy," such as S.O.B.:

A.A. Alcoholics Anonymous

ad lib from the Latin *ad libitum*, at one's pleasure; was first a musical term.

C-Note century note, \$100.

C.O.D. collect on delivery; has been traced back to 1859.

DTs delirium tremens.

et al. from the Latin *et alia*, "and others."

F.Y.I. For Your Information; ubiquitous on office memos.

G.P. general practitioner.

Ibid. from the Latin *ibidem*, "in the same place."

IHS the abbreviation is simply the first two letters and last letter of the Greek word for Jesus, capitalized and Romanized. It does not stand for *in hoc signo* ("in this sign") or any other phrase.

I.O.U. for "I owe you"; an unusual abbreviation that is based on sound, not sight.

MIG standing for a Russian jet fighter, from the initials of the designers of a series of Russian fighters.

Mrs., Mr. *Mrs.* originally stood for "mistress," when "mistress" meant a married woman, but since a mistress today is something entirely different, *Mrs.* cannot be considered a true abbreviation anymore—there is no full form for the word, unlike for *Mr.* (mister).

P.D.Q. stands for "pretty damn quick," e.g., "You'd better get started P.D.Q." Its origin hasn't been established beyond doubt, although it has been attributed to Dan Maguinnis, a Boston comedian appearing about 1867–1889.

Q.T. an abbreviation for "quiet"; "on the q.t." means stealthily, secretly, e.g., "to meet someone on the q.t." Origin unknown.

Q.V. from the Latin *quod vide*, "which see."

R.S.V.P. stands for the French *répondez s'il vous plait*, "please reply," "the favor of a reply is requested."

UFO Unidentified flying object, the term coined in recent times, although the first sightings of such objects were reported as far back as 1896.

Abderian laughter. Inhabitants of ancient Abdera were known as rural simpletons who foolishly derided people and things they didn't understand. Thus these Thracians saw their name become a synonym for foolish, scoffing laughter or mockery. Though proverbially known for their stupidity, the Abderites included some of the wisest men in Greece, Democritus and Protagoras among them.

abecedarian hymns. See ACROSTIC.

Abelia. A plant genus of the honeysuckle family that was named for British physician and plant collector Dr. Clarke Abel, including some 80 ornamental shrubs that are found across the Northern Hemisphere from eastern Asia to Mexico. *Abelis schumannii* is a species of *Abelia* named for Dr. Karl Schumann, a 19th-century German botanist, and is one of the many plants bearing both genus and species human family names.

Abe Lincoln bug. Anti-Lincoln feelings died hard in the South after the Civil War, as the name of this little bug shows. Even as late as 1901 this foul-smelling insect, also known as the harlequin cabbage bug, was commonly called the *Abe-Lincoln bug* in Georgia and other Southern states. *See also* LINCOLDOM.

Abe Lincoln War. The Civil War was given this name in New England, the only U.S. region where names associating the war with slavery were commonly employed. *The Abolition War*, *The War of the States*, and *The War to Free the Slaves* were others. *See* CIVIL WAR.

Abert's towhee. A colorful bird of the Southwest named for soldier-naturalist Lt. J. W. Abert (1820–87), who has several other southwestern birds and animals, including *Abert's squirrel*, named in his honor,

Abe's cabbie. American slang for a five-dollar bill. So-called from the face of Abe, Abraham Lincoln, on the front of the bill, and from *cabbie*, a shortening and rhyming pronunciation of *cabbage*, which in slang means any currency (green). Coined in the 1930s among jazz musicians, the term is still in limited use today. *See also* BENJAMIN.

abet. *Abet* means to incite, instigate, or encourage someone to act, often wrongfully. The word derives from an old command for a dog to “sicem” or “go get'em,” and owes its life to the “sport” of bearbaiting, which was as popular as cricket in 14th- and 15th-century England. In bearbaiting, a recently trapped bear, starved to make it unnaturally vicious, was chained to a stake or put in a pit, and a pack of dogs was set loose upon it in a fight to the death, which the bear always lost, after inflicting great punishment on the dogs. Spectators who urged the dogs on were said to *abet* them, *abet* here being the contraction of the Old French *abeter*, “to bait, to hound on,” which in turn derived from the Norse *beita*, “to cause to bite.” Bearbaiting was virtually a Sunday institution in England for 800 years, until it was banned in 1835; Queen Elizabeth I once attended a “Bayting” at which 13 bears were killed.

abeyance. *See* BAH!

abhor. From the Latin *abhorre*, to shrink from. The Abhorers of history were so named because they expressed to Charles II an abhorrence of various Whig and Nonconformist views.

abide. To endure, stand, or tolerate, usually in the negotiation sense, as in “I can't abide him.” Mark Twain used this expression, which has been considered standard American English since at least the early 1930s.

abigail. A lady's maid or servant is sometimes called an *abigail*, which means “source of joy” in Hebrew. Several real Abigails contributed their names to the word. The term originates in the Bible (Sam. I:25) when Nabal's wife, Abigail, apologized for her wealthy husband's selfishness in denying David food for his followers—humbly referring to herself as David's “handmaid” six times in the course of eight short chapters. David must have appreciated this, for when Nabal died he made Abigail one of his wives. The name and occupation were further associated when Francis Beaumont and John Fletcher's *The Scornful Lady*, written about five years after the King James version of the Bible (1611), gave the name Abigail to a spirited “waiting gentlewoman,” one of the play's leading characters. *Abigail* was thereafter used by many writers, including Congreve, Swift, Fielding, and Smollett, but only came to be spelled without a capital when popularized by the notoriety of Abigail Hill, one of Queen Anne's ladies-in-waiting from 1704 to 1714.

able-bodied seaman. *See* AB.

abogado. The Spanish word for lawyer; still used in the Southwest and recorded there as early as 1803.

Abolition War. *See* ABE LINCOLN WAR.

A-bomb; H-bomb; the bomb. The atomic bomb was first called the *atom bomb* or *A-bomb* within a few months after it was dropped on Hiroshima on August 6, 1945. People were also calling it simply *the bomb* by then. Soon after the far more powerful thermonuclear hydrogen bomb or H-bomb was tested, in 1952, it was commonly called *the bomb*, too. Lighter cites a 1945–48 reference for *A-bomb* as a powerful mixed drink. The nickname of the uranium bomb dropped on Hiroshima was Little Boy, while the plutonium bomb that obliterated Nagasaki three days later was called Fat Man.

Aboriginal Australian words. English words that come to us from Aboriginal Australian include boomerang, kangaroo, dingo, koala, wallaby, wombat, and bellycan (water can).

aborigine. William Hone, in his *Table Book* (1827–28) says that *aborigine* “is explained in every dictionary . . . as a general name for the indigenous inhabitants of a country. In reality, it is the proper name of a peculiar people of Italy, who were not indigenous but were supposed to be a colony of Arcadians.” Nevertheless, these people of Latium were thought by some Romans to have been residents of Italy from the beginning, *ab originie*, which gave us the Latin word *aborigines* for the original inhabitants of a country.

aboveboard; under the table. *Aboveboard* means “honest.” The expression, first recorded in the late 16th century, derives from card-playing, in which cheating is much more difficult and honesty more likely if all the hands of cards are kept above the board, or table. *Under the table*, a later expression, means dishonest, and refers to cards manipulated under the playing surface.

above ground and moving. Words for someone bemoaning his or her fate: “Don't complain, you're above ground and moving.” Origin unknown.

above one's bend. Meaning “beyond one's ability, limit, or capacity.” This expression probably has its origins in a phrase Shakespeare used in *Hamlet*: “To the top of one's bent.” The “bent,” according to the *Oxford English Dictionary*, refers to the extent to which a bow may be bent or a spring wound up, thus the degree of tension; hence degree of endurance, capacity for taking in or receiving . . .”

above snakes. Tall; distant from the ground. “He's a lean, rangy cowpoke, about six-and-a-half feet above snakes.”

above the salt. See SALT.

abracadabra. One of the few words entirely without meaning, this confusing term is still used in a joking way by those making “magic.” It was first mentioned in a poem by Quintus Severus Sammonicus in the second century. A cabalistic word intended to suggest infinity, *abracadabra* was believed to be a charm with the power to cure toothaches, fevers, and other ills, especially if written on parchment in a triangular arrangement and suspended from the neck by a linen thread. *Abracadabra* is of unknown origin, though tradition says it is composed of the initials of the Hebrew words *Ab* (Father), *Ben* (Son), and *Ruach Acadsch* (Holy Spirit). When toothache strikes, inscribe the parchment amulet in the following triangular form:

Abraham Lincoln. Old Abe's nicknames include, among others, *Honest Abe*, *The Railsplitter*, *The Liberator*, *The Emancipator*, *Uncle Abe*, *Father Abraham*, *The Chainbreaker*, and *The Giver of Freedom*. He was called many derogatory names, too, notably the sarcastic *Spot Lincoln*, because he had supported the anti-Mexican War resolution in 1847, demanding that President Polk identify the exact spot where Polk claimed Mexico had already started a war on American soil. During the Civil War Lincoln was called *Ape* in the South, the word mocking his appearance and playing on *Abe Tycoon*, in its sense of military leader, was also applied to him at that time.

Abraham Lincoln Brigade. The famous military organization had nothing to do with the American Civil War. It was formed in 1937 to fight fascism in Spain and was composed of some 2,800 volunteers, mostly American Communists.

Abram; Abraham man; Abraham's bosom. *Abram* or *Abraham man*, a synonym for beggar, can be traced to the parable in Luke 16:19–31, where “the beggar [Lazarus] died and was carried into Abraham's bosom.” But it may actually derive from the Abraham Ward in England's Bedlam asylum, whose in-

mates were allowed out on certain days to go begging. In *Abraham's bosom* is an expression for the happy repose of death, deriving from the same source.

Absalom. See WOULD GOD I HAD DIED FOR THEE.

absence makes the heart grow fonder; out of sight, out of mind. Whether you believe the first proverb or the contradictory saying *out of sight, out of mind*, the phrase does not come from the poem “Isle of Beauty” by Thomas Haynes Bayly (1797–1839), as Dr. Brewer, Bartlett, and other sources say. Bayly did write “Absence makes the heart grow fonder, / Isle of Beauty, Fare thee well!” but the same phrase was recorded in Francis Davison's “Poetical Rhapsody” in 1602. *Out of sight, out of mind* comes from the poem “That Out of Sight” by Arthur Hugh Clough (1819–61):

That out of sight is out of mind
Is true of most we leave behind.

the absent are always wrong. The saying is a translation of the old French proverb *Les absents ont toujours tort*, which dates back to the 17th century. The words suggest that it is easy to blame or accuse someone not present to defend himself.

absinthe. This alcoholic drink, not invented until about 1790, is made from various species of wormwood, *Artemisia absinthium*, the plant so named because it was dedicated to Artemis, Greek goddess of the hunt and the moon. Long prized for its aphrodisiac powers, the drink can cause blindness, insanity, and even death. For this reason absinthe was banned in the United States in 1912 and in France three years later. Still, many great writers and artists praised the drink, including Dumas fils, de Maupassant, Anatole France, Verlaine, Rimbaud, Toulouse-Lautrec, Degas, Gauguin, Picasso and Van Gogh—the last artist reportedly drank it in a concoction of five parts water to one part absinthe and one part black ink!

absolute zero. The lowest temperature theoretically possible, which is –459 degrees Fahrenheit; zero on the Kelvin scale; and –273.15 degrees Celsius. See CELSIUS SCALE; FARENHEIT; KELVINATOR.

absolutism tempered by assassination; despotism by dynamite. Count Ernst F. Munster (1766–1839), the German envoy at St. Petersburg, was referring to the Russian Constitution when he said this in 1800, but he claimed that a Russian noble really invented the phrase. Gilbert and Sullivan altered the phrase to *despotism by dynamite*.

absquatulate. A historical Americanism coined in the early 19th century and meaning to depart in a clandestine, surreptitious, or hurried manner, as in “He absquatulated with all the funds.” The word is a fanciful classical formation based on *ab* and *squat*, meaning the reverse of “to squat.” The *Rocky Mountain News* (1862) gives the following example: “Rumour has it that a gay bachelor, who has figured in Chicago for nearly a year, has skedaddled, absquatulated, vamosed, and cleared out.”

absurd. This word for ridiculous, foolish, or irrational comes to us from the world of music, as the original meaning of its Latin ancestor, *absurdus*, was “out of tune or harmony.” The Romans, however, used *absurdus* in the figurative sense long before it passed into English. In recent times the term *Theater of the Absurd* has been used to describe the plays of contemporary dramatists that conceptualize the world as absurd, that is, irrational, meaningless, and indecipherable.

abundance. An overflowing of precious water—as in a wave breaking over the shore or perhaps as in a flooding river—suggested this word to the Romans, for *abundance* comes to us from the Latin *abundare* “to overflow, to be plentiful.”

abuse. In its sense of *revile*, abuse was coined by Shakespeare in *Othello* (1604). It derives from the Latin *abusare*.

abyss. *Abyss* is one of the few English words that derive from Sumerian, the world’s first written language, which evolved some 5,000 years ago in the lower Tigris and Euphrates Valley of what is now called Iraq. The word came into English in the late 14th century from the Latin word *abyssus*, meaning “bottomless, the deep,” but has been traced ultimately to the primordial sea that the Sumerians called the Abzu. Another word with Sumerian roots is *Eden*, the word for the lost paradise that came into English from a Hebrew word.

academy, academic. See GROVES OF ACADEME.

acamarackus. Pseudo-Latin slang for nonsense, bullshit. “Now of course this is strictly the old acamarackus, as The Lemon Drop Kid cannot even spell arthritis, let alone have it . . .” (Damon Runyon “The Lemon Drop Kid,” 1931). *The Random House Historical Dictionary of American Slang* (1994) cites the first recorded use of the term in a Runyon *Collier’s* story in 1933, two years later, and cites Eugene O’Neill’s use of it in a letter. *Ackamaracka* is among other variants of the word.

acanthus. *Acanthus* comes from the Greek *a* (without) and *canthos* (cup), indicating that its upside-down flowers can’t hold water, have no cups. There are at least two charming stories, neither verifiable, about how the spiny or toothed leaf of the Mediterranean blue-flowered plant *Acanthus mollis* gave the name *acanthus* to the architectural ornament resembling those leaves that is used in the famous Corinthian capital or column. One tale has it that the Greek architect Callimachus placed a basket of flowers on his young daughter’s grave, and an acanthus sprang up from it. This touched him so deeply that he invented and introduced a design based on the leaves. Another story, from an early 18th-century book called *The Sentiment of Flowers* tells it this way:

The architect Callimachus, passing near the tomb of a young maiden who had died a few days before the time appointed for her nuptials, moved by tenderness and pity, approached to scatter some flowers on her tomb. Another tribute to her memory had preceded his. Her nurse had collected the flowers which should have decked her on her wedding day; and, putting them with the marriage veil, in a little basket, had placed it near

the grave upon a plant of acanthus, and then covered it with a tile. In the succeeding spring, the leaves of the acanthus grew around the basket: but being stayed in their course by the projecting tile, they recoiled and surmounted its extremities. Callimachus, surprised by this rural decoration, which seemed the work of the Graces in tears, conceived the capital of the Corinthian column; a magnificent ornament still used and admired by the whole civilized world.

Acapulco gold. First recorded in 1967, *Acapulco gold* supposedly means a strong variety of marijuana grown near Acapulco, Mexico. But no one is even sure whether it is really a special variety of marijuana grown there or just any premium pot that dealers ask high prices for. Hawaiian *Maui wowie* is another well-known kind.

accidentally on purpose. Someone who does something *accidentally on purpose* does it purposely and only apparently accidentally—often maliciously, in fact. The expression is not an Americanism, originating in England in the early 1880s before it became popular here.

accolade. In medieval times men were knighted in a ceremony called the *accolata* (from the Latin *ac*, “at,” and *collum*, “neck”), named for the hug around the neck received during the ritual, which also included a kiss and a tap of a sword on the shoulder. From *accolata* comes the English word *accolade* for an award or honor.

according to Cocker. *According to Cocker*, an English proverb similar to the five *according* entries following, means very accurate or correct, according to the rules. *According to Cocker* could just as well mean “all wrong”; however, few authorities bother to mention this. The phrase honors Edward Cocker (1631–75), a London engraver who also taught penmanship and arithmetic. Cocker wrote a number of popular books on these subjects, and reputedly authored *Cocker’s Arithmetick*, which went through 112 editions, its authority giving rise to the proverb. Then in the late 19th century, documented proof was offered showing that Cocker did not write the famous book at all, that it was a forgery of his editor and publisher, so poorly done in fact that it set back rather than advanced the cause of elementary arithmetic.

according to Fowler. Many disputes about proper English usage are settled with the words, “according to Fowler. . . .” The authority cited is Henry Watson Fowler (1858–1933), author of *A Dictionary of Modern English Usage* (1926). Fowler, a noted classicist and lexicographer, and his brother, F. G. Fowler, collaborated on a number of important books, including a one-volume abridgement of the *Oxford English Dictionary* (1911). But *Modern English Usage* is his alone. The book remains a standard reference work, though some of the old schoolmaster’s opinions are debatable. Margaret Nicholson’s *A Dictionary of American English Usage, Based on Fowler*, is its American counterpart. The Fowlers’ trenchant and witty book on modern English usage (1906) was entitled *The King’s English*, but it is often called simply *Fowler’s* today. Death ended the grand grammarians’ collaborations in 1918 when Francis Fowler, the older brother, was killed in World War I.

according to Guinness. Arthur Guinness, Son & Co., Ltd., of St James Gate, Brewery, Dublin, has published *The Guinness Book of World Records* since 1955. Many arguments have been settled by this umpire of record performance, which has inspired the contemporary expression *according to Guinness*. Few business firms become factual authorities like the Guinness company, which has brewed its famous stout since 1820, its registered name becoming synonymous with stout itself for over a century.

according to Gunter, etc. Many practical inventions still in use were invented by the English mathematician and astronomer Edmund Gunter nearly four centuries ago. Gunter, a Welshman, was professor of astronomy at London's Gresham College from 1619 until his death five years later when only 45. In his short life he invented Gunter's chain, the 22-yard-long, 100-link chain used by surveyors in England and the United States; Gunter's line, the forerunner of the modern slide rule; the small portable Gunter's quadrant; and Gunter's scale, commonly used by seamen to solve navigation problems. Gunter, among other accomplishments, introduced the words *cosine* and *cotangent* and discovered the variation of the magnetic compass. His genius inspired the phrase *according to Gunter*, once as familiar in America as "according to Hoyle" is today.

according to Hoyle. *A Short Treatise on the Game of Whist* by Englishman Edmond Hoyle, apparently a barrister and minor legal official in Ireland, was published in 1742. This was the first book to systemize the rules of whist and remained the absolute authority for the game until its rules were changed in 1864. The author also wrote *Hoyle's Standard Games*, which extended his range, has been republished hundreds of times, and is available in paperback today. The weight of his authority through these works led to the phrase *according to Hoyle* becoming not only a proverbial synonym for the accuracy of game rules but an idiom for correctness in general. History tells us little about Hoyle, but he enjoyed his eponymous fame for many years, living until 1769, when he died at age 97 or so. Hoyle is responsible for popularizing the term *score* as a record of winning points in games, a relatively recent innovation. "When in doubt, win the trick" is his most memorable phrase.

according to Rafferty's rules. Unlike the five other "according to" entries listed here, this one means according to no rules at all, no holds barred. It is an Australian expression with some international currency that apparently arose from Australian boxing matches, perhaps referring to a roughhouse fighter named Rafferty, although he has not been identified. Partridge, however, suggests that *Rafferty* derives from *refractory*, "obstinately resistant to authority or control."

accumulate. *Accumulate* means literally "to heap up," from the Latin *accumulare*. (We also find the idea in "cumulus" clouds, billowing clouds heaped up in the sky.) One who accumulates wealth piles it up by adding money to the figurative pile.

ace; aces. *Aces* has been American slang for "the best" at least since the first years of the last century, deriving from *aces*, the highest cards in poker and other card games. But *ace* for an expert

combat flier who has shot down five or more enemy planes appears to have been borrowed from the French *as*, "ace," during World War I. From there *ace* was extended to include an expert at anything. The card name *ace* comes ultimately from the Greek *ás*, one. An *ace* in tennis, badminton, and handball, among other games, is a placement made on a service of the ball, while an *ace* in golf is a hole in one. The trademarked *Ace bandage*, used to bind athletic injuries, uses *ace* meaning "best," too. *Ace* figures in a large number of expressions. *To ace* a test is to receive an A on it, and *ace it* means "to complete anything easily and successfully." *To be aces with* is to be highly regarded ("He's aces with the fans."), and *to ace out* is to cheat or defraud ("He aced me out of my share.") *Easy aces* in auction bridge denotes aces equally divided between opponents; it became the name of a 1940s–1950s radio program featuring a husband and wife team called *The Easy Aces*. Another old *ace* term is *to stand ace high*, to be highly esteemed.

ace boon coon. Black English for one's best friend, first recorded in 1962. The word *coon* when said by a white person is a racial slur for a black person. It possibly has nothing to do with the animal called a raccoon or a coon. *Coon* here may come from the last syllable of the Portuguese *barracoes*, which is pronounced like *coon* and meant buildings especially constructed to hold slaves for sale. The word *coon* is also used by blacks, as is the word *nigger*, but is of course considered highly offensive when uttered by whites.

ace in the hole. A stud poker card dealt face down and hidden from the view of the other players is called a hole card. An ace is the highest hole card possible, often making a winning hand for the player holding it. Thus from this poker term came the expression *an ace in the hole* for "any hidden advantage, something held in reserve until it is needed to win." The term probably dates back over a century, and was first recorded in *Collier's Magazine* in 1922: "I got a millionaire for an ace in the hole." *Hole card* is a synonym. See AN ACE UP ONE'S SLEEVE.

Aceldama. See POTTER'S FIELD.

aces all around. Everything is going well, splendidly, first rate, like being dealt all aces in a poker or other card game. Someone might ask "How are you doing?" and get the reply "Aces all around." The expression was heard in Washington, D.C. (2006) but is doubtless much older.

ace up one's sleeve. Ever since crooked gamblers in the wild and woolly West began concealing aces up their sleeves and slipping them into their hands in card games, we have had the expression *an ace up one's sleeve* for "any tricky, hidden advantage." Although the practice is not a common way to cheat at cards anymore, the phrase lives on.

Achilles' heel. When he was a baby, Achilles' mother, the goddess Thetis, dipped him into the magic waters of the river Styx to coat his body with a magic shield that no weapon could penetrate. However, she held him by the heel, so that this part of his body remained vulnerable. Paris learned of his secret during the Trojan War, shooting an arrow into his heel and killing him. *Achilles' heel* has since come to mean the weak part of anything.

acid test. This expression dates back to frontier days in America, when peddlers determined the gold content of objects by scratching them and applying nitric acid. Since gold, which is chemically inactive, resists acids that corrode other metals, the (nitric) *acid test* distinguished it from copper, iron, or similar substances someone might be trying to palm off on the peddlers. People were so dishonest, or peddlers so paranoid, that the term quickly became part of the language, coming to mean a severe test of reliability.

acknowledge the corn. Much used in the 19th century as a synonym for our “copping a plea,” this phrase is said to have arisen when a man was arrested and charged with stealing four horses and the corn (grain) to feed them. “I acknowledge [admit to] the corn,” he declared.

Acoma. A Native American tribe of New Mexico and Arizona. The tribe’s name means “people of the white rock” in their language, in reference to the pueblos in which they lived. Acoma is also the name of a central New Mexico pueblo that has been called “the oldest continuously inhabited city in the United States.” The name is pronounced either *eh-ko-ma* or *ah-ko-ma*.

aconite; monkshood; wolfsbane. Aconite (*Aconitum napellus*) is a deadly poisonous plant, also known as wolfsbane and monkshood. Aconite itself derives from an ancient Greek word meaning “wolfsbane.” Ancient legend says the showy perennial herb is of the buttercup family and that it became poisonous from the foam that dropped from the mouth of the monstrous hound Cerberus, who guarded the gates of Hell, when Hercules dragged him up from the nether regions. Some authorities say aconite derives from the Greek *akon*, “dart,” because it was once used as an arrow poison. See also WOLFSBANE.

acorn. *Acorn* is an ancient word deriving from the Old English *aecern*, meaning “fruit” or “berry.” Its present form *acorn* is due in large part to folk etymology; people believed that the word *aecern* was made up of “oak” and “corn” because the fruit came from the oak and was a corn or seed of that tree. Thus *aecern* came to be pronounced and spelled “acorn.”

acqua tofana. *Acqua Tofana*, a favorite potion of young wives in 17th-century Italy who wanted to get rid of their rich, elderly, or ineffectual husbands, recalls a woman who peddled her deadly home brew on such a large scale that she has achieved immortality of a kind. Her first name is unknown, but Miss or Mrs. Tofana was either a Greek or Italian lady who died in Naples or Palermo, Sicily about the year 1690. Apparently she died a natural death, although five others headed by an old hag named Spara, who had bought her secret formula, were arrested and hanged in 1659. Tofana’s poison was a strong, transparent, and odorless solution of arsenic that she sold in vials labeled *Manna di S. Nicolas di Bari* (the “Manna of St. Nicholas of Bari”), in honor of the miraculous oil that was said to flow from the tomb of the saint. See BRUCINE.

acre; wiseacre. The Sumerian *agar* meant a watered field, a word the first farmers in Babylonia formed from their word *a* for water and applied to fertile watered land in the river valleys. *Agar*—related to the Sanskrit *ajras*, an open plain—came into

Latin as *ager*, “fertile field,” and finally entered English as *acre* or *acras* in the 10th century. The word first meant any unoccupied land but then came to mean the amount of land a yoke of oxen could plow from sunup to sundown. During the reign of Edward I, it was more fairly and accurately defined as a parcel of land 4 rods in width and 40 rods in length (a rod measures 16½ feet). The area remains the same today except that the land does not have to be rectangular, that is, 4×40 rods. In case you want to measure your property another way, in the United States and Great Britain an acre equals 43,560 square feet, or 1/64th of a square mile, or 4.047 square meters. One old story says that Ben Jonson put down a landed aristocrat with “Where you have an acre of land, I have ten acres of wit,” and that the gentleman retorted by calling him “Mr. Wiseacre.” *Acree* doesn’t actually figure in this word, however. *Wiseacre* has lost its original meaning, having once been the Dutch *wijssegger*, “a wise-sayer, soothsayer, or prophet,” apparently an adaptation of the Old High German *wizzago*, with the same meaning. By the time *wijssegger* passed into English as *wiseacre* in the late 16th century, such soothsayers with their know-it-all airs were already regarded as pretentious fools.

acrobat; neurobat. *Acrobat* comes from the Greek *akros*, “aloft,” plus *batos*, “climbing or walking,” referring of course to the stunts early acrobats performed in the air, which included ropewalking. The greatest of the ancient Greek acrobats were called *neurobats*, from the Greek *neuron*, “sinew.” These men performed on sinewy rope that was only as thick as the catgut or plastic used for fishing line today, appearing from the ground as if they were walking on air.

acrolect; basilect; idiolect. The *acrolect* (from the Greek *akros*, “topmost”) is the best English spoken, the KING’S ENGLISH, while the *basilect* means the lowest level of poor speech. Another unusual word patterned on *dialect* is *idiolect*, meaning the language or speech of an individual, which always differs slightly from person to person. These words were apparently coined toward the end of the 19th century. See DIALECT.

acronym. According to the *Guinness Book of World Records*, there is a Russian acronym of 56 letters. *Guinness* also claims that the longest English acronym is the 22 letter ADCOM-SUBORDCOMPUBSPAC, used in the U.S. Navy to denote the Administrative Command, Amphibious Forces, Pacific Fleet, Subordinate Command, U.S. Naval Forces Eastern Atlantic and Mediterranean, Commander Headquarters Support Activities— itself abbreviated as CSCN/CHSA. Strictly speaking, these are both acronyms, new words formed from the initial letters or syllables of successive words in a phrase. But *acronym* has come to mean any such word that can be easily pronounced as a word, and not even Demosthenes could pronounce these abbreviations designed to appeal to the eye rather than to the ear. The term *acronym* derives from the Greek *akros* (“top”) and *onym* (“name”); it is a fairly new coinage, although scholars claim to have found early examples of acronyms in Hebrew writings dating back to biblical times. Acronyms came into prominence during World War I with coinages such as AWOL (absent without leave), proliferated during the New Deal with all its “alphabet agencies,” and got entirely out of hand during World War II, as can be seen by the two monsters cited above. The good ones appeal to the American preference for brevity

and wit in speech. New acronyms are invented every day, but relatively few stand the test of time. A number are apparently happy accidents, but in many cases the long form was invented so that the acronyms could be born. There is no good explanation for why common abbreviations such as G.O.P., F.O.B., and O.P.A. haven't become acronyms, except that they just don't sound right to most ears when pronounced as words. Unfortunately, there isn't room here for interesting place-name acronyms such as Pawn, Oregon, which wasn't named for a pawnshop but comes from the initials of four early residents named Poole, Aberley, Worthington, and Nolen. See ABBREVIATIONS.

across the board. Around 1935, racetrack combination tickets naming a horse to win, place, or show—giving a bettor three chances to win—began to be called *across-the-board* bets. Since then, the term has been widely used outside the racetrack to mean “comprehensive, general, all inclusive.”

acrostic; telestich; abecedarian hymns. Acrostics can be any composition (poems, puzzles, etc.) in which certain letters of the lines, taken in order, form a word, phrase, or sentence that is the subject of the composition. When the last letters of lines do this, the acrostic is sometimes called a *telestich* (from the Greek *tele*, “far,” and *stichos*, “row”). *Acrostic* derives from the Greek *akros*, “top,” and *stichos*. The term was first applied to the prophecies of the Greek Erythraean sibyl, which were written on separate pages, the initial letters forming a word when the pages were arranged in order. Another famous early acrostic was made from the Greek for “Jesus Christ, God's Son, Savior”: *Jesus Christos, Theou Uios, Soter*. The first letters of each word (and the first two letters of *Christos* and *Theou*) taken in order spell *ichthus*, Greek for “fish,” which became a Christian symbol for Jesus. There are even earlier examples of acrostics in the Bible. In Hebrew, for instance, Psalm 119 is an acrostic in which the first letters of each of the 22 stanzas descend in alphabetical order. Such alphabetical acrostics are usually called *abecedarian hymns*, or *abecedarius*, and there are more complicated species of them in which each word in every line begins with the same letter:

An Austrian army, awfully array'd
Boldly by battery besieged Belgrade, etc.

Actaeon. In Greek mythology, Actaeon came upon Artemis bathing, and the angered goddess changed him into a stag, whereupon his own hounds tore him to pieces. Another version of this story, however, has it that Actaeon claimed he was a better hunter than Artemis and suffered the same fate.

action. A good example of how English is changing as it spreads around the world. *Action* in Singapore, where English is an official language (along with Malay and Chinese) means to show off, as in: “That fellow always like to action, walking around with his Rolex over his shirtsleeves.”

actions speak louder than words. Lincoln used the proverb, but it dates back to the early 1700s.

actor. Originally *actor* meant a “doer,” from the Latin *agere*, to do. Its current sense dates from the 16th century, but it is recorded

three centuries before then. Collectively, actors and actresses have been called *companies*, *casts*, *troops*, and even *entrances*. In the Middle Ages, a *troop* was called a *cry*, and in more recent times, during the heyday of the Hollywood studios, there were *stables* of actors and writers. A number of *angels* financially backing a play might be called a *host of angels* and a *collection of critics a frown*.

actuary. An actuary is a highly skilled statistician who calculates and states insurance risks and premiums, but his or her title derives from the Latin for clerk, *actuarius*, for in the Roman army, during Caesar's time, an *actuary* was no more than a payroll clerk.

act your age. Perhaps *act your age!* originated as a reproof to children, but it is directed at both children and adults today, meaning either don't act more immature than you are, or don't try to keep up with the younger generation. The expression originated in the U.S., probably during the late 19th century, as did the synonymous *be your age!*

acushla. An Irish word for “darling.” It is short for the phrase *a chuisla mo chroid*: o pulse of my heart.

ad absurdum. Latin for “to the point of absurdity or foolishness,” as in “His speech went on and on, ad absurdum.”

Adam; human. Adam, the name of the first man in the Bible, is the Hebrew word for man, deriving from *adama*, “earth,” just as the Latin *humanus*, “human,” is related to the Latin *humus*, “earth.” For his sins, according to the Talmud, Adam was evicted from Paradise after only 12 hours. In addition to entries following, his name is represented by *Adam's wine*, or *ale*, a humorous expression for water; *Adamic*, naked, free like Adam; *Adamite*, a human being or descendant of Adam; *the second Adam*, a biblical reference to Christ; *the old Adam in us*, a reference to man's disposition to evil; and I DON'T KNOW HIM FROM ADAM.

adam-and-eve. This pretty North American woods orchid (*Aplectrum hyemale*), also called puttyroot, apparently takes its name from its two bulbous roots, which are joined together by a small filament about two inches long that suggested Adam and Eve, hand in hand, to some poetic soul. When the plant has three bulbous roots or corms joined together it is called “Adam-and-Eve-and-their-son.” The name *adam-and-eve* includes the dogtooth violet, because its plant bears a large and a small flower at the same time, and the common monkshood. It is said that when immersed in water one root or corm of the puttyroot sinks and the other floats—whether it is Adam or Eve who sinks is never told. Folklore also holds that adam-and-eve sewn together and carried in a bag on one's person protects the bearer from evil.

adamant. Stubbornly unyielding, inflexible, impervious to reason. The word comes ultimately from the Greek *a*, not, plus *damao*, to tame, and originally meant something very hard, such as a diamond or steel. Poet John Milton writes in *Paradise Lost* (1667) of Lucifer dwelling in hell in “adamantine chains and penal fire . . .”

Adamastor. Vasco da Gama is said to have seen a hideous sea phantom called the “*Adamastor*,” the spirit of the stormy Cape of Good Hope, which warned him not to undertake his third voyage to India. Da Gama made the voyage anyway and died soon after reaching his destination. The Adamastor is first mentioned in the epic poem the *Lusiads* by Portuguese adventurer and poet Luis de Camoëns (1524–80), which was translated into English by Sir Richard Burton in 1881. The word *Adamastor* is probably Portuguese in origin, but its exact derivation is unknown.

adamite. A historical name for any supporter of John Adams, the second president of the United States. Old Parson Weems, George Washington's biographer, wrote a book entitled *The Philanthropist, or a Good Twenty-five Cents Worth of Political Love Powder for Honest Adamites and Jeffersonians*. John Adams, who died in 1826, age 91, died on a July 4th, as did Thomas Jefferson and James Monroe. Adams and Jefferson died on the same July 4th. See JEFFERSON BIBLE.

Adam's apple. Adam never ate an apple, at least not in the biblical account of his transgressions, which refers only to unspecified forbidden fruit on the tree in the Garden of Eden. The forbidden fruit of which the Lord said “Ye shall not eat of the fruit which is in the midst of the garden, neither shall ye touch it, lest ye die” (Gen. 3:3) was probably an apricot or pomegranate, and the Muslims—intending no joke—believe it was a banana. Many fruits and vegetables have been called apples. Even in medieval times, pomegranates were “apples of Carthage”; dates, “finger apples”; and potatoes, “apples of the earth.” At any rate, tradition has it that Adam succumbed to Eve's wiles and ate of an apple from which she took the first bite, that a piece stuck in his throat forming the lump we call the *Adam's apple*, and that all of us, particularly males, inherited this mark of his “fall.” Modern scientific physiology, as opposed to folk anatomy, explains this projection of the neck, most prominent in adolescents, as being anterior thyroid cartilage of the larynx. But pioneer anatomists honored the superstition in the mid-18th century by calling it *pomum Adami*, or *Adam's apple*. They simply could find no other explanation for this evasive lump in the throat that even seemed to move up and down.

Adam's apple tree. This particular tree is popularly named for Adam and the entire genus containing it was named by Linnaeus in honor of German botanist Dr. J. T. Tabernaemontanus (d. 1590), a celebrated Heidelberg botanist and physician who—despite the length of his patronym—also has species in two other plant genera commemorating him. Why the folkname *Adam's apple tree*? Clearly still another case of a claim on Eden. I quote from the *Encyclopedia of Gardening* (1838) by J. C. Loudon: “The inhabitants of Ceylon say that Paradise was a place in their country . . . They also point out as the tree which bore the forbidden fruit, the *Devi Ladner* or *Tabernaemontana alternifolia* [the species name has since been changed to *coronaria*] . . . In confirmation of the tradition they refer to the beauty of the fruit, and the fine scent of the flowers, both of which are most tempting. The shape of the fruit gives the idea of a piece having been bitten off; and the inhabitants say it was excellent before Eve ate of it, though it is now poisonous.” *T. coronaria*, a five-to-eight-foot-high tropical shrub with white fragrant flowers, is

also called the East Indian rosebay, crape jasmine, and NERO'S CROWN, after the Roman emperor.

Adam's needle. Adam and Eve sewed fig leaves together to cover their nakedness (Gen. 3:7). This led to the belief that they used the spines of a plant as a needle. Most often the honor goes to the yucca (*Yucca filamentosa*), native to Mexico and Central America and grown in gardens all over the world.

Adams' New York Gum No. 1—Snapping and Stretching. The world's first modern chewing gum (previously there were gums made of spruce sap, paraffin, and other substances), concocted by Thomas Adams Sr. on his Jersey City kitchen stove around 1869, and later manufactured in New York City. Adams may have been the first commercial gum to be made with chicle, and this milky liquid from the sapodilla tree was supplied to the inventor by General Antonio López de Santa Anna, Mexican conqueror of the Alamo, who was exiled in Staten Island at the time. Adams first tried to make a cheap rubber substitute from the chicle, as Santa Anna had urged him to do; he failed but then came up with the great gum idea. Later his company merged with eight others into the American Chicle Company.

Adam's profession. “There is no ancient gentlemen but gardeners, ditchers, and grave-makers; they hold up Adam's profession,” Shakespeare wrote in *Hamlet*. The bard also said “And Adam was a gardener” in *Henry VI, Part III*. Much later, Kipling wrote: “Oh Adam was a gardener, and God who made him sees/That half a proper gardener's work is done upon his knees.” The phrase *Adam's profession* was proverbial for gardening long before both poets lived. No one has called it “Eve's profession,” even though she picked the first apple. See also FIACRE.

adder; auger. Many English words have changed over the years because of lazy or quick pronunciation—depending on how you look at it. *Adder*, is an example. *Adder* was originally “nadder,” but starting in the 14th century its *n* began to become part of the article *a*, making *an adder* out of “a nadder.” Much the same happened to the tool, *an auger*, during the same time, the auger having originally been “a nauger.”

add insult to injury. One of the oldest of expressions, this goes back to an early fable of Aesop, in which a bald man tried to kill a fly on his head and missed the fly, smacking himself instead. Said the fly: “You wanted to kill me for a mere touch. What will you do to yourself, now that you have added insult to injury.”

addisonian termination. See PREPOSITION.

Addison's disease. British physician Thomas Addison (1793–1860) discovered this glandular disease in 1855, and it was shortly named after him. The chronic, sometimes fatal malady affects the adrenal or suprarenal glands, located above the kidneys. It is said that President John F. Kennedy suffered from and was treated for *Addison's disease*, whose symptoms are often tiredness, weakness, puffiness of the face, and a

gradual brownish pigmentation of the skin. British novelist Jane Austen died of Addison's disease. See THORN TEST.

Adidas. The popular running shoes, famous since marathons became popular in the late 1970s, bear the name of their German inventor and manufacturer *Adi Dassler*.

adieu. *Je vous recommande à Dieu*, "I commend you to God," was in times past said to Frenchmen who were going on a long journey and would not be seen for some time. Eventually the *à Dieu* detached itself (merged to *adieu*) from the phrase and came to mean the same kind of good-bye.

ad infinitum. Latin for "to infinity, without limit," as in this little poem by Jonathan Swift that was a favorite of President John F. Kennedy:

So naturalists observe a flea
Hath smaller fleas that on him prey;
And these have smaller still to bite 'em,
And so proceed *ad infinitum*.

adios. Heard in the U.S. since about 1830, this Spanish word meaning good-bye (literally, "to God") is now widely used throughout the country. It can also mean "get going, vamoose": "You better adios before the law comes."

Adirondacks. The Mohawk Indians contemptuously dubbed a tribe of Algonquin Indians *Adirondack*, meaning "they eat bark," and the tribe's nickname came to be applied to the mountain region in northeastern New York that these Indians inhabited. The insulting name gives us, literally, "they eat bark" chairs, pack baskets, and even grapes, among many other items characteristic of the Adirondacks.

ad lib. Deriving from the Latin *ad libitum*, at will, *ad lib* means to speak words or perform actions not in a script or speech being used. *Ad libitum* is first recorded in 1705.

the Admirable Crichton. The perfect man, the perfect servant. James Crichton, born in 1560, was an English prodigy who while still in his teens earned his Master of Arts degree, mastered over a dozen languages, all the sciences, and achieved some fame as a poet and theologian. The fabled prodigy was also said to be handsome and without peer as a swordsman—"All perfect, finish'd to the fingernail," Tennyson wrote of him. Unfortunately, this ideal man proved either unwise or human enough to steal the heart of a prince's lady while traveling in Italy and was assassinated by three men in the prince's hire. Crichton was only 25 or so when he died. His name, in the form of *The Admirable Crichton*, was long used as a synonym for the perfect man, and when playwright James M. Barrie used it as the name of his butler hero in *The Admirable Crichton* (1902) it became synonymous with a perfect servant.

admiral. Technically, all admirals come from the Arabian desert, for the word can be traced to the title of Abu Bakr, who was called Amir-al-muninin, "commander of the faithful," before he succeeded Muhammad as caliph in A.D. 632. The title Amir, or "commander," became popular soon after, and naval

chiefs were designated *Amir-al-ma*, "commander of commanders." Western seamen who came in contact with the Arabs assumed that *Amir-al* was one word, and believed this was a distinguished title. By the early 13th century, officers were calling themselves *amiral*, which merely means "commander of." The *d* was probably added to the word through a common mispronunciation.

Admiral of the Red. An old term for a drunkard, whose face and nose are often red. The expression is a play on the naval term *Admiral of the Red*, one of the three classes of admirals in early times named from the color of their flags. In British naval engagements prior to 1864 the *Admiral of the Red* held the center of the line, while the Admiral of the White held the vanguard and the Admiral of the Blue held the rear.

ad nauseam. Latin for "to a sickening extent," as in "The book tells us ad nauseam about his seductions."

adobe. An adobe can be a house made of *adobe*, from the Spanish word for sun-dried clay or mud bricks. The term was first recorded in the U.S. in 1759. *Adobe* also means things of Mexican origin, as in the slang expression *adobe dollar*, a Mexican peso. See DOUGHBOY.

adolescent. See ADULT.

Adonis. During the Adonia, an annual feast held in Greece, women wept eight days over Adonis's death, finally rejoicing in his resurrection. In classic mythology Adonis was the handsome lover of Aphrodite, goddess of love and beauty, and thus any man called an Adonis is among the most handsome of men.

Adonis flower; Adonis garden. The Greek goddess Aphrodite punished the king of Cyprus for his disrespect by making his daughter Myrrha fall in love with him. Discovering this, King Cinyras tried to kill Myrrha, but she was changed into a myrtle, from which the handsome youth Adonis was born. Aphrodite herself fell in love with Adonis; when he was killed by a wild boar while hunting she caused a beautiful red flower to spring from his blood, which had been watered by her tears. Over the centuries, the anemone, the poppy, and the rose have been said to be this Adonis flower. John Gerard's famous *Herball* (1597) was the first source to mention that the plant commonly called "pheasant's eye," of the family Ranunculaceae, was known as the "Adonis." A species of butterfly is also so named. An "Adonis garden" is any worthless or very perishable thing, or a momentary pleasure. Its source was the plots of earth in which quick-growing plants such as wheat, lettuce and fennel were planted during the Adonia, the ancient feast of Adonis celebrating his death and resurrection. Symbolic of the brief life of Adonis and grown around a statue of him, the plants were only tended for eight days, allowed to wither and then thrown into the sea along with little images of Adonis. The next year, of course, seeds were sown again and Adonis was resurrected, a ceremony symbolic of the course of vegetation.

adroit. See RIGHT.

adult. The Latin *adolescere* means “to grow up.” The past participle of this word, *adultus*, gave us our word *adult* while its present participle, *adolescens*, gave us *adolescent*. Adolescent seems to have first been recorded in 1440, about a century before adult.

adultery. Contrary to popular opinion this word is not related to adult. It can be traced back to the Latin *adulterare*, “to pollute, to commit adultery,” which also gives us the word *adulterate*. Interestingly, the English word *adulterate* once meant to commit adultery, Shakespeare using it in *King John* (1596): “She adulterates hourly with thine Uncle John.”

advertising. The British long abhorred the idea of advertising. “Let us be a nation of shopkeepers,” *Punch* pleaded in 1848, “but there is no necessity we should become a nation of *advertisers*.” America, however, had no prejudice against advertising. There perhaps was a national tolerance to it fostered by the tall tales of our literature, even a belief in it born of the promise beyond reality America has always held to her children, the wild exaggeration of this country itself with its seemingly limitless land and golden opportunities.

advertising euphemisms. Manufacturers and their ad agencies have originated some ingenious if sometimes silly euphemisms in touting their products. Here is a short collection, to which you may want to add your favorites: underarm (armpit); halitosis (bad breath); derriere (buttocks); irregularity (constipation); foundation garment (corset); color-correct hair (dye hair); problem days (menses); lingerie (underwear).

Aegean Sea. King Aegeus of Greek mythology gives his name to the Aegean Sea. The king’s son Theseus promised to hoist a white sail on his voyage home to Athens from Crete, to signal that he was alive. Theseus neglected to do so and Aegeus, thinking his son had been killed, committed suicide by throwing himself into the sea that came to be named for him.

aegis. See UNDER THE UMBRELLA OF.

aeon. An *aeon*, a variant of *eon*, means a very long period of time, or the longest period of geological time, composed of two or more eras. The Irish author and editor George William Russell (1867–1935) used AE, a contraction of the word *aeon*, as both his signature and his pen name.

aerial. *Aerial*, formed from the Latin word for “airy,” wasn’t introduced during the age of aviation, nor does it have its origins in circus aerial acts. The word is first recorded by Shakespeare, who may have coined it, in *Othello* (1604).

aerobics. Derived from the Greek for “air” and “life,” *aer* and *bios*, aerobic was first used to describe an organism that requires air or free oxygen for survival. Its relatively new usage was first recorded around 1965, when the physical fitness boom began in the United States. In brief, aerobics is any exercise, such as running or swimming, that stimulates and strengthens the heart and lungs, thus improving the body’s use of oxygen. It can also refer to a physical fitness program based on such exercises.

aerugo. See VERDIGRIS.

affidavit. Dickens makes the word’s origin “Alfred David” in *Our Mutual Friend* (1864–65), but *affidavit* has nothing to do with this humorous derivation. It is literally the Latin for “he has pledged his faith.”

affiliate. “Adopted” is the meaning of the Latin *affileatus*, composed of *ad*, “to,” and *filius*, “son,” from which the word *affiliate* derives. Thus a smaller company affiliated with a larger one could be said to have been adopted by the parent corporation. The word is first recorded by Tobias Smollett in *Gil Blas* (1761).

affluent. After the publication of economist John Kenneth Galbraith’s book *The Affluent Society* in 1958, *affluent* came to be commonly used as a synonym for rich or wealthy. *Affluent*, however, had been used for “flowing or abounding in wealth” since the 18th century and for “flowing in abundance” since at least 1413, when the word is first recorded.

afghan. A soft, knitted, or crocheted wool blanket, often with a geometric pattern, that was once made exclusively in Afghanistan. An Afghan, capitalized, is a native of Afghanistan, sometimes called an Afghani.

Afghan hound. Bred in Afghanistan since at least 3000 B.C., this large, slender, heavy-coated dog, related to the greyhound, was used by the Egyptians for hunting. It is one of the few dogs that hunt by sight.

Afghanistan. Afghanistan is named after the biblical King Saul’s grandson, Afghana, according to legend, which has traditionally described the Afghanistan people as *Ben-i-Israel*, “Children of Israel.” Legend also has it that King Solomon (Sulaiman) settled the country. Whether such stories, and many more, are true or not, they are widely believed, and the country does bear Afghana’s name.

aficionado. An ardent, devoted fan of bullfighting or anything else. Ernest Hemingway, who wrote much about bullfighting, said in *The Sun Also Rises* (1926): “Aficion means passion [in Spanish]. An aficionado is one who is passionate about the bull-fights.” See BULLFIGHT.

Afipia felix. The bacterium that causes cat scratch fever. The word *Afipia* in the name stands for AFIP, the Armed Forces Institute of Pathology, for its help with the fever.

afraid of one’s shadow. The ancient Greeks used this expression and it probably wasn’t original with them. Still very common today, after thousands of years, the workhorse phrase means, of course, to be very fearful for no good reason, to be extremely jittery.

Africa. The Romans may have named this continent *Apricus*, meaning “sunny,” which became the English *Africa*. But Africa, according to my correspondent Professor Howard Marblestone, “probably derives from the *Afri*, a name centered in the Carthagonian realm . . .”

African American. *African American*, a term many blacks and whites prefer as the name for blacks today, is not of recent origin and wasn't coined in the North, as some people believe. African American did become common in the late 1980s but was first used in the American South some 140 years ago. Even before its birth, terms like *Africo-American* (1835) and *Afro-American* (1830s) were used in the names of black churches.

African language words. English words and phrases that possibly came to us from African languages include: banjo, bad mouth, boogie-woogie, to bug, buckra, chigger, cooter, goober, hip, jazz, jitterbug, jukebox, mumbo jumbo, okra, poor Joe (great blue heron), speak softly and carry a big stick, sweet talk, tote, voodoo, yam, and zombie.

African violet. See SAINTPAULIA.

Afrikaans words. English words that came to us from Afrikaans (the Taal) include: veldt, trek, commando, wildebeest, and aardvark.

Afrikander. A resident of South Africa. For the Dutch *Afrikaner*, influenced by the Dutch *Englander*.

Afro. This bushy hairstyle became popular in the early 1960s. Its synonyms are *fro* and *natural*.

afromobile. Confined to Florida, this expression referred to an early-1900s Palm Beach vehicle consisting of a two-seated wicker chair in the front and a bicycle in the back pedaled by a black man. For many years, this taxi for rich white patrons was the only vehicle permitted in the city.

aftermath. The *after mowth*, which later came to be pronounced "aftermath," is the second or later mowing, the crop of grass that springs up after the first hay mowing in early summer when the grass is best for hay. This term was used as early as the 15th century, and within a century *aftermath* was being applied figuratively to anything that results or follows from an event.

after someone with a sharp stick. To be determined to have satisfaction or revenge. John Bartlett called this phrase a common Americanism in 1848 and it is still occasionally heard today.

afterward. The Saxons called the stern of a boat the *aft* and their word *ward* meant "in the direction of." Thus *aftward* meant "toward the rear of a ship," or "behind." Over the years, the word *aftward* changed in spelling to *afterward* and came to mean "behind in time," "later on," or "later."

againbite [agenbite] of inwit. James Joyce revived the expression *agenbite* [againbite] of *inwit* in *Ulysses*. It is a good example of Anglo-Saxon replacements of foreign words, meaning the "remorse of conscience" and originally being the prose translation of a French moral treatise (*The Ayenbite of Inwit*) made by Dan Michel in 1340.

agape. Probably at first a sexual love feast of early Christians; then, love that is spiritual in its nature; finally, it came to mean a state of wonder or awe, as with the mouth wide open ("He stood there agape at the splendor."). The word derives from the Greek *agape*, love.

agate; agate type; aggie. In ancient times colored stones were often found near the Achates River in Sicily. The river gave its name to these pretty stones, or gems, as they were called. Because they were small, the stones gave their name to a small printing type, *agate type*, that is still used widely today. This type is called *ruby* in England but has been *agate type* in America since 1871. The marbles called *aggies* are so named because their coloring resembles agate.

agave. Any of several southwestern plants with tough, spiny, sword-shaped leaves. Named for Agave, daughter of the legendary Cadmus, who introduced the Greek alphabet, the large *Agave* genus includes the remarkable century plant (*Agave americana*), which blooms once and dies (though anytime after 15 years, not after 100 years, as was once believed). Introduced to Europe from America in the 16th century, this big agave is often used there for fences. It is regarded as a religious charm by pilgrims to Mecca, who hang a leaf of it over their doors to ward off evil spirits and indicate that they have made the pilgrimage.

age before beauty. There has been some controversy about this expression, which originated in 19th-century England. One story tells us that Clare Boothe Brokaw, who later became Clare Boothe Luce, had joined the staff of *Vanity Fair* and encountered Dorothy Parker in the lobby one morning. "Age before beauty," said the sharp-tongued Clare, holding the door open. "Pearls before swine," the sharper-tongued Dorothy Parker said, entering first. Clare Boothe Luce later denied this story, and a similar quip was used in one of Alexander Woollcott's pieces, but it has nevertheless become part of the Parker legend. Recalled Mrs. Robert Benchley in a biography of her husband: "I was right there, the time in the Algonquin, when *some little chorus girl* and Dottie were going into the dining room and the girl stepped back and said, 'Age before beauty,' and Dottie said very quickly, 'Pearls before swine.' I was right there when she said it." This last is probably the correct version of the story.

ageism. A word coined by Dr. Robert N. Butler in 2006. Dr. Butler, who won the Pulitzer Prize for his *Why Survive?*, a meditation on aging, founded the Mount Sinai School of Medicine's geriatric department. He has suffered *ageism* himself and encountered it even in words like *retired*, which seems to have become a synonym for "over the hill."

agelast; agelasta. An *agelast*, from the Greek for "not laughing," is a person who never laughs. The term for a non-laughter is first recorded in 1877, but *agelastic*, also meaning a morose, severe person who never laughs, is recorded in English as early as 1626. Rabelais was the first writer to use the word, fashioning it from the Greek. The *agelasta*, coming from the same Greek root for "joyless," is the stone upon which the fatigued Ceres sat when worn down in searching for her daughter Persephone.

agent. The first professional author's agent appears to have been Alexander Pollock Watt, an Englishman who had as his clients Thomas Hardy, Rudyard Kipling, Arthur Conan Doyle, and Bret Harte, among other great writers. Watt published a list of his clients, along with testimonials, in 1893. The firm he founded, A. P. Watt and Sons, is still in business. *Agent* for any person authorized to act on another's behalf dates back to the 16th century and derives from Latin words meaning the same.

Agent Orange. This herbicidal spray, used in Vietnam for purposes of jungle defoliation and crop destruction, has great toxicity, and many former U.S. soldiers claim to have suffered terribly because of it. Tens of thousands of tons of 2,4,5,-T, as it is called more scientifically, were used on over 5 million acres in South Vietnam during the 1960s. The term *Agent Orange* is first recorded in 1970 and derives from the color code stripe on the side of the herbicide's container—to distinguish it from the toxic herbicides Agent Blue, Agent Purple, and Agent White, which had their own appropriately colored stripes.

Age of Anxiety; anxiety neurosis. Though it is possibly more pertinent today, the term *Age of Anxiety* was coined over a half century ago in 1948 by British-born poet W. H. (Wystan Hugh) Auden in his long Pulitzer Prize-winning poem *The Age of Anxiety: A Baroque Eclogue*. The term *anxiety neurosis* is a translation of Freud's *Angstneurose*, which he coined in about 1895. The mild illness is marked by excessive anxiety.

Age of Aquarius. In the early 1960s it was widely believed that the decade was the start of an age when space would be conquered and there would be peace and brotherhood for all. This age was connected with the great constellation Aquarius, hence the name, which was also the title of a popular song from the musical *Hair* (1966), a song not sung much anymore. See AGE OF ANXIETY.

Age of Reason. Also called the Age of Enlightenment and the Enlightenment, this term describes the main trend of thought of 18th-century Europe, which put reason and individualism over tradition. Owing much to 17th-century thinkers, the philosophy was championed a hundred years later by Voltaire, Rousseau, and Kant, among many others. Thomas Paine's 1794–95 book attacking the Bible and defending deism was entitled *The Age of Reason*. See FROM THE RIDICULOUS TO THE SUBLIME.

ageratum. "The flower that never grows old" translates the name of this flower, from the Greek *a*, "not," and *geras*, "old age." Actually, the Greeks were probably referring to another flower than our garden annual the *ageratum*, but it seemed a good name for this little, long-lasting, lavender-blue bedding plant, also known as the "everlasting flower."

ages ago. See THE GREAT MAJORITY.

age spots. Those small splotches on the human body are called by several names, including *liver spots*, *brown spots*, and *death spots*.

aggie. See AGATE.

aggie fortis. An Americanism meaning anything very strong to drink. As one old-timer put it ". . . this man's whiskey ain't Red Eye, it ain't Chain Lightning either, it's regular Aggie forty [sic], and there isn't a man living who can stand a glass and keep his senses." *Aggie fortis* derives from *aqua fortis*, strong water, the Latin name for nitric acid.

agita; agit. *Agita* is an Italian word that has become popular recently in American usage, where it refers to acid indigestion brought on, especially, by stress and anxiety, as in "You're giving me agita with all this trouble." *Agita* derives from the Italian *agitare*, "to agitate," which comes from the Latin *agitare*, "to drive," "to set in motion." The term *agit*, used in prescriptions to mean "shake, stir," hails from the same source.

agit-prop drama. *Agit-prop* plays were commonly performed in the 1930s. They are plays that convey very emphatic social protest, the word *agit-prop* being a combination of *agitation* and *propaganda*. The word has its roots in the early U.S.S.R. *Agitpropbyuro*, "Agitation and Propaganda Bureau."

agnostic. Nineteenth-century British scientist Thomas H. Huxley coined the word *agnostic*, one who believes there is no proof of God's existence but does not doubt the possibility that God exists. The anonymous rhyme "I do not know, / it may be so" sums up the position. Huxley, who described himself as "a man without a rag or label to cover himself" coined his label from the Greek *a*, "without, not," and *gnostic*, which is related to the Greek *gnosis*, "knowledge."

agonizing reappraisal. Secretary of State John Foster Dulles coined the phrase *agonizing reappraisal* and used it at a NATO meeting in December 1954. The term was so overworked and applied to so many piddling matters everywhere that it became a cliché, as did "massive retaliation," which the Secretary had coined several months earlier. *Agony* itself derives from the Greek *agonia*, a contest between wrestlers, boxers, or even dramatists that took place at an *agon*, or meeting. The physical or mental struggles of these contestants gave rise to our word *agony*. *Agony* was first used in English by the translators of the Bible in describing Christ's intense mental suffering or anguish in the Garden of Gethsemane. Thus in the true spirit of the word, any *agonizing reappraisal* would be best made regarding matters of great consequence, if used at all.

agony. The Greek word from which *agony* derives first meant an athletic contest, next came to mean a struggle for victory in an athletic contest, then any struggle, and finally mental struggle or anguish like Christ's in Gethsemane. The idea of physical pain and suffering isn't recorded for *agony* until about the 17th century, but it is hard not to think of an athletic contest when contemplating this meaning. As one writer notes: "You only have to look at a photograph of anybody running the 100-yard dash to understand how it [the athletic contest] came in its English version to have the sense of 'agony.'"

Agony Aunt. See MISS LONELYHEARTS.

agoraphobia. Fear of public places, the word coined by German psychiatrist Carl Westphal in 1871. Westphal constructed

the word from *agora*, the great Athenian marketplace of ancient times. See DEPARTMENT STORE; MACY'S WINDOW; SHOP; STORE.

agouti. This rodent of tropical America is one of the few animals that takes its name from the Tupi Indian language.

agree to disagree. To *agree* to *disagree*, to remain friendly while holding differing opinions, is considered an Americanism by many writers. But in 1948 a writer in *Notes and Queries* reported finding the expression in a 1770 sermon of English theologian John Wesley, founder of Methodism. What's more, he found the phrase in quotation marks, suggesting that Wesley hadn't invented it but had heard it elsewhere.

agricultural ant. The western harvester ant (*Pogonomyrmex barbatus*) and several related species, because they were once believed to plant, cultivate, and harvest food. They do eat seeds, clearing the area around their nests and storing the seeds there.

agronomist. Agronomists are today's scientifically trained farmers, taking their name from the Greek *agros*, "field," and *nomis*, "to manage." The word only recently came into the language—in the early 19th century.

Aha! William Safire (in his *New York Times Magazine* column "On Language," 2/17/97) calls this exultant cry of discovery "one of the great, unappreciated and deliciously nuanced words in the English language." First recorded in Chaucer's *The Canterbury Tales* (ca. 1387), the palindromic *Aha!* has, I should add, even become the official scientific name for a genus of sphecid wasp. The genus was so named by Smithsonian Institution researcher Arnold Menke to express his joy on discovering it. When he discovered a second species of *Aha*, Mr. Menke was even happier, naming it *Aha ha*. For still more good news about *Aha!* see Mr. Safire's column and our entries HAH HAH and EUREKA.

ahimsa. See DIGAMBARA.

ahoy. Sailors had been saying "*ahoy*" for "hello" or "hey" at least a few years prior to 1751, when Tobias Smollett first recorded it in his novel *The Adventures of Peregrine Pickle*: "Ho! the house a hoy." The word is a combination of the interjection *a* and *hoy*, a natural exclamation used to attract attention that is first recorded as a cry for calling hogs and which in nautical language was also spelled "hoay." Incidentally, *ahoy* was suggested by Alexander Graham Bell as the salutation for telephone calls when he invented the telephone, but the term never caught on, phone users opting for "hello" and depriving *ahoy* of a more prominent place in the language.

AIDS. As an acronym for *acquired immune deficiency* (or, more currently, immunodeficiency) syndrome, *AIDS* was first recorded in September 1982. It denotes an often fatal disease in which, according to one authority, "infectious or malignant tumors develop as a result of a severe loss of cellular immunity, which is itself caused by earlier infection with a retrovirus (HIV), transmitted in sexual fluids and blood." The epidemic

of *AIDS* remained unnamed for more than a year before the U.S. Centers for Disease Control gave a name to it. At one point it was called *K.S.O.I.* (Kaposi's Sarcoma and Opportunistic Infection). In Africa it has since 1985 been called *slim*, after the extreme weight loss suffered by people afflicted with the disease.

ain't. *Ain't*, first recorded in 1706, began life in England as a contraction of "am not" (an't). Once widely used among all classes and quite proper, it became socially unacceptable in the early 19th century, when people began to use it improperly as a contraction for "is not" and "are not" as well as "am not." But "proper" or not, *ain't* is still widely used wherever English is spoken.

ain't fittin' to roll with a pig. Dirty, worthless. "Folks say he ain't fittin' to roll with a pig."

ain't got sense enough to poke acorns down a peckerwood hole. An old rural Americanism said of someone pitifully stupid. A *peckerwood* is a woodpecker but can also mean a poor southern white. See CRACKER; POOR WHITE; REDNECK.

ain't hay. *Hay* has meant a small amount of money in American slang since at least the late 1930s, which is about the same time that this expression is first recorded. Little more is known about the very common *and that ain't hay* for "a lot of money," a saying that I would suspect is older than currently supposed.

ain't he (she) a caution. Isn't he or she remarkable, unusual, or, especially, funny; an old term still heard infrequently. Could be a variation of *ain't he a corker*, once frequently heard among Irish Americans.

ain't never seen no men-folks of no kind do no washing no-how. A forceful example of the use of the double negative heard in the Ozark mountains. Though considered ignorant today, such double negatives have strong links with Elizabethan England, when the double negative was simply employed as a stronger, more effective negative. Shakespeare, in fact, wrote: "Thou hast spoken no word all this while, nor understood none neither."

ain't no big thing. It's not important. The saying derives from a song popularized by the late Hawaiian singer Don Ho.

ain't no place in heaven, ain't no place in hell. Nowhere for one to go, limbo. The expression is from an old African-American folk song quoted in William Faulkner's *Sanctuary* (1931): "One day mo! Ain't no place fer you in heaven! Ain't no place fer you in hell! Ain't no place fer you in white folk's jail! Whar you gwine to?"

air ball. Today's fans would have trouble deciphering newspaper accounts of 19th-century baseball games. Consider this description of a shortstop catching a pop-up or short fly ball. Wrote a reporter in the *Chicago Times* on July 26, 1867: "Williams hit an air ball which was sugared [caught] by Barnes at short stop." An air ball is what we call a pop fly today.

Airedale terrier. First called a “*Bingley*” *terrier* after the Bingley district in Yorkshire, England, the dog’s name was officially changed to *Airedale* in 1886 (the Aire River runs through Bingley). *Terrier*, from the Latin *terra* (“earth”), means a dog that “takes to earth,” a reference to the terrier digging into burrows for badgers and other prey.

airplane. See FLYING MACHINE.

air quotes. These could be called *finger quotes*, but *air quotes* is better, that is, imaginary quotes inscribed in the air by the fingers when speaking and quoting something, instead of saying “quote, unquote.” The practice seems to have increased over the past five years or so. For more on the procedure, see QUOTES, QUOTATION.

air raid. In his final play, *On the Eve*, the prolific Russian dramatist Alexander Nikolayevich Afinogenov (1904–41) expressed outrage at the Nazi invasion of the Soviet Union. He was killed in a German air raid on Moscow.

airtights. Canned food was called “*airtights*” by cowboys in the American West during the latter part of the 19th century. Canned beef was *meat biscuit* or *beef biscuit*.

airy way. Once a common term for an areaway of apartment houses. In the *airy way* garbage cans, rarely called trash cans, were kept for the garbagemen (sanitation workers today) to pick up, usually to the side of a building against a fence. Garbagemen in the 1930s, when the term probably originated, lifted not only garbage but cans of coal ashes so heavy that they required two men to dump them into the garbage truck.

aisle. *Aisle* strictly means a section of a church or auditorium, deriving from the Latin *ala*, “wing,” and that is how the word has been used by the British until relatively recently. But Americans have long used *aisle* to mean a passageway in a church, auditorium, or elsewhere, and this usage is becoming universal.

A.K. A euphemism for “*ass kisser*,” one who curries favor. The term has been widely used for well over 50 years in the New York City area, among other places, especially by children. The same initials are also very common for an *alter kocker*, which means a crotchety old man or “old fart” in Yiddish. *Kocker* in Yiddish literally means “crapper” or “shitter.”

akimbo. *In kene bowe* meant “in a sharp bend” in Middle English. It is believed that *akimbo*, for a hand resting on the hip, comes from the mispronunciation of this phrase, the shape of the arm in this position resembling “a sharp bend.”

Alabama. “The Cotton State,” our 22nd, took the name *Alabama* when admitted to the Union in 1819. *Alabama* is from the Choctaw *alba ayamule*, which means “I open the thicket,” that is, “I am one who works the land, harvests food from it.”

Alabama egg. See HOBO EGG.

alabaster. The name of this variety of gypsum derives from the Greek *alabastos*, which in turn is said to come from the name of an ancient Egyptian town where it was found. Because the substance is often white and translucent, *alabaster* has also come to mean smooth and white, as in “her alabaster skin.”

à la Comanche. To ride a horse by hanging onto one side, as the Comanches used to do to protect themselves in battle while they fired arrows from under the horse’s neck. The technique has been depicted in scores of Western movies.

alamo. The name of several poplar trees, including the cottonwood; from the Spanish *alamo* meaning the same. The Alamo is also the name of a Franciscan mission in San Antonio, Texas, besieged by 6,000 Mexican troops in 1836 during the Texan war for independence. The siege lasted 13 days and ended with all 187 of the defenders being killed. “Remember the Alamo!” became the Texan battle cry of the war. The most recent use of the Alamo’s name is San Antonio’s Alamo-dome sports stadium constructed in 1992 at a cost of \$130 million.

Alan Smithee. Just as “George Spelvin” is used in play or movie credits as the name of an actor playing a part anonymously, “Alan Smithee” is sometimes used as the name for a director or producer who desires anonymity. A recent film jokingly used the pseudonym as part of its title: *An Alan Smithee Film: Burn Hollywood Burn* (1998). See GEORGE SPELVIN.

alarm; to arms. *Aux armes! Aux armes!* was the Old French military call when a sentry spotted the enemy coming. This became the English *At arms! At arms!* and finally the more recent *To arms! To arms!* Though these were all signals indicating danger, it was, strangely enough, the Italian expression *all’arme!* meaning the same thing, that passed into English as *alarme* and became the English word *alarm*, “a warning.”

alas. Our *alas*, expressing grief or unhappiness, is recorded as early as 1260. It derives from the Old French *ah, las!*, “oh weary [me]!”

Alas, poor Yorick. The famous passage from *Hamlet* in which the prince holds the old jester’s skull in his hand and reflects on the variety of life is thought by some to be a funeral oration commemorating the most noted of English clowns, Richard Tarleton (d. 1588). A very short, broad man who was one of the Queen’s Men, Tarleton was immensely popular in his day for his quick wit, jests, jig-dancing, singing, and comic acting. As a boy Shakespeare may well have known him, and Tarleton may even have carried little Willie on his back on one of his visits to Stratford as a traveling actor: *Alas, poor Yorick! I knew him, Horatio, a fellow of infinite jest, of most excellent fancy. He hath borne me on his back a thousand times; and now, how abhor’d in my imagination it is! My gorge rises at it. Here hung those lips that I have kiss’d I know not how oft. Where be your gibes now; your gambols, your songs, your flashes of merriment that were wont to set the table on a roar? Not one now to mock your own grinning? Quite chopfall’n? Now get you to my lady’s chamber, and tell her, let her paint an inch thick, to this favour she must come: Make her laugh at that.*

Alaska. SEWARD'S FOLLY, SEWARD'S ICEBOX, Seward's iceberg, Icebergia, and Walrussia were all epithets for the 600,000 square miles now known as Alaska. All of these denunciations today honor one of the great visionaries of American history, William Henry Seward. Seward's most important work in Andrew Johnson's administration was the purchase of Alaska, then known as Russian America, from the Russians in 1867. Negotiating with Russian Ambassador Baron Stoeckl, the shrewd lawyer managed to talk the Russians down from their asking price of \$10 million to \$7.2 million, and got them to throw in a profitable fur-trading corporation. The treaty was negotiated and drafted in the course of a single night and because Alaska was purchased almost solely due to his determination—he even managed to have the treaty signed before the House voted the necessary appropriation—it was widely called “*Seward's folly*” by irate politicians and journalists. Seward himself named the new territory Alaska, from the Aleut *A-la-as-ka*, “the great country.”

Albany beef. Sturgeon was once so plentiful in New York's Hudson River that it was humorously called *Albany beef*. The term is first recorded in 1791 and was in use through the 19th century; sturgeon caviar was so cheap in those days that it was part of the free lunch served in bars. Cod was similarly called *Cape Cod turkey* in Massachusetts.

albatross. Probably the subject of more legends than any other sea bird, the albatross takes its name from a corruption of the Portuguese *alcatraz*, meaning “large pelican.” Dubbed “gooney birds” because of their clumsy behavior, the big albatrosses—whose wingspans often reach 12 feet, greater than that of any other bird—frequently lumber about the decks of ships, unable to take off after they land because of the cramped space, and actually get as seasick as any landlubber. Another name for them is “mollymawks” or “mollyhawks,” from the Dutch *mollemok*, “stupid gulls.” Despite their apparent stupidity and stubbornness—nothing can force them to abandon their nesting sites, as the U.S. Navy learned at Midway Island—and their poor flying ability when there is no wind current, albatrosses have managed to thrive. They are also called Cape Hope sheep.

Albion, Perfidious Albione. No place in England is more than 75 miles from the sea; the sea is the very soul of the nation and is even responsible for its poetical name, Albion, which may derive from the name of the giant son of Neptune, who according to legend founded the country and ruled over it for 44 years. Another story states that the king of Syria's 50 daughters, married on the same day, all murdered their husbands on their wedding night and as a punishment were put to sea in a ship and set adrift. They came ashore in Britain, which was named Albion for the oldest daughter, Alba. *Albion* could also derive from the Latin *albus* (white), describing the white cliffs of Dover, or from the Celtic *alp*, rock or crag, also describing the cliffs. *New Albion* is the name Sir Francis Drake gave to the area north of what is now San Francisco on his voyage of 1579. The term *Perfidious Albione*, an English translation of the French *la perfide Albion*, refers to Britain's alleged deceitful policy toward foreigners. It was apparently coined by French preacher Jacques Bossuet (1627–1704), sometimes called France's greatest ora-

tor, but it wasn't much used until Napoleon's military recruitment drive in 1813. Another possible coiner of the term is the marquis de Ximenes (1726–1817).

album. The Romans called the white tablet on which edicts were written an *album*, from the Latin *albus*, “white.” In English *album* came to mean any empty book for entering or storing things, especially photographs, only the wedding album still being traditionally white. A record album, a collection of songs, derives from the same root.

Alcatraz. The former high-security prison in San Francisco Bay takes its name from the island on which it is situated. *Alcatraz Island* was so named by an early Spanish explorer, who named it after the many pelicans he saw there, *alcatraz* being the Portuguese for pelican. First a Spanish fort and then a U.S. military prison, it was made in 1933 a federal prison for dangerous inmates from other locations. Alcatraz, closed in 1963, was nicknamed *The Rock* after the rocky island on which it stands. Among its many infamous inmates were Al Capone and Machine Gun Kelly, none of whom managed to escape so far as is known.

alchemilla; lady's mantle. Grown for their silvery leaves, these plants derive their name from the Arabic word *alkemelych*, which refers to their use in the past by alchemists who collected dew from their leaves for operations. They are also called “*lady's mantle*,” after the Virgin Mary, to whom the plant was dedicated.

alcinoo poma dare. Alcinous, legendary king of Phaeacians on the island of Scheria, who entertained Odysseus, had the most renowned and prolific orchards of ancient time. *Alcinoo poma dare*, to give apples to Alcinous, was long proverbial for to do what is superfluous, as to CARRY COALS TO NEWCASTLE.

alcohol. One apocryphal tale claims that an Arab named Jabir ibn Hazzan “invented” alcohol in about A.D. 800 when he discovered the process of distilling wine. In trying to find the intoxicating agent in wine he distilled *alkuhl*, which meant “a finely refined spirit.” According to the story, the word itself was adopted from the name for an antimony powder used at the time as an eyelid cosmetic (an ancient eye shadow). More sober etymologists will only say that *alcohol* derives from the Arabic *alkuhl*, powdered antimony, or the distillate.

aleck. A name for the black or roof rat, perhaps because it is among the smartest of rats, a “smart aleck,” or possibly because it is also called the Alexandrine rat.

alewife. One early traveler in America, John Josselyn, seems to have thought that this plentiful fish was called the *alewife* because it had “a bigger bellie” than the herring, a belly like a wife who drank a lot of ale. More likely the word is a mispronunciation of some forgotten American Indian word.

Alexander. A cocktail made with creme de cacao, gin or brandy, and sweet cream, said to have been invented by and named for American author Alexander Woollcott in about

1925. “The lethal mixture . . . tasted like cream,” actress Helen Hayes once said. “I drank one down and took another and drank it down, and I was blind.”

Alexander Hamilton. Sometimes used as a term for one’s signature, similar to the use of JOHN HANCOCK or JOHN HENRY. The term, of course, comes from the name of American statesman Alexander Hamilton (1757–1804).

Alexander the Corrector. One of the great censors to be found in these pages (see BOWDLERIZE; COMSTOCKERY). Alexander Cruden (1701–1770) believed himself divinely appointed to reform England, suffered periodic attacks of insanity, and was confined in lunatic asylums several times. Cruden compiled a highly regarded *Biblical Concordance*, but would be more valued today for his peculiar form of censorship. He was called “Alexander the Corrector” because he had a penchant for going about London with a sponge and erasing all the “licentious, coarse and profane” graffiti he saw. Cruden was found dead in an attitude of prayer.

Alexandria. Ancient *Alexandria* in the Nile delta was founded in 332 B.C. by Alexander the Great, the king of Macedonia, the *Alexandrine verse* or line of poetry derives from a French poem written about him, and the *Alexandrine rat*, or roof rat, indirectly comes from his name, via the Egyptian city. Great though he was in war and statecraft, Alexander’s personal life was a loss. Excluding the Sicilian ruler Dionysius, he is probably the only king to die from overindulging in drink. One story has it that a six-day drinking bout led to his death, while another claims that his wife, Roxana, persuaded him to plunge intoxicated into an ice-cold pool, causing the conqueror of Persia to die of a high fever at the tender age of 33. Robert Graves, however, points out that Alexander may have died from poisoning after a mushroom orgy rather than a drunken one.

Alfred Hitchcock. Hitchcock confirmed the old story that his father, a London greengrocer, sent him with a note to the local chief of police when he was a child. After reading the note, the chief had him locked in a jail cell for five minutes, finally letting him out with the warning “That’s what we do to naughty boys.” This incident instilled in him a morbid fear of the police. The reason he never learned to drive, he revealed, is “the simple fact that if you don’t drive a car, you can’t get a ticket.” Such personal fears, apparent in his films, can also be attributed to the cruel punishments he suffered at the Jesuit school he attended. See HITCHCOCKIAN ENDING.

alfresco. Now widely used in the United States, *alfresco*, meaning outdoors (as in “We dined alfresco”), is first recorded in 1853 as a borrowing of the Spanish *al fresco*, meaning the same.

alga. Snow in Arctic and Alpine regions that appears red has often been regarded as a supernatural portent of evil. It is actually caused by the presence of large numbers of the minute alga *Protococcus nivalis*. *Alga*, from the Latin *alga*, “seaweed,” are simple microscopic flowerless plants, ranging from those that coat ponds with green scum to giant seaweeds 100 feet long.

alibi. “We the jury, find that the accused was *alibi*,” was the verdict in one 18th-century criminal trial. This simply meant that the defendant was “elsewhere” when the crime was committed, and therefore innocent. Over the centuries, the Latin *alibi*, for elsewhere, was used so often in the courts in this sense that it entered everyday speech as both the synonym for an accused criminal’s “story” and an excuse, often a spurious one, in general.

Alibi Ike. Someone who is always making excuses or inventing alibis is called “Alibi Ike.” The designation was invented by Ring Lardner in his short story “Alibi Ike” (1914) as a nickname for outfielder Frank X. Farrell, so named because he had excuses for everything. When Farrell drops an easy fly ball, he claims his glove “wasn’t broke in yet”; when questioned about last year’s batting average he replies, “I had malaria most of the season”; when he hits a triple he says he “ought to had a home run, only the ball wasn’t lively,” or “the wind brought it back,” or he “tripped on a lump o’ dirt roundin’ first base”; when he takes a called third strike, he claims he “lost count” or he would have swung at and hit it. The author, who had a “phonographic ear” for American dialect, created a type for all time with Alibi Ike, and the expression became American slang as soon as the story was published. In an introduction to the yarn the incomparable Lardner noted, “The author acknowledges his indebtedness to Chief Justice Taft for some of the slang employed.”

Alice; Alice in Wonderland. For over a century Lewis Carroll’s *Alice in Wonderland* (1865) has been the most famous and possibly the most widely read children’s book. That there is an *Alice* cult even among adults is witnessed by the numerous works of criticism devoted to the book, which has been translated into Latin. The model for the fictional Alice was Alice Liddell, daughter of Dean Henry George Liddell, noted coauthor of *Liddell & Scott’s Greek Lexicon*, still the standard Greek-English Dictionary. Carroll, his real name being Charles Lutwidge Dodgson, wrote *Alice* for his friend’s daughter, who later became Mrs. Reginald Hargreaves. The author apparently made up the story while on a picnic with Alice and her sisters, actually improvising the classic tale as the group rowed up a river. Incidentally, Carroll is regarded as the greatest 19th-century photographer of children and his best pictures were of Alice Liddell. An *Alice*, in allusion to *Alice in Wonderland*, is sometimes used to refer to a person newly arrived in strange, fantastic surroundings.

Alice blue. Alice blue is one of several colors named for real people. The shade signalizes Alice Roosevelt Longworth, daughter of President Theodore Roosevelt, who favored the pale greenish or grayish blue. Mrs. Longworth is the witty lady who said of Calvin Coolidge: “He looks as if he had been weaned on a pickle.” Princess Alice, as she was called, was born on February 12, 1884; her mother, Alice, died from Bright’s disease, a kidney inflammation, two days after her birth, on the same day that Theodore Roosevelt’s mother died of typhoid fever. On February 17, 1906, Alice married Congressman Nicolas Longworth of Ohio in an elegant East Room wedding in the White House. Mrs. Longworth long remained a leader of Washington society, her name and the color Alice blue rendered familiar by the tune “Alice Blue Gown,” which she inspired. See COOLIDGE EFFECT; I DO NOT CHOOSE TO RUN.

alien corn. See CORN.

alive and kicking. Though it is a cliché by now, this expression has an interesting history. Meaning alert and active, *alive and kicking* apparently goes back to the 18th century, when it was first used by London fishmongers in reference to the fresh fish flapping about in their carts.

alkahest. The alkahest was the universal solvent of alchemy that supposedly dissolved anything, the word being coined from Arabic by the Swiss alchemist Theophrastus Bombastus von Hohenheim (1490–1541), who also coined his own pseudonym. This charlatan called himself Paracelsus, from the Greek *para*, “beyond,” plus *Celsus*, the name of a prominent first-century physician—thus advertising himself as beyond or better than the much esteemed Celsus!

alkali. Arab chemists in medieval times extracted sodium carbonate from the marine saltwort plant, calling the substance *al-qaliy*, “ashes of salt wort.” Later chemists applied the term *alkali*, a transliteration of the Arab word, to all salts with properties similar to sodium carbonate.

alkalied. (1) Poisoned by alkaline water. Cowboys believed that cattle so poisoned could be cured by feeding them a plug of tobacco wrapped in slices of bacon; cuts caused by alkalied dust were said to be healed by applying canned tomatoes, which are acidic. It is not known, however, that toxic alcohol found in certain plains plants causes so-called alkali poisoning. (2) Someone seasoned in the ways of the West, an old hand, a veteran, especially a veteran of what was called “the big dry country,” the alkali plains.

Alka-Seltzer. A Miles Laboratory trademark, *Alka-Seltzer*, an antacid taken for the relief of an upset stomach or a headache, was coined from *alkaline*, the opposite of *acid*, and *seltzer* water (from the medicinal mineral water at Neider-Selters in Germany). *Seltzer* was suggested by the effervescence of the analgesic preparation.

all aboard! This common train conductor’s call is an Americanism, first recorded in 1837, and is nautical in origin. Wrote Joshua T. Smith in his *Journal in America* (1837): “They [the Americans] describe a situation by the compass ‘talk of the voyage’ of being ‘all aboard’ & etc.; this doubtless arises from *all* their ancestors having come hither over ocean & having in the voyage acquired nautical language.” The call *all aboard!* was used on riverboats here before it was used on trains.

all-American. Walter Chauncey Camp, “the Father of American Football” who formulated many of the game’s rules, picked the first all-American football team in 1889 along with Caspar Whitney, a publisher of *This Week’s Sport Magazine*. But the idea and designation was Whitney’s and he, not Camp, should be credited with introducing *all-American* to the American lexicon of sports and other endeavors. See ALL-STAR GAME.

all animals are equal, but some animals are more equal than others. Several sources credit this coinage to George Orwell in his 1945 classic *Animal Farm*. However, William Safire in his

New York Times “On Language” column (November 5, 2006) attributes the invention to American author Ambrose Bierce in the San Francisco *Wasp* of September 16, 1882. Bierce (1842–1914) was the author of a large body of work, including *The Cynic’s Word Book* (1906); *The Devil’s Dictionary* (1911); and *Fantastic Fables* (1899). William Safire’s piece points out that the soon-to-be-published *Yale Book of Quotations* will contain the Bierce attribution, which reads exactly “All men are created equal. Some, it appears, are created a little more equal than others.” Thomas Jefferson, of course, used the stirring “all men are created equal” in the Declaration of Independence.

all at sea. Early mariners hugged the coastlines because their navigational aids were crude and inaccurate. But often they were blown far out to sea where they had no landmarks to guide them. The expression *all at sea* described their plight perfectly, as anyone ever caught in rough, open seas will testify, and the term was soon used to describe the condition of any helpless, bewildered person.

all chiefs and no Indians. Many businesses have experienced trouble because they had all chiefs and no Indians, that is, too many officers who want to do nothing but give orders to others. The origin of this common worker’s complaint has been traced to about 1940 in Australia, where the expression was first *all chiefs and no Indians, like the University Regiment*. Yet the first half of the expression has an American ring, and one suspects that some determined word sleuth might turn up an earlier printed use in the United States.

all dressed up and no place to go. Said to have originated in a 1915 song by U.S. comedian Raymond Hitchcock. The words are still heard today but nowhere nearly as often as they once were.

all ears. *I’m all ears*, I’m listening attentively, is hardly modern slang, being at least three centuries old. Its first recorded use in this precise form is by Anthony Trollope in 1865. But over two centuries before this Milton wrote in *Comus* (1634): “I was all ear,/And took in strains that might create a soul/Under the ribs of death.”

alley-oop. This interjection may have been coined by American soldiers during World War I, for it sounds like the French *allez* (“you go”) plus a French pronunciation of the English *up*—hence *allez oop*, “up you go.” During the 1920s *allez-oop* (often spelled *alley-oop*) was a common interjection said upon lifting something. The expression became so popular that a caveman comic strip character was named Alley Oop. Soon *alley-oop* became a basketball term for a high pass made to a player near the basket, who then leaps to catch the ball and, in midair, stuffs it in the basket. In the late 1950s, San Francisco 49er quarterback Y. A. Tittle invented a lob pass called the *alley-oop* which was thrown over the heads of defenders to tall, former basketball player R. C. Owens.

all fogged up. Confused. William Faulkner wrote in *The Tall Men* (1941): “You just went out and got yourself all fogged up with rules and regulations. That’s our trouble. We done invented ourselves so many alphabets and rules and recipes that we can’t see anything else . . .”

all foreign fruit, plants are free from duty. This is the classic example of the importance of proper punctuation. In the 1890s a congressional clerk transcribing a new law was supposed to write: “All foreign fruit-plants are free from duty” but changed the hyphen to a comma and wrote: “All foreign fruit, plants are free from duty.” Before Congress could amend his error, the government lost over \$2 million in taxes.

all for one and one for all. The motto of the Three Musketeers in Alexandre Dumas’s novel *The Three Musketeers* (1844). Still widely read and made into movies, the novel describes the swashbuckling adventures of the immortal trio, Athos, Porthos, and Aramis, mounted guards of the French king, and their friend d’Artagnan, who was based on a musketeer of Louis XIV.

all good Americans go to Paris when they die. See MUTUAL ADMIRATION SOCIETY.

all gussied up. A gusset, (probably from the French *gousset*, “pod, or shell of nuts”) is a triangular piece of material inserted into a garment to make it more comfortable, and perhaps more fashionable because it fits better. *Gusseted* means to have a gusset or gussets in clothing and may have become corrupted in everyday speech to *gussied*. Someone with many gussets in her dress, many improvements in it, might have been called “all gussied up,” which could have come to mean “to be dressed in one’s best clothes.” This is all guesswork, but it is the best explanation we have for the phrase, which dates back to the 17th century.

all hands and the cook. *All hands and the cook on deck!* was a cry probably first heard on New England whalers in the early 19th century when everyone aboard was called topside to cut in on a whale, work that had to be done quickly. Fishermen also used the expression, and still do, and it had currency among American cowboys to indicate a dangerous situation—when, for example, even the cook was needed to keep the herd under control.

all hat and no cattle. A Texan phrase describing someone who acts rich or important but has no substance, such as a person who pretends to be a cattle baron, even dressing the part: “He’s all hat and no cattle.”

all his bullet holes is in the front of him. A colorful phrase describing a brave man, not a coward, coined by cowboys in late 19th-century America.

alligator. The biggest lizard that the Romans knew was about the size of the forearm and was thus named *lacertus* (“forearm”), which eventually came into Spanish use as *lagarto*. When the Spaniards encountered a huge New World saurian that resembled a lizard, they called it *el lagarto*, “the lizard,” putting the definite article before the noun as they are accustomed to doing. Englishmen assumed this to be a single word, *elagarto*, which in time became corrupted in speech to *alligator*. This is probably the way the word was born, but much better is an old story about an early explorer sighting the creature and exclaiming, “There’s a lagarto!” Less dangerous than the crocodile, the alli-

gator does have a worse “bark”: it is one of the few reptiles capable of making a loud sound. See also CROCODILE TEARS.

alligators-in-the sewers legend. A story dating back to the 1930s or early 1940s holds that full-grown alligators live in the sewers beneath New York City, flushed there as foot-long pets when kids or their parents tired of them. The phrase *alligators-in-the sewers legend* has since been used humorously to indicate something mythical or untrue. Columnist George Vecsey wrote in the *New York Times* (September 24, 2004): “The alligator-in-the-sewers legend is that [Harry] Frazee, who owned the Red Sox, sold Babe Ruth to the Yankees after the 1919 season to finance a new show called *No, No, Nanette*. Only in the past few years has it been drummed into our brains that *Nanette* did not appear on Broadway until 1925.”

all I know is what I read in the papers. This saying has become a popular American expression since Oklahoman Will Rogers coined it in his *Letters of a Self-Made Diplomat to His President* (1927). It has various applications but is commonly used to mean “I’m not an expert, just an ordinary person, and what I’ve told you is true to the best of my knowledge.” It implies one may be wrong because one’s sources are not infallible.

all in the same boat. Just more than a century old, this saying means that two or more people are sharing the same risks or living under similar conditions. It may derive from some unknown situation when two or more people were adrift in the same lifeboat, or it may even come from the earlier expression “to stick” or “have an oar in another’s boat”; that is, to meddle in someone else’s affairs, which dates back to the 16th century.

all is lost save honor. After Francis I of France was defeated by Spain’s Charles V at Pavia, Italy in 1525, captured, and forced to sign a humiliating treaty, he sat down and wrote to his mother. His actual words were not so eloquent, but the most memorable phrase in his letter was translated into English as *All is lost save honor*. Despite the fact that Francis soon lost his honor by breaking the treaty, the sentiments of this patron of Rabelais and creator of Fontainebleau became proverbial.

alliteration. An old device (older than rhyme) used in poetry, and less commonly in prose, which consists of the repetitions of an initial sound in two or more words of a phrase, line, or sentence. The word derives from the Latin for “repeating and playing upon the same letter.” A good example is Tennyson’s line, “The moan of doves in immemorial elms / And murmuring of innumerable bees.” The device has been much used and much abused. The poet Huchbald, who flourished in the ninth century, wrote the *Eclogue on Baldness*, which he appropriately dedicated to the king of the Franks and Holy Roman Emperor Charles the Bald. The 146-line poem has been called “a *reductio ad absurdum* of alliteration,” every word beginning with the letter *c*. Better known is the 1817 alliterative alphabetic poem by B. Poulter that begins “An Austrian army, awfully arranged/Boldly by battery, besieged Belgrade . . .”

all men make faults. See ROSES HAVE THORNS.

all mouth and no ears. Proverbial for someone who tries to dominate every discussion, won’t listen, won’t yield the floor,

and has a big mouth. The first recorded use of the term is unclear, but similar sentiments have been expressed by writers since ancient times. Zeno of Citium (ca. 335–ca. 263 B.C.), the founder of the Stoic school, remarked to a pupil who talked in class excessively: “The reason why we have two ears and only one mouth is that we may hear more and talk less.”

all my eye and Betty Martin. This saying may have originated when a British sailor, looking into a church in an Italian port, heard a beggar praying “*An mihi, beate Martine*” (“Ah, grant me, Blessed Martin”) and later told his shipmates that this was nonsense that sounded to him like “All my eye and Betty Martin.” Most authorities dismiss this theory summarily, especially because *Joe Miller’s Jests* included the story, but St. Martin was the patron saint of beggars. One etymologist tells us that “no such Latin prayer is to be found in the formulary of the Catholic Church” and another claims to have in his possession “a book of old Italian cosmopolitan life . . . [that] mentions this prayer to St. Francis by beggars.” It seems likely that beggars would have recited such a prayer and so the story has some basis in fact, more at least than linguists have been willing to admit. Meanwhile, there is no better identification of “Betty Martin.”

all oak and iron bound. A 19th-century Americanism meaning in the best of health and spirits, as in “He’s feeling all oak and iron bound.” The comparison is to a well-made barrel. Oak alone is a hard, strong, durable material.

all-overs. An American southernism that goes back to at least the early 19th century, the *all-overs* describes a general state of nervousness. Something close to it is first recorded in an 1820 song entitled “Oh, What a Row”: “I’m seized with an all-overness, I faint, I die!”

all over the ballpark. Anyone or anything very confused and unfocused can be said to be all over the ballpark. The expression, dating back to the 1850s, is from baseball, where it refers to a pitcher who can’t find the plate.

all quiet on the Potomac. Syla Clapin explained this phrase in *A New Dictionary of Americanisms* (1902): “A phrase now become famous and used in jest or ironically as indicative of a period of undisturbed rest, quiet enjoyment, or peaceful possession. It originated with Mr. [Simon] Cameron, Secretary of War during the Rebellion [Civil War], who made such a frequent use of it, in his war collections, that it became at last stereotyped on the nation’s mind.” E.L. Beers published a poem in *Harper’s Weekly* (Nov. 30, 1861) extending the expression: “All quiet along the Potomac, they say, / ‘Except now and then, a stray picket / is shot, as he walks on his beat to and fro. / By a rifleman hid in the thicket.’” General George McClellan is also said to have invented the phrase. See ALL QUIET ON THE WESTERN FRONT.

all quiet on the western front. Although it may owe something to the Civil War slogan ALL QUIET ON THE POTOMAC, this phrase became well known in World War I because it was often used in communiqués from the western front, a 600-mile battle line that ran from Switzerland to the English Channel and was in reality far from quiet just with the moans of the wounded

and dying. The most famous use of the words is in the title of Erich Maria Remarque’s great antiwar novel, *All Quiet on the Western Front* (1929).

all roads lead to Rome. The ancient Romans built such an excellent system of roads that the saying arose *all roads lead to Rome*, that is, no matter which road one starts a journey on, he will finally reach Rome if he keeps on traveling. The popular saying came to mean that all ways or methods of doing something end in the same result, no one method being better than another.

all she wrote. That’s the end of it, it’s finished. *That’s all she wrote* is first recorded in 1948 as college slang, but probably dates back before World War II and is now common country-wide. It may have derived from the “Dear John” letters breaking up relationships that some soldiers received from wives and sweethearts while away from home. This appears to be indicated by its use in James Jones’s novel *From Here to Eternity* (1951), which takes place just before World War II: “All she’d have to do, if she got caught with you, would be to holler rape and it would be Dear John, that’s all she wrote.”

all shook up. The Elvis Presley song of this name helped to popularize the expression when he recorded it in 1958, but these words meaning “very excited, disturbed, worried” originated 10 years or so before, probably as slang associated with the rock-and-roll music becoming popular at the time.

allspice. Allspice, or pimento (*Pimenta dioica*), is the dried, unripe berry of an aromatic 20- to 40-foot tree now found generally in Jamaica and other West Indian islands. It should not be confused with pimientos, the fruits of certain capsicum garden peppers. Allspice has long been regarded, and feared, as an aphrodisiac. Pious Peter the Venerable forbade the monks under his charge at Cluny in 1132 to eat pimiento because it was “provokative to lust.” Allspice takes its name from the fact that the berry smells and tastes something like cinnamon, nutmeg, and cloves combined.

all’s right with the world! This saying is frequently misquoted as “all’s well with the world.” The words are from Robert Browning’s dramatic poem “Pippa Passes” (1841) and is one of the songs of Pippa, a young girl who passes through town on her yearly holiday. Unknown to her, each of her songs affects and changes the lives of people who hear them, the best-known one filling a murderer with remorse for what he has done:

The year’s at the spring,
And day’s at the morn;
Morning’s at seven;
The hill-side’s dew-pearled;
The lark’s on the wing;
The snail’s on the thorn:
God’s in his heaven—
All’s right with the world!

All-Star Game. The idea for an All-Star Game between the American and National baseball leagues came from *Chicago Tribune* sports editor Arch Ward in 1933. Under Ward’s plan, fans voted for the best players and the winners played each

other. In most seasons since then the fans have picked the teams, but balloting is now conducted by the national newspaper *U.S.A. Today*. Babe Ruth hit a home run in the first All-Star Game, or Midsummer Dream Game, as it is sometimes called. The premiere was played in 1933 at Chicago's Comiskey Park as a special feature of the Chicago World's Fair. Football's Pro Bowl was called the All-Star game until its name was changed in 1951. See ALL-AMERICAN.

all's well that ends well. This famous phrase wasn't coined by Shakespeare as the title of his comedy *All's Well That Ends Well* (1603). According to several sources, including the *Concise Oxford Dictionary of Proverbs*, the words were proverbial long before the Bard, as far back as the 14th century, and perhaps longer.

all systems go. All preparations have been made and the operation is ready to start. Widely used today, the expression originated with American ground controllers during the launching of rockets into space in the early 1970s.

all that glitters is not gold. "Do not hold everything gold that shines like gold," French theologian Alain de Lille wrote as far back as the 12th century. Since then Chaucer, Cervantes, and Shakespeare have all contributed variations on the saying. Its present form originated with English author John Dryden in his *The Hind and the Panther* (1687): "All, as they say, that glitters is not gold."

all that meat and no potatoes. An exclamation of pleasure and admiration by a man on seeing a woman with an attractive figure, although the term and/or the exclamation might be offensive to many women. See POTATO; MEAT AND POTATOES; HOT POTATO.

all the bullet holes in the front of him. John Wayne's scout in *Red River* may have invented this saying, or perhaps he was just the first to use the line in a movie: "I'm not ashamed of him," he says of someone trying to prove himself in a fight with an Indian, "all the bullet wounds are in the front of him."

all the news that's fit to print. Adolph S. Ochs purchased the *New York Times* in 1896 and raised it to the eminent position it enjoys today. Instead of participating in the YELLOW JOURNALISM of the day, he chose the high road, adopting two slogans to make his intentions clear. One, still used, was the famous "All the news that's fit to print." The other was "It does not soil the breakfast cloth."

all the tea in China. All the tea in China would be nearly 600,000 tons, according to the 1985 estimates of the United States Department of Agriculture. It may be an Americanism, but this expression denoting a great sum probably is of British origin and over a century old; the trouble is that no one has been able to authoritatively pin it down.

all the traffic will bear. Partridge's definition of this catchphrase is "The situation, whether financial or other, precludes anything more." Because it literally relates to railroad fares and

freights, the expression, which is first recorded in the United States circa 1945, may originally be the cynical words of a railway magnate.

all the world's a stage. Shakespeare used this phrase in *As You Like It* (1598–1600): "All the world's a stage, / And all the men and women merely players." About 20 years before this, Guillaume de Salluste, seigneur du Bartas (1544–90), wrote in *Divine Weekes and Workes* (1578): "The world's a stage, where God's omnipotence, / His justice, knowledge, love, and providence Do act the parts." Other well-known phrases that the French poet used before Shakespeare, suggesting that the English bard was familiar with his work, include: *night's black mantle*, for which Shakespeare has *night . . . with thy black mantle* (*Romeo and Juliet*, 1594); *the four corners of the world*, which Shakespeare has as *the three corners of the world* (*King John*, 1596); *these lovely lamps, these windows of the soul*, which Shakespeare has as *the windows of mine eyes* (*King Richard III*, 1592); and *in the jaws of death*, which Shakespeare has as *out of the jaws of death* (*Twelfth Night*, 1598).

all things are difficult before they are easy. A coinage of British physician Thomas Fuller (1654–1734) in his *Gnomologia* (c. 1732).

all this for a song. The phrase, reflecting an often prevalent attitude toward poetry, was spoken by William Cecil, Lord Burleigh, England's Lord Treasurer under Queen Elizabeth, when the Queen ordered him to give 100 pounds to Edmund Spenser as a royal gratuity for writing *The Faerie Queene*. Burleigh was later satirized in Richard Sheridan's *The Critic*, in which he comes onstage but never talks, just nodding because he is much too busy with affairs of state to do more. This inspired the expression *Burleigh's nod* and *as significant as a shake of Burleigh's head*.

all thumbs. *All thumbs* for a clumsy person, or someone with no dexterity has its roots in an old English saying first recorded in John Heywood's *Proverbs* (1562): "Whan he should get ought, eche fynger a thumbe."

all vines an' no taters. An Americanism of the 19th century used to describe something or someone very showy but of no substance. "He'll never amount to nothin'. He's all vines and no taters." Probably suggested by sweet potato plants, which produce a lot of vines and, if grown incorrectly, can yield few sweet potatoes.

all washed up. At the end of a day's work a factory worker usually washes his hands. From this notion of washing hands after finishing a job came the expression *all washed up*, finished with anything, which led to its later meaning of a business failure, finished with everything, or anything that has become obsolete and unfashionable. The expression dates back to the early 1920s.

all wool and a yard wide. Dating back at least to the late 19th century, this expression may have originated during the Civil War, when SHODDY, cloth made from reprocessed wool and

supplied to the Union Army, often literally unraveled on a wearer's back. The phrase has come to mean something or someone of high quality or reliability, as in "He's all wool and a yard wide."

all wool and no shoddy. Something or someone genuine, trustworthy, pure. SHODDY was a cheap material manufactured during the Civil War.

almanac.

Early to bed and early to rise
Makes a man healthy, wealthy and wise.

The above is just one sample of the shrewd maxims and proverbs, almost all of which became part of America's business ethic, that Benjamin Franklin wrote or collected in his *Poor Richard's Almanac*. This was by no means the first almanac issued in America, that distinction belonging to *An Almanack for New England for the Year 1639*, issued by William Pierce, a shipowner who hoped to attract more paying English passengers to the colonies and whose almanac was (except for a broadside) the first work printed in America. *Poor Richard's* was written and published by Franklin at Philadelphia from 1733 to 1758 and no doubt takes its name from the earlier English *Poor Robin's Almanac*, first published in 1663 by Robert ("Robin") and William Winstanley. Almanacs, which take their name from a medieval Latin word for a calendar with astronomical data, were issued as early as 1150, before the invention of printing, and were compendiums of information, jokes, and proverbs.

almighty dollar. Washington Irving coined the phrase *the almighty dollar* in his sketch called "The Creole Village," first published in 1836: "The almighty dollar, that great object of universal devotion throughout the land, seems to have no genuine devotees in these peculiar villages." But Ben Jonson had used "almighty gold" in a similar sense more than 200 years before him: "that for which all virtue now is sold, / And almost every vice—almighty gold."

almond; Jordan almond. Almonds, which came out of China, are today the most popular of all nuts worldwide. They especially please the Japanese, who often have English signs reading "Almond" outside shops that would otherwise say "Bakery" or "Confectionery" in their own language. But then this ancient nut (mentioned 73 times in the Old Testament) has been associated with beauty and virility for centuries. Rich in protein, amino acids, magnesium, iron, calcium, and phosphorus, and a good source of vitamins B and E, the almond is also a harbinger of spring and the joyous expectancy of new life and love; in fact, the tree's pale pink blossoms appear about the time that the swallows return to Capistrano. The word *almond* has its roots in *amandola*, the medieval Latin word for the nut. Jordan almonds come from Spain; they have no connection with the country named Jordan, as many people assume. The term "Jordan almond" is simply a corruption of the French *jardin amande*, which translates as "garden almond."

aloha. Both a greeting and farewell, the Hawaiian *aloha* means, simply and sweetly, "love." It has been called "the world's loveliest greeting or farewell." Hawaii is of course the ALOHA

STATE, its unofficial anthem "Aloha Oe" (Farewell to Thee) written by Queen Liliuokalani. *Mi loa aloha* means "I love you" in Hawaiian.

"Aloha Oe." The Hawaiian queen Liliuokalani (1838–1917) is the only ruler known to have written a national anthem. A prolific songwriter, she wrote the words to "Aloha Oe" ("Farewell to Thee"), today Hawaii's unofficial state song.

aloha shirt. Although these colorful Hawaiian shirts with bright prints of hula girls, surfers, pineapples, and other Hawaiian subjects date back to the 1920s, they were made famous by manufacturer Ellery Chun (1909–2000), who first mass-produced them. The shirts were made in small Honolulu tailor shops until Mr. Chun, a native Hawaiian and Yale graduate, manufactured them in quantity and coined their name in 1933. They sold for 95 cents apiece during the Great Depression. See ALOHA.

aloha state. See ALOHA, above, for this nickname for Hawaii, which is also called the Crossroads of the Pacific and the Paradise of the Pacific.

aloof. To *stand aloof* was originally a nautical term meaning "to bear to windward," or luff, which derives from the Dutch *loef*, meaning "windward." Since a ship cannot sail to windward except by keeping the bow of the ship pointed slightly away from the wind, the term took on the general meaning of "to keep away from," "to keep at a distance," "to be reserved or reticent."

alpha and omega. Everything, the most important part. The expression has its origins in the Greek alphabet, where *alpha* and *omega* are the first and last letters respectively, as well as in the biblical phrase (Rev. 1:7): "I am the Alpha and Omega, the beginning and the ending, saith the Lord."

alphabet. *Alphabet*, Brewer notes, is our "only word of more than one syllable compounded solely of the names of letters"—the Greek *alpha* (*a*) and *beta* (*b*). He goes on to say that the English alphabet "will combine into 29 thousand quadrillion combinations [possible words]," that is, 29 followed by 27 zeros (29,000,000,000,000,000,000,000,000,000). Others dispute this figure, saying the number of combinations of words possible is "only" 1,906 followed by 25 zeros. In any case, remember that these figures were arrived at by using each of the 26 letters of the alphabet *only once* in each combination or word—and they do not include possible compound words, homonyms, etc.! I'd guess that there are now at least 10 times as many English words as the half million or so recorded in the most complete dictionary, there being over 1 million scientific words for organic and inorganic chemical compounds alone. Of the 65 alphabets now used around the world the Cambodian has the most letters, with 72, and the Rotokas, spoken on Bougainville Island in the South Pacific, has the least, with 11. Among others, the Russian alphabet has 41 letters, the Armenian 38, the Persian 32, the Latin 25, the Greek 24, the French 23, the Hebrew 22, the Italian 20, and the Burmese 19. The German and Dutch alphabets, like the English, have 26 letters. Wrote William Walsh in 1892: "The 26 letters of the English alphabet may be transposed 620,448,401,733,239,439,369,000 times. All the

inhabitants of the globe could not in a thousand millions of years write out all the possible transpositions of the 26 letters, even supposing that each wrote 40 pages daily, each page containing 40 different transpositions of the letters.”

Alphard, and other star names. Alphard, the only bright star in the constellation Hydra, was named by Bedouin tribesmen traveling through the desert thousands of years ago. The word comes to us from the Arabic *Fard ash-Shuja*, meaning “the lone one in the serpent.” Surprisingly, most star names are of Arabic origin. Of 183 star names listed in one study, 125 are Arabic (Vega, Algol, etc.), 14 are Latin (Capella, Spica), 9 are Arabic-Latin combinations (Yed Prior), and three are Persian (Alcor). A good number of Arabic star names were bestowed by tribesmen who named the more prominent stars after camels, sheep, birds, jackals, hyenas, frogs, and other animals, but most were named by Arabian astronomers.

Alps. These mountains in southern Europe take their name directly from the Latin *Alps*, the “high mountains,” which is what the ancient Romans called them. The highest peak in the range is Mont Blanc, 15,781 feet.

Alsatian. Another name for the breed of dog called a German shepherd or a police dog in the United States, which originated from anti-German sentiment during World War II. Commonly so called in Britain. Named after the Alsace region in France, which was previously part of Germany.

also-ran. The joy may be in playing, not winning, but *an also-ran* means a loser, someone who competed but didn’t come near winning. The term is an Americanism first recorded (as *also ran*) with political reference in 1904, and derives from horse racing. The newspaper racing results once listed win, place, and show horses before listing, under the heading “Also Ran,” all other horses that finished out of the money.

aluminum. The English word *aluminum* for the metal is the same or very similar in many languages: Italian, *alluminio*; Spanish, *aluminio*; French, *aluminium*; Dutch, *aluminium*; Danish, *aluminium*; Hungarian, *aluminium*; Polish, *aluminium*; Indonesian, *aluminium*; Arabic, *alaminyoum*; and Japanese, *aruminyuumu*. The words are so alike simply because British scientist Sir Humphrey Davy named the metal aluminium when he discovered it in 1812, from the Latin *Alumina*, for “a white earth,” which he used in his experiments.

always be nice to people on your way up—you may meet them on your way down. Not comic Jimmy Durante but humorist Wilson Mizner invented this catchphrase coined in the 1920s, when Mizner served the Muse in Hollywood and invented dozens of well-known, usually caustic expressions. The phrase is now heard almost everywhere English is spoken.

always do right . . . Mark Twain’s advice, given to the Young People’s Society of the Greenpoint (Brooklyn) Presbyterian Church in 1901: “Always do right, This will gratify some people, and astonish the rest.”

“always scribble, scribble, scribble! eh! Mr. Gibbon?” Henry Digby Beste, in his *Personal and Literary Memorials* (1829), tells

the full story of this famous remark made to English historian Edward Gibbon: “The Duke of Gloucester, brother of King George III, permitted Mr. Gibbon to present him with the first volume of *The History of the Decline and Fall of the Roman Empire*. When the second volume of that work appeared, it was quite in order that it should be presented to His Royal Highness in like manner. The prince received the author with much good nature and affability, saying to him, as he laid the quarto on the table, ‘Another damn’d thick, square book! Always scribble, scribble, scribble! Eh! Mr. Gibbon?’” This insulting remark about the greatest historical work in English (though Gibbon generally saw history as “little more than the crimes, follies and misfortunes of men”) has also been attributed to the duke of Cumberland.

alyo. The unusual term *alyo* has had some currency in baseball, where it means “a cool hand, a player who is not easily disconcerted.” *Alyo* was probably first an underworld expression with the same meaning. It apparently derives from the Italian idiom *mangiare aglio*, literally “to eat garlic,” but meaning to appear calm and placid while being angry; this idiom is rooted in the Italian folk belief that garlic wards off evil.

alyssum. The Greek word for madness is the chief component of this delicate plant’s name, for the Greeks believed it cured madness and named it *alysson*, from *lysa*, “madness,” and *a*, “not.” The popular garden plant with its clusters of fragrant white or golden flowers is called “madwort” for the same reason. “Wort,” from the Old English *wyrt*, “root, plant,” means a plant, herb, or vegetable and is usually used in combinations like “madwort.”

Alzheimer’s disease. Victims of this disease or syndrome affecting the brain cells display common symptoms of senility, such as memory loss, but Alzheimer’s disease can strike people in their 40s as well as those of more advanced age. The disease takes its name from German neurologist Alois Alzheimer (1864–1915), who first identified it in about 1900. See *THE LONG GOODBYE* and *THE FORGETTING* by David Shenk, 2006.

A.M.; P.M. A.M. is the abbreviation of the Latin *ante meridiem*, “before noon or midday,” not ante meridian, even though *meridian* also means noon. P.M. is the abbreviation of *post meridiem*, “after noon.”

amalgam. Although the derivation of *amalgam*, meaning an alloy of metals or a combination of diverse elements, is of obscure origin, Weekley says the “most probable conjecture connects it, via Arabic, with the Greek for ‘marriage.’” The “‘marriage’ of the metals,” he notes, “is often referred to in alchemistic jargon.”

amalgamationist. “Blending of the two races by amalgamation is just what is needed for the perfection of both,” a white Boston clergyman wrote in 1845. Few American abolitionists were proponents of amalgamation, but many were called amalgamationists by proslaveryites in the two decades or so before the Civil War. This Americanism for one who favors a social and genetic mixture of whites and blacks is first recorded in 1838, when Harriet Martineau complained that people were calling her an amalgamationist when she didn’t know what the word meant.

amaranth. The Greeks believed this flower never died and gave it the name *amarantos*, “everlasting.” It was said to be a symbol of immortality because the flowers keep their deep blood-red color to the last. John Milton wrote in *Paradise Lost*:

Immortal amaranth, a flower which once
In Paradise, fast by the Tree of Life,
Began to bloom, but, soon for man’s offence
To heaven removed where first it grew, there grows
And flowers aloft, shading the Fount of Life . . .

amaretti. A lovesick baker daydreamed so long about his lady while baking a special kind of almond cookie for her that he left the cookie in the oven too long and the light, dry *amaretti* cookie resulted. Such is the legend, that the delicious cookies, often served with wine, take their name from the Italian *amoretti*, “little loves.” Actually, they take this name from *amare*, “bitter,” because they are made from bitter almonds. *Amarretto* liqueur comes from the same source.

amateur. An amateur player in any sport is one who plays for pleasure or the love of the sport rather than for financial gain or professional reasons. Appropriately, the word derives ultimately from the Latin *amator*, lover. The term was first recorded in English around 1775 and was initially used in reference to sports about 25 years later in a description of gentleman boxing enthusiasts. In the late 19th century, men vied for the title of “the world’s greatest amateur athlete,” and one of the leading contenders was New Yorker Foxhall Keene. See CHICKEN À LA KING.

The Amazing Regurgitator. Hadji Ali, billed as “The Amazing Regurgitator” in the late 19th century, had one of the most tasteless acts in vaudeville history. Ali would swallow a variety of things, including objects supplied by his audiences, and regurgitate them at will. But it must be said that upchucking coins, jewels, watches, watermelon seeds, peach pits, and the like wasn’t the exciting part of his act. For a grand finale Hadji swallowed a gallon of water and a pint of kerosene. He’d first throw up the kerosene, spewing it five feet across the stage, where it set a small heated metal castle on fire. He then vomited the gallon of water to extinguish the flaming castle while the audience cheered. There are records of his performance on film.

Amazin’ Mets. An affectionate nickname for the New York National League baseball team since the team was formed in 1962. Said to be coined by Casey Stengel, the team’s first manager, when he watched them win their first exhibition game: “They’re amazin’!!” Later, however, he would lament: “They’re amazin’! Can’t anybody here play this game!” Also called *The Amazin’s*. See STENGELESE.

Amazon. The first Amazons, from the Greek *a* (“without”) plus *mazos* (“breast”), were popularly said to be a tribe of fierce warrior women who cut or burned off their right breasts so as not to impede the drawing of their bows. Amazons have been reported in Africa and South America as well as in Greece. The Amazon River, which had been named Rio Santa Maria de la Mar Dulce by its discoverer, is said to have been rechristened by the Spanish explorer Francisco de Orellana in 1541 after he was attacked by the Tapuyas, a tribe in which he believed wom-

en fought alongside men. Most word detectives believe both these stories are examples of folk etymology but offer no alternatives.

ambergris. The *ambergris* Melville described in *Moby-Dick* remains a valuable, important ingredient in perfume making. It is a black waxlike substance, originating in the stomach of a sick sperm whale sometimes found floating in the sea. As the soft secretion ages, it becomes harder and sweet in smell. The French thought it resembled amber, save for its color, and called it *ambergris*, gray amber, which was taken into English as *ambergris*.

ambidextrous. See RIGHT.

ambition. Politicians are still among the most ambitious men, but the Romans thought them so much more so than others that they confined their word *ambito* (from *ambi*, “around,” and *eo*, “go”), meaning “ardent striving for pomp and power,” to politicians alone. In fact it took centuries before *ambition*, the English derivative of *ambito*, took on a more positive meaning and was applied to any person striving for wealth, power, skill, or recognition.

ambulance chaser. It is said that ambulance chasers in days past had cards like the following:

SAMUEL SHARP	
THE HONEST LAWYER	
CAN GET YOU	
\$5,000	\$10,000
for a leg	for a liver

Ambulance chaser is a thoroughly American term that originally described (and still does) a lawyer who seeks out victims immediately after an accident and tries to persuade them to let him represent them in a suit for damages. The expression probably originated in New York City during the late 1890s, a time when disreputable lawyers frequently commissioned ambulance drivers and policemen to inform them of accidents and sometimes rode with victims to the hospital to proffer their services.

ambush. In the mid-16th century the Old French *embusche* became through mispronunciation the English *ambush*. Appropriately, the French word derived from *embuscher*, “to hide in the woods.”

Ameche. Though not much used anymore, *Ameche* has been American slang for “telephone” since 1939, when actor Don Ameche played the lead role in *The Story of Alexander Graham Bell*, the inventor of the telephone.

amen. The Hebrew *amen*, meaning “certainty,” “truth,” passed into Greek and Latin, eventually becoming in Old English the exclamation meaning “so be it” used as the closing word at the end of a prayer or hymn.

amen corner. A group of fervent believers or ardent followers is called an amen corner, after the similarly named place

near the pulpit in churches occupied by those who lead the responsive “amens” to the preacher’s prayers. The term may come from the Amen Corner of London’s Paternoster Row, but it is an almost exclusively American expression today. Also, a name coined by sportswriter Herbert Wind (1916–2005) for “the treacherous stretch of the Augusta National [golf] course on the 11th, 12th and 13th holes,” as his *New York Times* obituary (June 1, 2005) put it. The name had been suggested to him by the spiritual “Shoutin’ in the Amen Corner,” a jazz record he had bought when in college.

America. Many writers have assumed that the Italian navigator Amerigo Vespucci (whom Ralph Waldo Emerson called “a thief” and “pickle dealer at Seville”) was a con man who never explored the New World and doesn’t deserve to be mentioned in the same breath with Christopher Columbus, much less have his name honored in the continent’s name. Deeper investigation reveals that Vespucci, born in Florence in 1454, did indeed sail to the New World with the expedition of Alonso de Ojeda in 1499, parting with him even before land was sighted in the West Indies. Vespucci, sailing in his own ship, then discovered and explored the mouth of the Amazon, subsequently sailing along the northern shores of South America. Returning to Spain in 1500, he entered the service of the Portuguese and the following year explored 6,000 miles along the southern coast of South America. He was eventually made Spain’s pilot major and died at the age of 58 of malaria contracted on one of his voyages. Vespucci not only explored unknown regions but also invented a system of computing exact longitude and arrived at a figure computing the earth’s equatorial circumference only 50 miles short of the correct measurement. It was, however, not his many solid accomplishments but a mistake made by a German mapmaker that led America to be named after him—and this is probably why his reputation suffers even today. Vespucci (who had Latinized his name to Americus Vespucci) wrote many letters about his voyages, including one to the notorious Italian ruler Lorenzo de’ Medici in which he described “the New World.” But several of his letters were rewritten and sensationalized by an unknown author, who published these forgeries as *Four Voyages* in 1507. One of the forged letters was read by the brilliant young German cartographer Martin Waldseemüller, who was so impressed with the account that he included a map of the New World in an appendix to his book *Cosmographiae Introductio*, boldly labeling the land “America.” Wrote Waldseemüller in his Latin text, which also included the forged letter: “By now, since these parts have been more extensively explored and another 4th part has been discovered by Americus Vespucius (as will appear from what follows); I see no reason why it should not be called Amerigo, after Americus, the discoverer, or indeed America, since both Europe and Asia have a feminine form from the names of women.” Waldseemüller’s map roughly represented South America and when cartographers finally added North America, they retained the original name; the great geographer Gerhardus Mercator finally gave the name “America” to all of the Western Hemisphere. Vespucci never tried to have the New World named after him or to belittle his friend Columbus, who once called him “a very worthy man.” The appellation *America* gained in usage because Columbus refused all his life to admit that he had discovered a new continent, wanting instead to believe that he had come

upon an unexplored region in Asia. Spain stubbornly refused to call the New World anything but *Columbia* until the 18th century, but to no avail. Today Columbus is credited for his precedence only in story and song (“Columbia, the Gem of the Ocean”), while Amerigo Vespucci is honored by hundreds of phrases ranging from *American know-how* to *American cheese*.

American. The first person recorded to have used this term for a citizen of the U.S. or of the earlier British colonies was New England religious leader Cotton Mather in his *Magnolia Christie Americana* (1702).

american. The Japanese have taken to many things American, but not our coffee, which they find weak. Preferring espresso or other strong brews, they call any weak coffee *american*. This seems to be the case in many countries. In Spanish-speaking places, for example, an espresso mixed with extra water is called a *cafe-americano*.

the American dream. The American dream is almost impossible to define, meaning as it does so many different things to so many different people. These words go back at least to de Tocqueville’s *Democracy in America* (1835) and are usually associated with the dreams of people new to these shores of freedom, material prosperity, and hope for the future.

American English. There are thousands of Americanisms that are different from English expressions, although these have dwindled with the spread of movies, television, and increased foreign travel. A good example of such differences is found in a story about *tuna fish*. The highest word rate ever paid to a professional author is the \$15,000 producer Darryl Zanuck gave American novelist James Jones for correcting a line of dialogue in the film *The Longest Day*. Jones and his wife, Gloria, were sitting on the beach when they changed the line “I can’t eat that bloody old box of tunny fish” to “I can’t stand this damned old tuna fish.” If they had translated *box* they would have substituted *can*.

American Indian language words. English words that come to us from American Indian languages include: chocolate, tomato, potato, llama, puma, totem, papoose, squaw, caucus, Tammany, mugwump, podunk, chinook, chautauqua, tomahawk, wampum, mackinaw, moccasin, sachem, pot latch, manitou, kayak, hogan, teepee, toboggan, wigwam, igloo, porgy, menhaden, quahog, catalpa, catawba, hickory, pecan, persimmon, pokeweed, scuppernong (grapes), sequoia, squash, tamarack, hominy, hooch, firewater, pone, bayou, pemmican, succotash, cayuse, wapiti, chipmunk, caribou, moose, muskrat, opossum, raccoon, skunk, terrapin, and woodchuck.

Americanism. In 1781 Dr. John Witherspoon, president of the College of New Jersey (now Princeton), wrote a series of essays on “the general state of the English language in America.” He listed a number of “chief improprieties” such as Americans using “mad” for “angry,” etc., and coined the word *Americanism* to define them.

America’s Cup. This racing trophy was originally called the Hundred Guinea Cup when it was offered by the British Royal Yacht Squadron to the winner of an international yacht race

around the Isle of Wight. The U.S. schooner *America* won the first race in 1875, defeating 14 British yachts, and the cup, still the greatest prize in yachting, was renamed in her honor. American yachts won the cup in every competition until 1983, when the Australians took it home to Perth, ending the longest winning streak in sport.

America the Beautiful; America. Katherine Lee Bates (1859–1929), was a professor at Wellesley College when she wrote the poem “America the Beautiful” (1893), which was made into the famous patriotic song of the same name. The lyrics have been set to music by 60 different composers. “America,” another well-known patriotic song, was written in 1831 by Boston Baptist minister Samuel Frances Smith (1808–95) when he was a seminary student. It is sometimes called “My Country ’Tis of Thee,” after its first line. See GOD BLESS AMERICA.

Americium. A chemical element that was discovered in 1944 by U.S. scientist Glenn T. Seaborg, who named it in honor of America. The element Seaborgium is named after him.

Ameslan. *Ameslan* is the acronym for *American Sign Language*, the shorter term being first recorded in 1974. American Sign Language, a system of communication by manual signs used by the deaf, is more efficient than finger spelling and closer to being a natural language. Finger spelling is just “a means of transposing any alphabetized language into a gestural mode.”

amethyst. This bluish-violet gem was once regarded as a great charm against drunkenness, leading the ancient Greeks to name the variety of quartz *amethystos*, from *a*, “not,” and *methystos*, “drunk.” *Amethystos* eventually became our *amethyst*.

AMEX. American Express. See NYSE.

amicus curiae. Latin for “friend of the courts,” *amicus curiae* in law applies to “any person, not a party to the litigation, who volunteers or is invited by the court to give advice on some matter pending before it.” Its second word is pronounced “kyo-or-ee-eye” and its plural is *amici curiae*.

Amish; Mennonites. The Amish people, located mainly in Pennsylvania, Ohio, Iowa, Indiana, and Canada, are descended from the followers of Jakob Amman, a 17th-century Swiss Mennonite bishop. The Mennonites are an evangelical Protestant sect that practices baptism of believers only, restricts marriage to members of the denomination, and is noted for simplicity of living and plain dress. They, in turn, were named for the religious leader Menno Simons (1496–1556). The Amish still cling to a rural, simple way of life, but many of their young have begun to rebel against seemingly restrictive conventions and to yield to the attractions and conveniences of 20th-century life.

ammonia. While camel riders worshipped at the Egyptian temple of the god Ammon, near Thebes, enterprising men and women extracted urine from the sand where their camels were hitched, later using it for bleaching or whitening clothes. The agent was called “sal ammoniac,” salt of Ammon, by the Romans, and when the gas obtained from this salt (NH₃) was first extracted in 1782 it was named *ammonia*.

amn’t I. Among others, James Joyce used this expression in *Dubliners*, which contains some of the most eloquent stories ever written; Rumer Godden employed it in *An Episode of Sparrows*; and Rebecca West used it in one of her novels (“I’m just awful, amn’t I?”). So, as odd as it may sound to some ears, the locution is preferred to “Aren’t I?” and “Ain’t I?” by a number of good writers and is widely employed. *Amn’t I?* is especially popular in Ireland, the expression dating back at least two centuries there.

amok. See RUN AMUCK (OR AMUCK).

among. *Among* comes from the Old English *on*, “in” and *gemang*, “crowd.” These terms made up the Old English *on-mang*, “in a crowd,” which eventually became *among*.

amortize. You gradually kill a debt (in the sense of resolving it) when you amortize it, for *amortize*, once more generally used than it is today, has its roots in the Latin *mors*, “death.” Chaucer wrote: “The goods werkes that men don whil they ben in good lif ben al amortised by synne folwyng.” The word MORTGAGE comes from the same source.

ampere. See MORON.

& (ampersand). The symbol & was invented by Marcus Tullius Tiro, who introduced it about 63 B.C. as part of the first system of shorthand of which there is any record. A learned Roman freedman & amanuensis to Cicero, Tiro invented his “Tironian notes” to take down his friend’s fluent dictation, but he also used it to write works of his own, including some of the great orator’s speeches & even some of Cicero’s letters to Tiro! His system was based on the orthographic principle & made abundant use of initials, the & sign that was part of it being a contraction for the Latin *et* or “and.” Tiro’s shorthand system was taught in Roman schools, used to record speeches in the Senate, & saw wide use among businessmen in Europe for almost a thousand years.

amphigory. *Amphigory* derives from the Greek for “circle on both sides” and means a burlesque or parody, usually a kind of nonsense verse that seems to make sense but doesn’t. Swinburne’s *Nephelidia*, a parody of his own style, is an example. The poem begins:

From the depth of the dreary decline of the dawn
Through a notable nimbus of nebulous moonshine,
Pallid and pink as the palm of the flag flown that
Flickers with fear of the flies as they float . . .

amputate. Weekley says *amputate*, from the Latin *amputare*, was originally “a metaphor from gardening, from *ambi*, about, and *putare*, to lop, prune. The word is first recorded in about 1630.

amscray. See PIG LATIN.

Amurrican. Linguist Raven I. McDavid Jr. told of how his conservative professors, literally interpreting the pronunciations indicated in *Merriam-Webster’s Collegiate Dictionary*, fifth edition, criticized his educated South Carolinian pronunciation

of the word *American*. McDavid pointed out that there are at least five pronunciations, one as good as any other, these including the second syllable with the vowel of *hurry*, with the vowel of *hat*, with the vowel of *hit*, with the vowel of *hate*, and with the vowel of *put*. There is no all-American pronunciation of *American*.

Similarly, many Americans voted against what H. L. Mencken sarcastically called “the caressing rayon voice” of the politician Wendell Willkie because the Hoosier pronounced “American” as *Amurrican*.

Amy Dardin case; Amy’s case. An obsolete term for procrastination. Virginia widow Amy Dardin of Mecklenburg County submitted to Congress her claim to be compensated by the federal government for a horse impressed during the American Revolution, sending a bill every year from 1796 to at least 1815; some sources say she kept dunning Congress for 50 years before the procrastinating government paid.

ana. Any collection of sayings, material connected with any person, or (sometimes) place, can be called an *ana*. *Virgiliana*, for example, are things relating to Virgil, while *Americana* are things relating to America. Robert Southey wrote: “Boswell’s *Life of Johnson* . . . is the ana of all anas.”

anachronism.

Cecil B. DeMille
Was feeling ill
Because he couldn’t put Moses
In the War of the Roses.

This famous cleriehew by Nicholas Bentley, the son of the inventor of the CLERIEHEW, comments on filmmakers who don’t often get ill about the anachronisms in their epics. If Moses was put in the War of the Roses, or if Cleopatra’s barge was depicted as powered by an outboard motor, these would be anachronisms. The word derives from the Greek *ana chronos*, “out of time,” to be late, or “back-timing,” and means an error in chronology, putting a person, event, or thing in the wrong time period. Some classic examples are Shakespeare’s reference to billiards in *Antony and Cleopatra*, to cannon in *King John*, and to turkeys in *Henry IV, Part I*. Famous American anachronisms include George Washington throwing a silver dollar across the Potomac (there were no silver dollars at the time) and the flying of the Stars and Stripes in paintings of major Revolutionary War battles (the flag wasn’t used until 1783). Sometimes anachronism is used to describe an institution or a person who lives in the past.

anaconda. This is one of the few English words, if not the only, that comes to us from Singhalese. *Anaconda* probably derives from the Singhalese *henakandayā*, although this word means “lightning stem” and refers to Ceylon’s whip snake, not the large snake we know as the anaconda. Weekley notes that “the mistake may have been due to a confusion of labels in the Leyden museum.”

Anacreontic. Not many names of people have come to mean “amatory, loving, convivial,” but this is exactly what

happened, many centuries after his death, to the Greek poet Anacreon (ca. 570–ca. 480 B.C.). The poet wrote many love poems and drinking songs, which inspired writers in the 17th century to coin the word *Anacreontic* (sometimes used in the lower case today). See also HOBSONIZE; MASOCHISM; SADISM.

anadama bread. Anadama bread, a Yankee cornmeal recipe, offers one of the most humorous stories connected with any foodstuff. Tradition has it that a Yankee farmer or fisherman, whose wife Anna was too lazy to cook for him, concocted the recipe. On tasting the result of his efforts a neighbor asked him what he called the bread, the crusty Yankee replying, “Anna, damn her!” Another version claims that the husband was a Yankee sea captain who endearingly referred to his wife as “Anna, damn ‘er.” Anna’s bread was much loved by his crew because it was delicious and would not spoil on long sea voyages. The captain is said to have written the following epitaph for his wife: “Anna was a lovely bride,/but Anna, damnr, up and died.”

anagram. An anagram is the rearrangement of the letters of a word or group of words to make another word or group of words, the word anagram itself deriving from the Greek *anagraphein*, “to write over again.” Popular as wordplay since the earliest times, anagrams were possibly invented by the ancient Jews, and the cabalists, constantly looking for “secret mysteries . . . woven in the numbers of letters,” always favored them, as did the Greeks and Romans. A famous Latin anagram was an answer made out of the question Pontius Pilate asked in the trial of Jesus. *Quid est veritas?* (“What is truth?”) was the question, the answer being *Est vir qui adest* (“It is the man who is here”). Though poet John Dryden called anagrams the “torturing of one poor word ten thousand ways,” the English are among the best and most accurate anagrammatists. Samuel Butler’s novel *Erewhon* derives its title from the word *nowhere*, almost spelled backward, and a tribe in the book is called the Sumarongi, which is *ignoramus* spelled backward. Among the many interchangeable words that can form *anagrams* in English are *evil* and *live*, and *eros* and *rose*, but the longest are two 16-letter pairs: *conservationists* and *conversationists*; and *internationalism* and *interlaminations*. A recent apt anagram suggested by Martin Gardner is *moon starrer*, an anagram for *astronomer*.

Ananias. The word *Ananias*, for a liar, refers to the New Testament’s Ananias (Acts 5:1–10), who with his wife, Sapphira, tried to cheat the church at Jerusalem by withholding part of the money he made from a sale of land. Ananias was struck dead after the apostle Peter declared that he had “not lied unto men, but unto God.” His wife shared his fate later that day when she maintained his deception and was told of his demise. *Ananias* was popularized by President Theodore Roosevelt, who referred to those he suspected of deceit as members of the Ananias Club, especially members of the working press who published confidential information they had promised not to reveal. Roosevelt did not coin the phrase, but as H. L. Mencken observed, he popularized or originated scores of other expressions, including *walk softly and carry a big stick*, *to pussyfoot*, *the strenuous life*, *one hundred percent American*, and *muckraker*, all of which are still in use today.

an apple a day keeps the doctor away. A proverb that dates back to the early 19th century, states *Bartlett's*. An apple a day is nutritious and delicious but doesn't provide any immunity against illness, according to the latest scientific studies.

anchor. The "ch" in this common word, the cause of much trouble to beginning spellers, really has no place there. *Anchor* derives from the Latin *ancora*, meaning the same, which the Romans, in turn, borrowed from the Greek *ankura*. Some Latin writers, however, changed the *ancora* spelling to *anchora*, mistakenly believing that the Greek word was properly spelled *anchura* (because the *k* sound was often spelled *ch* in Greek words). When the word came into English in about 1400, English writers adopted this incorrect Latin spelling and it became the basis for the word *anchor*.

anchor man. The strongest member of a track team, the runner who runs the last leg in a relay race, has been called the anchor man since the late 19th century. Possibly the term has its roots in the "anchor man" at the end of a tug of war, but there is no proof that this usage came first. In any case, *anchor man* came to be applied to the last swimmer in a relay race, too, and by the 1930s was being used for the strongest member of a radio broadcasting team. With the rise of women in sports and television news broadcasting, the term is increasingly heard as *anchor*.

"Anchor's Aweigh."

Anchor's aweigh, my boys, anchor's aweigh.
Farewell to college joys, we sail at break of day!
Through our last night on shore,
Drink to the foam,
Until we meet once more
Here's wishing you a happy voyage home.

These are the words to "Anchor's Aweigh" that were commonly sung by sailors during World War II. Although they are accepted as the lyrics of the song by almost everyone today, they are far different from the original words to this official marching song of the U.S. Navy, which was composed for the 1906 Army-Navy football game, music by Charles A. Zimmerman and lyrics by Alfred H. Miles. See ARMY AIR CORPS.

anchovy. A small herringlike fish, widely used as an appetizer. The word's origin is unknown.

ancillary. Subordinate clauses in technical business documents such as wills, insurance policies, and legal briefs are often referred to as *ancillary*. The aptness of the word can be seen in its literal meaning of "handmaiden," which derives from the Latin *ancilla*, the diminutive of *anca*, servant.

Andalusia. The region of Andalusia in southern Spain so named for the Vandals who invaded and occupied it some 15 centuries ago. The region was first called Vandalusia, the word dropping the *V* over the centuries.

and don't you forget it! An intensive recorded in England as early as 1898 and adopted in the U.S. soon after, *and don't you forget it!* remains a popular expression often used to reinforce

one's anger, especially anger in chastising children. For close to a century experts have inveighed against it as "vulgar and senseless," but it is alive and thriving nonetheless.

Andes mountains. The name for these mountains derives from the Quecha *andi*, meaning "high crest." The similarity of *andi* to the Egyptian *andi* for "high valley," along with the similarity of other Egyptian and Quecha words, has led some observers to suggest that Egyptian explorers may have traveled to South America in ancient times.

and how! Indicating "intensive emphasis of what someone else has just said," *and how!* is a long-popular catchphrase first recorded in 1924. The Americanism possibly derives from the German *und wie!* or the Italian *e come!*, meaning the same thing, and once very common among Americans of German and Italian extraction, respectively.

andirons. Andirons are pairs of metal stands used to hold logs above the floor in a fireplace. One theory holds that the word derives from the Gaulish *andera*, "heifer," cows' heads once commonly used as decorations on the supports.

and pigs have wings! Used sarcastically as one would say *yeah* or *sure*, both expressing disbelief. The British say *and pigs fly!* instead, but their expression *when pigs fly!* means "never."

Andrea Ferrara. Many Scotsmen will know that an Andrea Ferrara is the Scottish broadsword frequently mentioned in Elizabethan literature, and more than a few will proudly claim that the original sword maker was a Scottish drill sergeant named Andrea Ferras or Ferrier. However, it is more likely that the real Andrea Ferrara was a 16th-century Italian sword maker who lived in Belluno and whose correct name was Andrea dei Ferrari, "Andrew of the armorers." How his swords got to Scotland is something of a mystery; either he was an exile, or as Sir Walter Scott suggests in the notes on *Waverley*, he was brought over by James IV or V to instruct the Scots in the manufacture of his blades. In any event, he left us with many references in literature to Andrea Ferraras, Ferraras, and even Andrews, all deriving from his name.

the Andrew. Since at least 1860 *The Andrew* has been British slang for the Royal Navy, and *The Andrew Miller* was used long before that. The expression derives from the name of Andrew Miller, a notorious press-gang leader of Lord Nelson's day who SHANGHAIED many men into the British Navy.

andromeda. Linnaeus named this early-blooming shrub with white blossoms for the mythological maiden Andromeda, daughter of the king of Ethiopia, who was chained to a rock as an offering to a sea monster, but was rescued by Perseus, the son of Zeus. In order to marry the beautiful Andromeda, Perseus had to defeat another suitor who tried to carry her off. He did so by showing his rival the head of the Medusa, which changed him to stone.

Andromeda strain. Any strain of bacteria or other microorganism "whose accidental release from a laboratory might have catastrophic effects because of its unknown biochemical make-

up” is called an Andromeda strain. The term comes from American author Michael Crichton’s 1971 novel of that title, in which an unknown type of bacteria escapes accidentally from a returning space probe and threatens to contaminate the planet Earth.

and then some! *And then some!* is an Americanism dating back to about 1910. But its roots probably go deeper than this in history, some investigators believing it is an elaboration of the Scots *and some*, meaning “and much more so,” which is recorded about two centuries earlier. One British professor claimed he found a parallel expression in the *Aeneid* (Book viii, line 487)!

and thereby hangs a tale. This has been the title of more than one book in modern times, though it is rarely used seriously anymore as a storytelling device. The expression goes back at least to the time of Shakespeare, who used it a number of times, notably in *As You Like It*. Here are Shakespeare’s words:

And so from hour to hour we ripe and ripe
And then from hour to hour we rot and rot,
And thereby hangs a tale.

Andy Warhol. According to the *New York Times* (September 20, 2006) the artist’s name should be Andy Warhola—the final “a” in his name was omitted early in his career by a typesetter. The artist was nicknamed Raggedy Andy “because he delivered his early commercial artwork in brown paper bags.”

anecdote; anecdotage. We owe the word *anecdote* to Justinian, Byzantine emperor from A.D. 527 to 565, who wrote a book of brief tales about life in his court. These true stories were satirical, scandalous, and sometimes off-color. Justinian—better known for the Justinian legal code—probably didn’t intend them for publication, but they were published by Procopius, a secretary to one of Justinian’s generals, as a supplement to his history of the times. Procopius entitled the book *Anekdotia*, a Greek word meaning “unpublished, secret.” The title of the book later became the term *anecdote*, meaning a brief factual story like the ones *Anekdotia* contained. *Anecdoteage*, “the state of being advanced in age and strongly inclined to tell reminiscent anecdotes,” is probably a happy coinage of John Wilkes in about 1835.

anemone. Also called the windflower, the dainty anemone takes its name from the Greek *anemos*, “wind,” the Greeks having observed that it often grew in windy places. A Greek legend says that the *anemone* was born after the handsome Greek youth Adonis, beloved by Aphrodite, goddess of love and beauty, was killed in the forest on a wild boar hunt. Aphrodite was so grief-stricken that the gods took pity on her and allowed Adonis to spend each spring with her in the form of a flower, the anemone rising from his blood.

anesthesia. Here we see a word being born, even to the exact date. Soon after William Thomas Green Morton successfully employed ether in an operation at Boston’s Massachusetts General Hospital in 1846, New England poet-physician Oliver Wendell Holmes wrote in a November 21st letter to him: “Every body wants to have a hand in a great discovery. All I will do

is give you a hint or two as to names—or the name—to be applied to the state produced and the agent. The state should, I think, be called ‘Anaesthesia’ (which derives from the Greek *anaesthesia*, ‘lack of sensation’). This signifies insensibility . . . The adjective will be ‘Anaesthetic.’” Thus, Holmes clearly coined the term *anaesthesia* (now usually spelled *anesthesia*), even though it had been recorded in a different sense over a century before in England. Holmes also coined the “unsuccessful” word *chrysocracy*, in his novel *Elsie Venner* (1861). As he explained in another letter: “In *Elsie Venner* I made the word *chrysocracy*, thinking it would take its place; but it didn’t; *plutocracy*, meaning the same thing, was adopted instead.” See also BETTER A HASH AT HOME THAN A ROAST WITH STRANGERS.

angel dust. So called because of its white color, *angel dust*, or PCP (phencyclidine), is used as a narcotic, being mixed with barbiturates or sprinkled on marijuana and smoked. The potent, dangerous depressant goes by many street names, including “white powder,” “peace pills,” “superjoint,” “green tea,” “busy bee,” “hog elephant,” “tranquilizer,” and “killer weed”—all first recorded in the early 1970s.

Angeleno. Anyone residing in Los Angeles, California; this Spanish term dates back to the mid-19th century.

angelica. According to one story, the Archangel Raphael assured a pious hermit that this plant was a remedy against the plague. This may account for the name *angelica*, which comes from the Latin *herba angelica*, “the angelic root,” or “root of the Holy Ghost,” and is first recorded in English in 1570. A confection called candied angelica was made from its roots in early times.

Angel of the Mountains; Eagle of Toledo. Nicknames of the two greatest climbers in cycling history. The *Angel of the Mountains* was Charly Gaul, a “king of the mountain” twice in the Giro d’Italia. The *Eagle of Toledo* was Federico Bahamontes, a six-time “king of the mountains.” Both also shared the same panache. Once Bahamontes so outdistanced the pack during a stage of the Tour de France that he stopped at the top of a mountain and enjoyed an ice cream while waiting for the others to catch up (though this may be a PR story). Gaul became a recluse after he retired from racing in 1962, living for more than 30 years in a Luxembourg cabin decorated with Christian symbols. He died in 2005, age 72.

angels on horseback. One of the more colorfully named foods of the world, angels on horseback are oysters rolled in bacon, cooked (often on skewers over a fire) and served on points of toast. They are recorded under this name early in the 20th century, but the name is probably a translation of the earlier French *anges à cheval*.

angel teat. Down in the holler, in mountain country, moonshiners call particularly good mellow whiskey with a good bouquet angel teat, or angel’s teat. The term is first recorded in 1946 but is probably much older.

Angelus; Angelic Hymn; Angelic Doctor. The Angelus is a Roman Catholic devotion, so named for its initial word. The

prayer, which is said three times a day (at 6 A.M., noon, and 6 P.M.) commences at the sound of a bell called the Angelus and begins “Angelus Domini . . . (The Angel of the Lord . . .).” The Angelic Hymn isn’t a synonym for the Angelus. It is the hymn beginning “Glory be to God in the highest” that was sung by the angels to the shepherds of Bethlehem after they brought tidings of the birth of Christ the Lord that day. St. Thomas Aquinas (ca. 1225–74) is traditionally called the Angelic Doctor because of the purity of his thought, regarded as the result of more than human intelligence. His schoolmates had called him the “Dumb Ox,” and his teacher Albertus Magnus had predicted, “This dumb ox will one day fill the world with his lowing.” Followers of the scholastic philosopher are called Thomists.

angle with a silver hook. An unlucky fisherman who fails to catch anything doesn’t want to go home empty-handed. Thus when he buys fish (with silver coin, in past times) to conceal his abject failure, he is said to *angle with a silver hook*.

Anglo. A term for an English-speaking white person, an Anglo-American, that originated among Spanish speakers in the Southwest in the early 19th century and is now common throughout the United States. Unlike *gringo*, it is not always a derogatory term. *Anglo* can also mean the English language: “He doesn’t speak Anglo.”

Anglo-Saxon. Also called *Old English*, *Anglo-Saxon* is the English language from the mid-fifth to the 12th century. In her libretto for Deems Taylor’s opera *The King’s Henchman* (1927), which is set in the palace of King Edgar in 10th-century England, American poet Edna St. Vincent Millay tried to use no word that came into English after the Norman Conquest (1066). Her “Anglo-Saxon” libretto began “Wild as the white waves / Rushing and roaring . . .” See BURN CANDLE AT BOTH ENDS.

Angora cat; Angora goat. Angora cats probably originated in Ancyra or Angora, Turkey (now Ankara), where their long, silky hair may have been used like wool. Bred in Angora 2,000 years ago for its hair, sometimes called mohair, the Angora goat is now raised throughout the world.

angst. German for “a feeling of dread or anxiety sometimes accompanied by depression,” as in “Her teenage angst seemed to have grown stronger over the past year.”

angstrom. A unit of length equal to one 10-millionth of a millimeter is known as an angstrom unit, or angstrom. It is used primarily to measure wavelengths of light and was named for Anders Jonas Angstrom (1814–74), Swedish astronomer and physicist, as was the Angstrom crater in the moon. Anders Angstrom taught physics at Uppsala University, his most important research work undertaken in heat conduction and light, and he is considered one of the founders of spectrum analysis. In 1867 he became the first man to examine the spectrum of the aurora borealis; the characteristic bright line in its yellow-green region is often called the *Angstrom line* in his honor.

animal. The ancient Romans gave the name *animalis*, which derives from *anima*, “having breath or soul,” to all living creatures that perceptibly breathed, obviously not including plants

because the way plants breathe could not be seen by them. *Animalis* later became the English *animal*.

animal spirits. Novelist Jane Austen (1775–1817) may have coined the term *animal spirits* in its sense of an excess of exuberant energy; vivacity; good humor. In any case, as Weekley notes, the expression is first recorded in this sense in her novel *Pride and Prejudice*, published in 1813, but which she wrote some 15 years earlier.

Annie Oakley. Annie Oakley was the stage name of Ohio-born Phoebe Annie Oakley Mozee (1860–1926), star rifle shot with Buffalo Bill’s wild west show. Married at 16, Annie joined Buffalo Bill when 25 and amazed audiences for more than 40 years with her expert marksmanship and trick shooting. Annie once broke 942 glass balls thrown into the air with only 1,000 shots. Her most famous trick was to toss a playing card, usually a five of hearts, into the air and shoot holes through all its pips. The riddled card reminded circus performers of their punched meal tickets, which they began to call Annie Oakleys, and the name was soon transferred to free railroad and press passes, both of which were customarily punched with a hole in the center. Today all complimentary passes, punched or not, are called *Annie Oakleys*, and the expression is also used in yacht racing for a ventilated spinnaker or head sail.

the annual fish. Gobies commonly don’t live from one spawning to the next and are often called *the annual fish* for this reason. They aren’t the shortest-lived fish, however, this dubious honor going to a species of killifish of Africa and South America that lives about eight months. The Philippine dwarf pygmy goby (*Pandaka pygmaea*) is the world’s smallest fish—normally about as long as the word *fish* printed here and so light that it would take 35,000 of them to make an ounce.

Annuit Coeptis. The mottoes on the reverse side of the Great Seal of the U.S. are *Annuit Coeptis* (“He [God] has favored our undertakings”) and *Novus Ordo Seclorum* (“a new order of the ages”). These were condensed by William Barton, designer of the Great Seal, from a line in Virgil’s *Eclogues* (line 5).

annus mirabilis. Latin for “a fated year noted for its wonders or disasters.”

anode. See FARAD.

anonymous. Dating back to the late 16th century in English, *anonymous* derives from the Greek *anonymos*, meaning the same. An *anonym* is an anonymous person or a false name. “Anonymous” is surely the world’s most prolific author; tens of thousands of books and pamphlets have been published anonymously since the invention of the printing press. Famous anonymous works include Poe’s first poems; Richardson’s *Pamela*, the first genuine novel in English; Fielding’s *Joseph Andrews*; almost all of Jonathan Swift’s work; Smollett’s *Roderick Random*; all Jane Austen’s early works; Gray’s “Elegy”; Byron’s “Don Juan”; Dryden’s “Absalom and Achitophel”; Pope’s “Essay on Criticism”; and Tennyson’s “In Memoriam.” See BY A LADY.

anorak. A name given to both a heavy hooded parka and a warm waterproof coat made from animal skins by Canadian Inuit natives.

another day, another dollar. The expression is not to be taken seriously. For instance, at the end of a workday a disillusioned worker might say, “Oh well, another day, another dollar.”

another nail in my coffin. See COFFIN NAILS.

another Richmond in the field. Henry of Richmond, afterward England’s King Henry VII, is honored by this expression, which means that still another, unexpected opponent has shown up to do battle. The phrase is from a speech made by the king in Shakespeare’s *Richard III*, though the last line is more famous than the first:

I think there be six Richmonds in the field;
Five have I slain today, instead of him—
A horse! a horse! my kingdom for a horse!

anselmo. A color named after an artist. Prolific Italian painter Giorgio Anselmi (1723–97) invented the yellowish color that bears his name.

Anstie’s limit. Nineteenth-century English physician Edward Anstie advised his patients that more than one-and-a-half ounces of pure alcohol a day, consumed day in and day out, will eventually cause physical damage to the body. Stay under this limit, Anstie said, and drinking won’t harm you. One-and-a-half ounces of pure alcohol translates roughly into three one-ounce drinks of 100-proof whiskey, or four beers, or half a bottle of wine. Some experts still agree with Anstie, but most refuse to generalize. Dr. Charles S. Lieber, who specializes in the effects of alcohol on health, does set a “danger level.” He says that anything over eight ounces of whiskey a day regularly “is the cause of complications in most individuals. Anyone who drinks above that level is high risk.” Judging by this, Anstie’s limit is very cautious.

ant cow. A term used for the aphid or plant louse, which excretes honeydew, a sugary substance, and is tended by honeydew-gathering ants. The term was coined in about 1870.

antediluvian. The Latin *ante*, before, and *diluvium*, flood, are the basis for *antediluvian*, which literally means “before the flood.” Because the flood is the biblical flood escaped by Noah, *antediluvian* has thus come to mean anything or anyone ancient, or, for that matter, anyone far behind the times—an OLD FOGY, in language of another era.

antenna. The Romans originally applied *antenna* to a ship’s wooden horizontal yard, from which sails were hung. Centuries later, in the 1600s, the word was borrowed to describe the “horns” of various insects, such as the snail. In the early 20th century the term was finally applied to radio and television receptors.

anthology. *Anthology* derives from the Greek word meaning “a collection of flowers”—the first recorded one, in fact, is the

Greek *Garland of Meleager* (ca. 90 B.C.). Two of many historically famous ones include the *Anthologia Palatina*, called the *Greek Anthology* (ca. 925), and Palgrave’s *Golden Treasury* (1861), the most noted of English anthologies. Tens of thousands of anthologies have been compiled since. Bennett Cerf told the story of a book called *The Ten Commandments* that was to be published for the armed services but was too long. “How about using only five of them,” quipped editor Philip Van Doren Stern, “and calling it ‘A Treasury of the World’s Best Commandments?’”

anthracite coal. Strictly speaking, *anthracite coal*, a hard, nearly pure carbon coal often used for heating, should be called *anthracite*, as *anthracite* comes directly from the Greek *anthrax*, meaning coal. To call it *anthracite coal* is a tautology: that is, *coal coal* or *coal-like coal*.

antibiotic. Dr. Selman Waksman, the discoverer of streptomycin, invented the term *antibiotic* in 1941. He coined it from the Greek *bios*, life, and *anti*, against. Thus an antibiotic is, strictly speaking, “against life”—against that life that seeks to destroy other life. An earlier sense of *antibiotic*, defined as “opposed to a belief in the presence or possibility of life,” was recorded in 1860.

anticlimax. Dr. Johnson seems to have invented or at least been the first to record the word *anticlimax*, which he defines as “a sentence in which the last part expresses something lower than the first.” Pope used the anticlimax humorously in his line “Men, monkeys, lap-dogs, parrots, perish all.” Everyone has a favorite anticlimax, fine examples of which can be found in the *Anthology of Bad Verse* by Wyndham Lewis and C. Lee, but one of the best is the last line of Tennyson’s poem “Enoch Arden” (1864), in which Enoch Arden, thought dead at sea, returns home after some years to find his wife happily married, and resolves that she won’t know of his return until his death. The poem ends this way:

So past the strong heroic soul away.
And when they buried him, the little port
Had seldom seen a costlier funeral.

antifogmatic. An antifogmatic is any alcoholic drink taken in the morning to brace one against the fog or dampness outside, or taken with that as the excuse. This amusing Americanism is first recorded in 1789.

antimacassar. Macassar oil, a trademarked product originally made in Makassar, Indonesia, was a highly popular men’s hair dressing in Victorian times. The oil stained chair backs and housewives used antimacassars, small cloths that they pinned to the backs of armchairs, to protect their fabric.

ant killer. A humorous term for the foot, especially a big foot. The term is an Americanism dating back to the mid-19th century.

antler. When the stag lowers his head to drink, his lower horns are often before his eyes. The Romans noticed this and called the horns the *rammum ante oculus*, “the branch before

the eyes." Shortened to *ante ocular*, this name became *antoillier* in French and eventually *antler* in English.

ants in one's pants. See ANTSY.

antsy. Originating in the early 1950s, *antsy* means jittery, restless, nervous. The expression derives from the earlier phrase *to have ants in one's pants*, which dates back to World War II America and is recorded in humorist H. Allen Smith's book *Putty Knife* (1943): "She dilates her nostrils a lot, the way Valentino used to do it in the silent movies to indicate that he had ants in his pants." The quotation shows that *to have ants in one's pants* can suggest lust, but to my knowledge *antsy* never has this sexual meaning.

Antwerp. *Antwerp*, Belgium got its name, legend says, because a giant who lived there used to hack off the hand (*handt*) of any traveler who couldn't or wouldn't pay a toll on entering the area, throwing (*werpen*) each hand into the water. But the city really is so named because it is "the city at the wharf," *Antwerp*, composed of the Dutch *aan*, "at," and *werf*, "wharf."

anvil chorus. When the opposition, especially in politics, joins collectively in condemning an action or proposal, the criticism is called an anvil chorus. The reference is to the famous "Anvil Chorus" based on the "Gypsy Song" in Giuseppe Verdi's opera *Il Trovatore*, complete with the sound of many loud anvils and cymbals.

anxious seat. Front seats at religious revivalist meetings in the American West during the 19th century were called anxious seats, because their occupants were so eager to be saved.

any man who hates dogs and children can't be all bad. W.C. Fields didn't coin this expression. It was ad-libbed by the admirable Leo Rosten, author of *The Joys of Yiddish*, among many marvelous books, at a Friars Club testimonial banquet given to honor the comedian in 1938, which marked Field's 40th year in show business.

any port in a storm. The expression is probably well over two centuries old and means that a ship (or by extension, a person) will welcome any relief or aid when a situation is extremely difficult to deal with, as with a ship in a storm.

anything for a quiet life. Though Dickens's Sam Weller immortalized this phrase in *The Pickwick Papers*, referring to a man who took a "situation" at a lighthouse, the expression dates back to the 17th century and a play by Thomas Middleton. A variation, dating only to about 1968, is the catchphrase *anything for a quiet wife*.

Anytime Annie. American slang for a woman who is always willing to have sex. Heard by author, who can find no recorded source for the name.

any time you're throwin' dirt you're losin' ground. May be an old Texas or Western saying about mudslinging. Or it may have been invented by Cormac McCarthy in his *No Country for Old Men* (2005).

anyways. Anyway, anyhow, in any case. "Anyways I've got my opinion," Mark Twain wrote in "The Celebrated Jumping Frog of Calaveras County" (1865). The Americanism can also mean to any degree at all: "Is he anyways hurt?"; or at any time: "Come visit anyways from May to October."

ao dai. A long tunic slit on the sides and worn over loose trousers that is the traditional dress of Vietnamese women.

A-O.K. An accidental coinage, *A-O.K.* was not used by American astronaut Alan Shepard while making the first sub-orbital space flight, as was widely reported. The term is actually the result of a mistake by NASA public relations officer Colonel "Shorty" Powers, who thought he heard Shepard say "A-O.K." when the astronaut, in fact, uttered a rousing "O.K." Powers liked the sound of *A-O.K.* so much that he reported it several times to newsmen before he learned of his mistake. By then it was too late, for the term became part of the language practically overnight. Speech purists insist that *A-O.K.* is a repetition, increasing O.K. 50 percent in size, but in spoken communication redundancy is not necessarily bad—in fact, it is often essential to clarity and understanding, especially in emergencies. And in everyday conversation *A-O.K.* usually means "better than O.K.," "great," "near perfect"—not, repeat *not*, just "all right." See O.K.

A-1. *A-1*, for anything excellent, first class, originated with the expression *A-1 at Lloyd's*, referring to the rating of ships in *Lloyd's Register*. Lloyd's of London, the world-famous insurance association, has insured everything from the first airplane to Hollywood sex symbols, but at its inception the company wrote only marine insurance. Lloyd's takes its name from a coffeehouse operated by Edward Lloyd, of whom the earliest record is in 1688 and who died in 1713. For travelers, Lloyd served as a sort of one-man tourist bureau, and there is even evidence that he would fix the press gang who shanghaied men into the naval service—for a price. Virtually nothing else is known about the elusive, enterprising Lloyd except that businessmen willing to insure against sea risks congregated at his coffeehouse on Lombard Street and issued marine policies to shipowners. Here *Lloyd's List*, a paper devoted to shipping news, was published in 1734, making it the oldest London newspaper, except for the *London Gazette*. By 1760 the precursor of *Lloyd's Register of Shipping* had been printed, and only 15 years later the phrase *A-1* was used in its pages to denote the highest class of ship. Charles Dickens first applied *A-1* to people and things in 1837. Lloyd's, now international in scope, eventually moved to the Royal Exchange and finally to its present \$15-million headquarters on Lime Street. It adopted its name legally when incorporated a century ago, not long before writing the first burglary insurance (1889). Lloyd's also wrote the first policy covering loss of profits resulting from fire and pioneered in automobile and worker's compensation insurance. The corporation can issue anything but long-term life insurance. Not actually an insurance company, Lloyd's is a corporate group of some 300 syndicates composed of about 5,500 strictly supervised individual underwriters, each of whom must deposit large sums—about \$35,000—as security against default on the risks each accepts. Some interesting Lloyd's policies and losses in its risky history include:

- A \$100,000 “love insurance” policy that provided payment if a certain photographer’s model married (she did, after the policy expired).
- A “happiness policy” that insured against “worry lines” developing on a model’s face.
- Losses paid of \$3,019,400 after the Lutine Bell rang over the rostrum announcing the *Titanic* disaster; more than \$5.6 million on the sinking of the *Andrea Doria*; \$1,463,400 on the 1906 San Francisco earthquake damage; and \$110 million on Hurricane Carol in 1954.

apache. An *apache* is a Parisian criminal or ruffian and an *apache dance* is a violent dance originated by the Parisian *apaches*. The word, in this sense, was coined by French newspaper reporter Emile Darsy, who is said to have read of “blood-thirsty Apache Indians” in the works of American authors and thought that their name would aptly fit denizens of the underworld. The Apache Indians, perhaps not deserving this reputation, derive their name from a Zuni word meaning enemy, and the name was applied to many nomadic bands of Indians roaming the southwestern United States. The Apaches called themselves *dene*, an Athabascan word for “human being.”

apartheid. Although racial segregation is no longer the law in South Africa, this word for official racial segregation is still applied to any such official policy anywhere and even segregation in general. The word seems to have first been used in English in a 1947 South African newspaper article. *Apartheid* is from Afrikaans, the language of Dutch settlers in South Africa. It is composed of the Dutch *apart*, “separate,” and *heid*, equivalent to the English suffix *hood*, literally meaning “separateness” but actually being far more insidious in both meaning and practice.

A-per-se. This common expression for the best, something or someone unbeatable, goes all the way back to Chaucer, who calls Cressida “the floure and A-per-se of Troi and Greek.”

aphid. Linnaeus coined the name for this soft-bodied little plant louse that kills plants by sucking out their sap, the name suggested to the great Swedish botanist by the Greek word for “unsparing.”

aphrodisiac. Anything, including food, drink, drugs, art, and words, that arouses or enhances sexual desire. The word comes from the name of Aphrodite, the Greek goddess of love and beauty, who sprang beauteous from the foam (*áphros*) of the sea that gathered around the severed penis of her father, Uranus, after his son Cronos dethroned and mutilated him. The Cytherean, as she is also called, is probably a goddess of Oriental origin; she bears a strong resemblance to the Asian Astarte. The Romans identified her with Venus. “Goddess born of the blue foam,” mother of Eros and Priapus, Aphrodite had as lovers in various legends not only Adonis but also Dionysus, Anchises, and Paris. She was worshipped in two separate forms: as Aphrodite Urania, “the goddess of higher, purer love,” and as Aphrodite Pandernos, “the goddess of sensual lust”—a distinction that, significantly, wasn’t made until later more repressed times. Fathered by Dionysus or Bacchus, god of wine, Aphrodite’s son PRIAPUS is identified with phallic worship. The Ces-

tus, her legendary girdle, is said to have endowed all its wearers with irresistible powers of love.

Api. The French gave this name to the old tasty apple variety that in English is called the “Red Lady.” It is named after the legendary Roman gourmet Apicius, who is said to have produced it in his garden by grafting more than 2,000 years ago. See APICIUS.

Apicius. Apicius might be called the world’s first gourmand and bon vivant as well as the author of the earliest cookbook. His *Of Culinary Matters*, has gone through countless editions since first written about 1,500 years ago. Some historians claim that Apicius was a rich Roman merchant who collected recipes wherever he traveled, others that his name is a nom de plume deriving from the word for “epicure,” but most authorities believe that he was the Roman nobleman Marcus Gavius Apicius, who lived under Tiberius in the first century A.D. Whatever his identity, an *Apicius* still brings to mind a chef and gastronome without peer, one who went to such lengths as spraying his garden lettuce with mead in the evening so that it would taste like “green cheesecakes” the next morning, one who concocted *Apician* dishes that remain, in the words of Mark Twain, “as delicious as the less conventional forms of sin.”

Apollinaris; Polly. One of the oldest and most famous of bottled spring water, *Apollinaris* has been on the market since the mid-19th century, when German farmer Georg Kreuzberg hit upon a spring while digging an irrigation ditch in his vineyard near Bonn. He named the spring and its water *Apollinaris* after a nearby chapel. The water became so popular in England that it was called by the nickname *Polly*.

Apollo; Apollo 11. Today an *Apollo* almost always means a very handsome man, but among the ancient Greeks and Romans he was a much-worshipped god, son of Zeus and Leto, widely associated with music, poetry, and other arts. He was even worshiped as *sminthos*, the “Mousekiller” for his protection of farmers against mice. Apollo for a handsome man comes specifically from the *Apollo Belvedere*, an ancient sculpture of a handsome youth unearthed in Italy in 1485 that is now in the Vatican Museum. The American space program *Apollo 11* landed the first men on the moon in 1969.

Appalachia. The Appalachian Indian tribe gave its name to this mountainous region in the southeastern U.S., though the naming was a mistake. As Roderick Peattie put it in *The Great Smokies and Blue Ridge* (1943): “[The Spanish explorer] De Soto left no memorial or trace, except for the name Appalachian itself (from the Appalachi tribe of Muskhogean on the Gulf Coast), misapplied by him to the fair mountains he traversed so long ago.” It is interesting to note that Washington Irving once suggested (in the *Knickerbocker Magazine*, August 1839) that the name *United States of Appalachia* be substituted for the *United States of America*.

Appaloosa. This hardy breed of white horses with dark spots and white-rimmed eyes was developed by the Nez Percé Indians and named by the Canadian-French voyageurs, who referred to the Indian horses as *à palouse*, “from the grassy plains” (where the Indians lived). In time *à palouse* became *Appaloosa*

in English, the word first recorded in 1849. The Appaloosa is sometimes called “the Dalmation of horses.”

appeal from Philip drunk to Philip sober. A woman petitioned King Philip of Macedon for justice for her husband and was refused. “I shall appeal against this judgment!” she exclaimed, and Philip—while still in his cups—roared: “Appeal—and to whom will you appeal?” “To Philip sober,” the woman replied, and according to Valerius Maximus, who tells the tale, she won her case.

Appian Way. This “Queen of Roads” was so named for Roman emperor Appius Claudius Caecus, who began building it in 312 B.C. It was 350 miles in total length and is still preserved today thanks to its excellent construction and materials such as cemented stone blocks. The emperor also built the first Roman aqueduct.

applause. *Applause* derives from the Latin *applaudere*, to applaud or clap. “Applause,” said one anonymous actor who apparently didn’t get enough applause, “is but a fart, the crude blast of the fickle multitude” (1645). Most actors and producers don’t feel that way. In fact, the practice of asking radio and television studio audiences to applaud at various points during a show isn’t an annoying modern-day invention. It dates back at least to Roman times, when in Plautus’s comedies a character called the Epilogue summed up the play after its conclusion and finally asked the audience for applause. In Plautus’s *Amphitryon*, for example, the actor implores the audience: “Now, spectators, for the sake of Jove almighty, give us some loud applause!” The Athenian lawmaker Draco, an avid theatergoer, got too much applause. According to one story, the official, popular despite his draconian laws, was killed by applause there. While he was sitting in the theater at Aegina in about 590 B.C., other spectators hailed him by applauding wildly and throwing their cloaks and caps in tribute. So many landed on Draco that he was smothered. Of all performers past and present, so far as history records, opera tenor Placido Domingo won the most applause from an audience. He needed no help from a claque. After his performance of *Otello* at the Vienna Staatsoper on July 20, 1991, Domingo was applauded for a full one hour and 20 minutes. However, Italian tenor Luciano Pavarotti received more curtain calls than Domingo—165 to Domingo’s 101—for his performance in *L’Elisir d’amore* at the Deutsche Opera in Berlin on February 24, 1998. Pavarotti was “only” applauded for one hour and seven minutes. See CLAQUE; CLAPTRAP.

apple; apple hawk; apple orchard. *Apple* for a baseball dates back to the early 1920s; before that the ball had been called a “pea,” a term heard no more. A good fielder was called an *apple hawk* at the time, this term obsolete now, and the ball park was called an *apple orchard*, an expression still occasionally used. *Apple* itself comes from the Old English *appel* for the fruit. An *apple* can also be a derogatory name given to certain American Indians by other American Indians who believe their values are too much like those of whites; that is, they are, like an apple, red on the outside and white on the inside. This term is based on the American black derisive name *Oreo* for a black person whose values are believed to be too much like those of whites. An *Oreo* is a trademarked chocolate cookie with creamy white filling.

apple cart. See UPSET THE APPLE CART.

Apple Island. A nickname for Tasmania, which is Australia’s main apple-growing area. Its inhabitants are often called Apple Islanders, though *Tassies* is more common.

apple-knocker. An abusive term meaning a stupid person, especially a rustic stupid person, that is still used by city dwellers. The term is recorded in this sense in a 1939 *New Yorker* story: “I had a reform-school technique, whereas them other sailors was apple-knockers. They were so dumb they couldn’t find their nose with both hands.” *Apple-knocker* first meant a fruit picker, deriving from the mistaken urban belief that fruit is harvested by being knocked from trees with long sticks.

the apple never falls far from the tree. Children always share the characteristics of their parents. The mid-19th-century proverb is usually said in a negative sense, emphasizing bad characteristics.

apple of discord. This legendary golden apple was thrown on the table by the god Eris (Discord) at the wedding of Thetis and Peleus, to which all the Greek gods but Eris had been invited. The apple was said to be “for the most beautiful woman” present, and Paris judged between Hera (Juno), Aphrodite (Venus), and Athene (Minerva), who offered him, respectively, bribes of power, sex, and martial glory. He chose Aphrodite, and the vengeance of Hera and Athene supposedly led to the fall of Troy. The *apple of discord* still means the cause of a dispute, or something to be disputed.

apple of one’s eye. That which one holds dearest, as in “You’re the apple of my eye.” The phrase is from the Bible (Deut. 32:10), which says the Lord kept Israel “as the apple of his eye.” *Pupil-lam*, or pupil, is actually the Latin for the “apple” of the phrase, but English translators of the Bible used “apple” because this was the early word for the pupil of the eye, which was thought to be a solid apple-shaped body. Because it is essential to sight, the eye’s apple, or pupil, is to be cherished and protected, and *the apple of one’s eye* came to mean anything extremely precious. The literal translation of the Hebrew phrase, incidentally, is “You are as the little man in the eye” (one’s own reflection in the pupil of another’s eye).

apple orchard. See APPLE.

apple pandowdy. Imogene Wolcott’s *New England Yankee Cookbook* (1939) gives several authentic recipes for this deep-dish apple dessert, noting that the modern version is often called *apple brown Betty*. It has also been called *flummery apple pot-pie*, *apple Jonathan*, *apple Johnny*, and *apple slump*. So much did Harriet Beecher Stowe like the dish that she named her Concord, Massachusetts, house *Apple Slump* in its honor.

apple-pie order. One old story holds that New England housewives were so meticulous and tidy when making their apple pies—carefully cutting thin slices of apples, methodically arranging them in rows inside the pie, making sure that the pinches joining the top and bottom crusts were perfectly even, etc.—that the expression *apple-pie order* arose for prim and

precise orderliness. A variant on the yarn has an early American housewife baking seven pies every Monday and arranging them neatly on shelves, one for every day of the week in strict order. Nice stories, but the term *apple-pie order* is probably British in origin, dating back to at least the early 17th century. It may be a corruption of the French *nappes-pliées*, folded linen (neatly folded) or cap-a-pie, “from head to foot.” Yet no use of either *nappes-pliées* order or cap-a-pie order appears in English. “Alpha beta order” has also been suggested, but seems unlikely. The true source of the term must still be considered a mystery, the matter far from in apple-pie order.

apple-polisher. The traditional practice of a student giving teacher a bright, shiny apple is the source for this expression for a sycophant, the Americanism being first recorded in 1928. The synonym SYCOPHANT interestingly has its origins in another fruit, figs.

applesauce. The expression *applesauce* for disguised flattery dates to the early 20th century and may derive from “the boarding-house trick of serving plenty of this cheap comestible when richer fare is scanty,” according to a magazine of the time. The term also came to mean lies and exaggerations. As a word for a sauce made from stewed, sweetened apples, *applesauce* is an Americanism dating back at least to the mid-18th century. *Applesauce* as a term for insincere flattery may also have been invented by American cartoonist Thomas Aloysius Dorgan (1877–1929), “Tad” having been the most prolific word coiner of his day. No one knows for sure.

apple slump. Apple slump, a popular New England dessert, takes on another meaning in Louisa May Alcott’s story “Transcendental Wild Oats” (1876), an account of her father Bronson Alcott’s failed utopian community, Fruitlands, 32 years earlier: “Poor Fruitlands! The name was as great a failure as the rest!” continued Abel [Bronson Alcott], with a sigh, as a frostbitten apple fell from a leafless bough at his feet. But the sigh changed to a smile as his wife added, in a half-tender, half-satirical tone, “Don’t you think Apple Slump would be a better name for it, dear?” The dessert is sometimes called *apple pandowdy* and *flummery*. So much did Harriet Beecher Stowe like the dish that she named her Concord, Massachusetts, house Apple Slump.

apples of paradise. According to tradition, each of the apples in the Garden of Eden had a bite taken from it after Eve took a bite of the forbidden fruit. Over the years *apples of paradise*, referring to the apples in Eden, has come to mean forbidden fruit.

apples of perpetual youth. These were golden apples of Scandinavian mythology that were in the care of Idhunn, daughter of Svold the dwarf. By eating them, the gods preserved their youth.

apples of Sodom. An old legend says that apple trees grown near the Dead Sea, “where Sodom and Gomorrah stood,” bear beautiful red fruit that falls to soot and ashes in the mouth. The gallnuts produced on apples by the insect *Cynips insana* are said to be scientific fact behind the legend, but the expression still means anything disappointing.

Appleton layer. English physicist Edward Appleton (1892–1965) discovered this upper region in the ionosphere that is 150 miles from Earth and part of the earlier discovered HEAVY-SIDE LAYER. Appleton named the region after himself and was knighted for his discovery in 1941. Sir Edward won the Nobel Prize in physics in 1947.

Appomattox. The name for a Virginia river that in turn gave its name to a sleepy town it meandered through in south-central Virginia, a hamlet more properly called *Appomattox Court House*, where all Confederate dreams died at the end of the Civil War when General Lee surrendered there. *Appomattox* itself later became a synonym for surrender or for victory, or for reconciliation, depending on who pronounced it. But perhaps Carl Sandburg defined the word best in *Abraham Lincoln: The War Years*: “For a vast living host the word Appomattox had magic and beauty. They sang the syllables ‘Ap-po-mattox’ as a happy little carol of harvest and fields of peace and the sun going down with no shots in the night to follow.”

apricot. The Romans called this fruit *praecoquum*, or “early ripe.” From there the word entered Arabic as *alburquq* and went into Portuguese as *albricoque*, whence it came into English as *apricock*. By the 18th century the shears of prudery had pruned the word from *apricock* to *apricot*.

April. The romantic Romans named *April* after the flower buds that open in this month, basing their *Aprilis* on the Latin *aperia*, meaning “open.”

April fool! All Fools’ Day, when childish pranks are played and their victims are taunted with cries of *April fool!*, seems to have been brought from France to England in about 1700. But its origins and the reason it is celebrated on April 1 remain unknown. There are several explanations. The oldest says All Fools’ Day is a relic of the Roman “Cerealia,” held at the beginning of April to honor Ceres, the goddess of agriculture. It seems that Ceres’ daughter Proserpina was carried off by Pluto, the king of Hades, and when Ceres heard the echo of her screams, she followed the echo—a fool’s errand. Other theories hold that April Fools’ Day falls in April because of the tricky weather at the time; because April is the first month of spring, when people are half awake from their winter hibernation and easily hoaxed; and because of the mock trial of Christ held in April. Still another explanation is that New Year’s Day fell on March 25 under the old Julian calendar (used until the Gregorian calendar was adopted in 1756) and that people capped a week of festivities with April Fools’ Day on April 1. The French call an April Fool a *poisson d’Avril* (an “April fish”), in reference to a newly spawned, naive, and easily caught fish.

apron strings. See TIED TO ONE’S MOTHER’S APRON STRING.

apronyms. American columnist Franklin P. Adams (F.P.A.) coined the term *apronym*, but writers have used apronyms—“label names” that fit the nature or occupation of a character—at least since the time of Spenser’s allegorical *Faerie Queene* and Bunyan’s *Pilgrim’s Progress*. It is said that Plato’s real name was Aristocles and that he was called Plato (“broad”) because of his broad shoulders. Mr. Gradgrind, Mr. Worldly Wiseman,

Lord Easy (a careless husband), William Congreve's gossipy character Scandal, Scott's Dr. Dryasdust, and many of Dickens's characters are famous fictional examples of aptronyms. In recent times there have been a number of real people with funny names, such as Judge Lawless, Dr. Kwak, and even an Orson Swindle of the Federal Trade Commission.

aquanaut; oceanaut. Based on the Greek *nautes*, sailor, these words were coined in recent times to describe scientist-explorers who work and live at sea for long periods. Jacques Cousteau coined *oceanaut*.

Arabic words. English words that come to us from Arabic include: saffron, mattress, admiral, hazard, cotton, henna, camphor, alembic, alchemy, elixir, alkali, zenith, almanac, azimuth, cipher, gismo, syrup, antimony, alcoran, mosque, sumac, bedouin, rebec, sash, algebra, monsoon, arsenal, assassin, jar, alcohol, apricot, giraffe, hashish, coffee, sirocco, fakir, emir, sherbet, alcove, sofa, harem, gazelle, minaret, zero, albatross, Allah, houri, magazine, genie, ghou, candy, jihad, safari, tariff, coffee, cafe and, possibly, so long (from *salaam*).

arachnida. *Arachnida*, the class of spiders (plus scorpions and mites), takes its name from the Lydian maiden Arachne, so skilled at weaving that she challenged Athena, goddess of the household arts, to a contest. Athena won the contest, weaving perfect tapestries that told glorious stories about the gods, while Arachne's excellent but imperfect efforts were unflattering to the gods. The proud Arachne, frightened when Athena tore her impious work to pieces, tried to hang herself, but the goddess interceded, changing her into a spider (from the Greek *arachne*) so that she would forever weave her beautiful designs. Yet she really wants no more of her weaving, legend says, and keeps trying to hang herself—the reason spiders hang on threads from their webs.

Arawak. This language of the Arawak people of the Lesser Antilles is unique because it developed into a separate “female language.” Many years before Columbus landed, fierce South American Caribs had invaded the islands, butchering and eating all the male inhabitants and claiming their women. In retaliation, the women devised a separate female language based on Arawak, refused to speak Carib, and for generations thereafter maintained silence in the presence of all males.

Arbor Day. “Tree Day” is the exact meaning of *Arbor Day*, for *arbor* is a Latin word for “tree.” Arbor Day was first celebrated in 1872, when Nebraskan J. Sterling Morton and his supporters persuaded their state to set aside April 10th for tree planting, to compensate for all the trees Americans had destroyed over the years in clearing the land for settlements. More than a million trees were planted on that first Arbor Day alone, and today the holiday is celebrated in every state.

arborvitae. The white cedar was named arborvitae, Latin for the “tree of life,” by French explorers in Canada during the early 17th century. Champlain's men had observed that Indians drank a medicinal tea made from the bark and needles of the white cedar (*Thuja occidentalis*) and so named the tree because it saved lives.

arcades ambo. See SIX OF ONE AND A HALF-DOZEN OF ANOTHER.

archaeopteryx. One of the world's most famous fossils, the 150-million-year-old archaeopteryx has the body and teeth of a small dinosaur and the feathered wings of a bird. When found in a German limestone quarry in 1861 it was hailed as a missing evolutionary link between reptiles and birds. Since that time five similar specimens have been found. *Archaeopteryx* is, appropriately, the Greek for “ancient wing.”

Archie Bunker. Among the most recent of eponymous words, an *Archie Bunker* means a bigoted lower-middle-class American. The words recall the bigoted lead character of the long-running television show *All in the Family*.

Archimedean principle. The Greek mathematician and inventor Archimedes, supposedly born at Syracuse in Sicily in 287 B.C., was both the Albert Einstein and Thomas Edison of his day. He devised the Archimedean drill, pulley, and windlass, and the screw of Archimedes, a machine for raising water, among many other inventions. Archimedes, however, thought little of these ingenious contrivances, even declining to leave written records of most of them. He preferred to be remembered for his great work in mathematics, or for his founding of the science of hydrostatics, which his Archimedean principle made possible. As fate would have it, Archimedes is best remembered for his coining of an expression. One day he was asked to determine the amount of silver an allegedly dishonest goldsmith had used for the king's crown, which was supposed to have been made of pure gold. While pondering the solution to the problem in his bath, he observed that the quantity of water displaced by a body will equal in bulk the bulk of the immersed body (the Archimedean principle). All he had to do then was to weigh an amount of gold equal in weight to the crown, put crown and gold in separate basins of water, and weigh the overflow to determine how much gold the crown really contained. According to one story, he was so overjoyed with his discovery that he forgot his clothes and ran out into the streets naked, astonishing passersby with his shouts of “*Eureka, eureka!*” (“I have found it, I have found it!”).

archipelago. *Archipelago* first referred only to the Aegean Sea, the Italians giving the Aegean this name in the 13th century from their word *arcipelago*, “chief sea.” *Archipelago* later came to mean any group of islands.

architecture is frozen music. Goethe did not coin the above phrase which we owe to the German poet Friedrich von Schelling (1775–1864). Von Schelling used the term several times in his *Philosophy of Art*: “Since it [architecture] is music in space, as it were a frozen music. . . . If architecture in general is frozen music. . . .” Soon after, in 1830, Goethe said *Die Baukunst ist eine estarrte Musik*, the form usually quoted today.

archy. Perhaps the only and certainly the most humorous cockroach in American literature. He was invented by satirist Don Marquis (1878–1937) for the author's newspaper columns, along with archy's friend mehitabel the cat, both of their names

uncapitalized. The inspired cockroach writes free verse because he can't work a typewriter shift key. The cat's motto is *toujours gai*, "always gay, merry." Their adventures were first collected in 1927. See COCKROACH.

Arctic. *Arctic* for the far north derives from *arctos*, the Greek word for bear. The Greeks referred to the north as *arctos* because the Great Bear constellation (Ursa Major) is the most prominent one in the northern skies.

arena. The floors of the amphitheaters of ancient Rome had to be covered with absorbent sand because so much blood was spilled in the gladiatorial contests held there. The Latin word for sand is *arena*, and this became the name for the structure itself.

Aretines. An ancestor of sorts to *The Joy of Sex, Sonnetti Lussuriosi* (1524) was written by Pietro Aretino (1492–1556). The book was a collection of verses and erotic drawings showing positions of sexual intercourse and became an underground favorite in Europe for centuries. Many courtesans were so proud to have slept with Aretino that they called themselves *Aretines*. But others hated the satirist—one critic wrote this mock epitaph:

Here lies the Tuscan poet Aretino
Who evil spoke of everyone but God,
Giving as his excuse, "I never knew him."

are we on the same page? A recent expression meaning "Are we speaking about the same thing?" or "Are we thinking about the same thing?"

are you a man or a mouse? American slang probably dating back to the early days of the century, *Are you a man or a mouse?* is used to disparage or spur on a timorous person. The reply is often: "A man; my wife's afraid of mice."

are you kidding? "You must be joking, you can't be serious." The Americanism *no kidding* probably suggested the longer exclamation, first recorded in about 1945.

Argentina. The South American country takes its name from the Latin *argentum*, "silver," after the precious metal Spanish explorers found there. Its official name, bestowed in 1816, is *La Republica Argentina*, "The Silver Republic." One legend holds that llamas grazing on Mount Posi in 1545 uprooted shrubs beneath which there was a vein of silver ore. Spanish prospectors noticed the ore, and the mining of silver began.

Argonaut. While searching for the Golden Fleece, Jason sailed from Greece to Colchis in the galley *Argo*. His 50 companions were thus called *Argonauts* (from the ship's name and the Greek *nautis*, "sailor"), and the word *Argonaut* is now applied to any adventurer on the sea. See AQUANAUT.

argosy. This large ship carrying rich cargo takes its name from the once great Adriatic seaport of Ragusa, the former name of the present-day Dubrovnik, Croatia. Italians called the *Ragusan*

vessels *ragusea*, and the English corrupted *ragusea*, in several stages, to *ragusye*, *arragouse*, *aragosa*, and finally *argosy*.

argus-eyed. In Greek mythology the hundred-eyed Argus was chosen by the jealous Zeus to guard over the nymph Io, even though he had turned his love into an unattractive cow. Apparently he grew jealous of Argus, too, for he had him killed and transferred his eyes to the peacock's tail—which is, according to tradition, why it looks the way it does. Argus managed to live on in name only, *argus-eyed* still meaning vigilant.

argyle. The original pattern for argyle socks was the traditional green and white pattern of the Scottish Campbell clan of Argyle, or Argyll. The Duke of Argyle, head of the clan, was famous among Highlanders for the posts he erected in his pastures to enable his cows to rub their backs and ease the itching caused by insects. Perhaps the posts were only erected to indicate a trail covered with snow, but nevertheless "God bless the Duke of Argyle!" became a common humorous remark whenever a Scotsman scratched himself. The clan found new popularity when mentioned in several of Sir Walter Scott's novels. Not long after, its tartan was adapted by fabric manufacturers as the *argyle plaid*, and socks knitted in such a pattern were called *argyle socks*. Nowadays, argyle socks are any two or more bright colors, retaining only the diamond-shaped pattern of the original adaptation.

aria. *Aria*, for an air or melody for a single voice with accompaniment, is an Italian word (*aria*, "air," "music") that entered English in the first half of the 18th century. It is said that three-quarters of our musical terms are Italian in origin, including, to name only a few, *violin*, *mandolin*, *pianoforte*, *orchestra* (from Greek), and *opera*.

Aristarch. A very pedantic or very severe critic. This eponymous word comes from the name of Aristarchus of Samothrace (ca. 217–145 B.C.), a Greek scholar, critic, and the chief librarian of the Alexandrian library for over 30 years. It is from his editing of Homer's *Iliad* and *Odyssey*, among other great works, that Aristarch won his fame or infamy.

Aristippus of Cyrene. A philosopher who was a pupil of Socrates and founder of his own school, which regarded pleasure as the only absolute good in life. The city of Cyrene, a few miles from the coast of what is now Libya, was the birthplace of Aristippus. All of his writings are lost.

Aristotelian logic. A number of words are named after Aristotle (384–322 B.C.), the Greek philosopher who was the pupil of Plato and tutor to Alexander the Great. These include *Aristotelianism*, a philosophy emphasizing deduction and investigation of concrete, particular things and situations; *Aristotelian logic*, traditional formal logic; *Aristotle's lantern*, a zoological term so called from a reference by Aristotle to a sea urchin that resembled certain lanterns; and the *Aristotelian* or dramatic *unities*, the necessity for unity of action, time, and place in drama. One of the greatest thinkers of all time, Aristotle's habit of giving his lectures in the *peripatos*, or walking place, of the Athenian Lyceum gave his school of philosophy the name *Peripatetic*, which yielded the English word *peripatetic*, "walking about or carried on while walking about from place to place."

Arizona. Our 48th state, admitted to the Union in 1912, is nicknamed “the Grand Canyon State.” *Arizona* derives from the Papago Indian word *Arizonac*, “the place of the small spring.”

Arizona nightingale. A humorous Americanism for a braying burro or mule that dates back to the late 19th century.

Arizona strawberries. American cowboys and lumberjacks used this term as a humorous synonym for beans, also employing the variations *Arkansas strawberries*, *Mexican strawberries*, and *prairie strawberries*. Dried beans were pink in color like strawberries. One wit noted that the only way these beans could be digested was for the consumer to break wild horses.

Arizona tenor. A person suffering from tuberculosis and the coughing that accompanies it; many people with the illness were drawn to the dry Arizona climate.

ark. “The sacred Biblical vessel built by Noah for preservation against the Flood,” according to British admiral William Henry Smyth in the *Sailor’s Lexicon*. “It was 300 cubits in length, 50 in breadth, and 30 in height, and of whatever materials it was pitched over or pay’d with bitumen . . .” *Ark* is also the name of a mare’s tail cloud, or *cirrus*, when it forms a streak across the sky.

Arkansas. Originally spelled *Arkansaw*, our 25th state, nicknamed “the Wonder State,” was admitted to the Union in 1925. *Arkansas* is the Sioux word for “land of the south wind people.”

Arkansas toothpick. See BOWIE KNIFE.

Arkansawyer. A nickname for a native of Arkansas, often used by Arkansas residents themselves, because the original spelling of the state’s name was *Arkansaw*. *Arkansawyers* have suffered their share of insults in the language, including *Arkansas asphalt* (a log road); *Arkansas chicken* or *T-bone* (salt pork); *Arkansas fire extinguisher* (a chamberpot); *Arkansas lizard* (any insect louse); *Arkansas travels* (the runs, diarrhea); and *Arkansas wedding cake* (corn bread).

armadillo; Texas turkey. *Armadillo* is the Spanish diminutive of “the armed one” and is related to words like armor, this obviously in reference to the little porkilotherm’s being encased in bony armor and by its habit of rolling itself, when threatened, into an impregnable ball. The Mexican native, which cannot survive north of Texas, was a source of food to Americans during the Great Depression, when it was known as the “Hoover hog” or “Texas turkey.” Darwin was fascinated by the little armadillo and its ancient prehistoric predecessor, the glyptodont, which was about the size of a Volkswagen Beetle. A children’s poem has it that a peccadillo of the armadillo is that it must be washed with Brillo.

Armageddon. Today *Armageddon* usually refers to a nuclear war that marks the end of the world. It derives from the biblical prophecy that the final battle between good and evil on Judg-

ment Day would be fought on the battlefield of Armageddon (Rev. 16:14–16), which is now Megiddo, near Samaria in Israel. The Hebrew *har Megiddo*, from which *Armageddon* derives, means the *har* or mountain of Megiddo.

armed to the teeth. Some real or imaginary pirate swinging aboard a ship, one hand on a rope, the other hand wielding a cutlass or a pistol, with a knife clamped between his teeth, suggested this expression. The phrase, still used if mostly in a humorous way, seems to have originated in the first half of the 19th century. English politician Richard Cobden used it in 1849, perhaps inspired by an adventure writer of the day.

armoire. These large wardrobes or cupboards started off as places to store weapons, deriving from the Roman *armarium*, “closet,” which derives from the Latin *arma*, “arms.”

armstrong. A high trumpet note, such as those played by American jazz great Louis “Satchmo” Armstrong (1900–71). “Satchmo,” which he liked to be called, refers to his rather large mouth.

the Army Air Corps. There is no Army Air Corps now, but a lot of people remember when there was and know the words to “The Army Air Corps,” written by Robert Crawford, which won first prize in a 1939 Army Air Force competition. It begins: “Off we go into the wild blue yonder, / Climbing high into the sun . . .” See ANCHOR’S AWEIGH.

Arnie’s army. See FRED KARNO’S ARMY.

A-Rod. People who have little or no knowledge of baseball might have trouble with these initials. They are short for Alex Rodriguez, the famous Yankee baseball star.

around Cape Horn. An expression once used in whaling communities to mean “being away on a whaling voyage.” One old poem went:

“I’ll tell your father, boys,” I cried
To lads at play upon my lawn.
They chorused back, “You’ll have to go
Around Cape Horn.”

around the horn. In the days of the tall ships any sailor who had sailed around Cape Horn was entitled to spit to windward; otherwise, it was a serious infraction of nautical rules of conduct. Thus, the permissible practice of spitting to windward was called *around the horn*. Cape Horn isn’t so named because it is shaped like a horn. Captain Schouten, the Dutch navigator who first rounded it in 1616, named it after Hoorn, his birthplace in northern Holland.

arrant thief; knight errant. *Arrant* was originally just a variation of *errant*, nomadic or vagabond, the word best known in *knight errant*, a knight who roamed the country performing good deeds. But from its persistent use in expressions such as an *arrant thief*, a thief who roamed the countryside holding up victims, *arrant* came to mean thorough, downright, or out-

and-out. Expressions such as *an arrant thief*, *an arrant coward*, etc., have been common since the late 14th century.

arras. This richly woven tapestry with scenes and figures takes its name from the town of Arrasin, in Artois, France, where it was first woven in medieval times. The French call it a *tapiserie*.

arrive. The Latin *ad*, to, plus *ripan*, shore or river bank, are the components of our word *arrive*, which first was a maritime term meaning a ship had reached shore or land. Since medieval times, however, *arrive* has meant to reach anywhere, as in “He finally arrived in Rome.”

arrow of Akestes. In Greek legend Akestes, scion of a river god, was an unrivaled archer. Akestes had such great strength that in one contest he shot an arrow hard enough that it caught fire flying through the air. Since then *arrow of Akestes* has come to mean an oratorical point made with fiery brilliance.

arrowroot. The Arawak Indians of the Caribbean Islands called this plant (*Maranta arundinacea*) *aru-aru*, “meal of meals,” because they thought it highly nutritious. It would have been more precise for English speakers to name the plant “aru-root” when they learned of it, but the plant was also a valuable medicine used to draw poison from the wounds caused by poisoned arrows. Speakers thus associated “aru” with arrow and folk etymology added *arrowroot* to the dictionaries; the word is recorded as early as 1696.

arroz con pollo. A Mexican chicken and rice dish seasoned with garlic, saffron, paprika, and other spices that was first introduced to the United States in the Southwest but is now known throughout the country. The Spanish name translates simply as “rice with chicken.”

arse; ass. *Arse* is generally used by the British for the buttocks. They use *ass* for the animal. Americans say *ass* for both the animal so called and the anatomical designation. In fact, the word *arse* in any sense is rarely heard in America, except possibly as a euphemism.

ars gratia artis. Latin for “art for art’s sake.” The expression is famous as the slogan for Metro-Goldwyn-Mayer since 1916, when publicist Howard Dietz introduced it along with the Metro-Goldwyn-Mayer lion. Dietz also invented the MGM slogan “More stars than there are in heaven.” The French, however, used a phrase similar to *ars gratia artis* in the early 19th century, their *l’art pour l’art* meaning that art couldn’t or shouldn’t be in any way useful, could serve no moral or political purpose.

artesian wells. *Artesian wells*, wells whose shafts penetrate through an impervious layer into a water-bearing stratum from which water runs under pressure, take their name from Artesium, now Artois, in northern France, where such wells were worked as early as the 17th century.

artichoke; Jerusalem artichoke. As the poet Richard Armour observed, the *artichoke* is the one vegetable you have more of when you finish eating it, due to its compact leaves,

which are scraped with the teeth and discarded. Often called the *globe* or *French artichoke*, it is the flower bud of a thistle picked before it blooms. At one time it was seriously suggested that the plant was so named because some *artist* had *choked* on the inedible “needles” covering its delicious base, or “heart.” Actually *artichoke* has more prosaic and complicated origins. The Arabians called it *al* (“the”) *kharshuf*, which became *alca-chofa* in Spanish. Northern Italians corrupted the Spanish version to *articiocco* and this entered French as *artichaut*, from which our *artichoke* evolved. It is true that the English *choke* in the word replacing the French *chaut* may have been influenced by the sensation one gets from eating the wrong part of the vegetable. As for the *Jerusalem artichoke*, it neither comes from Jerusalem, is an artichoke, nor tastes anything like an artichoke. The starchy underground tuber (a good potato substitute) was called *girasole articiocco*, “sunflower artichoke,” by northern Italians because it is a member of the sunflower family and resembles a sunflower in leaf and stem. To Englishmen the word *girasole* sounded like *Jerusalem*, and they mistakenly translated the name as *Jerusalem artichoke*.

article. A derogatory Irish slang term for a person, as in “Shut your hole (mouth), you stupid article.” The term has some currency in England.

artsy-fartsy. A pompous, pretentious person who tries to appear more educated or knowing about something, especially art, literature, or music. Originally an American expression, perhaps patterned on *arty-crafty*, and first recorded in 1965. British slang, however, has constructions like *arsy-varsy* (ass-backward, vice versa).

asafetida bag. *Asafetida* is a foul-smelling resinous material made from roots of several plants of the parsley family. Its odor was once thought to ward off illness, and it was often placed in small bags that were worn under the clothing of children.

A.S.A.P. This initialism for *as soon as possible* (as in “Send the check A.S.A.P.”) seems to have been coined in the military during the Korean conflict and is first recorded in 1955. It can be pronounced as initials (A.S.A.P.) or as a word (pronounced *a sap*). After about 30 years it spawned the slang A.S.A.F.P. (as soon as fucking possible), first recorded in 1985.

ascham. This tall narrow locker for arrows takes its name from Roger Ascham, an English scholar who would otherwise not be remembered for his 16th-century treatise on archery.

as cold as charity. Bitterly cold. The saying alludes to the coldness encountered in the offices of charitable or welfare organizations by people seeking help. The coinage is British but the practice is worldwide.

ascot. A neck scarf knotted in a special way; so named from the fashionable dress worn at the Ascot races in England. Also called *ascot tie*, the term dates back to the early 1900s. Ascot Week is held every June at Ascot Heath in Berkshire.

as deaf as the mainmast. An old phrase said of a sailor who doesn't hear an order given.

as different as chalk and cheese. A phrase dating back to Middle English that shows the great difference between two things, as in "It's chalk and cheese."

as easy as shaking the drops off your John. The *John* referred to here is the *John Thomas* (qv), the expression for the penis.

as every schoolboy knows. Jonathan Swift used this expression, which has been traced back as early as 1621. It is generally associated with the British historian Macaulay because of his frequent references to somewhat abstruse subjects as subjects that any public schoolboy should know.

ashes; cremains. *Ashes* are the grayish-white to black residue that remains after something is burned, including human remains after cremation. The word derives from the Old English *aesce*. *Cremains* are the remains of a cremated corpse. The best story I know about *cremains* involves humorist and drama critic Robert Benchley (1889–1945). "I can hear him laughing now," Benchley's wife said upon reaching the Nantucket graveyard where his ashes were to be buried—and then inspecting the open burial urn she was transporting. As a kind of cosmic farewell joke, the ashes in the urn had blown away en route and she had been driving for miles with an empty vessel.

Asiatic hordes. These words are so distasteful to Asians that they have officially asked on several occasions to never be called Asiatics to avoid any association with the term *Asiatic hordes*. "Hordes" itself, however, is clearly associated with Asians. The word first described the tent of Batu Khan, Genghis Khan's grandson, who crossed the Volga in 1235 leading the savage Mongol invasion of Europe that left massacred people and leveled cities in its path. Batu's magnificent tent, made mostly of embroidered silk, was called the *sira ordu*, the "silken camp." Conquered Poles called it the *horda* and soon the name "Golden Horde" was applied to both Batu's tent and his army. In time "horde" came to describe any large, savage army, especially in the phrase *Asiatic hordes*.

ask a silly question and you'll get a silly answer. Still a common expression, the above probably dates to the late 19th century. It possibly evolved from the old proverb "ask no questions and you'll be told no lies."

ask not what your country can do for you; ask what you can do for your country. The precise wording of this famous phrase, especially the catchy inversion "ask not" can be credited to John F. Kennedy, as it usually is, but the sentiment was hardly original with J.F.K. Wrote Oliver Wendell Holmes, Jr., for just one example: "It is now the moment . . . to recall what our country has done for each of us, and to ask ourselves what we can do for our country in return." After this, in a 1916 speech, future president Warren G. Harding said: "We must have a citizenship less concerned about what the government can do for it and more anxious about what it can do for the nation."

as long as grass grows and water runs. A promise, meaning "forever," often made to Indian tribes in the American West regarding their rights to their lands and their freedom. But as a writer put it in *Colliers Magazine* (11/30/07): "The white invaders [settlers] pleaded for Statehood, and Statehood forever laid aside the promise to the red man that he should have freedom 'as long as grass grows and water runs.'"

as mad as Ajax. The words allude to the old story that Ajax, a hero of the Trojan War, disappointed at being awarded only Achilles' armor, went mad and attacked a flock of sheep, which he mistook for a hostile army. Both Sophocles and much later Shakespeare wrote of the tragedy.

as Maine goes, so goes the nation. A common political saying since at least 1880, when it was first recorded, meaning that the political party that wins the most votes in the state of Maine in a national election will win nationally. This has often, but not always, been the case. The saying, however, originally referred to New York, being first recorded in 1848 as "As goes Dutchess County, so goes the state, and as New York goes, so goes the Union."

as much chance as a one-legged man at an ass-kicking contest. Close to no chance at all.

as one man. Unanimously, with one accord. The expression is an ancient one, coming from the Bible (Judges 20:8): "So all the people got them up as one man."

asparagus. There is a story that *asparagus* takes its name from the Greek *aspharagos*, meaning according to this theory, "as long as one's throat," because diners often swallowed the spears whole. But the meaning of the word *aspharagos* from which our *asparagus* derives is unclear and more likely meant "sprout or shoot" in Greek.

The great chef Brillat-Savarin told of a giant asparagus stalk growing in an Episcopal bishop's garden, so immense that it became the talk of the town as it rose from the ground. Only when the bishop went out to cut the tempting stalk did he learn that it wasn't real but a perfect imitation made by a local canon, "who had carved a wooden asparagus . . . had stuck it by stealth into the bed, and lifted it a little every day to imitate the natural growth."

Some old-timers still call asparagus *grass*, from the homily expression "sparrowgrass" commonly used as a name for the vegetable over the last three centuries. The Romans cultivated the vegetable as early as 200 B.C., growing some stalks at Ravenna that weighed a full three pounds and gathering stems in the Getulia plains of Africa that were actually 12 feet tall.

There is an interesting true story about blanched white asparagus. According to a *New York Times* correspondent, at a recent dinner party "a certain guest complimented the German hostess and said: 'This white asparagus is as beautiful as a naked woman,' becoming the first asparagus eater to have noticed a resemblance between asparagus and the attributes of the *female sex*." See QUICKER THAN YOU CAN COOK ASPARAGUS.

Aspasia. The great Athenian statesman Pericles (ca. 500–429 B.C.) took for his lifelong companion the beautiful and cele-

brated hetaera Aspasia of Miletus. This accomplished courtesan gave birth to his son Pericles the Younger and over the centuries her name became a literary euphemism for a courtesan. *See* THAIS.

aspen; trembling poplar. The trembling or quaking poplar, as the aspen is also known, is said to have trembling leaves because it began shaking in shame and horror when Christ's cross was made from its wood. *Populus tremula* and its related species have long, compressed, twisted leafstalks that cause the leaves to tremble in even the slightest wind.

asphodel; Jacob's rod. The asphodel of the ancients so frequently encountered in poetry is *Asphodeline lutea*, a perennial yellow-flowered herb sometimes called Jacob's rod. In ancient times the dead were thought to sustain themselves on the roots of asphodels, and the flowers were often planted on graves. Interestingly, the much better known daffodil bears a name that is a corruption of *asphodel*.

aspic. A tasty meat jelly, aspic is supposed to have been named for the asp (the same hooded venomous snake that Cleopatra used to kill herself), because French gourmets said it was "cold as an asp." The word came into English late in the 18th century and there is no better explanation for its origin.

aspidistra. This foliage plant takes its name from the Greek *aspis*, a small round shield in reference to the shape of its stigma. It is often called the cast-iron plant because it withstands all kinds of ill treatment. Widely used in bars, movie houses, and other public places, it is also called the beerplant—because bartenders often water it with beer left on the bar at the end of the evening!

aspirin. Originally a trademark of the German Bayer Aspirin Company, *aspirin* is now a generic term and needn't be capitalized. The famous analgesic's name was coined by German scientist Charles Witthauer in 1899, *aspirin* being a shortening of the German *Acetylsalicylsäure* (acetylated spiraic acid), plus the chemical suffix *in*. By 1915, after many headaches, Bayer had lost its battle for the trademark in court.

as poor as Job's turkey. An old saying possibly invented by Canadian humorist Thomas C. Haliburton, who combined shrewd New England talk with the boastful tall talk of the frontier. He apparently invented the common Americanism in one of his tales, explaining that the turkey was even poorer than the biblical Job, who had been stripped of all his worldly goods by God. Job's turkey was so poor that it had but one feather to its tail, and so poorly fed that it had to lean up against the fence when it gobbled, lest the exertion make it fall down.

assassin. Named after the 11th-century Muslim order of Assassins, its name coming from the Arabic *hashshasin* "eaters of hashish or hemp," which apparently gave them courage for their ruthless murders. The first grandmaster of the order, its absolute ruler, was known in Europe as the Old Man of the Mountain. According to one writer, the lowest devotees were

required to disregard their own safety—"martyrdom was not avoided but sought." The term assassin came into English and today is used to mean murderer, particularly one who kills for political motives. *See* OLD MAN OF THE MOUNTAIN; THUG.

Assassinations Committee. *See* WARREN COMMISSION.

assembly line. The term *assembly line* was first recorded in 1914 in connection with Henry Ford's car company, but the practice in America goes back at least to the 18th century, when muskets were made from several standard parts in one factory. Among automobile manufacturers, Henry Ford is generally credited with the idea for an assembly line, but Ford actually improved upon a method the Olds Motor Vehicle Company, maker of the Oldsmobile, used long before him in 1902, although he did introduce the electric conveyer belt.

ass in a sling. The *Dictionary of American Slang* says that *to have one's ass in a sling* means "to be or appear to be sad, rejected, or defeated." Originating in the South perhaps a century ago, the now national expression was probably suggested by someone with his arm in a sling, that image being greatly and humorously exaggerated. A good story claims that this *ass* is really a donkey, that the expression comes from a practice of blacksmiths rigging slings for donkeys, or asses, because they can't stand on three feet while being shod. But the good story isn't a true story. Donkeys *can* stand on three feet, and so far as is known, no blacksmith ever shod a donkey in a sling.

ass-up. The unusually named small woodpecker of the family Sittidae, found in the eastern United States, is so called because it runs up and down tree trunks with its head held lower than its tail.

as sure as God made little green apples. Very certain, as in "He'll be there as sure as God made little green apples." First recorded in the mid-19th century, the phrase is sometimes heard with the word *green* deleted.

aster. This daisy takes its name from the Latin *aster*, "a star," in reference to the shape of its flower. However, when *aster* occurs at the end of other plant names, as in *Cotoneaster*, it doesn't have anything to do with this root but instead indicates inferiority.

asterisk. *Asterisk*, from the Greek word for "star," can mean "little star" in English, but much more frequently refers to the star that writers use after a word to indicate a footnote at the bottom of the page. Stoddard King wrote about one in "The Writer and the Asterisk" (1913), showing another function of the star:

A writer owned an Asterisk,
and kept it in his den,
Where he wrote tales (which had large sales)
Of frail and erring men
And always, when he reached the point
Where carping censors lurk,

He called upon the Asterisk
To do his dirty work.

asteroid. An *asteroid*, from the Greek *aster*, “star,” and *eidos*, “form,” is also called a minor planet, being one of the thousands of small planets, the largest less than 500 miles in diameter, that circle the sun mainly between the orbits of Jupiter and Mars. *Asteroid* was coined in 1804 by British astronomer Sir William Herschel, who so named the minor planets. See EARTHLIGHT for a word Herschel’s son coined.

asteroid 6285 Ingram. An asteroid discovered in 1981 and named for molecular biologist Vernon Ingram and his wife Elizabeth. Dr. Ingram also found the cause of sickle-cell anemia.

as the crow flies. Meaning, “in a straight line,” the expression dates back to at least 1800. *Corvus brachyrhynchos* of North America is a remarkable bird, far too clever for any SCARECROW. These crows are said to hold conventions of 40 to 60 birds in which a leader they will follow is chosen. They can apparently be ruthless, too. Wrote the New England naturalist Alan Devoe: “The most extraordinary rites of a flock are the ‘trials’ they conduct. When a crow has broken the laws of crowdom, the flock gathers in judgment, parleying sometimes for hours while the offender waits some distance away. Suddenly the discussion ceases; there is a moment of silence. Then the flock either rises in unison and leaves, or dives in a mass upon the offender, pecks out his eyes, and pummels him to death.” See CROW BAR, CROW’S-FEET, CROW’S NEST, EAT CROW.

as the saying goes. This common saying has been traced back to George Farquhar’s play *The Beaux’ Stratagem* (1707), in which the landlord Boniface consistently utters, “As the saying is . . .” before his every phrase. Over the years Boniface’s words became *as the saying goes*.

asthma dog. A hairless dog, from the belief that sleeping with one is a cure for asthma.

Astor Place riots. The eminent American actor Edwin Forrest (1806–72) was a great rival of the older English tragedian William Macready, who at 78 played his last role, as Macbeth, and who died in 1873 at the age of 100. In 1849, both actors were appearing in New York, where each had ardent fans, the “common man” favoring Forrest and the elite supporting Macready. The rivalry degenerated into “a struggle between democracy and Anglomania,” in one critic’s words, and on May 10 a mob led by E. C. Z. Judson (writer Ned Buntline), possibly encouraged by Forrest, attacked the Astor Place Opera House, where Macready was playing Macbeth. In the Astor Place riots, 22 people were killed and 36 wounded, making this probably the worst such theater disaster of all time. Judson went to jail for a year for his part in the affair.

astrology. *Astrology* means “speaking of the stars” in Greek, and an astrologist is “one who speaks of the stars.” The word did not come into English, through Latin, until the late

14th century. Prior to that ASTRONOMY had been used in its place.

astronomy. *Astronomy* comes from a Greek word meaning “star arranging, or arrangement of the stars,” and was first applied to the work of men charting the heavens. It came into English, via Latin, early in the 13th century, meaning at first the whole field of ASTROLOGY, not the modern science of astronomy.

asylum. *Asylum*, from the Greek *asulon*, refuge, first meant a sanctuary for debtors or criminals, but in the 18th century it came to mean a *lunatic asylum*. After another two centuries that meaning lost favor, *mental hospital* preferred, and now it is mainly heard in sayings such as British prime minister Lloyd George’s “The world is a lunatic asylum run by the lunatics.” *Asylum* is used frequently today in *political asylum*, protection and immunity from extradition granted to a political refugee from another country.

AT&T. American Telephone and Telegraph, formed in 1885, was called The Long Distance Company until it acquired the Bell Company four years later and began buying local phone companies. Today, as the result of a 1982 antitrust suit, it has divested itself of local phone companies and is back to long distance again (along with some new ventures and the manufacture of phone equipment).

Athanasian wench. Though it’s rarely used anymore in everyday speech, this 18th-century slang for “a forward girl, ready to oblige any man that shall ask her” has an amusing origin. It alludes to the ecumenical *Athanasian Creed*, which takes its name from St. Athanasius, an exiled third-century Alexandrian bishop who was a pioneer in scientific theology. The *English Book of Common Prayer* includes the *Athanasian Creed*, and the term *Athanasian wench* arose when some wit pointed out that the familiar first words of the creed read *quicumque vult*, “Whosoever desires . . .”

Athens. According to the myth, when Cecrops founded a great city in Attica, the Greeks offered to name it for the god who gave them the most valuable gift. Poseidon gave them the horse, but Athena stuck her spear in the ground and an olive tree rose from the earth. Because she gave them this greatest gift of all, the city was named in her honor. In any event, the city is assuredly named for the goddess.

athlete. *Athlete* ultimately comes to us from the Greek *athlos*, meaning “prize,” which led to the Greek *athlein*, “to contend for a prize,” and finally *athletes*, “one who contends for a prize.” Entering English early in the 16th century, the word described anyone who competed in the physical activities—running, jumping, boxing, wrestling, etc.—that formed part of the public games in ancient Greece.

athlete’s foot. An advertising copywriter coined this term in 1928 when Absorbine Jr., a remedy for this disease often caught in gyms and locker rooms, popularized the euphemism. For over 400 years before that, *athlete’s foot* had been called “ring-

worm.” *Jock itch*, the term for a condition caused by the same fungus, was coined in the 1970s.

Atlantic Ocean. The Atlantic may take its name from the fabled kingdom of Atlantis that is said to have existed in its domain, or from the Atlas Mountains in northwest Africa, which the ancients thought overlooked the entire ocean. It is interesting to note that the Atlantic Ocean is widening an inch every year, while the Pacific Ocean is shrinking.

Atlantis; Lemuria; Lyonesse. First mentioned by Plato and said to have existed in the Atlantic Ocean, *Atlantis* was supposed to have been destroyed by an earthquake and sunk beneath the bottom of the sea more than 10,000 years ago, which hasn’t stopped legions of adventurers from searching for it over the ages. *Lemuria*, said to be near Madagascar, is another famous lost island in history, as is *Lyonesse*, a mythical country “forty fathoms down” stretching off England from Lands End to the Scilly Isles.

atlas. In Greek mythology Atlas stood on a mountain peak in what is now Africa holding the heavens apart from the earth. This myth inspired the great geographer Gerardus Mercator (1515–94) to use a drawing of Atlas holding a globe on his shoulders for the cover of a collection of maps he published in the 16th century. The picture was used on so many similar books to follow that *atlas* became synonymous for any book of maps.

at loose ends. There are at least two good explanations for this expression meaning “not knowing what to do with oneself,” or to be unemployed. The saying dates back to the middle of the 19th century in England and was originally *to be at loose end*. One theory connects it with a string hanging loose from a garment, the end of it attached to nothing. But Weekley in his *Etymological Dictionary of Modern English* says the phrase suggests “freedom from tether,” like a horse out to pasture, out of harness, untied and unemployed.

at low tide. *To be at low tide* or *water* or *the low watermark* is to have financial difficulties, or no money at all, as if one were stranded by the ebbing tide. Nautical slang in origin and dating back to the early 17th century, the expression is Standard English today.

atom. The *atom* takes its name from the Greek *atomos*, undivided or indivisible, being to the Greeks something that could not be cut up or divided anymore. More poetically, the Greek word *atomos* is closely related to the Greek for “the twinkling of an eye,” a charming way to express minuteness. *Atom* came into English in the 15th century from the Latin *atomus*, which derives from the Greek word.

atomic bomb. This term was apparently first used in a science fiction story—H. G. Wells’s “The World Set Free,” written in 1914. Thirty years later it became a reality.

atone. A person who must atone for his sins must find inner unity and become “at one” with himself. That is the origin of

the word *atone*; in fact, an obsolete definition of *atone* is “to bring into unity, harmony.”

at one fell swoop. The first use of this phrase in English appears to be by Shakespeare in *Macbeth*, where he describes a Hell-Kite killing chickens. But the word *swoop*, referring to a bird of prey pouncing suddenly on its victim, occurs in an earlier reference to a fabled bird of Madagascar that could swoop down and carry off “a horse and his rider, or an elephant.” *One fell swoop* means a sudden single strike or blow, fierce and often brutal. The *fell* in the phrase has nothing to do with the verb “fall,” as might be suspected, deriving instead from the old English adjective *fell* meaning “fierce, savage, ruthless,” which is the basis for the word *felon*. *Swoop* comes from a Scandinavian word that meant to move in a stately manner, to sweep along as with trailing garments.

atropa. See BELLADONNA LILY.

atropidae. *Atropidae* are book lice that feed on the bindings and paper of books, eventually destroying them. They are named for *Atropos*, one of the three Fates in Greek mythology, the Fate that finally cut the thread of life. Why were the *Atropidae* or book lice named for someone who destroyed life? In ancient times the ticking sound they made was said to forebode a death. *Atropos*, the unturning (unbending) fate, takes his name from the Greek *a* (without) and *tropos* (turning).

attest. See TESTICLES.

at the end of one’s rope. *I’m at the end of my rope* means I’ve gone as far as I can, I can’t do anymore, and suggests the image of an animal tied on a tether. The expression is first recorded, however, in the sense of someone finally checked in wrong-doing, in a 1686 translation of a French work. This suggests that the expression may have been inspired by the sight of a man executed by hanging, dangling at the end of his rope.

attic; attic salt. Both the *attic* in one’s house and *attic salt*, pointed wit, came to us from the same source, the Greek word *Attikos*, an Athenian, or citizen of Athens. Salt was a common term for wit and the Athenians were noted for their elegant turns of thought, which inspired the Romans to coin the expression *sal atticus* (“attic salt”). The Athenians had no *attics* in their houses as we know them, but the Attic (Athenian) style of architecture featured decorative walls at the tops of buildings. When storage rooms were built behind such decorative walls centuries later, they were called *attics*, after the walls.

Attila the Hun. See HUN.

attorney. See LAWYER.

Au; gold. *Au*, an abbreviation of the Latin *aurum*, is the chemical symbol for gold, which is itself one of the four oldest words in English, deriving from the Indo-European sub-

strate word *gol* (the other three are *apple*, from *apal*; *bad*, *bad*; and *tin*, *tin*). Hundreds of expressions, some of them covered in these pages, are based on *gold*, from *all that glitters is not gold* and *good as gold to heart of gold* and *gold digger*. Various kinds of real or counterfeit gold include the following:

Argental gold, electrum—an alloy of gold and silver.

Colored gold—gold whose luster is destroyed by nitric acid.

Dead gold—colored gold.

Fool's gold—iron or copper pyrites, sometimes mistaken for gold.

Green gold—gold alloyed with silver.

Jeweler's gold—an alloy containing three parts silver to one of gold.

Leprous gold—lead.

Mannheim gold—an alloy containing copper, tin, and zinc.

Mock gold—an alloy of copper, zinc, and platinum.

Red gold—gold alloyed with copper.

Shell gold—a gold put into shells by miners.

Spangle gold—gold beaten for spangles.

White gold—an alloy of about five parts silver to one of gold.

Aubepine. As a preface to his famous story “Rappaccini’s Daughter” Nathaniel Hawthorne originally wrote a paragraph claiming that the tale was written by a Frenchman named Aubepine. Some readers immediately recognized that Aubepine meant “hawthorn” in French and that Hawthorne was actually discussing his own work.

aubergine. Another word for the eggplant, deriving from the French *auberge*, a kind of peach, possibly because the first cultivated eggplants were about the size of a peach. *Aubergine* is also used as an adjective meaning “black” or “dark purple.” See EGGPLANT.

aubrieta. Few great painters have a genus or species of plants named after them, not even French artist Claude Monet, whose paintings of his exquisite garden at Giverny are indisputable masterpieces. But one small genus of perennials honors Claude Aubriet (1651–1743), the venerable French natural history painter. Its only horticultural species is *Aubrieta deltoidea*, purple rock cress, which comes in many varieties and is often used for rock gardens and edgings. *Aubrieta* is pronounced “au-bree-sha.”

Aubry’s dog. The dog Dragon’s French master, Aubry of Montdidier, was murdered in 1371 by Richard of Macaire. Thereafter, whenever Richard appeared, Dragon attacked him. This excited suspicion of Richard, and he was ordered into judicial combat with the dog. Dragon killed him, and in his last moments Richard confessed the murder of Aubry. An Aubry’s dog is thus a very loyal, faithful dog.

auburn. A word that has changed its color. Though it refers to something darker today, *auburn* originally meant whitish, from the Latin *alburnus*, which derives from the Latin *albus*, “white.”

Somehow over the years *auburn* became confused with the English *brown* and has come to mean golden brown or reddish brown.

au courant. French for “up to date, informed on current affairs,” as in “every detail of her dress was au courant.”

auction; augment. When an item is auctioned, bids on it keep going up, of course, until there is no more bidding and the highest bidder makes the purchase. The word *auction*, widely used by the Romans, reflects the process, deriving as it does from the Latin *augere*, to increase, which also gives us *augment*.

audible edibles. A humorous name for popcorn. According to his obituary in the *New York Times* (February 19, 2004), Samuel Rubin (1919–2004), known as “Sam the Popcorn Man,” was largely responsible for the sale of popcorn in U.S. movie theaters. “Movies had prospered without popcorn until the Great Depression, when theater owners scrambled to make up for reduced ticket prices by turning to ‘audible edibles,’” Douglas Martin wrote in Rubin’s obituary. “The appetite of moviegoers was so great that from 1934 to 1940 the nation’s annual popcorn harvest grew from 5 million to 100 million pounds.”

auger. See ADDER.

auger in. Pilots superstitiously avoid the use of the word *crash*, using many euphemisms, including *buy the farm* and *auger in*. *Auger in* dates back to the day of the prop plane, planes with props resembling an auger as they crashed into the earth.

August; Augustan age. Augustus Caesar stole a day from February to give *August* 31 days—simply because he did not want July, named after his great uncle and adopted father, to be longer than his own name-month. History is made up of such petty jealousies, but Augustus and Julius Caesar really got along very well; there is no evidence of any generation gap. Born Gaius Octavianus, his mother the daughter of Julius Caesar’s sister, Augustus was eventually chosen by the Roman ruler as his heir, adopting the name Caesar. Octavianus, as he was commonly known, was only 19 at the time of his uncle’s assassination in 44 B.C. On returning to Rome from Spain, he found that Caesar had secretly adopted him and willed him all his property. It was then that he changed his name and embarked on a celebrated military career that included the conquest of Egypt. In 29 B.C., already immensely popular among the people, he was chosen first emperor of Rome, and two years later the Senate bestowed upon him the title *Augustus*, or “imperial majesty.” Finally, what was the sixth month of the year (*Sextillus*) was renamed “Augustus” in his honor—complete with an extra day at his insistence. *August* wasn’t chosen because it was his birth month (September), but because it happened to be his “lucky” month of the year—the one in which he first became a consul, reduced Egypt, put an end to civil wars, received the oath of allegiance from his legions at Janiculum, and scored his greatest military triumphs. Octavianus Augustus ruled wisely until his death at the age of 75, his reign

marked by great progress and a flowering of literature that is today known as the *Augustan age*.

auld; Auld Lang Syne. *Auld*, as in the song “Auld Lang Syne,” simply means “old.” *Auld Lang Syne* probably dates back at least before the 18th century, but the famous version rewritten by Scottish poet Robert Burns in 1796 is the one that is known and sung today. *Auld Lang Syne* means “old long since,” or times past.

Auld Reeky. “Old Smoky,” an old nickname for the Scottish city of Edinburgh, which used to be covered with smoke and soot from factories.

Auld Sooty. The devil, one of many such names for Satan, including Auld Billy, Auld Bogey, Auld Cloutie, Auld Mick, Auld Roughy, and Auld Waghorn. All of these are mostly used in Scotland.

Aunt Edna. The creation of British playwright Terence Rattigan (1911–77) in his *Collected Works* (1953). An *Aunt Edna* is a close relative of the American little old lady from Dubuque—nice but provincial, middle-class, very prudish, and traditional. See OLD LADY IN DUBUQUE.

Aunt Hagar’s children. A once commonly heard reference for African Americans in general. So called after Hagar, Ishmael’s mother (Gen. 21:9); Hagar was the Egyptian servant of Abraham’s wife, Sarah, in the Old Testament.

Auntie; Beeb. *Auntie* is a Britisher’s fond name for the BBC, which is also called the *Beeb*. See AUNT EDNA.

Aunt May. An *Aunt May* is British naval slang for a person generous to sailors. It is aptly named for Mrs. May Hanrahan, the widow of a United States naval captain, who “adopted” 16 British destroyers during World War II and spent almost a quarter of a million dollars on their crews in the form of presents and comforts. *Aunt May* Hanrahan was received by the queen when she visited England after the war and was piped on board the destroyer *Tartar* while a naval band on the jetty played in her honor.

au pair. A young woman, often foreign, who receives room and board and a small salary in return for housework. The term, dating back to 1965, is becoming more common in the United States, especially to describe one who watches children. It is from the French for “on equal footing.”

aurora borealis; auroral. *Aurora borealis* means “northern dawn” in Latin and is used to describe the electrical streams of light sometimes seen at night in the northern sky. The phenomenon is so named because the Greek goddess Aurora was said to begin her day’s travels before the sun rose. Aurora’s name is also remembered in *auroral*, “dawnlike.”

auspicious, augur, augury. The Roman *auspex* was a man appointed to foretell the future by observing the flight of birds,

listening to their songs, observing the food they ate, or examining their entrails. The name comes from the Latin *avis*, “bird,” and *specere*, “to look at.” No important enterprise was begun without the *auspex*’s consulting the birds to see if omens were favorable; favorable omens came to be called *auspicious* ones. In later Roman times the *augur* replaced the *auspex* as the observer and interpreter of bird signs, his name deriving from the Latin *avis*, “bird,” and *garrere*, “to talk or tell.” His interpretation was called an *augurism*, which became the English word *augury*, an omen, while the Latin *inaugurare*, “to install an official after consulting the birds,” became our word *inaugurate*.

Aussie. Australians have been called Aussies since about 1895, when the term seems to have been coined by Australians. *Aussie* became popular worldwide during World War I, as did *digger* for an Australian soldier, though this last term may have originated during the Australian gold rush in the 1850s. Australia, of course, has long been called *the land down under* (along with New Zealand). In contrast, Alaska is sometimes jokingly called *the land up over*.

Aussie salute. A humorous term for waving a hand in the air to swat or scare off flies. The words were probably coined by the Australians, who aren’t at all a pompous people.

Australia. Captain Matthew Flinders is the second of only two men in history who alone named a continent. The English navigator named Australia in 1803, after sailing completely around it. It had previously been known from the 16th century as *Terra Australis*, “the southern land.” For the first person to name a continent see AMERICA and the story of the mapmaker who could be credited with naming both North America and South America—though his map depicted only the area we now know as South America, and he did not realize that he was naming a continent.

Australian crawl. Pacific Island natives probably invented this fastest of all swimming strokes—the one used by all free-style swimmers today—but it was introduced into Europe (where the breaststroke was the favored stroke) from Australia at the turn of the century, and thus dubbed the *Australian crawl*.

Austrian lip. The British historian Macaulay wrote that Charles II of Spain, last of the Spanish Hapsburgs, had a jaw so malformed that he couldn’t chew his food. Another Hapsburg, Emperor Charles V, possessed a lower jaw that protruded so far beyond his upper jaw that he could not speak an intelligible sentence. This inherited genetic defect, one of the most curious in history, is common to all the Hapsburgs, and can be seen in many of their portraits. It was probably inherited through marriage with the Polish princely family of Jagellon and perpetuated by intermarriage among the Hapsburgs themselves. The term *Austrian lip* describes the deformity far better than “severely protruding lower jaw.”

autantonym. An *autantonym* (from the Greek for “self” plus “antonym”) is a word that has come to mean its opposite. An example is the word *fast*, which in the case of a fast runner

means a runner who runs rapidly, but in the case of a *fast* color means a color that doesn't run at all. The word seems to have been coined in the last 50 years or so. Another example of an autonym is *raze/raise*.

auteur; cineast(e). A movie director who displays a unique personal style in his films is often called an *auteur*, from the French for "originator" or "author." A *cinéaste*, on the other hand, is a French word for a devoted movie fan.

author's children. Knowing his life was drawing to a close, Eugene O'Neill asked his wife Carlotta to help him destroy his 11-play cycle, *A Tale of Possessors Self-Dispossessed*, which he had been working on for more than 20 years. "Go and get the unfinished manuscript and let's sit in front of the fireplace and burn them," he told her. Later she recalled: "And so we sat feeding the flames, through the long dusk. When the darkness came O'Neill had passed into unequivocal silence. You don't know how horrible it was. It was like tearing up children."

auto-da-fé. A public judgment against someone tried by the Spanish Inquisition was called an *auto-da-fé*, the judgment usually followed by burning condemned heretics at the stake, burning employed because the Catholic church forbade the shedding of blood. *Auto-da-fé* is Portuguese for "act of the faith."

auto-icons. Jeremy Bentham (1748–1832), the philosopher-author whose clothed skeleton is on display at University College, London, thought that dead people should all be embalmed and used as their own monuments. He called these *auto-icons*. "If a country gentleman have rows of trees leading to his dwelling," he wrote, "the auto-icons of his family might alternate with the trees; copal varnish would protect the face from the effects of rain—caoutchouc the habiliments." But then Bentham also had an unusual "pet"—a teapot.

automatic writing. *Automatic writing* is writing performed without the will or control of the writer, sometimes without the writer being conscious of the words written. The phenomenon first appeared in mid-19th-century America as a tool of spiritualism, and the writer was sometimes (but not always) hypnotized or drugged and aided by instruments including a planchette, "a little heart-shaped board running on wheels," that was supplemented by a Ouija board containing the alphabet and other signs.

automation. *Automation* was coined in 1936 by D. S. Harder, a General Motors employee, but it didn't come into popular use until the 1950s. Harder defined *automation* as the "automatic handling of parts between progressive production processes," but it is more commonly defined today as "the technique or system of operating a mechanical or productive device by highly automatic means, as by electronic devices."

automatist. A practitioner of automatic writing (i.e., writing performed without the will of the writer). French writer Thomas Flournoy (fl. early 20th century) was one of several such au-

thors who produced a book written in an "unknown tongue." In 1900, he published *Des Indes à la planète Mars*, which he claimed to have written in "the Martian language." The word dates back to about 1880.

automobile. "[Automobile] being half Greek and half Latin, is so near indecent that we print it with hesitation," a *New York Times* editor wrote in 1899. But *automobile* and *car* are the only survivors of the many names Americans gave to early *horseless carriages*, which included *diamot*, *motor buggy*, and even *stink chariot* (probably the work of an early environmentalist). A French construction of the 1880s, it was broken down to *auto* here by 1899. See *CAR*.

autumn; fall. *Autumn* is used much more in England, *fall* in America. Both are lovely old words. *Autumn*, from the Latin *autumn* for the season, dates back to the early 14th century. *Fall*, first recorded in 1545, is short for the season of *leaf-fall*. In the 1850s *autumn* was British slang for a hanging through a drop door, the grim joke showing that the British did use *fall* as a synonym for *autumn*.

ave atque vale. Latin for "hail and farewell." In about 57 B.C. the Roman poet Catullus traveled to Asia and found the tomb of his brother, who had died near Troy. After he performed the ancient Greek burial rites over the grave, there came to him the famous *ave atque vale* lament containing a phrase still common to dozens of languages over 2,000 years after he invented it:

Dear brother, through many states and seas
Have I come to this sorrowful sacrifice,
Bringing you the last gift for the dead . . .
Accept these offerings wet with fraternal tears;
And forever, brother, hail and farewell.

Avenging Angel. A Colt revolver with a portion of its barrel sawed off was called an *Avenging Angel* in the early West. Avenging Angels were used by Brigham Young's Mormon followers, one of whom was said to have killed hundreds with his.

average. *Average* has an unusual rather than average derivation. The word derives from the French *avarie*, a word of Arabic origin that meant "less than total damage to a ship or its cargo." Since average damage was a mean between the extremes of total damage and no damage, the word *average* ultimately came to take its current meaning.

avocado. When Montezuma served the *avocado*, or alligator pear, to Cortés and his conquistadores, the Aztecs explained that their *ahucatl* was so named from their word meaning "testicle," not only because the fruit resembled a testicle but because it supposedly excited sexual passion. The Aztecs even drew their guests pictures to illustrate their story, but to the Spaniards *ahucatl* sounded like *avocado*, their word for "advocate," and they named it so when they brought it back to Spain. In Europe the *avocado* became a great favorite, and France's Sun King called it *la bonne poire* (the good pear) because it seemed

to get a rise out of his setting libido. Aphrodisiac or not, the fruit remains an important meat substitute in parts of the world today and a delicious dessert in others.

Avogadro's law. Also called *Avogadro's hypothesis*, this physics law states that "equal volumes of all gases under identical conditions of pressure and temperature contain the same number of molecules." It is named after its creator, Italian physicist Count Amedeo Avogadro (1776–1856), who developed it in 1811. Avogadro, who became a professor at the University of Turin, also has named after him *Avogadro's number*: "the number of molecules in a mole of any substance." A *mole* is the molecular weight of a substance.

avoid extremes. Common to many languages, *avoid extremes* has been traced back as far as the writings of Pittacus of Mitylene (652–569 B.C.), one of the Seven Wise Men of Greece. Ovid has it "You will go more safely in the middle," and Aristotle, "Moderation in all things."

avoid Latin derivations. *Avoid Latin derivations; use brief, terse Anglo-Saxon monosyllables* was long a popular admonition to students in college English composition classes. The only Anglo-Saxon word in the anonymous admonition is *Anglo-Saxon*.

Awake, Mars! In the Roman reign of King Numa, legend tells us, a shield fell from heaven, an oracle declaring the seat of the Roman Empire would lie wherever that shield should be. On hearing this, Numa had 11 identical shields made so that the original could not be identified. The shields were kept in the Temple of Mars, the Roman god of war. If war was declared, a Roman general moved the shield, with the phrase "Awake, Mars!"

Away Down South in Dixie. As the *Star of the West* sped from New York to Fort Sumter in Charleston, South Carolina, just before the start of the Civil War, the Union troops gathered on deck, telling stories and singing. Ironically, their favorite tune turned out to be "Away Down South in Dixie," which songwriter and minstrel David D. Emmett had composed on his violin in 1859 "while looking out at the cold dreary streets of New York City and wishing he were down home in Dixie." This would become the favorite marching song of the Confederates during the Civil War, but it was first sung as a war tune by these Yankees heading South. "In Dixie land I'll take my stand, to live and die in Dixie . . .": one war correspondent reported that these words were heard again and again, over 20 times on the first day alone, as the ship cut through the billowing waves. See GOD BLESS AMERICA.

AWOL. This commonly used abbreviation meaning "absent without leave" originated during the Civil War, according to H. L. Mencken (*The American Language*, supplement I, 1945): "[In the Confederate Army] unwarranted absences of short duration were often unpunished and in other cases offenders received such trivial sentences as reprimand by a company officer, digging a stump, carrying a rail for a hour or two, wearing a placard inscribed with the letters AWOL."

axe. A common Ozarkian pronunciation of *ask* that has a long history in England, as in "Let me axe you a question."

axel. In figure skating an *axel* is a graceful jump consisting of one-and-a-half turns in the air, among other qualifications. Having nothing to do with the axle of a wheel, it is named for its inventor, Norwegian skater Axel Paulsen, who perfected it in the late 19th century. It is the only figure-skating jump to take off from a forward position.

Axis; Allies; Axis of Evil. *Axis* and the *Allies* were terms common during World War II, the former referring to the political alliance of Germany, Italy, and Japan, and the latter referring to the allies of the United States and Britain. *Axis* is first recorded in 1936 and *Allies* in 1914, when it was the name of those countries that opposed the Central Powers in Europe during World War I. In recent times, as early as 2001, the phrase *Axis of Evil* was coined by U.S. president George W. Bush's speechwriters David Frum and Mike Gerson to describe the alliance of terrorist organizations and terrorist states around the world. See EVIL ONE.

Axis Sally. See TOKYO ROSE.

an ax to grind. In the tale "Who'll Turn Grindstones" a man carrying a dull ax compliments a boy on his intelligence and good looks and then asks him if he can borrow his father's grindstone. Flattered, the boy says yes, and then the man proceeds to tell him how strong he looks for his age. The boy falls for all this flattery, and to demonstrate his strength keeps turning the grindstone until the dull ax is as sharp as a razor. Then the man goes off without so much as thanking the boy. The author concludes his story with the observation: "When I see a merchant overpolite to his customers, begging them to taste a little brandy and throwing half his goods on the counter—thinks I, that man has *an axe to grind*." Ben Franklin is frequently credited with this yarn, thought responsible for the expression meaning to flatter a person while seeking a favor from him, but perhaps the credit should go to Charles Miner (1780–1865), who related this incident from his childhood in the columns of the *Wilkes-Barre Gleaner* (1811). The phrase *an ax to grind* has since the publication of his story become widely synonymous for an ulterior motive.

¡Ay Chihuahua! A mild expletive sometimes heard in the Southwest. This was a frequent oath of the Cisco Kid's sidekick on *The Cisco Kid* radio program in the 1940s.

aye-aye. This sailor's word for "yes" or "understood" dates back to at least the 16th century aboard ships and on land. Many writers believe it derives from the early English *yie*, yes, while others cite the Old French *je* or *oje*, meaning yes or that say I. (Also aye).

ayuh. Yes; though the word has shades of meaning ranging from the affirmative to the sarcastic. Chiefly heard in Maine, *ayuh* is found throughout New England in variations such as *ayah*, *ayeh*, *eeyuh*, *ehyuh*, *aaay-yuh*, and even *ayup*. A touchstone of New England speech, it possibly derives from the nautical *aye*, "yes," which in turn probably comes from the early English *yie*,

“yes.” Another theory has *ayuh* coming from the old Scottish-American *aye-yes* meaning the same.

azalea. The ancient Greeks had the erroneous idea that this shrub required a dry, sandy soil and named it after their word for dry, *azalea*. Technically, azaleas are not different from rhododendrons, but they are kept distinct from that genus by gardeners.

Aztec two-step. More commonly known as *Montezuma's revenge*, a term recorded much earlier, the *Aztec two-step* is a humorous designation for diarrhea, usually diarrhea suffered by travelers in Mexico, and refers, of course, to the ancient Aztecs of Mexico. The term is first recorded as the title of a book in 1953 but is probably older. See MONTEZUMA'S REVENGE.

B

B. Our capital *B* can be traced back to the Phoenician alphabet; the lowercase *b* derived from the cursive form of the capital. *B* was called *Beth*, “a house,” in Hebrew.

baaad. *Bad*, when slowly pronounced *baaad*, has long been black slang for something or someone good, and recently this meaning has come into general usage to a limited extent. The variation is so old that it is found in the American Creole language Gullah three centuries ago, when *baaad* was used by slaves as an expression of admiration for another slave who successfully flaunted “Ole Massa’s” rules.

baas. Boss or master. This usage as a form of address from a black to a South African white man is dead in Namibia, where it has been banned by law, and it is fast dying in South Africa. It derives from the Dutch for *master*.

ba-ba-deh-boom. A humorous term imitative of the sound of a gun fired and used to indicate someone was killed by a gun, generally up close. First recorded in the film version of Mario Puzo’s *The Godfather* (1972). *Ba-ba-deh-boom* was probably around long before it found its way to the printed page, however. Heard frequently since *The Godfather* film, it is usually said while simulating a gun with the thumb and index finger. Can also be written as *babadehboom* to indicate how quickly it is said.

babbitt. Congress deemed the invention of babbitt or babbitt metal so important to the development of the industrial age that it awarded inventor Isaac Babbitt (1799–1862) a \$20,000 grant. Babbitt is a soft, silver-white alloy of copper, tin, and antimony used to reduce friction in machine bearings. It was discovered as a result of the inventor’s experiments in turning out the first Britannia metal tableware ever produced in America. After the Taunton, Massachusetts goldsmith successfully manufactured Britannia in 1824, he experimented further with the same three metals and ultimately invented babbitt, which he used to line a patented journal box in 1839. The metal proved far better than any other substance used for reducing friction and is still widely used for machine bearings today. *Babbitt*

soap, no longer marketed, also bore the inventor’s name. Babbitt wasn’t the prototype for Sinclair Lewis’s ambitious, uncultured, and smugly satisfied American businessman in his novel of the same name, but the character’s name was probably suggested by Lewis’s early memories of advertisements for the soap.

babble; babel. *Babel*, for a confused turbulent medley of sounds (“a babel of sounds”), or a scene of utter confusion, takes its name from the biblical city of Babel described in Genesis, where as punishment for the people’s attempt to build a tower to reach heaven itself, God confused their speech and, where there was previously one universal language, created the many tongues that we know today. *Babel* comes to us from the ancient Assyrian *bab-ili*, “gate of the gods.” *Babel* and Babylon are the same city, the latter word passing to us from the Greek *Babulon*. Babylon stands for any corrupt, luxury-loving place of riotous living, owing much of its reputation to the Babylon of the Revelation of St. John the Divine—“Babylon the Great, the Mother of Harlots and Abominations of the Earth.” In days past, and in rare instances today, Protestants have called Rome, seat of the Catholic church, “the Woman of Babylon.” *Babel* is of no relation to *babble*, a word probably suggested by the sounds made by infants, though the *O.E.D.* says that *babble*’s association with *babel* may have affected some of the former word’s meaning. *Babel* can be pronounced baybel or babble, the latter usually the American pronunciation. One time British playwright Noël Coward corrected singer Elaine Stritch on her pronunciation of the word. “It’s bayble, Stritch,” he advised. “I’ve always said babble,” she countered. “Everyone says babble. It means mixed-up language, doesn’t it? Gibberish. It’s where we get babble from.” “That’s a fable,” Coward said.

Babcock test. Though not as famous as Pasteur, the agricultural chemist Stephen Moulton Babcock played an important role in the development of the modern dairy industry. While chief chemist at the Wisconsin Agricultural Experiment Station in 1890, Babcock invented a process for determining the butterfat content of milk. The Babcock test makes possible rapid, accurate milk grading and helps farmers develop better

dairy herds by enabling them to test milk from their stock. Babcock taught for 25 years at the University of Wisconsin, from 1887 to 1913. He died in 1931, at age 88, having spent the last 20 years of his life researching the nature of matter.

babe; baby. *Babe* was once the standard English word for child, deriving from the Middle English *baban*, an imitative nursery word in origin—that is, similar to the cries of an infant. Infant sounds also give us “mamma” and “poppa” and the Latin *mamma*, breast, from which all we mammals take our name. *Baby* is just a diminutive of *babe* and was once used as a word for doll. *Baby* as a term of endearment for a sweetheart, male or female, doesn’t seem to go back further than 1901 in America, though it may have arisen a little earlier in fast English sporting circles, and *baby* for a tough guy (“That baby packed some punch”) dates back only to the Roaring Twenties. The most famous example of *Babe* as a pet name for a boy is baseball great BABE (George Herman) RUTH (1895–1948). The nickname is often used in the South as a familiar name for a boy or man, especially the youngest of a family. *Babe* as a term for a woman (often an attractive woman) is an Americanism first recorded in 1905. See BAMBINO.

babe in the woods. The old ballad “Children in the Wood” (1595), gives us the still-common expression *a babe in the woods*, for someone easily gulled because he is simple and trustful, inexperienced in life or some aspect of life. The ballad probably predates a tragedy by Robert Harrington on the same theme that was written in about 1601. Both play and ballad tell the story of two children left by their dying father to the care of his wife’s brother. The brother, wanting their inheritance, hires two men to kill the children, but one of them repents and kills his companion, abandoning the children in the wood, where they die. The wicked uncle is arrested and dies in jail and the hired killer is sentenced to death. The ballad was vastly popular, and no doubt became a nursery story, too.

Babel. See BABBLE.

babe of love. See LOVE CHILD.

Babe Ruth. George Herman Ruth wasn’t the first athlete to be called Babe, but he is certainly the most famous to bear the name, which was bestowed upon him in 1914 by a Baltimore Orioles coach, who shouted, “Here’s Jack’s new Babe!” when Ruth (signed by Baltimore owner Jack Dunn) first entered the ballpark. Over his long career, Ruth earned many other nicknames—including *Judge*, *Monk*, *Monkey*, and the *King of Swat*—but history will always remember him as *the Babe*. A variation on this is *Bambino*, the Italian for “baby,” which for centuries has meant an image of the infant Jesus in swaddling clothes. No sports records are better known than the legendary *Sultan of Swat*’s 60 home runs in one season and 714 throughout his career (though both records have been surpassed), and his “call” of a home run in the 1932 World Series is on every list of “most memorable sports events.” There seems no reason to doubt that when all his records are broken, Babe Ruth will still be more famous than those who broke them. Ruth (1895–1948), the poor boy brought up in an orphanage who became the most renowned American athlete of all time, is one of the few people ever to become a folk hero while still alive (Joe Louis is another).

Some of the stories about the Bambino bear repeating. For example, he began his baseball career as a catcher for St. Mary’s School in Baltimore. He was an outstanding pitcher in the major leagues before switching to the outfield. He led the major leagues in strikeouts in 1923 with 93, being a strikeout king as well as home run king. He once hit a home run that literally went around the world, the ball landing in a freight car that was transported to a ship. And one could go on for pages from memory alone. The New York Yankees star, the Homer of Home Runs, has never been equaled for talent or color. His name will remain a synonym for the ultimate in sluggers even after someone else has hit 120 homers. See SULTAN OF SWAT; JOE LOUIS.

Babe Ruth of rodeo. Casey Tibbs (1928–90), rodeo’s all-around champion nationally in 1951 and 1955 and saddle bronc champion six times.

babushka. One of the few Russian words widely used in English, *babushka*, for a woman’s scarf, derives from the Russian *baba*, “village woman,” plus the diminutive suffix *ushka*—because scarves have long been worn hoodlike by old women in Russia.

baby boom. According to *New York Times* columnist William Safire, *baby boom*, the sharp increase in the birth rate after World War II, hasn’t been traced back further than 1953, when it appeared in a report to President Truman by the Commissioner on Immigration and Naturalization. Attorney Harry Rosenfield wrote the report, but he doesn’t claim to have coined the expression. See BOOMER.

baby-kisser. Politicians have been baby-kissing since the first election, but the term doesn’t seem to have been used before the U.S. presidential election of 1884. The words were applied to Benjamin Butler, who ran on the independent Greenback-Labor ticket and came in a poor third behind Democrat Grover Cleveland and Republican James Blaine. “As a baby-kisser,” a contemporary newspaper observed, “Ben Butler is not a success.” One theory has it that the idea for the term appears in the Eatanswill election episode of Dickens’s *Pickwick Papers* (1837), although *baby-kisser* doesn’t appear there.

Babylon of the West. An old name for bloody Dodge City, Kansas, a town famous or infamous in the last half of the 19th century for its gunfights, saloons, and “soiled doves” and “Calico Queens” like Molly-be-damned and Cotton Tail. Some historians hold that the first RED LIGHT DISTRICT called by that name was located in Dodge.

Baby Ruth. The popular candy bar was probably named after BABE RUTH in 1921, when Ruth was already a legendary star. Soon after, Ruth challenged the naming, trying unsuccessfully to patent his own *Babe Ruth Home Run Bar*, and the candy-maker then claimed its *Baby Ruth* had been named after President Grover Cleveland’s daughter Ruth, widely called Baby Ruth. Since Baby Ruth had died in 1904, 17 years before the candy bar was marketed, such a naming seems highly unlikely. The Baby Ruth candy bar probably was named for Babe Ruth, even though the candymaker doesn’t support the story anymore. Ira Berkow’s “A Babe Ruth Myth . . .” (*New York Times* 4/7/02) tells the story in greater detail.

baby-sitter. *Baby-sitter* offers a good example of what is called back-formation of a word. Usually nouns derive from verbs, as *diver* derived from *dive*. In the case of *baby-sitter*, however, this process was reversed. *Baby-sitter* is an Americanism first recorded in 1937, while the verb to *baby-sit* was born from it over 10 years later. The noun has come to mean one who takes care of children or anything else that requires attention.

Baby State. A nickname for Arizona because it was long the youngest state in the Union, admitted in 1912. It is also known as the Valentine State (it was admitted on St. Valentine's Day), the Grand Canyon State, the Sunset State, the Sandhill State, the Coyote State, and the Apache State.

Bacchus. See APHRODISIAC.

bachelor. It wasn't until relatively recent times that the word *bachelor* was used exclusively for unmarried males. In the past the word was applied without distinction of sex, Ben Jonson using it to mean an unmarried woman in his play *The Magnetic Lady* (1632). *Bachelor* derives ultimately from the medieval Latin *baccalaris*, which became the Old French *bachelier*.

bachelor's buttons. In his *Herbal*, Gerard wrote that "The similitude these flowers have to the jagged cloath buttons anciently worne . . . gave occasion . . . to call them Bachelor's Buttons." But *bachelor's buttons*, a name now applied mainly to *Centaurea cyanus*, or the common cornflower, but also to the red campion, the upright crowfoot, and the white ranunculus, may take their name from the old custom of bachelors carrying the flower in their pockets to determine how they stood with their sweethearts. If the flowers stayed fresh in the pocket, it was a good omen; if they shriveled up "she loves me not." Other colorful names for the cornflower include blue-bottle, blue bonnets, and ragged sailor.

bacitracin. This antibiotic used to treat bacterial skin infections takes its unusual name from *baci*(llus) plus the first four letters of the last name of Margaret Tracy (b. 1936), a child in whose tissues *Bacillus subtilis* was found.

back and fill. Hardly any progress is made when you back and fill a sailing ship; that is, when you are tacking the craft while the tide is running with her and the wind is against her. The sails are alternately backed and filled and the ship seems to remain in roughly the same place, going back and then forward. The term was a natural for sailors, and then landlubbers, to apply to any vacillating or irresolute action—to HEM AND HAW.

back-answer. To talk back. Mainly an Irish expression, as in "Don't you back-answer me or you'll get the back of me hand," but it is heard in England as well.

Back Bay. The Back Bay area has been since the mid-19th century a fashionable residential district in Boston, Massachusetts. So much so, in fact, that *Back Bay* has been synonymous almost as long for the culture of Boston.

backbite. This expression was formed from the noun *back* and the verb *bite*, almost certainly as an obvious description of someone slandering another person in his absence, or behind his back. An old chestnut connects the words with the medieval "sport" of bearbaiting, where the bear was fastened to a post by a short chain, some of the dogs that fought him holding him at bay face to face while others attacked him from the back. There are no known old quotations to support this theory, the oldest one recorded (1175) referring to "Cursunge [cursing] backbitunge [backbiting] and fikelunge [deceit]." There is a legend that Diogenes, when asked what beasts "bit sorest," answered: "Of wilde beasts, the Back-biter; of tame, the Flatterer." Wrote Tennyson of the secret calumniator, "Face-flatterers and back-biters are the same."

back east. A term used by westerners referring to the eastern United States; *east* in the expression means anywhere east of the Mississippi River or in the general direction of the East coast. Easterners, in turn, say *out west* in referring to the western U.S.

backfin. The choicest prime crabmeat from the blue crab (*Callinectes sapidus*) comes from the rear or back bony chambers of that esteemed creature. The meat is called *backfin* because it is found in that location near the crab's fins, *not* because the crabmeat comes from the fin, which contains little or no meat at all. The expression dates back over a century and is still common among people who know their crabmeat.

backgammon. Backgammon takes its name from the early English *gamen*, "game," the *back* in the word reflecting the strategy in the game of "sending back" pieces to the board. The game, closely related to checkers, is far older than its English name. "Back game," or backgammon, dates back thousands of years; in fact, a handsomely crafted backgammon board was found in the 5,000-year-old tomb of Babylonian queen Shub-ad.

backhand. One of the oldest technical sports terms, *backhand* for a tennis stroke can be traced to the early 18th century, when Sir John Van Brugh recorded it in his play *The Mistake* (1706). The English playwright used the term figuratively, but there seems no doubt that he borrowed it from the tennis court. One hopes that Van Brugh, also the architect of massive Blenheim Palace, wasn't criticized for his backhand as he was for his buildings. A contemporary mock epitaph of him went:

Lie heavy on him, O Earth!, for he
Laid many heavy loads on thee!

backhouse lily. The day lily (of the genus *Hemerocallis*) is a common "escape" from gardens and got this name because it often grew near backhouses or privies.

backseat driver; backseat necker. Automobiles have introduced many general terms into the language. "Step on the gas," "detour," "hitchhiker," "hit-and-run," "streamlined," and "joy-ride" are only a few of the automobile expressions that are now widely applied. *Backseat driver*, describing species *Autokibitzer accidentus*, an indomitable breed that does more harm than good on the road (and often occupies the *front* seat next to the

driver) has considerably weakened the meaning of “to take a back seat”—that is, to be humble, to take an inconspicuous position in the background. The newer expression, coined in the 1920s, applies to all those who have pinned humility to the mat for their lifetime, particularly critics of the incumbent administration in politics. *Backseat necking*, making love in the backseat of a car, dates to 1922, and “necker’s knob,” the suicide knob on a car’s steering wheel that allows for one-armed driving, was first recorded in the early 1940s.

backslider. Someone who converted to a religion or cause when things were going bad and rarely or never practices it again once times have improved is called a *backslider*. In *Night Comes to the Cumberland*s (1962), Harry M. Caudell tells of a man reporting on the health of a relative he had taken in: “He’s a lot better than he was. In fact, he’s about well enough to backslide.” The word, first recorded in the early 16th century, can also mean to relapse into bad habits or undesirable activities.

backswimmer. A marine bug that swims on its back and can inflict painful bites if handled. It is also called the *boat bug*.

back the wrong horse. When we support the wrong person, party or thing, or bet on the loser in any situation, we back the wrong horse. The term is an Americanism taken from the race-track, and is still widely used although it is a century or more old.

back to square one. This phrase means to “start all over again” or to “go back to the beginning” of a problem or project in an attempt to solve it. An expression of frustration, it was probably suggested by players of the various board games in which a playing piece is moved off the first square after the drawing of a card or the throw of the dice.

back to the salt mines! Back to work, especially dreary, unrewarding work, “slave labor.” This catchphrase may be several hundred years old. It originated in Russia, where people have been punished for centuries by banishment to Siberia and compulsory labor in the salt mines there. The phrase is, however, first recorded in an 1890s play about Russian exiles in Siberia.

back water. When a steamboat’s paddle wheel is reversed it is said to *back water*, or move backward. The expression came into use with the rise of the steamboat in the early 1800s and was soon being used figuratively to mean “to reverse one’s position on a subject, withdraw from a situation, or retract a statement.”

bacon and rice aristocracy. A nickname for those who made great fortunes raising these commodities or selling them.

bacteria. *Bacteria* means little sticks, from the Greek *bakterion*, the diminutive of *baktron*, staff or stick, because the first bacteria observed by scientists (in about 1847) looked like little sticks under the microscope.

bad. Most major dictionaries, including the *O.E.D.*, hold that *bad* derives from the Middle English *badde*, meaning the same,

which, in turn, most probably derived as a back formation (altering a word by dropping rear syllables, e.g., “zoo” from “zoological garden”) from the Old English *baeddel*, “hermaphrodite,” and *baedding*, “effeminate man” or “sodomite.” This would explain why there aren’t many early written examples of the word, which is first recorded circa 1300 (“good” is recorded circa 800, with many early examples). By that time *bad* had almost entirely lost its sexual connotation, but it still retains the sense of “evil misbehavior” that was then the dominant attitude about homosexuality—though *bad* of course means many things today, including “of poor quality,” “invalid,” “spoiled or rotten,” “dejected” (feeling bad), and even (in black slang) “good” (especially in the sense of very stylish or sharp). See GOOD; BAAAD.

bad ball hitter. A term of recent vintage, a *bad ball hitter* describes someone who makes bad judgments or evaluations. The Americanism refers to a batter in baseball who often swings at pitches that are not strikes and usually misses. There is no similar term in cricket or tennis. It should be noted that many batters have hit so-called bad-ball pitches for home runs, including career home run record-holder Hank Aaron, who frequently did so.

bad cess to you. Many of us on hearing the Irish expression *bad cess to you* have assumed that the *cess* in the term is a corruption of the word success. This, however, isn’t the case. The expression originated in Ireland, where *cess* meant an assessment or land tax. The words thus mean “May your taxes be raised.”

bad cop, good cop. A method of interrogation widely used, at least in popular police fiction. Here one of two detectives tries to convince the suspect that he is the suspect’s friend, that he will help him if the suspect will only cooperate. Ideally, he wins the suspect’s confidence.

bad egg; good egg. Shakespeare used the word *egg* to contemptuously describe a young person in *Macbeth*, when the murderers of Macduff’s son cry, “What you egg! Young fry of treachery!” But the expression *bad egg* for a disreputable, thoroughly rotten person doesn’t seem to have been coined until the mid-18th century in America, no matter how obvious the analogy might seem. “American criminal Thomas Egg” isn’t in any way responsible for the expression; it derives from just the odor of a bad egg itself. *Good egg*, for a “nice guy,” came along about 50 years later, probably originating as Oxford University slang.

badger; badger game. Badger baiting consisted of putting a badger in a barrel or hole and setting dogs on him to “worry him out”; the cruel process was repeated several times until the animal died. The ancient “sport” gave us the phrase *to badger*, to worry or tease, even though the dogs, not the badger, did the badgering. Centuries later *badger* was applied to the *badger game* by American confidence men and women. Commonly the woman member of the team in this con game pretends to fall for her victim and goes to bed with him. While they are having sex, the male member of the team surprises them, playing the part of the outraged husband. The victim is badgered by the “husband,” who finally agrees to accept money as compen-

sation for the wrong done him. It is sometimes months before the victim realizes he is being black-mailed, and even then he often keeps on making payments to avoid publicity. Figuratively, the expression *badger game* is used to indicate any deception for personal or political gain. See BRAVE AS A BADGER.

Badger State. A nickname for Wisconsin, after pioneers in the state who lived in hillside caves resembling badger burrows and who were called badgers.

bad hair day. A term that originated in the United States for a day on which it is hard to do anything with one's hair, male or female. The expression dates back to about 1990 and by extension came to mean a day on which nothing seems to go right.

badlands. A barren, severely eroded region in southwest South Dakota and northwest Nebraska. According to *Century Magazine* (1882, XXIV), "The term Bad Lands does not apply to the quality of the soil. The Indian name was accurately rendered by the early French voyageurs as *mauvaises terres pour traverser*—'bad lands to cross.' The ground between the buttes is fertile, and the whole region is excellent cattle range, the rock formation affording the best possible winter protection." Badlands National Park is in South Dakota.

bad luck comes all in a lump. The belief that bad luck comes one after another, without relenting. A proverb possibly from the American West, dating back to the 19th century.

bad man; badman. A mainly historical term for an outlaw or professional gunfighter who had killed people. Many were brutes, bullies, and psychopaths, but several who carried the title were men who had killed others in arguments or in self-defense. In *The Great American Outlaw* (1993), Frank Richard Prassel has this to say about the compound word *badman*, as opposed to *bad man*: "Indirectly [John] Wayne gave popular language the very word. His film *The Angel and the Badman* (1946) fixed the compound in vernacular English with a contradictory meaning. A badman is not necessarily bad; *goodman* has no meaning. Films issued before 1946 consistently divided the term; those made later routinely adopted the compound. For the original it was of no significance; whenever John Wayne played a badman, as he did with some frequency, something was clearly wrong with the law. His mere appearance in the role of a criminal made justification for illegality pointless; it could be assumed."

bad medicine. Among American Indians, bad medicine meant a person's bad luck, his spirits working against him. Cowboys used the term *bad medicine* to describe any very dangerous person, such as a feared gunfighter. See MEDICINE.

badminton. The racket game, really the Indian game of *poona* adopted by the British, is named for the eighth Duke of Beaufort's estate, Badminton, in Gloucestershire, where it was introduced in 1783.

badmouth. To speak ill of someone. Probably originating among African-American speakers and possibly deriving from a Vai or Mandingo expression, *to badmouth* was at first em-

ployed mostly by southern blacks but is now used nationwide. Its first recorded use in this sense came in 1941 when James Thurber used it in a *Saturday Evening Post* story: "He badmouthed everybody."

the bad place. Hell. Wrote Erskine Caldwell in *Georgia Boy* (1943): "I thought when I come to that I was in the bad place. I sure thought I had been knocked all the way down to there."

bad spot (place) in the road. A very small, seedy town or group of houses, so small it can hardly be considered a town. Usually a road or a highway winds by it. The expression seems to date back to the 1930s.

bad things happen to good people. Often heard in reference to decent, intelligent people who seem to have no luck in anything at all, from making money to keeping healthy. Recently heard in the movie *Shooter* (2007).

Baedeker; Fielding guide. A *Baedeker* once referred to a specific guidebook published by the German printer and bookseller Karl Baedeker (1801–59), but the word is now used loosely to mean any travel guide. Baedeker's guides were so authoritative and comprehensive that they were eventually printed in numerous languages and became almost a necessity for travelers of the time. Similar to the contemporary Fielding guides, named for travel writer Temple Hornaday Fielding (b. 1914), the books covered every aspect of travel, from historic questions to cuisine, and started the practice of rating places with one to four stars. *Baedeker* became synonymous for an exhaustive guide, the word adopted in many countries.

bafflelegab. See GOBBLEDYGOOK.

bagasse. Crushed sugarcane or the beet refuse from sugarmaking that is used as animal feed. The word was borrowed from the Spanish word *bagazo*, meaning the same.

Bagdad on the Hudson. See HYPOGLYCEMIA.

bagel; bialy. "Bagels, BEGORRAH!" Macy's bakery once advertised on St. Patrick's Day in our word-rich land. *Bagel* derives from the Middle High German *bouc*, "bracelet," which became the Yiddish *beggel*—the *bagel*, of course, resembling a bracelet in shape. The roll topped with onion flakes called a bialy (plural bialys, not bialies) takes its name from Bialystok, Poland, where it was first made. Bialystok, played by Zero Mostel in *The Producers*, is one of the great comic characters in movie history.

bag lady; old bag; bag. Short for "shopping bag lady," *bag lady* entered the language in the 1960s. It has nothing to do with the term *old bag*, for an ugly woman (which goes back to the 1920s), or BAGMAN, a term for someone (often a policeman) assigned to collect bribe or extortion money, an expression also dating back to the flapper age. *Bag* has many meanings in American slang, including "to be sacked (bagged) from a job"; "a prostitute" (from *douche bags* being associated with prostitutes); "a condom"; "to arrest"; "a base in baseball"; and "to be drunk" (to have a bag on). But *bag* here refers to the shopping bags, filled with their possessions, that the unfortunate women

we call bag ladies carry with them as they wander—from doorway to alley to abandoned car to park bench—through American cities. The *lady* in their name is both ironic and kind.

bagman. In America *bagman* means a racketeer or anyone assigned to collect a bribe, extortion, or kidnapping money. In England, however, a bagman is simply a traveling salesman, a drummer who carries bags of samples. “In former times,” one authority tells us, “these commercial travelers used to ride a horse with saddle bags sometimes so large as almost to conceal the rider.”

bagnio. A brothel, the word deriving from the Latin for bath. Originally, a *bagnio* was a bath or bathhouse, especially one with hot baths. However, to quote British author Thomas Wright’s *A History of Domestic Manners and Sentiments in England During the Middle Ages* (1862), the bathhouses “were soon used to such an extent for illicit intrigues, that the name of a hot-house or bagnio became equivalent to that of a brothel.”

bah!; bashful; abeyance, etc. *Bah!* is an interjection indicating scorn, contempt, or disgust, but “ba!” is a natural expression of surprise in any language, a sound uttered by both sheep and men when the jaw drops down. It forms the basis for a number of English words. *Bashful* and *abash* come to us from the French *esbaiss*, which derives from the Latin *ex* plus *ba!* *Abeyance*, a state of temporary suspension or inactivity, derives from the Latin *badare*, which developed from the elementary sound “ba!” and meant to hold the mouth wide open, to gape—someone “held in abeyance” would stand, jaw dropped, waiting for a decision. The “baying” of hounds, from the Old French *beer* (later *bayer*), to gape, is also related to “ba!”, the exclamation of surprise becoming the sound of impatience here.

Bahaism. Bahaism is an Iranian religion with an Oriental mystical quality that specifically reflects the attitudes of the Islamic Shiah sect, emphasizing religious tolerance. Founded by a Shirez merchant who was executed for heresy in 1850, the religion was named for its founder’s leading disciple, known as Baha Allah, who gave it a worldwide following. Baha Allah, in turn, means “splendor of God” in Persian. The Bahais have been persecuted in Iran since the fundamentalists took power in 1979.

bah-fong-goo. An Italian slang term popularized by Mario Puzo’s *The Godfather* (1969), this curse meaning “fuck you” is often accompanied by the common hand-chopping-the-elbow-joint motion meaning the same. According to the *Random House Dictionary of American Slang*, the curse derives from the Italian *affanculo*, “I fuck you up the ass.” *Fungoo* and *boff-on-gool* mean the same.

bahuvrihi. *Heavy-handed* and *redcoat* are examples of this grammatical term first recorded in about 1850. The first half of these compound words is an adjective describing the noun coming after it. The term comes from Sanskrit, the ancient Indo-European language of India. In Sanskrit *bahu* means “much,” and *vrihi* means “rice,” *bahuvrihi* meaning “much-rice.” Thus, one of the examples of the term is also the name of the term.

Bailey bridge. Portable Bailey bridges designed to replace bridges destroyed by retreating forces and to carry much heavier loads than military bridges could previously support, were to a large extent responsible for the Allied victory in World War II, particularly in northwestern Europe. They were invented by Sir Donald Coleman Bailey, an engineer with the British Ministry of Supply, who was knighted in 1945 for his contribution to the war effort. The versatile truss bridges were first used in 1941 and are still employed throughout the world in flood and disaster areas. They consist of some 29 different parts, but are made principally of 10-foot-long, 5-foot-wide prefabricated lattice-steel panels weighing 600 pounds each that are held together by steel pins. Bailey first sketched his bridge on the back of an envelope and he always claimed that his invention was “just part of the job.” Field Marshal Montgomery, on the other hand, said, “Without the Bailey bridge we should not have won the war.” Bailey died in 1985, at age 83.

bailiff; bailiff wand. Someone authorized to perform legal actions, such as a sheriff’s deputy who carries out arrests. The word dates back to at least 1297 in England and derives from the Latin *bajulus*, carrier or manager. English bailiffs have even arrested dead people. When British playwright and politician Richard Brinsley Sheridan died penniless in 1816, a well-dressed man at the wake touched Sheridan on the forehead with his *bailiff’s wand* and declared that he was arresting him in the name of the king for a debt of £500. Since the corpse was arrested, the funeral and burial could not go on until Sheridan’s friends pulled out their purses and paid the man. See BAILIWICK.

bailiwick. The district within which a *bailie* or BAILIFF has jurisdiction. The word has also come to mean a person’s best area of skill or authority, as in “I’m not going to interfere—it’s your bailiwick.”

bait tree. The quick-growing catalpa (*Catalpa bignonioides*) is called the bait tree because its branches provide homes to many caterpillars that can be used as fish bait. It is also known as the Indian bean, bean tree, cigar tree, and smoking bean tree, due to its long pods. *Catalpa* is a North American Indian name for the tree.

baked alaska. Consisting of ice cream mounded on a cake base placed briefly in a hot oven to brown its blanket of meringue, baked alaska is among the most posh of desserts. It was created and named at New York’s Delmonico’s restaurant in 1876 in honor of the newly purchased Alaskan territory. An informant advises that a blow torch is now commonly used to make it. As my informant notes—nouvelle cuisine indeed!

Bakelite. Employed chiefly as an electric insulator, Bakelite has numerous industrial uses, including the manufacture of phonograph records, machinery, and even buttons, pipe stems, and billiard balls. A heat-resistant, synthetic resin or plastic, valuable as a nonconductor of electricity, it is prepared by the chemical interaction of phenolic substances and aldehydes. Bakelite was invented by Leo Hendrik Baekeland (1863–1944), a Flemish chemistry teacher who migrated to the United States

from Ghent, Belgium in 1889. Seven years later he announced the invention of Bakelite, a registered name used by the company.

baker's dozen. Bakers in ancient times were subject to severe penalties for shortweighting their customers; in ancient Egypt, for example, they were sometimes nailed by the ear to the doors of their shops when caught selling light loaves. Thus when the English Parliament passed a law in 1266 subjecting the Company of White Bakers and the Company of Brown Bakers to strict regulations regarding bread weight, the bakers made sure that they complied. Since it was difficult to make loaves of a uniform weight at the time, bakers customarily added a thirteenth loaf, the "in-bread" or "vantage loaf," to each shipment of 12 they sent to a shopkeeper or retailer, thus guaranteeing that there would be no shortchanging or ear-nailing. Most authorities believe this led to the expression *baker's dozen* for 13.

baksheesh. *Baksheesh* is Persian for a tip or present. But the insolent persistent demands of beggars, servants, and officials in the Near East over the years have made baksheesh seem more a claim or demand upon a traveler than a gratuity in many cases, giving the word an unsavory connotation.

balbriggans. Men's white cotton socks are called balbriggans, after Balbriggan, Ireland, a Dublin suburb, where the fabric they are made of was first manufactured in the 19th century.

bald. Bald seems to derive from the Welsh *bal*, white-browed, a white streak or blaze on the brow, but there is some confusion about the word's origins. In any case, the term came to be used of someone partially bald or completely so, like Charles the Bald (823–77), Holy Roman emperor, and other rulers. According to legend, another bald man, the Greek playwright Aeschylus, was killed when an eagle dropped a tortoise on his head, mistaking it for a rock on which it could break open its evening meal.

bald; Old Baldy. A bare mountain top without any trees or vegetation or such a peak sparsely covered with vegetation is called a *bald*. These *balds* are also called *slicks*, both words first recorded in the 1830s. Mountaintops covered with snow have since at least the early 1860s been called *Old Baldy* or *Baldy*.

bald as a coot. Totally or severely bald. The common waterfowl called the coot (of the genus *Fulica*) has a white bill and front shield, which make it appear bald. See CRAZY AS A COOT.

bald eagle. This American eagle is so named because the feathers on the head of the adult are white, making it appear bald when seen from a distance. Said to be the most pictured bird in the world, the bald eagle appears on the Great Seal of the United States and on many U.S. coins and paper currency. There was some controversy over its choice for the great seal by the Second Continental Congress because it commonly steals fish from other hawks, but its majestic presence prevailed. It has also been called the bird of freedom, bird of Washington, calumet eagle, gray eagle, brown eagle, nun's eagle, white-headed eagle, and national bird.

balderdash. Nonsense, a senseless jumble of words or ideas. *Balderdash* is still another word for which no one knows the origin. First recorded in the late 16th century, it meant a light frothy liquid, then came to mean incongruous liquids, such as beer and milk mixed together, and finally took its modern meaning. The Danish *balder*, "noise, clatter," has been suggested as its parent, but this derivation is doubtful at best.

bald-headed. An expression used for a hurried action taken without caution or much thinking: "He really went at it bald-headed." As Maximilian Schele de Vere put it in *Americanisms* (1871), the expression probably derives from "the eagerness with which men rush to do a thing without covering the head."

Baldwin apple. Loammi Baldwin (1740–1807), an American civil engineer, is known for building the Middlesex Canal between Somerville and Lowell, Massachusetts, opened in 1803. But he is perhaps best known for the red or red-and-yellow Baldwin apple, which he originated several years later, one of the 10,000 or so apple varieties. A so-called winter apple, it is usually grown in the Northeast.

baleboss. This Yiddish expression has no etymological connection with the English word *boss*. To be called a *baleboss* (pronounced bahl-eh-BOHSS) is indeed a compliment, but the term has several meanings. A *baleboss*, the word deriving from the Hebrew *baal*, "master," and *bayis* "house," can be the head of the household, the owner of a business establishment of any kind, or anyone who assumes authority. A female *baleboss* is a *baleboosteh*, and she can be the same things as a *baleboss*, or be the wife of a *baleboss*, or be an excellent homemaker.

Balfour Declaration. See BOB'S YOUR UNCLE.

bali, bali. Hurry up, get going. GIs have been using this expression in Korea since at least 1950. It is from a Korean word (*bahli-bahli*).

Balize pilot. Balize was a historical settlement of houses built on stilts at Pass à la Outre near New Orleans in the Mississippi River, designed to take on or discharge riverboat pilots. It fell into decay at the time of the Civil War and has since disappeared.

balk. A balk, deriving from the Old English *balca*, was a ridge between two furrows made in ploughing. Since the balk was an obstacle, the word *balk* came to be applied figuratively to any obstacle, and *to balk* came to mean "to place obstacles in the way of." The baseball term *balk*, an illegal movement by a pitcher when runners are on base, comes from an obsolete meaning of *balk*: "to miss, slip, or fail."

Ballad of Typhoid Mary. Few are the songs that celebrate a disease as this one does. Swiss author J. F. Federspiel wrote the song "Typhoid Mary," a true story about a woman who worked as a cook in New York City, spreading death and disease wherever she went as a carrier of typhoid fever. Once caught, she was finally confined by health authorities until her death in 1929.

ballast. Ballast, loaded in the belly of a ship to help keep it right side up, probably has its ancestor in a Teutonic word meaning “belly load,” but no one is sure, though the word has been used for centuries. Everything from rocks to gold bars has been used for ballast. After unloading its emergency cargo at Corregidor in the Philippines in February 1941, at the beginning of World War II, the submarine U.S.S. *Trout* took on the most valuable ballast in the history of shipping. No other ballast was available, and the *Trout* traveled back to San Francisco loaded with Philippine government gold bars valued at over \$9 million at the time.

ballast for his (her) balloon. Apparently, Mrs. Bronson Alcott coined this term for a person who is a down-to-earth or steadying influence on another. Mrs. Alcott did all her life follow wherever her utopian husband led. At least so their daughter Louisa May Alcott claimed in her essay “Transcendental Wild Oats” (1876).

balled up; balls. Dashing through the snow on a horsedrawn sled could be hazardous in days past. One difficulty was the balls of snow or ice that formed in the curve of a horse’s shoe and often made a horse slip and fall. When horses did fall, especially a team of them, the resulting confusion and entanglement gave rise to the expression *all balled up*. That is *almost* everybody traces this term for helpless confusion to floundering horses. Mencken suggests a connection with the ejaculation *balls!* (1890), one for which little proof can be found. A second alternative linking the expression to balls of knitting yarn that the cat got at is a possibility, too. *Balls* has been American slang for testicles since the early 1880s, and slang for guts or courage since about 1935.

ball naked. Stark naked, completely naked; derives from *ballocks* shortened to *balls* (testicles) and may have originally been *naked to the ballocks*, or *balls*.

balloonatic. A person fascinated with aerial balloons, including military balloons during World War I, when they were used as bombers. The word is based on *lunatic*. See ZEPPELIN.

ballot. In days past, people voted by dropping little balls, or ballots, (from the Italian *ballotta*) into a box or other receptacle. In this ancient method of voting, still used in some clubs today, a white ball signified an affirmative vote and a black ball a negative one. By the 19th century paper was being widely used in place of these balls, but the new form retained the old name.

ballpark figure. An approximation based on an educated guess or a reasonable estimate is a ballpark figure. Only about 25 years old, the American expression obviously comes from baseball, *ballparks* being another name for the stadiums where baseball is played. The phrase probably derives from the 1962 coinage of *in the ballpark* for “something that is within bounds, negotiable, not out of reach”; *out of the ballpark* means just the opposite. Baseball stadiums were first called ballparks around 1900; before then they had been called ball grounds, baseball grounds, ball fields and baseball parks.

balls. “You’ve got balls, young man,” the impressed Black Hand boss tells a young Vito Corleone in *The Godfather* (1972).

Balls in this sense means courage, guts, audaciousness, daring. This may be the earliest printed use of the term, which is a U.S. invention, though no one else notes the source.

balls to the wall. Originally a military aircraft term, this expression dates back to about 1966 and means at full speed, to the extreme, all out, maximum effort. According to the *New Dictionary of American Slang* (1986), the phrase derives “from the thrusting of an aircraft throttle, topped by a ball, to the bulkhead of the cockpit to attain full speed.” Usually considered vulgar or obscene, the expression is commonly heard in Washington, D.C., today.

ball the jack. To move or work swiftly. Originally an American railroad term (“That train is sure balling the jack.”) of the 19th century, *ball the jack* came to mean “to move or work swiftly,” as in “When he saw his boss coming he really balled the jack.”

ballyhoo. The little village of Ballyhooly in County Cork, Ireland once had a reputation for loudmouthed, violent street debates. “The residents engage in most strenuous debate,” the *Congressional Record* of March 1934 advises, “a debate that is without equal in the annals of parliamentary, or ordinary discussion, and from the violence of these debates has sprung forth a word known in the English language as *ballyhoo*.” However, this is but part of the possible truth. Ballyhooly did have a reputation for violent arguments that drew crowds, but today *ballyhoo* denotes something far from violent, being glib advertising or the spiel of a carnival barker. Possibly the residents of Ballyhooly, noted for their blarney as well as their violent arguments, lent their village’s name to a popular British music-hall song of 1885 that used the refrain *bloody hooly truth* as a phrase for “the whole bloody truth.” *Bloodyhooly*, in turn, was later applied to the spiels of carnival barkers and acquired its present meaning.

balm. See NO BALM IN GILEAD.

balmy. *Balmy*, in its sense of silly, foolish, eccentric, is the Americanized version of the British *barmy*, and may derive from the name of St. Bartholomew, patron saint of the feebleminded. Most etymologists, however, trace the word to the Old English *barm*, the froth on fermenting beer, which could indeed make one act balmy. Still another theory is that the word derives from the Barming lunatic asylum at Kent in England, meaning that a barmy or balmy person is “one fit only for Barming.” This overlooks the fact that the *Oxford English Dictionary* gives the first use of *barmy* as 1535, whereas Barming was established in the early 19th century, but it may be that the popularity of the word was enhanced by the asylum.

baloney. See BOLONEY.

balsa rafts. Spanish sailors off South America in the 16th century gave the name *balsa*, meaning “float,” to the rafts lashed together with vines that the natives used. They later applied the same name to the tree logs, half the weight of cork, that made the rafts so buoyant. That the rafts make even better boats than the Spaniards expected was demonstrated by Thor Heyerdahl

centuries later, when he sailed from South America to Polynesia on a balsa raft.

Baltic Sea. This body of water is named for either the Lithuanian *baltas*, “white,” or from the Scandinavian *balta*, “strait.” Thus, no one knows for sure whether the Baltic means “the white sea,” or “the sea of straits.”

Baltimore; Baltimore oriole; Baltimore clipper. An early dictionary tells us that the Baltimore oriole is “so called from the colors of Or (orange) and Sable in the coat of arms belonging to Lord Baltimore.” This oriole is not closely related to the orioles of Europe, belonging to the blackbird or meadowlark rather than the crow family. In fact, many American birds with the same names as European species are in reality birds of a different feather. (The American robin, for instance, is really a thrush, and other Old World avian words given new significances include partridge, blackbird, lark, and swallow.) But whatever its true species, the Baltimore oriole definitely takes its name from the Baltimore family, founders of Maryland, the bright colors of the male bird indeed corresponding to the orange and black in their heraldic arms. The city of Baltimore, Maryland also honors the barons Baltimore, as do the early 19th-century Baltimore clippers, more indirectly, the famous ships having been built in the city. The same can be said of baseball’s Baltimore Orioles and football’s Baltimore Colts. No particular Lord Baltimore has been singled out for the honor. George Calvert, the first baron Baltimore (ca. 1590–1632), prepared the charter for the proposed colony that became Maryland, but died before it could be accepted; the charter was granted to his son Cecilius, but the second baron Baltimore never even visited the province; and the third baron Baltimore, Cecilius’s son Charles, governed the province from 1661 to 1684. A Catholic who ruled quite arbitrarily over his predominantly Protestant subjects, Charles returned to England and never came back, leaving little more than the family name behind.

Baltimore Ravens. Would you believe this football team is named after a poem? It is. The *Baltimore Ravens* honors Edgar Allan Poe’s “The Raven,” one of the most famous poems in American history, which Poe wrote in 1844 and sold to the *New York Mirror* for 35 bucks. Poe was intimately connected with Baltimore, where he spent his last weeks on earth, dying four days after he’d been found delirious outside a saloon-polling place where he may have been casting ballots for drinks. Few remember that Poe was also an accomplished athlete, possibly the greatest author-athlete in American literary history. He once swam seven and a half miles from Richmond to Warwick, Virginia, against a tide running 2–3 miles an hour. He long-jumped 21 feet while at West Point and was a swift runner. Fully six members of Princeton University’s 1899 football team were named Poe, each of them a great-nephew of Edgar Allan Poe. To further honor the writer, the Ravens have named their three mascot ravens *Edgar*, *Allan*, and *Poe*. See EDGAR; PRINCETON.

Baltimore Whore. A humorous name given to the B-26 Marauder bomber by U.S. pilots during World War II. The *Baltimore Whore*, made in Baltimore, Maryland, was so called because it was very difficult to fly and was frequently cursed out with such names.

baluster. See BANISTER.

the Bambino. Taken from the Italian *bambino*, baby, this is a well-known nickname of American baseball great Babe (George Herman) Ruth (1895–1948), also known as the Sultan of Swat. But *bambino* has for centuries meant an image of the infant Jesus in swaddling clothes in art.

bambochades. Genre paintings of rural life, especially rustic drinking scenes treated in an exaggerated or comic manner, are called *bambochades* or *bambociades*, after the nickname of Dutch landscape painter Pieter van Laar (ca. 1600–74). Van Laar, or Laer, worked some 15 years in Italy, where he was nicknamed *Il Bamboccio*, “the cripple.” Famous for his landscapes and etchings depicting rustic life—pictures usually in heavy brown tones showing wakes, weddings, and other country scenes—the artist was also called *Michel-Ange des Bambochades*.

bamboo. Linnaeus adopted the Maylay name *bambu* for these giant grasses, giving the name to the plant’s genus, which consists of about 120 species and whose name has come to be spelled *bamboo*, probably in error. The tropical bamboos range from 15 to 100 feet in height. An interestingly named bamboo is the Chinese *Buddha’s belly bamboo* (*Bambusa ventricosa*). *Bambis oldhamii*, *Oldham’s bamboo*, is grown for the excellent flavor of its shoots. In the U.S. the native bamboo is called a *cane*, including the *sugar cane*, which often forms impenetrable *canebrakes* 15 to 25 feet high in the South.

bamboo curtain. The *bamboo curtain* is a term suggested by the IRON CURTAIN that means a political and economic barrier between China and noncommunist countries. The policy came into effect when Mao Zedong (Tse-tung) cut China off from much of the free world after winning the Communist revolution. The expression may have been invented at *Time* magazine, in which it was first recorded on March 14, 1949: “The Communist bosses of Peiping dropped a bamboo curtain cutting off Peiping from the world.” Bamboo, of course, had long been a synonym for things Asian.

bamboozle, bombazine. How did a fabric used for women’s mourning clothes since the early 19th century give its name to our word for “to cheat or swindle”? Probably an early confidence game had a female swindler posing as a bereft widow wearing black bombazine, her costume lending its name to the swindle or hoax she and others like her practiced. Jonathan Swift included *bamboozle* in a list of new distasteful slang words, but it survived nevertheless. *Bombazine* itself comes from the Greek *bombux*, “silkworm.”

banality of evil. Coined by Hannah Arendt in *Eichmann in Jerusalem* (1963), about the trial of Adolf Eichmann, the Nazi official in charge of deporting the Jews of Europe to the death camps. The book’s subtitle is *A Report on the Banality of Evil*, and its last words are *banality of evil*. Arendt was reporting Eichmann’s trial when she coined the controversial phrase.

banana. *Banana* derives from the Arabic word *banana*, meaning finger, and even today the individual fruits forming

the familiar banana “hand” are called “fingers.” The banana tree is really a giant herb with a rhizome instead of roots, and its “trunk” is made up of large leaves, not wood. The fruit was given the scientific name *Musa*, comprising 18 species, by Linnaeus in honor of Antonio Musa, personal physician to the first emperor of Rome. *Musa sapientum*, the most common banana tree species, takes its second name from the Latin word for “wise man,” in reference to the Indian sages of old who reposed in its shade and ate of its fruit. Arabian slang and a score of other languages make the fruit a synonym for the male sexual organ, not surprisingly, and “I had a banana with Lady Diana” was British slang for sexual intercourse up until about 1930. “Where the banana grows man is sensual and cruel,” Emerson wrote in his *Society and Solitude*, and the Koran says that the forbidden fruit in Paradise was a banana, not an apple. Banana oil, incidentally, is a synthetic—bananas produce no commercial oil—and the banana, like the pear, is one of the few fruits that ripen better off the tree.

banana leaf restaurant. Any Malaysian restaurant featuring cuisine served on large banana leaves.

banana oil. Nonsense, foolishness. An obituary of the syndicated advice columnist Ann Landers (Eppie Lederer, 1918–02) noted that she never made public expressions of annoyance “much stronger than ‘oh banana oil!’”

banana slug. The slug *Ariolimax columbianus*. William Least Heat Moon in *Blue Highways* (1982) wrote of an Oregon area: “I poked about the woods and turned up a piece of crawling yellow jelly nearly the length of my hand. It was a banana slug, so named because the mollusk looks like a wet, squirming banana.”

banco; Mark Banco. *Banco*, meaning bank money on account as distinguished from banknotes or currency, is often used in the international exchange business. Mark Banco was the mark of fixed value employed as an invariable standard in the old Bank of Hamburg in Germany and used by the Hanseatic League. Since all gold and silver deposits were credited in Mark Banco and all banking transactions carried on in Mark Banco, it made no difference how the exchange rate varied from day to day.

Band-Aid. Invented by Robert W. Johnson and George J. Seabury in 1874, the Band-Aid was registered by Johnson as a trademark in 1886 when he left Seabury and formed his own business, Johnson & Johnson. Widely used today, the word is a zealously protected trademark and still must be capitalized.

bandanna. A Hindu method of dyeing called *bāndhmu* consisted of knotting pieces of silk and dipping them in dyes so that parts of the silk would retain their original color. The Portuguese, who reached India during the 16th century, brought clothes dyed in this manner back to Europe, where the Hindi *bāndhmu*, corrupted to *bandanna*, soon came to mean a large silk handkerchief, especially one with a background of red with white spots.

bandersnatch. See JABBERWOCKY, SQUISH.

bandicoot. A word like this is needed in a time noted for both green thumbs and slick fingers, when thefts of shrubs, flowers, and vegetables right from the ground are occurring more frequently from public places and private residences. *Bandicooting* is an Australian word for the practice of stealing vegetables out of the ground, and a bandicoot is a thief who does this. The word could have a wider application, covering all vegetative thefts. Human bandicoots, like the Australian marsupial they are named for, usually steal root vegetables, leaving their tops protruding from the ground to avoid suspicion for a longer time.

bandwagon. See HOP ON THE BANDWAGON.

bandy; bandy-legged. This word for bowlegged (legs shaped something like these parentheses), strangely enough, derives from a comparison of bowlegs with the curved sticks used in the 17th-century Irish game of bandy, the precursor of hockey. No one is sure where the word *bandy* that gave us the game of bandy, bandysticks, and bandy-legged comes from, though earlier it was a tennis term. In playing ancient hockey, the ball was banded from side to side and fought for, which led to metaphors like “I’m not going to bandy words with you”; that is, “I’m not going to argue, wrangle over nothing.”

bang. See ONOMATOPOEIA.

bangers and mash. Visitors to Australia sometimes mistake this for an alcoholic drink, but it is simply Australian for a dish of sausage and mashed potatoes. The Australians and British call sausages *bangers* because they often split open with a slight bang while cooking.

bang for the buck. See GET MORE BANG FOR THE BUCK.

Bangor rule. A rule devised by lumbermen in Bangor, Maine, to determine the total of board feet in a log. Figuratively, the *Bangor rule* has become a measure of honesty and fairness in a person; one who goes by the *Bangor rule* is an honorable person.

bangs. A bang-tailed horse is one whose tail is allowed to grow long, and then cut or “banged off” horizontally to form an even tassel-like end. Such fashioning of horses’ tails was popular in the late 19th century and when several bang-tailed horses won major races the style attracted wide attention. Apparently, American hairstylists or women themselves named the similar women’s hairstyle after the horse-tail style, adding *bangs* to the fashion lexicon. *Bangtail*, incidentally, was also a synonym for a prostitute in 18th- and 19th-century England.

Bang’s disease; Brucellosis. These are names for what is probably the most diversely named disease—it is called, variously, undulant fever, Malta fever, Gibraltar fever, rock fever, Mediterranean fever, and goat fever. Its cause, an infectious bacteria called *Brucella*, was discovered in 1887 when Scottish physician Sir David Bruce (1855–1931) performed an autopsy on a patient who had died of the illness on the island of Malta. Later, Danish veterinarians Bernhard L. F. Bang and V. Striolt isolated a second strain of *Brucella* and in 1895 found that it

caused a disease in cattle, which was called Bang's disease in that scientist's honor. Bang's disease, the name still used for the infection, is thought to have been responsible for the epizootic disease or storms of abortions that commonly occurred in American and European cattle herds in the early 19th century. Scientifically speaking, all diseases caused by *Brucella* bacteria are termed brucellosis. The disease affects not only cattle and goats but swine, chickens, dogs, cats, wild deer, and bison as well. It is usually contracted by humans from contact with infected animals or by ingesting infected milk, and is sometimes fatal. No complete cure is known for infected animals, and the incidence of the disease is said to be on the rise throughout the world.

banister; baluster. *Banister*, a support for a handrail on a staircase, is a mispronunciation of *baluster*, first recorded in English over three centuries ago. *Baluster* comes from *balaustion*, the Greek name for a specific flower. Because Greek architects used the outlines of these flowers for the shapes of the short pillars supporting handrails, *baluster* came to mean the supports themselves.

banjo. There are two theories about *banjo's* origin. One holds that the word derives from a black mispronunciation of *bandore*, an English word of Spanish origin denoting a musical instrument similar to the banjo. The other cites the Angolan Kimbunde-language *mbanza*, which also means a banjo-like instrument. It would be hard to prove or disprove either theory.

bank; bankrupt. In medieval times Italian moneylenders used a small bench in the marketplace to conduct their business. The Latin word for such a bench, *banca*, is in fact the source for the English word *bank*. These moneylenders, the bankers of their day, were required to break up their benches if they failed in business, and the Latin expression for doing so, *banca rupta*, later became the English word *bankrupt*.

banker. A North Carolina seacoast inhabitant. "This term of 'Banker' applies to a scattered population of wreckers and fishermen, who dwell on the long, low, narrow beaches . . . from Cape Fear to near Cape Henry."

bank holiday. *Bank holiday* was one of the first of many words and phrases coined during the New Deal in America's Great Depression. President Franklin Delano Roosevelt used it on March 6, 1933, two days after his inauguration. Providing for the reopening of sound banks in a period when most banks had failed and "runs" had abounded, F.D.R. declared a four-day bank holiday while Congress rushed to pass the Emergency Banking Act. A bank holiday is the name for legal holidays in the U.K.

bankrupt. See BANK.

bankrupt worm. A little parasite roundworm of the genus *Trichostrongylus* is called the bankrupt worm because it often infects cattle herds, sometimes bankrupting those cattlemen whose stock it attacks.

banned in Boston. In its heyday during the 1920s the phrase *banned in Boston* made a number of books best-sellers through-

out the rest of the country. Books were frequently banned in Boston for foolish reasons at the time because the local ultra-conservative Watch and Ward Society wielded great power in the city. This is no longer the case, but the expression is still used jokingly.

banquette. A raised sidewalk, usually made of bricks or planks. The term is mainly used in Louisiana, especially along the coast, and in East Texas. It derives from *banquette*, little bench, and is another French loan word.

to bant; banting. William Banting (1797–1878) might have made a fortune had he published his booklet on dieting a century later, in our own weight-conscious era. As it turned out, he merely amused Londoners in the mid-1860s, although his name did become a word. Banting was an enormously overweight cabinetmaker and undertaker who couldn't bend to tie his shoelaces and had to walk downstairs backwards to relieve the pressure on his legs. Convinced by his own discomfort, and perhaps from his undertaking activities, that many deaths resulted from overeating, he went on a strict diet, losing 46 pounds and taking 12 inches off his waist. As so many dieters do, he then wrote a book about his experience, setting forth his method of reducing. "Bantingism" called for a meat diet and abstention from practically everything else—beer, butter, sugar, farinaceous foods, and even vegetables. Needless to say, it wasn't popular very long, but Londoners humorously took to calling dieting *banting* and to diet *to bant*.

bantam. The dwarf fowl called the *bantam* takes its name from Bantam, Java where it was developed, and gives its name to any little, feisty creature.

bantling. See BASTARD.

Bantu. See ESKIMO.

banyan tree. Here is a tree named for merchants who sold their wares beneath it. The Indian tree, which spreads out by sprouting aerial extensions that grow into the ground to form new trunks, can cover an area large enough to shade thousands of people. Noticing this, Hindu merchants set up naturally shaded marketplaces underneath the trees and the British later named the tree after the merchants, *banions*, who traded there.

banzai. Before World War II, when the Japanese Navy and those of the Western powers were on good terms, *banzai* parties, or shore parties, were held where seamen from Japan and other nations mingled. The expression derives from the general Japanese felicitation, *banzai*, which means "May you live forever." During World War II, the once pleasant *banzai* was shouted by Japanese soldiers making bayonet charges.

baobab tree. So thick is the baobab tree (*Adansonia digitata*)—up to 30 feet across—that several African tribes hollow it out so that families can live inside, much like the mesquite is used in Central America. The baobab is grown as a curiosity in the southernmost United States. Arabian legend holds that it acquired its peculiar shape when the devil plucked it out of the earth and replanted it with branches underground and roots in

the air. The origin of the tree's name is obscure but may have something to do with that legend.

baptism of fire. There is a strange, little-known story behind this common expression. The phrase had been used from antiquity as a synonym for martyrdom, in reference to Christian martyrs burned at the cross. It came to mean any severe ordeal or painful experience, but not until the late 19th century were the words used to describe a soldier's first experience in battle. We even have an exact date for the phrase used in this sense. At the Battle of Saarbrück during the Franco-Prussian War of 1870, Napoleon III (Louis-Napoleon Bonaparte) ordered that his 14-year-old son and only male heir, Prince Napoleon Eugène, be sent into battle and exposed to enemy fire for the first time. The French ironically called this event the child's *baptême de feu*, "baptism of fire." The teenaged prince, who had agreed with his father's order, if that means anything, survived the battle, but went into exile in England with the enigmatic Napoleon III when France was defeated. Later he joined the British army and did die under fire, while fighting the Zulus in Africa, at the age of 22.

BAR. The *Browning automatic rifle*, or BAR, of World War II fame was invented by John M. Browning (1854–1926) of Ogden, Utah, who designed many famous weapons. The BAR, an air-cooled weapon capable of firing 200–350 rounds per minute, was generally assigned one to a squad. It is said that none of the prolific Browning's designs ever failed. These included the light and heavy Browning machine guns, the .45 caliber pistol, the .50 caliber machine gun, the 37mm aircraft gun, and a number of shotguns and repeating rifles. Browning took out his first patent in 1879, on a breech-loading, single-shot rifle that the Winchester Arms Company purchased. After his entry into the military field, the U.S. Army relied almost exclusively on Browning's automatic weapons.

bar; before the bar. Shakespeare used the word *bar* for a tavern, this *bar* first recorded in 1572 and taking its name from the bars that were pulled over the serving counter in taverns at closing time. Similar bars or gratings were used in early courts of law, leading to the expression about lawyers practicing *before the bar*.

Barabbas. The robber held in jail at the time of Jesus' arrest who was later freed from the cross by Pilate in place of Christ. His story is told in Matthew 27:15–16; Mark 15:6–14; Luke 23:13–25; and John 18:39–40. In recent times, several novels have imagined his life.

barani roll. A barani roll is a difficult one-and-a-half-rotation twist in the air in gymnastics. It has been suggested that the maneuver is named for Austrian physician Robert Barani (1876–1936) who, appropriately, won the 1914 Nobel Prize for his research into the human sense of balance.

Barbados. The Spanish *barbados*, "bearded," is the source for this country's name. What they had in mind were the many vines hanging from all the trees in the area, vines so dense that they looked like beards.

a Barbara Fritchie. A courageous, patriotic old woman. The term is from John Greenleaf Whittier's famous poem "Barbara

Fritchie," in which a 96-year-old Mrs. Fritchie flaunts the U.S. flag in the face of Confederate troops marching through Frederick, Maryland. The poem was based on a true incident, but Whittier gave credit to the wrong flag waver. The real eponym should have been Mrs. Fritchie's neighbor, Mrs. Mary Quantrell. Mrs. Quantrell in reality was not molested by the Confederates, who raised their hats as they passed, saying, "To you Madam, and not to your flag." Whittier, who got his information from novelist Mrs. E.D.E.N. Southworth, later admitted his mistake.

barbarian; barber. *Barba* means "beard" in Latin, and when the Romans called hirsute foreigners *barbarians* they were strictly calling them "bearded men," though the word shortly came to mean, rightly or wrongly, "rude, uncivilized people." A barber was, of course, one who cut beards or hair. The barber pole outside barber shops today has its origins in the ancient barber's duties as a surgeon and dentist as well as a hair cutter. It was first the symbol of these medical professions—a blood-smear white rag. However, *barbarian* may have Greek origins.

barbecue. Here's an English word that comes from the language of the extinct Haitian Taino tribe. The tribe smoked meat on a framework of sticks called a *barbacoa*—at least the name sounded like that to Spanish pirates who visited Haiti in the mid-17th century. *Barbacoa* came to mean the cooking of the meat itself and passed into English as the American *barbecue*. The Tainos also gave us the word POTATO, which was first their *batata*.

barbed wire. When in the 1850s farmers began fencing in their land with barbed wire—twisted strands of wire fence with sharp barbs at regular intervals—ranchers tore the fences down so their herds could pass. This led to barbed wire fence wars in the West, notably one that broke out in Texas in 1884, and helped end the reign of the cowboy by the close of the century.

barber. A strong frigid northwestern wind bearing moisture that can cut the face and often clings to the hair and beard, forming ice crystals.

barber pole. See BARBARIAN.

barberry. The barberry is an ornamental bush often planted for hedges in place of privet and valued for its flowers, its gorgeous fall foliage, and the striking red berries that often hang on the bush all winter long. Few gardeners would believe that the common spiny barberry (*Berberis vulgaris*) provides fruit that can be eaten in a variety of ways. The English, in fact, once cultivated the handsome bush for its berries, and the Arabs before them grew barberries for their sherbets. The barberry may take its name from *berberys*, the Arabic name for a shell, possibly in reference to the shape of its leaves. The Berbers cultivated it on Africa's Barbary Coast. Some 50 species are widely grown in America.

barbershop quartet. The "Sweet Adeline" in the famous song of the same name was originally "Sweet Rosalie." Richard Gerard and Henry Armstrong (both fl. early 20th century) wrote

“You’re the Flower of My Heart, Sweet Rosalie” in 1903, tried to sell it and couldn’t. When they decided to name the song’s heroine in honor of popular prima donna Adeline Patti and shortened the title to “Sweet Adeline,” it sold and eventually became the barbershop quartet hit of all time. It became so famous that all close harmony was called “barbershop harmony,” a term not much heard today.

Barbie doll. I’ve heard *Barbie doll* used as American slang for a conformist or a dehumanized person since the late 1960s, though the first recorded use of the term seems to have been in a 1973 issue of *Rolling Stone*. The term derives from the trade name of a very popular blue-eyed blond doll made for little girls. The doll’s name, in turn, comes from the name of Barbara Millicent Roberts, daughter of Ruth Handler, who created the doll in 1959—Barbie’s birthday is March 9 to be exact. Barbie and her husband Ken became grandparents in 2003.

barcarole. A boating song of the Venetian gondoliers, or a song like it with a slow tempo and sad refrain. The gondoliers are called *barcaroli* after the Italian *barca*, a small boat.

Barcelona. The Spanish city is named after Hamilcar Barca, who founded it in about 230 B.C.

bard; bardolatry. Originally a wandering Celtic minstrel, a *bard* wrote and recited epic and heroic poems, often while playing a harp or lyre. But the Celtic word came to mean any poet or writer, although *The Bard* or *The Bard of Avon* or *The Bard of All Time* are titles reserved for William Shakespeare. There are at least a dozen titles like Shakespeare’s, including *The Bard of Twickenham* (Alexander Pope), *The Bard of Ayrshire* (Robert Burns), *The Bard of Prose* (Boccaccio), and *The Bard of Democracy* (Walt Whitman). *Bardolatry* is excessive admiration of Shakespeare. Wrote H. G. Wells in *The Outline of History* (1920): “Bards were once blinded so they would not wander from the tribe. In recent memory a writer describes such a blindman in Rhodesia. The Slav word for bard was blind.” Few modern societies place such a value on bards. The greatest blind authors in history are doubtless Homer and Milton, whose stories are well known. Louis Braille, who invented the Braille system of printing, and Helen Keller, the author of 10 books, are also familiar figures. Not so familiar are publisher Joseph Pulitzer, for whom the Pulitzer Prize is named, who went blind at age 40; blind historian William Hickling Prescott, who had secretaries to read source material to him; and blind Argentine writer Jorge Luis Borges. James Thurber was blinded in one eye in a childhood accident and went all but completely blind in his later years, while James Joyce, Charlotte Brontë, and Aldous Huxley all had extremely poor eyesight. See SWAN SONG.

bardash. A *bardash* is a male prostitute, or “a catamite,” in the definition of the *O.E.D.* First recorded in 1548, the word may be an adaption of the Arabic *bardaj*, “slave.” In 1760 a magazine spoke of the practice of “Publicly maintaining bardassaes and concubines.” *Berdache* is an alternate spelling.

bare as a milkpan when the cat’s been round. Impoverished. “That farm’s always ’bout as bare as a milkpan when the cat’s been round.”

Barebones’s Parliament. The historically important Barebones’s Parliament nominated by Cromwell in 1653 wasn’t so called because it was a small body, the skeleton of a real parliament. Rather, the assembly, which first met on July 4th of that year, was derisively nicknamed for one of its members. Praise-God Barebones was his name. Barebones, a famous London preacher as well as a leather merchant and man of property, was vociferously opposed to the restoration of the Stuarts. Controversial for his Baptist religious views, Praise-God Barebones’s preaching attracted large crowds, the meetings frequently disturbed by riots, and one time a mob stormed his house, Barebones barely escaping with his life. Barebones’s Parliament passed a number of reforms, including civil marriage and public registration of births and burials, but was generally unqualified for its task of governing, “more fools than knaves,” as someone wrote. Praise-God Barebones, who seems to have taken little part in the debates, long outlived his namesake, dying in 1680, at about 84.

barefaced liar. *Barefaced*, “beardless, with no hair upon the face,” may have been coined by Shakespeare in *A Midsummer Night’s Dream*, where it is first recorded. Within half a century or so it came to mean bold, audacious, impudent, or shameless, like many boys, who were barefaced. By 1825 we find “the barefacedness of the lie” recorded, and Harriet Beecher Stowe writes of a *barefaced lie* in *Uncle Tom’s Cabin*.

barefoot. See quote. “‘I take my tea barefoot,’ said a backwoodsman when asked if he would have cream and sugar.” (James Russell Lowell, *The Biglow Papers*, 1872).

barge in. Useful but clumsy flat-bottomed barges, probably named from an early Celtic word for boat, have been common in England since medieval times. These shallow-water craft are often pulled through canals by conventional vessels or by animals on the bank. But accidents involving the unwieldy vessels were frequent; they were constantly bumping into other boats. By the late 19th century, English schoolboys were using the slang term *barge*, “to hustle a person,” *to barge about* someone, bump him or move him heavily about. It is this practice, far removed from the water but related to barges, that led to the expression *to barge in*—to clumsily or rudely intercede, to butt in—that originated in the early 1900s.

bark. American pioneers were often excellent marksmen. At a distance of 100 yards or more, for example, an expert could *bark* a squirrel with a rifle shot, that is, hit the limb the squirrel was sitting on, the concussion killing the animal without wounding it. Some marksmen claim they can do this today.

Barkis is willin’. In Charles Dickens’s novel *David Copperfield* (1849–50) the eponymous hero takes a message from the carrier Barkis to his (David’s) nurse, Clara Peggotty, telling her that Barkis is ready to marry her. The message, “Barkis is willin’,” has over the years become proverbial for any willingness or consent.

bark up the wrong tree. Coon dogs, which could be almost any breed of dog or even mongrels in Colonial days, commonly chased raccoons through the underbrush and treed them, barking furiously at the base of the tree until their masters

came to shoot the “gone coon.” But the crafty nocturnal animal, called a rahaugum by John Smith, often escaped through the branches to another tree in the dark, leaving the dogs barking up the wrong tree, which is the origin of the American phrase. Skilled hunters who could *bark* a squirrel, that is, strike the bark on the lower side of the branch where it sat, killing it by the concussion, have nothing at all to do with the expression. The *bark* of a tree comes to us from the Anglo Saxon *beore*, while a dog’s *bark* is related to the Old English *barki*, “wind-pipe.” It’s said that dogs in the wild state howl, whine, and growl, but that their barking is an acquired habit—anyway, debarking operations are available to silence dogs whose barks are worse than their bites and dogs that bark at the moon. *Barkable* is an unusual old word. One would take the adjective to be a modern affectation, but it dates back to at least the 13th century, a treatise of the time on estate management advising lords to have “discreet shepherds . . . with good barkable dogs.”

barlow knife. Russel Barlow, who has been called “the patron saint of whittlers,” invented the barlow knife over 200 years ago and it has been known to Americans under one name or another ever since. The *barlow*, a single-bladed pocket-, pen-, or jackknife, was the pride, joy and bartering power of many an American boy, and is mentioned in the works of Mark Twain, Joel Chandler Harris, and many other writers. It has also been called the Russel Barlow knife.

Barmecide’s feast. A *Barmecide’s feast* is an illusion of plenty, figuratively a poor meal leaving much to the imagination. The expression comes from the “Story of the Barber’s Sixth Brother” in the *Arabian Nights*. A rich noble named Barmecide (based on one of a real family of Baghdad princes) served the beggar Schacabac course after course of imaginary dishes, pretending that the empty golden plates he set before his guest constituted a sumptuous feast. Schacabac got the better of the prince, pretending to enjoy each course and finally boxing his host’s ears while feigning drunkenness from the illusory wine. So amused was Prince Barmecide that he gave the beggar a real banquet, but his name is remembered for the first, imaginary meal.

bar mitzvah. A solemn but joyous ceremony held in a synagogue, usually on the Saturday morning closest to a Jewish boy’s 13th birthday, to recognize the boy as an adult member of the Jewish community. *Bar Mitzvah* can also mean the boy himself, a *bar mitzvah boy*. The word comes from the Hebrew for “son of the commandment.” The equivalent ceremony for girls is called the *bas mitzvah* or *bat mitzvah*.

barn; barnstorming. The Old English *bere*, “barley,” combined with *ern*, “storage,” gives us the word *barn*, which was originally a place to store grain. Only in early America did the *barn* become a joint grain storage place and animal stable, American barns becoming so big that they spawned sayings like *You couldn’t hit the broad side of a barn* and *as big as a barn*. Eventually we had car barns, furniture barns, and antique barns. *Barnstorming*, first applied in 1815 to a theatrical troupe’s performances in upstate New York barns, has come to mean tours of rural areas by political candidates.

barnacle. The barnacle takes its name from the barnacle goose, which is so called because of its “bare neck,” *barnakylle*

in Middle English, for in ancient times people firmly believed that these geese were born from what we now know as *barnacles*. A barnacle’s long stalk and rounded body does resemble the neck and body of a goose, and its tentacles, which wave during the feeding process, suggest the wings of an infant bird being born from a shell and straining out to sea. The ubiquitous crustacean takes its scientific names, *Cirripedes*, from the Greek for “feet-like curls of hair,” in reference to its tentacles.

barnburner; hunkers. Barnburners were members of a faction of the Democratic Party in New York State from about 1830–50, so-called because they were so zealous for reform in the party that they would burn the barn (the Democratic Party) to get rid of the (pro-slavery) rats. The Democratic Party majority at the time was called the Hunkers, perhaps from the Low German *hunk*, “home, place of refuge,” but possibly because they once packed the state convention and nominated a complete ticket for their faction, “took the whole hunk.” *Barnburner* is used by wildcat oil men for a big well, a gusher, a strike that lights up the sky. It is common presently in Michigan, among other states, but probably originated in Pennsylvania toward the end of the 19th century, though I’ve never seen it recorded.

barnstorming. See BARN.

barnyard epithet. This widely used euphemism for plain old *bullshit* was coined by a *New York Times* editor as recently as 1970 in reporting the reply of David Dellinger, one of the Chicago Seven tried for conspiracy to disrupt the 1968 Democratic National Convention, to a police version of his actions (“Oh, bullshit!”).

barracuda. A large, fierce tropical and subtropical fish with fanglike teeth of the genus *Sphyræna*. Ernest Weekley says the word’s origin is unknown, but suggests the Spanish *barrigudo*, big-bellied. Others have suggested the American Spanish *bar-raco*, overlapping tooth, and some say *barracuda* is a Carib word recorded as early as 1678. Many barracuda attacks on humans are recorded and the swift and voracious fish is much feared by swimmers in the West Indies. Barracuda can be poisonous to humans if eaten after the fish has fed on poisonous corals. Barracuda poisoning affects the respiratory system and is said to cause mental derangement. In American slang a *barracuda* can also be a greedy, treacherous, violent person, often a criminal.

barrage. A barrage of artillery is strictly speaking a “barrier,” the word deriving from the French *barre*. One can see the logic of this when considering that strategically an artillery barrage is meant primarily to be not an assault but a barrier to any enemy activity. The word in its military sense is first recorded during “the war to end all wars,” in 1917.

barrio. A Spanish word, common in many areas of the U.S., for a Spanish-speaking, often poor, section of a city. The term is first recorded in 1890 and has become common generally over the last 30 years.

barrister. See LAWYER.

Bars. The flag of the Confederacy, now usually called the Stars and Bars. An anonymous old rhyme goes: “Down your Black-a-moor Stripes and Stars! We’ll up instead the Confederate Bars!”

barter. Few, if any, American sports terms derive from the names of great players, no matter how proficient. In baseball a home run is not called a “Babe Ruth,” though we may (rarely) say a “Ruthian blast”; a hitting streak is not a “DiMaggio”; nor is a strikeout a “Sandy Koufax.” Across the Atlantic this is not the case. *Barter*, for example, is an English cricket term dating back nearly 150 years. It comes from the name of Robert Barter, warden at Winchester College from 1832 to 1861, famed for his half-volley hits. The word is unrelated to the word “barter” meaning to trade, which is of unknown origin, although it may be related to the Old French *barater*, to cheat, exchange.

Bartholomew pig; Bartholomew fair. Shakespeare called Falstaff a *Bartholomew pig*. This has long been the synonym for a very fat person, after the whole roasted pigs that were traditionally sold at the *Bartholomew Fair* in London. The fair, held on St. Bartholomew’s Day (August 24th) from 1133 to 1855, was the center of London life. St. Bartholomew, martyred in Armenia in A. D. 44, has as his symbol a knife, in allusion to the knife with which he was flayed alive.

Bartlett pear; Seckel pear. The yellow Bartlett grown commercially mostly in Oregon and Washington, where it is less susceptible to blight than in the East, represents 70 percent of the country’s 713,000-ton crop and is certainly America’s most commonly grown pear. It is a soft European-type fruit, in season from July to November, as opposed to earlier hard Asian varieties like the Seckel, which is named for the Philadelphia farmer who first grew it in America just after the Revolution. The Bartlett was not, in fact, developed by Enoch Bartlett (1779–1860), a merchant in Dorchester, Massachusetts, as is generally believed. Bartlett only promoted the fruit after Captain Thomas Brewer imported the trees from England and grew them on his Roxbury farm. The enterprising Yankee eventually purchased Brewer’s farm and distributed the pears under his own name in the early 1800s. They had been long known in Europe as Williams or William Bon Chrétien pears. Bartletts, by any name, are one of the most delicious of the over 3,000 pear species, and pears have been one of man’s favorite fruits from as early as 1000 B.C.

Bartlett’s. For many years John Bartlett owned the University Book Store in Cambridge, Massachusetts, where Harvard teachers and students came for assistance in tracking down the source of a quotation. Bartlett’s erudition soon made the saying “Ask John Bartlett” a customary one when anyone sought the origins of a phrase, a faith that was justified when Bartlett’s *Familiar Quotations*, or *Bartlett’s*, appeared in 1855. John Bartlett died in 1905 at age 85, and his book remains a standard reference work today, unequaled by any similar English work except *The Oxford Dictionary of Quotations*. The Bartlett pear doesn’t bear the scholar’s name.

baseball. The name of America’s national pastime is first recorded in 1744 as “base ball” in *The Little Pretty Pocket Book* as a synonym for the British game of rounders, a direct ancestor

of the sport. Another early mention of the name is found in Jane Austen’s *Northanger Abbey* (1788) in which the heroine mentions that she played base ball as a child. Around the turn of the century, *base ball* became *baseball* in America.

Basedow’s disease. See GRAVE’S DISEASE.

bash. Meaning a blow or even a wild party, *bash* seems to have originated in the world of boxing, the first use of the word recorded in the 19th century, when a *basher* was a prizefighter. No one is sure whether the word is a blend of “bang” and “smash,” or simply of echoic origin.

bashful. See BAH!

basil. Basil was once believed to have been used in making royal perfume, and so the aromatic herb takes its name from the Greek *basilikos*, royal. In ancient times it was thought to have great healing properties. Boccaccio’s *Decameron* tells the story of Isabella, who put her murdered lover’s head in a pot, planted basil on top, and watered it with her tears.

basilect. See ACROLECT.

basilisk. This is another name for the legendary COCKATRICE. The two names seem to have been interchangeable, and the same myths applied to both beasts. Just to look in the basilisk’s eyes was enough to kill a person, and the serpent hatched from a cock’s egg had breath so fiery that it killed off all vegetation. The basilisk took its name from the Greek *basilikos*, “little king,” in reference to the cock’s crest on its head that resembled a crown; the mythical creature had a cock’s head, a dragon’s tail and bird’s wings. The monster’s killing glance led to the use of *basilisk* for a wanton woman, who you never looked at while making love, and the term “cockatrice” for a prostitute or whore. Today *basilisk* is the name of a real South American lizard, a harmless two-foot-long creature that has a crest on its head.

Basin State. A nickname for the state of Utah. “The Judge has friends goin’ to arrive from New Yawk for a trip across the Basin,” wrote Owen Wister in *The Virginian*, 1902.

basketane. See CUBANE.

basketball; basket. The game of basketball might be called boxball today if its inventor’s intentions had been realized. Canadian James Naismith (1861–1939) invented the game while working at the International YMCA Training School in Springfield, Massachusetts, in late 1891. Though Naismith gave the game no name, his plan called for hanging an overhead wooden box at each end of the school’s gym. Since the school’s supply room had no boxes, Naismith agreed to use two half-bushel peach baskets instead. This suggested the name *basket ball* to him, even though the game was first played with a soccer ball, and he used it a month later, in January 1892, in an article for the school magazine describing the game. Soon *basket ball* was contracted to *basketball*. Incidentally, Naismith’s peach baskets were not cut open at the end and his players had to climb on a ladder to retrieve each ball sunk in the basket. *Basket* for a

score in basketball comes of course from the peach basket first used in the game. But *basket* wasn't the most common name for a score until about 1905—before that a score was most often termed a goal. In fact, the very first score in the first basketball game—made by one William R. Chase—was called a goal. See ACCORDING TO HOYLE.

Basque. *Basque*, which derives from the Latin *vasco*, for an inhabitant of Vasconia, a country up on the slopes of the Pyrenees, is spoken in northern Spain and southwestern France, and has been called “the most difficult language in the world to learn,” being the remains of a prehistoric cave language that is related to no other language save a tongue spoken in a small area of the Caucasus Mountains. A Spanish proverb says that when God wished to punish the devil he made him study Basque for seven years. The Basques have jealously guarded their ancient customs and traditions, which include the strenuous national game of *jai alai*, now widely played throughout the world. There are some 200,000 Basques in Spain and France and another 250,000 in other countries.

Basque words. English words that come to us from Basque include: *bizarre*, *original* (a word for the American moose), and *JAI ALAI*.

bass. *Bass*, or *bast*, is the inner bark of the linden or basswood tree. This bark has been used to make everything from cloth to shoes and hats; gardeners use it often for packing and tying up plants.

bass-ackwards. A euphemism for ass-backwards, head over heels, as in “He fell over bass-ackwards.” Also *bares-ackward*.

bastard; bantling. Provençal mule drivers on the road in the Middle Ages used packsaddles called *basts* for beds whenever they checked into an inn or stretched out under a tree. Atop his *bast* (from the Latin *bastum*, “packsaddle”) the typical muleteer must have fathered many an illegitimate child, for the expression *filis de bast*, “son of a packsaddle” (a child begotten on a packsaddle bed as opposed to a marriage bed) became an epithet for a natural child and the basis for the Old French word *bastard*. Many other attempts have been made to explain the word—even a happy one tracing it to the Old English word *besteaerd*, “the best disposition”—but “packsaddle child” is clearly right. *Bantling* has a similar derivation, coming from the German *bank*, “bench,” and conveying the idea of a child begotten on a bench instead of in the marriage bed. “Born on the wrong side of the blanket” is a euphemism for *bastard* and indicates prudery at work—implying that sex in marriage should be performed in the dark, under the covers.

bat. To call a woman an *old bat* is not to call her an *old battle-ax*, as many people believe. *Bat* is not a shortening of *battle-ax* here, but English slang for a prostitute that goes back to at least 1612. A *bat* was a prostitute who walked the streets; like a bat she usually worked at night or, if she worked during the day, she hid out in dark recesses like a bat. To go *on a bat*, “a binge” or “a drinking spree,” is similarly connected with the nocturnal bat—the “nightbird,” not the prostitute. Someone who goes on a bat usually stays out all night, often stumbling around, as people thought a bat did in the dark. (The first such *bat* record-

ed in literature, in 1848, describes the spree taking place at night. In days past the winged, rodent-like bat was called by the colorful name “flitter-mouse.”)

bathing machine. These structures were wooden bath houses drawn into the water by horses so that no one on the beach could see bathers in their bathing costumes (though these were certainly modest enough). The term was used in the U.S. as early as the late 18th century and in England even before then.

bathos; pathos. *Pathos*, which derives directly from the Greek word for “suffering,” is the quality or power in any of the arts to evoke feelings of tender pity, compassion, or sadness, and gives us pathetic characters in literature such as Ophelia in *Hamlet* or even Dickens's Little Nell. *Bathos* means something quite different and was coined by Alexander Pope from the Greek word *bathos*, “depth” (not related to our English word *bath*), to indicate a descent from the sublime to the depths of the ridiculous. Pope and other writers of the early 18th century, including Swift, Gay, and Arbuthnot, made a sport of parodying contemporary writers. Out of this game of wits came Pope's satire “Bathos, the art of sinking in Poetry” (1727), in which he invented the word because no similar one existed in English to express the idea. “The taste of the Bathos is implanted by Nature itself in the soul of man,” he wrote in his essay, and he proceeded to give an example of bathos at its worst:

And thou, Dalhousie, the great god of war,
Lieutenant-general to the earl of Mar.

bathukolpian. A rare, rather elegant way to say “big breasted” or “deep bosomed,” *bathukolpian* is first recorded in 1825. Coined apparently as a euphemism, the word comes from the Greek for “deep” and “breast.”

bathysiderodromophobia. There are many people afraid of subways, but few who call themselves *bathysiderodromophobes*, people who fear subways and other things underground. A 20th-century coinage, the word is based upon the Greek *bathys*, “deep.”

bathysphere. This reinforced spherical deep-sea chamber in which people are lowered by a cable to study the ocean and marine life was invented and named by American scientist and author William Beebe in 1930. Dr. Beebe later described the coinage exactly: “As the great chamber took shape, we found the need of a definite name. We spoke of it casually and quite incorrectly as tank and cylinder and bell. One day, when I was writing the name of a deep-sea fish—*Bathytroctes*—the appropriateness of the Greek prefix occurred to me; I coined the word *Bathysphere*, and the name has stuck.” The Greek prefix *bathy* is so appropriate because it means “deep”; *sphere*, also from the Greek, is self-explanatory.

batiste fabric. One account claims that the popular *batiste fabric* takes its name from the soft linen used in medieval times to wipe holy water off the heads of baptized infants. It is more likely that the word derives from the name of one Jean Baptiste, of Cambrai, a 13th-century French linen weaver about whom little is known beyond his name. Cambric was at the time already a trade name for a linen manufactured at Cambrai, or

Kamoric. English merchants needed another word for this new Cambrai product, so they named it after the French weaver but misspelled his name. Today *batiste* is no longer only linen material. Sheer cotton *batiste* is used for lingerie, handkerchiefs, and children's wear, and sheer rayon, silk, and woolen *batistes* are common, too.

Bat Masterson. A fabled gunfighter; after William Barclay "Bat" Masterson (1853–1920), a western lawman who never lost a gun battle. Masterson is one of the few gunfighters who didn't die a violent death. He became a sportswriter in New York City and is said to have "died at his desk gripping his pen with the tenacity with which he formerly clung to his six-shooter." Masterson got the nickname "Bat" because while a sheriff in Kansas he often batted down lawbreakers with his cane instead of shooting them.

bat out of hell. Since bats are nocturnal creatures that loathe the light, the hellfires of the infernal regions would inspire them to flap like hell to get out of there. That may be the idea behind the expression to move *like a bat out of hell*, extremely fast, which *Partridge* traces to 1908 and which probably goes back to the late 19th century. It was also slang used by R.A.F. pilots since World War I for "to fly extremely fast."

bats in his belfry; batty. Blind bats flapping about in the vast emptiness of someone's head, which suggested a church bell-tower or belfry to somebody, form the basis of this expression meaning a little crazy in the head, poco loco in the coco. Apparently no one told anybody *You've got bats in your belfry* until early in this century, for the first recorded use of the words is 1907. *Bats*, meaning crazy or nuts, seems to derive from the phrase, as does *batty*, meaning the same. The expression holds on mainly because of its alliteration, like the much older BEE IN HIS [HER] BONNET. But the image of bats flapping their wings and squeaking in the dark is a strong one that does suggest craziness.

battalion. A battalion is a large body of military troops, often an army unit with a headquarters and two or more companies of soldiers. The word derives ultimately from the Latin for "battle." But in Japan *battalion* means a zombie, of all things. The word came to mean zombies in Japan after a Japanese distributor in 1985 rather arbitrarily changed the name of the film *The Return of the Living Dead* to *Battalion*. Japanese moviegoers thought that *battalion* referred to the zombies in the picture and began calling all zombies *battalions*.

batten; batten down the hatches. A *batten* is simply a sawed strip of wood. This word gives us the nautical phrase *batten down the hatches*, for battens were once used to fasten canvas over a ship's hatchways during a storm. The phrase probably originated in the early 18th century.

battering ram. Romans of old called this device for battering down the walls of an enemy city an *aries* ("ram"), alluding to the male sheep and its powerful butting horns, and our term *ram* or *battering ram* is just a translation of the Latin. The long log, sometimes hung on chains, was used until the invention of the cannon and has been depicted in hundreds of film epics. It has never to my knowledge been shown in the form of a huge

ram's head, although some ancient armies actually constructed it that way.

battery. In his *Stealing God's Thunder* (2005), historian Philip Dray claims that Benjamin Franklin "introduced the terms 'positive' and 'negative' and coined the word *battery*, "drawing an analogy between the panes of glass that stored and fired an electrical charge and the row of cannons in a military battery." See STEAL MY THUNDER.

batting average; batting a thousand. *Batting average* has come to mean one's degree of achievement in any activity, but the term dates back to 1865 when it was used only in baseball. There it is the measure of a player's batting ability that is obtained by dividing the number of base hits made by the number of official times at bat and carrying out the result to three decimal places. *Batting a thousand* is doing something perfectly. No one knows when the common saying came into the general language from baseball, but it is based on the fact that 1.000 is the perfect average in baseball with a base hit every time at bat.

batting eyelids. To bat your eyelids is to flutter them, an American expression that goes back to the late 19th century. It has nothing to do with bats flapping in a cave, someone "gone batty," or even baseball bats. *Batting* in this case comes from the lexicon of falconry in Tudor times. According to a falconry book written in 1615: "Batting, or to bat, is when a Hawke flut-tereth with his wings either from the perch or the man's fist, striving, as it were, to fly away." The old word had long been used by sportsmen, and some American with a lot of *Sprachgefühl*, "feeling for language," found a fresh use for it in the 1880s.

battle. One persistent old joke has the Civil War caused by the widespread Southern pronunciation of *battle*. It seems that three high-ranking Northern generals stomped into a Washington, D.C., saloon and shouted, "We want a bottle right away!" A Southern spy overheard them and breathlessly reported to General P. G. T. Beauregard: "Top Union generals say they want a battle right away!" Chivalrous Beauregard obliged, leaving the evening's quadrille in Montgomery and proceeding to Charleston, South Carolina, where he gave them the *bottle* (or *battle*) of Fort Sumter, the first of the war. Also to wash clothes by pounding them with a paddle after they are boiled in water, "whuppin' the dirt of 'em." *Battle* in this sense is an old English word first recorded in 1570 and not used today.

Battle Above the Clouds. A poetic name for the Civil War battle of Lookout Mountain, near Chattanooga, Tennessee, on November 25, 1863. The battle was so called because the heavy clouds below the summit obscured the fighting going on above. By the next morning the Stars and Stripes was flying at the summit, and by the end of the day the Union had won Chattanooga. Both sides lost about 10 percent of their large forces.

battle-ax. It took over 600 years for someone to think of this description of a domineering, sharp-tempered wife. Battle-axes were used at least since the Bronze Age, and were so named in the Middle Ages, most of them fearsome weapons that could fell a man with a single blow. Long after the lethal weapons

were made obsolete by firearms, they remained a favorite of collectors and were displayed in museums. But it wasn't until the early years of this century that someone, possibly a vaudeville comedian, compared his warring wife to an *old battle-ax*. The expression is still used, often in a humorous, affectionate way. *Old battle-ax*, as slang for a strong man who is disliked and considered mean, has passed out of use.

Battle-born State. A nickname for Nevada, the 36th state, because it was admitted to the Union in 1864 while the Civil War was still being fought.

“Battle Hymn of the Republic.” Sung to the tune of “John Brown’s Body” (1856) by William Steffe, this was the favorite marching song of Union troops during the Civil War. The words were written by Julia Ward Howe (see UNCLE TOM) in December 1861 while she visited Union troops in Virginia, its major theme, according to the writer: “The sacredness of human liberty.” See GOD BLESS AMERICA.

Battle of Britain. See BLITZ.

Battle of the Aesthetes. Irish-born author Ernest Boyd (1887–1946) became an important literary figure after immigrating to America in 1913. His essay “Aesthete: Model 1924,” which appeared in the first issue of H. L. Mencken’s *The American Mercury* that year, attacked the young idealists of New York’s Greenwich Village and launched what was called the Battle of the Aesthetes. Before it was over, a terrified Boyd suffered insulted would-be aesthetes picketing his apartment house, throwing stink bombs through his window, jamming his doorbell with pins, and making obscene phone calls to him in the early hours of the morning.

battle of the giants. See WAR OF THE GIANTS.

battle royal. Cockfighting does have a lot to do with this metaphor for a free-for-all, a battle in which more than one contestant is involved, but it probably didn’t originate with the now outlawed “sport,” as is often stated. The earliest quotations using the phrase support the theory that it derives from medieval jousting tournaments, where it was used to describe two sides fighting, each commanded by a king. Later, the expression became cockpit jargon before passing into standard English. In cockfighting, *battle royal* better describes what we mean by a *battle royal* today. It was an elimination tournament for gamecocks in which only the best fighters survived. A number of cocks, say eight, were thrown in the pit. These eight fought until there were only four left. Then these remaining four were rested and pitted against each other until two survived. The two survivors finally fought for the championship.

battology; battologist. A stammering man named Battos mentioned in the works of the Greek historian Herodotus, “The Father of History,” is responsible for the word *battology*, “needless or excessive repetition in speech or writing.” The *Oxford English Dictionary* records *battology*’s first use in 1603. It was formed by combining the name of the man Herodotus described, *Battos*, with the Greek *logia*—from *logos*, “word.” *Battologist* is a term sometimes applied to boring speakers.

batty. See BATS IN HIS BELFRY.

baubee. A little thing not worth much, a trifle. From the Scottish *bawbee* for a half-penny: “I don’t care a baubee for that.” Also spelled *bawbee* and *bobee*.

Baumanometer. The inflatable cuff and gauge with a column of mercury used to measure blood pressure. Technically called the sphygmomanometer, the Baumanometer was invented by American William A. Baum in 1915. Electronic alternatives are often used today.

Bavius; Maevius. Virgil sarcastically criticized the two minor Roman poets Bavius and Maevius in his Third Eclogue and Maevius was further criticized by Horace in his Tenth Epode, making their names forever synonyms for inferior poets or poetasters. In 1794 William Gifford wrote a fierce satire called *The Baviad* and followed it two years later with the *Maeviad*. The works attacked the Della Cruscan school of poetry, founded by sentimental young English poets living in Florence at the time. Ironically, the school bore the name of Florence’s famous Accademia della Crusca (Academy of Chaff) whose object was purifying the Italian language, sifting away its chaff. By the way, Virgil himself was much criticized in his time; one critic published eight volumes consisting of resemblances between lines in Virgil’s poems and earlier Roman poems.

bawdy; bawdy houses. *Bawdy*, “obscene, indecent, or lewd,” derives from *bawd*, originally a procurer of either sex, and then either a prostitute or the madam of a brothel. Some scholars link *bawd* with Middle French *baud*, “gay,” “dissolute,” but the *O.E.D.* marks *bawd* “of uncertain origin.” *Bawd* also means a hare in English, but as this use of the word is recorded two centuries after the first, it is hard to show any relationship between the fabled sexual energy of hares and the activities of human bawds. In the 17th century it was customary on Shrove Tuesday for apprentices to beat or frighten bawds on the street or in their bawdy houses.

bawl; bawl out. Dating back to the 15th century, *bawl* for a loud, rough cry probably derives from the Latin for *baulere*, “to bark like a dog.” The word was also applied to the sounds of other animals, especially cows and bulls, which supports the theory that to *bawl out* originated as American ranch slang, suggested by the bawling or bellowing of angry bulls.

bayard. An honorable man. The word honors Pierre du Terail (1473?–1524), seigneur de Bayard, a French military hero famously called *le chevalier sans peur et sans reproche* (the knight without fear or blame). He was killed in the Italian War of 1521 at the Battle of the Sesia.

bayberry. See LIGHT ON A BUSH.

Bay Bridge. Another name for San Francisco-Oakland bridge that spans San Francisco Bay.

Bay City. A nickname for San Francisco since the mid-19th century. Also the proper name of several U.S. cities.

Bayer aspirin. A great many people pronounce the name of this old standby as *Bay-er aspirin*, but the correct pronunciation of the brand is *bear aspirin*. Aspirin is best known for its use against headaches, but it has many other uses, including the prevention of blood clots.

baying. See BAH!

bay laurel tree. Because this tree (*Laurus nobilis*), the *tree laurel* of history, was sacred to the god Apollo it was thought to be immune to lightning. According to legend, Apollo fell in love with the beautiful Daphne, daughter of the river deity Pe-neos, who changed her into a bay laurel tree to protect her when she spurned the god's advances. Apollo vowed that thereafter he would always wear bay laurel leaves and that all who worshipped him should do the same. The legend inspired Tiberius and other Roman emperors to wear wreaths of bay laurel as amulets during thunderstorms. Observation, however, has proved that the bay laurel tree is no more immune to lightning than any other tree. Another ancient superstition holds that the withering of a bay tree is an omen of death. The historian Holinshed noted that in 1399 old bay trees throughout England withered and then inexplicably grew green again. Shakespeare made use of this note in *Richard II*: "'Tis thought the king is dead. We'll not stay—/The bay-trees in our country are withered." See LAURELS.

Bay of Fundy tide. See TIDE.

bayonet. Originally a short dagger, the *bayonet* almost certainly takes its name from Bayonne in southwestern France, where it was first made in the early 17th century. The word is first recorded, meaning "dagger," in 1611, and first cited meaning "a dagger attached to a musket" in 1674.

bayou. A marshy, sluggish outlet of a lake or river; any slow-moving body of water. Used chiefly in the lower Mississippi Valley and Gulf States, it probably derives from the Choctaw *bayuk* for a river forming part of a DELTA. Louisiana is sometimes called the Bayou State.

bay scallop. The aristocrat of scallops, especially the unsurpassed Peconic Bay scallop of Long Island, New York, across Long Island Sound from New England. Bay scallops are found from the estuaries of Long Island Sound up to the coast of Cape Cod, Nantucket, and Martha's Vineyard.

Bay State. A nickname for Massachusetts since 1789. It has also been called the Old Bay State and the Old Colony.

bay window. The bay window, devised as early as the 14th century, is so named because in projecting from the house it made the room inside appear to mariners like a little harbor or bay. *Bay window* has been American slang for a "pot belly" since the 1890s.

bazaar. Used for a store or marketplace where many kinds of goods are sold, *bazaar* is one of the few English words that come to us from the Middle East, in this case deriving from the Persian *bazar*, "marketplace."

bazooka. Arkansas musician Bob Burns invented the musical instrument called the *bazooka* in 1905, out of two overlapping pieces of gas pipe that could be used like a trombone. The name he gave it is supposedly from the obsolete slang word *bazoo*, meaning loud talk, with a humorous ending tacked onto it. In 1943 U.S. Army Major Zeb Hastings gave the name of the instrument to the rocket-projectile gun that somewhat resembles it.

BBC English. See RECEIVED PRONUNCIATION.

beach glass. Small pieces of glass from broken bottles that are made opaque over time by the movements of tide and sand. They come in as many colors as there are broken-bottle colors on the beach, and some collectors make bracelets, necklaces, and earrings from them. I don't know why no dictionary records this beachcombing treasure. My mother called them *poverty gems* and *poorman's diamonds*. Howard Moss (1922–87) wrote a lovely poem called "Beach Glass," first published, if I remember well, in *The New Yorker*, whose poetry he edited for many years. Also called *sea glass*.

beach plum. A shrub (*Prunus maritime*) growing near the shore, its fruit used in making preserves. Also an old name for the bunchberry (*Cornus canadensis*), a low-growing plant with scarlet berries.

bead. *Bead* derives from the Middle English word *bede*, which meant "a prayer" and in turn came from the Old English *gebel*, meaning the same. Since prayers were often said on a string of small round balls (now called a rosary), the name for "prayer" came to be applied to the balls themselves, the spelling changing to *bead* over the years.

beam me up, Scotty. This has become a very popular humorous expression, often used on bumper stickers as well as in conversation, for "get me out of here, free me from this mess," etc. It originally requested transportation, a frequent order Captain Kirk gave to chief engineer "Scotty" Scott on the television series *Star Trek*, which premiered in 1966. It meant that Scotty should transform Kirk's body into energy. Interplanetary polyglots will be interested to know that a 1996 video game, *Star Trek Klingon*, teaches players the Klingon language. *Beam me up!* in Klingon is *Hljol!* Beam me, up, Scotty, also meant "get me high." See also KLINGON.

bean; string bean; green bean. Deriving from the Old English *bean*, and possibly akin to the Latin *faba* by a circuitous route, *bean* was long used for the seeds of many plants. "Common beans" (string beans, first recorded in 1759; Lima beans; wax beans; etc.) are native to the Americas. Napoleon wouldn't eat string beans, afraid that he would choke on the strings, but today's varieties are virtually stringless and thus are often called green beans. As early as 1830, one observer noted: "We do not call it a string bean, because the pod is entirely stringless." Yet *string bean* is still used for the vegetable and Americanisms like *string bean* for a tall, thin person remain in the language. *Bean pole*, another Americanism for a lanky person, takes its name from the tall poles that support climbing bean plants.

Beaneater; Boston baked beans. Since at least the late 19th century, *Beaneater* has been a humorous nickname for a

Bostonian, Boston being called *Beantown*. *Boston baked beans* have been regarded as the best of baked beans for a half century longer and are still so thought today. They are made basically with navy beans flavored with molasses and slowly cooked with pork. Baked beans have been the traditional Saturday night supper in New England since early times, the leftover traditionally being part of Sunday breakfast.

beanfeast. No one is sure about beanfeast's derivation. The annual dinner that British employers gave their workers in the 1800s may be so named because beans were served at the feast or because a "bean goose," a goose "with a beak like a horse bean," was part of the fare. On the other hand, *bean* here may come from *bene*, "prayer, solicitation," because charitable collections were made at the feasts.

beanpole. Another Americanism for a tall, thin person, *beanpole* takes its name from the tall poles that support climbing bean plants.

beans and bullets. What the army travels on. The "beans" in the old U.S. saying means food in general.

beard. Islamic law forbids the wearing of beards too short or too long. Under the Taliban in Afghanistan, for example, offenders were imprisoned or flogged.

bear down upon. The nautical practice of *bearing down* on another ship means to sail toward her rapidly from a position upwind. From this naval strategy comes the phrase *to bear down upon*, to put pressure on someone or something, which probably originated late in the 19th century.

beard the lion in his den. In the biblical story young David assures Saul that he can handle the giant Goliath: "Your servant used to keep sheep for his father; and when there came a lion, or a bear, and took a lamb from the flock, I went after him, and smote him and delivered it out of his mouth; and if he arose against me, I caught him by his beard and smote him and killed him." His words became the basis for our expression *beard the lion in his den*, boldly confront a dangerous adversary, though the exact saying was first recorded in Sir Walter Scott's *Marmion* (1808).

bear flag. The white flag with a star and grizzly bear upon it that was adopted by Americans in California in 1846 when they defied Spanish authorities and proclaimed the California Republic. It has since become the California state flag.

a bear for work. In the early 19th century, as Americans pushed on into the wilderness, a number of native expressions arose comparing men with great strength or strong appetites or emotions to bears. *A bear for work* was born at this time, as was *CROSS AS A BEAR*.

bear paw. A popular pastry made with nuts and raisins that roughly suggests a bear's paw in shape; also called a bear claw. It appears to have originated in California in about 1940.

bear the brunt. *Brunt* is an old word for the main force of an army and the expression *to bear the brunt* has been used since

at least the early 1400s in the sense of to take the main force of an enemy attack. Today it means to bear the worst of anything.

beastly drunk. The first recorded use of *beastly drunk* seems to have been by John Bristed in *Anthroplanomenus, being an account of a pedestrian tour through part of the Highlands of Scotland* (1803): "He . . . comes home every morning about two or three o'clock quite beastly drunk." But Jonathan Swift in 1709 wrote of the "beastly sin of drinking to excess." And Thomas Nashe in his *Pierce Penniless . . .* (1592) gives descriptions of eight types of drunks, comparing many of them to wild beasts, such as the "Lion drunke [who] flings the pot about the house, calls his hostess whore, breaks the glass windowes with his dagger . . ." Nashe's work may have first suggested the expression, even if he didn't use the exact words.

beast 666.

Let he who hath understanding
Reckon the number of the Beast;
For it is a human number,
Its number is Six Hundred and Sixty Six.

—Book of Revelation 13:18

No one has been able to identify satisfactorily the Beast alluded to in the Bible. Since each digit in 666 falls short by one of the "sacred number" seven, it has been suggested that 666 therefore symbolizes the Antichrist expected by some Christians to precede the second coming of Christ. Others have tried to prove that 666 is a cryptogram based on the names of various men throughout history. The Hebrew letters of the name Nero Caesar, for example, represent numbers that add up to 666. Nero has always been a favorite candidate for the Beast, but Roman emperor Diocletian, Martin Luther, Muhammad, Napoleon, and many others have been suggested, too. The matter is further complicated by the fact that some ancient authorities say the number given in Revelation is 616.

beast with a belly full of bedsprings. A colorful cowboy term for a wildly bucking horse. The expression seems to have originated in rodeos within the last 50 years or so.

beast-with-two-backs. Shakespeare used this expression for face-to-face sexual intercourse in *Othello*, having Iago say: "I am one sir, that comes to tell you your daughter and the Moor are now making the beast with two backs." The words are often hyphenated today.

beat a dead horse. See FLOG (OR BEAT) A DEAD HORSE.

beat a retreat. In early times drums were played when armies retreated from the field. Over the years the drumming and a bugle call came to be the ceremony of retreat at sunset, when day was done and the flag was lowered. *To beat a retreat* now means to retreat or retire from all activities rather than just battlefield withdrawal.

beat around the bush. It's hard not to beat around the bush about the origins of this one. Hunters once hired beaters who "started" birds and other game for them by beating the bush and scaring them out into the open. The simplest explanation for the

phrase *to beat around the bush*, to approach a matter very carefully or in a roundabout way, is that these beaters had to take great care when approaching the bush or they would “start” the game too soon for the hunter to get a good shot. But etymologist Ernest Weekley and others believe that the expression, which dates back to at least the early 16th century, is a mixed metaphor. Weekley suggests that the old proverb “I will not beat the bush that another may have the bird” joined with “to around the bush,” an early expression used for a hound hesitating when circling the bush—and gave us *beat around the bush*.

beat black and blue. Originally the colors in this phrase, recorded as early as 1300, were *blak* and *bla*, the *blak* for “black,” and the *bla*, for “a dark color between black and blue,” a livid blackish-blue. These of course are the colors the human body commonly turns when beaten, bruised, or pinched.

beat it! Although most authorities say *beat it!* is American slang first recorded in 1905 for “get out of here, go away!”, the expression is much older. The term was used by both Ben Jonson and Shakespeare for “go” and is said to have been coined by Shakespeare. It may be a shortening of “beat the trail” or some similar expression, but no one is sure. See SCRAM.

beats; beat generation; beatnik. Novelist Jack Kerouac claimed he invented the word *beat* for Allen Ginsberg’s “angel-headed hipsters” of the fifties, and said it meant “beatific, blissfully happy,” that “you got the beat,” but it probably owes a lot to the early thirties jargon of jazz musicians in which *beat* meant “exhausted, frustrated, played out.” In fact, *beat* in this last sense was used generally as far back as 1830. *Beat generation* seems certainly to have been Kerouac’s name for the fifties “Lost Generation,” though it was first used in John Clellon Holmes’s novel *Go!* (1957). Columnist Herb Caen of the *San Francisco Chronicle* coined *beatnik* in 1958. The pejorative though affectionate Yiddish suffix *nik* (as in “nudnik,” “no-good-nik,” etc.) was probably added to *beat* to make the word, but remember that the Russian sputnik (“fellow traveler of the earth”) with its Polish suffix *nik* was launched at the time.

beat the band. Banagher, an Irish town on the Shannon, was in the mid-19th century a notorious “pocket borough” where most residents were employed by the local lord and voted as he directed (were “in his pocket”). It became a standing joke in Parliament at the time to quip “Well, that beats (or bangs) Banagher!” whenever someone mentioned a pocket borough where *every* resident was employed by the local lord. Either via this route, or because of an Irish minstrel named Bannagher who told amazing stories, the saying *that beats Banagher*, for “anything amazing or superior,” became an English favorite. It’s reasonable to suggest, as Partridge does, that the later phrase *that beats the band*, derived from it. The alliterative expressions do sound alike and “*bang*” (from both the alternate version of the English phrase and Banagher) would suggest “band”—that beats something louder, bigger, better than a great brass band. Attempts to connect *that beats the band* with several real bands have all failed.

beat the devil and carry a rail. To beat someone decisively. The saying derives from the rural custom of having the favorite runner in a race carry a rail as a handicap.

beat the living daylight out of you. To say “I’ll let daylight into you!” to an enemy in days past was to threaten that you’d open him up, make a hole in him with a sword, knife, or gun. The expression, in the form of its variant “I’ll make daylight shine through you,” is recorded in America as early as 1774 and is probably much older. Sayings like “I’ll fill him full of holes” replaced the older expression when modern weapons like machine guns made wholesale ventilation easier, but it lived on in the form of *I’ll beat the living daylight out of you*—I’ll beat you to a pulp, punish you unmercifully. Unlike the old swordsman’s words, this makes no sense literally. It is merely the ghost of an imaginative phrase.

beat to the punch. British boxing champion Daniel Mendoza weighed only 160 pounds but defeated many bigger fighters with his speed and agility, which enabled him to throw a punch before his opponents could. Mendoza reigned through the 1790s, when the phrase *beat to the punch* became a common one in boxing circles. It wasn’t until about 30 years later, in 1823, that *beat to the punch* began to be used figuratively for “to do what someone else plans to do before he does it.” Possibly the first of the “scientific” boxers, Mendoza operated a boxing school where he taught many British gentlemen how to fight. Among many innovative techniques he originated were INFIGHTING, the jab, the hook, and the old one-two.

Beau Brummell. Beau Brummell, born George Bryan Brummell, was more a dandy than a gentleman; it is said that he even refused to tip his hat to ladies, out of fear that he might mess his wig. Brummell’s name has indeed been synonymous for a dandy, fop, or fancy dresser for over a century. From his early years at Eton and Oxford the incomparable Beau paid extravagant attention to his dress. There he met the Prince of Wales, later George IV, who became his patron when he left college, commissioning him in his own regiment in 1794. Brummell retired from the service four years later, when he inherited a large fortune, and set up a bachelor apartment in Mayfair, where he held sway as London’s arbiter of fashion for almost 20 years. Though he showed good taste and originality in dress, he is remembered for his excesses. Beau Brummell often spent a whole day dressing for a royal ball; his gloves were the work of three glovers—one to fashion the hands, another for the fingers, and a third for the thumb. In 1816 he fled to France to escape his creditors. Here he spent his last 24 years in exile while struggling to survive, imprisoned once for debt and suffering several attacks of paralysis. He died in an asylum for the poor in Caen in 1840, aged 62. He had long before lost all interest in elegant fashion and manners, his dress becoming slovenly and dirty. See also BEAU NASH.

beaucoup. Many, a lot, an abundance. A term (from the French *beaucoup*, much) pronounced *boocoo*, that has gained wider use in recent years, as in “He’s got boocoo money.”

Beaufort scale. The Beaufort scale, a means to measure wind velocity, was devised in 1806 by Sir Francis Beaufort (1774–1857), noted surveyor and hydrologist, who later became a rear admiral and served as hydrographer to the British navy from 1829 to 1855. Beaufort’s scale consists of numbers from 0 to 12 that indicate the strength of the wind ranging from “light,” force 0, to “hurricane,” force 12, or in Beaufort’s words, “that

which no canvas could withstand.” My learned correspondent Eric Halsey points out that the best thing about the scale is that it can be used without instruments. When the tops of the trees begin to stir, for example, the wind is 5 knots.

beau geste. French for “a noble gesture, though possibly futile,” as in “No beau geste, no gracious gesture could repair what he had broken.” *Beau Geste* was the title of an early motion picture.

Beaujolais. Often drunk very young—even as early as mid-November of the year its grapes are harvested—*Beaujolais* is a full-bodied fruity wine that has become very popular in America recently. It takes its name from the Beaujolais region in France, north of Lyon, where it is produced.

beau monde. French for “high or fashionable society,” as in “it was truly a good world, a *beau monde*, open to everyone with the qualifications.”

Beau Nash. Beau Nash is the only “beautiful person” comparable to BEAU BRUMMELL. Master of Ceremonies at Bath, then England’s most fashionable gambling and cultural center, Nash spent much of his long life preening and strutting, riding in a chariot drawn by six gray stallions and attended by laced lackeys. The “King of Bath” died in 1761, aged 87, and the town ordered a full-size statue of him erected in the Pump Room between the smaller busts of Newton and Pope. That Beau Nash, like Brummel, was remembered for his excesses and not his many good works can be seen in Lord Chesterfield’s epigram concerning this statue:

The statue placed these busts between
Gives satire all its strength;
Wisdom and Wit are little seen,
But Folly at full length.

beautiful. See BROKEN-HEARTED.

beautiful! There are many variations on the exclamation *beautiful!*, which means everything from the very worst to the very best, depending on the situation and one’s tone of voice. Someone might say, “This new virus can wipe out a whole city in a matter of days,” and the reply might be an ironic, disgusted “Beautiful!” On the other hand, *beautiful!* is used to express one’s extreme happiness with something.

beautiful bodacious Babylon of the West. A colorful old name for Dodge City, Kansas, once a wild and rowdy cowtown on the Santa Fe Trail.

beautiful nuisance. A euphemistic Southern name for the kudzu vine, a scourge in the U.S. South where it was introduced as a valuable forage crop and soil conditioner but became a fast-growing weedy pest in southern gardens. *Kuzu* is the Japanese name for this Asiatic plant (*Pueraria thunbergiana*) of the pea family. The kudzu has had more publicity but the most pernicious weed in the South, and in all America, is the purple nutsedge (*Cyperus rotundas*), which can grow 39 inches long and does far more damage.

beautiful people; flower people. *The beautiful people* for fashionable rich people dates back only to the 1960s, when it was supposedly invented by fashion authority Diana Vreeland, though there is no firm proof of this. The term is probably based on *flower people*, hippies of the time until their bloom faded. Flower people were people who advocated love and peace, so-called because they sometimes offered others flowers as symbols of their beliefs. *Flower Power* was the belief of the *flower children*, whose stun guns were flowers. First printed in 1967, the slogan is said to have been invented by Beat poet Allen Ginsberg.

beauty is only skin-deep. *Skin-deep*, for “superficial” or “shallow,” “penetrating no deeper than the skin,” can be traced back to the early 17th century, as can the proverbial *beauty is only skin-deep*, expressing the limitations of beauty. The last expression is first recorded in a poem by Thomas Overbury in about 1613: “All the carnall beauty of my wife,/Is but skin-deep.” *Skin-deep*, literally, can range from 1/10th of an inch on the eyelid to 1/5th of an inch on the back.

beaver. Though extinct in England, this aquatic rodent retains its English name, which comes from the Old English *beofor*. Books have been written about the beaver (*Castor fiber*), the largest and most ingenious of North American rodents. Valuable beaver pelts, used largely in felt hats, were a great incentive to the exploration of the New World, and in the early 19th century hundreds of thousands of beavers were killed for their fur. Growing to a length of four feet and a weight of over 80 pounds, beavers are peaceful family animals devoted to their kittens and live in large towns or colonies. Their engineering skills in building dams and lodges are well known, and they have been observed building 1,000-foot-long canals to divert a stream into their pond or to reach a food source (usually the inner bark of trees). Beavers have “more engineering skill than the entire Army Corps of Engineers,” claimed one admirer in Civil War times. See EAGER BEAVER.

Beaver State. A nickname for Oregon. It has also been called the Sunset State and the Webfoot State, suggested by the term *Webfooters* for residents of the state, which has a 77.2-inch annual rainfall, good weather for (webfooted) ducks. Oregon was once known as the Hard-Case State, this unusual state nickname referring to the many shady characters who came there in the early 19th century.

beaver tail. A round pastry, popular in Canada, made with brown sugar, lemon juice, flour, and other ingredients.

became shot. Killed by being shot. According to James Michener in his novel *Centennial* (1974), a cowboy “would ride up and warn you not to trespass on his watering rights, and if you persisted . . . one day you became shot. That was the phrase they used.”

because it’s there. The humorous or wry answer of a mountain climber who is asked why he chose to climb a certain mountain. The phrase is often attributed to Sir Edmund Hillary, who climbed Mt. Everest with his guide Tenzing Norgay in 1953, but it was said many years before then by British

climber George Leigh Mallory (1886–1924) when asked why he wanted to climb Everest. It is also applied to people other than climbers, meaning generally “a foolish reason for any foolish act.”

bechamel. The marquis de Bechamel, it is said, made his money financing various fraudulent deals before turning from crookery to cookery, but the French forgave him everything for the sauce he invented. Louis de Bechamel became steward to Louis XIV, the Sun King, as he liked to call himself, whose motto was, “He who eats well works well.” While superintendent of the royal kitchens, Bechamel created many sublime dishes for the dedicated gourmet king, under whom the now proverbial Cordon Bleu school of cookery was established. However, what we call a *bechamel*, a *bechamelle*, or a *Bechamel sauce* today—a cream sauce thickened with flour—bears little resemblance to the original, which was a complicated concoction prepared from egg yolks, cream, and butter blended with an elaborate bouillon made from vegetables, wines, “old hens, and old partridges.” This may be for the best, though. “Thank goodness,” writes the noted chef Raymond Oliver, “[such recipes] are no longer more than pale ghosts of what they were.”

bêche-de-mer. Bêche-de-mer, a lingua franca known only in the Pacific, is a combination of English and native dialects. The bêche-de-mer was a staple of trade, the natives prizing it for food, and the language takes its name from this sea slug or sea cucumber.

bedbug. A crazy person; someone who acts crazy. Often used in the old expression *crazy as a bedbug*, after the bedbug’s frantic running around in all directions when exposed.

bedbug letter. According to an old story, a guest at a famous hotel was bitten by a bedbug one night and on returning home wrote a letter of complaint. He received an apologetic letter claiming that this had never happened before; however, the guest’s letter was enclosed, with the notation scrawled across the top: “Send him the bedbug letter.” Ever since, the expression *bedbug letter* has meant a form letter apologizing for poor service or a defective product.

Bedcheck Charlie. The nickname of any piloted single plane that, in World War II and Korea, regularly slipped in under the radar to drop bombs on or shoot up U.S. compounds, demoralizing many.

bed of ice. A short story I read recently described as a *bed of ice* the water bed a quarrelling couple shared. The expression has a much crueler connotation in history. It seems that for one capricious reason or another Empress Anne of Russia demoted an old noble at her court to court jester and then ordered him to marry an old crone who served her as a chambermaid. At great expense the sadistic Anne had a house of ice built on the frozen Neva River and furnished it entirely with ice. The newlyweds were, amid great fanfare, transported to their home on the back of an elephant, put into their ice bed naked and the house’s ice door was moved in place. They did not last until morning.

bed of pain. One’s deathbed: “I’m but a poor old woman lying in her bed of pain.” *To take to one’s bed* is to go to bed because one is very ill or dying. Both phrases are at least two centuries old.

bed of Procrustes. Procrustes, sometimes called Damastes or Polypemon in Greek legend, always obliged weary travelers when they came to his house on the road to Eleusis seeking lodging for the night. But the notorious highwayman of Attica makes modern muggers look NAMBY-PAMBY in comparison. He had two sadistic M.O.s. Once he got a short victim inside, he’d lead him to a long bed, tie him up, and stretch him on a rack until he fit it. If the victim was tall, Procrustes would show him to a short bed, restrain him, and lop off his legs so that he fit. Either way his victims died in bed and Procrustes stole their money. From his inhumane hospitality we have the expression to put a person *on the bed of Procrustes*, meaning to force him to one standard of thought or action by arbitrary methods.

bed of roses. A phrase indicating great ease, pleasure, or comfort, as in “Her job’s a bed of roses.” It seems to be the invention of Christopher Marlowe in his poem “The Passionate Shepherd to His Love” (1593):

And I will make thee beds of roses!
And a thousand fragrant posies.

Shakespeare used the same words in the *Merry Wives of Windsor* (1600–01), and several other poets made similar rhymes. A velvety bed of rose petals would, of course, soothe the senses from touch to scent.

bedouin. A bedouin has come to mean any wandering person or vagabond, and derives from the French word (*Bedouin*) for the nomadic Arab tribes of the Arabian, Syrian, and North African deserts. The French adapted the word from the Arabic *bidwan*, “a dweller in the open lands.” The Bedouins of the Arabian desert, about 1 million in number, are nomadic camel breeders who trade their camels with Persian (Iranian) and Syrian traders for food and other goods. Living in groups of up to 100, they are strongly united through blood relationships, a woman generally marrying her father’s brother’s son.

to bedpost. An interesting expression that means to hold down a child’s shirttail or other garment by placing it under a heavy bedpost that the child can’t lift. While they were busy in the kitchen, garden, or elsewhere, mothers a century ago often did this to prevent young ones from wandering off into trouble. Also called *bedpost on a dress tail*.

bedswerver. In days past this delightful word served as a synonym for an unfaithful spouse (one of *its* synonyms being a *spouse-break*). Shakespeare used the term in *The Winter’s Tale*.

bee. *Spelling bee* is among the last survivors of a large number of *bees* relating to social gatherings (bees being busy, cooperative, social animals) “for performing some task in common.” These are American in origin—the first one recorded is a 1769 *spinning bee* in Taunton, Massachusetts, though the term was in use before that. Later came *bees* prefixed by apple, building, candy, checker, chopping, drawing, housecleaning, husking,

knitting, logging, paring, picking, political, quilting, raising, sewing, shingle, shooting, shouting, shucking, spinning, squirrel, stone, tailor, and wood. There were even *rattlesnake bees*, where “the venomous reptiles . . . were summarily excised by fire and lethal weapons”; *kissing bees*, parties for young people; *whipping bees*, where toughs beat someone; and *lynching bees*. The affairs, sometimes called “frolics,” were often followed by parties.

beech. See BOOK.

Beecher’s Bibles. *Beecher’s Bibles* were Sharps repeater rifles that the Reverend Henry Ward Beecher (1813–87), one of America’s most famous and controversial preachers, raised money for at his Brooklyn Heights church in New York, and shipped to “Bloody Kansas” in crates labeled “Bibles.” Beecher encouraged his parishioners to join the “underground railroad” and even held mock slave auctions at Plymouth Congregational Church to illustrate the evils of slavery. The church, still in use, was called “The Church of the Holy Rifles,” and is now a national historic shrine. Beecher once wrote that “the Sharps rifle was a truly moral agency . . . [had] more moral power . . . than a hundred Bibles.” The great preacher, brother of Harriet Beecher Stowe, was a complex man whose interests ranged from involvement in antislavery movements to involvement with female members of his congregation. See SHARPS RIFLE.

beefcake. See CHEESECAKE.

beefeater. The popular name of the warders of the Tower of London and the Yeoman of the Guard, all of whom dress in 15th-century uniforms and are perennial tourist attractions. Their name, however, was originally a derogatory term for a well-fed servant, something of a glutton, and three centuries ago the French used it as a contemptuous word for an English soldier.

beef on weck. Another notable American sandwich, this one from western New York, especially Buffalo. *Beef on weck* is slices of beef piled on a crusty roll topped with caraway seeds and coarse salt. *Weck* is a shortening of the German *Kummelweck* for caraway roll. See HERO.

beef Stroganoff; beef Wellington. Nineteenth-century Russian diplomat Count Paul Stroganoff has the honor of having the well-known *beef Stroganoff* named after him. It is beef sautéed with onions and cooked in a sauce of consommé, sour cream, mushrooms, mustard, and other condiments. *Beef Wellington*, another popular dish, commemorates Arthur Wellesley, first duke of Wellington, whose name is part of a number of terms, including WELLINGTON boots. *Beef Wellington* combines a choice cut of beef, liver pâté, bacon, brandy, and various condiments, all baked in a golden crust of puffed pastry.

beehive. Anything that resembles an artificial beehive in appearance can be called a *beehive*. The most unusual among such objects is a woman’s hairdo called the *beehive*, which was very popular in the 1950s and 1960s and is becoming fashionable again today. See POMPADOUR for the hairstyle’s description. It has no connection with BEEHIVE STATE, the nickname of Utah.

Beehive State. See MORMON STATE.

bee in his (her) bonnet.

Ah! woe is mee,
woe, woe is mee
Alack and well-a-day!
For pity, sir, find out the bee,
Which bore my love away.
I’le seek him in your bonnet brave,
I’le seek him in your eyes.

Robert Herrick’s little-known poem “Mad Maid’s Song,” above, written in 1648, is supposed to be the basis for the expression *to have a bee in one’s bonnet*, “to be eccentric, have a screw loose, especially to be obsessed with one idea.” If the poem is implying in the last two lines that the mad maid is slightly insane, this is the case. Herrick was probably playing with an older expression, “to have bees in the head or brain,” which means the same and dates back to the early 16th century. Bees humming in the head obviously suggested an obsessive idea busy at work there. A bonnet at the time was either a man’s or woman’s hat.

beeline. Any straight or direct path, like a bee’s course to its hive, an expression that possibly originated in New England in the early 19th century. “He made a beeline for the food table.”

Beelzebub. The devil or prince of the devils, whose name is mentioned several times in the Bible. Poet John Milton, in *Paradise Lost*, makes him a fallen angel next to Satan in power. Originally a god of the Philistines, he was called *Lord of the Flies* because his statue, believed to be always coated with blood, attracted flies to it.

been down so long it looks like up to me. This expression is the title of a book by the late Richard Fariña and still has currency today. It dates back to the 1960s or before and is akin to several ancient phrases. For example, in 1590 one writer noted: “They verife the olde Proverb, Charles, which is, That such as were never but in Hell, doo thinke that there is no other Heaven.”

been there, done that. A recent American phrase, first recorded in 1983, usually said by someone bored to death with something overly familiar to him or her.

beep. A term used for a New York City borough president. First recorded in 1980 and patterned on *veep* for the vice president of the United States.

beer. *Beer* possibly derives from the Latin *biber*, for “drink.” Roman soldiers most likely demanded *biber* in taverns wherever they went in Germany and the tavern owners assumed that this meant the ale in which they specialized. Gradually, the German word for ale became *biber* and then *Bier*, which came into English as *beer*.

beer and skittles. Mainly a British tavern game of ninepin in which a wooden ball or disk is used to knock down the pins,

skittles takes its name from the Scandinavian *skutill*, “shuttle.” This game, similar to shuffleboard, has been played since the early 17th century in taverns, where *beer and skittles* became an expression for a relaxed, laid-back lifestyle in which people want no more from life, and no less, than their beer and a game of skittles. Life sometimes gives more, of course, and frequently gives less.

beerbelly. A big stomach or potbelly that is attributed to drinking too much beer over the years. Called a *booze belly* in some regions.

beerplants. See ASPIDISTRA.

bee’s knees. Something or someone the ultimate of excellence is *the bee’s knees*, as in “He thinks she’s the bee’s knees.” This Americanism is first recorded in 1923. No one is sure why bee’s knees should suggest excellence, but it may have something to do with their part in the making of honey. See THE CAT’S MEOW.

beet; red as a beet. *Beet* comes to us from the Greek *beta*, for a similar plant. *Red as a beet* has probably been used as long as man has used beets. The French *betterave*, “beet,” has served as slang for the penis, an analogy not unknown in history, despite the unlikely shape of the modern beet for such—Catullus wrote about a Roman matron who left her husband because the object of her desires “dangled like a limp beet.”

beetle. Born to bite, beetles take their name from the Old English word *bitula*, meaning “biter.” The species of beetle called *dermestes* derive their name from the Greek words for “skin or leather” and “to eat,” meaning what an entomologist-etymologist in the early 19th century observed: that they ate even the hides of dead animals. *Dermestes* are interesting little beetles that PLAY POSSUM when touched. Actually, their larvae do the eating, and they demolish everything on a dead animal. They’re so thorough that large museums sometimes keep a colony on hand to clean delicate specimens to the bone instead of risking chemical or mechanical means.

beetle-brained. We don’t call someone *beetle-brained* because he acts as though he has a brain about as big as a beetle. The English term, first recorded in 1604, derives from the Old English *betl*, “a hammer,” a *betl* or *beetle-brained* person having a head as hard as a hammer head.

beetle-browed. To be beetle-browed is simply to have an overhanging forehead, like the beetle. The word has nothing to do with the Old English word *betl*, for hammer.

beezer. Rarely heard anymore, *beezer* was once popular slang for the nose, slang brought back by U.S. Marines serving in China, where Westerners were called the insulting *ta-bee-tee*, or “big-nosed ones.” See CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.

before the mast. Seamen on sailing ships in days past always bunked in the forecabin (fo’c’sle), literally “before the mast,”

which accounts for the title of Richard Henry Dana’s classic *Two Years Before the Mast* (1840). But *before the mast* also means to be hauled before the mast, where the captain held court, to be tried for some offense.

before Viagra. Revolutionary French journalist Victor Noir (1848–70) was killed in a duel with Prince Pierre Bonaparte. Sudden death caused an erection of his penis, and since his bronze statue was made exactly as he had lain on the field of honor, it shows the unmistakable bulge. For over a century now, women have visited his tomb in Paris’s Père Lachaise cemetery, considering it a fertility symbol.

beggar; to beg. A *beggar*, as Ernest Weekley pointed out in *The Romance of Words*, is not etymologically one who begs, for in the case of *to beg* the verb evolved from the noun. Many scholars share this opinion. Surprisingly, *beggar* is not of ancient vintage, like “eat” and “drink” and “sleep.” The word probably derives from the nickname of the 12th-century Liege priest, Lambert le Begue (Lambert the Stammerer), who founded a Belgian lay order devoted to the religious life and chastity as a reaction against the suffering of the Crusades. Little is known about Lambert le Begue besides the fact that he died in 1177, but his secular order, though it demanded communal living, poverty, and self-denial, was a tolerant and popular one. There were no requirements that his followers take vows or lock themselves in a monastery, and members were allowed to own private property, as well as to leave the order and marry. The nuns of the Beguine order were called *beghinae* in Medieval Latin, and the monks belonging to a male group formed in the Netherlands were similarly called *beghardi*, these Latin formations influenced by the name of their order and by the Old Flemish *beghen*, “to pray.” But the brotherhood of *beghardi* or *Beghards*, composed mostly of the tradesmen, was very loosely organized, making it easy for thieves and mendicants to pose as members of the poor and ill-clad group. Imposters traveled the Low Countries claiming to be Beghards and asking for alms, and the group was held in low repute by the end of the 13th century—especially because a large number of the Beghards were militant trade unionists who raised havoc wherever they went, and because many other members had become idle, wandering mendicants like their imitators. The Old French word *begard*, meaning mendicant, was soon formed from either the Medieval Latin *beghardi*, for *Beghards*, or from the Middle Dutch *beggaert*, meaning the same thing. *Begard*, in turn, became the Anglo-French *begger*, which was transformed into the Middle English *beggare*, or mendicant, with its verb *beggen*, meaning to ask for alms. Eventually we had the English word *beggar* that we use today, the verb *to beg* thus growing out of what the *beggar* did. Other scholars trace *beggar* to the obscure Old English word *bedecian*, which is only related to a Gothic word meaning mendicant and is so rare it has been found only once. But even if this is correct, there is no doubt that the Beghards at least reinforced the idea of *beggar* in people’s minds. See also BIGOT.

beggar on horseback. “Set a beggar on horseback and he will ride a gallop,” Robert Burton observed in his *Anatomy of Melancholy*. But the proverb, meaning there is no one so arrogant as a beggar who has suddenly made his fortune, probably dates back much earlier. It possibly derives from the old English

proverb, “Set a beggar on horseback and he’ll ride to the devil.” This proverb is common to many languages, its German equivalent, for instance, being “Set a beggar on horseback and he’ll outride the devil.”

beggars can't be choosers. Beggars, and often poor people as well, must take what they are offered. The old proverb is first recorded in the 1500s.

begin with b. Whether it is true or not no scientific study has established, but this is a venerable nautical saying regarding the naming of ships. Because ships whose name begin with A supposedly have a greater history of misfortune, *begin with b* has been almost a rule among some sailors and shipowners when naming their vessels.

begonia. Michel Begon (1638–1710) served as a minor navy official at various French ports until a fortunate marriage led to his appointment by Louis XIII as royal commissioner in Santo Domingo, though he wasn't Santo Domingo's governor, as is often claimed. Begon primarily concerned himself with protecting the natives from unscrupulous merchants and attending to their medical needs, but the amateur horticulturist ordered a detailed study of the island's plant life, collecting hundreds of specimens. Among these he found the begonia, now a common house and garden plant, which he took back to France with him and introduced to European botanists. The begonia however, wasn't named for him until 67 years after his death, when it was first brought to England. Begon is remembered for his patronage of science and his public spirit. On the opening of his large private library to the public, for example, friends advised him that he would surely lose numerous books. “I had much rather lose my books,” he replied, “than seem to distrust an honest man.” The begonia he discovered is a most valuable garden plant because it prefers the shade, where it flowers freely, is available in a large variety of colors, and can be grown for its foliage as well as its beautiful blooms. The *Begonia* genus contains some 1,000 species.

begorrah! *By God!* is the curse this comic Irish euphemism conceals, though practically no one thinks *begorrah!* means that by now. The corruption dates back to at least the late 19th century.

beg the question. *Begging the question* doesn't mean evading the question by giving an indirect answer, as is often assumed. The old phrase, which can be traced back to the 16th century, is the rough equivalent of the logician's *petitio principii* and means “to stack the cards in an argument by assuming something that hasn't been proved before the debate begins.” *Beg the question* actually means that someone is acting like a beggar, asking his opponent to concede the argument at the beginning. “O shameless beggar, that craveth no less than the whole controversy to be given him!” an early English author wrote in explaining the term.

beg to advise. The much-used phrase *beg to advise*, so often read in business letters, may be dated but isn't incorrect by any means. Here *advise* doesn't mean “to give advice” but “to give

information,” information being one of the meanings of *advise*. This is seen in another common business expression: “We would appreciate the benefit of your advice.”

behind the eight ball. See EIGHT BALL.

behind the scenes. Though the origins of this phrase are theatrical, as you would expect, it goes back to the English theater in the time of Charles I, when elaborate paintings were commonly used for the first time to create atmosphere on the stage. Since these paintings were often landscapes, they were called “scenes.” Behind them much of the important action of a play went on—birth, murders, intrigues, and the like—action that wasn't represented on the stage. As early as 1658 we find the playwright John Dryden writing on “Things happening in the Action of the Play, and suppos'd to be done behind the Scenes.” It wasn't long before the phrase began to be used figuratively to describe any important action hidden from the ordinary spectator, especially in places of power.

beignet. This square, French-style powdered doughnut without a hole takes its name from the French loanword *beignet*, meaning “fritter.” It is popular in New Orleans and other parts of southern Louisiana. Marketed widely today, it is also spelled *bignet* and is sometimes pronounced *ben-ya*.

béisbol. *Béisbol*, or baseball, is so popular in many Spanish-speaking countries that they have borrowed and altered numerous baseball words from American English. These also include *aut!* (out!), *battero* (batter), *al bate* (at bat), *estrait* (strike), and *jonron* (home run).

bel canto. *Bel canto* is virtuoso singing, a vocal technique emphasizing the quality of sound rather than emotion, a style found in some Italian opera. The words are Italian for “beautiful singing.” *Bel canto* writing might be writing with more style than substance, though some would say the only substance is style.

Belcher scarf; Belcher ring. Jim or Jem Belcher, England's version of Gentleman Jim Corbett, carried and made popular a large pocket handkerchief, its blue background spotted with large white spots with a small dark blue spot in the center of each. Such handkerchiefs or neckerchiefs, often more descriptively called “bird's eye wipes,” were named after the boxer, as was the *Belcher ring*, a huge gold affair set with a large stone that was prominent even on Belcher's massive dukes. Jim Belcher, the most celebrated boxer of his time, lost an eye in 1803, thereafter retiring from the ring and owning or operating a pub. He died in 1811, when only 30 years old. Belcher's name, oddly enough, means “fine gentleman” in French. He bore a remarkable resemblance to Napoleon and was in fact billed as the “Napoleon of the Ring.”

beldam. Beautiful things deteriorate. So do beautiful words. *Beldam* comes ultimately from the French *belle dame*, beautiful lady. It crossed the Channel and eventually became a polite English term for a grandmother. Then (as the English grew less polite?) it came to mean any old woman at all, and finally, an ugly old woman, a hag.

belfry. This word for a church steeple isn't directly named for the bells hung inside it; in fact, it owes its life to the worship of war, not God. In their desire to conquer their neighbors, German strategists of the Middle Ages built moveable wooden towers ironically called *bergfieds* ("peace" shelters) that they used in their advances on walled cities. Soldiers concealed inside these primitive, "vertical" tanks could protect themselves from enemy archers, and the devices proved so effective that many other European armies adopted them. By the time the English imported the siege tower in about 1500 it was called the *berfrey* and the English built it even taller, so that their own archers could climb to the top and fire arrows into a walled city or castle. But with the invention of new weapons using gunpowder, the wooden *berfreys* became outmoded in offensive military operations and were hauled within the walls of cities to serve as watchtowers. Here they were equipped with bells so that watchmen inside could sound the alarm of an enemy attack. Over the years people constantly associated the word *berfrey* with the word bell and because of this "klang association"—the hearing of one word in the sound of another—they began to pronounce it *belfrey*, substituting an *l* from bell for the *r*, this dissimilation being *belfry's* only etymological connection with the word *bell*. Later, churches were built with bell towers and the name *belfry* was used for them, too.

Belgian block. An attractive stone about a foot long, used extensively a century ago to pave streets but now, due largely to cost, used primarily for driveways or to make low borders in gardens. Some streets built with *Belgian block* remain today. Also called *Belgian*.

Belgian liquor. A nasty French term for cesspool matter; at least in Gustave Flaubert's *Bouvard and Pécuchet* (1881). In his novel Flaubert wrote: "Bouvard . . . became infatuated with fertilizer. Into his compost pits he piled boughs, blood, entrails, feathers—anything he could find. He used Belgian liquors, liquid manure, lye, smoked herring, seaweed, and old rags. In the midst of this stench, Bouvard smiled. To those who seemed disgusted he cried, 'But it's good! But it's good!'"

believe it or not. Robert Ripley's (1893–1949) syndicated newspaper column, books, and television show called *Believe It Or Not* have been with us since 1923 and almost from the beginning made this expression a part of the language. Up until his death in 1975 the late Norbert Pearlroth researched most of the material for the column—not in exotic places but in the New York Public Library.

Belisha beacon. See HORE-BELISHA.

belittle. Thomas Jefferson coined the word *belittle* in about 1780 and Noah Webster included it in his 1828 dictionary, but many critics denounced it as an incurably vulgar term, one going so far as to say "It has no visible chance of becoming English . . ." The condemnations went on for almost a century, but needless to say all the belittling of *belittle* failed to ban the word from the language.

belladonna lily. Belladonna means "pretty lady" in Italian and this flower may be so named because its smooth petals re-

semble a pretty girl's skin, or because Italian women once used the red sap of the plant as a cosmetic or to brighten their eyes. A beautiful shepherdess in the poems of Virgil and Theocritus gives the *belladonna lily* its scientific name *Amaryllis*.

bellarmine. *Bellarmino* is a historical term referring to a glazed stone beer jug designed to ridicule Italian cardinal Roberto Francesco Romolo Bellarmino (1542–1621). Cardinal Bellarmine, as he is better known, distinguished himself as a Jesuit scholar and was a friend of Galileo, but is usually remembered for his persecution of Protestants in Flanders. The Flemish later retaliated by caricaturing him with the large *bellarmine*, which was designed as a burlesque likeness, having a huge belly and a narrow neck. The controversial cardinal was canonized in 1930.

bellibone. In the 16th century a pretty lass was called a *bellibone*, the whimsical word an Anglicization of the French *belle et bonne*, "fair and good."

bell the cat. To bell the cat is to take on a dangerous mission at great personal risk for the benefit of others. Cats, of course, have long been belled to prevent them from killing songbirds. But the expression derives from a wise mouse. It is from an old fable retold in William "Long Will" Langland's alliterative poem "The Vision Concerning Piers Plowman," which was written, as far as is known, between 1360 and 1399. "Piers Plowman" tells of a family of mice who hold a meeting to decide what to do about a cat who has been preventing them from foraging for food. One cunning mouse suggests that a brass bell be hung around the cat's neck so that they could be warned of its approach. Everyone agrees that this ploy is perfect, except for one sage mouse, who steps forward and says, "Excellent idea, but who will bell the cat?"

bellwether. Since Anglo-Saxon times a bellwether has been a castrated male sheep that usually has a bell fastened around its neck and leads the flock. Later the word was applied humorously to a ringleader, the leader of any mob, conspiracy, or the like, and then was used to describe any leader who assumes the forefront of a profession or industry, etc., as in "New York is the bellwether of the publishing industry."

bellyache. *Bellyache* had earlier meant "colic" in England, but in the sense of "to complain" it is an Americanism coined about midway through the 19th century and first recorded in 1881. As with so many coined words, no one knows its clever inventor's name.

bellyache root. The plant scientifically named *Angelica lucida canadensis fortasse* was widely used as a tonic for stomachaches by American colonists. They gave it the popular name *bellyache root* that it still goes by today.

belly cheater; belly robber; belly burglar. *Belly cheater* is an old American cowboy term for a cook, which may date back to the 19th century but is first recorded as U.S. Navy slang in the form of *belly robber*, specifically referring to a commissary steward. The term has also been used for an Army mess sergeant. Another (later) variant is *belly burglar*.

belly laugh. See HIGH HAT.

belly-timber; belly-cheer; belly-god. An old English term for food or provisions—timber for the belly—*belly-timber* is recorded as early as 1607 and as late as the mid-19th century, having been used by a number of great writers, including Butler and Smollett. *Belly-cheer*, another delightful word, is perhaps a century older, and refers to food that cheers the belly. A *belly-god* is usually a person who makes a god of his belly, a glutton, though a *belly-god* can be “a god presiding over the appetites”: the three belly-gods being Bacchus, Ceres and Venus.

Belmont Stakes. Part of horse racing’s Triple Crown, which was named for Belmont Park on New York’s Long Island. Belmont Park, in turn, was named for millionaire August Belmont. The other races of the Triple Crown are the Kentucky Derby and the Preakness. All are for three-year-old thoroughbreds. See KENTUCKY DERBY.

beloved playwright. The founder of modern Italian comedy, Carlo Goldoni (1707–93), wrote some 250 plays over his long life, but he died a pauper. Nevertheless, he has been called one of the “most cheerful and lovable men in literary history.” He himself explained his personality this way: “My mother brought me into this world with little pain, and this increased her love for me. My first appearance was not, as is usual, announced by cries and this gentleness seemed then an indication of the pacific character which from that day forward I have preserved.”

below the belt; Queensberry rules. Boxing enthusiast John Sholto Douglas, the eighth marquis of Queensberry, put boxing on a more humane basis in 1867 when he and lightweight boxer John Graham Chambers drew up a code of 12 rules to govern boxing matches that were generally accepted by 1875 and standard throughout England by 1889. The rules instituted many modern features, including the use of gloves, a limited number of three-minute rounds, the 10-second count for a knockout, and the outlawing of wrestling, gouging, and hitting below the belt line on a boxer’s trunk. The Queensberry rules became the basis for all world boxing regulations. The rule that attracted most attention was the one prohibiting hitting below the belt, a practice that had been widely accepted despite the fact that fighters hit in the testicles suffered excruciating pain. *Queensberry rules* mark the first literal use of the expression, and not long after their formation *below the belt* was being used figuratively to describe any dirty, unfair methods.

beluga caviar. See CAVIAR.

belvedere. *Belvedere* is Italian for “fine or fair sight.” Summer houses commanding a fine view of the garden were beginning to be built on English estates in the 16th century, when the word came into the language from France or Italy.

Ben. Slang for a \$100 bill, named in honor of Ben Franklin, whose picture is on the bill. The term is common among gamblers and is frequently heard in Philadelphia and parts of New Jersey, especially Atlantic City. “That’s worth a Ben at least!” (Frank Freudberg, *Gasps*, 1996).

Ben Day. A New York printer named Benjamin Day (1831–1916) invented the Ben Day process of quick mechanical production of stippling, shading, or tints on line engravings. *Ben Dayed* means produced by the Ben Day photoengraving method. The process, which has been used since about 1879, eliminates the shading of a drawing by hand.

bender. Though most benders, or drunken sprees, take place on land today, the word has nautical origins. Before it came ashore it was a sailor’s word for a drinking bout, first recorded in the 19th century.

Bendigo, Australia. The only city ever named for a prizefighter is Bendigo, Australia, which has a population of some 50,000 and is the third largest sheep and cattle market in that country. Bendigo, the site of a famous gold strike in 1851, honors the ring name of English pugilist William Thompson (1811–89), as does the bendigo fur cap popular in the late 19th century. Thompson was born the same year that Fighting Jim BELCHER died. He may have been one of triplets nicknamed Shadrach, Meshac, and Abednego, or his nickname could have stemmed from his evangelical pursuits, but, in any event, in 1835 he signed his first ring challenge “Abed-Nego of Nottingham,” and used the nickname Bendigo for the remainder of his career—until he gave up fighting to become a full-time evangelist. Bendigo, Australia had some second thoughts about its eponymous name, changing it to Sandhurst in 1871, but reverted back to the old application in 1891, two years after Thompson’s death.

beneath; beneath contempt. Deriving from an Old English word, *beneath* is first recorded in 1205. As for its prepositional use, the *O.E.D.* puts it this way: “The prepositional use of *beneath* seems originally to have been introduced to express the notion of ‘lower than’ . . . But in the process of time *beneath* was so widely used for *under* that *below* was laid hold of to express the more general idea . . .” *Beneath* has thus become “more or less a literary and slightly archaic equivalent” of both *under* and *below*, and is preferred to these words only in a few phrases, such as *beneath contempt*, below the level or dignity even of contempt, which seems to have first been recorded in the late 19th century.

benedick; benedict. A benedick is strictly a sworn bachelor entrapped in marriage, while *benedict* refers to a bachelor of marriageable age. The former term derives from the name of the character Benedick in Shakespeare’s *Much Ado About Nothing* and the latter honors St. Benedict (d. 543), founder of the Benedictine order and a great advocate of celibacy. Benedict originally meant a perennial bachelor sworn to celibacy, and it is probably for this reason that Shakespeare adopted and adapted the name—for its amusing contrast to his Benedick, the young lord who vows at the beginning of *Much Ado About Nothing* to forever remain a bachelor and is finally talked into marriage. Shakespeare may have borrowed his idea from Thomas Kyd’s *The Spanish Tragedy*, and the Latin *Benedictus*, “the blessed,” probably also influenced his choice of the name. Although there is a distinction between the two words, they are used interchangeably today, meaning not a bachelor anymore, but a newly married man who had been a bachelor for a long time. *Benedict*, as in “a happy *benedict*,” is the usual spelling.

Benedict Arnold. QUISLING and a few others have endured, but most traitors have not been included in the dictionaries. *Benedict Arnold* is an exception. The term has been used for over 200 years in America, and is still a common one. Every schoolboy knows the story of how General Benedict Arnold plotted to deliver the garrison at West Point to Major John André, how the plot failed with André's capture and how Arnold fled to the British army. Less familiar are the facts that Arnold was a brilliant soldier and that his treason was provoked by shabby treatment at the hands of superiors several times during the course of the Revolutionary War.

Benedictine; Benedictines. Many famous drinks treated in these pages—champagne, coffee, chianti, mocha, scotch, seltzer, and Vichy water—are named after places, but the celebrated liqueur Benedictine is named for the monastery of a famous religious brotherhood. The particular monk who concocted the drink was one Don Bernardo Vincelli, a man whom the medieval archbishop of Rouen declared as important to humanity as any saint for his inspiration. Benedictine, one of the oldest liquors in the world, was first made at the Benedictine monastery at Fecamp, France in about 1510. Called Benedictine in honor of the order, its makers dedicated it “to the greater glory of God.” Though the monastery was destroyed during the French Revolution, monks managed to save the secret formula, and 50 years later a Frenchman named Le Grand began manufacturing Benedictine, his distillery still standing on the site of the abbey. Le Grand labeled each bottle D.O.M., which are the initials of the order's motto and stand for *Deo optimo maximo*, “for the most good and great God.”

benefit of clergy. Benefit of clergy was until 1827 a procedure in British law whereby a criminal arrested for a felony was exempt from trial in the secular courts if he could recite a passage from the Bible—the passage becoming known as *neck verse*. After reciting the verse, whether he was accused of murder, rape, or burglary (all capital offenses), he would be turned over to an ecclesiastical court, which could not invoke the death penalty for such crimes, and his neck would be saved from the hangman or axman. Originally, this privilege was granted only to the clergy, but as it was based on the biblical injunction, “Touch not my anointed and do my prophet no harm” (1 Chron. 26:22), it was extended to anyone who could read or write, that is, anyone who could *become* an ordained clergyman. This early-day “diplomatic immunity” of course discriminated against the uneducated poor. The *neck verse* that had to be recited was from the first verse of Psalms 51: “Have mercy upon me, O God, according to Thy loving kindness: According unto the multitude of Thy tender mercies blot out my transgressions. . . .” This verse is commonly called the *Miserere* because its opening words in Latin are *Miserere mei Deus*.

benign neglect. *Benign neglect* was used in reference to a proposed policy of giving fewer welfare benefits to U.S. minorities in the 1970s, but it originated long before this. The term was coined in 1839 by the Earl of Durham and described England's treatment of Canada.

Benjamin. Probably the least known of American currency notes. The *Benjamin*, a two-dollar bill, honored Judah Philip Benjamin (1811–84), Confederate secretary of war and secre-

tary of state during the Civil War. The brilliant lawyer, statesman, and plantation owner was one of Jefferson Davis's best friends and was known in the North as “the brains of the Confederacy.” He escaped to England after the Civil War and carved out another brilliant legal career. Today, *Benjamin*, or *Ben*, is common slang for a \$100 bill, named in honor of Ben Franklin, whose pictures is on the bill. *See also* ABE'S CABE.

benne. Another name for sesame seeds. *Sesamum indicum* is said to be the oldest herbaceous plant cultivated for its seeds. *Benne*, as the seeds are called in Africa, or *sim sim*, another African name for them, were brought to America on the first slave ships. They have been used for everything from ink to cattle feed to flour to oil, and are popular ingredient in cookies, crackers, and candies. *Benne* is a Wolof word for the sesame seed. *Sesamum* is the Greek version of the Arabic word for sesame.

benny; benjamin. Today a benny is usually American slang for an amphetamine tablet, especially Benzedrine, a trademarked name, but it also signifies both a pawnbroker and an overcoat. A pawnbroker became a *benny* because he often makes loans on overcoats, which are sometimes called *bennies* or *benjies*, a shortened form of *benjamins*. The benjamin, at first a certain tight-fitting style of overcoat and then any overcoat at all, probably derives from the biblical Benjamin, in humorous reference to his brother Joseph's coat of many colors (Gen. 37:3). But some scholars claim that the *benjamin* was created by a mid-19th-century London tailor of that name, the biblical tale rendering the term popular, and Mencken suggests that *benny* for an overcoat may have derived from the Romany *bengru*, “a waistcoat.” *Benny* is also slang for a derby.

Ben Thompson. Any legendary gunfighter. The real Ben Thompson (1842–84) was a professional gambler said by some to be the fastest shot in the West, and several times shot the gun out of an opponent's hand. He died in an ambush in which he was greatly outnumbered, so it is said.

Ben Trovato. *Ben Trovato* comes from the Italian phrase *Se non e vero, e ben trovato* (“If it is not true, it is well invented”), so it has often been used humorously as the authority for a good story that really isn't true—*ben trovato*, in other words, has over the years become the quoted scholar Ben Trovato. Every effort has been made to bar Ben Trovato from these pages, but in a work of this size it is impossible to be sure that he hasn't sneaked in somewhere. What can be promised is that if old Benjamin is anywhere on the premises, he'll certainly be spinning a good yarn.

be of good cheer. Part of Jesus' words in the Gospel of John: “In the world ye shall have tribulation, but be of good cheer; I have overcome the world.”

Bering Sea. *See* SEWARD'S FOLLY.

Berlin blue. *See* PRUSSIAN BLUE.

berm. *Berm* is first recorded in 1854, in the sense of “the bank of a canal opposite the towing path.” The word derives

from the German *Berme*, “a path or strip of ground along a dike,” and over the years has come to mean the side or shoulder of a road, especially in the southern U.S.

Bermuda. Juan de Bermúdez, a Spanish colonist, had been migrating elsewhere late in the 18th century when he was shipwrecked in what is today called the Bermuda Triangle. He and a cargo of pigs wound up on the island that now bears his name.

bern. See BRUIN.

the berries. *The berries* has been American talk for “the best, the greatest” since 1902, when it seems to have originated as college slang. *Berry* had been recorded a few years earlier as slang for a dollar and perhaps this use suggested the expression.

berserk. Old Berserkr (“Bear Skin”), a famous hero in Norse mythology, was a supernatural warrior who fought with feral fury and feared nothing; he even spurned weapons or armor, rushing into battle protected only by the bearskin thrown over his shoulder and clawing and biting his victims to death. His 12 sons bore the same name, and these mad warriors could also turn themselves into wild beasts that neither fire nor armor could kill. Together they terrorized the land. This is the most widely accepted biography of Old Berserkr. Another account says he was a grandson of the eight-handed Starkader and that he got his name not from his bearskin, but from Norsemen calling him *baer-serce*, bare of mail, because he went into battle without armor. At any rate, the legends surrounding Berserkr and his dozen scions became known to the English, who spelled his name Berserkar. Any fierce fighter was soon called a *berserker*, especially one who fought with a fury that seemed almost insane and terrified even his allies. In time *to go berserk* came to mean the violent, furious rage of a madman.

berth. See GIVE A WIDE BERTH TO.

Bertillon system. The first modern scientific method for identifying criminals was the Bertillon system, devised by Alphonse Bertillon (1853–1914), French anthropologist and pioneer criminologist. Bertillon developed *Bertillonage*, as the system is also called, when he headed the criminal identification bureau in the Seine prefecture and described it in his book *La Photographie judiciaire*. Adopted by France in 1888, the revolutionary method relied on anthropometry—the classification of skeletal and other body measurements, plus the color of hair, eyes, etc., for purposes of comparison. Fingerprints were a late addition to these *Bertillon measurements* and soon supplanted the system itself. The term is still used, though, to describe fingerprints and all anthropometric measurements.

Besame Mucho. Hundreds of singers have sung this internationally famous song written by Mexican songwriter Consuelo Velázquez (1924–2005). The song, whose title translates into English as *Kiss Me Much*, has been performed over 2 million times on radio and TV alone and has been translated into scores of languages. Ms. Velázquez wrote both the words and melody of *Besame Mucho* in 1940 when she was 16, before she had ever been kissed.

beshame bush. A colorful name for the mimosa (*Mimosa pudica*), or any sensitive plant that closes its leaves when touched. This mimosa plant should not be confused with the mimosa tree.

be smart. The country merchant’s storekeeping methods could be quite sophisticated. An early store owner, for example, might hang up two boots, one on each side of the chimney, and put all the money he received in one, all the receipts for money he paid out in the other. At the end of the year he would empty both boots and make an accounting. But, as a rule, bookkeeping methods were quite complicated, as were weighing and measuring techniques. There was even a complicated code system for marking goods so that the merchant could tell what every piece of merchandise cost him without the customer knowing, which gave the storekeeper an advantage when bargaining. A merchant, for instance, might take the phrase *now be sharp* represent 12345678910 (an N would equal the numeral 1, and O the numeral 2, a W the numeral 3, and so on). Every trusted clerk would be given this equation, and if a piece of merchandise was marked, say, NWW on the back, anyone with the formula would know its cost was \$1.33.

bespoke. Something, especially natty clothes, custom-made, made to order. Generally a British term but sometimes used by Americans. First recorded in about 1745. “He wore a bespoke jacket.” A *bespoke tailor* is someone who makes or sells bespoke clothing.

Bessemer converter, etc. We might almost as fairly call the Bessemer process the Kelly process. This revolutionary method for converting pig or cast iron to steel is named after Englishman Henry Bessemer (1813–98), but it was discovered almost concurrently by American inventor William Kelly (1811–88). Bessemer, the son of a French artist, was already a respected metallurgist and the inventor of a machine used to reduce gold and bronze to powder when he began experimenting to produce better and cheaper iron for cannons during the Crimean War. He started his work about the year 1854, being granted his first patent a year later, and in 1856 discovered the basic principle involved in his process, which he described in his paper, “The Manufacture of Iron Without Fuel.” Bessemer’s secret was the removal of carbon and other impurities from pig iron by melting it in his *Bessemer converter* and forcing a blast of air through the molten metal. The Bessemer process, much improved today, produced far better steel more cheaply and faster than ever before, tripling English steel production within a few years after its introduction.

best (greatest) fighter pound for pound. See POUND FOR POUND.

best boy. This old term, often puzzling to moviegoers when seen in film credits, simply means the main gaffer, the electrician’s chief assistant, on a movie set.

the best fish swim near the bottom. Anything worthwhile takes trouble to obtain. Some tasty fish, such as sole, do swim near the bottom.

the best laid schemes (plans) of mice and men. In his poem *To a Mouse* (ca. 1786) Scottish poet Robert Burns wrote: “The

best laid schemes o' mice an' men / Gang aft a-gley." The words have ever since been a common expression for failed plans in both Great Britain and the U.S., often in its original form, often as *the best laid plans of mice and man often go astray*, and often as the abbreviated *the best laid plans of mice and men*.

best of all possible worlds. See DOCTOR PANGLOSS.

best-seller. *Best-seller*, for a book that sells many copies, is an Americanism first recorded in 1905. The Sears Roebuck Catalog was probably the "best-seller" of all time, though it was distributed free for more than three-quarters of a century. Over 5 billion copies may be a conservative estimate for its total distribution since 1896. In second place is the Bible.

the best things in life are free. Possibly a proverbial saying of the early 20th century, but certainly the title of a popular 1927 song by Buddy De Sylva and Lew Brown, music by Ray Henderson.

betel nut. The betel nut is a famous masticatory that people prize for the joy of a stimulating chew, even though it turns their teeth pitch-black. It comes from the areca or betel palm (*Areca catechu*); the tree's fruit, roughly the size of a hen's egg, contains the mottled gray seed or nut. The nuts are boiled, sliced, and dried in the sun until they turn black or dark brown, when they are ready to be wrapped up in betel leaves and chewed. Native to Malaya and southern India, betel nuts are so widely used in Asian nations that it is estimated that 1/10th of all the people on earth indulge in betel chewing. The introduction of modern chewing gum has cut into this figure slightly, but the betel chewers aren't easily discouraged, not by the copious flow of brick-red saliva caused by chewing the betel nuts, which dye the lips, mouth, and gums, nor by all those black teeth resulting from a betel nut habit. Betel is a true excitant and arouses a great craving in the addict. Legions of devotees—black-toothed, bloody-mouthed, and bad-breathed—can still be seen throughout Asia chomping away and squirting scarlet juice on the walls.

bête noire. French for "pet hate" or dislike, as in "He was her *bête noire*." Pronounced *bet noire*.

bet one's bottom dollar. To be so sure about something that one will bet all one has on it, the last of one's money, as in "I'll bet my bottom dollar on it." Commonly heard throughout the U.S. today, the expression comes from the American West over a century and a half ago, when poker was often played with silver dollars. Someone completely sure of a hand would push his whole stack of silver dollars, including the one on the bottom, into the pot to cover a bet or a final raise.

better a hash at home than a roast with strangers. A saying coined by New England poet-physician Oliver Wendell Holmes in a letter home while traveling far from Boston. See ANESTHESIA.

better half. Originally these words bore no hint of male chauvinism, applying to a husband as well as a wife and meant

to be taken seriously. The expression can be traced back to the Roman poet Horace, who called his old friend Maecenas his *better half*. But the term became common in England only about 1570, not long before Sir Philip Sidney began writing his prose romance *Arcadia* (1580). The Puritans had used the phrase to describe the soul, the *better half* of the person, but Sidney popularized its use as a description of either partner in a marriage. For three centuries husbands and wives called their mates *my better half* without any humor intended. It wasn't much more than a century ago that it began to be used jocularly and mainly in reference to a wife.

better late than never. The Roman historian Livy recorded this old proverbial saying in his *History* in 59 B.C.

better mousetrap. See BUILD A BETTER MOUSETRAP.

better to give than to receive. John Heywood recorded this saying about 500 years ago in his *The Proverbes of John Heywood* (1546), which is the earliest collection of English proverbs. Heywood had it "Better to give than to take."

Betty. The Zero was and still remains a well-known World War II fighter plane. But relatively few people know the name of the Japanese bomber: the *Betty*, possibly named by U.S. fliers. The Betty was the plane shot down by U.S. aces flying P-38 Lightning fighters in 1945, off of Bougainville; one of the passengers was Admiral Isoroko Yamamoto, who had planned the Japanese attack on Pearl Harbor in 1941.

between a rock and a hard place. In days past if one was badly in need of money, almost bankrupt, he or she was said to be *between a rock and a hard place*. This expression was probably born in Arizona during a financial panic early in this century, but over the years its meaning changed. It came to mean being in a very tight spot, on the horns of a dilemma in making a hard decision. The words do lend themselves best to this last definition, for wherever one turns in making the decision there is rock or something as hard as or harder than rock.

between grass and hay. The period between childhood or adolescence and adulthood; the term dates back to the 19th century.

between Scylla and Charybdis. The *Odyssey* vividly describes Odysseus's passage between Scylla and Charybdis. In Greek mythology Scylla (Skulla) was a beautiful maiden loved by Poseidon, the lord of the sea. But her rival, Amphitrite, fed Scylla magic herbs that transformed her into a monster with 12 dangling feet, six long necks with a head on each, and three rows of teeth. She dwelt in a high cave overlooking the sea (situated, according to tradition, in the Strait of Messina) and from every ship that passed by, each of her terrible mouths reached down and devoured a sailor. On the other side of the narrow channel, beneath an immense wild fig tree, lay a dangerous whirlpool called Charybdis (Charubdis) that sucked in and regorged the sea three times a day. It was Odysseus's fate to sail between Scylla and Charybdis, as it is still the fate of anyone steering a mid-course between equally dangerous perils. Odysseus had mixed luck: he lost his crew

and ship, but saved his own life by clinging to the fig tree above Charybdis.

between the cup and the lip there's many a slip. No one knows where this common phrase originated, though it has been traced back to the 16th century. It means of course that anything can happen between the making of plans and their fulfillment.

between the devil and the deep blue sea. The Devil didn't inspire this old saying, as many people believe. It is thought to be a nautical expression, as its earliest recorded use in 1621 indicates, the "devil" in it referring not to Satan but to a seam between planks in a wooden ship's deck, specifically the long seam nearest to either side of a ship. This seam was "the devil to get at" and any sailor caulking it in a heavy sea risked falling overboard. The seam that ran around a ship's hull at the waterline, another one difficult and dangerous to get at, was also called "the devil," and these two devils inspired the memorable alliterative phrase *between the devil and the deep blue sea*—someone caught on the horns of a dilemma, caught between difficulties that are equally dangerous. Similarly, "the devil to pay" refers to "paying"—waterproofing with pitch—the devil on a ship. *Pay* here comes from the Latin *picare*, for the process, and the original phrase was "the devil to pay and no hot pitch."

between the lines. See READ BETWEEN THE LINES.

between wind and water. Any ship struck by a shell or torpedo in an area that is *between wind and water*—that is, damaged in a part of the hull that dips into the water and then rises to the wind when plowing through rough seas—is usually seriously damaged. The expression *between wind and water* has thus been used since the 16th century to signify hazardous damage in a ship and is used metaphorically to mean an unexpected attack on someone.

between you, me, and the bedpost. This is the earliest of the *between you, me, and . . .* expressions, dating back to about 1830 and meaning "confidentially, between us." Bedposts were of course part of the often curtained four-poster beds of the time. Other expressions with the exact same gossipy meaning include *between you, me, and the barn*, first recorded 20 years later, and BETWEEN YOU, ME, AND THE LAMPPOST, which probably dates to the 1850s and is similar to *you, me, and the gatepost* (of a fence) common at about the same time.

between you, me, and the lamppost. Dickens used this expression in *Nicholas Nickleby* (1838) and it couldn't be much older, for "lamppost" is first recorded in 1790. But the words probably derive from earlier expressions meaning "in confidence," such as *between you and me* and *between you and me and the gatepost* (or *bedpost*).

Beulah land. A biblical term (Isaiah 62:4) used for heaven or the promised land; also called Beulah shore.

Bevinism. British public servant Ernest Bevin, who once served in Winston Churchill's cabinet, was a mangler and mauler of language on par with the Reverend William Spoon-

er, Count Joseph Marrowsky, film producer Samuel Goldwyn, and baseball player and manager Casey Stengel. A typical Bevinism: "If you open this Pandora's box, you will find it full of Trojan horses." See also MALAPROPISM; MARROWSKY; SPOONERISM.

beware of and eschew pompous prolixity. See LEGALESE.

Beware of Dog! This common warning sign has probably been around as long as the dog has been domesticated and humankind has known how to write. An archaeological dig in Italy found such a sign (*Cave canem!*) on a house among ancient Roman ruins, and Petronius Arbiter (d. A.D. 66) records the warning in his *Satyricon*. See ONE GOOD TURN.

beware of Greeks bearing gifts. See GREEK.

beware the ides of March. The warning words of a soothsayer to Caesar in Shakespeare's *The Tragedy of Julius Caesar*. The ides of March fall on March 15th.

beyond the pale; put to the pale. There is no connection between this expression and the word *pale*, "of whitish appearance," which comes from the Latin *pallidus*, "pallid." *Pale* here refers to the Latin *palus*, "a stake or boundary marker driven into the ground with others to fence off a territory under the rule of a certain nation." Pale or picket fences (we call them palings today) were erected all over Europe from Roman times to designate territory belonging to a certain country. Later, the "pale" came to be used figuratively, as in the famous 15th-century "English pale" portion of Ireland that the English dominated before Cromwell conquered the whole island. *Beyond the pale* first meant simply to be outside the boundaries or jurisdiction of a nation, but by extension, and with the aid of Kipling's "Beyond the Pale," it came to describe a dismal place to which we assign social outcasts, those regarded as beyond the bounds of moral or social decency. To *put to the pale* often means to defeat someone so badly that he'll be banished from competition with you forever ("Write more poems like this and you'll put Poe to the pale.").

be your age. See ACT YOUR AGE.

Bhopal. This Indian city became the site of the most terrible chemical disaster in the world, killing some 16,000 people in December 1984 after an explosion in a pesticide plant.

b'hoy. An Irish pronunciation of *boy* common in the 19th century. The female counterpart was a *g'hal*. The *b'hoy* was usually a young worker, flashily dressed, who belonged to one of many fiercely competitive and colorfully named fire companies, such as the Black Joe, the Dry Bones, and the Bean Soup. Their speech was called *flash*, and it is said that it contributed many words and phrases to the language—though this last is doubtful.

bialy. See BAGEL.

bib. A paper attached to the outer clothes of a runner, especially a marathon runner, which provides the runner's *bib*

number or *identity number*. The use of *bib* in sports is probably a recent one; in fact it doesn't seem to have been used to any extent until the 1970s. Usually, it would just be called one's *number*: "Did you get your number yet?" *Bib* in a sports sense derives from the piece of clothing designed to protect a child's clothing while the child is eating.

bib and tucker. Clothes, *best bib and tucker* meaning one's best clothes, as in "Be sure to put on your best bib and tucker." The expression is first recorded in the late 1900s, *tucker* usually meaning a piece of ornamental lace worn around the top of the bodice.

Bibb lettuce. An amateur gardener named John B. Bibb developed Bibb lettuce in his backyard garden in Frankfort, Kentucky, about 1850, and the variety has been an American favorite ever since. Bibb is the most famous and best of what are called butterhead lettuces, having a tight small head of dark green color and a wonderful flavor. Because the variety is inclined to bolt in hot weather, a summer Bibb is now offered by nurserymen for the home garden. Several kinds of lettuce are named after their developers, including blackseeded Simpson, a loose-leaf variety. The vegetable can be traced back to ancient India and Central Asia, but takes its name from the Latin word *lac*, meaning silk, the Romans favoring lettuce for its milky juice and calling it *lactuce*. Bibb is not often found in the market, the most popular sellers in the United States being iceberg lettuce, a heading variety, and loose-leaf Boston lettuce.

Bible. The following quote succinctly gives the history of the word: "Round about the twelfth century B.C., an Egyptian envoy, Wen-Amon by name, visited the king of the Phoenician town of Byblus . . . Now, Byblus, today the small city of Gebal, was one of the oldest cities of Syria and Palestine. It had been long in close contact with Egypt and, as a trading center, among other articles of import it included papyrus . . . From Byblus the Greeks called papyrus *biblos*; and from the plural (*biblia*) of the diminutive *biblion* is derived our word Bible, properly '[the] books,'" (Stanley Cook, *An Introduction to the Bible*, 1945.) See BOOK.

Bible Belt. H. L. Mencken invented this term to describe parts of the United States where the literal accuracy of the Bible is widely believed, which of course is not limited to the South, despite the first use of the term: "*The Baptist Record*, in Jackson, Mississippi, [is] in the heart of the Bible and Lynching Belt" (*American Mercury*, 1926). More recently the term has been used to refer to any area of religious or moral fervor.

Bibles. See BUG BIBLE.

biblia a-biblia. "I can read anything which I call a *book*," wrote Charles Lamb. "There are things in that shape which I cannot allow for such. In this catalogue of books which are not books—*biblia a-biblia*—I reckon Court Calendars, Directories, Pocket Books, Draught Boards, bound and lettered on the back, Scientific Treatises, Almanacs, Statutes at Large, the works of Hume, Gibbon, Robertson, Beattie, Soame Jenyns, and generally, all those volumes which 'no gentleman's library should be without.'"

bibliobibuli. This little-known word was coined by that great lover of language, H. L. Mencken, who defined it thus: "There are people who read too much: The bibliobibuli. I know some who are constantly drunk on books, as other men are drunk on whiskey or religion. They wander through this most diverting and stimulating of worlds in a haze, seeing nothing and hearing nothing." Wrote Anatole France: "We live too much in books and not enough in nature, and we are very much like that simpleton of a Pliny the Younger, who went on studying a Greek author while before his eyes Vesuvius was overwhelming five cities beneath the ashes." See BOOKWORM.

bibliopoles and other bibliotypes. A *bibliopole* is simply a bookdealer, while a *bibliotaph* is one who conceals or hoards books, keeping them under lock and key, and a *biblioclast* is someone who collects and treasures books either for their value or for what's in them, and a *bibliomaniac* is a *bibliophile* gone bonkers, one who loves books to the point of madness. Legend has it that Don Vicente, a Spanish friar and scholar, murdered five or six collectors to steal a rare book, which makes him a *biblioklept* as well as a *bibliomaniac*. Another noted book thief was Innocent X, who, before he became pope, was caught red-handed stealing *L'Histoire du Concile de Trente* from a painter's studio while visiting with a religious party. The future pope was evicted bodily by the painter, and some historians believe that this action caused the ill-feeling toward France that marked the pontifical reign of Innocent X. The ancient Assyrians had curses like this for the library *biblioklept*: "The gods of heaven and earth and the gods of Assyria, may all these curse him with a curse which cannot be relieved, terrible and merciless, as long as he lives, may they let his name, his seed, be carried off from the land, may they put his flesh in a dog's mouth!"

Bic. Disposable Bic pens have been manufactured by the billions since they were invented by Hungarian Ladislas Biro in 1953, so many used throughout the world that the *Bic* trademark has become synonymous for a pen. Bics are named after the Frenchman (born in Italy) Baron Marcel Bich (pronounced "beek"), who bought the rights to the pen from Biro and manufactured and promoted them, his first factory a leaky shed on a street in Paris. Bich died in 1994, age 79.

Bickerstaff Hoax. Nearly all of Jonathan Swift's works were published anonymously and he received payment only for *Gulliver's Travels* (£200). In the case of the Bickerstaff Hoax, Swift used the pen name Isaac Bickerstaff. Indignant when an ignorant cobbler named John Partridge, claiming to be an astrologer, published an almanac of astrological predictions, Swift parodied the book under the title "Prediction for the ensuing year by Isaac Bickerstaff." In his parody, he foretold the death of John Partridge on March 29, 1708, and when the day arrived Swift published a letter affirming his prediction and giving an account of Partridge's death. Partridge indignantly protested that he was very much alive, but Swift wrote what he called a "Vindication," *proving* that Partridge was dead. Poor Partridge was doomed to a literary death as a result, especially when other writers perpetuated the joke. So famous did the pseudonym Isaac Bickerstaff become that Richard Steele used it as his pen name in the *Tatler*. Benjamin Franklin later emulated Swift's hoax in America.

bicycle. Englishman J. I. Stassen coined the word *bicycle* in 1869. The two-wheeled vehicles were previously called *velocipedes*, among many other names, including the humorous *boneshaker* because of the machine's vibrations on the terrible roads of the time. Early bicycles so scared horses on the road that many towns and cities required bicycle riders to dismount when approaching one. See ROADHOG.

biddy. The common Irish first name Bridget is the source for this word for an Irish maid or cleaning woman. So is the term *old biddy*. Both expressions were first coined in about 1700.

bidet. Ben Jonson is the first to record *bidet*, in 1630. A low basinlike bath "used especially in France for bathing one's private parts," the bidet is "bestriden, one squatting to wash." Someone with a sense of humor named the bath after the small horse called a bidet that people had to ride with their legs drawn up to avoid dragging their feet on the ground.

big. No one really knows the origin of this important monosyllabic word. *Big* has been traced to the Middle English *bigge*, meaning the same, but no further than that. It may come from the Scandinavian *bugge*, "an important man," but it could also derive from the Latin *bucca*, in the sense of "inflated cheek," among other possibilities.

Big A. A shortening of *Big Apple*, a name for New York City. Also a common designation for the Aqueduct racetrack in Queens, New York, because there is big-time horse racing there.

the Big Apple. A nickname for New York City since the 1960s, *the Big Apple* was first used in New Orleans. In about 1910 jazz musicians there used it as a loose translation of the Spanish *manzana principal*, the main "apple orchard," the main city block downtown, the place where all the action is.

big as old Cuffey. A historical expression describing someone or something of great size. The eponym is Captain Paul Cuffey, a black ship captain of New Bedford, Massachusetts, who in about 1787 recruited free African Americans to settle in Sierra Leone and transported them there on his ship.

Big Bang theory. The cosmological theory holding that the universe originated with the explosion of a single compact mass, blasting matter in every direction. The term was invented in 1950 by astrophysicist Fred Hoyle (1918–2001), who used it derisively in defending his *steady state theory* (1938). "This big bang theory seemed to be unsatisfactory," he wrote, but over the years the *big bang theory* has become generally more accepted than his own.

Big Bellies. A name given by white settlers to the Gros Ventre Indians of Montana; also called the *Great Bellies*.

Big Ben. Big Ben is not the huge clock in London's Parliament tower, though it is often given this name. The words really describe the huge, deep-toned bell in St. Stephen's Tower that strikes the hours over the British Houses of Parliament. Big

Ben, cast from 1856 to 1858, weighs 131/2 tons, more than twice the weight of the 61/2-ton bell in Philadelphia's Independence Hall. The great bell's first stroke, not the last, marks the hour, four smaller bells in the tower striking the quarter hours on the famed Westminster Chimes. The tower clock, 329 feet high, was designed by lawyer and architect Edmund Grimthorpe (1816–1905), and was named St. Stephen's Tower. This was to be the name of the bell, too, but newspapers took to calling it after Sir Benjamin Hall, Chief Commissioner of Works at the time, and the sobriquet stuck. Big Ben, though a notable achievement in bell founding, is far from being the world's largest bell. Moscow's Tsar Kolokol, a broken and unused giant weighing about 180 tons, is called the "King of Bells."

Big Bertha. On close examination, Big Bertha, the famous cannon that shelled Paris during World War I, is not so complimentary to the woman for whom it was named. *Big Bertha* is a translation of *die dicke Bertha*, "the fat Bertha," a nickname the Germans had for their 42-cm howitzers. They had in mind portly Frau Bertha Krupp von Bohlen und Halbach, whose husband owned the giant Krupp steel and munitions plant at Essen, it being mistakenly believed that the howitzers were manufactured by Krupp, whereas they were actually made at the Skoda works in Austria-Hungary. The Big Bertha aimed at Paris, an even larger gun with a range of 76 miles, began bombarding the city on March 23, 1918, firing every third day for 140 days and killing 256 people in all. On Good Friday of that year alone its shells killed or wounded 156 worshippers in the church of St. Gervais. It was at this time that journalists resurrected the term from the German and began applying it specifically to the Paris gun.

big brass. See BRASS.

Big Brother is watching you. *Big Brother* has come to mean a dictator or a dictatorship, a person or a political system that controls people's minds and lives so that there is nothing private and personal anymore. The reference is of course to the character Big Brother in George Orwell's novel *Nineteen Eighty-Four* (1949). See BIG WILLIE.

big butter-and-egg man. Speakeasy owner Texas Guinan may have coined this expression for a wealthy big spender during the Roaring Twenties. According to the story, one of her patrons kept buying rounds for the house all evening and showering \$50 bills on the chorus girls. Texas asked him to take a bow but he would only identify himself as being in the dairy business, so Texas put the spotlight on him, asking for "a hand for my big butter-and-egg man." In any case, George S. Kaufman used the phrase as the title of a play in 1925, giving it greater currency.

big cheese. A *big cheese*, for "a boss or important person," is an Americanism dating back to about 1890. But it derives from the British expression *the cheese*, meaning "the thing or the correct thing, the best." The British expression, in turn, is a corruption of the Persian or Urdu *chiz* (or *cheez*), "thing" that the British brought back from India in about 1840. A *big cheese* thus has nothing to do with cheese and should properly be "a big chiz."

Big Chill. Recent slang for death or a depressing situation. The expression derives from the title of the popular movie *The Big Chill* (1983), which deals with the death of a member of a close-knit group of friends and their reactions to it.

Big City rhythm. According to the *Federal Writer's Project* (1938): "The Big City rhythm has been dealt with in the movies, radio, books and magazines, but the fact remains that everything which has been told is no more than a pale suggestion of the dominant moods of the town, the qualities that place it by itself in the world; the efforts to relax within the battle to exist, the complicated individual adjustments to myriad personal relationships and to the whole process of the living city."

Big Daddy. An affectionate term for one's grandfather or the paternalistic head of a family, the term made famous by Tennessee Williams as the nickname of the wealthy cotton planter in his play *Cat on a Hot Tin Roof* (1955).

big doolie. Any important person, is sometimes called a *big doolie*, as in this *New York Times* quote from an Olympic gold medal winner: "I got a gold today, so I'm a big doolie." The expression, perhaps half a century old, may have its origin in the older American slang term *dooly*, meaning "dynamite," its origin unknown.

the Big Drink; Big Ditch; Big Water; Big Pond. *The Big Drink*, the first humorous American phrase for the Atlantic, Pacific, or any big body of water, seems to have been coined anonymously in 1844 and was also a name for the Mississippi River, which is more commonly called the Big Ditch of Big Water. *Big Ditch*, coined in 1825, has also been applied to the Atlantic, but is most commonly associated with the Erie Canal. *The Big Pond*, a humorous term for the Atlantic, stems from about 1840, when it was coined by Canadian humorist Thomas Haliburton.

the Big Dry. Another name for the "dry" or drought in Australia, which is said by some to be the biggest in history.

Big Easy. Possibly this was originally a jazz term referring to the pleasant, easygoing life in New Orleans. No dictionary records the fact, but New Orleans's nickname among its residents is the *Big Easy*, as is noted in the 1987 film of that name. Some authorities believe that Frank Conaway, who wrote the 1970 novel (also called *The Big Easy*) that the movie was based upon, coined the term.

big enchilada. A person who is the boss, the head man or woman, the big shot of any organization. The term is first recorded on one of the Watergate tapes in 1973, the speaker, John Ehrlichman, referring to Attorney General John Mitchell. In a letter from jail to author William Safire, Ehrlichman later claimed he had coined the expression, having "cooked my own enchiladas for years" as part of his "California upbringing." Possibly the term owes something to the phrase *the whole enchilada*—everything, the whole ball of wax—which had been around at least seven years longer, first recorded in 1966. Other foodstuffs associated with bossdom include *big banana*, *big cheese*, *big fish*, *big potato*, and *big vegetable*, among others. An

enchilada, an American Spanish word, is a tortilla rolled and stuffed with cheese, meat, or beans and served with a hot chili sauce.

big eyes. Desire or want for someone or something, a term, probably black English, unrecorded in any slang dictionary I've consulted. The late great jazz musician Dale Turner recently said in a film biography: "I had big eyes to play with Count Basie's band, but he told me [jokingly] one leader was enough." *Dictionary of American Regional English* lists a *big eye* (singular) defined as "greed, covetousness" and that entry may be the basis for the slightly different, much lighter Turner expression. One scholar calls *big eye* originally a Gullah phrase that is a translation of an African Ibo expression literally meaning "eye big."

big fleas have little fleas. The words, a favorite of President John F. Kennedy's, are found in full in Jonathan Swift's poem "On Poetry" (1733): "Big fleas have little fleas upon their backs to bite them, / and little fleas have lesser fleas, and so on *ad infinitum*." The similar proverbial saying *big fish eat little fish* has been around since the 13th century.

Bigfoot. A huge, hairy, humanoid creature said to inhabit the Pacific Northwest forests, so named because of the size of its alleged footprints, said to be 16 to 17 inches long and 7 inches wide. This abominable snowman of the California mountains is also called Sasquatch, a name recorded in 1925, some 35 years before the name Bigfoot.

big galoot. See GALOOT.

the bigger they come, the harder they fall. Boxer Robert "Bob" Fitzsimmons (1862–1917) fought and beat many men bigger and heavier than himself, holding at one time or another the world middleweight, light-heavyweight, and heavyweight championships. Fitzsimmons destroyed "Gentleman Jim" Corbett with his famous "solar plexus punch" and won the admiration of such boxing legends as John L. Sullivan. In 1902, when he was to fight James (Jim) Jeffries in defense of his heavyweight title, it was pointed out that Jeffries was 50 pounds heavier. "The bigger they come, the harder they fall," Fitzsimmons responded. Unfortunately, despite one of boxing's most memorable bon mots, he lost the fight by a knock-out to Jeffries, who was also 15 years younger. While Fitzsimmons's words were original, both Herodotus and Pindar expressed the same sentiment thousands of years before him. Wrote Pindar:

It is the lofty pine that by the storm
Is oftener tossed; towers fall with heavier crash
Which higher soar.

biggest bribe. Probably the first major French writer to live entirely by his pen (Pope was the first English champion), Alain-René Lesage (1668–1747) followed in the footsteps of Molière, producing over 60 farces and librettos in addition to his masterpiece, *Gil Blas*, one of the greatest foreign influences in English comedy. Lesage's comedy *Turcaret* satirized French financiers so scathingly that several Parisian moneylenders offered him 100,000 francs if he would refuse to let the play go onstage. Though the shrewd Lesage valued money as much as anyone,

to his credit he turned down the offer and the play went on as scheduled. The moneylenders next tried the cast, but they refused the bribe, too.

big gooseberry season. In Victorian times summer was a dull period for the British newspapers. So much space was left for reports of record-size vegetables and fruits grown by one gardener or another that it was nicknamed *the big gooseberry season*.

Big H. A nickname for Houston, Texas. See *XIT*.

Big House. The British use this term for the main house in a village, but in the United States it has meant, since about 1913, a prison or penitentiary. The American meaning may, however, come from the mid-19th-century British slang *Big House* for “the workhouse.”

Big Hungry. The poor country area around Tuskegee, Alabama, was once commonly called the *Big Hungry*. The famous Tuskegee Institute is located in this area today. Booker T. Washington was the school’s first principal, and George Washington Carver taught there.

Big Ike. A disparaging term meaning “a self-important person, a big wheel, a loud offensive person”: “He’s a real Big Ike.”

big kahuna. Originally *kahuna* in Hawaiian meant “a priest or wise man.” Then, in the mid-1950s, it also came to mean any expert surfer, and by the 1980s it took on the meaning of “an important person or thing,” this last usually in the form of *big kahuna*: “He’s the big kahuna around here.” The expression is now heard in all the 50 states and in other countries as well.

big league. A term for Major League Baseball (the highest level of organized ball) since the 1890s, *big league* has come to mean the highest level in any field, from art to zoology; its antonym is another baseball term: bush league. See *BUSH LEAGUE*; *MAJOR LEAGUE*.

Big Muddy. A nickname for the Missouri River dating back a hundred years or so when the West was being settled.

bignonia. A widely distributed woody flowering vine, the bignonia is sometimes confused with the *BEGONIA*, and the names of the men that the two plants honor are often confused as well. The species are not related, and Abbé Jean-Paul Bignon, court librarian to Louis XIV, did not discover the beautiful bignonia vine bearing his name. The bignonia was named by the French botanist Tournefort about 1700 in honor of the abbé, who had never ventured from Europe.

big nose. A slur given mainly to Americans and British, among others, by some Chinese, Koreans, and Vietnamese, who apparently believe occidentals have big noses. The term, first recorded in 1952, is said to be a translation of a Chinese expression. During the Korean conflict the U.N. forces, especially Americans, were called *kho-jang-ee*—big noses. Then

again, the Koreans may have had a reason not to favor large prominent noses. When the brutal Japanese warlord Toyotomi Hideyoshi invaded Korea in 1592, according to James L. McClain’s *Japan: A Modern History* (2002), he and his men hacked off tens of thousands of noses from the faces of Koreans, shipping them back to Kyoto, where he displayed them in a hideous pile for all to see.

bigot. “*Ne, se, bi got!* (‘No, by God!’)” the Norman lord Rollo is supposed to have shouted indignantly when he was told to kiss the foot or posterior of Charles the Simple as an act of homage, and legend has it that the word *bigot* arose because this phrase of Rollo’s was thereafter applied to any obstinate person. But the amusing old story is probably no more than that. Some scholars do suspect, however, that *bigot* stems from the Teutonic oath *bi got*, suggesting that it may have been bestowed as a derogatory nickname upon the Normans, who were regarded as obstinately and intolerantly devoted to their own religion. Nobody knows, but whatever the case, the formation of *bigot* was certainly influenced by the fanatical, intolerant behavior of the Beguine religious order. See also *BEGGAR*.

big shot. Italian general Giuseppe Garibaldi’s forces used a 90mm cannon against the Austrians. The big projectile it fired was translated into English by Garibaldi’s American followers as the *big shot*, which came to mean a big, important person. Such, at least, is one version of the origin of *big shot*, an Americanism first recorded in 1910, some 30 years after Garibaldi had breathed his last. Another theory traces *big shot* to the late 1920s, deriving it from the much older *big gun* and applying it to important people, especially ganglords.

Big Sky; Big Sky State. Nicknames for Montana, which is still one of the least populated states.

big sleep. It is believed that this synonym for death was coined by American novelist Raymond Chandler. Chandler used the sometimes capitalized term in his novel *The Big Sleep* (1938), and there is no record of its use before then.

big ticket. Since about 1945 in the U.S. a *big ticket* item has meant an expensive item such as a television set or a fur coat, etc., sold in retail stores.

Big Ugly. There is no more homely named hometown than Big Ugly, West Virginia.

big wheel, etc. *Big wheel*, first recorded in 1941, is the latest in a long line of similar earlier expressions. Of these *bigwig*, *big shot*, *big cheese*, *big gun*, and even *big noise* are still heard, while *big bug*, *big fish*, *big dog*, and *big toad in the puddle* are all but dead. The “wheel” in the term could come from the huge wheels in textile mills, or the phrase may derive from the mid-19th-century expression “to roll a big wheel,” used by mechanics as a synonym for “to be important or influential.”

bigwig. All of Europe’s royalty aped France’s Louis XIV when he took to wearing long, flowing wigs in his middle years. In England especially, the more important a man was, or imagined

himself to be, the bigger the wig he likely would wear. In fact, custom soon dictated that only the nobility, judges, and bishops were permitted to wear the full-length wig still retained in British courts of law. By then the word *bigwig*, for “an important person,” had passed into the language.

Big Willie. Another weapon named after a real person, in this case the first tank to be used in warfare. Officially called the Mark I, the behemoth was invented by Sir William Tritton (1875–1946) and popularly named *Big Willie* in his honor. Tritton was knighted for his invention in 1917, but his tank, first pressed into action a year before on the Somme battlefield, had very little effect on the outcome of World War I. It did, however, mark the beginning of a new kind of land warfare. It is often forgotten that Major W. G. Wilson jointly invented *Big Willie* with Tritton. See BIG BERTHA.

bijou. A small, delicate, beautifully made ring or other piece of jewelry. Ultimately from the French *biz*, finger. A movie theater is often called a *bijou*—because the name for beautifully made small jewelry was applied to small but attractive, fashionable buildings, which included movie theaters.

bikini. Soon after the two 1946 atomic bomb tests at Bikini Atoll in the Pacific, a French couturier created “*Latome*—the world’s smallest bathing suit.” This was supposed to compare “the effects wrought by a scantily clad woman to the effects of an atomic bomb,” as *Webster’s* put it. However, French designer Louis Réard outdid *Latome* with his *Bikini*, named after the atoll and “smaller than the smallest bathing suit in the world.” *Bikini* caught on, *Latome* did not. Since then we have had the *string* and the *thong*, even briefer than the bikini, so brief that an American slang synonym for it is *butt floss*.

bilberries. “Pinch the maids as blue as *Billberry*,” Shakespeare wrote in *The Merry Wives of Windsor*. *Billberries*, or “whortleberries,” or “blaeberries,” or “whinberries,” as they are variously called, are of the same genus as the blueberry. The main difference between the two is that the *bilberry* (*Vaccinium myrtillus*) is a little plant no more than 18 inches tall that usually produces berries singly, not in clusters as blueberries do. “Nineteen bites to a *bilberry*,” a centuries-old British expression, means to make a major production of an inconsequential act, just as it would be to take 19 bites of a berry no more than one-quarter inch in diameter.

bilge. Now meaning nonsense or filth, *bilge* was originally the dirty water that collected in the bottom of a ship. *Bilge* was first spelled *bulge*, which referred to the fact that the dirty water collected in the bulge, or curve, at the bottom of a straight-sided ship.

bilingual. To be *bilingual* is to be able to speak two languages with facility. The word comes from the Latin *lingua*, tongue, and *bi-*, two, and is first recorded in about 1835. The importance of bilingualism is illustrated by the old South American tale of the cat, mouse, and dog who live in the same house. The cat and the mouse were mortal enemies, of course, but the dog and mouse lived on good terms. So when the mouse heard

barking one day, he came out of his hole to greet his canine friend. He was quickly caught by the cat. “You’re not supposed to bark!” were the rodent’s last words. Replied the cat, licking her chops: “To get along in this life, it is necessary to know more than one language.”

bilk. *Bilk* comes from the game of cribbage, where this variant of *balk* means to defraud another player of points by sharp, sly tactics. The term was widely used by the mid 1800s in its current general sense of to cheat or defraud in a clever way.

Bill Daley. A long lead in a horse race is called a *Bill Daley* after a 19th-century American jockey instructor of that name. *Bill Daley* persistently advised his pupils that the best way to win a horse race is to take a long lead and hold on to it.

billiards. Billiards takes its name from the French word for the cue stick used in the game, a *billard*. The name of the game is first recorded in 1591 and Shakespeare mentions it in *Antony and Cleopatra* (1606): “Let it alone, let’s to billiards.”

Billies and Charlies. Collectors will still pay premium prices for genuine *Billies* and *Charlies*, even though they are fake historical objects. They are named for antique dealers William (Billy) Smith and Charles (Charlie) Eaton, who manufactured bogus medieval articles from 1847 to 1858, planting them around London and then “discovering” them in excavations.

billingsgate. Coarse and abusive language, *billingsgate* is language similar to that once used by the fishwives in the *Billingsgate* fish market along the River Thames in London. The area was named for whoever built the gate below the London Bridge leading to the old walled city. But who built *Billings Gate* is a matter of controversy. Some historians credit a Mr. *Billings* (or *Billin*, or *Belin*), a builder or famous burgher who owned property thereabouts; others suggest that *Billings Gate* was named for an ancient clan called *Billings*, or for one *Belen* (*Belinus*), a legendary monarch, citing a 1658 map that ascribes it to “*Belen*, ye 23rd British Kinge.”

billionaire. There are no British billionaires, for a billion is a million million there, whereas it is “merely” a thousand million in the U.S. The word *billionaire* was first recorded in 1861. Though stingy with his dimes, John D. Rockefeller was the world’s first known billionaire—American style. See also MIL-LIONAIRE, TRILLIONAIRE.

bill of lading; bill; check. *Lading* in this expression simply means “loading.” The *bill* part refers not to the modern meaning of bill as a statement of money owed, but to a written, formal, and sealed document. *Bill*, in fact, derived from the Latin *bullā* for seal. Today a bill of lading is “A written receipt given by a carrier for goods accepted for transportation.” None are as poetic as the old bills of lading, which ended with the prayer: “And so God bring the good ship to her desired port in safety.” Because *bill* meant an “official paper” it came to be applied to paper currency in late 16th-century England. As for the word *check* for a bank check, it originated from a bank draft with a counterfoil. The counterfoil prevented or “checked” forgeries and alterations of the drafts.

billy. The American policeman's *billy*, or nightstick, seems to have taken its name ultimately from a short crowbar once used by burglars for prying open doors and windows. The crowbar was named in about 1848 after the personal name *Billy*, though not after any specific person, and within 10 years it became the name of the club policemen wear at their sides.

billycan. Even an aboriginal language has made its contributions to English. *Billycan* or *billy* for any can in which water can be carried and boiled over a fire, derives from the Aboriginal Australian *billa*, "water." The word has limited use in England and America as well as in Australia.

billycock. See BOWLER.

Billy the Kid. One of the most fabled of American gunfighters, after William Henry McCarty (1859–81), who took the name William H. Bonney and was dubbed "Billy the Kid" for his youth and small size after he killed his first man when barely 18. He was perhaps the fastest draw in the West, and his shots often hit their mark before his gun was seen to leave his holster. He was killed by Sheriff Pat Garrett, who caught him off guard.

Billy Yank. The common term for a Union soldier during the Civil War; his Confederate counterpart was called Johnny Reb. These terms were often shortened to *Billy* and *Johnny* and were frequently lowercased. In all wars after the Civil War, up until Vietnam, American soldiers were called Yanks regardless of what section of the country they came from.

biltong. Animal lovers will not much like this South African word (from the Dutch *bil*, buttock, plus *tong*, tongue, meaning a strip of filet). In South Africa *biltong* is usually strips of air-dried and salted wild game meat. There is shark biltong, ostrich biltong, lion biltong, elephant biltong, and many other types. Elephants culled from the herds in Kruger National Park are often sold to butchers. The meat of "an elephant facing due east" when shot is said to be particularly tasty for some reason, or superstition. See JERKEY.

bimbo. This word for a loose woman who is viewed as just a sex object, was originally applied to men and used to describe a man unimportant or undistinguished. It was first recorded in this sense in 1919, 10 years before it meant a sexually promiscuous woman. No one knows its origin, but one guess is that it derives from the Italian *bimbo*, baby.

Binet-Simon tests. The first intelligence tests were developed by Alfred Binet (1857–1911), a French psychologist who directed the laboratory of psychology and physiology at the Sorbonne, in conjunction with psychologist Theodore Simon. The initial tests, later extended in age, determined the intelligence quotient of children three to 12, each subject being asked questions adapted to the intelligence of a normal child of his age. The *Binet-Simon tests* have been revised many times since their invention in 1905. Intelligence quotient, or I.Q., on such tests is merely a ratio, expressed as a percentage, of a person's mental age to his actual age, his mental age being the age for which he scores 100 percent on all the questions. The score 150

is generally accepted as genius and below 70 is classified as mental deficiency.

Bing Boys. All Canadian troops in World War I (the "war to end all wars" that preceded World War II) were called *Bing Boys* after their commander, the British Lord Byng of Vimy (1862–1935). *Bing Boys* became a household name due in large part to newspaper and magazine articles and even a stage play called *The Bing Boys Are Here*.

Bing cherry. *Bing cherries* are popular dark red, nearly black fruit of the Bigarreau or firm, crisp-fleshed group. The tree was developed in 1875 by a Chinese farmer named Bing in Oregon, where over a quarter of the United States's sweet cherry crop is grown. Other cherry varieties named after their developers include the Luelling, for the man who founded Oregon's cherry industry in 1847, the Lambert, and the Schmidt. Countless varieties honor famous people, such as the "Napoleon," the "Royal Ann," and the "Governor Wood," though none is named for George Washington. Surprisingly, sour cherries outnumber sweets two to one in the United States because they are easier to grow and are more in demand for cooking and canning. Cherries were probably first cultivated in China over 4,000 years ago, so Bing was carrying on a great ethnic tradition.

Bingley terrier. See AIREDALE TERRIER.

bingo! Nineteenth-century Christian missionaries introduced the game of bingo to inhabitants in various parts of Africa while they were enthusiastically converting people to their religion. The people associated the Christian concept of heaven, a Christian's final reward, with a player's shout of *bingo!* when he wins a game of bingo—making *bingo!* their word for heaven. *Bingo* is a corruption of *beano*, an early name for the game, and *beano* was patterned on *Keno*, another game of chance, which takes its name from the French *quine* for "five winning numbers."

bingo arms. Arms with excess cellulite. Recent slang inspired by elderly ladies waving their cards to advise that they have *bingo!*

biological warfare; bioscare. *Biological warfare*, the use of disease and famine as weapons of war, seems to have been coined by *Life* magazine in 1946. *Germ warfare* (1938) and *bacteriological warfare* (1924) are older similar terms, while *bioscare* was invented in 2001 after the World Trade Center disaster to describe the reaction of U.S. citizens to reports of terrorists using anthrax as a deadly weapon.

bird; birdie. *Bird* is one of the most common examples in English of metathesis, the transposition of letters, sounds, or syllables that sometimes occurs as a word develops. *Bird* arose from the Old English (Anglo-Saxon) *brid* meaning the same. For well over half a century, beginning in about 1849, *bird* was American slang for a person or thing of excellence ("He's a perfect bird of a man"), the expression coming into use at about the same time as the still heard use of *bird* for "fellow" or "guy" ("He's a strange old bird"). In the early 1920s, possibly at the Atlantic City Country Club in New Jersey, the popular expres-

sion attached itself to golf in the form of *birdie*, which means “one stroke under par for a hole,” an excellent performance. Since about 1880 *bird* has been British slang for a girl.

a bird in hand. This proverbial expression can be traced back in English to the early 16th century, when it is rendered as “A byrde yn hande ys better than three yn in the wode,” and probably much earlier, counting variations such as “Some bete the bush and some the byrdes take” (1440). Later, Cervantes used it in *Don Quixote* in the full form best known today: “A bird in the hand is worth two in the bush.” Actually, the proverb, which is found in German, French, Italian, and several other languages, has its direct ancestor in an ancient saying from Plutarch’s *Of Garrulity*, written in about A.D. 100: “He is a fool who lets slip a bird in the hand for a bird in the bush.” It is what Weekley calls one of those proverbial expressions “which contain the wisdom of the ages.”

bird of ill omen. Birds that appeared to the right of the augur who stood on Rome’s Capitoline Hill were considered good luck, and any bird that appeared on his left was said to indicate bad luck. It is from the ceremony of this Roman religious official and fortune-teller that we get the phrase *bird of ill omen*, which is still applied to a bearer of bad news or an unlucky person. Specific birds that have been considered unlucky over the years include the owl, which is said to screech when bad weather (and hence, sickness) is coming, the raven, and the vulture, held to indicate death, as well as the crow and the albatross under certain circumstances.

the bird of night. Another name for the owl. Shakespeare called it so in *The Tragedy of Julius Caesar* (1599): “And yesterday the bird of night did sit, Even at noon-day, upon the market place, Hooting and shrieking.”

Bird o’ Satan. A colorful name for the blue jay, especially among rural black speakers. In folklore the bird is associated with hell and Satan, perhaps in part for its thievery of bright objects.

bird’s nest soup. This most recherché of gourmet soups is definitely made from bird’s nests—notably those of swallows of the genus *Collichia*, whose nests are glutinous half-cups composed of the spawn of fish and seaweed bound together by the birds’ cementlike saliva. The swiftlings whose nests are used for the soup are mainly found on the island of Borneo, where literally millions live in great systems of limestone caves, their nests of solidified saliva stuck to the walls. The nests of the swifts are thought to be a gourmet aphrodisiac because they are the only nonhuman bird known to make love on the wing. After being collected, the nests are washed in hot water and rubbed with ground nut oil to help remove feathers and dirt. They must be soaked for two hours before they swell and become transparent for use in bird’s nest soup. When the soup cooks, the nests fall to pieces, giving the soup its characteristic viscid texture.

Bird Woman. A name given to the Shoshoni Indian woman Sacagawea (pronounced *Sa-cuh-juh-we-uh*), famous guide for the Lewis and Clark expedition in 1805.

birrellism; birreligion. The charm and unobtrusive scholarship displayed by Augustine Birrell (1850–1933) in his *Obiter Dicta* and other works led to the formation of the word *birrellism* for shrewd cursory comments on humankind and life in general. Birrell, a barrister elected to Parliament in 1889, became president of the national board of education and chief secretary for Ireland (1907–16). He is noted for Birrell’s Educational Bill of 1906 and the founding of the Roman Catholic National University of Ireland. *Birreligion* indicated the political import of his educational bill.

birthday suit. Anyone parading in his *birthday suit* is stark naked. The phrase, first recorded in 1771 but probably older, simply means that someone is wearing nothing, just what he or she wore at birth.

biscuit. *Biscuits* were cooked a second time to keep them from quickly spoiling at sea. Thus their name derives from the French *biscuit*, “cooked twice.”

to bishop. Unlike BURKE, which it resembles, the expression *to bishop* is used only historically today, although the words arose at about the same time and for essentially the same reason. *To bishop* is to murder by drowning. It is named for a Mr. Bishop, who in 1831 so murdered a little boy in Bethnal Green, England in order to sell the child’s body to surgeons for dissection, the murderer probably influenced by the earlier work of Burke and Hare.

Bismarck. The capital of North Dakota, named after German chancellor Otto von Bismarck in honor of the German bondholders who financed the railroad reaching the capital in 1873.

Bismarck herring. Often served as a cold hors d’oeuvre, this dish is salted filet of herring, pickled in vinegar, white wine, and spices. See BISMARCKIAN.

Bismarckian. Aggressive politics or diplomacy like that of German statesman Otto von Bismarck (1815–98), the leading statesman of Europe in his day. “The Iron Chancellor,” as he was called, also has the *Bismarck Sea* and *Bismarck herring* (qv) named in his honor.

bistro. When the Russians invaded Paris after Napoleon I’s fall in 1815, restaurant owners or their shills would lure them into their places by shouting the Russian word *bystro*, meaning “quick,” assuring them that they could eat quickly here at a good price. They used the word so often that it became altered to *bistro*, the common French word for any small unpretentious restaurant where cheap meals could be had, and from there *bistro* soon entered into English. But *bistro* could come from the French *bistoille*, cup of coffee. Or the word may derive from the French *bistouille*, raw spirits, for the cheap liquor served in such establishments. No one is sure.

bitch. Captain Grose defines a bitch as “A she dog, or doggess; the most offensive appellation that can be given to an English woman, even more provoking than that of *whore*, as may be gathered from the regular Billingsgate or St. Giles [woman’s] answer [on being called a bitch]: ‘I may be a whore but can’t be

a bitch.” *Bitch* has meant “a lewd woman” and been applied opprobriously to a woman since about 1400. It has been applied to a man, “less opprobriously and somewhat whimsically,” for almost as long. Fielding, for example, calling the landlord “a vast comical bitch” in *Tom Jones*. The word *bitch* derives from the Old English *bicchu*, meaning “a female dog.”

bitchbox. See MEGAPHONE.

bite moose! An unusual expression heard in British Columbia for *get out of here!, get lost!, go bite a moose!*

bite the bullet. The cartridge used in the 1850s British Enfield rifle had a paper tube, the end of which riflemen had to bite off to expose the powder to the spark. A rifleman doing this had to remain calm when reloading in the midst of a battle, giving rise to the expression *to bite the bullet*, to stand firm while under attack. Another theory, however, has the expression deriving from the bullet patients bit to alleviate pain when they were operated on without aid of an anesthetic.

bite the dust. Every time we hear of still another desperado biting the dust in western films, we are hearing an almost literal translation of a line found in Homer’s *Iliad*, written thousands of years ago. American poet William Cullen Bryant translated the words in 1870: “. . . his fellow warriors, many a one, Fall round him to the earth and bite the dust.” Earlier, Alexander Pope had eloquently translated the phrase as “bite the bloody sand” and English poet William Cowper had it, literally, as “bite the ground.” The idea remains the same in any case: a man falling dead in combat, biting the dust in his last hostile, futile act.

bite the hand that feeds one. To turn against a benefactor. British statesman and author Edmund Burke is said to be the first to record this phrase figuratively, in a 1770 speech. It obviously suggests a dog that might bite its owner’s hand.

bitin’ and gougin’. Ernest Hemingway described this vicious kind of fighting (sometimes seen in the ring today) in one of his late Michigan stories. It was often practiced by frontiersmen and mountaineers, a brutal practice in which ears, noses, and cheeks were bitten off and eyes were actually gouged out of the sockets. Harry M. Caudell wrote of it in *Night Comes to the Cumberlands* (1963): “A story is told of a mountaineer . . . attacked by a large and angry female bear. . . . The monster hugged him in her immense forepaws and undertook to bite away his face. But the mountaineer was determined to die hard. He seized the end of the bear’s nose between his sturdy teeth and plunged his thumbs deep into bruin’s eyes. With a roar the bear flung him aside and fled, leaving the tip of her nose in his mouth. The victim later proudly displayed her nose, explaining that ‘bars can’t stand bitin’ and gougin.’ Whether true or not, the tale illustrates the vital savagery which the early mountaineers perpetrated so long.”

biting remark. A remark capable of wounding, causing pain. The old story says that the tyrant Nearchos ordered Zeno (ca. 335–ca. 263 B.C.), founder of the Stoic school of philosophy, to be pounded to death by sticks in a large bowl-shaped container.

After suffering this punishment a short time, Zeno told Nearchos he had something important to say to him and when Nearchos leaned over to hear better, Zeno bit off his ear. Somehow Zeno survived and from this tale, true or false, came the proverb, “A remark more biting than Zeno’s,” which yielded the expression, *a biting remark*. The *O.E.D.*, however, only traces the word *biting* in this sense back to Chaucer’s time. Zeno is also credited by some with the old saw “The reason we have two ears and one mouth is that we may listen more and talk less.” See MORE TEMPERATE THAN ZENO.

to the bitter end. The first theory here is that death has always been regarded as the bitter end, as in the phrase from Proverbs, “Her end is bitter as wormwood.” Poetically, then, any unpleasant final result, utter defeat or death would be the bitter end. But the anchor rope on early sailing vessels was attached to a device called the *bitt*, from which the anchor and anchor rope were paid out into the sea. The portion of the anchor rope nearest the bitt was called the “bitter end.” There was no more anchor rope to be paid out after you came to the bitter end, and so you were at the end of your rope. This nautical expression has become widely known and so has at least helped to perpetuate the expression.

bitter pill to swallow; pill-pusher. Figurative bitter pills were being swallowed more than two centuries before Horace Walpole used the expression in 1779. The phrase may have been proverbial ever since apothecaries began making the round little pellet that the Romans called a *pila* (ball) and from which our word *pill* derives. Though many pills were coated with honey and spices (and later sugarcoated), some bitter ingredients could not be masked. The intensely bitter chinchona bark, which contains quinine and was used to treat malaria, is one example. (Chinchona, incidentally, was named for the Condesa Ana de Chinchon, wife of the Spanish viceroy of Peru, who was stricken with a tropical fever in 1639 and cured by chinchona bark.) Bitter pills are also responsible for the expression *an old pill* for a grouchy person, first recorded in about 1880, and *pill-pusher*, early 20th-century slang for a doctor, which has a derogatory connotation but has its roots in old, nonobjectionable British military slang for a doctor, a “pill,” that goes back to about 1860.

blab. *Blab*, first recorded by Chaucer, is supposed to be a shortening of the earlier *blabber*. *Blabber* in turn, is said to derive from *blaeberen*, an echoic word that imitates the sound of blabbering. It means, of course, CHATTER, or loose talk, or to chatter, to spill out information.

black arts. As Weekley points out, this name for conjuring or the art of divination is a mistake, no matter how apt it seems. It was translated into English directly from the Old French *nigromancie*, “divination by means of the dead.” But the Old French word itself had been formed in error from the Greco-Latin *necromantia* meaning the same, people confusing the sound-alike words *necro*, “dead,” and *niger*, “black”—and associating black with the dark, secret ways of conjuring. The Greeks and others after them believed that they could divine or foretell the future, or discover hidden knowledge in many ways besides the study of corpses, these methods ranging from the study of animal entrails to the study of water.

blackball. So infamous was the 19th-century Black Ball Steamer Line between Liverpool and New York (the pilfering of its sailors widely known on both sides of the Atlantic and second only to the cruelty of its officers) that the term *blackball* came to mean stealing or pilfering at sea. In its most common use *blackball* means to vote against, to ostracize. When voting by ballot for a candidate proposed for membership in certain social clubs in 18th-century England, club members who accepted the candidate dropped a white ball into the ballot box and those who voted against the candidate dropped in a black ball. The term *blackball* is first recorded in a 1770 letter referring to a lady shunned by polite society.

Black Bart, the PO-8. The nom de plume of Charles E. Boles, the daring robber who held up stagecoaches in the 1870s and did it alone on foot (he had no use for horses) with an unloaded shotgun (he had no use for violence). A consummate artist at his chosen work, Black Bart wasn't a bad poet, either. He wrote many poems for his victims, the following example being his rationalization for his crimes:

I've labored long and hard for bread
 For honor and for riches
 But on my corns too long you've tread
 You fine-haired Sons of Bitches.

Unfortunately, little is known of Black Bart. The man who signed his poems PO-8 appears to have disappeared after being released from jail in 1888.

Black Belt. Any southern region, especially in Alabama and Mississippi, with rich black soil and a large population of African-Americans. The term dates back to the late 19th century.

blackberry. The blackberry, a member of the rose family and named for its color, has been valued since ancient times, when the Greeks enjoyed it and believed that it prevented gout. In England blackberries are the most common fruit growing in the wild and proverbially came to represent what is plentiful because they outyield all other bramble fruits: One plant can produce up to five gallons of berries. "Plentiful as blackberries" comes to us from Shakespeare, though what he actually wrote was, "If reasons were as plenty as blackberries, I would give no man a reason upon compulsion." (Henry IV, Part I). A period of cool weather in spring, usually May or June, when blackberries are in bloom, is called a "blackberry winter," and a "blackberry summer" is a period of fine weather in late September or early October. *Blackberry baby* is a century-old American euphemism for an illegitimate child, suggesting that such children are secretly conceived in places like the distant woods where blackberries grow. In 1997, a wireless handheld device called a BlackBerry was introduced and became instantly popular. On April 2, 2008, the Canadian company that developed the device announced that subscribers had passed 14 million. See BOYSENBERRY.

Black Betsy. Probably the most famous bat in baseball was BABE RUTH's black 44-ounce bat, which he called *Black Betsy* and with which he made baseball history. No one knows for whom he named the large bat, if anyone; in fact, it may have been named *Black Betsy* by its maker, A.G. Spalding & Co.

Shoeless Joe Jackson of Black Sox shame used a bat named *Black Betsy* before Ruth did. See SAY IT AIN'T SO, JOE.

blackbirder. A blackbirder was a ship engaged in the African or Polynesian slave trade in the mid-19th century. A *blackbird* was a captive aboard these slavers and *blackbirding* was used to describe such kidnapping or slaving.

black book. None of the slang dictionaries seem to record it, but a *little black book* has for at least half a century been the name for any Casanova's address book filled with the names, addresses, and especially phone numbers of desirable or compliant companions. But *black book* has far greater historical importance as the synonym for a book containing the names of people liable to censure or punishment, the term used most frequently in the phrase *I'm in his black book*, meaning "in disfavor with someone." The first such black books were compiled by agents of Henry VIII, who listed English monasteries under the pretext that they were sinful but really in order to convince Parliament to dissolve them so that the crown could claim their lands—which Parliament did in 1536. Later, the British universities, the army, and the police began the practice of listing censured people in *black books*, which reinforced the meaning of the term.

black bottom. Originally a low-lying section of a town inhabited solely by blacks. The dance called the black bottom, which originated among blacks in the South, is not named for this geographical description. *The New Yorker* (October 7, 1926) said the hip-moving dance "was constructed to simulate the movements of a cow mired in black bottom river mud."

Blackburnian warbler. A North American bird with an orange throat and an orange-and-black head. Despite its origins, the warbler was named in about 1775 after Mrs. Hugo Blackburn, a British birdwatcher.

black Christmas. A Christmas or Christmas season without any snow. "It was a black Christmas last year. It usually takes a white Christmas for a good crop year."

Black Daniel; Ichabod. His black hair and black eyes suggested the nickname *Black Daniel* for the great American statesman, orator, and folk hero Daniel Webster (1782–1852). The name is noted in Stephen Vincent Benét's story "The Devil and Daniel Webster" (1937), which was made into a film. The nickname *Ichabod* was bestowed upon Webster by John Greenleaf Whittier in his poem "Ichabod" (1850), which expresses the Abolitionists' great disappointment with Webster's support of the Compromise of 1850. *Ichabod* means "inglorious" in Hebrew, and Whittier later apologized for the description, praising Webster's noble qualities. See GODLIKE DANIEL.

Black Death; bubonic plague. The bubonic plague that started in Constantinople (now Istanbul) and devastated Europe from 1347–51, killing from one-quarter to three-quarters of the population, was called the Black Death because the bodies of plague victims rapidly turned black after death. Over 25 million died of the Black Death, far more than in the 1665 plague of London that Defoe described in his *Journal of the Plague Year* and Samuel

Pepys in his *Diary*. Bubonic plague is carried by rat fleas that have become infected by biting diseased rats (and certain squirrels on the West Coast of the U.S.). It is so named because the rod-shaped bacterium, *Pasturella pestis*, responsible for it causes swellings (buboes) of the glands in the groin or armpit.

black dog. Someone with a case of the *black dog* is suffering from despondency, melancholy, or depression. British statesman Winston Churchill wrote that he was one of the many who have suffered from the condition. Long before him, Dr. Johnson used the words to describe his bouts with the blues. Perhaps the term derives from the old Roman superstition that a black dog with pups is an unlucky omen. Or it may be that its origins can be found in another version of the term that the *OED* says was used in some country places: “*The black dog is on his back.*” Robert Louis Stevenson called this last “a terrifying nursery metaphor.” The expression is first recorded in about 1700. *See also* BLACK MONEY.

black eye; a black-eyed beauty. *Black eye* has had two meanings for over three centuries. In one sense it is a mark of beauty, an eye in which the iris is very dark and lustrous—hence our expression *a black-eyed beauty*. In another sense a black eye is of course a discoloration of the flesh around the eye from a blow or contusion. Both expressions were coined toward the beginning of the 17th century.

black-eyed peas. So named for their black hilum, black-eyed peas (*Vigna sinensis*) are simply a variety of cowpeas that originated in India thousands of years ago (though the name “cow-pea” originated in colonial America). George Washington grew these peas, which are actually botanically closer to the bean than the pea family. They are often cooked southern style: stewed with a bit of ham or pork fat. Black-eyed peas go by many names in the South, including “crowders,” “black bean,” “black-eyed bean,” “black-eyed susan,” “bung belly,” “China bean,” “cow bean,” “cream pea” and even “chain-gang pea” because they are said to be fed to prisoners on chain gangs. *See* PEA.

Black Friday, etc. The first Black Friday in the British financial world fell on May 10, 1886, when certain brokers suspended payments and a widespread panic ensued. America’s first Black Friday also came in 1886, when Jay Gould and Jim Fisk tried to bribe public officials in an attempt to corner the gold market; their manipulation failed when the government released gold for sale, but it ruined thousands of investors. With the Panic of 1929, the beginning of America’s Great Depression, came Black Wednesday (October 23) when stocks began falling; Black Thursday (October 24), the day the bottom dropped out of the market; and Black Tuesday (October 29), when over 16 million shares were traded. Black Monday was Easter Monday in 1360, a terrible day for the English armies in France, while Black Saturday refers to August 4, 1671, when there was a violent storm in Scotland. History seems to record no Black Sunday. *Black Friday* today usually means the Friday after Thanksgiving, marking the beginning of the Christmas season, when manufacturers and retailers often see their books go from in the red to in the black, giving them a profit for the year. However, the Saturday before Christmas is generally the most profitable day of the year for U.S. retailers.

black frost. Long a name for a severe frost that kills plants, sometimes turning them black or blackish; a *killing frost*, as opposed to a slight or light frost. The average time of the first *black frost* depends primarily upon the area of the country, and some U.S. areas (such as Key West, Florida) have no *black frosts*. A black frost marks the end of the growing season.

black goods; white goods. *Black goods* is a term rarely if ever heard anymore. Back almost a century ago department stores often carried a complete line of coffins and black goods, the contemporary euphemism for the mourning clothes of black crepe worn by members of a bereaved family. *White goods* in retail parlance can mean anything from bedsheets to large appliances.

blackguard. The modern meaning of *blackguard*, a low, contemptible person, may derive from the characteristics of medieval kitchen servants, who were humorously called *blackguards* in allusion to their filthy appearance and the black pots and pans that they guarded when the household retinue moved from place to place. These kitchen workers surely weren’t always “rough and worthless knaves,” as one source has it, so the theory, accepted by most etymologists, isn’t entirely convincing. Perhaps the word really derives from some actual band of soldiers who wore black uniforms and whose vicious crimes are lost to history—unlike those of the contemporary BLACKSHIRTS.

Black Hand. The late 19th-century and 20th-century precursor of the American Mafia. The *Black Hand*, Neopolitan in origin, embraced all crimes but specialized in extortion. Many letters sent to their victims had the imprint of a black hand upon them. *Black Hand* was also the name of the Slav secret society that planned the 1914 assassination of Archduke Franz Ferdinand, which led to World War I.

black hole. The infamous Black Hole of Calcutta gives its name to any black hole or cell in a prison where prisoners are confined as a punishment. The original black hole in this sense was the 18- by 14-foot room into which the French-supported Nawab of Bengal, Siraj Uddaula, thrust 146 British prisoners on the terribly hot night of June 20, 1756. The only ventilation in the room was two small air holes, and by the next morning 123 of the men had died. Robert Clive retook Calcutta the following year and avenged the atrocity, but the story of the Black Hole was never forgotten. Several Indian writers have claimed it was a British hoax, perpetrated to rouse patriotic sentiments, but three witnesses testified to the story and none of the 23 survivors ever denied it. In 1967 Princeton physicist John Wheeler used the term to describe “an object whose gravity is so powerful that it swallows everything around it—even light.” Today *black hole* is part of everyday language, used to describe the economy, the deficit, the post office, etc.

black humor. Humor that regards suffering as absurd, not pitiable, or that regards existence as ironically pointless yet comic. The expression was first recorded in 1963, though such humor has always been around; it is said to have been coined by American author Bruce Jay Friedman. Wrote Friedman in

Newsday (1/1/96) regarding the coinage: “I don’t really know if I invented it, or if a publisher came to me and said, ‘How about doing an anthology and calling it *Black Humor*?’ What I do remember is, they were going to pay me for a chance to read writers like Barthelme, Heller and Pynchon, so it was a terrific deal. Then I had to write an introduction (to *Black Humor*, 1963), so I slapped together some justification for the collection: the stories had a certain edge to them—they often connected with social issues in very bold colors—whatever. The next thing I know, black humor is being taught in college courses and becomes imprinted in the language.”

black ice. A term used in many U.S. places meaning both (1) smooth ice with a dark appearance that forms on ponds and lakes and (2) the dangerous, thin, transparent layer of ice that forms on black road surfaces, making it appear as if the road is ice-free.

black is beautiful. It has been suggested that this slogan of pride for black Americans since the late 1960s may derive from the Song of Solomon in the Old Testament: “I am black but beautiful.” But the “but” in the song casts doubt upon such a derivation.

Black Jack Pershing. Among the most famous generals of World War I, John J. Pershing (1860–1948) was widely called by the nickname Black Jack. The American general who commanded the American Expeditionary Force in Europe and later became chief of staff wasn’t so named for his black hair and dark complexion (as was General John A. Logan [1826–86] during the Civil War), or because he liked to play the card game black jack. Pershing was called Black Jack because he commanded the Tenth U.S. Cavalry, the renowned black regiment that distinguished itself in the Spanish-American War.

blacklist; white list. The blacklist is centuries old, having originated with a list England’s Charles II made of 58 judges and court officers who sentenced his father, Charles I, to death in 1649. When Charles II was restored to the throne in 1660, 13 of these regicides were executed and 25 sentenced to life imprisonment, while the others escaped. The white list is not quite the opposite of a blacklist, usually being a list, often kept by unions, of people suitable for employment.

black magic; voodoo. Black magic doesn’t divine the future as the black arts do; it is rather the casting of magic spells for an evil purpose. *Black magic* is a synonym for *voodoo*, which is found in its purest forms today in the villages of Haiti, where it was encouraged and practiced by the former Haitian dictator “Papa Doc” Duvalier. *Voodoo* was brought to the New World by African slaves as early as the 1600s, and some authorities believe the word derives from the West African *vodun*, a form of the Ashanti *obosum*, “a guardian spirit or fetish.” Others say that *voodoo* takes its name from the Waldensians, followers of Peter Waldo or Valdo (d. 1217), who were accused of sorcery and given the name *Vaudois* by the French. French missionaries later remembered these “heretics” when they encountered the witch doctors who preached black magic in the West Indies, this story says. They called the native witch doctors *Vau-*

dois and the name was soon applied to any witchcraft similar to the magic spells they cast, *Vaudois* being eventually corrupted to *voodoo*. Americans further corrupted *voodoo* to “hoodoo,” but use the word in a playful sense.

blackmail. Sixteenth-century Scottish farmers paid their rent, or mail, to English absentee landlords in the form of white mail, silver money, or black mail, rent in the form of produce or livestock. The term black mail took on a bad connotation only when greedy landlords forced cashless tenants to pay much more in goods than they would have paid in silver. Later, when freebooters along the border demanded payment for free passage and “protection,” the poor farmers called this illegal extortion blackmail, too.

Black Maria. Maria Lee, an imposing black woman, became a national heroine in 1798 when she delivered swivel guns to outfit the little cutters Alexander Hamilton had ordered built to protect American merchant ships on the high seas. Maria was just as reliable when she opened her boardinghouse for sailors in the early 1800s; her place was the cleanest and her guests the best-mannered on the Boston waterfront because even hardened criminals feared her awesome strength. The giant woman aided the police so often that the saying “send for the Black Maria” became common whenever there was trouble with an offender. Fiery Maria sometimes helped escort prisoners to jail, and when the first British police horse vans or paddy wagons were introduced in 1838 they may have been christened Black Marias in her honor. But this tradition has skimpy evidence to support it. Critics point out that the first van was black and that *Maria* (which is pronounced *mar-eye-ah*) could have come from numerous sources.

black money; black dog. In the early 18th century, counterfeit coins were commonly made of double-washed pewter and looked black or dirty. They were therefore called *black money* or *black dogs*, as readers of historical romances know.

blackout. In the sense of turning off or concealing lights before an enemy air raid, *blackout* dates back to the London BLITZ at the start of World War II. The term was used before this to mean the extinguishing of all stage lights to signal the end of a scene in a play, to indicate the passing of time, or to mark the end of a vaudeville skit.

black power. No one is sure of the origins of this slogan urging or demanding political and economic power for African-Americans. CORE, the Congress of Racial Equality, used it as a slogan in the 1960s but it was not new at the time. In his *Simple Takes a Wife* (1953) poet and novelist Langston Hughes wrote: “Black is powerful,” which may be the source for the term.

black rat. The *black rat* (*Rattus, rattus, rattas*), also known as the *roof rat* and *Alexander rat*, is smaller than its *Norway rat* (qv) cousins. It is, however, the rat species that for the most part spreads bubonic plague to humans. Except for the lack of a bushy tail it resembles a squirrel much more than its shaggy brown relative and, with its long tail balancing, it can climb or leap with nearly as much agility as a squirrel.

Black Republican. Long an insulting nickname for a Republican in the South, the term was first used to describe a Republican favoring emancipation of the slaves. It came to be applied to any Republican and is still occasionally heard.

Black Robe. A historical name given to Jesuit missionaries working among Indians in the West, the name originating with the Indians themselves and referring to the robes the Jesuits wore. They were also called Black Gowns.

Black Sea. The ancient Greeks never gave a derogatory name to any natural force, good or bad. So they named what we know as the *Black Sea*, the Euxine or “the Hospitable,” even though it was noted for its storms and rocky shores. The Turks later named it the *Black Sea* because they were terrified of its dangers and large stretches of open water.

black sheep. Black sheep were once thought to bear the devil’s mark in their wool. The superstition arose in days when dyestuffs were so ineffective and expensive that it wasn’t practical to dye the wool of black sheep. Since black sheep were biological rarities, there weren’t enough of them to market black wool, and the animals were regarded as practically worthless. Generations of farmers cursing their bad luck for having black sheep in their flocks evolved the term *black sheep*, for any disgrace in a family or community. Wild sheep are usually brownish, and American mountain men called the buff wool of the bighorn (*Ovis canadensis*) its “long underwear.”

Blackshirts. These were first members of the Italian fascist militia, who wore black shirts and were imitated in England and other countries by fascists who wore similar uniforms. The term became much better known as the popular nickname of the elite military unit of the German Nazi party, officially called the *Schutzstaffel* (protection staff), or SS Corps. As its German name implies, the black-shirted SS served as a special protection unit and Hitler’s bodyguard. See BROWNSHIRT.

black-shoe navy. Rear Admiral Edgar Keats, USN (ret.), kindly provides the true origin of this controversial term. “During the 1920s and 30s,” Admiral Keats writes, “naval aviators were permitted to wear green cloth uniforms in cold weather and lightweight khaki working uniforms during warm weather, in addition to service dress blue and white. Non-aviators did not have that option. When World War II approached it became apparent that battles could not be won in the tropics by officers constrained to heavy blues or impractical whites, so khaki, but not green, uniforms were made available to all officers. The khaki uniform was changed somewhat with stripes being removed from sleeves and the shoulder boards of whites being substituted. Above all, and fatefully, the orders from Naval Headquarters gave officers the option of continuing to wear the black shoes they had previously worn with the blue uniforms. Aviators, without exception, continued with their brown shoes, but many senior surface ship officers, flag and ship commanders, decreed that in their commands only black shoes would be worn. Thus junior and mid-grade officers on surface ships had no choice but to wear black shoes. In the early years there was hardly a ripple of controver-

sy, but as time wore on the words “brown shoe” came to be used as a substitute for “naval aviator” and “black shoe” came to be a designation for an officer who was not a naval aviator. Some, but not all, may have used the words as epithets, probably because of surface officers’ jealousy of the increased pay of aviators. Another explanation may be naval aviators looking down on those not qualified to fly airplanes. The words have over time become identifiers of an intramural split within the naval establishment that, until recently, has had adverse consequences for the overall navy. Had there been far-sighted leadership in the navy in the early years of the war either brown or black shoes would have been ordered for all officers and, with uniforms being truly uniform, these unfortunate words would never have gained currency.”

blacksmith. A smith is a craftsman who shapes any metal by hammering, and a blacksmith takes his name from the iron or black-colored metal he works with, not from the soot that gets on his clothes and skin while he works over a fire. His opposite is called a whitesmith, or tinsmith, one who works with tin or white metal. The *Harmonious Blacksmith* is the popular name of a musical composition by Handel; it wasn’t really suggested to him by a smithy hammering at his forge.

black widow spider. The little jet-black American spider *Latrodectus mactans* is called a widow because it eats its mate. Spiders, however, are often cannibalistic. Generally, spider venom causes no harm to humans, but the venom of the black widow spider causes pain and can be fatal. A black widow can be identified by a red mark shaped like an hourglass on its underside. See THE FEMALE OF THE SPECIES; SPIDER.

Blade Runnerization. Science-fiction writer Philip Dick’s novel *Do Androids Dream of Electric Sheep?* was made into the classic movie *Blade Runner*. According to an article in the *New York Times* by Brent Staples, “His film struck a number of chords in the real world, its vision of the polyglot, environmentally ruined Los Angeles spawned the phrase ‘Blade Runnerization’ among urban planners who recognized it as a frighteningly likely vision of things to come.”

blame and shame. An important phrase in American history. As one of the judges who tried the Salem witchcraft trials in 1632, Samuel Sewall, a very humane person, publicly accepted “the blame and shame” for all of them when he discovered the error of his ways (19 people wrongly found guilty of witchcraft). Thereafter, he annually spent a day of fasting and prayer.

blame game. An expression said to be coined by President Ronald Reagan in a speech given on October 14, 1982: “The pounding economic hangover America is suffering from didn’t come about overnight, and there’s no single, instant cure. In recent weeks, a lot of people have been playing what I call the ‘blame game.’”

blanco. An Indian name for white men in the Southwest; from the Spanish *blanco* (white). “He rarely wound the watch . . . because he knew where the sun stood and when the moon rose, unlike the puzzling *blancos*.”

a blank check. A *blank check* is one signed by the payer, leaving the amount to be filled in by the payee. When someone receives a blank check in any situation, he or she has been given absolute control, but Weekley quotes British prime minister David Lloyd George on the term (November 1918): “To talk about a blank cheque is blank nonsense.”

blanket. There may have been a Thomas Blanket of Bristol, England who made blankets, setting up “the first loom for their manufacture in 1340.” But the word *blanket* comes from the Old French *blankete*, originally a “white wool cloth used for clothing” but meaning the blanket we know today by the mid-14th century. This is not to say that a Thomas Blanket couldn’t have adopted the name *blanket* for his product and popularized the word. See WET BLANKET.

blanket Indian. A derogatory term commonly used in the 19th century for an Indian thought to be docile and of a low cultural level because he or she wore a blanket instead of dressing like white people. To *wear the blanket* meant that an Indian was “half-civilized.”

Blanket Mountain. In order to have a plain target for his compass, 19th-century surveyor Return J. Meigs hung a bright-hued blanket on a 4,609-foot mountain in the Great Smokies range. The mountain, at Elkmont, was soon dubbed *Blanket Mountain*, a name it still holds today.

blanket tossing. See TOSS IN A BLANKET.

blankety-blank. An expression some 150 years old that is still heard as a euphemism though the practice that suggested it is fast fading. *Blankety-blank* (as in “You blankety-blank S.O.B.!”) derives from the use of printed blank spaces (dashes) to represent what are considered profane words, such as *d—* for *damn*.

blarney. Built by Cormac McCarthy in 1446 and named for a nearby village only a few miles north of Cork, Ireland, Blarney Castle was put under siege by the British in 1602. The story goes that McCarthy Mor, descendant of its builder, refused to surrender the fortress to Queen Elizabeth’s Lord President of Munster, Sir George Carew. All Carew got from McCarthy for months were promises that he would eventually surrender. This smooth talk became a joking matter, making Carew the laughingstock of Elizabeth’s ministers and *blarney* a byword for cajolery, flattering or wheedling talk. There is today, about 20 feet from the top of the castle wall, a stone inscribed “Cormac McCarthy *fortis me fieri fecit, A.D. 1446*,” which may have been set there to commemorate the verbal defeat of the English by the Irish. This triangular stone is difficult to reach and the legend grew in the 17th century that if you could scale the wall and kiss the blarney stone you would be blessed with all the eloquent persuasive powers of McCarthy Mor, that is, you’d be able to lie with a straight face. The blarney stone that people kiss today is a bit of *blarney* itself—a substitute provided to make things easier for tourists.

blaspheme. To speak impiously or irreverently of sacred things. The word came into English in about 1300, ultimately

from the Greek *blasphemos*, blasphemous. It also means to speak evil of, slander, or abuse. The Greeks took blasphemy seriously, to say the least. The Greek author Lucian, “The Blasphemer,” is said to have been ripped to pieces by a pack of mad dogs for his impiety.

blast from the past. Early in the 1960s disc jockey Murray the K (Kaufman) made this phrase popular as his way of introducing a great old song. The expression is now used to describe someone or something that appears from one’s past out of the blue, as in “Wow! Seeing him was a blast from the past!”

blazer. The jacket called the blazer may take its name from the “somewhat striking blue-and-white-striped jerseys” that the captain of Britain’s H.M.S. *Blazer* ordered his crew to wear in the 19th century. But others say the jackets were called blazers because they were the “brightest possible blazing scarlet.” According to this theory the jackets were first worn by the crew of the *Lady Margaret*, St. John’s College, Cambridge, Boat Club in 1889.

blazing star. A stampede. As described in *Munsey’s Magazine* (25, 1901): “The herd . . . burst like a bombshell into the most dangerous of plains mishaps—a ‘blazing star.’ The solid herd streamed suddenly in all directions, scattered in knots and bunches, and twos and threes, and vanished into the storm and darkness.”

blazing ubiquities! See GLITTERING GENERALITIES.

bleachers. When you sit in the open outfield seats of a baseball stadium on a hot day, the sun seems strong enough to bleach your shirt. That is the humorous idea behind the coining of the word *bleachers* for all such seats in a stadium, the term first recorded in the early 1880s.

bleed white. See PAY THROUGH THE NOSE.

blenker. An eponymous verb remembering Union general Louis Blenker (1812–63) that first meant the wholesale theft of civilian property by the military and then came to mean any theft at all. General Blenker’s troops, having insufficient rations, raided civilian farms in the Shenandoah Valley in April 1862, the division’s plundering inspiring a Northern song that went: “His knapsack with chickens was swelling; / He’d Blenkered those dainties, and thought it no wrong . . .”

bless. As unlikely as it seems, our word *bless* derives from the Old English *blod*, blood. *Blod* yielded the Old English verb *bledsian*, which meant “to make sacred or holy with blood,” as when sacrificial blood of animals was used in religious ceremonies. *Bledsian* became *blessen* in Middle English and by Shakespeare’s time had become *bless*.

bless the meat and damn the skin. Part of an old American grace said before a meal: “Bless the meat an’ damn the skin, / Throw back your ‘eads an’ all pitch in.”

Blighia Sapida. See CAPTAIN BLIGH.

blimp. The word wasn't coined, as Mencken's story goes, by two Britishers while they were having "blunch" (or brunch, as it is called in America) at an airport. Nor was the nonrigid dirigible airship so named by its manufacturer, the Goodyear Company in the early years of World War I. It is often reported that Goodyear's first model, the "A limp" (nonrigid), hadn't worked and that their second model, the "B limp," succeeded and kept its name, but Goodyear has denied that they or anyone else had airships with "limp" or type "B" designations. This leaves us with the possibility that the word is an onomatopoeic one, possibly coined by a Lt. Cunningham of the British Royal Navy Air Service in 1915. Cunningham, according to this story, flicked his thumb at one of the airships while on an inspection tour and "an odd noise echoed off the taut fabric. . . . [He] orally imitated the sound his thumb had drummed out of the airship bag: 'Blimp!' Those nearby saw and heard this unusual interlude in the inspection, and its account quickly spread."

blind as a one-eyed mule in a root cellar. Unable to see or to understand, completely blind to sight or reason. The American expression is probably from the mid-19th century.

blind eye. See TURN A BLIND EYE.

blind leading the blind. This phrase describing the ignorance of both leaders and followers is biblical in origin, from Matt. 15:14, where Jesus says of the Pharisees: "They be blind leaders of the blind. And if the blind lead the blind, both shall fall into the ditch."

blindman's buff. This old children's game is sometimes called "blindman's bluff," which makes no sense at all. *Blindman's buff* is actually right, the *buff* coming from the buff, or slap on the backside, other players would give the blindfolded player when he tried to grab them to make somebody else the "blindman."

blind pig; blind tiger. No doubt these names for "speakeasies serving illegal liquor during Prohibition" owe much of their popularity to the fact that people believed the rotgut served therein would get you blind drunk. The names, however, may have more interesting origins. *Blind pig* is traditionally said to derive from the nickname of a band of soldiers called the Public Guard serving in Richmond, Virginia, in about 1858. Their militia hats had the initials P.G. on them, the sobriquet arising because "P.G. is a pig without an *i*, and a pig without an *eye* is a blind pig." One would have to assume that the soldiers were much disliked and were drunk a lot of the time—and the saloons they drank in named after them—to accept this theory, which has law officers being called "pigs" long before the sixties, as indeed they were. The theory seems all the more unlikely when it is known that *blind pig* is recorded as early as 1840, 18 years before the Richmond Public Guard was formed. *Blind tiger* (1857) possibly takes its name from the saloons in faro gambling establishments a century ago, the game of faro commonly known as "tiger." But it is just as good a guess to say that both names were suggested because cheap whiskey got people *blind drunk*.

blindside. For centuries *blind side* has meant the obscured part of one's field of vision. In the early 1970s, the word became

a verb in professional football meaning to tackle or block an opponent from the blind side. Soon the verb was taken up generally to describe an attack on anyone who is unprepared or taken by surprise.

Blind Tom. Baseball fans began calling umpires Blind Toms at about the turn of the century and the expression is still occasionally heard for the boys in blue. One theory has the often affectionate term originating with Old Blind Tom, a popular black musician in the post-Civil War era.

bling bling. A new word meaning flashy jewelry.

blintz. Another delicious ethnic food that has become popular nationwide, thanks largely to its appearance in the frozen food sections of supermarkets. Ultimately *blintz* comes from the Ukrainian *blints*, "pancake," which became the Yiddish *blintzeh* and was then shortened to *blintz*. A blintz in Jewish cookery is a thin pancake folded or rolled around a filling of cheese, potatoes, fruit, etc., fried or baked, and often served with sour cream. The word is also spelled *blintze*.

blister. Everything has a name if you look hard enough. If you've ever wondered what those delicious bubbles commonly seen on baked pizza dough, or in the cheese on pizza itself, are called, your wondering is over. Proud pizza makers, or pizzamen as they like to call themselves, advise me that in New York, among other areas, they are known as *blisters*. I have found no printed use of the word.

the Blitz. Short for *Blitzkrieg* (literally "lightning war"), specifically the German Luftwaffe's bombing raids on London and other British cities between September 1940 and May 1941 that attempted to terrorize England into surrender. According to the *New York Times* (Oct. 7, 2000), more than 40,000 civilians, 5,000 children among them, were killed in these World War II air raids, in what was also known, in Winston Churchill's words, as the Battle of Britain. The word *blitz* is also a verb meaning to bomb or to destroy.

blizzard. In its meaning of a severe snowstorm *blizzard* seems to be an Americanism dating back to about 1835. Its direct ancestor is probably the English dialect word *blisser*, meaning the same, but could be the German *blitz*, "lightning, flash." Before *blizzard* meant a storm in America it meant a violent blow of the fist or a crushing remark.

blockbuster. The powerful high-explosive bomb called a blockbuster dates back to the beginning of World War II, when the bombs and word seem to have been invented by U.S. ordnance. It was applied to anything big or powerful. In the early 1950s a *blockbuster* came to mean any real estate agent who convinced whites to sell their homes by creating fears that blacks were moving into their block or area. Like the bomb, they bust up blocks. An alternate meaning is anything or anyone who is successful, effective, extravagant, etc. See MOAB.

blockhead. Since the 14th century, when hats began to replace hoods as the most popular headwear, head-shaped blocks of oak have been standard equipment in the shops of hatmak-

ers. By the time of Henry VIII these *blockheads*, used to shape hats and wigs, had already been compared to simpletons, stupid people whose heads contain no more brains than a block of wood. “Your wit will not so soon out as another man’s will,” Shakespeare wrote in *Coriolanus*, “’tis strongly wedged up in a blockhead.”

block of stock. People have been buying *blocks* of stock, a large number of shares in a company, on the stock market since the late 19th century. In fact, a humorous anonymous poem about a block of stock appeared in Carolyn Wells’s *A Whimsey Anthology* (1906):

He bought a little block of stock
The day he went to town;
And in the nature of such things,
That
Stock
Went
Right
Straight
Down!

blog. This term, referring to a kind of Internet diary, is a shortened form of the phrase *web log*. *Bloggers*, the people who publish such logs, have been described as “self-styled social commentators who blend reportage, opinion and personal views on Internet postings.” Apparently there is no connection with *Joe Bloggs*, a British name for “a hypothetical average man.”

bloke. Word origins can be lost very quickly. *Bloke*, for a “man,” “chap,” or “guy” (in America) entered the language only in 1839 or so, but no one has been able to establish its ancestors. Suggestions are that it came from the Hindustani *loke* for “man,” introduced by the Gypsies into England; that it derives from an old Irish tinker’s cry; and that it is from the Dutch *blok*, for “fool.” The Celtic *ploc*, “a large, bull-headed person,” reinforced by *plocach*, “a strong, coarse person,” has its supporters, too. However, the evidence doesn’t prove any of these theories. *Bloke* has been in fairly common humorous usage in America since late in the 19th century, as in “he’s a nice bloke.”

Blondenfreude. A recent front-page story in the *New York Times* (5/23/02) about a prominent personality claims that “*Blondenfreude*, the glee felt when a rich, powerful, and fair-haired business woman stumbles, is the guilty pleasure of the age.” This is the earliest mention I can find of the word, which is clearly patterned on the German *SCHADENFREUDE*. Perhaps it was coined by the article’s authors, Alessandra Stanley and Constance L. Hays.

Blondin. Blondin was the stage name of one of the greatest tightrope walkers of all time, the Frenchman Jean François Gravelet (1824–97). The Inimitable Blondin, whose name became a synonym for a star acrobat or tightrope walker, began his career at a mere five years of age and performed many great feats thereafter. The first man to cross Niagara Falls on a tightrope, on June 30, 1859, he later made the crossing while pushing a wheelbarrow, twirling an umbrella, and with another man

on his back. The rope was 1,100 feet long, only three inches thick, and was suspended 160 feet above the falls. *Blondin* is still used occasionally to describe an accomplished acrobat or nimble person.

blood diamonds. This recent term has nothing to do with the color of diamonds. It refers to the diamonds of Africa, which rebels of various countries fight for and use to finance their operations, much blood being spilled in wars over the gems.

bloodhound. The breed of dog called the *bloodhound* was known in Italy as early as the third century. This dog’s name has nothing to do with its following the blood trail of an animal or person. The bloodhound was so named because it was one of the first of the “blooded,” or purebred, breeds. Its main modern use, however, is in trailing criminals or finding lost persons. See *HOUND*.

the bloodiest battle of World War I. See *THEY SHALL NOT PASS!*

blood is a big expense. Another saying from the movie *The Godfather* (1972). This time a rival gangster proposes a truce. “I don’t like violence, Tom,” he explains. “I’m a businessman. Blood is a big expense.”

blood is thicker than water. This was the reply of U.S. commodore Josiah Tattnall on the Peiho River, China, in 1859, when he went to the aid of the British against the Chinese and was told this step would violate U.S. neutrality. But Tattnall didn’t invent the phrase, which is recorded in German as far back as the 12th century. Tattnall was referring, of course, to the close ties between the Americans and British. It is interesting to note that blood has a specific gravity of 1.06—only slightly thicker than water, which has a specific gravity of 1.00!

the Bloodless War. See *TO HAVE THE LUCK OF HIRAM SMITH*.

blood money. The expression can mean money paid to a hired killer; money obtained ruthlessly from someone; money paid to an informer; money earned at the cost of another’s life; and even money paid to the family of a slain person. It is an old term for old practices, the words appearing in the 1535 Coverdale Bible (Matt. 27).

blood, toil, tears, and sweat. The first time Winston Churchill used these famous words was in a speech before the House of Commons on May 13, 1940, when he became prime minister. The words are sometimes shortened to *blood, sweat, and tears*, and the speech itself is of course much longer.

bloody. Partridge’s *Word, Words, Words!* has a 2,000-word essay on *bloody*, which has been an objectionable adjective in Britain since the early 1800s, though it had been respectable enough for a century before. Meaning “very,” it may have become objectionable because it suggested menstruation, or suggested the profanity “Byr Lady”—many plausible and

implausible suggestions have been made. But Partridge believed that “the idea of blood suffices” to explain the squeamishness. *Bloody* is often inserted for emphasis within words, as in *abso-bloody-lutely*.

bloody back. A contemptuous name Americans gave the British red-coats during the Revolutionary War. A newspaper of the day recorded the taunts of one group: “The Mob still increased, and were outrageous . . . calling out ‘Come, you Rascals, you bloody Backs, you Lobster Scoundrels; fire if you dare!’”

bloody hand of Ulster. See RED (BLOODY) HAND OF ULSTER.

Bloody Mary. It is said, without much proof being offered, that this cocktail made from vodka and tomato juice takes its name from Mary I or Mary Tudor (1516–58), queen of England, who was nicknamed Bloody Mary. Not because she drank the concoctions (for one thing tomatoes were unknown in England at the time), but because she had some 300 of her subjects put to death during her reign, including a former queen and the archbishop of Canterbury. Another story claims that the potent drink was invented at the famous Harry’s Bar in Paris in 1920 and named by an anonymous American expatriate who proposed that it be called the Bloody Mary because it reminded him of the Bucket of Blood Club in Chicago and he had a girl named Mary. The drink has since become famous as a hangover “remedy,” the foremost example of the hair-of-the-dog-that-bit-you school. According to an article in *USA Today* on December 10, 1985, “The Bloody Mary made its debut in an ad that appeared in late December 1955. In it [New York entertainer] George Jessel declared that he invented the drink at 5 one morning.” Bloody Mary is also the name of a character in James Michener’s *Tales of the South Pacific* (1946).

book. A *book* is a book written by a *blogger* (qv). According to *U.S. News & World Report* (March 13, 2006), “There aren’t any *book stores* yet. Nor is there a *New York Review of Books*. But the *book* . . . is a growing presence in the publishing biz . . .”

bloomers. Bloomers take their name from early feminist Amelia Jenks Bloomer (1818–94), who did not invent them as is often stated. Bloomers were originally billowing Turkish pantaloons, bound with elastic around the ankles and covered by a short skirt and loose-fitting tunic, a kind of pants suit of the 19th century. They were designed and first worn in 1850 by Mrs. Elizabeth Smith Miller, daughter of the wealthy abolitionist, Gerrit Smith, but Mrs. Bloomer defended the masculine pantaloons with the same vehemence as their detractors and it is her name that they immortalize. Editor of *The Lily*, the house organ of a temperance society, Mrs. Bloomer was an ardent feminist who demanded that the word “obey” be omitted from the marriage vows when she wed. She wore Mrs. Miller’s new costume on lecture platforms across the country, insisting that fashionable hoopskirts were both cumbersome and unsanitary, picking up dust and mud on the then largely unpaved American streets. When preachers banned women wearing bloomers from church, threatening excommunication and pointing out

that the Bible forbids a woman donning anything that pertains to a man (Deut. 22:5), she reminded her religious critics that Genesis made no distinction between the fig leaves of Adam and Eve. Mrs. Bloomer even inspired a troop of Bloomer Girls to sail to England, where they were generally met with laughter or indignation. Her proselytizing, coupled with the fact that the pantaloons “bloomed out” so, made the appellation *bloomers* stick in the public mind.

Bloomsbury group. This literary term has nothing to do with James Joyce’s Leopold Bloom or a country place where flowers profusely bloom. The term Bloomsbury group referred to a coterie of writers, and artists who resided in London’s Bloomsbury district in the first few decades of the 20th century. Their ranks included Virginia and Leonard Woolf, Lytton Strachey, John Maynard Keynes, E. M. Forster, Clive Bell, Roger Fry, and Duncan Grant. While not constituting a “school,” they strongly influenced literature and art criticism.

Bloomsday. Bloomsday, originated by James Joyce-o-phile and bookstore owner Enrico Adelman, celebrates each year the June 16, 1904, day of Leopold Bloom’s odyssey through Dublin in Joyce’s *Ulysses*. A marathon public reading by actors is held at Mr. Adelman’s New York bookstore every Bloomsday and lasts from 8:00 A.M. until Molly Bloom says, “yes I said yes I will Yes” some 40 hours later.

blooper. *Blooper* has meant a clumsy mistake or blunder, a faux pas, since 1925, and has meant a puny hit in baseball since about the same time. No one is sure which usage came first. *Blooper* for a long, looping punch in boxing is also a contender. One dictionary says the word *blooper* was originally in reference to “a radio receiver that emits bloopers,” while another claims it is “from the high-pitched sound of interference in a radio signal and from the sound made by hitting a ball weakly.”

blossom; flower. In Anglo-Saxon times the word for flower was *blossom*, this changing after the Normans conquered England in 1066 and their *fleur* became the English *flower*. However, both words have the same common ancestor—the ancient Indo-European *blo*, which eventually yielded both *blossom* and *flower*. The Old English verb *blow*, to bloom, is still alive and well today in the compound forms *full-blown* (full flowered) and *over-blown* (faded and wilted), past the prime.

blow a fuse. Meaning to explode in anger, this expression, first recorded in 1945, was probably suggested by *to have a short fuse*. The *fuse* here, however, is the one in a house’s fuse box controlling the electricity.

blow gum. Sometimes used as a synonym for bubblegum. “I’d sure like a piece of that blow gum.” *Chew bubble* is also a synonym.

blowhard. See BLOW HIS (HER) OWN HORN.

blow his, her, own horn. The term *blowhard*, for “a braggart,” can be traced back to the American West in about 1855. To *blow your own horn*, or “to promote yourself,” derives from

a much older expression, *to blow your own trumpet*, which goes as far back as 1576. Such “hornblowing” may have its origins in medieval times, when heralds blew their trumpets to announce the arrival of royalty but commoners such as street vendors had to blow their own horns.

blow his mind. This was originally an expression employed by drug users, comparing the effect of a drug on the mind to an explosive that blows something up. From this 1960s usage the words came to mean “to experience, or cause someone to experience, great mental excitement.”

blow his top. For several centuries *blow* has been used in the sense of a violent explosion of temper, and for just as long *top* has meant the top of the head. Yet somehow the expression *to blow one’s top* didn’t enter the language until about the time of the Great Depression. There have been attempts to link it with the top of a volcano erupting, but the phrase seems to have come down the road to general speech via the off-trail slang of jazz musicians. Mencken alludes to its “blushful” sexual origin, but doesn’t explain further, probably meaning ejaculation of the male organ.

blow off steam. The diesels that have replaced steam engines have robbed us of the literal basis for this metaphor, but it’s still widely used. *To blow off or let off steam* is to have an emotional outburst, a psychological safety valve. This is reflected in the origins of the term, which goes back to the 1830s. Early steam locomotives had no safety valves and when steam pressure built too high in an engine, the engineer had to pull a hand lever to blow off steam to prevent an explosion. The angry-looking engine blowing off steam to save itself quickly suggested the colorful metaphor.

blowth. In the past people often called the blossoming of trees a *blowing*, a colorful term that means a tree’s buds were exploding or blowing outward to make its flowers. This suggested the word *blowth* for blossoming in general, as in “There’s a good blowth on my fruit trees.”

blow the whistle. This phrase means to inform on someone or something. The expression, of recent vintage, was inspired by the whistles blown by basketball or football officials after a foul has been committed.

blucher boots. This half boot has evolved into today’s basic, low-cut men’s shoes. Originally laced low boots or high shoes, *bluchers* were named for Gebhard Leberecht von Blücher (1742–1819), a Prussian field marshal who fought with Wellington against Napoleon at Waterloo. Field Marshal von Blücher did not design but sponsored the boots in 1810, considering them better footwear for his troops. Another word commemorating him was the British slang expression *Blucher*, for a cab allowed to take passengers to London stations only after all others had been hired—in allusion to the fact that the old man had arrived at Waterloo too late to be of much help!

bludgeon. One guess is that *bludgeon* for a heavy club or to hit with a heavy club, may be related to the word *blood*, which certainly sounds like the first part of the word and certainly de-

scribes a possible result of being hit with such a club. But this is only a theory, there’s no proof to back it up. We only know for sure that *bludgeon* is first recorded in 1730.

blue; blue movies; blue laws. A series of off-color French books called *La Bibliothèque Bleu* contributed to the coining of the word *blue* for obscene, as in pornographic *blue movies*, as did the customary blue dress of prostitutes in the early 19th century when the books were written. *Blue laws*, which might repress *blue movies*, has an entirely different derivation. The term usually means Never-On-Sunday moral laws and may take its name from a nonexistent Connecticut “blue book” rumored to contain fanatical laws. The vengeful rumor was spread by the Reverend Samuel Peters, an American Tory who returned to England after the Revolution. Peters claimed that the fictitious blue-bound book contained laws prohibiting such activities as kissing one’s wife on Sunday.

bluebacks. Paper money used by the Confederates during the Civil War; also called *graybacks*. “During the Civil War . . . the original Blue Backs of the Confederacy (so-called in opposition to Green Backs of the Union) soon became known as Shucks, a name sufficiently significant of their evil repute . . .” Maximillian Schele De Vere wrote in *Americanisms* (1871). Over a billion dollars’ worth of bluebacks and graybacks were issued by the South during the Civil War; the bills were worth about 1.7 cents in gold for each Confederate dollar by the end of the hostilities. See GREENBACKS.

Bluebeard. Many of the most famous fairy tales, including “Sleeping Beauty,” “Red Riding Hood,” “Puss in Boots” and “Cinderella,” were collected by Charles Perrault and published in his *Contes du Temps* (1697). Among them was “Barbe Bleue” (“Blue Beard”), in which a sadistic indigo-bearded wife killer is foiled when his last wife, Fatima, discovers the bodies of her predecessors in a secret, locked room and is saved from death herself by her brothers’ arrival in the nick of time. According to local tradition in Brittany, the real Bluebeard upon whom the story is based was the monstrous Frenchman General Gilles de Retz, the marquis de Laval, who murdered six of his seven wives and was burned at the stake for his crimes in 1440. But similar stories are common to many languages and other candidates have been nominated as well. A Bluebeard has come to mean a man who murders women he has married, and a number of contemporary wife killers, especially the Frenchman Henri Desire Landru, have been called “The Modern Bluebeard.”

blueberry. The blueberry, like the BLACKBERRY, is of course named for the color of its berries. Blueberries have been a favorite food for centuries and are among the most widely distributed fruits. Early colonists gathered the “blues,” “whortleberries,” and “bilberries,” and made good use of them as the Indians had done since prehistoric times. But more than any other fruit, cultivated blueberries are children of the 20th century. It was in the early 1900s that Elizabeth C. White of Whitesbog, New Jersey (one of several pioneer women fruit growers), offered local prizes for highbush blueberries bearing the largest fruits. Hearing of her work, Dr. Frederick V. Coville, a U.S. Department of Agriculture plant breeder, began to work in cooperation with her starting in 1909, and crossed

many wild plants she or her contestants had selected from the Pine Barrens of New Jersey, an area with an acid, sandy, but fertile soil. By the time Coville died in 1937 there were 30 large-fruited, named highbush varieties where there had been none, and today there are myriad varieties that have been selected from hundreds of thousands of fruited hybrid seedlings. From its status as a lowly fruit often confused with the huckleberry (even though, unlike the bony-seeded huckleberry, its 50 to 75 seeds are small and barely noticeable when eaten), White and Coville had elevated the blueberry to a position where it became the basis for an entirely new agricultural industry. *Vaccinium corymbosum*, the highbush or swamp blueberry, had gone through a revolution rather than an evolution and became a mass-produced fruit in less than 25 years. See BILBERRIES; RABBIT-EYE.

blue blood; blue-brick. The warriors of Islam who were called the Moors (or, more poetically, the lyrical name blackmoors) ruled over most of Spain for five centuries. Toward the end of their rule the Spanish aristocrats of Castile began to distinguish themselves from these darker-skinned people by adopting the name *sangre azul*, “blue blood,” to describe themselves. The expression simply refers to the fact that these nobles had lighter complexions than the Moors and that the veins in their skin showed up a vivid blue. Pure Castilians became known as blue bloods and the term was borrowed to describe European noblemen of other countries. Today, the British make use of the expression in an interesting way. Universities with the highest prestige and pedigrees, like Cambridge and Oxford, are called blue-brick universities.

bluebonnet. The blue-flowered lupine, *Lupinus sub-carnosus*, the official state flower of Texas. Due to extensive seeding, great masses of these flowers bloom along the roadsides in spring. They are also called buffalo clover.

blue-chip stocks. The most valuable counters in poker are the blue chips. Since the early 1900s Wall Street, borrowing the expression from another world of gambling, has called secure, relatively high-yielding stocks “blue-chip stocks.” Among the earliest terms for worthless or speculative stocks is “cats and dogs,” first recorded in 1879.

bluegrass. Whether *Poa pratensis* or bluegrass was brought here from Europe or was here long before the first white settlers came is a matter of opinion among laymen if not scientists. The late John Ciardi discussed the question in *Good Words to You* (1987):

Various Kentucky historians . . . including Dr. Eslie Asbury, surgeon, raconteur, and well-known breeder of race horses, insist that the bluegrass was there when the first white settlers reached Kentucky . . . I have driven across Kentucky many times, even on the Bluegrass Highway, without seeing any but green grass. A number of natives have assured me that I have seen only cropped pastures, and that the blueness of the bluegrass becomes visible only when the grass is allowed to go to seed, the seed covering having a distinctly blue cast . . . Others have added that the blueness of bluegrass is

visible only when the sun is low and a soft wind tosses the grass . . . I choose to agree with Dr. Asbury, who attributes the blueness (in season) to the small blue flowers this grass bears. Even in season, they are not commonly visible because the grass is usually cropped.

Another theory holds that bluegrass takes its name from a pest grass that settlers on the Atlantic coast so named because its leaves were distinctly bluish in color. When these settlers moved into what is now Kentucky they found a grass, of about the same size and shape as the bluegrass previously discovered, and gave it the same name, which we still use today. See BLUEGRASS STATE.

Bluegrass State. A nickname for Kentucky since Civil War days (see BLUEGRASS). Kentucky has also been called the Hemp State, the Rock-Ribbed State, and the Dark and Bloody Ground (the translation of an Indian name for ground on which bloody battles between Indian tribes were fought).

blue hen's chicken. One who is a good fighter, because blue hens are said to breed the best fighting cocks; the term also means someone high-spirited, aggressive, quick-tempered or high-class and was applied to soldiers from Delaware during the Revolutionary War, resulting in the nickname *blue hen's chicken* for a native of Delaware.

Blue Hen State. A nickname for Delaware (see BLUE HEN'S CHICKENS). Delaware has also been called the Diamond State, Uncle Sam's Pocket Handkerchief (due to its small size), and New Sweden, after the 1638 settlement of Swedes there in *Nye Sverige*.

blue jeans. In the late 16th century the cotton cloth used to make jeans was called *Genoa fustian* after Genoa, Italy, where it was first woven. *Genoa* was shortened to *Gene* and then *Jean* by Englishmen, fustian was dropped, and the men's work pants made from the material were called blue jeans for their color—all this centuries before they reached their present popularity.

blue laws. See BLUE.

blue lights. *Blue lights* became an Americanism for traitors during the War of 1812 when on December 12, 1813 pro-British Americans flashed blue lights to British ships off the coast as a signal that Commodore Stephen Decatur's two frigates would soon be sailing from their New London, Connecticut harbor. Acting on this information, the British blockaded the port.

blue moon. See ONCE IN A BLUE MOON.

Bluemouths. An Indian tribe residing west of the Choctaws. Not much is known about them, but the Choctaws told travelers that there was a large city where these blue-mouthed or blue-lipped people lived and that if a person tried to kill one of these people, he would become insane.

blue movies. See BLUE.

bluenose. The term *bluenose* to describe a person of rigid puritanical habits was first applied to lumbermen and fishermen of northern New England and referred to the color of their noses, the blue induced by long exposure to cold weather. Only later was the word applied to the aristocratic inhabitants of Boston's Back Bay area in the sense that we know it today, possibly in alluding to their apparently "frigid" manner. *Bluenose* is also used as an opprobrious nickname for Nova Scotians, but there the word probably derives from the name of a popular Nova Scotian potato.

blue-nose certificate. The blue-nose certificate was an illuminated diploma once awarded aboard British vessels to those who had crossed a meridian north of the Arctic Circle, the "blue-nose" referring, of course to the cold. The certificate is no longer awarded.

blue-pencil. To alter, abridge, correct, or delete, as an editor does with a manuscript requiring anything from first aid to intensive care. The term, dating back to the late 19th century, was suggested by the pencil with blue lead often used by editors to edit manuscripts.

blue peter. On ships ready to leave port, a signal flag called the blue peter is raised to call all crew members aboard and to notify everyone in port that all money claims must be settled because the ship is departing. The flag is blue with a white square in the center. Why the *peter* in the term? It may be a corruption of the French *partir*, "to depart," while most consider it to be a telescoping of the word *repeater*. The flag may have originally been used as a "repeater flag," a signal hoisted to indicate that a message from another ship hadn't been read and should be repeated.

blue ribbon; cordon bleu. Britain's highest order of knighthood is the Most Noble Order of the Garter, which has as its badge a dark blue velvet ribbon edged with gold that is worn below the left knee. Inscribed on the ribbon in gold is the motto *Honi soit qui mal y pense* (Shame to him who thinks evil of it). Popular legend says that these words and the name of the order result from the gallantry of King Edward III—the king was dancing with the countess of Salisbury at a royal ball and when she lost her garter, he retrieved it and slipped it on his own leg to save her embarrassment, uttering the famous words. In any case, Edward III instituted the award in about 1344 and the blue ribbon awarded with it came to symbolize the highest honor in any field of endeavor. The French *cordon bleu* (blue ribbon), a decoration suspended on a blue ribbon, also influenced the term's meaning. Under the Bourbons it was the highest order of knighthood in France and was later used to honor great chefs.

blues; blue devils. *Blues*, for a state of depression or despair, is probably a shortening of the 18th-century expression *blue devils*, or low spirits. Surprisingly, Washington Irving first used the term in *Salmagundi* as far back as 1807: "[He] concluded his harangue with a sigh, and I saw that he was still under the influence of a whole legion of the blues." Later *blue devils* became the hallucinations associated with the D.T.s, or

delirium tremens, and a *blue devil* is now drug users' slang for sodium amylal, suggested by the color of the capsule and the narcotic's effects. *Blue devils*, *blue*, *blue-eyed*, and *blue around the gills* all have meant drunk in one way or another, possibly because blue is the color of approaching death and they are all associated with the SEVEN STAGES OF DRUNKENNESS. This would also explain the linking of blues with depression. *The blues*, toward the end of the 19th century, gave their name to the melancholy jazz music called the blues, deriving in part from sad black prison and funeral songs of slavery and oppression.

blue sailor. An old name for the chicory plant, a blue wildflower very common along roadsides in many eastern U.S. cities. According to *American Wildflowers* (1949), the name comes from the legend of a beautiful girl who fell in love with a sailor. Her lover left her for the sea, and so she sat day after day along the side of a highway waiting for his return. Eventually the gods took pity on her and turned her into a chicory plant that wears sailor blue in its blossoms and still haunts roadsides in the hope of meeting her returning lover. The roots of chicory are often ground and roasted as a coffee substitute or flavoring.

blue-sky laws. These are American state laws regulating the sale of securities, especially laws designed to inhibit the promotion of fraudulent stocks. Kansas, in 1912, enacted the first law so described by the press as protection against unscrupulous land promoters. Behind the words is the idea that suckers will buy even the blue sky from con artists or that "blue-sky" land or securities lack substance, like cloudless blue skies.

bluestockings. Only one of the original bluestockings wore homely blue stockings, and he was a man, a Mr. Benjamin Stillington. The group was founded by Mrs. Elizabeth Montagu in about 1750 as a kind of literary salon based on Parisian models. Leading intellectuals of the era gave talks at Mrs. Montagu's London home and conventional evenings of card-playing were replaced by intellectual discussions. All of the club members dressed simply as a reaction against the ostentatious evening clothes of the time, but only the one male member wore blue-gray tradesman's hose in place of gentlemen's black silk hose. Nevertheless, a contemporary wit twisted the fact and called all these intellectual ladies bluestockings, the word coming to mean a dowdy, affected literary lady, even though Mrs. Montagu was a beautiful woman and an author whose work was highly praised by Dr. Johnson. These early feminists were held in contempt by "proper ladies" of the time, but male chauvinists were most vehement about them. "A bluestocking," said Rousseau, "is a woman who will remain a spinster as long as there are sensible men on earth."

blue streak. See TALK A BLUE STREAK.

blue-water sailor. This is a complimentary term for a sailor who customarily sails in the "deep (blue) sea" as opposed to safer coastal waters; it probably dates back to the mid-18th century.

bluff. Mathew's *A Dictionary of Americanisms* records *bluff*, origin unknown, as the term for a riverbank as early as 1687, referring to a "Bluffe" in South Carolina. According to Stuart Berg Flexner, in *I Hear America Talking* (1976), this is a historical curiosity, the very first of what would be a long list of Americanisms that the British termed "barbarous." In poker to bluff is to deceive an opponent about the strength of one's hand by betting heavily on it. This *bluff* probably derives from the German *bluffen*, "to frighten by menacing conduct." Early names for poker, recorded in 1838, were bluff and brag. From poker also comes the expression *to call one's bluff*.

Bluff City. A nickname for both Memphis, Tennessee, and Hannibal, Missouri. Both cities are located on bluffs overhanging water.

blunderbuss. The Dutch gave the name *dunderbluss* ("thunder tube") to this short musket with a wide bore and expanded muzzle, which they used to scatter shots at close range. But the English, who adopted it in the 17th century, soon learned that it was an erratic weapon, changed its name to *blunderbuss*, and applied the word to "a blundering, stupid person" as well.

blunt. One of the few words meaning money in general that derives from the name of a person. *Blunt*, which means cash, possibly comes from the name of John Blunt, chairman of the British South Sea Company, who was a very rich man indeed. *Blunt* in this sense has been used by many writers, including Dickens in *Oliver Twist*. The obsolete historical term led to the expressions *in blunt* and *out of blunt*, to be rich or poor. A *blunt* is also a cigar stuffed with marijuana, the term named after the Phillies Blunt trademarked brand of cigar and first recorded in 1988. See OSCAR ASCHE.

blurb. Humorist Gelett Burgess invented *blurb* in 1907 with the publication of his *Are You a Bromide?* Burgess's publisher, B. W. Huebsch, later told the story: "It is the custom of publishers to present copies of a conspicuous current book to booksellers attending the annual dinner of their trade association, and as this little book was in its heyday when the meeting took place, I gave it to 500 guests. These copies were differentiated from the regular edition by the addition of a comic bookplate drawn by the author and by a special jacket which he devised. It was the common practice to print the picture of a damsel—languishing, heroic, coquettish . . . on the jacket of every novel, so Burgess lifted from a Lydia Pinkham or tooth-powder advertisement the portrait of a sickly sweet young woman, painted in some gleaming teeth, and otherwise enhanced her pulchritude, and placed her in the center of the jacket. His accompanying text was some nonsense about 'Miss Belinda Blurb,' and thus the term supplied a real need and became a fixture in our language."

blushing thigh of the aroused nymph. The French gave this sensuous, poetic name (*la cuisse de nymphe ému*) to a double pink alba rose developed in France in 1797. According to rosarian Stephen Scanniello (see YELLOW ROSE OF TEXAS), the name was too daring for English gardeners who imported the lovely fragrant rose, so they bowdlerized it to "Great Maiden's Blush."

BMW. The German car's name has its origins in an abbreviation of *Bayerische Motoren Werke* (Bavarian Motor Works), which was founded in Munich in 1914.

BMX. Cross-country bicycle racing is called BMX, as is the cross-country bicycle itself. BMX stands for *bicycle moto cross*, *moto* coming from the French for "motorcycle" and *cross* (X) from the English "cross-country."

B.O. Lifebuoy Health Soap, better known as Lifebuoy, ran its first "Lifebuoy stops B——O——" advertisements (with a two-note foghorn warning accompanying the "B.O.") on the radio in 1933. Since then B.O. has become synonymous with *bad* body odor, though it is of course an abbreviation of *body odor*, which isn't necessarily bad.

Boanerges. Any loud orator or preacher. The Hebrew *Boanerges* means "sons of thunder" and was the surname Jesus gave to his disciples the brothers James and John, sons of Zebedu. These disciples were rebuked by Jesus when, after the Samaritans failed to receive their master, they suggested: "Lord, wilt thou that we bid fire to come down from heaven and consume them." The story is told in Mark 3:17 and Luke 9:54.

boardwalk. A sidewalk made of boards, common in many early Western towns though seen only in historical replicas today.

boat; ship; craft. A *boat*, deriving from the Old Norse *beit* or *bato*, is any small marine craft, while a *SHIP* is any large ocean-going vessel, and a *craft*, from the Old English *craeft*, means all boats and ships of any size.

boat names. See SHIP NAMES.

bob. It has been suggested that this British slang word for a shilling, familiar to all English-speaking peoples, may come from the name of Sir Robert (Bob) Walpole (1676–1745). The first Earl of Walpole was intimately connected with money in his posts as army paymaster, first commissioner of the treasury, chancellor of the Exchequer, and finally as England's Prime Minister. But the word *bob* isn't recorded until about 1810, some 65 years after Walpole's death, so the derivation remains uncertain.

Bob Acres. A *Bob Acres* comes from a character in British playwright Richard Brinsley Sheridan's comedy *The Rivals* (1775), in which Acres refuses to duel a rival, "wanting to live to fight another day." This is not only the brilliant Sheridan's first play, but it is one of his best. It should be a consolation to many that he was regarded as a dunce at school.

bobadil. Ben Jonson's play *Every Man in His Humor* (1598) gave us the character Captain Bobadill, an old soldier who gravely boasts of his conquests and is proved as vain and cowardly as he is boastful. From the old soldier's name we have the word *bobadil*, "a braggart who pretends to great prowess." Johnson patterned his character on Boabdil, a late 15th-century

Moorish king of Granada. King Boabdil was noted for the same characteristics as the fictional captain.

bobbasheely. “You and Sweet Thing bobbasheely on back to the hotel now,” William Faulkner has a character say in *The Reivers* (1962). *Bobbasheely* means “to walk in no great rush but to move on,” “to saunter.” It can also mean a very close friend—in fact, it is said to derive from a Choctaw Indian word for “my brother.”

bobbitt. One night in 1993 while he slept, John Wayne Bobbitt’s wife, Lorena, cut off his penis with a kitchen knife, allegedly in revenge for acts of rape and abuse. Surgeons reattached his penis, but Bobbitt’s name would never wholly be his own again. People began using *bobbitt* to mean the act of a woman amputating a husband’s or a lover’s penis, especially in revenge, and this most extreme of eponymous words became part of the vocabulary of millions, thanks to news stories about the dismemberment, reattachment, and trial that followed. See JOHN THOMAS.

bobble. An Americanism meaning a mistake or error. The word, first recorded in 1805, is commonly used today for a mishandled chance in baseball.

bobby; peelers; robert. *Bobby* is among the most familiar of eponymous words, despite the fact that “copper” or “cop” is more often used today to describe an English policeman. The well-known word honors Sir Robert Peel, British Home Secretary (1828–30) when the Metropolitan Police Act remodeled London’s police force. Peel, whose wealthy father bought him his seat in Parliament, as was customary in those days, first won fame as chief secretary for Ireland, where he was nicknamed “Orange Peel” for his support of the Protestant “orangemen.” It was at this time that he established the Irish constabulary under The Peace Preservation Act (1814), and his policemen were soon called “Peel’s Bloody Gang” and then *peelers*. *Peelers* remained the name for both Irish and London police for many years, *bobby* and *robert* not being recorded in print until about 1851.

bob house. According to *Yankee Magazine* (January 1974), this is a little hut built on a frozen lake for fishing. The fishermen fish through holes cut through the wooden floor and through the ice.

bob ruly. American pioneers called a burned out area a *bob ruly*, which leads some to think that the term might have been named after a notorious firebug of old. But *bob ruly*, first recorded in 1848, though older, is just how the French words *bois brûlé*, “burned woods,” sounded to American ears.

Bob’s your uncle. Americans mainly know this expression from films. It means “that’s it” “that’ll be all right” “you’ve got it right,” “there you go,” “there you are.” The term dates back only to the 1880s, but no one has been able to identify without doubt the real “Bob” in the phrase, if indeed there was one. It may, however, be derived from the promotion in 1885 of Arthur J. Balfour (1848–1930) to chief secretary for Ireland by

his uncle the marquess of Salisbury, who had just appointed him to another position the year before. Balfour is better remembered for the Balfour Declaration of 1917, in which as British foreign secretary he favored a Jewish homeland in Palestine.

bobtailed flush or straight. A bobtailed flush or straight in poker is a three-card flush or straight, one that is worthless because poker rules require five-card flushes or straights. The term apparently originated in the West in the mid-19th century, modeled on the short-cut tails of bobtailed horses.

bocaccio. A fish named after the great Italian poet, storyteller, and diplomat Giovanni Boccaccio (1313–75). The American rockfish has a big mouth and the poet was said to be something of a gossip. Or it may be simply that this famous person’s name combined nicely with the Spanish *bocacha* for “bigmouth,” yielding *bocaccio* (with three c’s, not four).

boccie. An Italian game of lawn bowling played on a dirt court shorter and narrower than a bowling green, bocce takes its name from the Italian *boccia*, “ball.” It is often played in city parks today. See SPALDING.

bock beer; lager beer. Beer drinkers who favor the strong, dark Bavarian lager beer called bock, which is usually brewed in the autumn and aged through the winter, may be surprised to learn that it takes its name from the German word for buck, or male goat—“because of its great strength making its consumers prance and tumble like these animals.” *Bock beer* comes from the German *Eimbockbier*, “buck beer from Eimbeck” in Lower Saxony, Germany. A lager beer is a beer that, like bock beer, has been “bedded down” in a storehouse for aging, *lager* simply meaning the German for “bed or resting place.”

bod. To Americans *bod* is slang for *body* (as in “That’s some bod!”). But both Australians and Britons use it to mean a person, as in “Some bod came uninvited.”

bodacious. *Bodacious* dates back to at least the early 1840s, but it is said to have been popularized by the Snuffy Smith comic strip about American hillbillies. *Bodacious* can mean remarkable, enormous, strong, and prodigious, as well as insolent, or even big-breasted. It is possibly a blend of *bold* and *audacious*.

bodega. *Bodega* is Spanish for “storehouse.” Originally indicating a small Hispanic grocery store, often selling a large variety of items, including wine, the word is now often used to refer to any small grocery store. There are thousands of bodegas in the United States today.

bodkin. *Bodkin*’s origin is uncertain, but it may derive from an unknown Celtic word, or be the corruption of a Gaelic word for “little dagger.” A *bodkin* was once a stiletto worn by ladies in their up-swept hair and this is probably the weapon Shakespeare refers to in the famous passage from *Hamlet*: “When he himself might his quietus make with a bare bodkin.” See QUIETUS.

Bodleian Library. England's Bodleian Library at Oxford is among the greatest libraries in the world. Its name honors founder Sir Thomas Bodley (1545–1613), who devoted nearly 20 years of his life to developing the library. The Bodleian is entitled under the national Copyright Act to receive on demand a copy of every book published in the United Kingdom. Thomas Bodley, a Protestant exile who returned to England from Geneva when Elizabeth I ascended the throne, served in Parliament and as a diplomat in several European countries before retiring from public life in 1596. He began to restore the old Oxford library two years later and left most of his fortune to it as an endowment.

Bodley Head. The British publisher, founded in 1887, took the name *Bodley Head* from the sign hanging outside the publisher's building featuring the head of Sir Thomas Bodley (1545–1613), who founded it in 1602, and endowed the great Bodleian Library at Oxford. See BODLEIAN LIBRARY.

bodock; Osage orange. *Bodock* is another name for the Osage orange tree (*Maclura pomifera*). It is so called because the Indians used its wood for making bows and the French thus called it the *bois d'arc* ("bowwood") tree, which became corrupted in English to *bodock*. It is called the *Osage orange* because it grew in Osage Indian country and has large, rough-skinned greenish fruits somewhat suggestive of an orange, but inedible. The spiny-branched tree is often used for hedges and called the Osage thorn. It is first recorded, in 1804, by the Lewis and Clark expedition, as the Osage Apple.

body Nazi. A fanatic bodybuilder who thinks everybody should share his or her obsession. Though an extreme term, it stems not from World War II but from the irascible *Soup Nazi* on the *Seinfeld* TV show, who, in turn, was suggested by a real-life Manhattan soup seller.

Boeotians. This is among the oldest of the many words dishonoring an entire people. Meaning ignorant, dull, and lacking in refinement, *Boeotian* recalls the inhabitants of Boeotia, a farming district in ancient Greece, whom the urbane Athenians found thick and stupid, with no understanding of art or literature. In truth, as Homer and other knowledgeable Greeks noted, the region produced Pindar and Plutarch as well as country bumpkins. *Boeotian* is also used in terms like "Boeotian ears," ears unable to appreciate good music or poetry.

Boer. A South African of Dutch extraction, deriving from the Dutch for farmer, peasant. The word *boor*, a rude country bumpkin, also comes from the Dutch, as does the adjective *boorish* meaning coarse, loutish, and uncouth.

Boer War. Actually there were two of them, in 1880–81 and in 1899–1902. The first Boer War saw the Dutch and Huguenot Boer settlers in South Africa rebelling against British rule and winning an independent republic controlled by the British. In the second Boer War, blame is divided between Britain's imperialist designs and the refusal of the Boers to give equal rights to British immigrants. After the British won the second Boer War, the Boer republics of the Orange Free State and Transvaal became part of the Republic of South Africa. The word *Boer* is

from the Dutch *boer* meaning agriculturist, though some writers claim it means "peasant."

boffin. Among the Australians and British a *boffin* is a specialist, especially a scientist, who knows a lot about his field but next to nothing about anything else.

boff-on-gool; bah-fong-goo. Among the several pronunciations heard in New York for an Italian curse meaning "fuck you." The widespread curse is often accompanied by the common arm motion meaning the same.

bog. *Bog* is the Russian word for God. In 1930 1 million copies of a school textbook containing a poem by Nekrasov with the word *Bog* in it were printed by the Soviet government. Then someone discovered, to the horror of the Kremlin, that *Bog* was spelled with a capital letter throughout the poem. Reducing *Bog* to *bog* required resetting type in 16 pages of each of the million books printed, but the change was made, despite the expense, so that "the books reached the Soviet children uncontaminated." Despite the past efforts of Soviet censors the Russian language remains rich in references to God, such expressions as "God knows," "God save us," "Oh, my God," and "Praise God" being quite common. "Communism is gone," one anonymous wit said recently, "but God remains."

bogart. See DON'T BOGART THAT JOINT.

bogey. *Bogey*, a word for "an imaginary or real thing that causes fear or worry," may be just a dialectical form of the old word *bug*, "ghost or specter," and it gives us both the *bogeyman* used to scare children and the golf term *bogey*, one stroke over par, which arose from a popular 1890 song called "Coloney Bogey." This latter term at first meant "par" in England, because Colonel Bogey's name was adopted by golfers to signify a fictitious gentleman who could play a course or hole in the lowest number of strokes that a good golfer could play it in. American golfers, satisfied with "par" to express the British meaning of *bogey*, made Colonel Bogey something of a duffer.

bogus. Most theories about the word *bogus*, meaning "fake or spurious," relate it to some form of bogey, in its sense of an imaginary or false thing. One version claims the word can be traced to May 1827 when the Painesville, Ohio, *Telegraph* ran a story about a gang of counterfeiters whose fake coins were so perfect that they were compared to the work of some supernatural bogeyman. Another says the word comes from the name of a device called a bogus, used for counterfeiting coins in the same state in the same year, connecting this machine with "tantra-bogus," an old Vermont term for bogeyman. Complicating matters is the fact that the first use of *bogus* isn't recorded until 1838. Although it is certainly possible that the word was in use 10 years or so before it appeared in print, another derivation traces it to a counterfeiter who was operating at exactly the time *bogus* was first recorded. "The word *bogus*," according to a *Boston Courier* of 1857, "is a corruption of the name Borghese, a man who, 20 years ago, did a tremendous business in supplying the Great West of America with counterfeit bills on fictitious banks. The western people came to shortening the name Borghese to *bogus*, and his bills were universally styled 'bogus

currency.” However, there is still another theory that suggests a direct passage from *boghús*, a gypsy word for counterfeit coin. More than one of these speculations has to be bogus.

bohemian. *Bohemian* was first used as a synonym for a gypsy or vagabond during the Middle Ages, people mistakenly believing that the gypsy tribes entered the West via the ancient kingdom of Bohemia. *Bohemian* became synonymous with a poor writer or artist with French novelist Henri Murger’s stories in *Scènes de la vie de bohème* (1848), his book providing the basis for Puccini’s opera *La Bohème*. The English novelist William Makepeace Thackeray made the word a synonym for a nonconforming artist in *Vanity Fair* (1848) when he wrote of his headstrong heroine Becky Sharp: “She was of a wild, roving nature, inherited from her father and mother, who were both Bohemian by taste and circumstance.”

bohunkus. A humorous term for the buttocks. It may derive from *bohunk*, a derogatory term for any eastern European, which in turn comes from *Bohemian* and *Hungarian*. See also HONKIE.

Bolivia; boliviano; bolivar. Commemorative of Simon Bolívar (1783–1830), the legendary South American revolutionary, soldier, and statesman, are the *bolívar* monetary unit of Venezuela and the *boliviano* of Bolivia. Simon Bolívar, the Liberator, led Venezuela’s revolution against Spain and founded Greater Colombia (then a union consisting of Venezuela, Ecuador, and New Granada, the present-day Colombia). He is one of the few men in history to have a country named after him in his lifetime and probably the only one to create and give that same country its constitution. Bolivia, or Upper Peru as it was then known, was first named República Bolívar in the great soldier and statesman’s honor.

bollard. A thick, low cylindrical post that combined with other bollards can stop out-of-control cars from crashing into pedestrian areas and is also employed in blocking cars from roads, lawns, etc. The word first described the black posts found on ships and docks used for tying hausers. *Bollard* derives from *bole*, Middle English for a tree trunk, and is first recorded in about 1835–40.

bollixed up. Messed up, mixed up, spoiled, thrown into confusion. The expression, only traced to the 1930s, is thought to derive from *bollocks*, testicles, which comes from the Old English *bealluc*, meaning the same.

boll weevil. *Weevil* comes from the Old English *wifel*, “beetle,” and *boll*, first spelled *bowl*, refers to the pod of the cotton plant, which the beetle attacks. In Enterprise, Alabama there is a monument to a boll weevil—erected at the turn of the century after the beetle so devastated the cotton crop in the area that farmers were forced to plant peanuts, and as a result became more prosperous than they ever had been as cotton growers. See also GULL.

Bollywood. English and Hindi are the official languages of India. Among the many English words coined there is *Bollywood*, a nickname for the busy motion picture industry in

Bombay. The blend word, first recorded about 1970, is patterned on HOLLYWOOD and was meant to suggest Bombay’s initial slavish imitation of Tinseltown. William Safire, in his *New York Times* “On Language” column (May 30, 2004) calls *Bollywood* “a 1976 coinage of the crime-fiction writer H. R. F. Keating.”

bolo. Paul Bolo, a French traitor popularly known as Bolo Pasha, faced a firing squad in 1917, having been convicted of treason the previous year. *Bolo*, though now generally a historical term, saw extensive use during World War I in describing a traitor, fifth columnist, or spy, someone working underground for the enemy. Bolo’s treason consisted principally of spreading pacifist propaganda financed by the Germans.

bolo alert. *Bolo* is a recent acronym used by law enforcement agencies, including the FBI, to mean *be on the look out for*, in reference to the whereabouts and intentions of a terrorist or any criminal. A bolo is also a long single-edged machete. See BOLO above.

boloney. Al Smith, governor of New York and unsuccessful presidential candidate in 1928, helped popularize this expression with his remark “No matter how you slice it, it’s still baloney.” But *boloney* for “bunk” dates back to at least the early 20th century, bologna sausage having been pronounced *boloney* as early as the 1870s, when there was a popular song “I Ate the Boloney.” There are those who say that *boloney* for “bunk” has nothing to do with bologna sausage, however, tracing it to a corruption of the Spanish *pelone*, “testicles,” and claiming that this meant “nonsense” or “bunk” just as “balls,” “all balls,” and “nerts” did. The word is also spelled *baloney*.

bolo punch. A punch developed by Cuban fighter Kid Gavilan (1926–2003), who won the world welterweight championship in 1951. Gavilan’s real name was Gerardo Gonzalez. His bolo punch, later used by Muhammad Ali, was a half-hook, half uppercut.

bolshevik; menshevik. Synonymous today for an agitator or radical reformer, *bolshevik* originally signified the left wing of the Russian Social Democratic Party, the designation evolving from a party congress in 1903 when the majority (Bolshevik), accepted the views of Vladimir Lenin. The vote was close (25–23), and behind the tactical issues involved lay great differences—such as the minority belief that revolution in Russia should be gradual in contrast to Lenin’s insistence that there be an immediate overthrow of the czarist regime. In 1917, the Bolsheviks again gained a small majority in the Socialist party congress, though not in Russia itself, and simultaneously overthrew the existing Russian government. Ironically, it was Lenin’s view that the Bolsheviks (the majority party) should be composed of a small select minority rather than the masses. “Bolshie,” for an agitator, is simply a corruption of *bolshevik*. The Mensheviks (from the Russian *menshevik*) were the members of the minority in the Russian Socialist party, who favored a more gradual transition to communism.

bolt from the blue. See TALK A BLUE STREAK.

bomb. *Bomb*, in reference to theatrical productions, has completely opposite meanings in England and America. When a play bombs in America it is a complete flop—a *bomb*. When a play “goes off like a bomb” in England it is often a great success. The British use seems to be built on the explosive force of a real bomb, while the American usage is based upon the destruction a bomb creates. The word *bomb* derives ultimately from the Latin *bombus*, “a booming sound.”

the Bomb. The term refers to any nuclear bomb, unique from other bombs because of its great destructive power. *The Bomb* was first recorded in 1945 and is also heard in the phrase *Ban the Bomb*, which nuclear arms protestors probably invented in 1960.

bombast. Bombast was cotton used as a padding or stuffing for clothes in days past, the word deriving from the word *bombyx*, for “silkworm or silk,” which was applied to cotton as well. Just as stuffing or padding in clothing was called bombast so was padded, stuffed, inflated, grandiose speech—this figurative use of *bombast* being first recorded in 1589, not long after the word was first used in its literal sense. Write off as entertaining but untrue the old story that *bombast* for inflated speech on trivial subjects comes from the real name of the egotistical Swiss physician, alchemist, and writer Paracelsus (1493?–1541)—Theophrastus Bombastus von Hohenheim.

bombazine. See BAMBOOZLE.

Bonac. Roughly 100 miles from Times Square in New York City, a community of Long Island fishermen called the Bonackers speak a dialect that retains the sound of Shakespeare’s England and has rarely, if ever, been recorded in any language book. The Bonackers reside in East Hampton, a town they helped settle in the 17th century. The Bonackers were not among the affluent settlers; they were, in fact, often the servants of the settlers, and at first they built shacks along the Accabonac Creek, which led the richer citizens to disparagingly dub them Bonackers. It is said that up to 1,000 Bonackers live in the Hamptons today, many of them speaking the old English dialect called *Bonac* that retains much of the vocabulary and the same vowel sounds the original settlers employed. “We speak the King’s English, only we come under an earlier king,” the Bonackers say. Common words used among them are *bub*, *cattywumper* (crooked), *durst* (does not), and *finiskind* (A-OK). Anyone born outside the eastern end of Long Island is a *foreigner* from *away*. See GULLAH.

bonanza. *Bonanza*, for a rich body of gold or silver ore in a mine, or any rich strike, began life as a Spanish word meaning “fair weather at sea.” Miners in California probably learned the word from seamen, who also used it to mean prosperity in general, and applied *bonanza* to any rich vein of ore.

Bonaparte’s gull; Zenadia bird. Bonaparte’s gull, one of only two black-headed species in the United States, was described scientifically for the first time in Prince Charles-Lucien Bonaparte’s *American Ornithology*. Bonaparte, Napoleon’s nephew, resided in this country from 1824 to 1833. The gull bearing the

naturalist’s name breeds hundreds of miles from the sea, becoming a seabird in winter, and inland bird-watchers consider it a harbinger of spring. *Zenadia*, the scientific designation for several species of wild doves and pigeons, is named for Bonaparte’s wife, Princess Zénaïde.

bon-bon. *Bon-bon* means “good, good” in French and the name was probably given to candies by children, “originating in the nursery,” according to the *O.E.D.* The term is first recorded in Thomas Moore’s satirical poem “The Fudge Family in Paris” (1818): “The land of Coccagne . . . / Where for hail they have bon-bons, and claret for rain.”

bond. See STOCKS AND BONDS.

bond paper. In the early 1800s a Boston, Massachusetts paper mill made a desirable all-rag paper that was widely used for printing bonds, bank notes, and legal documents. People began to call it *bond paper* when ordering it, and the expression soon was applied to any high-quality paper.

bone; bone up on. Bones were once used to polish shoes, and some scholars have attempted to link such bones to the expression *to bone up on* a subject, to study it hard and thoroughly, especially for an exam. One would then “polish up” his knowledge, presumably, but bones probably have nothing to do with this term. It was first used in the 1860s by collegians, and they apparently first spelled the *bone* in the phrase *Bohn*, probably referring to the Bohn translations of the classics, or “trots,” that they used in studying. British scholar Henry George Bohn (1796–1884) was the author and publisher of many books, including the “Classical Library.”

bonehead play; pulling a boner. The original *bonehead play* was made on September 9, 1908 by Fred Merkle, New York Giants first baseman. It was the last of the ninth, two out, and the Giants had Moose McCormick on third and Merkle on first. The next man up singled to center and McCormick scored the winning run, but Merkle ran into the dugout instead of touching second base. Johnny Evers of the Cubs got the ball and stepped on second, forcing out Merkle. The winning run was nullified and the game not counted in the standings. Merkle’s play became all the more important later in the season when the Cubs and Giants finished tied for first place and the Cubs won the pennant in a playoff game. Though *boneheaded* had been used in the sense of “stupid” a few years earlier, it was a sportswriter’s use of *bonehead play* in reference to Merkle’s blunder that introduced the phrase to the language, along with the related *to pull a boner*.

bone, hide, and hair. Everything, every part of. For the term’s origin see NEITHER HIDE NOR HAIR.

boner. See BONEHEAD PLAY.

bone to pick. It has been suggested that this expression arose from “an old Sicilian custom” where the father of the bride gave “the bridegroom a bone to pick clean as a symbol of the difficult task of marriage that he was undertaking.” If such a custom

exists, it has nothing to do with the phrase, which in modern usage means to have an argument to settle with someone. The expression, though its meaning has varied over the years, is some four centuries old and was probably suggested by two dogs fighting over a single bone tossed between them—a *bone of contention*—or by a dog preoccupied with a bone, which suggested the phrase's original meaning of "to mull over something." The idea is conveyed in several earlier phrases common to English and other languages.

bonfire. Dr. Johnson believes *bonfire* was a hybrid word derived the French *bon*, good, and the English *fire*, reasoning that this fit the definition of *bonfire* as a fire made for a "cause of triumph or exaltation." But most experts believe the word comes from *bone* plus *fire* and originally described a fire made from bones. The word is first attested in English as *bane* (bone) *fire* in 1475 and its earliest known ancestor is the Latin *ignis ossium*, fire of bones.

bongo. The reddish brown forest antelope of tropical Africa may have been named from the people of the Sudan, noted for their reddish brown skin color. Or according to another theory, these people were named after the antelope. In any case *bongo* is a Bantu word of uncertain meaning.

boniface. Innkeepers are called bonifaces after Will Boniface, a character in George Farquhar's comedy *The Beaux' Stratagem* (1707). Will Boniface is the landlord of an inn in Lichfield, a pleasant old man of 85 with a comic tongue who loves his ale. See LADY BOUNTIFUL.

bonkers. Most Americans know this British slang word for silly, stupid, or crazy. Many use it, and some act it. Partridge claims the word, about 1920, first meant "slightly drunk, light-headed," but has no explanation for its origin except that it arose in the navy. Perhaps the word has something to do with getting bonked (hit) in the head. Other Brit favorites for *crazy* include *crackers*, *dotty*, *loopy*, and *certified*.

bon mot. French for "a witty remark," as in "Oscar Wilde was the master of the bon mot in his day."

bonne-bouche. An English term since the 18th century, *bonne-bouche* means "a dainty or tasty mouthful or morsel." It comes from the French *bonne-bouche* (*bonne*, "good," plus *bouche*, "mouth"), which means "a pleasing taste in the mouth" in that language. French for a dainty morsel would be *morceau qui fait ou donne bonne bouche*.

bonnet. Back in the 14th century, when the word is first recorded, a bonnet wasn't a woman's hat but a brimless man's hat, its name deriving from the Old French *bonnet*. ("Off goes his bonnet to an Oyster-wench," Shakespeare wrote in *Richard III*.) It was over a century before *bonnet* meant a headdress exclusively for women.

bonnet squash. This common vegetable sponge (*Luffa cylindrica*) was so named in the American South because women

made bonnets out of its fibrous matter. Wrote Joel Chandler Harris in *On the Plantation* (1892): "The girls made their hats of rye and wheat straw, and some very pretty bonnets were made of the fibrous substance that grew in the vegetable patch known as the bonnet squash." These inedible squashes are also called "dishcloth gourds" and "loofah." They are widely sold as sponges.

Bonnie Blue flag. The Civil War secession flag of South Carolina, which had a blue field and a single star; also the name of a popular secessionist song. It was at a state convention at Jackson, Mississippi, when that state voted to secede from the Union, that the famous patriotic song of the South was inspired by an immense blue silk banner with a single star that someone carried through the crowd. According to one old story, Arkansas comedian Harry Macarthy witnessed the scene and began writing the song's lyrics, which he finished when the rest of the southern states seceded.

bonus. Those who have received a bonus for an outstanding piece of work will understand the derivation of the word, for *bonus* derives from the Latin *bonum*, "a good thing." According to the best conjecture, the term originated as a pun on the classical Latin word early in the 17th century among London stock market traders.

bon vivant. French for "a person who likes to live well" as in "Casanova was a great lover, and a great bon vivant as well."

boo. "Boo is a corruption of *Boh*, the name of a terrible Gothic general whose gross brutalities struck terror among his enemies," swears one old source. "It was early used to conjure fear among stubborn children." I like this story as well as the next person, but there is no proof for it. Unfortunately, the *boo!* used to startle someone, first recorded in about 1430, is probably just a loud startling sound—Latin had a similar exclamation, *bo-are!* The *O.E.D.* claims that the *boo* used to express disapproval, as in *booing*, is a sound imitating the lowing of oxen. It is first recorded in about 1800. In *Listening to America* (1982), Stuart Berg Flexner notes that "*boo* may have been used much earlier in the theater and elsewhere, but before the 1880s [in baseball] it was considered just a roaring sound and not a word." Thus, *boo* dates back to the early 19th century, but *to boo* did not mean "to show disapproval" until it was first used that way in connection with baseball.

boob tube. See COUCH POTATO.

booby; booby trap; booby hatch. *Booby*, for "a dunce, a nin-compoop," is recorded in English as far back as 1599, probably deriving from the Spanish *bobo*, "a fool," which in turn, may come from the Latin *balbus*, "stammering." It explains later expressions such as *booby prize* (ca. 1900), "a prize of little value given to the loser of a game," and *booby trap* (ca. 1850), "a trap set for fools." The last originally described practical jokes played by English schoolboys (balancing a pail of water atop a door that a *booby* would open, etc.), but in World War I *booby traps* became lethal explosive devices, killing wise men and poets as well as fools. *Booby hatch*, for an insane asylum, may have its

beginnings in the “booby hatch,” a police wagon used to carry criminals to jail. This term can be traced back to 1776 and certainly some of the criminals confined (for a short time, anyway) in booby hatches were deranged. Further, a “booby-hutch” was a police cell in the late 19th century—before some unknown American wit coined *booby hatch*. The term may have been suggested, however, simply from the idea of boobies confined and crammed under a hatch in some snake pit of an early insane asylum.

boodle. The Dutch in the New World called a bundle of paper money or a sack of gold a *boedal*, which served as the term for any property, goods, or effects. The word’s spelling gradually became *boodle* and it was used as underworld slang for counterfeit money and graft or bribery money, later becoming slang for a large bundle of money or money in general, with no implication of dishonesty.

boohoo. *Boohoo*, first recorded in 1525, originally expressed weeping or laughter. (Thackeray wrote that one of his characters “burst into a boohoo of laughter.”) The imitative word is today applied only to crying. American humorist Thomas Haliburton made a verb of the word, *to boohoo*, to weep noisily, in 1837.

boojum tree. Perhaps the only tree to be named after a fictional character. This deciduous tree (*Idria columnaris*) of Baja, California, with a thick, tapering trunk and spiny branches, has since about 1960 been popularly named for the imaginary character the *boojum* in Lewis Carroll’s nonsense poem *The Hunting of the Snark* (1867). In fact, Carroll (Charles Lutwidge Dodgson) insisted that his poem “sprang from one line of verse—one solitary line—‘For the Snark was a Boojum, you see,’” which came to him while he was out walking one day. Asked what the poem meant, he replied, “I have but one answer, ‘I don’t know.’” See CHORTLE; SEQUOIA.

book; folio; bible; bibliography; volume; code. Smooth-skinned beech trees have always been the favorite of lovers carving their names or initials inside a heart. The outer bark of the beech and slabs of its thin, inner bark were also the first writing materials used by Anglo-Saxon scribes. Saxons called the beech the *boc* and also applied this name to their bound writings made from slabs of beech, the word becoming *book* after many centuries of spelling changes. Numerous terms for things related to writing come from the names of raw material. Folio, now a book of the largest size, is from the Latin word *folium*, “a tree leaf,” which also gives us the word *foliage*. *Bible* and related words, such as *bibliography*, derive from the Greek *biblos*, “the inner bark of papyrus.” *Volume* is from the Latin *volumen*, which meant “a roll of papyrus manuscript”; and *code*, for a system of laws, etc., is from the Latin *codex*, “the trunk of a tree,” from which wooden tablets were made to write codes upon.

book burner. The term *book burner*, meaning “self-appointed censor” and worse, didn’t arrive until 1933 when thousands of pro-Nazi students ended a torchlight parade at the University of Berlin by burning a pile of 20,000 books while Nazi propaganda minister Joseph Göbbels proclaimed: “The soul of the

German people can express itself. These flames . . . illuminate the . . . end of an old era and light up the new.” But the first mass *book burners* in American history were, oddly enough, the anti-mail-order small merchants at the turn of the century who burned mail-order catalogs to censor not the free expression of ideas, but free enterprise. Local merchants persuaded or arm-twisted people into tossing their catalogs into a bonfire in the public square every Saturday night. Prizes of up to 50 dollars were offered to those who brought in the greatest number of catalogs to be burned. This practice seemingly descended to its nadir in a small Montana town where a movie theater gave free admission or 10 cents to any child who turned over a catalog to town authorities for public burning. Yet the Montana orgy of destruction was repeated in other states, all in the name of insuring a continuance of “freedom of opportunity in America.” The world’s worst book burner was probably China’s first emperor, Shi Huang Ti (259–210 B.C.). Shi, who buried alive 460 scholars in the process, burned all the books in his kingdom, except for one copy of each deposited in the royal library, which he planned to destroy before his death, reasoning that if all records were destroyed history would begin with him. For generations after, the Chinese expressed their hatred of Shi by “befouling his grave.”

book club. America’s first book club was the Book-of-the-Month Club, founded in April 1926 by Harry Scherman with Robert Haas as president. Its distinguished panel of judges consisted of Dorothy Canfield, Heywood Broun, Henry Seidel Canby, William Allen White, and Christopher Morley, and they chose as the first book-of-the-month Sylvia Townsend Warner’s *Lolly Willowes, or the Loving Huntsman* (Viking) to be distributed to 4,750 members. Within 20 years the club had revolutionized the publishing industry and 25 similar clubs were distributing 75 million books, over one-sixth of all American book sales. Customarily, members receive a free book or books upon joining a book club and a free book with every two or three books purchased. Book club editions are often, but not always, printed on cheaper paper. While the clubs have been criticized for inculcating a mediocrity of taste, they have offered many excellent books to their members and there is no doubt that they bring books to areas without bookstores. Ancestors of the book clubs were the circulating libraries of the 19th century, which supplied popular novels to readers for a small subscription price. These libraries often forced publishers to conform to their puritanical standards and made good writing all the more difficult. George Gissing’s *New Grub Street* (1891) treats the subject in detail.

Booker Prize. The prestigious British literary prize for British or Commonwealth citizens is well known in the United States, but few know the term’s origin, even believing “Booker” is synonymous with “book.” The \$50,000 award actually takes its name from the Booker McConnell firm, which has given it annually since 1968. Its American counterpart is the National Book Award or the PULITZER PRIZE. Recently, the Booker Prize has added the name of its new sponsor and become the Man Booker Prize.

book in breeches. The great English historian Thomas Babington Macaulay was a walking library who had filled his head with learning ever since he began reading at age three. He was

a “book in breeches,” the Reverend Sydney Smith (1771–1845) said, but Smith had some reservations about his loquacity. “Yes, I agree, he is certainly more agreeable since his return from India,” Smith said of the historian. “His enemies might perhaps have said before (though I never did so) that he talked rather too much; but now he has occasional flashes of silence that make his conversation perfectly delightful.” But then everyone had a bad word for Macaulay. “His conversation was a procession of one,” said Florence Nightingale of him. “Macaulay is well for a while, but one wouldn’t want to live under Niagara,” said Carlyle. “I wish I was as cocksure of anything as Tom Macaulay is of everything,” Viscount Melbourne said. Sydney Smith added that the historian “not only overflowed with learning, but stood in the slop.”

books without e’s. Among the French author Georges Perec’s unusual works was a novel in which the letter *e*, the most common vowel, wasn’t used, and another in which *e* was the *only* vowel used. But the title here probably should go to American author E. V. Wright’s *Gadsby*. That novel was written without the use of the letter *e*, the author tying down the *e* key on his typewriter and producing a work some 50,000 words long. E. V. Wright’s feat was no mean accomplishment, as anyone will see who attempts to write even a paragraph under the same conditions.

bookworm. Bookworms are literally the larvae or adults of various insects, moths, and beetles that live in and feed upon the pages and bindings of books. No single species can properly be called the bookworm, but the little beetle *anoliium*, silverfishes (order *Thysanura*) and book lice (order *Psocoptera*) are widely known by the name. The human of the bookworm species also lives in and feeds upon the pages of books, but doesn’t usually destroy them. Human bookworms have been scorned since before Ben Jonson wrote of a “whoreson book-worm.” Authors especially are fools to be contemptuous of bookworms, but from Elizabethan times to the present few scribes have had anything good to say about them. As for insect bookworms, a 19th-century journal called *The Bookworm* had this to say about them: “Bookworms are now almost exclusively known in the secondary and derivative meaning of the word as porers over dry books; but there was a time when the real worms were as ubiquitous as our cockroaches. They would start at the first or last page and tunnel circular holes through the volume, and were cursed by librarians as *bestia audax* and *pestes chartarium*. There were several kinds of these little plagues. One was a sort of death-watch, with dark-brown hard skin; another had a white body with little brown spots on its head. Those that had legs were the larvae of moths, and those without legs were grubs that turned into beetles. They were dignified, like other disagreeable things, with fine Latin names, which we spare our readers. All of them had strong jaws and very healthy appetites; but we are happy to find that their digestive powers, vigorous as they were, quail before the materials of our modern books. China clay, plaster of Paris, and other unwholesome ailments have conquered the *pestes chartarium*. They sigh and shrivel up. Peace to the memory, for it is now hardly more than a memory, of the *bestia audax*.”

boomer. Someone who was born during the prolific post-World War II baby boom, a sharp increase in the birth rate that

lasted from about 1947 through 1961. *Boomer* is of course short for *baby boomer*, which is first found in print in a 1974 *Time* magazine article. In 1941 *Life* magazine used the term *baby boom*, but it did not refer to the post-World War II boom. In Australia a boomer is a large, full-grown kangaroo. See BABY-BOOM; GENERATION X.

boomerang. *Boomerang* is another loan word from Australia’s aboriginals (like *kangaroo*, *dingo*, *koala*, and *wombat*). Captain Cook noticed the native weapon on his voyages to Australia but did not record its name, which is first mentioned in 1798 in an account of aboriginal weapons.

boomeritis. Orthopedic surgeon Dr. Nicholas A. DiNubile not only coined but trademarked the term *boomeritis*, the phenomenon of exercising that causes injuries like cartilage and ligament damage, bursitis, tendinitis, and hip replacement, among many others. Baby boomers, the 78-million generation that has grown up exercising, lead the way in boomeritis.

boondocks. *Bundok* is the word for “mountain” in Tagalog, the Indonesian language of the Philippines. But during the U.S. occupation there, American soldiers extended its meaning to include any rough back country with wild terrain difficult for troops to penetrate, corrupting the word to *boondocks* in the process. After World War II, Marines brought *boondocks* home with them and it became the name for difficult terrain on the fringes of training camps, where recruits were often taken on long bivouacs. These remote areas naturally suggested the “sticks,” rural areas where there is similarly little to do but work and be bored, and *boondocks* began to be applied to them as well. The word is most frequently heard in the expression *out in the boondocks*, way out in the sticks.

boondoggles. One dictionary defines boondoggles as: “Useless, wasteful tasks, ‘make-work’ projects that are often performed by recipients of a government dole.” The word was employed in 1929 by Scoutmaster Robert Link of Rochester, New York, who applied it to the braided leather lanyards made and worn around the neck as a decoration by Boy Scouts. Under the New Deal during the Great Depression, the term was transferred to the relief work for the unemployed that some people, not out of work themselves, thought was as useless as making lanyards, and soon *boondoggling* meant to do any work of no practical value merely to keep or look busy. Before Scoutmaster Link applied *boondoggle* to lanyards it had been a word for a belt, knife sheath, or other product of simple manual skill, and in Scottish dialect it means a marble that you get as a gift, without winning it. The yarn about *boondoggle* being suggested by Daniel Boone idly whittling sticks to throw to his dog does convey the sense of the word, but is just another spurious tale.

booster. Sinclair Lewis’s Babbitt was a booster who wore a Booster Club button in his lapel. But Lewis didn’t invent the term in his novel. This term for an enthusiastic, often puerile supporter or promoter of a person, team, cause, etc., was born in the American Southwest in about 1890, quickly spreading throughout the country, and has its roots in the verb to boost.

boot camp. U.S. sailors serving during the Spanish-American War wore leggings called *boots*, which came to mean “a navy (or marine) recruit.” These recruits trained in what were called boot camps.

Boot Hill. Now a joking name for any cemetery, the term was first applied to any small cemetery where men who died in gunfights, with their boots on, were buried. The first such is said to have been in Deadwood, South Dakota; the Mount Moriah cemetery there is now a big tourist attraction.

bootlegger. Bootleggers got the name because they smuggled illegal whiskey in the legs of their tall boots. The word originated in about 1850, at least 70 years before Prohibition. Today a *bootleg* is a football ploy in which the quarterback fakes a handoff and hides the ball on his hip, running with it himself.

boots and saddles! Most Americans are familiar with the old western song “Give Me My Boots and My Saddle,” but this familiar cavalry call has nothing to do with boots and saddles, as one might suspect. It derives from the old French cavalry command *Boute selle!* (“Put saddle!”), which the British corrupted to *boot and saddle* and which American cavalrymen further corrupted to *boots and saddles!*

boots on the ground. The number of soldiers in an army or part of an army in a combat zone: “As soon as the troops come over we’ll have 100,000 boots on the ground.” A U.S. term, possibly dating back a half century or so.

booty. (Frequently pronounced boody). Originally meaning a woman’s sexual organs and sexual intercourse, this term has come to mean “buttocks.” It is widely used in this sense today, even in the names of tanning parlors, such as “Tan Your Booty,” not to mention popular songs.

booze. Mr. E. G. or E. S. Booze of either Philadelphia or Kentucky, circa 1840, was a distiller who sold his *booze* under his own name, the bottles often made in the shape of log cabins. But *booze* probably has its roots in the Middle English verb *bousen*, “to drink deeply,” which comes from an earlier German word. However, the English use *booze* only for beer and ale and there is no doubt that the labels on our Mr. Booze’s bottles influenced the American use of the word for hard liquor and strengthened its general use. Today *booze* most often signifies cheap, even rotgut whiskey.

B.O. Plenty; Bathless Groggins. These are the names of comic strip characters who rarely washed, if ever, and whose names became synonymous for anyone who pays no attention to bodily cleanliness. B.O. Plenty, his prenom influenced by B. O. above, was a character in cartoonist Chester Gould’s Dick Tracy comic strip in the 1940s; he eventually married Gravel Gerty, who looked as bad as he did. *Bathless Groggins*, always scratching himself, appeared in his own, earlier strip.

bora. Bulgarian has contributed only a few words to English. One may be *bora*, for the fierce north wind of the Black Sea that

can blow up to 70 miles an hour and create 12-foot waves. *Bora* may, however, derive from the Latin *boreas*, north wind.

borax. The real source for the term *borax*, for “cheap furniture, or any cheap and inferior merchandise,” is probably not a Yiddish expression used by Jewish immigrants on New York’s Lower East Side in the late 19th century, as many sources contend, but the premiums for cheap furniture offered by early manufacturers of borax soap.

Bordeaux. The largest of France’s great wine areas, the province of Gironde, surrounds the port city of Bordeaux, after which the elegant red and white wines made there are named.

border tale. A Western story. “I am sorry to have to lie so outrageously in this yarn. My hero has killed more Indians on one war trail than I have killed in all my life. But I understand this is what expected of border tales. If you think the revolver and Bowie knife are used too freely, you may cut out a fatal shot or stab wherever you think wise.” (William F. [Buffalo Bill] Cody in a letter to his editor, 1875).

bored. British actor George Sanders committed suicide, leaving behind a note saying that he had been bored by it all. Another worldly Englishman, the poet Lord Byron, used the word *bored* for “wearied, suffering from ennui,” in *Don Juan* (1823), in which he wrote:

Society is now one polished horde
Formed of two mighty tribes, the bores and the bored.

Bored is first recorded in 1768, apparently being a figurative use of *to bore*, “to pierce, make a hole through,” although the French *bourrer*, “to stuff or pad,” has also been suggested.

bore for the hollow horn. An expression popular in days past. It was explained in *Dialect Notes*, v. 5, 1919. “A hole is bored in the horn of a cow (having a hollow horn) with a gimlet. This custom gave rise to the epithet applied to people who behaved foolishly (suggesting a hollow head): ‘He ought to be bored for the hollow horn.’”

Borgia; nepotism. Whether any Borgia was ever a poisoner is a matter of dispute, but Lucrezia and Cesare Borgia, children of Pope Alexander VI (1431–1503), were reputed to indulge in such activities. Tradition has it that the Borgias employed some secret deadly poison to eliminate their enemies. Historians have never been able to substantiate this, but a GLASS OF WINE WITH THE BORGIA has long been proverbial for a great but risky honor, and *Borgia* is still a synonym for a poisoner. There is no doubt that the Borgias were murderers, the family generally a pretty unsavory lot. They are also responsible for the word *nepotism*, this directly from the Latin *nepos*, “a descendant, especially a nephew,” coined when Pope Alexander VI filled important church offices with his relations. Among the many family appointments Rodrigo Borgia made were the installing of his son Cesare as an archbishop when the boy was only 16, and the bestowing of a cardinal’s hat on his young nephew, Giovanni.

bork. Hardly a year after conservative judge Robert H. Bork's nomination to the Supreme Court was defeated in 1989 the verb *to bork*, to attack someone's nomination in an extreme media campaign, was being used to describe such actions against other nominees and candidates, conservative or liberal. Only time can tell if the word will fade from common usage and become a historical relic.

born-again Christian. This term for a Christian who has found a renewed commitment to Christ has long been known to evangelists, but came into prominence when U.S. presidential candidate Jimmy Carter described himself as a "born-again Christian." The phrase's source is John 3:3 and 3:7: "Jesus answered and said . . . Except a man be born again, he cannot see the kingdom of God . . . Marvel not that I said unto thee, ye must be born again."

bornin; birth. "His bornin' killed her [his mother]." Used in the movie version of Harold Bell Wright's classic *The Shepherd of the Hills*, 1907.

born in a hurricane. Descriptive of someone who can handle the most extreme situations, do the hardest, most difficult work. As novelist Thomas McGuane claims in his novel *Keep the Change* (1989), "This man would go out by himself for weeks at a time with his bedroll and lariat and would single-handedly rope, brand, vaccinate, and castrate hundreds of calves . . ."

born in the middle of the week and looking both ways for Sunday. A colorful expression dating back to the 19th century that describes someone extremely cross-eyed.

born on the wrong side of the blanket. See BASTARD.

born on the wrong side of the tracks. See WRONG SIDE OF THE TRACKS.

born to the purple. From earliest times purple has been the color of kings, especially Tyrian purple, a color yielded by a species of Murex shellfish. But the expression *born to the purple*, or "born of royal parentage," doesn't have its origins in the purple robes of royalty. It really derives from an ancient Byzantine custom that dictated that the empress give birth to her royal child in a lavishly appointed special chamber called the *Porphyra*, whose walls were lined with royal purple porphyry. The Greeks had a word for such a royal birth, *porphyrogenitus* (from *porphyra*, "purple," and *gennetos*, "born"), which translates directly as "born in the purple." Today the expression is *born to the purple*, and it is used to describe anyone of exalted birth, not necessarily royalty, or anyone born rich.

born with the gift of laughter and a sense that the world was mad. These words became famous not because they are from Shakespeare, Milton, or any of the great classical writers of antiquity, but because they were inscribed as a hoax over a door in the Hall of Graduate Studies at Yale University. The line is from novelist Rafael Sabatini's rousing *Scaramouche*,

beloved to generations of romantics, and the full quote, referring to the hero, is "Born with the gift of laughter and the sense that the world was mad, and that was his only patrimony." The words apparently were written on Yale's hallowed walls as the result of a hoax. At least the building's architect, John Donald Tuttle, confessed in a letter to *The New Yorker* (December 8, 1934) that collegiate Gothic repelled him. It is, he wrote, "a type of architecture that had been designed expressly . . . to enable yeomen to pour molten lead through slots on their enemies below. As a propitiatory gift to my gods . . . and to make them forget by appealing to their senses of humor, I carved the inscription over the door." Yale authorities apparently didn't enjoy the joke. After employing medievalists, classical scholars, and Egyptologists to find the source of the quotation, only to learn it was from a mere adventure novelist, they planted the ivy that hides the words today.

born with two strikes against him. It is uncertain when this expression was coined, but it clearly has its roots in baseball as an analogy to a batter only one strike away from striking out and thus failing completely. The words are usually said of someone born with great disadvantages, or of someone with incredibly bad luck.

borracho. *Borracho* is a word borrowed from Spanish meaning "drunk" or "a drunk person." It has been commonly used in English for 20 years, though no major dictionaries admit it to their pages.

borrow. *Borrow* was originally a noun deriving from the Anglo-Saxon *borg* and meaning "a pledge of security." This use of the word became obsolete in England by Spenser's time, but early on *borrow* became a verb meaning "to give security for, to take on pledge." Security is no longer essential in a borrowing transaction, but the idea that what is loaned is the property of the lender and must be returned is still preserved.

borscht; borscht belt. *Borscht* is a beet soup served hot or cold, often with sour cream, that is a great favorite in Jewish and Russian restaurants. The word derives from an East Slavic word meaning the same. The *borscht belt* is a resort area in the Catskill Mountains of upstate New York. Once famous for its abundant food and entertainment—many notable comedians and singers got their start there—the *borscht belt* caters largely though not exclusively to a Jewish clientele from New York City. It takes its name from the popular beet soup noted above that was introduced to America by Russian Jews and is consumed in large quantities at the *borscht belt* or *borscht circuit* resorts.

bosey; googly. *Bosey* is a cricketing term familiar to Australians but not much used anymore in England, where it originated. The term honors the English bowler, B. J. T. Bosanquet, who popularized the technique known elsewhere as the *googly* when he toured Australia in 1903–04. The *googly* is, according to the *Oxford English Dictionary*, "an off-break ball bowled with leg-break action." There is no popularly known technique in American baseball, basketball, or football named after its player-inventor, so B. J. T. Bosanquet is somewhat unique in the world of sports.

bosh. Meaning “stuff and nonsense,” *bosh* came into English from the Turkish word *bosh* for “nothing, empty, worthless.” The novelist James Morier introduced the word in a book about Turkish life published in 1834.

bos'n; boatswain. *Bos'n* is a corruption of *boatswain*, the boy (“swain”) who took care of the ship’s dinghy and summoned its crew. The boatswain didn’t get his whistle until sometime in the 15th century and wasn’t called a *bos'n* for 200 years more.

bosom bread. A historical term for the large flat loaves of bread that black hands working the Mississippi steamboats in the 19th century often carried inside their shirt fronts for snacks throughout the day. They needed such fuel, as these longshoremen expended more energy than almost any other workers at the time.

boss. Early Americans, independent and democratic, never liked the word “master” with all its aristocratic associations. Late in the 18th century they adopted the Dutch word *baas* meaning the same thing, and were soon spelling it *boss*. By as early as 1838 *boss* had achieved common usage and writers as prominent as James Fenimore Cooper were condemning it as a barbaric vulgarization of the language. Some people think that *boss* as an adjective meaning the best, the greatest, is recent teenage slang, but the word has been used in the same sense since the mid-19th century. The usage of *baas* (boss) as a form of address from a black to a white man is dead in Namibia, where it has been banned by law, and it is fast dying in South Africa.

Boston. A historical term once used by Indians of the Northwest for any white American, as opposed to the foreign English, French, and so forth. These Bostons were also called Bostonians by the Indians and were so named because so many settlers came from New England or had connections with that great hub of commerce.

Boston accent. Often used outside New England as a synonym for *New England accent*, perhaps because the accent is so strong in the city, although the accent is not the same in all parts of New England. In Boston one commonly hears such pronunciations as *gull* for *girl*, *shop* for *sharp*, *back* for *bark*, *hot* for *heart*, and *bee-ad* for *bad*.

Boston baked beans. Famous since at least the mid-19th century as the best of baked beans, made with navy beans flavored with molasses and slowly cooked with pork. Baked beans have been the traditional Saturday night supper in New England since early times, though recipes for them vary greatly. Leftover beans were traditionally Sunday breakfast fare.

Boston Brahmin. A Brahmin is a worshipper of the Hindu god Brahma, the creator of the universe. The Brahmin’s status as a member of the highest caste in Hinduism inspired the Americanism *Boston Brahmin* for an aristocratic, upper class, conservative Bostonian; the term was first recorded in January 1861 by Oliver Wendell Holmes in his novel *Elsie Venner* as “the Brahmin caste of New England.” Holmes found the Boston

Brahmins a “harmless, inoffensive, untitled aristocracy . . . which has grown to be a caste by the repetition of the same influences generation after generation” so that it has acquired a distinct character and organization. In November 1947 the *Atlantic Monthly* noted: “The Brahmins do not think of themselves as Brahmins: the word is antique as the wooden cod hanging in the State House.” Antique or not the term is still widely used, usually in a humorous way. *Brahmin caste* is a synonym.

Boston Braves. A National League baseball team that was named after the New York City Tammany Hall political machine. Tammany politicians had invested in the club in 1912 and since members of the political club were called “braves,” in honor of the Indian chief for whom Tammany was named, the name was applied to players on the baseball team. The Braves moved from Boston to Milwaukee in 1953 and later moved on to Atlanta. See DODGERS.

Boston fern. See BRAMLEY’S SEEDLING.

Boston Pops. Members of the Boston Symphony orchestra, founded in 1881 and one of America’s oldest symphony orchestras, make up the Boston Pops, which plays more *popular* light music rather than classical music. They usually perform at summer concerts.

Boston strong boy. A nickname of John L. Sullivan, late-19th-century bareknuckle (no gloves) boxing heavyweight champion. He was also called *The Boston Hercules*, *Boston’s Pet*, *Boston’s Pride and Joy*, *The Boston Miracle*, *Young Boston Giant*, *Boston’s Goliath*, and *Boston’s Philanthropic Prize-fighter*, among many more nicknames.

Boston Tea Party. The first act of violence in the disputes leading to the Revolutionary War, occurring on December 16, 1773 when members of the Sons of Liberty, incensed by the tax on tea, boarded British ships and dumped 342 chests of tea into Boston Harbor.

Boswell; boswellize. “I have a notion,” Somerset Maugham once observed, “that it is pleasanter to read Boswell’s record of the conversations than it ever was to listen to Dr. Johnson.” *Boswell*, after the ultimate in biographers, honors James Boswell (1740–95), whose *The Life of Samuel Johnson* (1791) is the prototype of biographies. Boswell, born in Scotland, met Dr. Johnson only after numerous rebuffs but became both friend and admirer of the great English man of letters. Over a relatively short period, he recorded in detail Johnson’s words and activities. “That Boswell was a vain, intemperate man of dubious morals is of no matter to history,” writes one biographer. “He shines in the reflected glory of his great portrait.” To *boswellize* means to write biography in the same detailed, intimate and faithful manner as “Bozzy” did.

botanomancy. Botanomancy is divination by leaves. The most popular method was to write sentences on leaves as possible answers to a question. The leaves were then left outside exposed to the wind, and those that weren’t blown away were supposed to compose the answer. The practice and word date

back to at least the early 17th century. Botanomancy's earliest renowned practitioner was the Cumaean Sibyl.

Botany Bay. Captain James Cook named Botany Bay after the many new botanical specimens he found there on his voyage to Australia in 1770. Later, the inlet's name came to be wrongly applied to a convict settlement at Sydney, and even to the whole of Australia.

both ends against the middle. See PLAY BOTH ENDS AGAINST THE MIDDLE.

bottle. One persistent old joke has *The War to Suppress Yankee Arrogance*, one of the 20 or so Southern names for the Civil War recorded in these pages, arising from a dialect difference. It seems that three high-ranking Northern generals stomped into a Washington, D.C., bar and shouted, "We want a bottle right away!" A Southern spy overheard them and breathlessly reported to General P. G. T. Beauregard: "Top Union generals want a bottle right away!" Chivalrous Beauregard obliged, leaving the evening's quadrille in Montgomery and proceeding to Charleston, South Carolina, where he gave them the *bottle* (or battle) of Fort Sumter.

bottom dollar. See BET ONE'S BOTTOM DOLLAR.

bottomless pit. The expression is from the book of Job in the Coverdale translation of the Bible (1545): "So shall He keep thee from the bottomless pit that is beneath." Hell is also called the bottomless pit in Revelation 20:1. The *Angel of the Bottomless Pit* is the devil. British politician William Pitt the Younger (1759–1806) was jokingly called *Bottomless Pitt* because he was so thin.

Bottomley's Own. Surely the only army named for a writer. In 1916 author Horace Bottomley wrote an article for *John Bull* revealing that too many British armies were "rotting in England" instead of fighting the Great War. The 12th London regiment had been encamped at home for a long time and was quickly dispatched to the front, soon becoming known as *Bottomley's Own*.

botulism. Why, you ask, does the Latin word for sausage, *botulus*, give us the English word *botulism*, first recorded in 1878, for "a form of food poisoning"? The answer is that the earliest cases of such food poisoning through improperly stored food involved canned sausages.

bougainvillaea. The largest island in the Solomon group, two Pacific straits, and a brilliantly flowering South American vine are all named after the French navigator and adventurer Louis-Antoine de Bougainville (1729–1811). Bougainville commanded a French expedition around the world in 1766–69, "discovering" the Solomon Islands and Tahiti. Naturalists in his party named the woody climbing vine family, of which there are about a dozen known species, *Bougainvillaea* in his honor. Bougainville's descriptions of the natives he encountered on his voyages helped popularize Rousseau's theories on the morality of man in his natural state, especially as concerns sexual freedom. He fought for America during the Revolution, and in his

later years Napoleon I made him a senator, count of the empire, and member of the Legion of Honor. The plant named after him is often cultivated in greenhouses, can be raised outdoors in the southern parts of the United States, and is regarded as the handsomest of tropical vines.

boughten goods. Once common as a participial adjective in the U.S., *boughten* is rarely heard any more, though it is listed in the *O.E.D.* as poetic dialect and an Americanism. *Boughten goods* is sometimes used today as a pseudo-rustic term meaning "manufactured or store bought things that are valued above familiar, homemade ones."

bought the farm. As late as the Vietnam War, soldiers killed in action were said to have *bought the farm*. The expression was inspired by the draftees's dream to go home—in many cases to a peaceful farm, or perhaps to buy a farm—in any case, to settle down somewhere far away from the army and war. "Well, he finally did buy the farm," a friend could say on hearing of the death of such a man, and the expression was used so often that *bought the farm* became an ironic synonym for death. The phrase dates to World War II or earlier. Here's another guess at its origin: When a farmer takes a bank mortgage there is a life insurance claim that is built into the payment, so that when the farmer dies the farm becomes the property of his estate; hence, he has finally bought the farm.

Bouguerean quality. The French painter Bouguerean (1825–1905), according to Partridge, "excelled in delicate presentation of the mostly feminine nude." This was considered "a risky ef-feminacy" at the time.

bouillabaisse. A French invention made of fish and shellfish, *bouillabaisse* derives from Provençal words meaning "boil it, then lower the heat." It has a worldwide reputation. In Greece it is called *psaro*, in Italy it is *zuppa di pesce*, and in Belgium it's *Ghentsche waterzoaie*. In his *Gastronomy of France* chef Raymond Oliver tells the legend of the spurned lover who invented *rouille*, the hot pimento sauce that makes *bouillabaisse* so passionate a potage. This poor sailor sat on the Martigues quay, sadly watching his perfidious beloved sail off with a rich Greek shipowner (they've always been around) when she added humiliation to heartbreak by tossing him the liver of a *racasse*, or scorpion fish, that the yacht's cook had been cleaning on deck. "There, that's for you!" she cried scornfully. But the sailor treasured even the scraps from her hands, and crushing the liver with garlic and oil, he cooked it with pimento and—marvelous to relate—from the moment he first tasted it he found *all* women lovely. "As *rouille* increases *bouillabaisse's* erotic proportion a hundredfold," Oliver concludes, "the perfidious girl was forgotten on the spot. Once more, a fairy tale with a happy ending."

Boulangism; boulangerite. General Georges-Ernest-JeanMarie Boulanger (1837–91) won the admiration of all France for his exploits during the Franco-Prussian War. That he was a handsome man who looked impressive astride a horse in parades didn't hurt his image, either. In 1886 Boulanger was made minister of war and insisted that he was the man to retrieve the lost glories of France with doctrines of militarism and

reprisal against Germany. For a short time a wave of political frenzy called *boulangisme* swept over France, but the movement came to nothing, the general in reality no Napoleon and his backers largely reactionary elements. Boulanger eventually went into exile, ending his life in a suburb of Brussels as a suicide.

boulevard. Stroll down a boulevard and you are literally strolling down a military rampart or bulwark. The first boulevard was a wide promenade made from the old defensive walls encircling Paris. This was called *le boulevard* after the abandoned ramparts it followed, and was soon applied to any similar broad street.

bouncer; checker-out. The American *bouncer*, for “a person who acts as a guard in a disco, nightclub, brothel, or bar, someone who bounces out unruly people,” dates back to Civil War days. *Checker-out* is the British term for the same, but it seems to have been coined later, in about 1880.

Bouncing Bet (*Saponaria officinalis*). This plant lathers in water, which accounts for its soapy botanical name. Its common name *Bouncing Bet* or *Bouncing Betty* honors British barmaids who were in days past often called Bet or Betty and cleaned beer bottles with the plant’s branches.

bourbon. *Bourbon whiskey* takes its name from Bourbon County, Kentucky, named for France’s Bourbon kings, and home of the first still that produced it. The word *Bourbon* for a political reactionary also derives from France’s Bourbon kings, a dynasty that reigned for over 200 years beginning in 1589, and of whom it was said that they “forgot nothing and learned nothing.” *The Dictionary of Americanisms* gives its first use for a political diehard as 1876.

Bourbon Street. Another storied American street, this one named for the French Bourbon kings (see **BOURBON** above). In *Love and Money* (1954), Erskine Caldwell called the noted New Orleans street “that Southern gentleman’s skid row.”

the Bourse. The world’s first stock exchange, in Belgium, originated in the 14th century. Few people are aware that it takes its name from the Van der Buerse family in Bruges, at whose house early traders congregated.

boutique. Though it has been used for over 700 years in France for a small retail shop, *boutique* only became widely known in the 1950s in the sense of a small shop selling very fashionable merchandise. It is so used now all over the world.

bouts rhymes. See **YESTERYEAR**.

Bovarian. See **MADAME BOVARY**.

Bovril; vril. The well-known trade name *Bovril* for a concentrated essence of beef has an unusual ancestry. *Bovril* is composed of the Latin *bovis*, ox, and *vril*, which is an invented literary word. The British novelist Edward George Bulwer-Lytton (1803–73) coined the word *vril* in his novel *The Coming*

Race (1871), describing it as an “electric fluid called Vril, which was capable of being raised and disciplined into the mightiest agency of all forms of matter.” This seemed perfect for the manufacturer of the beef essence in 1887, and he quickly adopted it as the last half of his product’s name. It has been suggested, too, that *vril* has a linguistic connection with *virility*—all the better as far as the company was concerned.

bow-and-arrow squad. A position assigned to the member of a police department who has been relieved of his weapon and can do no fieldwork.

Bowditch. A name for the navigation handbook *American Practical Navigator*, prepared by American navigator, astronomer, and mathematician Nathaniel Bowditch (1773–1838) in 1802 and published in a series of editions ever since. Nathaniel Bowditch left school in Salem, Massachusetts, at age 10 and went to sea, where he studied navigation, correcting some 8,000 errors in the leading guide of his time. So respected was Bowditch and his work on navigation that ships of all nations flew their flags at half-mast when he died.

bowdlerize. His inability to stand the sight of human blood and suffering forced Dr. Thomas Bowdler to abandon his medical practice in London, but this weakness apparently did not apply where vendors of words were concerned. Bowdler so thoroughly purged both Shakespeare and Gibbon that they would have screamed in pain from the bloodletting had they been alive—to *bowdlerize* became a synonym for “to radically expurgate or prudishly censor.” Thomas Bowdler, the most renowned of self-appointed literary censors, was born at Ashley, near Bath, England on July 11, 1754. After he retired from medicine, a considerable inheritance enabled him to travel about Europe, where he wrote accounts of the Grand Tour that seem to have offended or pleased no one. Though he came from a religious family, Bowdler never earned the “Reverend Doctor” title often applied to him, and his early years are conspicuous for the lack of any real accomplishments, unless one counts membership in organizations like the Society for the Suppression of Vice. Only when he was middle-aged did he retire to the Isle of Wight and begin to sharpen his rusty scalpel on the Bard of Avon’s bones. His *Family Shakespeare* was finally published in 1818. In justifying this 10-volume edition, Bowdler explained on the title page that “nothing is added to the text; but those expressions are omitted which cannot with propriety be read aloud in a family,” adding later that he had also expunged “Whatever is unfit to be read by a gentleman in a company of ladies.” He would probably have turned his scalpel to other great authors if death had not excised him in 1825. About 10 years later Bowdler’s name was first used as a verb, the official definition then being “to expurgate by omitting or modifying words or passages considered indelicate or offensive.” Today the word means “prudish, ridiculous censorship.”

bowels of compassion. Though not a common expression anymore, these words are frequently encountered in literature. The phrase itself is given in the King James Bible (1 John 3:17), and Shakespeare, Congreve, and other great writers all made use of the ancient idea that the bowels are the seat of misery or compassion in the body—just as the liver

was supposed to be the location of courage; the heart of affection and learning (*learn by heart*); the head of understanding; and the spleen of passion. The blunt word *bowel* comes from the Latin *botellus*, little sausage or pudding, a diminutive of the Latin word for sausage, *botulus*. Aside from the expression *the bowels of the earth*, it is heard today mainly in medieval references or in the entreaties of parents toilet-training children. Certainly it isn't associated with compassion anymore, so once-current expressions such as *the bowels of compassion*, *the bowels of pity*, *the bowels of Christ*, and *child of my bowels* have all but died.

bowery; bowery boys. *Bowery* derives from the Dutch word for "farm," *bowerij*, and this was originally its meaning in early New York. But the word came to be applied to an area in downtown Manhattan that was originally the site of a farm and became the city's most famous skid row, *the Bowery*, long noted in song and story for its saloons and cheap hotels. It is also the name of a street, stretching from Chatham Square to Cooper Square, that was once an Indian path. Huntz Hall, Leo Gorcey, and the other *Bowery Boys* of movie fame take their names from a number of real gangs dating back as far as the 1700s. Other gangs of the day, to name only a few, include the Dead Rabbits, the Roach Guards, the Shirt Tails, and the Plug Uglies. Hell-Cat Maggie, a female member of the violent Dead Rabbits, "filed her front teeth to points and wore artificial brass fingernails," according to Luc Sante's *Low Life* (1991).

bowie knife; Arkansas toothpick. One writer defines the *bowie* (pronounced "boo-*ie*") *knife* as "the principal instrument of nonsurgical phlebotomy in the American Southwest." Sad to say, this lethal instrument was not invented by the legendary Colonel James Bowie (1796–1836), friend of Davy Crockett and hero at the Alamo. According to testimony by a daughter of Rezin Pleasant Bowie, the colonel's older brother, it was her father who invented the knife in about 1827, though Jim Bowie did make it famous in a duel that year at Natchez, Mississippi, in which six men were killed and 15 wounded. The common long-bladed hunting knife was originally made at Rezin Bowie's direction by a Louisiana blacksmith, who ground a large file to razor sharpness and attached a guard between the blade and handle to protect the user's hand. After he killed one man with it in the Natchez duel, Colonel Bowie is said to have sent his knife to a Philadelphia blacksmith, who marketed copies of it under his name. Its double-edged blade was 10 to 15 inches long, and curved to a point. Once called an Arkansas toothpick, it was even carried by some congressmen.

bowing. *Bowing*, to show someone respect, derives from an Old English word meaning the same, and the custom is recorded as far back as *Beowulf*. While Westerners commonly bend the neck and uncover the head when bowing, people in several other cultures uncover the feet to show their respect. As Brewer explains, this is because "with us the chief act of investiture is crowning or placing a cap on the head; but in the East it is putting on the slippers."

to bowl. In some U.S. prisons no talking is allowed after lights out. Prisoners have been known to circumvent this rule by flushing the toilets in their cells until they are dry and can be used as "telephones." When they talk into the empty bowl their

voices can be heard clearly in the next cell. *To bowl* has thus come to mean to call another prisoner at night,

bowler; billycock. The same hat by different names, each probably named for a different person. Its shape can be traced back to the helmet worn by the ancient Greeks, but the billycock, a round, soft felt hat with a wide brim, most likely first graced the head of William Coke, a rich British landowner, in 1850. It is said to have been designed at "Billy" Coke's request by a hatter named Beaulieu because Mr. Coke's tall riding hat was frequently parted from his head by tree branches when he rode to the hounds. There is little doubt about the origin of *billycock* then, and *bowler* may derive from the name of the hatter, M. Beaulieu. The only trouble is that some authorities credit a London hatter named William Bowler, quoting a newspaper item tracing his "invention" to 1868. Still others say *bowler* is simply named for the hat's "bowl shape" or from the fact that it is round, stiff-brimmed, and can be bowled along.

bowl game; bowl. The first football bowl game ever recorded was the 1916 Pasadena Bowl (which was a year later renamed the Rose Bowl). *Bowl*, however, had been a synonym for a football stadium since 1914, when the Yale University stadium was first called the Yale Bowl.

bowling. Pins and balls for a sport similar to bowling were found some years ago in an Egyptian tomb dating to 5200 B.C. Bowling was long banned in England, along with football and other games, because kegling diverted men from practicing sports more valuable to a country often at war, such as archery and swordsmanship. Several English monarchs did like to bowl, though; in fact, Henry VIII built his own alley at Whitehall. The Dutch brought bowling to America, and Bowling Green in New York's financial district is so named because the sport was taught there.

bowl over. Apparently this term, meaning to surprise greatly, is not from bowling, nor is it an Americanism. Logan Pearsall Smith's *Words and Idioms* (1925) claims it derives from a cricket term describing the bowler throwing the ball to the batsman. First used in England, the expression crossed the Atlantic by the end of the 19th century.

bow-wow. The sound of a dog's bark, as is *woof-woof*. Such sounds vary from language to language. In German, for instance, a dog's bark is *wau-wau*.

box. See TO BE IN A BOX.

box and cox. This old expression came to mind after I read a report that poor immigrants in Central Islip, New York, are renting beds in private residences for \$300 a month, these "hot beds" (so called because the sheets are always warm) rented for night and day shifts of 12 hours. This practice of alternate privileges has been called *box and cox* since 1847, when English playwright John Maddison Morton's one-act farce of the same name made the expression popular. In the play *Mrs. Bouncer*, a landlady, rents the same room to Box, who works nights, and Cox, who works days. When one of them arrives home out of

turn, the fun begins. The author's father, Thomas Morton, also contributed a word to the language. See MRS. GRUNDY.

Boxer Rebellion. The Chinese anti-foreigner movement early in the 20th century originated with a Shantung secret society known as the I-Ho-Chuan, which the British thought meant "righteous, uniting fists" (it actually meant "righteous harmony band"). So the British, or "foreign devils," as they were called, punned upon members of what they thought were the "fists" and called them Boxers, dubbing their uprising the Boxer Rebellion.

boxes. Opera houses were the first theaters to feature the partially enclosed rooms that came to be called boxes. While opera houses still have boxes encircling the auditorium, most other theaters have abandoned them because of their poor view of the stage. Once, however, they were the only desirable choice for those who came to the theater to be seen as much as to see. Some boxes held as many as 20 people, and they were often equipped with blinds that could be pulled down to give occupants complete privacy when, for one reason or another, they didn't care to watch the play. As early as Shakespearean times rich patrons were allowed to buy seats onstage in English theaters, usually to the dismay of the actors, who objected to fops proudly displaying their new clothes and chattering endlessly, paying no attention to the play.

boxing. Scholars have declared the name of this sport to be "of uncertain origin," suggesting that it may derive from Middle English *box*, a blow, or *boxen*, beat. Others say that *boxing* comes from the boxlike shape of a prizefighting ring. The sport seems always to have had its grudge matches and prefight stare-downs. Postfight imbroglios weren't unknown in the ancient Olympic games. In one case, a boxer arrived too late to fight, put on his gloves, ran after the winner, and began punching him, crowned as he was with his wreath of wild olive. The champion finally hid among the judges. See BANTAMWEIGHT; BEAT TO THE PUNCH; BELCHER; BELOW THE BELT; BENDEGO; BRAINS KNOCKED OUT; BRODERICK; BROWN BOMBER; BUCKHORSE; CAULIFLOWER EAR; CESTUS; DO A BRODIE; DOWN AND OUT; HANG IN THERE; HAPPY AS LARRY; HEAVYWEIGHT; INFIGHTING; KILLER INSTINCT; KNOCK DOWN, DRAG OUT FIGHT; JACK DEMPSEY; JACK JOHNSON; JOE LOUIS; LEAD WITH YOUR CHIN; MUTT AND JEFF; NOBLE SCIENCE; ON THE ROPES; PALOOKA; PLUG UGLY; PUT ON THE GLOVES; PUNCH DRUNK; PUNCHING BAG; PUT UP YOUR DUKES; REAL MCCOY; ROLL WITH THE PUNCHES; THROW IN THE TOWEL; SAVED BY THE BELL; SEEING STARS; STRAIGHT FROM THE SHOULDER; WE WUZ ROBBED; ZIGGED WHEN I SHOULD HAVE ZAGGED.

box office. Most likely *box office* derives from the theater office that sold box seats to customers. But an old story insists that the expression originated in Elizabethan times, when theater admission was collected by passing a box attached to a long stick among the audience.

box score. From its original baseball use to describe a condensed statistical record of a game that includes the performances of both teams and all the players, *box score* has taken on the extended meaning of a record of results in any area, as in

the box score of an elected political figure or corporate administrator. Similar summaries of baseball games were printed in newspapers as early as 1853, but the term *box score* isn't recorded until the turn of the century, so named because these summaries were usually printed in boxed-off sections on the sports pages of a newspaper.

box the compass. Mariners who boxed the compass literally named all 32 points of the compass, from north through east and back to north. One describes a complete turn in doing so, however, which is why, in the early 19th century, the expression *to box the compass* began to be used figuratively for a complete or full turn.

boy. The *O.E.D.* traces *boy*, which came into the language in the late Middle English period, to the Old French *abuie*, "fettered or chained," which suggests that the word originally meant a slave. Other sources, however, suggest the Frisian *boi*, "young gentleman," the German man's proper name *Boia*, and the Old Norse, *bofi*, "rascal," among other choices. Nobody really knows. Male American Indians, black slaves, and white indentured servants who were little more than slaves, were all called boy in America before the Civil War, and black men were commonly called the same for more than a century after. The term is insulting, however, not because *boy* here means a male child. This *boy* is a word dating back to the 13th century that originally meant a low menial servant, deriving from the Latin *boiae*, "fetters."

boycott. Captain Charles Cunningham Boycott (1823–97) lived to see his name immortalized as a synonym for a refusal to deal with a person or business firm, the word current not only in English but in French, German, Dutch, Russian, and a number of Asiatic languages as well. Boycott, a stubborn British soldier turned farmer, had been hired to manage the Earl of Erne's estates at Lough Mask House in Connaught, County Mayo, Ireland. Absentee landlords like the earl owned most of the land in Ireland at the time and were evicting poverty-stricken tenant farmers who could not pay their rents. The fiery Irish leader Charles Stewart Parnell had already formed his National Land League, agitating for land reform by these "English usurpers." In September 1880, Parnell addressed tenants near Connaught, advocating that anyone working a farm from which a man had been evicted, or any landlord refusing to accept his new, reduced rent scales, should be ostracized "by isolating him . . . as if he were a leper of old . . . by leaving him strictly alone. . . ." When Captain Boycott harshly refused to accept more reasonable lower rents and tried to evict one farmer, Boycott's tenants forced his workers to leave him; organized marauders destroyed his property; his fences were torn down and cattle driven into his fields; he was refused service in all local stores; his mail went undelivered; he was jeered in the streets and hanged in effigy; and his life was repeatedly threatened. So successful had been the famous "excommunication" against him that it was commonly called a boycott in the papers within two months.

boy meets girl. A phrase meaning any conventional love story. Also *girl meets boy*. Cleaning out William Faulkner's desk after he left the Warner Brothers writing factory in the 1930s, coworkers found the fruits of his labor: an empty whiskey bot-

tle and a piece of paper on which he had written, more than 500 times, *boy meets girl*.

boyo. First recorded in 1870, this Anglo-Irish or Irish-American word for boy, fellow, man, or friend was perhaps based on *bucko* and is often heard today.

the boys. *The boys*, for “political hangers-on,” has a long history in America, dating back to at least 1832. It is often spelled *b’hoy*, the Irish pronunciation. See **BOY**.

boysenberry. Americans have always been pie makers without peer, thanks to sugar resources close by, an abundance of native fruit, and a willingness to experiment. The blackberry, long regarded as a nuisance and called a bramble or brambleberry in England, is a case in point. Many varieties of blackberries have been developed here, long before anyone paid attention to the family *Rubus* in Europe. Among them is the boysenberry, a prolific, trailing variety that is a cross between the BLACKBERRY, RASPBERRY, and LOGANBERRY, another eponymous berry. The boysenberry, a dark wine-red fruit that tastes something like a raspberry, was developed by California botanist Rudolf Boysen in the early 1900s. Single plants commonly produce two quarts of the large 3/4-inch round, 1 1/2-inch-long fruit.

boys of the bulldog breed. Pugnacious Englishmen, often sailors, are called boys of the bulldog breed. The words come from the popular 19th-century song “Sons of the Sea, All British Born.”

bozo. A word of southwestern origin with Spanish antecedents that means fellow or man but has come to have a derogatory connotation. It possibly derives from the Spanish *mozo* (young man). As one champion of this theory explained: “With the word *’bo* (for hobo) in mind, and a cold in the head, what more simple than to change *mozo* (pronounced with the Mexican *s*, not the Spanish *th*) into *bozo*?”

bozzonga. I haven’t found this word meaning “ass” or “behind” in any dictionary, slang or otherwise, but it was definitely used by tennis star Billie Jean King in September 1973. “I hate sitting around on my bozzonga,” she told a television interviewer at the time, referring to her need to play. Maybe Billie Jean invented the word.

bra. The brassiere, which Roman matrons wore in the form of leather straps beneath the breasts and which euphemizers have called “breast shields” and “cup forms,” probably takes its name from the French *bras*, “arm.” The name was first coined in about 1914. However, in a punning hoax, one source claims that its inventor in modern times was Otto Titzling, who designed a bra for a hefty opera singer named Swanhilda Olafsen in 1912. Titzling failed to patent his invention, but Mary Phelps Jacobs (a descendant of Robert Fulton of steamboat fame), who had independently invented a similar device, did so, filing for a patent application for a brassiere in February 1914. The same source credits dress designer Phillippe de Brassière, who glamorized the “chest halters” and sold them under his name beginning circa 1929, popularizing *brassiere* and hence *bra*. A poem sent to Macy’s complaint department entitled *On a Bra*:

I think that I shall never see
A bra that’s fashioned just for me?
I thought that I should order “C;”
Surveyed again and ordered “B;”
“B” is too large, to my dismay,
And yet I am too big for “A.”
Poems are made by fools like me;
I guess my bras will have to be.
The gist of this is just to say,
Please come and take the bra away.

bracero. Any Mexican laborer in the U.S. Formerly meaning a Mexican migrant picker legally admitted to the U.S., the word derives from the Spanish *bracero*, “a person with strong arms.”

bradbury. One of the few men to have bank notes named for them, even in slang, was Sir John Bradbury, whose signature as Secretary of the Treasury from 1914–19 was on the British one-pound note, which was widely called a bradbury.

Bradley. According to Gary Jennings in *Personalities of Language* (1965): “All of the few Chickahominy Indians still existing in Virginia are surnamed Bradley. This commemorates either the popularity or the fecundity of an early English colonist, a runaway indentured servant, who joined and married into the tribe.”

braggadocio. You will look high and low in Italian dictionaries for this word, to no avail. For it was invented by Edmund Spenser (1552–99) in *The Faerie Queene*. Spenser gave the name Braggadochio to a loud-mouthed braggart in his poem who was finally revealed as a coward, and may have based his character on the duc d’Alençon, a suitor of Queen Elizabeth. The word came to mean “any braggart,” and finally “empty or loud boasting.”

braggin’ ranch. A big Texas ranch. Wrote Edna Ferber in *Giant* (1952), “We only got a small place—couple hundred thousand acres—it ain’t what you’d call a braggin’ ranch.”

Bragg’s law; Bragg angle; Bragg loop. Only one father-and-son team has jointly won the Nobel Prize in physics (or any other field). The winners are English physicist William Henry Bragg (1862–1942) and his son, physicist William Lawrence Bragg (1890–1971), who are responsible for *Bragg’s law*, which is “the fundamental law of X-ray crystallography.” The *Bragg angle*, “the small angle between an incident X-ray beam and planes of a crystal,” also honors them. The *Bragg loop*, an antisubmarine device used in World War I, was invented by the Braggs after they won the Nobel in 1915.

Brahma. A famous western cattle breed first imported from India, its place of origin, by South Carolinian Dr. James Bolton Davis in 1849. See BOSTON BRAHMIN.

Brahmacharya. Literally, this means “the search after Brahma” or “the search after God.” “Life without Brahmacharya,” Gandhi said, “appears to me insipid and animal-like. The brute of nature knows no self-restraint. Man is man because he is

capable of, and only insofar as he exercises, self-restraint." See also BOSTON BRAHMIN.

Brahmin. See BOSTON BRAHMIN.

braille. When only three years old, Louis Braille was blinded by an awl driven into his eye while he was playing in his father's leather-working shop. Total blindness extended to both eyes, but young Louis attended the village school in Coupvray outside of Paris, where he learned his alphabet by feeling twigs in the shape of letters, and then the *Institution Nationale des Jeunes Aveugles*, where he learned to read from three huge 400-pound books engraved with large embossed letters. This last method had been invented by Valentin Hauy, Father and Apostle of the Blind, the Institute's founder, but it could not be easily written by the blind and was thus inadequate. At about the time that Louis Braille was made a junior instructor at the Institute, French army officer Captain Charles Barbier introduced his "night writing," a system of 12 raised dots and dashes that fingers could "read," enabling brief orders like one dot for advance, or two dots for retreat to be written with a simple instrument and understood in total darkness. Barbier demonstrated his invention at the Institute and it fired young Braille's imagination. When only 15 he began work on the improved system that bears his name. Louis Braille, highly regarded as an organist and composer in his own right, also invented a braille musical notation, but braille was not officially adopted at the Institute where he taught until 1854, two years after his death. Tradition has it that a blind organist performing at a fashionable salon told her audience that she owed everything to Louis Braille, who had died unheralded of tuberculosis in 1852 when only 42 years old, and that her touching story finally led to universal recognition of his system.

brain chill. A recent American expression describing the shooting head pain suffered by those who eat ice cream too fast. Also called brain freeze.

brain drain; brain gain; outsourcing. After World War II, Britain found that many of its highly trained and skilled professionals, often scientists, doctors, and teachers, were moving to the United States, where they could obtain higher salaries and better working facilities. This they called *brain drain*, which in time suggested *brain gain* when industrial countries throughout the world expanded their production and began to hire more skilled people. In recent years (since about 1979), the controversial term *outsourcing* has come to mean, among other things, to contract or farm out work to other countries using skilled outside labor, thus depriving U.S. workers of jobs.

brain skip. Essentially the same as *senior moment* (qv), without the insult to seniors. A *brain skip*, the inability to remember something, is thus more likely to happen to anyone rather than to an old person. It usually happens in the midst of a discussion or a conversation.

brains knocked out. *To have one's brains knocked out* is not a modern Americanism for "to be badly beaten in a fight." It dates all the way back to the late 16th century and the first Brit-

ish bare-knuckle "fistfights," as boxing matches were called at the time. See BELOW THE BELT.

brains of the Confederacy. See BENJAMIN.

brain trust. James M. Kieran of the *New York Times* called the group of experts surrounding presidential candidate Franklin Delano Roosevelt the brains trust in his 1932 dispatches, the term having previously been used in sarcastic reference to the first American general staff in 1901, not at all in the same sense. Headline writers quickly chopped off the cumbersome *s*, and by the time Roosevelt became president his larger group of experts was called the brain trust. Brain trust now is applied to trusted business as well as government advisers.

brainwashing. *Brainwashing* was coined during the Korean War, when a number of American prisoners of war violated military codes after being captured, imprisoned, interrogated, and tortured by the North Koreans and Chinese. The vivid term is not an Americanism, however, being a direct translation of the Mandarin Chinese *hsi*, "to wash," and *nao*, "brain." See CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.

Bramley's seedling. Bramley's seedling is a delicious English apple, notable not only because it was discovered by a butcher named Bramley of Southwell, Nottinghamshire in his garden, but because it is a "sport," or mutation. Most mutations, or changes in genes, occur in seedlings, but the Bramley was the result of a bud mutation, a variation in which only part of a plant is affected. Thus the first Bramley as well as the first Golden Delicious apple, and the first New Dawn Rose, among others, developed on one branch of a plant bearing an entirely different race. The Boston fern, which originated in a shipment of ferns sent from Philadelphia to Boston in 1894, is another well-known mutation, but the most famous bud sport is the nectarine.

branch water. A branch is a tributary stream, or any stream that isn't a large river. Branch water is pure, natural water that comes from such a stream or creek, as in "I'll have a bourbon and branch water."

brand. *Brand*, though commonly used in the U.S. for over a century, is not of American origin. It is an Old English word meaning "torch" that is related to the word *burn*. The ancient Egyptians marked their cows with brands thousands of years ago.

brand-new. *Brand-new* has nothing to do with the brand name of a product. It is rather associated with the word *brand* that is cognate with "fire," as in firebrand. The product would thus be fresh from the anvil, or as Shakespeare put it in *Twelfth Night*, "fire-new."

brand of villain. Up until the early 19th century, when the practice ended, British criminals were branded with large letters indicating their crimes. Murderers or manslayers were branded with an *M* on the thumb or back of the right hand, while thieves got a *T* on the left hand; rogues, usually kidnap-

pers, had an *R* branded on their shoulders; and felons were marked with an *F* on the cheek. In early times the English also branded people convicted for brawling in church (*F* for felon), and blaspheming (*B*). Some of these brands were used in colonial America, too, and we had one of our own, the *A* or Scarlet Letter that was sewn on the dress of an adulteress. English criminals often pleaded *BENEFIT OF CLERGY* and were released to a church court, where they automatically received lighter penalties. But even if they did so, they were frequently branded before the secular court let them go. Branded criminals were thus a familiar sight on the streets of London and other large cities, and it was their presence that suggested the old expression *he had the brand of villain in his looks*.

brandy. *Brandy* is a shortening of *brandywine*, which comes from the Dutch *brandewijn*. *Brandewijn*, in turn, derives from the Dutch *branden*, “burn” and *wijn*, “wine,” translating as “burned (or distilled) wine.” The word is first recorded in the early 17th century.

brass; brazen. As the ancient word for an alloy of copper with tin or zinc, *brass* is of unknown origin; it comes directly from the Anglo-Saxon *braes*, not found in any other language, though it may have some relation to the Danish *brase*, “to fire”—as in the firing and hardening of metal. The metal brass does give us several other easily explained words, though. *Brass* meaning “shameless impudence” goes back to Elizabethan times and is explained by the 1642 quotations cited by the *O. E.D.*: “His face is of brasse, which may be said either ever or never to blush.” *Brazen*, “shamelessly impudent, as bold as brass,” is simply from the English word *braze*, “to make hard like brass.” The word *brass*, used to describe anyone in authority, is a shortening of the British *brass hat*, for “a high-ranking military officer,” a term used before the turn of the century and referring to the oak leaves, commonly thought to be brass, that adorned the brim of a British officer’s cap. This term was adopted by U.S. soldiers in World War I, was streamlined to *brass* (or *top brass*, *big brass*, *heavy brass*, etc.) in World War II and was then applied to high-ranking civilian officials, executives, and influential people in general, none of whom had “scrambled eggs” (gold braid) on their hats.

brass ankle. This often derogatory name for a person of mixed race was first recorded in 1930, according to *The Random House Historical Dictionary of American Slang*. However, the words are probably considerably older. One possible explanation has the term deriving from Portuguese settlers in South Carolina who intermarried with local blacks. These racially mixed people then tended to marry within their own group. Noted for the brass anklets they liked to wear and their dark skin, they came to be known as brass ankles or black ankles.

Brass Monkey. The flag of the famous Cunard Line has been since the 19th century a splendid gold lion on a red field. Mariners, unimpressed by such splendor, have almost as long called it the *Brass Monkey*.

brass tacks. There are no brass tacks, only brass-headed ones, used because they rust less easily. The American expression, which has been traced back only to 1903, though it may have

been common before then, has several possible origins. Brass-headed tacks were used in upholstering chairs, especially at the foundations of the chairs, and in taking a chair apart to reupholster it from the bottom up, craftsmen might have said they were getting down to business, to the root of the matter, getting down to the brass tacks. There is no solid evidence for this theory, however, just as there is none for the country-store hypothesis. Merchants in country stores, it’s said, hammered brass-headed tacks at intervals into their fabric department counters to indicate lengths of a yard, a half-yard and a quarter-yard. After a customer selected the cloth she wanted, the merchant would say, “All right, now we’ll get down to brass tacks—I’ll measure it up for you.” This certainly was a practice in country stores and a common one at about the time the expression is first recorded.

brave as a badger. Ernest Hemingway called his friend foreign correspondent Herbert Matthews *brave as a badger* in the early 1930s. The badger is indeed a brave mammalian creature, furiously protecting its burrow. It gets its name from the French word *baucenc*, which refers to the animal’s badgelike markings on its head. See *BADGER* for more about the creature, which gives its name to Michigan, the Badger State.

brave heart. Courage. “Surely it does require brave heart to farm in these yere hills.” Any hillbilly will tell you that and provide a dozen examples.

brawl. Did the British dance called the brawl, a kind of cotillion popular into the 19th century in which many dancers held hands and moved closer together, have anything to do with our slang expression *brawl*, for “a party”? Some etymologists believe that it is the origin of the word, but others believe the clamor or disturbance of *brawl* in the sense of “an argument” is responsible.

brazen. See *BRASS*.

Brazen Guts. Didymus of Alexandria (ca. 65 B.C.-A.D. 10) was nicknamed Chalkenteros (Brazen Guts or Bronze Guts) by his Greek contemporaries because of his enormous literary output. Didymus actually wrote a stunning 3,500 to 4,000 books over his 45-year lifespan—assuming that he started writing when age 18, that’s roughly 148 books a year, 12 or so a month, about three a week—according to Lionel Casson’s *Libraries in the Ancient World* (2000). No other author comes close, not even Lope de Vega with his 1,500 plays (see *ES LOPE*). Yet only fragments of Brazen Gut’s “vast and varied work” survive.

Brazil. The country of Brazil was named for the wood called brazilwood, not the other way around. Brazilwood is a red-colored wood used as a dye source that takes its name from the Spanish *brasa*, “red coal or ember,” and was used in Europe centuries before what is now Brazil was discovered. Because so many similar dye-wood trees were found there, Portuguese explorers named the country *terra de Brasil*, “land of red dye-wood,” which later became *Brazil*.

bread. As a synonym for money, *bread* is an underworld term, first recorded in 1935 but not widely used until the late

1950s. Several English proverbs equating *bread* with one's livelihood, such as *taking the bread out of someone's mouth*, could have suggested the coinage, or, more likely, it may have been suggested by the common term *dough* for money.

bread (or toast) never falls but on its buttered side. This be-moaning of bad luck may be a much older proverb, but the idea is immortalized in a 1884 poem by English author James Payn (1830–98), who wrote over 100 novels as well as a volume of poems and several nonfiction works:

I had never had a piece of toast
Particularly long and wide,
But fell upon the sanded floor,
and always on the buttered side.

bread and circuses. *Bread and circuses* is a translation of a line by the Roman poet Juvenal that refers to the practice in ancient Rome of government feeding the people and providing them with entertainment to prevent rebellion. The term means the same today.

bread crumbs; fork in the beam. Naval discipline was much harder to take a century or so ago. For instance, when a British senior officer used the expression *Bread crumbs!* at that time, it was a signal that junior midshipmen in their mess were not allowed to hear what was going to be said next and actually had to stuff their ears with bread until the senior officers finished speaking. Similarly, when a senior officer placed a fork in the beam (above his head), it meant that he wanted privacy, and all junior midshipmen had to leave the mess. *See* FORK.

breadfruit. Breadfruit (*Artocarpus incisa*), which grows wild on trees on South Pacific islands, was so named because English seamen who sampled the fruit in the 17th century believed its soft white pulp resembled fresh baked bread—although it tastes something like sweet potato. *See* CAPTAIN BLIGH.

breadline. In *The Dictionary of Americanisms*, *breadline* is said to have been first recorded in 1900, but no specific account of its origin offered. However, in his fascinating book *Here at the New Yorker*, Brendan Gill attributes the expression to the Fleischmann family from whose yeast fortune rose the *New Yorker* magazine. The family ran the Vienna Model Bakery in New York City during the late 1870s: “In order to call attention to the freshness of Fleischmann’s bread and also, it appears, because of an innate generosity, Lewis [Fleischmann] made a practice of giving away at 11 every evening whatever amount of bread had not been sold during the day. The poor lined up to receive it at the bakery door; hence our word ‘breadline.’” The term had its widest use during the Great Depression 50 years later.

breadwinner; bread. *Breadwinner* is one of the few words still retaining the meaning of the Anglo-Saxon word *winnan*, “to toil,” that gives us the word “win”—a breadwinner being one who toils to obtain bread. As slang for money, *bread* dates back to about 1935 and may derive from the Cockney rhyming slang “bread and honey,” for money.

break. When a criminal went to trial or left prison in the late 19th century his friends often took up collections called breaks to raise money for a lawyer or to help give him a fresh start. These breaks possibly took their name from collections performers had made since medieval times during pauses, or “breaks,” in their acts, but there is no solid proof of this. The collections for criminals may have given rise to the expression “to get a break,” meaning “to have some good luck.” Perhaps collection breaks were held long before the first recorded mention of them. Or “to get a break” might come from a break in pool or billiards, where once a player breaks the racked balls he has a chance to make a long, successful run.

break a butterfly on the wheel. Alexander Pope may have coined this phrase and certainly was the first to use it in a poem, “An Epistle to Dr. Arbuthnot” (1735):

Satire or sense, alas! Can Sporus feel!
Who breaks a butterfly upon the wheel.

The “wheel” here is a cruel torture device used to break the bones of criminals. The phrase means to punish someone excessively, to employ overkill.

break a leg! *Break a leg!* means “good luck” in theatrical circles, probably *not* because the great Sarah Bernhardt “had but one leg and it would be good luck to be like her.” No one is sure, but one theory has the expression deriving, possibly through Yiddish, from a German expression meaning “May you break your neck and your leg,” for which I can find no satisfactory explanation. It may also have something to do with wishing someone a “big break,” that is, good luck leading to success. Or bad luck like breaking a leg may simply be wished because actors, a superstitious lot, have long believed that wishing them good luck guarantees something terrible will happen. *See* KILL THE PEOPLE!; THE SCOTTISH PLAY.

breaking a mirror. Almost everyone knows breaking a mirror brings you seven years of bad luck. The Romans introduced this superstition, choosing “seven years” because they believed that a person’s body was rejuvenated every seven years. They also believed that a broken mirror should be buried as soon as possible.

to break Priscian’s head. Priscian was a Roman grammarian of the sixth century. Therefore, *to break Priscian’s head* is to violate laws of grammar. Priscian’s work *Communtarii grammaticae*, long a standard study, was published in 18 books. The term is not heard much anymore. *See also* FOWLER.

Breakspear. Certainly no relation to Shakespeare, but the only English pope, Adrian IV (c. 1100–59, pope from 1154–59) His full name before becoming pope was Nicholas Breakspear.

break the ice. Ice skaters might test the ice in a rink, but would never break it, and so have nothing to do with this expression meaning to be the first to try something, or to break a silence or uneasiness when people meet, etc. The allusion is probably either to ice being sold for the first time in America, in the 1830s, when *to break the ice* came to mean to introduce

something, or to a ship breaking ice in its path so that it could proceed on its journey. There is no proof for either guess.

breastaurant. A humorous definition of a restaurant that serves more than food, often considerably more, including nearly naked waitresses, dancers, and pole dancers.

Breathalyzer. This trademarked portable device that scientifically measures alcohol in the blood, helping to enforce drunk driving laws, was invented by Robert F. Borkenstein (1912–2002) in 1953. Previously, he had helped invent the harder-to-use Drunkometer, among the first of such instruments. For his Breathalyzer Borkenstein was elected by the National Safety Council in 1988 to its Safety and Health Hall of Fame International.

breed a scab on one's nose. American cowboys have used this expression for a century as a warning to a man who is stirring up trouble, looking for a punch in the nose: "Keep talking like that and you'll breed a scab on your nose."

breeding woman. A term used by slaveowners for a slave woman who was kept to bear children. Frederick L. Olmsted's *A Journey in the Seaboard Slave States* (1856) reported, "A breeding woman is worth from one-sixth to one-fourth more than one that does not breed." The vicious term *breeder* was used to refer to men as well as women who were kept to produce children.

breeze. John Hawkins and his men heard the Spanish word *breza*, for the northeast trade winds, on their voyage along the Spanish Main in the mid-16th century. They introduced the word to English, where it became the lovely refreshing *breeze*, which within 50 years was used in the sense that we employ it today.

brevity is the soul of wit. "Since brevity is the soul of wit, and tediousness the limbs and outward flourishes, I will be brief," Polonius says in *Hamlet*. But Shakespeare did not mean *wit* in the sense of a witty remark when he wrote this. He used *wit* here in its older meaning of "wisdom," and what Polonius is really saying is that wise men know how to put things succinctly—which the Bard knew was a dramatically ironic thing for a windy chap like Polonius to say. The newer meaning of *wit* was known in Shakespeare's time; he himself used it in *Much Ado About Nothing*: "They never meet but there's a skirmish of wit between them." Yet "brevity is the soul of wit" meant "brevity is the soul of wisdom" for many years before it took on its present, universal meaning. Swinburne's "An Epigram" (1802) is both witty and wise:

What is an Epigram? A dwarfish whole,
Its body brevity, and wit its soul.

Brevoortia Ida-Maia. *The floral firecracker*, as this plant is popularly called, shows how oddly things sometimes get their names. Ida May, the daughter of a 19th-century California stagecoach driver, had noticed the bulbous plant many times in her travels and pointed it out to Alphonso Wood, a

naturalist always interested in collecting botanical specimens. Wood named the single plant, a member of the lily family *Brevoortia Ida-Maia*, its prenomens in honor of his fellow American naturalist J. C. Brevoort, and its patronym in gratitude to the observant little girl who had brought the scarlet-flowered perennial to his attention.

Brewster chair. A spindle chair named after William Brewster (1566–1644), elder of the Pilgrim Church, who was the sole leader of the Pilgrims, 1620–29.

Briadism. See HYPNOTISM.

a Briareus of languages. Briareus was a mythological giant with 50 heads and 100 hands, but the phrase *Briareus of languages* first honored Cardinal Giuseppe Caspar Mezzofanti (1774–1849), chief keeper of the Vatican library. The term is used to describe an accomplished linguist, having been invented by the English poet Byron, who called the cardinal "a walking polyglot; a monster of languages; a Briareus of parts of speech." Mezzofanti, we are told, learned Latin and Greek fluently while listening to an old priest giving lessons to students next door to the shop where he had been an apprentice to a carpenter. He eventually mastered 39 languages, from Albanian to Wallachian, speaking these as well as he did his native tongue. All in all, he could speak 60 languages and 72 dialects fluently and could translate 114 languages. Among these were such exotics as Bimbarra, Geez, Kurdish, Tonkinese, and Chippewa.

bribe. A bribe, a sinister thing today, was originally, in 14th-century France, alms that one gave a beggar. Because beggars began to *demand* such alms the word came to mean "to extort or steal" when it reached England a century or so later. Within a century or so a *bribe* came to mean, instead of an extortion, "a voluntary inducement to get someone to do something for the giver," an ironic change that has carried over into the word's meaning today.

brick of a man. A good, solid, substantial person that you can rely upon. The expression is said to have originated with King Lycurgus of Sparta, who was questioned about the absence of defensive walls around his city. "There are Sparta's walls," he replied, pointing at his soldiers, "and every man is a brick."

bridegroom. The *groom* in *bridegroom* is of no relation to the "groom" who takes care of horses. *Groom* here is a corruption of the Old English *guma*, "man." *Guma* became *grome* in Middle English and this word was associated with *grome*, "a lad," finally becoming part of *bridegroom*, first recorded in the early 16th century.

Bride of the Sea. Early in the 11th century, the wedding of the doge of Venice to the Adriatic symbolized the sea power of Venice. Every year the doge, in his state barge, the *Bucentaur*, sailed into the Adriatic on Ascension Day and dropped a wedding ring into the sea. This practice, still part of the annual ceremony called the *Sposalizo del Mar*, is responsible for Venice's historical name "The Bride of the Sea."

brides of the multitude. A colorful euphemism for prostitutes used in the early West, though the expression may not have been coined there.

bridewell. In England, as readers of English history and fiction know, a bridewell is a house of correction, jail or prison. All the bridewells take their name from the original Bridewell, an ancient house of correction in London that remained in operation until 1863.

bridge. Bridge is a card game derived from whist that first became popular in the 1880s. Its name is of obscure origin. Since it was earlier called *biritch*, some scholars believe the word derives ultimately from the Turkish *bir*, “one,” plus *iic*, “three,” referring to one hand of cards in the game being exposed while the other three are concealed. Bridge was possibly introduced to Europe from the Near East, but there is no record of a Turkish game with a name anything like *bir iic*.

a bridge too far. Any foolish ill-advised strategy. The phrase was popularized by Cornelius Ryan’s *A Bridge Too Far* (1974), a history of the World War II (September 10, 1944) airborne drop on Holland. It is said that one of Field Marshal Montgomery’s staff told him, “I think we might be going a bridge too far,” on hearing Monty’s plan to capture 11 enemy bridges in the operation. No one listened and the Allies suffered terrible casualties. There is controversy about whether or not the conversation in Ryan’s book really took place, but, in any case, the expression *a bridge too far* was kept alive by the book and the movie made from it.

brie. The delicious cheese is named for Brie, an agricultural district in France noted for its cheese and other dairy products.

brier. The brier from which pipes are made has no connection with the thorny bush called the brier. Rather, pipes are made from the roots of the tree heath, which was called *bruyer* in Old English; this name was corrupted to *brier* over the centuries. The tree heath (*Erica arborea*) is a small tree 10–20 feet high with long, fragrant flowers. It is popular in southern Europe. A “brierpatch child” or “brierpatch kid” is a term for an illegitimate child. This Americanism dates back at least a century. See CABBAGE.

brig. *Brig*, for “a prison on a ship,” is an Americanism first recorded in 1852. One theory has it that pirates called “brigands” sailed on “brigandines” or “brigantines,” small, two-masted sailing vessels, the name of which was soon shortened to *brig*. Since the brigands were criminals and were often in jail, the name of the type of ship they sailed supposedly became associated with jail cells.

bright and early. This common expression, meaning “very early in the morning,” isn’t as old as one would suspect, being an Americanism that is first recorded by Washington Irving in his *Adventures of Captain Bonneville, U.S.A.* (1837).

bright-eyed and bushy-tailed. *Bright-eyed* is obvious, and the *bushy-tailed* here is a reference to the tail of a cat, which fluffs

up when the animal becomes excited. The expression means cheerful and lively, and it dates back to the 19th century.

Bright’s disease. One of the scores of maladies named for medical researchers is Bright’s disease, after English Dr. Richard Bright (1780–1858), whose findings determined the nature of the kidney affliction. Other names in the same morbid category include Basedow’s disease, a swelling of the thyroid gland, for German Dr. Karl von Basedow (1799–1854); Hodgkin’s a disease of the lymphatic glands, after English Dr. Thomas Hodgkin (1798–1866); Lindau’s, a brain disease, for Arvid Lindau, a Swedish pathologist; *Paget’s*, a disease of the breast, after Sir James Paget (1814–99); Pott’s, a tuberculosis infection, after English surgeon Percivall Pott (1714–88); Riggs pyorrhea for American dentist John M. Riggs (1810–85); Jacksonian epilepsy, after English Dr. John Hughlings Jackson (1835–1911); and Vincent’s infection, trench mouth, for French Dr. Jean Hyacinthe Vincent (1862–1950). All also go by far, far longer medical names.

brightwork. Metal fixtures of a ship that are kept bright by hand polishing are called brightwork. The term is an Americanism, first recorded in 1841, but probably older.

Brillat-Savarin. “The destiny of nations depends on the manner wherein they take their food.” “A dessert course without cheese is like a beautiful woman with one eye.” “Animals feed: man eats; only a man of wit knows how to dine.” Anthelme Brillat-Savarin, author of these and many other well-known aphorisms on *la cuisine*, was 70 when he published his *Physiologie du goût (Physiology of Taste)* in 1825, his celebrated book 30 years in the making. He was to die the following year but not before he had given the world the most trenchant discussion of food and its effects on trenchermen ever written. The greatest of French bon vivants had been born, appropriately enough, in the town of Belley—“Belley is its name and Belley is its nature,” someone wrote over a century later. He became the town’s mayor after the French Revolution but had to emigrate to America during the Reign of Terror, living in Connecticut for a few years. Portly and gregarious, the sage of Belley remained a bachelor all his life—perhaps too devoted to food and women ever to marry, possibly because he loved his cousin, the society beauty Madame Récamier. A lawyer who wrote on political economy and law, and penned a few licentious tales as well, he is remembered above all for his bible of gastronomy. “Tell me what you eat and I will tell you what you are,” he once declared. Though he was something of an eccentric—he often carried dead birds around in his pockets until they became “high” enough for cooking—Brillat-Savarin’s reputation has not suffered for his eccentricities, his name long synonymous with supreme authority on cooking. The greatest of gourmets also has the savarin, a yeast cake soaked in a rum- or kirsch-flavored syrup, named for him, and there are countless restaurants and a brand of coffee using the last half of his hyphenated name, as well as two classic garnishes, both made in part with truffles, the most extravagant of gourmet foods. Brillat was actually Anthelme’s real name—he took on the hyphen and Savarin when his great aunt left him her entire fortune on the condition that he add her name to his, Mademoiselle Savarin wanting a little immortality and getting more than

she bargained for. Love of food, in fact, seemed to run in the Brillat family. Anthelme's youngest sister, Pierrette, for instance, died at the dinner table. She was almost 100 and her last words are among the most unusual in history: "And now, girl, bring me the dessert." *Physiologie du goût*, incidentally, had to be printed at the author's expense. And when Brillat-Savarin's brother later sold the rights to a publisher, he got only \$120—after throwing in a genuine Stradivarius as well.

brilliant diamond. This isn't a diamond that sparkles brilliantly, but a diamond cut in a specific way, a perfect brilliant diamond having 58 facets. The term has been used since the late 17th century, when the Venetian diamond cutter Vincenzo Peruzzi invented the technique.

Brinell hardness, etc. A Brinell machine or tester determines the hardness of a metal, especially steel, by forcing a hard steel or tungsten carbide ball into it under a fixed hydraulic pressure. By dividing the force applied by the indenter into the surface area of the indentation made, the metal's Brinell number is obtained, this indicating its relative *Brinell hardness* on the scale. The machine and method were devised by the Swedish engineer, Johann August Brinell (1849–1925), who first demonstrated his famous invention at the Paris International Exposition of 1900.

bring down the house. A performer who brings down the house is so good that the theater seems to vibrate from all the applause he receives and it even seems as if the building will collapse. The common expression is from the British theater and is first recorded in 1754. At least once the house nearly did come down on an audience. During an early performance of Christopher Marlowe's *The Tragical History of Dr. Faustus*, the story of a man who sold his soul to the devil, timbers in the Theater Playhouse suddenly began to crack. Many in the audience thought the building was on the verge of collapse—some attributing this to supernatural causes—and alarmed patrons hurried from the premises. It turned out to be a false alarm, but no one ever established the cause of cracking timbers.

bring home the bacon. An English custom initiated in 1111 and lasting until late in the 18th century provided that any married couple who swore that they hadn't quarreled for over a year, or had not at any time wished themselves "single again"—and could prove this to the satisfaction of a mock jury sometimes composed of six bachelors and six maidens—was entitled to the Dunmow Flich, a side of bacon awarded at the church of Dunmow in Essex County. The expression to *bring home the bacon*, "to win the prize," isn't recorded until 1925, but bacon was used as a word for "prize" centuries before, and most scholars believe that the Dunmow Flich is responsible for the usage. This custom, along with the popular American one of awarding the pig to the winner of "greased-pig" events at county fairs, gives us the phrase, which now means to support a family by working.

bring me the winner. The French dramatist Georges Feydeau (1862–1921) is apparently the originator of the old restaurant joke about the lobster with one claw. A waiter sup-

posedly brought such a specimen to his table, explaining that lobsters often fought in the tanks and were mutilated in this way. "Take this one away then," Feydeau said, "and bring me the winner."

bristlecone pine. Called the "oldest living things on earth," some gnarled, twisted bristlecone pines (*Pinus aristata*) in California's White Mountains are more than 5,000 years old. Named for the bristle-like prickles at the end of its cones, this slow-growing tree also goes by the names Jack pine, cattail pine, and foxtail pine, the last two names alluding to the tufts at the ends of its twigs.

Bristol. This city in Connecticut takes its name from its sister city in England. Bristol, England, in turn, got its name from the peculiar habit its residents had of tacking an "l" onto words ending in a vowel. This local dialectical eccentricity, which persists there to this day, changed the seaport's name from *Bristowe* to *Bristol*.

Bristols. British rhyming slang made the slang *titties* (for breasts) into *Bristol Cities* (because they come in pairs), later dropped the second word, as is frequently the case in rhyming slang, and made *Bristol* plural so that *Bristols* became slang for female breasts. See CHARLEY; BRISTOL.

bro; bra. The use of *bro* for *brother* dates back to 1666 in England, 300 years before American blacks began using the word. As for the Jamaican and South African black slang *bra*, it can be used to mean "brother" or as the equivalent of "Mr." applied to any man.

broad. *Broad* has meant both a promiscuous woman and any young woman since the 1920s, though it is generally used today, when it is used, to mean a young woman—not necessarily a promiscuous one, but not someone toward whom much respect is shown. The Americanism may derive from *bawd*, but was more likely suggested by broad breasts and buttocks.

broad shoulders. Legend has it that Plato's real name was Aristocles and that he was called by the pseudonym Plato because of his broad shoulders.

Broadway; B'way. By the mid-19th century most New York playhouses were located on Broadway or nearby, but the name *Broadway* wasn't used to attract customers until 1800, when *The Black Crook*, a strange hybrid of ballet and melodrama, was produced. This extravaganza ran over a year on Broadway and toured for more than 20 years, advertising itself as "the original Broadway production." After that the name *Broadway* was commonly used both in describing a successful touring company and in attracting visitors to New York as well. *The Black Crook* also did much to further burlesque, employing a long line of chorus girls in flesh-colored tights, which proved sensational at the time. Broadway is, of course, the best-known street in New York City, though rivaled in fame by Wall Street, Park Avenue, and Fifth Avenue. According to the *Dictionary of Americanisms*, the first recorded use of the name *Broadway* for the street was 1673; before then it had been called High Street.

Originally an Indian trail, it now runs 17 miles through Manhattan and four miles through the Bronx. It has been called the longest street in the world, but doesn't come close, the record being held by Toronto's 1,178.3-mile-long Yonge Street. Columnist Walter Winchell may have coined the popular spelling *B'way*. See GREAT WHITE WAY.

brobdingnagian. A big word that means "giant" or "huge," and honors a race of fictional giants. The Brobdingnagians were the giants who inhabited the island of Brobdingnag in Jonathan Swift's *Gulliver's Travels* (1726). Men were "odious little vermin" to the Brobdingnagians. See LILLIPUTIAN.

brocard; Brocard's circle and ellipse. Brocard was the French name for Burchard, an 11th-century bishop of Worms. Bishop Brocard published a collection of canons, *Regulae Ecclesiasticae*, celebrated for its short, sententious sentences, and a *brocard* soon came to mean both a brief maxim or proverb in philosophy or law and a pointed jibe or biting speech. *Brocard's circle* and *Brocard's ellipse* are mathematical terms named for French mathematician Henri Brocard (1845–1922).

broccoli. Roman farmers, who must have been more poetic than their contemporary counterparts, are said to have called *broccoli* "the five green fingers of Jupiter." The word has a more prosaic derivation, however, coming from the Latin *bracchium*, "a strong arm or branch," in reference to its shape. According to Pliny the Elder, Drusus, the eldest son of Emperor Tiberius ate so much broccoli that his urine turned bright green! See I SAY IT'S SPINACH AND I SAY THE HELL WITH IT.

broderick. His tactics wouldn't be officially approved today, but Johnny (The Boffer) Broderick is still remembered as a tough New York City cop who relied on his fists as much as his police revolver. Known as the world's toughest cop, Detective Broderick worked "the Broadway beat," dealing out punishment with his fists on the spot so often that *to broderick* became a synonym for "to clobber." Broderick once flattened the hoodlum Jack (Legs) Diamond, and he knocked out and captured Francis (Two-Gun) Crowley before Crowley could find the courage to shoot. Another time he battered two men molesting a woman, threw them through a plate-glass window and then arrested them for malicious destruction of property. In fact, Bellevue Hospital used him as an exhibit to show how much punishment the human hand could take. Broderick, an image of sartorial splendor, was used as a bodyguard by many celebrities, including Franklin Roosevelt and Jack Dempsey. Dempsey confessed that the detective was the only man he wouldn't care to fight outside the ring. This graduate of New York's gashouse district was immortalized by Damon Runyon as Johnny Brannigan and played by Edward G. Robinson in *Bullets or Ballots*. By the time he retired in 1947, after 25 years on the force, Broderick had won eight medals for heroism. Broadway gamblers once gave 9–5 odds that he would be killed on any given day, but he died in his bed in 1966, 72 years old.

brodie. See DO A BRODIE.

brogan. A heavy, sturdy workshoe, from the Irish *brogan* meaning the same. The term has widespread use.

brogue. One theory holds that the *brogue* long associated with the Irish derives from the Gaelic *barrog*, for "a wrestling hold"—Irish tongues were held by tradition and couldn't speak any other way. A rival theory says that *brogue* comes from the heavy brogans (from the Gaelic *brog*, "shoe") worn by Irish peasants, who usually spoke with what we now call a brogue.

brokenhearted. Brokenhearted lovers weren't the inspiration for this word. It was coined in 1526 by William Tyndale, English translator of the Bible, who was later strangled and burned at the stake for heresy. The word first occurs in Luke 4:18: "To heale the broken harted," and was preceded by such formations as "broken-minded," "broken-backed," and "broken-winded." Tyndale is also said to have coined the word *beautiful*, in his translation of the Bible (in Mat. 23:27).

a broken reed. Someone untrustworthy, undependable, not to be relied upon. The phrase is from the Bible (Isa. 36:6): "Lo, thou trusteth the staff of this broken reed. . . ."

broker. Brokers today are associated with stocks or real estate, but all brokers were originally *brokieres*, or men who opened up wine casks (usually to bottle and sell the wine inside). This Old French word came to be transferred to wine salesmen, or brokers, and finally to one who sold anything at all. Wall Street brokers who work on the floor (or in the pit) of the exchange are called floor brokers; they were once called two-dollar brokers because they received a fee of two dollars per transaction.

broker than the Ten Commandments. A humorous expression from the 1930s, during the Great Depression. Wrote Henry Roth in *From Bondage* (1996), a novel set in that period: "Listen Bud, I'm flat broke. I'm broker'n the Ten Commandments."

bromide. A bromide was originally only a sedative often prescribed by a doctor. Toward the end of the 19th century, however, it became the name for any boring old joke or joke-teller, either of which might put you to sleep.

bronco. A name (from the Spanish for rough and wild) given to small, half-wild American horses descended from steeds that escaped from early Spanish settlements. Any wild, unbroken horse is also called a bronco or bronc.

bronco-buster. A cowboy who breaks wild horses to the saddle; also called a *bronc-buster*, *bronco-peeler*, *bronc-rider*, *bronc-twister*, *bronc-fighter*, *bronc-snapper*, *bronc-scratcher*, and *bronc-stomper*.

the Bronx. The Bronx, one of New York City's five boroughs, takes its name from Jonas Bronck, a Dane who first settled the area for the Dutch West India Company in 1641. Points of interest in the celebrated borough are the Bronx Zoo and Botanic Gardens, the Edgar Allan Poe cottage, and Yankee Stadium, "the house that Ruth built." The Bronx River runs from Westchester County through the Bronx and into the East River. The *Bronx cocktail* was named in honor of the borough, or invented there in about 1919. Long associated with baseball,

the razz, or raspberry, called the Bronx cheer wasn't born at Yankee Stadium, home of baseball's New York Yankees. It may derive from the Spanish word *branca*, "a rude shout," or have originated at the National Theater in the Bronx. We know for certain only that the term was first recorded in 1929. See RASPBERRY.

Bronx Bombers. This nickname for the New York Yankees, who make their home in THE BRONX, first appeared in the *New York Post* in 1936. Baseball historian Paul Dickson says the name became popular when heavyweight champion Joe Louis was known as the Brown Bomber. See JOE LOUIS.

Bronx cheer. Long associated with baseball, the razz, or raspberry, called the *Bronx cheer*, wasn't born in Yankee Stadium in the Bronx, the home of baseball's New York Yankees, as many baseball fans believe. It may derive from the Spanish word *branca*, "a rude shout," and possibly originated at the old National Theatre in the Bronx. We only know for certain that the term was first recorded in 1929 and that many players have received Bronx cheers in Yankee Stadium.

bronze. Many scholars trace the word *bronze* to the late Latin *brundisium*, "brass from Brundisium," Brundisium being the modern Adriatic city of Brindisi. But since that city doesn't produce exceptional brass or bronze, the derivation is doubtful. Another possible source is the Persian *birindj*, "alloy." In any case, *bronze* is a fairly modern word, first recorded in 1721.

Bronze John. A now mostly historical term for yellow fever, from *bronze* and the French *jaune* (yellow).

Brooklyn. A borough of New York City almost as well known as Manhattan. Officially it is designated King's County, but no one calls it that. In 1645 the area was named Breuckelen after an ancient village in the Netherlands. Over the years this changed to Brockland, Brocklin, Brookline, and finally Brooklyn.

a Brooklyn; Woolworth; mother-in-law. Surely Brooklyn is the only borough that lends its name to a bowling term. The New York City borough gives us the word *Brooklyn* meaning a hit made on the side of the headpin opposite to the arm bowling the ball. Another eponymous bowling term is the *Woolworth*, a split of the pins leaving the "five and ten" pins still standing. The bowling term *mother-in-law* refers to the left rear pin in the pin formation.

Brooklyn Bridge. Called the "Eighth Wonder of the World" upon its opening, this bridge joining Brooklyn and Manhattan spans 1,595.5 feet between its towers and was at one time the longest bridge to use steel for greater stability. John Augustus Roebling (1806–69), the inventor of wire cable, designed the bridge but died in a ferry accident during the early stages of construction. His son Washington Roebling (1837–1926) took charge after his father's death. In 1872, Roebling became paralyzed, suffering from the bends, a common affliction among the men working the massive bottomless caissons used to sink the bridge towers onto the solid bedrock beneath the East River.

From then until the end of construction, Roebling's wife acted as his intermediary while he looked on through a telescope from the window of his Columbia Heights apartment. Twelve people were trampled to death in the crowd that rushed to cross the bridge when it first opened on May 24, 1883. Almost from that year on, *buying the Brooklyn Bridge* has become a phrase symbolizing gullibility—though it's doubtful that any con man ever really sold it to anyone.

Brooklynese. Betty Boop, Popeye the Sailor Man, and Bugs Bunny all speak Brooklynese. *Brooklynese* is a synonym for the worst of New York speech, coined about 1945. It is an extreme form of New York talk that had its golden age 60 or so years ago and has been heard less ever since. Someone long ago defined *Brooklynese* as what you have a bad case of if you recite the sentence "There were thirty purple birds sitting on a curb, burping and chirping and eating dirty worms, brother," as "Dere were toity poiple boids sittin onna coib, boipin and choipin an eatin doity woims, brudda."

Brooklyn side. When a bowler hits into the wrong pocket of pins (the one opposite his bowling hand, for example, the 1–3 pocket if he's right-handed) the hit is called a *Brooklyn side* or a *Brooklyn*, as in "You've been hitting the Brooklyn side all night."

broom. British housewives in early times used the besom, "a handful of twigs with the leaves attached," to sweep their homes. Because these "besoms" were often made of twigs from the broom shrub they came to be called brooms by about the year 1000. "Besom," however, remained the name for a sweeping implement well into the 19th century. Brooms were often placed across the door of a house to ward off witches, for even though witches were believed to ride on brooms, it was thought that a witch had to count every straw in a broom placed across a door before she could open it.

broomstick marriage. Broomstick marriages were common in remote districts of England, Scotland, and the southern U.S. in the 18th century. In order to avoid paying clerical fees and waiting for the preacher to ride by, rural folk devised a ceremony that was regarded as perfectly legal and binding in many communities—all the prospective bride and groom had to do was jump over a broomstick held by two people who knew them and they were declared man and wife. It has been suggested that the broomstick has something to do with "witches riding on their broomsticks to their unholy pleasures," but no one really knows why the superstition developed. At first *broomstick marriage* meant only a rural marriage, but its meaning deteriorated over the years as laws grew more uniform and it is now regarded as a mock marriage or a common-law marriage.

brothel. Prostitutes in the 15th century were called brothels, from the Old English *breoþan*, "to go to ruin." *Brothel houses* soon meant houses of prostitutes, or warehouses, the word shortened to *brothel* by the late 1700s.

brother, can you spare a dime? A popular song published in 1932 had these words as its title and they quickly be-

came the common plea of panhandlers throughout America during the Great Depression. American songwriter E. Y. (Yip) Harburg (1898–1981) wrote the 1932 song, which was an American pop hit throughout the Great Depression. Among many other songs, Harburg also wrote the lyrics to “It’s Only a Paper Moon” (1932), “Over the Rainbow” (1939); and “Follow the Yellow Brick Road,” the last two for the movie *The Wizard of Oz* (1939).

brother, I’m bobbed. A parlor game, once widely played, in which a blindfolded player is touched by the other players. When a player touches him, he responds, “Brother, I’m bobbed” and the reply is, “Who bobbed you?” If he can identify who “bobbed” or touched him, that person takes his place as the blindfolded player.

Brotherhood. See OUTFIT.

Brother Jonathan. Brother Jonathan was originally Connecticut governor and minister Jonathan Trumbull (1710–85), one of the few colonial governors to stand up for the rights of the colonists. The redoubtable Trumbull was a trusted friend and adviser of George Washington, and an unsupported story has it that General Washington, when he needed ammunition and none of his officers could solve the problem, declared, “We must consult Brother Jonathan on this.” Trumbull came up with a solution and Washington’s remark became proverbial in time. Washington did rank Trumbull “the first among patriots,” and the term *Brother Jonathan* for an American first appeared in print in 1816. Some debunkers point out, however, that Jonathan was a very common American name at the time and that the British had used *Brother Jonathan* in allusion to the Puritans as early as the 17th century.

brother’s keeper. See MARK OF CAIN.

brougham. The brougham, a four-wheeled carriage for two or four passengers, honors Henry Peter Brougham, Baron Brougham and Vaux (1778–1868). This name for a one-horse carriage with an open driver’s seat and a closed, low-slung passenger cab behind also designated the first tall electric automobiles, as well as an early gasoline-powered limousine with the driver’s seat unenclosed. The brougham was named after Lord Brougham in about 1850, because of his design for the “garden chair on wheels,” similar to the old “growler” horse cab. The amazing Lord Brougham, born in Edinburgh, Scotland, was among the most versatile of men—a noted lawyer, orator, politician, statesman, scientist, writer, publisher, abolitionist, reformer, and one of the great wits of his day. In his later years the many-faceted genius built a cottage in Cannes, and his presence there was directly responsible for the French town’s great vogue as an international resort.

browbeat. A browbeaten person is literally “someone who is beaten or put down by the knitted or wrinkled brow and frown of somebody else.” To *browbeat*, “to belittle someone with sternness, arrogance, or insolence,” is first recorded in 1581.

brown. See AUBURN.

brown as a berry. The first expression was used by Chaucer in 1386: “His palfrey [small saddle horse] was as broune as is a bery.” Though most berries aren’t brown, the reference is possibly to brown berries like those of the juniper or cedar.

the Brown Bomber. See JOE LOUIS.

brown-eyed peas. These are black-eyed peas with a brown rather than black spot where they were attached to the pod. They also go by the name “brown-eyed crowder peas.” Regardless, they always taste just like black-eyed peas. See BLACK-EYED PEAS.

Brownie. The cheap simple Kodak camera called a Brownie is not named after its inventor, Charles Brownell. Kodak’s founder, George Eastman, chose it himself in about 1900 from the little creatures called brownies in the stories of Canadian children’s book author and artist Palmer Cox. The Brownie camera, he reasoned, was helpful and efficient like the brownies, and it could be operated by a child.

brownie. This friendly country goblin of folklore helps with household chores at night when all the house is asleep. It was a long series of popular illustrated books by Québec-born author and artist Palmer Cox (1840–1924) that made the brownies popular. The first of the series was *The Brownies: Their Book* (1887).

brown rat. Another term for the Norway rat (qv).

brownshirt. A Nazi militia member, so called after the brown shirt he wore as part of his uniform. The militia, its name first recorded in 1932 in Germany, was organized by Ernst Rohm. The term *blackshirt* refers to an Italian paramilitary group founded by Mussolini in 1919 but first recorded in 1922.

browsing. We associate *browsing* mainly with bookstores today, but the word, from the French *broust*, “young bud or shoot,” originally meant the feeding of animals such as cattle, deer, and goats on the leaves and shoots of trees and bushes; to *browse* was recorded as early as 1542 in this sense. Shakespeare seems to have been the first to use the word figuratively, in *Cymbeline*, but Charles Lamb first used it in its modern sense in his largely autobiographical *Essays of Elia* (1823): “He browsed at will upon that fair and wholesome pasturage [a good library].”

brucellosis. See BANG’S DISEASE.

brucine. Another poison named for a real person, but this time not for someone who used it for nefarious purposes. Brucine is a bitter, poisonous vegetable alkaloid found in seeds of various *Strychnos* species, especially *Nux vomica*. It resembles strychnine, though it isn’t as powerful and it is rapidly eliminated from the body. *Brucine*, used in the denaturing of alcohol, was named for the apparently innocent Scottish traveler and explorer, James Bruce (1730–94), who merely discovered it. See ACQUA TOFANA.

bruin. Bears have been called bruins ever since medieval times, when the bear in the folk tale *Reynard the Fox* was named Bruin. The tale is Dutch in origin and *bruin* is the Dutch word for “brown.” The Swiss capital, Bern, takes its name from the German word for bear.

brumby. An Australian wild horse is often called a brumby, or brumbie. The word possibly derives from the name of Major William Brumby, an early 19th-century settler from England whose descendants still live in Australia. Major Brumby was a noted breeder of horses, but much of his stock escaped and ran wild. *Brumby* may come, however, from the Aborigine *booramby*, meaning “wild.”

brummagem. Counterfeit or cheap merchandise is called brummagem, after the city of Birmingham, England, which was often pronounced *Brummagem* locally in the 17th century. The city had a reputation as a manufacturing center of cheap trinkets and a place where counterfeit coins were made.

brunch. *Brunch* is a dictionary-accepted word for a meal. Brunch came into the language back in 1895, when it was introduced in *Hunter's Weekly*, a British publication, to describe a combined breakfast and luncheon. It had probably been a collegiate coinage a little earlier. *Lupper*, a midafternoon meal eaten instead of lunch and supper, is a new portmanteau word “struggling to be born,” according to William Sherk in *500 Years of New Words* (1983). *Dunch* and *blupper* are two possible substitutes for *lupper*, suggested by readers of Marian Burros’s “De Gustibus” column in the *New York Times*.

Brunswick stew. A stew of squirrel meat, lima beans, and green corn seasoned with salt and pepper and said to have been invented by a cook in Brunswick County, Virginia, over 100 years ago.

brushfire. Two uses of the word *brush* probably suggested this recent coinage for a relatively small, localized war, an expression first recorded about 30 years ago. *Brushfire*, the term invented by early emigrants on the western frontier, was a fire in the brush, or scrubby areas where shrubs and small trees grew, a fire relatively easy to control compared with a forest fire. More than a century later the word *brush* became slang for uncivilized regions of any kind. Since they took place in what many considered “uncivilized” areas and were presumably easy to contain, local wars in far-off places became known as brushfire wars in the mid-1950s. *Brushfire* has also been used as an adjective for other things limited in scope, area, or importance, as in a *brushfire labor dispute*.

brussels sprout. Unknown in America until about 1800, this relatively “new” vegetable is named for the capital of Belgium, where it was developed or improved upon early in the 16th century.

Brutus; Et tu Brute? Marcus Junius Brutus (ca. 85–42 B.C.) was, of course, the principal assassin of Julius Caesar and *a Brutus* is any treacherous person, especially a former friend. *Et tu Brute* (“You too, Brutus?”), Caesar’s last words when he

glimpsed his friend, is among the most familiar of quotations. History holds two opinions of Brutus. One claims that he conspired with Cassius to save the republic from Caesar’s tyranny. The other suggests that his reputation as a moneylender and his friendship with the self-seeking Cassius prove that his motives were far more crass. Two years after he took part in Caesar’s assassination, Brutus committed suicide, following a battle at Philippi that the republicans lost to Mark Antony and Octavian (later Augustus Caesar). A brutus, without the capital, is both a rough, cropped wig and a bronze variety of chrysanthemum, the origin of these terms unknown.

Bubba. *Bubba*, chiefly among blacks in the American South, is a term of address meaning “brother” and is used by friends as well as relatives. But reference works generally fail to note that the word is also commonly used to mean a white southerner. An essay in the *New York Times* by Molly Ivins put it this way: “In theory, the battle for Southern voters revolves around the stereotypical white Southerner, usually known as ‘Bubba,’ who is partial to country music and conservative politics. But as Presidential politics move into the states of the Confederacy, the biggest question about Bubba may not be how he will vote but how to find him.” *Bubba* is also a nickname in the press for former president William Jefferson Clinton, “the man from Hope (Arkansas).”

bubble and squeak. Though several authorities add meat to this dish of fried cabbage and potatoes, which bubbles and squeaks as it cooks on the kitchen stove, I’ve never had it that way. Probably too poor for meat. In any case, there are recipes for this dish dating back two centuries.

bubble gum. See CHEWING GUM.

bubblegum machine. Since the mid-1960s this has been the name for a police car with a flashing revolving red light on the roof. Also called a *bubbletop* and a *gumball*. Recently, other emergency vehicles have adopted the mechanism but not the name.

bubbles. Often used as a name for the circular containers holding the words of characters in comics, cartoons, etc., usually pictured as coming from each character’s mouth.

bubby; bubee. Both Bartlett and Webster’s state that *bubby*, a familiar name for “a little boy,” is a corruption of “brother,” claiming it as an Americanism first recorded in about 1848. More likely, it is from the German *bube*, “little boy.” *Bubee*, a Yiddish term of endearment that can be addressed to a child or any loved one, appears to have a separate etymology. It derives from the Yiddish *bubeleh*, meaning the same, which probably comes from the Russian *baba*, “little grandmother,” and the Hebrew *buba*, “little doll.”

bubby bush. The strawberry shrub (*Calycanthus floridus* or *glauca*) is possibly named the “bubby bush” because its blossoms resemble a woman’s breasts, sometimes called “bubbies.” However, according to Thomas Anburey in his *Travels Through the Interior Parts of America* (1791), the word derives “from a

custom that the [American] women have of putting this flower down their bosoms . . . till it has lost all its grateful perfume." The plant is also called the bubby, bubby blossom, bubby flower, bubby shrub, and sweet bubbies.

bubkes. Usually pronounced "bub-kiss," this Yiddish word, widely heard in America, comes from the Russian for "beans" and means nothing or very little, a small amount, something trivial: "You know what I got for the job? Bubkes!"

bubonic plague. See BLACK DEATH.

buccaneer. *Buccaneer* was the name applied to themselves by the sea raiders roaming the Caribbean. The word derives from the *boucanes*, or little dome-shaped smokehouses, on Hispaniola Island, where strips of boar meat and beef were smoked dry over a slow fire. The men who smoked *vlande boucanee*, or "jerky," and sold it in bundles of a hundred for six pieces of eight were called *boucaniers*, "smokers of meat." Pirates in the area so often bought this dried meat from the *boucaniers*—it was perfect food to carry in the days before refrigeration—that they began to be called *boucaniers* or *buccaneers*, too.

Bucephala. See PERITAS AND BUCEPHALA.

buck; pass the buck. The American slang word for a dollar may have its origins in animal skins that were classified as "bucks" and "does." The bucks, larger and more valuable than does (some 500,000 of them were traded every year in 18th-century America), could have become a part of early American business terminology (ca. 1800) and later become slang for a dollar. But *buck's* origin could just as well be in poker. A marker called a *buck* (perhaps after a buck horn knife made from a deer's anthers) was placed next to a poker player in the game's heyday, during the late 19th century, to remind him that it was his turn to deal next. When silver dollars were used as the markers, they could have taken the name *buck* for their own. Although markers called *bucks* may or may not have given us the slang term for a dollar, they are almost certainly responsible for the expression *to pass the buck*, "to evade responsibility"—just as poker players passed on the responsibility for the deal when they passed the buck. Buck is also a derogatory term for an Indian man that dates back to the early 19th century. *Buck warrior* and *buck aborigine* were synonymous, though they are rarely, if ever, used anymore.

buckaroo. *Buckaroo*, for "a cowboy," is a corruption of the Spanish *vaquero*, meaning the same. The first recorded quotation using the word, in a letter from Texas, shows the mispronunciation of *vaquero* by Americans: "These rancheros are surrounded by peons and *bakharas* or herdsman." The mispronunciation "bakhara" was further corrupted to "buckhara," "buckayro," and finally *buckaroo*. *Buckaroo* has probably lasted because it is a good descriptive word, suggesting a cowboy on a bucking horse. It inspired well over 50 other American slang words ending in "-aroo" or "-eroo." *Stinkaroo*, a bad play or movie, still has wide currency, as does *the old switcheroo*, the act of substituting one thing for another. Others not so familiar anymore are *antsaroo*, ants in his pants; *jugaroo*, a jail; and *ziparoo*, energy.

the bucket. The rearmost part of the batter's box in baseball, as in: "He had his foot way back in the bucket."

bucket hitter. A batter who often steps back from the pitch, one who "steps in the bucket."

bucket letter. During the largely ineffective administration of President John Quincy Adams, a series of anonymous letters were sent to the president by David Holt of Georgia, writing under the pseudonym Edward Bucket. These letters, widely published, became familiar to many Americans, and for a number of years a *bucket letter* became the name for any anonymous letter. Such a letter was also called a "bucket."

bucket shop. Before it became the term for "an illegal brokerage house that cheats its customers," *bucket shop* was the designation for "an unsavory bar where patrons could buy beer by the buckets." However, in 1882, the Chicago Board of Trade prohibited grain transactions of less than 5,000 bushels. Illegitimate brokerage houses began trading in smaller lots and whenever larger, legitimate houses dealt illegally in smaller lots they sent down for a "bucketful" to the bucket shops.

buckeye. American pioneers in what is now Ohio so named this horse chestnut tree because its dark-brown nut resembles the eye of a buck deer "when the shell first cracks and exposes it to sight." A useful tree whose soft wood, cut into long shavings, even made ladies' hats and whose very roots were made into a soap, the buckeye (*Aesculus glabra*) eventually gave its name to all the natives of the BUCKEYE STATE. The nuts, or buckeye beans, of the tree were carried as good-luck charms and thought to ward off piles, rheumatism, and chills, among other maladies.

Buckeye State. A nickname for Ohio, after the buckeye tree (see BUCKEYE). Like Virginia, Ohio has also been called the Mother of Presidents (Presidents Grant, Hayes, Garfield, Benjamin Harrison, McKinley, Taft, and Harding all hailed from Ohio). In the early 1800s Ohio was called the Yankee State because so many of its settlers were from New England.

buckhorse. If you gave him a few shillings, the English fighter John Smith, who went by the ring name of *Buckhorse*, would let you punch him on the side of the head as hard as you could. The well-known boxer saw his nickname become slang for "a punch or a blow" beginning about 1850; that is, if he saw anything but stars after a while.

buckle down to work. To buckle oneself, when English knighthood flowered, meant to fasten one's armor, to buckle the straps securely in their holders, to prepare for battle. Soon the expression was used figuratively, meaning "to apply oneself resolutely to any task": "Everie man . . . must buckle himself to a painful kind of life" (1574). The word *buckle* itself comes from the Latin *buccula*, a diminutive of "cheek," which originally was used to describe the strap holder or clamp on Roman battle helmets that rested near the cheek.

Buckley's chance. Used mainly in Australia for little or no chance at all. Probably named after convict William Buckley,

an escaped prisoner who lived among the Aborigines, far from “civilization.” Many thought Buckley would never last, had no chance, but he fooled them all, living with the Aborigines for more than 30 years before he died in 1856, age 76.

buck-nekked. Completely naked. “They got drunk and crashed the door in on him and found him buck-nekked, dancing the highland fling. A man fifty years old, seven foot tall, with a head like a peanut.” (William Faulkner, *Sanctuary*, 1931) Other similar terms are *buck ass-naked*, *buck born-naked*, and *stark buck-naked*.

buck nun. An old cowboy term for a single, celibate man or recluse who lives by himself without a woman, often in winter camps.

buckra. A Gullah term from the African Elik word *mbakara* (white leader or man), which can be a derogatory term for any white person or mean “white boss” or “poor white person.”

the buck stops here. President Harry S. Truman (1884–1972) probably coined this saying indicating that the Oval Office and the president bear the final responsibility for any policy or action. Since then it has been used widely and is frequently a sign on the boss’s desk, as it was on Truman’s. *Pass the buck*, above, probably suggested Truman’s invention.

buckwheat. The grain of buckwheat resembles the seed of the beech tree, so the Dutch called it *bockweit*, or “beech wheat.” From *bockweit* came the English *buckwheat*, which is used in Europe mainly for animal feed (“A grain which in England is commonly fed to horses,” Dr. Johnson notes characteristically in his *Dictionary*, “but in Scotland supports the people.”), but is used in America to make *buckwheat pancakes* and was the name of one of the most popular characters in the “Our Gang” film comedies.

bud. In its latest use, *bud* means the little receiver law enforcement officers wear in their ears to get information or orders from fellow officers or superiors. It is so named because it resembles in size small buds on a plant. See NIP IN THE BUD.

Buddhism. Buddha, “the Enlightened One,” was the title given to Prince Siddhartha (ca. 563–ca. 485), the Hindu prince who founded Buddhism in the sixth century B.C. It had been prophesied on his conception that the prince would renounce the world upon seeing a sick man, an old man, and a corpse, which human misery he saw while riding through the royal park one day when he was 29 years old. Prince Siddhartha left his wife and child, and after six years of solitude and contemplation, during which he devoted himself to the severest asceticism, living on seeds, grass, and even dung, he emerged as the Buddha, preaching a religion based on salvation by suffering. Existence, he proclaimed, was evil, and desire was the cause of sorrow. Nirvana the absorption into the supreme spirit, was the reward obtained by the suppression of desire. Gautama Buddha (Gautama is from his clan name, and he is called Sakyamuni Buddha from his tribal name) spent all his life as a wanderer, preaching his doctrine from the time he attained enlightenment under a Bo tree at Buddh Gaya in northern

India until his death 45 years later. Buddha, or the Enlightened, derives from the Sanskrit *bodhati*, “he awakens.” It is estimated that Buddhism has about 140 million followers today.

buddy. Most experts believe this word arose from a children’s mispronunciation of *brother*, children frequently having trouble with the letter *r* in that word and pronouncing it buddy. From its use as a substitute for brother, *buddy* was extended to mean a close friend as well.

budge. An old-fashioned term for a fit of fidgety nerves. In *The Deliverance* (1904), Ellen Glasgow wrote: “Having unfortunately crossed her knees in the parlour after supper, she suffered untold tortures from ‘budges’ for three mortal hours rather than be seen to do anything so indelicate as to uncross them.”

budgerigar. This ancient word is the aboriginal name for a favorite Australian parrot or cockatoo. *Budgerigar’s* origins may be lost in time, but some experts have theorized that it comes from the aboriginal *budgeri*, good, and *gar*, cockatoo.

budget. Originally, a budget was a leather bag or wallet, deriving from the French *bougette*, wallet. The word’s meaning may have been extended to cover a statement of financial requirements when the British Chancellor of the Exchequer, in appearing before Parliament, began the custom of carrying papers containing his annual statement of estimated revenues and expenses in a leather bag and “opening the budget” for the year. Another theory claims that in 1733 Sir Robert Walpole introduced an unpopular excise duties bill and a political pamphleteer compared him to “a mounte-bank at a fair opening his budget of crank medicines,” the word *budget* from then on becoming linked with government financial requirements.

Budweiser. Though one of America’s most popular beers, Budweiser, or Bud, as it is often abbreviated, is German in origin. The brand of beer is not named for an American brewmaster, as many people suppose, but takes its name from the German village of Budweis, where a visiting St. Louis businessman “discovered” it.

Buenos Aires. Few American cities today could honestly take the name of this city, for the Spanish *Buenos Aires* means “good air” in English. Buenos Aires was so named over a century ago for the bracing air in the major seaport and capital of Argentina. See MALARIA.

buff; in the buff. So many buffalo hides were taken in the 19th century that buff coats made of them became very fashionable, the undyed yellowish coats giving us the word *buff*; the verb *buff*, “to polish,” entered the language from the strips of buffalo hide that were used to bring metals like bronze to a high polish. Even the word *buff* for an avid devotee of some activity or subject owes its life to *buffalo*. Buffalo robes were the winter gear of firemen in the middle of the 19th century. The amateur firefighters who rushed to blazes emulated the professionals by wearing buffcoats made of buffalo skins and were called buffs as a result. The expression *in the buff*, “in the nude,” derives from the soft yellow buff skins made from buffalo hides,

which looked something like bare human skin tanned by the sun. Buff is also one of the most unusual acronym nicknames. According to Frederick Forsyth in *The Fist of God* (1993): “The B-52 Stratofortress [bomber] is not called the Buff because it is painted a tan or dun-brown color. The word is not even a derivation of the first two syllables of its number—*Bee-Fifty-two*. It just stands for Big Ugly Fat Fucker.” Buffs dropped 40 percent of the entire bomb tonnage during the Gulf War. Each plane can carry 51 750-pound bombs.

buffalo. Most people believe that *buffalo* is a misnomer, a name applied with zoological inexactitude to the American bison. Cortes described the creature as “a rare Mexican bull, with crooked shoulders, a hump on its back like a camel and with hair like a lion,” but later explorers thought it was the Asian or African water buffalo and called it after the Spanish *bufalo*, already used in Europe as the name for those animals. Actually the water buffalo and the American buffalo both belong to the bison family, so the real mistake of early explorers was in calling the native American animal simply *buffalo* and not qualifying it with a name such as *prairie buffalo*.

Buffalo Bill. Colonel William Frederick Cody (1846–1917), the peerless horseman and sharpshooter who became the original Buffalo Bill, earned his nickname as a market hunter for buffalo (bison) hides and as a contractor supplying buffalo meat to workers building the Union Pacific Railroad in 1867. To his glory then, and shame now, he killed 4,280 buffalo in one year, mostly for their hides and tongues. It is hard to separate truth from fiction in Cody’s life, his fame owing much to the dime novels that made him a celebrity in the late 19th century. Buffalo Bill was a herder, a Pony Express rider, a scout and cavalryman for the U.S. Army in the Civil War, and an Indian fighter who is said to have killed the Cheyenne chief Yellow-hand single-handedly. He was a member of the Nebraska state legislature. His Wild West Show, which he organized in 1883, toured the United States and Europe, bringing him great personal fame, yet financial problems caused this legendary American hero to die in poverty and relative obscurity. Today his name conjures up visions of “sportsmen” picking off buffalo from the platforms of moving trains, abundant buffalo meat rotting on the plains, and the destruction of the great herds. Thanks to early conservationists, some 20,000 American bison survive today, protected on government ranges.

buffalo chips. Dried buffalo dung. Louis L’Amour describes their gathering and use by wagon team women in his novel *Comstock Lode* (1981): “There was a space of wagon-tongue lashed there and a sheet of canvas . . . ‘What’s that for?’ ‘Buffalo chips,’ a bystander said. ‘The women folks walk behind the wagon and pick up buffalo chips and toss them onto that canvas. They’re the only fuel you are likely to find.’” American resourcefulness at its most fundamental.

the buffalo gnat. “The most detestable thing in creation,” one American pioneer traveling West called this vicious pest. “Before you are conscious of its presence, it has bitten your face, ears and neck in 10,000 places. My face at one time had the appearance of one with smallpox, my eyes were swollen up so much that I could hardly see, and my ears as thick as my hand.”

buffalo nickel. The old buffalo nickel, 1.2 billion of which were minted in the United States for 25 years starting in 1913, is among the handsomest of American coins, especially the realistic profile of the Indian chief on the coin’s front and the bison on the reverse. In February 2005, the U.S. Mint released a new buffalo nickel with several differences. The Indian on the original coin was actually a composite of three Native American chiefs—Iron Tail, Big Tree, and Two Moons—who posed for sculptor James Earle Fraser in 1911. The bison’s name was Black Diamond.

buffalo soldier. An American Indian name for African-American soldiers stationed in the West. One explanation of the name is given by F. M. A. Roe in *Army Letters* (1872): “The officers say the negroes make good soldiers and fight like fiends . . . The Indians call them ‘buffalo soldiers,’ because their woolly heads are so much like the matted cushion that is between the horns of the buffalo.” *The Encyclopedia of African-American Heritage* (2000) states “The name is said to have originated with the Plains Indians, who likened the soldier’s bravery to that of the buffalo, and because the soldiers’ curly black hair was reminiscent of a buffalo mane.”

bug; insect. The word *bug* originally had nothing to do with insects, possibly deriving from the Welsh *bwg*, “a specter or a ghost.” How *bug* came to mean *insect* (insect is short for the Latin *animal insectum*, an “animal notched near the middle”) no one knows, but perhaps the beetles and other insects first called *bugs* terrified some people, suggesting supernatural creatures. Another possible source is the West African word *baga-baga*, “insect,” which the English may have encountered in the slave trade. *Bug* is first recorded in 1642. Some etymologists trace the *bug* in “don’t bug me” to the West African *bugu*, “annoy.” This may be so, but if the term did come to America with slavery, there should be earlier references to it than we have, *bug* only being recorded in this sense since the early 1950s. *Bug* for “annoy” may also have derived in some roundabout way from one of the many other slang uses of *bug*, including an obsessed person, a trick, or even *bugging* a person’s telephone calls surreptitiously. It could also derive from *BUGGER* for sodomy, or from *BOGEY*. *Bug* in the sense of a defect (“This new model car has a lot of *bugs* in it”) does not derive from the moths that supposedly plagued the first U.S. experimental computers in the 1940s, as the old story goes. Used long before then, *bug* is most likely a form of *bogey*, in this case, “a real thing that causes worry.” The bug used to wiretap a telephone or a room may have its origin in *bogey*, being “a device that causes worry, even terror.” But the term has its origins in the underworld and could be a shortened form of *burglar alarm*—back in the ’20s advertisements used to say that premises protected with burglar alarms were *bugged*. In racing terminology, a *bug* means the weight allowance granted to a horse because the jockey riding him is an apprentice; the apprentice jockey himself is also called a bug. This term comes from the asterisk appearing on racing forms next to the weight of a horse granted such an allowance. In printing jargon an asterisk, being small, was called a bug, and the term was adopted by horseplayers.

The Bug Bible. Numerous editions of the Bible have been named for their translators or patrons, the most famous being the *King James* or *Authorized Version*, which was prepared by a

group of British scholars working at the command of King James I from 1604 to 1611. James commissioned this version mainly because other Bibles of the time had marginal notes questioning the divine right of kings. *Coverdale's Bible*, *Cramer's Bible*, *Cromwell's Bible*, *Matthew's Bible*, *Matthew Parker's Bible*, *Taverner's Bible*, *Tyndale's Bible*, and *Wycliffe's Bible* are all famous in history. *Coverdale's Bible* is sometimes known as *The Bug Bible* because it reads "Thou shalt not need to be afraid for any bugs by night" in a passage from *Psalms*, using "bugs" instead of "terror" in the sentence. Other amusing instances of printer's errors occur in *The Wicked Bible* (1805), where the seventh commandment reads "Thou shalt commit adultery"; the *Unrighteous Bible*, which says that "the unrighteous shall inherit the Kingdom of God"; and *The Sin On Bible*, which in the book of *John* reads "sin on more" instead of "sin no more." There is even a *Vegetarian Bible* and one with no references to sex. See also GUTENBERG BIBLE.

bug-eater. A humorous, derisive nickname for a Nebraskan. The name comes either from some Nebraskans's impoverished appearance in times past, or from parts of the state being overrun by locusts; suggestions were even made at one time to make food of the locusts, one farmer writing a cookbook with the theme "If you can't beat 'em, eat 'em." According to *Notes and Queries*, June 15, 1883: "Several Nebraskan entomologists and journalists actually got up a dinner at which locusts were served in various styles."

bugger. *Bugger* in British English never means a child, as it does in American expressions like "he's just a little bugger." A *bugger* in England is only a sodomite and *to bugger* is to sodomize—in fact, use of the word in print was actionable in England for many years. *Bugger* in this sense, which is American slang as well, derives, down a tortuous path, from the Medieval Latin *Bulgarus*, meaning "both a Bulgarian and a sodomite." The word first referred to a Bulgarian and then to the Bulgarian Albigenses or Bulgarian Heretics, an 11th-century religious sect whose monks and nuns were believed to practice sodomy. Some historians claim that the charge of sodomy against these heretic dissenters was a libel invented with the approval of the Church. They had already been banished from Bulgaria, were living in the south of France, and the trumped-up story caused the French to oust or exterminate them, too.

buggy. The horse carriage *buggy* is thought to derive from the old meaning of *bug*—"a specter or a ghost," often called a BOGEY. It seems that the light carriages were called "bogies" (which later became *buggie*) because they were so fast that they scared people out of their wits.

Bughouse Square. A popular name since the 1920s for the famous Chicago landmark Washington Square, where street corner orators and preachers hold forth. *Bughouse* can mean "insane" or "crazy," and many speakers past have seemed so. This name seems to have hobo origins.

bug juice. *Bug juice*, for "cheap liquor," is a century-old term that takes its name from the tobacco-colored secretion of grasshoppers.

bugle. The rude ancestor of this musical instrument was made from the horn of a young bull or bullock, a *buculus*, in early Roman times. *Buculus* passed into French and English as *bugle* and the *bugle horn*, or *bugle*, remained the name for the instrument well after it was no longer made from a bull's horn.

bug out; swanning. *To bug out*, "to retreat hastily," is an expression that dates back to the time of the Korean War, when it was first used by teenagers and then in the United Nations "police action" to indicate a military retreat. Since retreats are generally the result of fear, the expression is another one that probably derives in a roundabout way from "bugaboo" or "bogey." Incidentally, the migrating habits of the swan inspired the word *swanning*, "going purposefully anywhere without a purpose," which meant the same thing that *bugging out* did during the Korean War. Today *bug out* is also slang for "freak out" or "flip out."

Bugs Bunny. Bugs's creator and voice, the late Mel Blanc, always insisted that the "pesky wabbit" (as Elmer Fudd called him) had his (Blanc's) New York accent, combining Brooklyn and Bronx elements, as did Popeye, Betty Boop, and the Dead End Kids, among many others. Bugs may have been so named because he acted bugs or crazy, but his name could honor gangster Bugsy Siegel, who certainly acted extremely bugsy if anyone dared call him Bugsy. See MURDER INC.; THAT'S ALL FOLKS!; WHAT'S UP DOC?; WILEY E. COYOTE.

build (or set) a fire under. Ornerly mules may be responsible for the expression to set a fire under, or "to stir someone to action or movement": southern farmers, it is said, sometimes built fires under their mules to get the beasts to move when they were standing with four legs spread and refusing to budge despite every other tactic. Palmer Clark, research librarian at the Van Noy Library in Fort Belvoir, Virginia, advises that relatives of hers in the "chuggy huggy hills of Tennessee" were familiar with the practice. "Aunt Clellie," Mrs. Clark writes, "said when she was a young girl, loads of cedar were transported to Murfreesboro from Hall's Hill Pike. She distinctly remembered that her brother-in-law . . . literally and actually built fires under the mules who hauled the cedar to get them going [this about 1921 or 1922 in middle Tennessee]."

build a better mousetrap. Ralph Waldo Emerson is often credited with "If you build a better mousetrap the world will beat a path to your door," mainly because a book entitled *Borrowings* by Sarah S. B. Yule and Mary Keene, published in 1889, reported that he had said it in a speech. But many scholars believe that Emerson was too wise to believe that the world would always seek out the best, and nothing concerning a mousetrap can be found in any of Emerson's published writings.

bull; phallus. *Bull*, for "the male of any bovine animal," is first recorded in about 1200 and derives from the Old English *bula*, "bull." The word is akin to the Greek *phallos*, "phallus," which comes from an Indo-European root meaning "to swell up." *Bull* as an opprobrious Americanism for a policeman, or prison guard, came into the language in 1893 from the Spanish Gypsy *bul*, policeman.

bull! *Bull!*, in the sense of “a lie, an exaggeration, an incredible concocted story,” was first recorded in 1911 and is not a euphemism for the euphemistic “booshwah” (which derives from the French *bois de vache*, “cow’s wood” or “dried dung”). It has nothing to do with a papal bull either or, for that matter, with Irish bulls (ludicrous incongruities such as “It’s grand to be alone, especially if your swateheart is wid you”). No one can say for sure just how the expression originated. *Bull!* may have passed into English via the French *boule*, meaning “fraud.” Or it could come from a “cock and bull story,” an expression that dates back to at least the early 17th century. Another explanation is that it’s simply a shortening of *bullshit*, which was first recorded in 1928, but it was probably around long before that. Still another has it deriving from the American expression “I wouldn’t trust him as far as I could throw [fling] a bull,” dating back to the 1830s. The papal *bull* comes from the Latin *bulla* for the heavy leaden seal attached to papal edicts, while the term *Irish bull* may derive from either the Middle English *bull*, to cheat, or the Old French *boule*, fraud.

bulldog. This breed of dog takes its name from the so-called sport it was bred for, not because it bears any resemblance to a bull. Bulldogs were bred centuries ago for bull-baiting “contests” held in England until they were outlawed by Parliament in 1835. A bull was chained to a stake in the center of the arena and then whipped into a frenzy when dogs were loosed upon it. The dogs had to be able to get by the bull’s horns, seize its nose, and hang on tenaciously. Therefore, they were bred to be strong, savage, courageous animals with a low center of gravity and an undershot jaw. These bulldogs were often killed, but the bull could *never* win: if it killed several bulldogs, more were set upon it. Because of its courage and tenacity the bulldog became a symbol of England. Over the years much of the savage aggressiveness has been bred out of the animal. See PIT BULL.

bulldog edition. In the 1890s several New York City newspapers brought out early-morning editions that came to be called bulldog editions, possibly because the newspapers “fought like bulldogs” among themselves in their circulation wars.

bulldogging. “One of the men . . . reached well over the animal’s back to get a slack of the loose hide next the belly, lifted strongly, and tripped. This is called ‘bulldogging.’” So did an early writer describe the way cowboys wrestled steers to the ground in the American West. They often, however, leaped from their horses and twisted the cow’s neck, flipping it over. Neither method suggests the way bulldogs fought bulls when such cruel contests were held in England—for the bulldog seized the bull’s nose in its mouth. Esse F. O’Brien’s *The First Bulldogger* (1961) therefore suggests that a black cowboy named Bill Pickett is responsible for the word—Pickett would sink his teeth into a bull’s nose while wrestling it to the ground, his method being responsible for the name of the more conventional method!

bulldozer. The earth-moving bulldozer takes its name from a band of political terrorists. After the Civil War, a group of Louisiana vigilantes, who brutally prevented freed slaves from voting freely, were termed “bulldozers,” the word first printed in

an 1876 newspaper account of their activities. It is not certain whether they were whites forcing blacks to vote Democratic, Republican Negroes forcing their brothers *not* to vote Democratic, or groups of both. Neither is the exact origin of their name clear—it probably came from *bulldose*, to mete out a “dose of the bull” with the long heavy bullwhip often made from the animal’s penis. *Bulldozer* was soon used for “a revolver” and to describe anyone resembling the original terrorist bullies. Later the huge earth-moving machine, which brutally pushes everything in its path aside, became a natural candidate for the designation. Few people realize that when someone is called a *bulldozer* today he is being named not for the machine, but for the vigilantes so much like him. See also DERRICK; MONKEY WRENCH.

Bull Durham. Long the most popular brand of tobacco rolled into cigarettes or smoked in pipes by cowboys. Recently the title of a movie.

bullfight. Ernest Hemingway commented on this term in *The Sun Also Rises* (1926): “He [the matador] was very bashful about his English . . . Bull-fight he was suspicious of. I explained that bull-fight in Spanish was the *lidia* [fighting] of a *toro* . . . There is no Spanish word for bull-fight.” In English *bullfight* dates back to about 1745. See AFICIONADO.

bullhorn. See MEGAPHONE.

bull in a china shop. Back in 1936 bandleader Fred Waring lost a bet to actor Paul Douglas and had to lead a bull through Plummer’s China Shop in New York City. Waring agreed to make good any damage the bull might do, but Ferdinand walked up and down the aisles with aristocratic grace, whereas his leader knocked over a table of china. Obviously bulls aren’t as clumsy and reckless in delicate situations as the old saying holds, but the expression has been common in English since before 1834, when Frederick Marryat used it in his novel *Jacob Faithful*.

bullion. Meaning gold or silver in the mass, or in bars or ingot form, *bullion* derives from the French *bouillir*, “to boil,” referring to the boiling or melting of the metal before it is made into bars or ingots. The word is first recorded in the 14th century.

bull pen. Early in this century the imposing Bull Durham Tobacco signs behind outfield fences in American baseball parks pictured a big brightly colored bull, proclaiming that any batter whose home run hit the bull would get \$50 and two bags of Bull Durham. Pitchers usually warmed up near these Bull Durham signs, which may be why warm-up areas for relief pitchers are called *bull pens* today, although the word could have derived from the word *bull pen* that had meant a stockade for prisoners since 1809. Or perhaps the two meanings reinforced each other.

bull’s-eye. There are many plausible ways to explain this term, all of them based on a bull’s eye, which is about the same size as the small black spot at the dead center of a target. Bull’s-eye tar-

gets were not used in ancient archery contests, as is commonly thought, but were introduced to England as targets in rifle and handgun competition. Perhaps the bull's-eyes in them were simply named for their resemblance to a bull's eye. But it is possible that bull's-eyes take their name from a British coin called the bull's-eye, which was worth a crown, or five shillings. This coin was in circulation in the early 1800s, about the time bull's-eye targets were introduced, and it would seem more logical to name the flat target centers after flat coins than after the round eye of a bull. As for the coin, it was so named in the late 17th century, possibly because the one-crown piece was often bet on the outcome of a bull-baiting contest; when one put money "on the bull's eye" one was betting on the bull, just as today we are said to put a bet on a horse's nose.

bullshit. Utter nonsense, a flagrant, outrageous lie. This American expletive is first recorded in 1914 but is almost certainly a century or more older. Common euphemisms for it include bull, bushwa, and BS. Flinging, slinging, and throwing the bull is done by a bullshit artist—and much less commonly, a Spanish athlete. "I enclose a prize sample of bullshit," James Joyce wrote in a 1914 letter to Ezra Pound. *See* SHIT.

bully boy with a glass eye. An army term for a fine person. Mark Twain used the expression in *Roughing It* (1872) and it was popular with troops in the Civil War.

bum; on the bum. No self-respecting hobo, or tramp, would allow himself to be called a bum, for the word has degenerated from its original meaning of "a vagabond" over a century ago, and today usually stands for a "moneyless, prideless, filthy, hopeless derelict and habitual drunkard." One working definition to distinguish between the three classes of vagabonds is that "a hobo will work, a tramp won't, a bum can't." *Bum* was first recorded in 1855, and during the Civil War was used to describe a foraging soldier. It appears to derive from two words: the German *bummer*, "a high-spirited, irresponsible person," and the old English word *bum*, which has for over four centuries been slang for both "a drunk" and "the buttocks." By the turn of the century a *bum* was the pitiable creature described above instead of a romantic vagabond singing the song of the open road. The term is also used today to describe any no-good person and has a score more uses, including terms like *tennis bum* and *ski bum*. *On the bum* is an American expression dating back to San Francisco Gold Rush days, when it simply meant living the life of a hobo. Later humorist George Ade used the slang term to mean someone not feeling well, and from this use derives our expression *on the bum* for something that isn't working well. *Bum* for a drunken loafer or vagrant is first recorded in reference to men who lost their fortunes in the California gold rush. To *bum*, to borrow or panhandle money, comes from the practice of bums begging in the streets. *Bum*, for "the buttocks" is a very old word dating from Middle English; only within the past two centuries has it become a vulgar expression. *Bum* now is apparently not an abbreviation of "bottom" but an echoic word. A long-suppressed nursery rhyme goes:

Piss a bed
Bailey Butt,
Your Bum is so heavy
You can't get up!

bumashka. *Bumashka*, a pejorative form of *bumage*, "paper," is the Russian term for GOBBLEDYGOOK or "officialese." Much of this existed in the Soviet Union, as in America, one government directive calling for "the mobilization of personnel for the removal of dust."

bumble. The pompous beadle Mr. Bumble in Dickens's *Oliver Twist* (1837–38) is a self-important, petty, domineering parish official. His name has come to be used for all such officious bureaucrats, collectively called *bumbledom*. In the book Bumble winds up in the workhouse he once commanded. Partridge notes that "Dickens chose this echoic name—he was a master of echoism—because Mr. Bumble and his like waffle and vainly boom their way through life."

bumboat. In the early 17th century, bumboats (also called dirtboats) were scavengers' boats used to remove filth from ships anchored in the Thames. Their name ultimately derives from the medieval *bum*, for "buttocks," a word of echoic origin imitative of "the sound of breaking wind." The bumboats' crews used to sell fresh vegetables to the ships in the harbor, so these craft came to be known as "any boat employed to carry provisions, vegetables, and small merchandise for sale to ships, either in port or lying at a distance from shore."

bumf. A word, British in origin, for what Americans more frequently call GOBBLEDYGOOK. *Bumf* is a shortening of *bum fodder*, "toilet paper," and refers to the reams of directives issued by government agencies. The *bum* in *bum fodder* refers of course to the buttocks.

Bummers. A Southern nickname for Union general William Tecumseh Sherman's soldiers as they made their way plundering and burning across Georgia in Sherman's fabled March to the Sea during the Civil War. They were also called "scabs," "huns," "scavengers," "hateful," "despised," "fiends," "red-handed devils," and "human fungi." But *Bummer* became the only word more anathema to Southerners than that hated word *Yankee*. After looting a town named Barnwell, the Bummers set it on fire and jokingly renamed it Burnwell. *See* SHERMAN'S HAIRPINS.

bummie. Shepherds give this name to a lamb that has lost its mother, or whose mother has deserted it, and which has to be raised by humans or by another ewe tricked into believing the lamb is her own. Also called a bummer, a bum, and a lappie.

bump. The prevailing theory is that *bump* was first an onomatopoeic word meaning "a knock or blow," the swelling or protuberance arising from the knocking or bumping becoming known as a *bump* as well. The trouble is that the *bump* for "a swelling" is the first recorded of the two words, by Shakespeare in *Romeo and Juliet* (1592): "It had upon its brow a bumpe as big as a young Cockrel's stone [testicle] . . ." Being *bumped* from a list, such as an airline passenger list, is a fairly recent and widespread Americanism. *Bump* also refers to a gesture that was probably born in the 1970s. Sometimes called the *first bump*, it is fast replacing *high-five* and *low-five* among young people. Some trace its origins to professional basketball, where the

great “Earl the Pearl” Monroe was a pioneer bumper. Others claim characters in *The Superfriends*, a 1973 cartoon show, first used the bump. There are several possible ancestors, too, including the punch to the muscle of the upper arm popular in the 1950s. In any case, *bump* means “a light bumping of fists” and is not an aggressive gesture.

bumper crop. *Bumper*, in the sense of “something large,” is only heard today in the expression *a bumper crop*, one that is extraordinarily abundant, as in “We had a bumper crop of tomatoes.”

bump off. The underworld slang for to kill or murder may have its origins in the relatively genteel world of British boating. The theory is that *bump off* derives from a rule in boat racing that disqualified any shell that was bumped by the boat behind it. This elimination regulation was familiar to gamblers betting on the races, proponents argue, and the term passed into the lexicon of the British underworld. Neither the *Oxford English Dictionary* nor the late British slang authority Eric Partridge support this theory, simply citing *bump off* as an Americanism first recorded in 1910.

bump on a log. “Ye ain’t goin to set there like a bump on a log ‘thout sayin’ a word to pay fer yer vittles, air ye?” This recorded use of the above American expression, from Kate Douglas Wiggin’s *The Bird’s Christmas Carol* (1899), uses the words as they are still used today and best defines them. The metaphor is a good one, for a log is stolid and stupid, and a bump on a log seems all the more so. Also, sitting next to someone who is *like a bump on a log*, who just sits silently without being able to make conversation, is as uncomfortable as sitting on a bump on a log.

the bum’s rush. To force someone out of a place, ejecting him quickly, abruptly: “They gave that con man the bum’s rush.” First recorded in 1910 by American word explorer T. A. Doran, who figures so often in these pages.

bunchgrass. Bunchgrass (*Sporobolus airbooides*) grows on the bleak mountainsides of Nevada and neighboring territories and offers excellent feed for stock, even in the dead of winter, wherever the snow is blown aside and exposes it; notwithstanding its unpromising home, bunchgrass is a better and more nutritious diet for cattle and horses than almost any other hay or grass that is known.

bundle of nerves. A very nervous person, someone with the jitters, as in “He’s a bundle of nerves.” *Bundle* probably comes from the Dutch *bondel*. It has referred since at least 1331 to “a collection of things bound,” and in biology can mean “a cluster of closely bound nerve fibers.”

bundling. In the late 1700s many tracts pro and con were written about the custom of bundling, which was all the rage in America at the time. When bundling, courting couples would lie in the same bed partly or fully clothed, sometimes with a special bundling board between them. Often the bundling board was breached or hurdled and the couples groped in the

dark for additional ways to keep warm, and that is where the controversy came in. In his *Classical Dictionary of the Vulgar Tongue*, Grose defined *bundling* as “A man and woman lying on the same bed with their clothes on; an expedient practiced in America on a scarcity of beds, where, on such occasions, husbands and parents frequently permitted travelers to ‘bundle’ with their wives and daughters.” But there was more to the practice than the scarcity of beds or the lack of heat, as Washington Irving noted in his *History of New York*. Irving cited those “cunning and ingenious” Yankees who permitted young couples to bundle due to their “strict adherence to the good old pithy maxim about ‘buying a pig in a poke.’” On the other hand, one old gentleman, explaining the custom to his grandson late in the 19th century, emphasized the practicality of bundling and denied any wrongdoing on the part of the participants. “What is the use of sitting up all night and burning out fire and lights, when you could just as well get under cover and keep warm?” he said. “Why, damn it, there wasn’t half as many bastards then as there are now!” In any event, bundling was with us from the beginning in America and came close to being a universal custom from 1700 to 1780.

bungalow. In India a *bangala* is a one-story thatched or tiled house surrounded by a verandah. Its name literally means “of Bengal,” where such dwellings are common. The British in India borrowed the word, which changed to *bungalow* over the years, applying it to any cottage of one story. In America a bungalow usually has one-and-a-half stories and a gabled roof, among other characteristics, but the word is also used here loosely to mean any small dwelling.

bungay. For reasons unclear, the old town of Bungay in Suffolk, England, is associated with stupidity, perhaps because *Bungay* sounds like “bungle.” In any case, the British have long called any stupid play in whist, such as when one leads with the highest scoring card, a bungay.

bung-o! A British toast that lives on in Hemingway’s *The Sun Also Rises* (1926), if nowhere else. Hemingway characters, notably Lady Brett, use the word several times, Brett shortly before she makes her famous remark, “You know it makes one feel rather good deciding not to be a bitch.”

bunk. The Missouri Compromise was being hotly debated the morning of February 25, 1820 when long-winded Congressman Felix Walker of Buncombe County, North Carolina rose on the floor of the House of Representatives and insisted that he be heard before a vote was taken. “Old Oil Jug,” as his fellow congressmen called him after his well-lubricated vocal cords, did not address himself to the monumental question of the extension of slavery; his interminable oration actually had little to do with anything and important members began interrupting him with cries of “Question, Question!” On being asked what purpose his speech served, Walker calmly remarked, “You’re not hurting my feelings, gentlemen. I am not speaking for your ears. I am only talking for Buncombe.” Old Oil Jug apparently had written his speech some time before and believed he would ingratiate himself with the voters back home if he delivered it in the midst of a great debate, but the strategy didn’t work, judging by the fact that he lost the next election. Yet his

reply, “I am talking for Buncombe,” was widely published in newspapers covering the debate and became a synonym for talking nonsense. Eventually, *Buncombe* became *bunkum* and it finally took the shortened form of *bunk* (in the 1850s), meaning not only “bombastic political talk,” but “any empty, inflated speech obviously meant to fool people.”

bunko. Any swindler or cheat, from the Spanish *banca* (a game of chance at cards). The term originated in the U.S., Herbert Asbury advising in *Sucker's Progress* (1938): “Eight-Dice Cloth was introduced into San Francisco by a crooked gambler who made various changes in the method of play and christened it Banco. After a few years this was corrupted into Bunco, sometimes spelled Bunko, and in time Bunco came to be a general term applied to all swindling and confidence games.”

bunny. *Bunny*, as in the *Easter bunny* or a *Playboy bunny*, has its origins in the Scottish dialect word *bun*, which according to some scholars, originally meant just the tail of a rabbit or a squirrel. By 1690 *bun* had been extended to *bunny* and had become the pet name for a rabbit.

Bunsen burner; bunsenite. Robert Wilhelm Bunsen (1811–99) invented the Bunsen burner that is standard equipment in every chemistry laboratory. This laboratory burner, which mixes gas with air to produce a hot smokeless flame, wasn't the only scientific contribution the German chemist made. He discovered, with Gustav Kirchhoff, the elements cesium and rubidium, and shared with Henry Roscoe the discovery of the reciprocity law, doing much original work in spectrum analysis. The Heidelberg professor also has bunsenite, a nickel monoxide, named in his honor.

bunt. The bunt in baseball, used mostly by a batter as a sacrifice play to advance another runner into better scoring position, is probably a corruption of the word *butt*, which sounds like *bunt* when spoken through the nose. Hitters butt at the ball with the bat when they bunt. *Bunt* dates back to at least 1872, when the strategy's first use is recorded by a player named Pearce on the Brooklyn Atlantics.

Buntlinism. Ned Buntline was the pen name of Edward Z. C. Judson (1823–86), an adventurer, trapper and soldier in the Far West whose life pales even those of the heroes of the more than 400 dime novels he wrote. This founder of the Know-Nothing party, rioter and accused murderer gave William Cody the name Buffalo Bill and featured him in a series of dime novels. His rowdy, jingoistic political doctrine inspired the term *Buntlinism*.

buoy; buoyant. Pronounced “boy” in England and by many sailors and some landlubbers in America (as in Lifebuoy soap), the word *buoy* (also pronounced “boo-i”) has no etymological connection with “boy.” *Buoy* comes from the Old French *boye* meaning “chained,” in reference to the chain that holds a buoy in place. However, the chain is invisible to anyone looking at a *buoy* and *buoys* came, ironically enough, to suggest lightness and freedom (the opposite of being chained) to onlookers, giving us the words *buoyant* and *buoyancy*. This was perhaps because of the floating action of the buoy itself.

Burbank; Burbank plum; Burbank potato. There has been muted controversy over whether the plant breeder Luther Burbank (1849–1926) was a “plant wizard” or something of a failure. Burbank was born in Lancaster, Massachusetts, and there developed the Burbank potato, his most important achievement, while just a boy experimenting with seeds in his mother's garden. At 26 he moved to Santa Rosa, California, using the \$150 he made from the sale of his potato to pay for the journey. It was in Santa Rosa, his “chosen spot of the earth,” that he bred almost all the varieties of fruit, vegetables, and ornamentals for which he became famous. These included at least 66 new fruits, 12 new bush fruits, seven tree nuts, and nine vegetables, of which a number, notably the Burbank plum, bear his name. He once grew half a million strawberry plants to obtain one prize plant. However, according to Dr. W. L. Howard (University of California Agricultural Experiment Station Bulletin, 1945), only a few of the several hundred varieties developed by Burbank have stood the test of time. The patient Burbank was not the first American plant breeder—Thomas Jefferson, George Washington Carver, and Charles Hovey, originator of the Hovey strawberry, came long before him. Burbank was strongly influenced by Darwin's *The Variation of Animals and Plants Under Domestication*. His credo can be summed up in his statement “I shall be contented if, because of me, there shall be better fruits and fairer flowers.” Burbank did have a sense of humor, unlike some of his critics. The renowned horticulturist was working in his experimental garden one day when approached by an obnoxious neighbor:

“Well, what on earth are you working on now?”
the man asked.
“I'm trying to cross an eggplant and milkweed,”
Burbank replied.
“What in heaven do you expect to get from that?”
asked the neighbor.
“Custard pie,” said Burbank calmly.

The city of Burbank, California was named for the famous plant breeder.

burbs; suburb. For better or worse, *burbs* has been American slang for *suburbs* for the last decade or so. I record it here mainly because I haven't seen it in any dictionary. *Suburbs* wasn't used much in America until about 1940, though the word dates back to 14th-century England, where it meant residential areas outside a town or city, deriving from the Latin *suburbium*, formed from *sub*, “near,” and *urbs*, “city.”

burdock. *Burdock* (of the genus *Arctium*), or *gobo*, as it is also called, has been recommended as a marvelous aphrodisiac by several ancient writers, but it is generally considered a garden weed today, one of the 50 worst weeds of all time. It's that little plant whose prickly burrs commonly stick to clothing. There's obviously nothing stimulating about eating the burrs or about rolling around in a field of burdock.

burgoo. The rich southern American stew called *burgoo* probably takes its name from a similar stew that American seamen used to make, which, in turn, may derive its name from the Arabic *burghul*, “bruised grain.” The word, however, is first recorded out West as *burgou*, in 1837, and may be a corruption

of “barbecue.” Someone has noted about *burgoo*: “No two people tell the same story about its origin and no two people will give you the same recipe.”

burgoynade. “Gentleman Johnny” Burgoyne hardly deserved his fate. General John Burgoyne (1722–92), an accomplished dramatist as well as a soldier, commanded the British forces that came down from Canada to capture New York’s Fort Ticonderoga during the Revolutionary War. It was his intention to join with Howe’s army farther downstate, but due to a delay on Howe’s part, excellent American tactics, and enemy forces three times the strength of his own, he was forced to surrender after the battle of Saratoga. English Tories condemned him for his alleged use of savage Indians, and his name in the form of *burgoynade* came to mean the capture of a notable person, particularly a general or high-ranking officer.

burgundy. Burgundy wines are usually red wines made from grapes from the French province of Burgundy, especially the area between Dijon and Chalons. The province, in turn, takes its name from the Medieval Latin *Burgundia*, land of the Burgunds (a German tribe). When one thinks of burgundy, one often remembers James Thurber’s famous put-down in a caption to a *New Yorker* cartoon depicting a wine-snob saying to another: “It’s a naive domestic Burgundy without any breeding, but I think you’ll be amused by its presumption.”

burial of an ass. This is a biblical term meaning no burial at all, burial with the body thrown on a refuse heap. The expression is from Jeremiah 22:9: “He shall be buried with the burial of an ass, drawn and cast forth beyond the gates of Jerusalem.”

Buridan’s ass. Buridan’s ass is “a hypothetical beast that stands exactly between two haystacks in every respect equal and starves to death because there is no reason why it should eat from one rather than the other.” The argument is a sophism, false because it ignores the fact that random choice remains when choice based on knowledge is impossible. Aristotle knew that the argument was specious when he drew the analogy in his *De Caelo* (“On the Heavens”), where he used it to criticize a theory of an earlier writer. However, the French scholastic philosopher Jean Buridan (ca. 1295–1356) accepted it as a philosophical principle when he wrote a commentary on Aristotle’s work. Buridan used a dog dying of hunger between two equally tempting dishes of food to illustrate the will’s paralysis when confronted with two equal choices and his philosophical sophism should really be called Buridan’s dog. How *Buridan’s dog* became *Buridan’s ass* remains something of a mystery. Aristotle used a *man* standing between food and drink in his analogy, so there is no help there. What probably happened was that Buridan’s opponents substituted the ass, long a symbol of stupidity, for the dog in Buridan’s analogy in order to deride his doctrine. Other myths about the rector of the University of Paris, as false as *Buridan’s ass*, insist that he founded Vienna University and was the lover of Joan of Navarre and/or Margaret of Burgundy, both queens of France.

buried; buried in booze. *Buried*, and sometimes *buried in booze*, was popular slang for “dead drunk” in the 1920s during

Prohibition, when the ingredients in BOOZE could kill more quickly.

burka. It was compulsory for all Muslim women to wear this loose garment when the Taliban ruled in Afghanistan. It covers the whole body, its only opening being a slit for the eyes, even this covered by pieces of cotton-mesh. It has been called a “head-to-toe shroud.”

burke. The best-known of eponymous murderers and among the most unwise, William Burke (1792–1829) was an Irish laborer who emigrated to Scotland in 1817. There he eventually opened a used-clothing store in Edinburgh and, far more important, rented a room from William Hare, a fellow Irishman and owner of a boardinghouse catering to vagrants and elderly pensioners. It was in 1827 that Burke and Hare embarked upon their career. One of Hare’s lodgers—an old man named Donald—had died owing him four pounds, and the landlord convinced Burke that they had stumbled upon an easy source of income. Ripping the cover off the coffin in which parish authorities had sealed Donald, the pair hid his body in a bed and filled the coffin with tanner’s bark, resealing it and later selling the cadaver for seven pounds 10 shillings to Dr. Robert Knox, who ran an anatomy school in Surgeon’s Square.

Burke and Hare soon expanded their operation. Another boarder lingered too long at death’s door and they helped him through, smothering the man with a pillow and selling his body to Knox for 10 pounds. Hare and his wife, and Burke and his mistress, Helen McDougal, proceeded to dispatch from 14 to 28 more unfortunates in similar fashion, receiving up to 14 pounds for each body. They were careful to smother their victims, leaving no marks of violence, so that it would appear that they were merely grave robbers. Whenever the boardinghouse supply ran low, they lured victims there, usually choosing old hags, drunks, and prostitutes, whom they often plied with drink. If a candidate offered too much resistance to being smothered by a pillow, Burke would pin him down while Hare smothered him, holding his hands over the victim’s nose and mouth. But the murderers eventually got careless.

First they killed Mary Peterson, a voluptuous 18-year-old, so free with her body that it was quickly recognized by Knox’s young medical students, who even preserved it before dissection as a perfect example of female pulchritude. Then they did in “Daft Jamie” Wilson, a familiar, good-natured imbecile who made his living running errands on the streets of Edinburgh. Finally, the suspicions of neighbors aroused, police caught them with the body of a missing woman named Mary Dougherty. Hare turned state’s evidence at the ensuing trial, which began on Christmas Eve; he and his wife were freed, and Helen McDougal was discharged for lack of evidence. Burke for some reason foolishly refused to give state’s evidence. He was convicted and hanged a month later on January 28, 1829, before a crowd of some 30,000.

The word the murderer contributed to the language was even heard as he stood on the scaffold in the Grassmarket, spectators exhorting the executioner with cries of “Burke him, Burke him!” (*i.e.*, don’t hang him but smother or strangle him to death). The crowd wanted to *burke* Hare, the real brains behind the operation, despite his immunity, but he escaped them

and is believed to have died of natural causes many years later in England, where he lived under an assumed name.

Burke's Peerage. Like DEBRET'S PEERAGE before it, *Burke's Peerage* has often been called the "studbook" of the British aristocracy. Originally published in 1826, it was fully titled *A Genealogical and Heraldic History of the Peerage and Baronetage of the United Kingdom*, and has been issued annually since 1847. The famous reference book, the first alphabetical guide to the British aristocracy, was the inspiration of John Burke (1787–1848), an English genealogist whose family hailed from Tipperary. Burke's son Sir John Bernard, a genealogist and barrister, assisted him in the compilation, and began its annual re-editing. John Burke also published *Burke's Landed Gentry* (1833–38), another work well known by those interested in tracing lost ancestors.

burlesque. The American burlesque in which stripteasers performed owes something to traditional burlesque, which is comedy employing satire or caricature (the word *burlesque* in fact deriving from the Italian *burla*, ridicule). But burlesque derived more directly from the minstrel show and variety theater. American burlesque, rarely produced today, featured often raunchy dialect and slapstick comedians, song and dance acts, and scantily dressed chorus girls as well as bump-and-grind strippers. It operated in circuits distinct from vaudeville after the turn of the 20th century, mainly in the Columbia and Empire Circuits, and grew more daring until police raids inspired by laws proposed by New York mayor La Guardia led to the closing of the famed Minsky burlesque houses and others during the Great Depression. The best-known and most artistic stripper of the golden era was Gypsy Rose Lee (born Rose Louise Hovick), who began her show business career as a child song-and-dance act and wrote mystery novels after her burlesque days ended. Fanny Brice, Bobby Clark, Phil Silvers, and Abbott and Costello were among the many great talents who worked in burlesque. See ECDYSTICST; VAUDEVILLE.

burning ears; itching ears. Pliny writes: "When our ears do glow and tingle, some do talk of us in our absence." This superstition probably goes back before the ancient Romans and is recorded early in English, Shakespeare writing of "fire in mine ears." *To have itching ears*, "to enjoy hearing gossip," is perhaps even older, the words recorded in the Bible (2 Tim. 3:3).

burning the midnight oil; it smells of the lamp.

Wee spend our mid-day sweat, or mid-night oyle;
Wee tyre the night in thought; the day in toyle.

I've read that this saying is of American origin, but it obviously isn't, judging by the above poem by Francis Quarles, English author and later "chronologer to the City of London," who first recorded the expression in the mid-17th century. Oils of many types were of course widely used for lamps long before American petroleum made low-priced lamplight available. The words mean "to sit up late at night working," especially in the pursuit of learning. *It smells of the lamp* (Latin, *olet lucernam*) is an equally old saying, referring to literary work that is overworked

and tired from too much burning of the midnight oil. Of authors who consistently burned the midnight oil, Honoré de Balzac is the best example. Like Pliny the Elder before him, Balzac liked to begin work at midnight and write for 18 hours at a stretch. He did this for weeks on end and was so meticulous a craftsman that he often completely rewrote his novels in proof.

burn one's fingers. To be harmed by meddling with something. Several sources suggest that the allusion here is to taking chestnuts from the fire. But there is no evidence for this in the first recorded use of the phrase in a 1710 book of English proverbs: "The busiebody burns his own fingers."

burn one with a feather. A colorful example of old diner and luncheonette talk, meaning a chocolate malted milk with an egg mixed in it. Another example is *burn the British*, which means a toasted English muffin. Of these orders related to the chef by the waiter or waitress, a few have stood the test of time. Nobody, for example, has improved on *one to go* for a take-out order or on *nervous pudding* for Jell-O.

burn or hang in effigy. I've found effigies washed up on New York City beaches several times—once two small plastic dolls bound together face-to-face with the names of lovers taped on their foreheads and hundreds of pins stuck in their bodies; on another occasion, an unhusked coconut that represented the head of a real person and had a message carved on it, urging her death. This handiwork of members of local voodoo cults shows that the practice of executing, burning, or hanging people in effigy still exists, as it has since prehistory. It means, of course, "to vent one's wrath on a facsimile or copy of a hated person in the hope of insulting him or actually harming him." Apparently, no one gave a name to the practice until the 17th century, when the phrase *in effigy* is first recorded in a beautiful sermon of John Donne (1617): "In those that are damned before, we are damned in Effigie." *Effigy* itself, for "a likeness or image," is from the Latin *effigies*, meaning the same, and was first written *effigies* until this was mistaken for a plural and the *s* that should be in the word was dropped. The practice of hanging people in effigy to disgrace them publicly dates back long before the French Revolution, when it was customary for the public executioners to hang an effigy of a criminal if the criminal himself couldn't be found.

Burnside carbine; Burnside hat. See SIDEBURNS.

Burns Night. Another literary holiday, similar to Bloomsday (qv), though not as well known in the United States. The celebration is held in Scotland on January 25th, Burn's birthday. Robert Burns (1759–96) is best known for "Auld Lang Syne" and "Tam O' Shanter," among many other songs and poems.

burn the candle at both ends.

My candle burns at both ends;
It will not last the night;
But ah, my foes, and oh, my friends—
It gives a lovely light!

—Edna St. Vincent Millay,
"First Fig" (1920)

These are the words I remember when I hear the above expression; Millay's bright brief candle shows how even an old hackneyed phrase can be transmuted into poetry. The phrase goes back to the early 17th century in English and is much older, for it was translated then from the French *Bruloient la chandelle par less deux bouts*. Originally the expression meant to waste material wealth; that is, to use the candle wastefully. Then it took on its more common modern meaning of wasting one's strength, as when someone goes from his day job to one he holds at night, or works for a worthy cause every moment of his spare time, or even does too much partying after work.

burnt offerings. A biblical phrase describing a sacrifice burnt on an altar.

burn your bridges behind you. This expression may have originally been "burn your boats behind you," which originated with the Romans. Roman generals, including Caesar, often did burn all their boats after invading an alien land to impress upon their legions the fact that there could be no retreat. Later, bridges were burned for the same reason and the phrase to *burn your bridges behind you* came to mean, figuratively, to take a stand from which no withdrawal is feasible. See ANGL0-SAXON.

burr artichoke. A globe or French artichoke, as opposed to a Jerusalem artichoke. The globe artichoke is used for making stuffed artichokes.

burrito. A tortilla wrapped around meat, beans, cheese, or other fillings. *Burrito* is Spanish for "little burro." The word was originally confined to the U.S. Southwest but is used nationwide now with the spreading popularity of Mexican food.

burro. A donkey, from the Spanish meaning the same; used mostly in the U.S., rarely in England.

bury one's head in the sand. To hide from reality. The *New York Times* recently reported that General Achraf Rifi, general director of the Internal Security Forces in Lebanon, said that "If any country says it is safe from this [terrorism] they are putting their heads in the sand." Ostriches are also thought by some to bury their heads in the sand if pursued, an ancient belief that has been around for centuries. See also OSTRICH STOMACH.

bury the hatchet.

Buried was the bloody hatchet;
Buried was the dreadful war-club . . .
There was peace among the nations.

Longfellow wrote this in *Hiawatha* (1855), but the expression *bury the hatchet*, "to settle all differences, to let bygones be bygones," goes back much further. Recorded as early as 1794, it stems from an old Indian custom. Crude stone axes, or hatchets, were long the most important weapon of northeastern American Indians. Such ceremony was attached to these tomahawks that when peace was made between two tribes, it was customary to take the tomahawks of both chiefs and bury

them. When hostilities broke out again, the hatchets were dug up again as a declaration of war. The earliest record of this practice is found in the letters of American author Samuel Sewall, dated 1680: "Meeting with the Sachem they came to an agreement and buried two axes in the ground . . . which ceremony to them is more significant and binding than all the Articles of Peace, the hatchet being a principal weapon." Also a humorous euphemism for sexual intercourse.

busboy. The waiter's assistant in restaurants, who clears dishes off tables and other tasks, takes his name from the *bus*, a "hand-pushed four-wheeled vehicle used typically for carrying dishes in restaurants." The term dates back to the late 19th century.

busby. *Busby*, once a large 18th-century bushy wig, is now the name for the plumed fur cap comprising part of the full-dress uniform of the British Hussars and Royal Home Artillery. It has long been thought to derive from the name of the noted schoolmaster and disciplinarian, Dr. Richard Busby (1606–95). Dr. Busby, headmaster of Westminster School, had among his pupils such greats as Dryden, Locke, and Prior, and once boasted that he at one time or another birched 16 of the bishops then in office with his "little rod." As far as is known, however, the good doctor did not wear a frizzled wig. Perhaps his hair naturally stood on end, suggesting the wig when it came into vogue, or possibly there was another Busby thus far unknown to history.

bush league. The Dutch *bosch*, "woods or forest," gave us our word early on for *bush*, "wilderness." By 1909 American baseball fans were calling the minor leagues the bush leagues, because they were out in the wilderness, away from the cities where professional teams played. *Bush league* and then *bush* soon came to mean anything amateur.

bushwacker. The first bushwackers weren't soldiers who hid in the woods or thickets carrying on guerrilla warfare. These bushwackers didn't appear until the Civil War, almost 50 years after the first bushwackers got their name from pulling their boats up parts of the Mississippi by grasping bushes along the bank. In more recent time *bushwacking* has also come to mean making one's way through unbroken forest, off the trail, by pushing bushes aside or breaking them.

business. *Business* derives from an Anglo-Saxon word, *bis-gian*, which means "to worry, to fatigue, to occupy." All the earliest recorded uses of the word *business*, dating back to about 950, are to express anxiety, distress, and uneasiness, the word eventually coming to mean "a pursuit, occupation, or employment," its modern sense, only in about 1400.

business tomorrow. After the Spartans seized Thebes, Archias commanded the garrison in that Greek city. The enemy plotted to kill him, but were discovered, their plot revealed in a letter sent to Archias. Archias, however, was enjoying himself at that moment. He put the letter aside, remarking, "Business tomorrow." He was assassinated before the sun rose the next day.

busker. A *busker* is a street musician or other entertainer who performs on the street, in malls, at subway stations, or wherever one can entertain and solicit money for one's performances. *Busk*, in the sense of "to entertain," is first recorded in 1851, when *busking* was defined as "going into public houses [pubs] and playing and singing and dancing." The term is becoming quite common in large U.S. cities. No one is sure of *busk's* origin, but it may derive from the French *brusquer*, "to seek."

buskin; sock; put on the buskin. *Buskin* for the high thick-soled boot (*cothurnus*), worn by actors to make them appear taller in ancient Greek tragedy, has been part of many languages since the 16th century, but its origin has never been established, and no one has been able to trace it back beyond the Middle Dutch *broseken*. Comic Greek actors wore a low shoe called the *sock*. Thus, *sock* is used allusively to denote comedy, and *to put on the buskins* means to write tragedy.

busman's holiday. An old story has a London bus driver spending his days off riding the bus he regularly drives, his peculiarity resulting in the expression *busman's holiday*, for "spending one's spare time doing what one regularly does for a living." But the story cannot be authenticated and the phrase, which is first recorded in 1921 but is probably 10 years or so older, must still be marked "origin unknown."

bust a gusset. To laugh hard or very heartily, as in "I like to bust a gusset laughing." *Gusset* refers to a piece of material added to a garment to make it fit more comfortably or roomier. To bust one, a person would have to laugh as hard or even harder than in *busting a gut* or *splitting a side*.

busted, by gosh! See PIKES PEAK OR BUST.

busy as a beaver. See BEAVER; EAGER BEAVER .

busy as a bee. "For aye as busy as bees been they," Chaucer wrote in *Canterbury Tales* (1387), the first recorded mention of the phrase. But bees must have been noticed busily collecting nectar since prehistoric days and no doubt the expression was used long before Chaucer's time. *Bee*, in fact, is a word found in all languages with Indo-European origins. That bees are busy there is no doubt—one pound of honey results from the visiting of some 10 million flowers where bees collect nectar, which they change to honey in their bodies.

busy as a goose with nine rectums. Very busy indeed; a one-rectumed goose, of course, seems to leave a dropping behind with each step.

busy as a one-armed paperhanger. This phrase is often attributed to cartoonist T(homas) A(loysius) Dorgan (1877–1929), but may have originated with O. Henry, who wrote in a 1908 story: "Busy as a one-armed man with a nettle rash pasting on wall-paper."

Busy Lizzie. See TOUCH-ME-NOT .

Butch Cassidy. A fabled gunfighter; after the alias of George LeRoy Parker (1866–1909?), who once worked as a cattle butcher and later led a gang called the Wild Bunch, one of whose members was the Sundance Kid (Harry Longabaugh). Legend holds that he was killed in a gunfight with Bolivian troops, but his sister claimed that he visited her long after his alleged death.

butcher. There is a story of a 13th-century queen of France wedding a butcher, so esteemed was the trade at the time. Our word *butcher* does come to us from the French *bocher*, which derives from *boc*, "goat," all butchers originally having been slaughterers of goats before bloodying their hands with other animals.

Butcher of Baghdad. A nickname of dictator Saddam Hussein, president of Iraq from 1979 until 2003. Saddam went into hiding when U.S. and British forces invaded Iraq, but was found cowering in a hole in the ground. After a long trial he was convicted of murder and hanged.

the butcher's bill. An old nickname in the British navy for the official returns of killed and wounded following a sea battle.

butcher's cut. I could find no reference listing this, but a butcher told me what it means: It is the best cut of meat, often taken or bought by the store's butcher.

butcher's dog. See LIE LIKE A BUTCHER'S DOG .

butler. *Butler* originally referred to a male servant in charge of wine and liquors, the word entering English in about 1250. It came from the French *bouteillier*, "bottle bearer," which in turn derives from the French *bouteille*, "bottle." Today, a butler is the chief male servant in a household.

but still it moves. When Galileo (1564–1642) was called before the Inquisition in Rome and forced to renounce the Copernican doctrine that the Earth moves around the Sun, which he had supported in his *Dialogue of the Two Chief World Systems* (1632), he was placed under house arrest for the remainder of his life and threatened with torture and death if he ever spoke such heresy again. Nevertheless, as he rose from his knees and shuffled toward the door, the old man was heard to mutter under his breath, "*Eppur si muove*—But still it moves."

butte. A French word, adopted by early explorers in the West, meaning an isolated hill or mountain rising abruptly above the surrounding land.

buttercup. Centuries ago English dairy farmers believed that if their cows ate the little yellow flowers that commonly grew in the meadows, the butter they yielded would be colored the same rich yellow. Experience seemed to prove that this was true and so the flowers were named buttercups. Actually, the field buttercup (*Ranunculus acris*) did improve the quality of

Bossy's output, because the flower grows only on good pasture and thus provides good feed. The flower's scientific genus name, *Ranunculus*, is Latin for "a little frog," in allusion to the meadow habitat of the wildflower.

butterfingers. Although the word *butterfingers*—used for someone who drops things or can't hold on to anything, as if his fingers were coated with slippery butter—has been traced back to early-17th-century England, its popularity in America stems from its use as a baseball term for a fielder who drops the ball. The baseball usage is first recorded in 1888 and *butterfingers* was being generally and widely used shortly thereafter.

butterflies; butterfly kisses. The nervous butterflies that we sometimes feel in our stomachs are a fluttering sensation, which accounts for this Americanism, first recorded in the classic W. C. Fields movie *The Bank Dick* (1940). Similarly, the light soft fluttering of one's eyelashes against a loved one's cheek is called a "butterfly kiss," this expression dating back at least to late 19th-century England. See BUTTERFLY; FLOAT LIKE A BUTTERFLY .

butterfly. The Dutch early called the butterfly the *boterschijte*, which translates as butter excrement, or butter shit. They supposedly called it this because the insect leaves streaks of its yellowish excrement wherever it lands. There we have one theory about the origin of *butterfly*. A second explanation claims that the Dutch believed a little witch with wings frequently stole their butter, and therefore named the insect the *butter fly*. But though these are amusing theories, the butterfly was probably so named simply because the most common English species (the brimstone) is a butter-yellow color. Anyhow, why would anyone want such a wonderful creature to be associated with those other derivations?

butterfly pea. A woody perennial vine of the pea family, the butterfly pea (*Clitoria mariana*) has pale blue flowers that appear as if upside down, the standard (the upper, broad and usually erect petal of a pea flower) much larger than the rest of the flowers. It takes its popular name from its imagined resemblance to a butterfly. One gardening guide says "the origin of [the genus name] *clitoria* is unprintable"; fortunately, it is not too difficult to figure out. See AVOCADO; PEA.

butter up. In the sense of bestowing fulsome flattery upon someone this phrase dates all the way back to Congreve's *Way of the World* (1700): "The squire that's buttered still is sure to be undone." It is probably a translation of the French *cirer*, which means the same.

butter wouldn't melt in her mouth. Men have been saying this about demure women since the early 16th century; in fact, Heywood listed it as a proverb in 1536: the lady so prim and proper, so cold, that is, that even a piece of soft butter wouldn't melt in her mouth. In *Pendennis* Thackeray used the expression with reference to a girl who "smiles and languishes," but today it isn't usually employed in the sense of suspiciously amiable. In fact, the phrase once had a longer form: "She looks like butter wouldn't melt in her mouth, but cheese won't choke

her," i.e., she's really not fastidious at all, but in fact rather earthy.

butt floss. Slang for a skimpy bikini bathing suit, or string. Wrote Peter Benchley in *White Shark*, 1994: "She was wearing one of those bikini bathing suits . . . what did they call them, butt floss . . ."

buttinsky. Someone who interrupts conversations or intrudes in matters not concerning him is said to *butt in*. Most authorities believe the "-sky" ending a play on Russian and Polish names ending in "-sky," *buttinsky* a punning word formed toward the turn of the century when there were plenty of "greenhorn" immigrants among these ethnic groups who had to ask a lot of questions in order to survive. At any rate, the term was soon used to describe all buttinskies and still is.

buttock broker. *Buttock broker* is a humorous term for a matchmaker or marriage broker, first recorded in the late 17th century. Used in slang speech until the early 19th century, it also meant the madame of a brothel, equally adept at getting buttocks together.

Buttdownhemd. A button-down shirt. One of well over a thousand English words adopted or adapted by the Germans, this one combining German and English. Others include *der Clown*, *der Toaster*, *der Computer*, *der Swimming pool*, *das Apartment*, *der Hobby*, *die Cocktail Party*, *der Drink*, *der Boss*, *das Baby*, *die Chips* (french fries), *der Teenager*, and *das Rock and Roll*.

buttonhole. "Barricade your door against the button-holding world!" a British magazine warned its readers over a century ago. *Button-holding*, "grabbing a man by the top button of his coat and holding on with all the strength of the boring until you sell him one thing or another," was so common in the early 19th century that *button-holder* was defined in many dictionaries as "one who takes hold of a man's coat by the button so as to detain him in conversation." People must have been button-holding and wearying people in France, too, at the time, for the French had a similar phrase. In those days men's coats had buttons all the way up to the neck, including one on the lapel that could be buttoned in cold weather. When fashion decreed that upper buttons be eliminated, button-holders didn't suddenly reform. Instead, they began grabbing people by the buttonholes designers (for no good reason) left on the lapels and the phrase became *to buttonhole*. According to Robert Caro's *Master of the Senate* (2002), Lyndon Johnson perfected the "buttonhole" technique, sometimes holding a man so hard by the buttonhole in his lapel that the buttonhole ripped.

button man. A soldier or low-ranking Mafia member. The name, first recorded in the 1960s, may come from the fact that such low-ranking members are paid very little; jokingly, the few coins they receive are the equivalent of buttons.

buy; purchase. Both *buy* and *purchase* mean "to acquire by payment of money." But *purchase* is a more formal, highfalutin word applying to grand transactions, such as the Louisiana

Purchase. Only a very pompous person indeed would say he was going to purchase an ice-cream cone or a bar of candy.

buying back the nut. Troupes of actors in days gone by often traveled by wagon to the theaters where they performed. Innkeepers would rent them rooms on credit if they would leave or deposit the nut holding one of the wheels to the wagons. When the troupe was paid for its performance, they would pay the bill and receive the essential wheel nut in return. This came to be called *buying back the nut*, a term purely of historical interest today.

buzkashi. The word is not in any English dictionary but had its 15 minutes of fame during the war in Afghanistan. Buzkashi is a furious game dating back to the horsemen of Genghis Khan, in which riders fight in a free-for-all for the carcass of a goat or calf that must be deposited in a circle on the ground by the winner. Before this, the riders must lean to the ground from their horses, avoiding flashing hooves and often holding their own horse's reins in their teeth while they try to lift the 150-pound carcasses. Their reward is the honor of victory and money contributed by the spectators.

buzz. See ONOMATOPOEIA .

buzzard. A New World vulture of the family Cathartidae, especially the turkey vulture. The word is also used to describe a cantankerous or contemptible person, usually in the form *old buzzard*.

buzzword. A buzzword, the term dating back to about 1965, is a word or phrase that sounds authoritative or technical and is in vogue in a particular profession or field of study. Such words are often GOBBLEDYGOOK . According to the *Washington Post*, Philip Broughton, a veteran employee of the United States Public Health Service, invented the "Systematic Buzz Phrase Projector," a surefire way to fashion such language should you want to use it for purposes of obfuscation. A writer just thinks of any three-digit number at random and selects the corresponding "buzzwords" from three columns of such words that Broughton provides. The number 257, for example, yields "systematized logistical projection," a phrase that can be used in almost any report. "No one will have the remotest idea of what you're talking about," says Broughton. "But the important thing is that they're not about to admit it." Author Gershon Legman has a similar four-column system of phrases called FARK (Folklore Article Reconstruction Kit) which he claims will enable any "Folklore Ph.D." to devise "40,000 new and meaningful, well-balanced, and grammatically acceptable sentences packed with Folklore terms." Choosing, for example, the numbers 7, 4, 8, and 2 from Legman's columns, the writer gets: "Based on my own fieldwork in Guatemala/initiation of basic charismatic subculture development/recognizes the importance of other disciplines, while taking into account/the anticipated epistemological repercussions?"

B.V.D.s. There is no doubt about the origin of *B.V.D.s*. The initials do not derive from the words "Boys Ventilated Drawers" or any such humorous phrase. *B.V.D.s* comes from the initials of the three men (Bradley, Voorhies, and Day) who

founded, in 1876, the company that makes them. *B.V.D.* is a trademark and cannot be legally used to describe the product of any other company, though it is often used, unlawfully, as a generic term for underwear. *Beeveedees* is a variant spelling that is recorded in print as early as 1915.

bwana. The journalist Henry Morton Stanley of Stanley and Livingstone fame first recorded the Swahili *bwana* in 1878. *Bwana* is a title of respect translating as "father of sons," but meaning "sir, Mr., boss, or master." Often applied exclusively to white men in the past, it is today a common form of address to both Africans and whites in many African countries. See DOCTOR LIVINGSTONE , I PRESUME .

by a hairbreadth. See HAIRBREADTH ESCAPE .

by a Lady. *By a Lady* has the distinction of being the world's most common pseudonym or anonym, aside from *Anonymous*. There are about 1,000 literary works in England alone whose authors are identified as *By a Lady*.

by and large. *By and large* originated in the days of sailing ships, roughly meaning "to sail a ship to the wind and off it." These instructions to a helmsman were not precise, and so the 17th-century nautical term came to indicate imprecise generalities in everyday English and to mean "generally speaking," "on the whole"—especially when the speaker or writer is telling the substantial truth, despite minor exceptions. Literal-minded linguists object to the expression because *by and large* really describes a more complex marine operation than is indicated in the above definition.

Byerly Turk; Darley Arabian; Godolphin Barb. The names of the three Oriental horses from whom, without exception, all modern Thoroughbred racehorses descend through the male line. *Byerly Turk*, first of the founding fathers, was the charger of English Captain Byerly at the Battle of the Boyne (1690). Little is known about him except that he was a Turkish stallion purchased abroad a few years before. *Darley Arabian*, most celebrated of the three sires, was sent from Syria to Richard Darley of Yorkshire by his son Thomas in 1704; he was a certified Arabian stallion. *Godolphin Barb* or *Arabian*, called "the mysterious Frenchman," was brought to England from France in 1730 by Edward Coke and later sold or given to the Earl of Godolphin.

by exclamations. These old exclamations aren't much used anymore, but are a pleasure to hear. They include, among hundreds: By gum! By Godfrey! By fire! By guess and by God! By gum and by gosh! By guess and by gory! By gum and by golly! By the green horn spoon! By the livin' law! By the Old Lord Harry! By the prophet's nippers! By the snakes of Babylon! By chowder! By crackie! By Crimmins! By dad! By gary! By ginger! By gory! By gravey! By hen! By the holy smut! By hokey! By Joe Beeswax! By Jove! By King! By scissors! By swan! and By zounds!

by George. Ben Jonson (and presumably his contemporaries) used the mild oath *by St. George!* as far back as 1598, but it wasn't until the late 19th century that the expression began to

be shortened to *by George!* St. George has been the patron saint of England since the institution of the Order of the Garter. A historical character about whom little is really known, the patron saint of soldiers was perhaps a soldier in the Roman army who was martyred for the faith in Asia Minor. In legend he is said to have slain a dragon that fed on villagers at Silene, Libya, rescuing the Princess Sabra from its clutches. This tale of course became a Christian allegory for good triumphing over evil. The name George has its roots in the Greek *Georgos*, “a farmer,” literally a worker of the earth. The word comes from the Greek *ge*, “the earth,” and *legon*, “a work,” which also gives us Virgil’s *Georgics*, an “agricultural poem” about the land and the men working it.

by Godfrey! An early U.S. euphemism for “by God!”

by guess and by God. To do something randomly, without much careful planning, is to do it “by guess and by God.” The planner hopes that God will see his strategy through, no matter how poor the planning.

by hook or by crook. Used by John Wycliffe in 1380 and now standard English, this expression has a dozen explanations that can’t be proved or disproved. The most widely accepted theory traces *by hook or by crook* to the forests of medieval England, which belonged to the King and were off limits to all commoners except those gathering firewood. Ancient law restricted these peasant gatherers to dead wood on the ground or dead branches that they could reach with a shepherd’s crook and cut off with a reaper’s billhook. The story does explain the phrase meaning “by any means possible,” but leaves something to be desired regarding the foul means suggested by *crook*. One widely accepted version traces the expression to 1100, when a charcoal burner named Purkiss found the body of William Rufus, King of England, who had been slain by an archer in Hampshire’s New Forest. Purkiss carted the king’s body to Winchester and was rewarded with permission to gather all the wood in the forest that he needed for his charcoal burners—provided he took only wood that he could reach *by hook or crook*. Almost 900 years have passed and the Purkiss family (now spelled Purkess) still live in the New Forest, which is the largest surviving medieval forest in England thanks to such *hook and crook conservation laws*, if I may coin a phrase.

by Jove! The exclamation or oath *by Jove!* isn’t heard much anymore, in England or elsewhere, but it has been around since the late 1500s. See JOVIAL.

bylaw. A law or rule, or a secondary law or rule. The *by* in the word, however, has nothing to do with “secondary” as many people believe. *By* here comes from the Old Norse *by* in the names of English places, such as Whitby, where Scandinavian invaders settled. The word, which itself may be Old Norse, is first recorded in 1283, in the sense of a body of regulations of a village or town.

by my troth, I care not; a man can die but once; we owe God a death . . . and let it go which way it will he that died this

year is quit the next. British Captain E. E. Dorman-Smith, later a general, wrote these words out for Ernest Hemingway in the Italian hospital where he was recovering from his wounds during World War I. Hemingway later put the words into the mouth of the white hunter Robert Wilson in “The Short Happy Life of Francis Macomber.” There Wilson comments upon the little-known phrase: “Worst one can do is kill you. How does it go? Shakespeare. Damned good. See if I can remember. Oh, damned good. Used to quote it to myself at one time. Let’s see . . . Damned fine, eh?” The words are originally from Shakespeare’s *Henry IV*. In his anthology *Men at War* (1942) Hemingway wrote that they had become “a permanent talisman” for him.

Byronic. George Gordon, Lord Byron (1788–1824), contributed to the creation of the *Byronic* hero with deeds as much as poems. Byron’s slight lameness, his good looks (which were likened to the Apollo Belvedere), his myriad and often sensational romantic entanglements, his wanderings on the Continent and his devotion to the cause of Greek freedom, were among many factors that made the English poet the perfect model for the wildly romantic yet despairing and melancholy heroes of his poems. Byron’s poetry was the most popular of his day, at home and especially abroad, despite its criticism on what today might be considered ridiculous moral grounds. No English poet but Shakespeare had greater influence on European literature, and all Byron’s major works, such as *Childe Harold’s Pilgrimage* and *Don Juan*, have stood the test of time. The poet was haunted in his lifetime by the charge that he committed incest with his half-sister, Mrs. Augusta Leigh. His tempestuous life, the panache and bravura of this poet (“His eyes the open portals of the sun—things of light and for light,” in Coleridge’s words; “The only man to whom I could apply the word beautiful,” according to another contemporary) were more romantic than any of his poems. Byron died in Missolonghi, Greece, of malarial fever when only 35. His heart is buried there, where he had sought a soldier’s grave in the name of Greek freedom. His body lies buried in England in a small village church, the authorities having refused his burial in the Poet’s Corner of Westminster Abbey.

byte, exabyte. A *byte* is a single printed character, such as “A,” while an *exabyte* is 17,300,000,000,000,000 *bytes*. According to the *New York Times* (August 28, 2005) the above *exabytes* are the equivalent of 8.5 times the content of all existing printed material.

by the numbers. To do something by the numbers is to do it mechanically, in precise order. The expression dates back to World War I, when soldiers were taught a complex task by breaking the task into a number of steps, often performed as the numbers were called out.

by the skin of the teeth. Many phrases from the Book of Job in the Old Testament are proverbial in English: “Naked I came from my mother’s womb, and naked I shall return”; “The Lord gave, and the Lord hath taken away”; “Man is born unto trouble. . . .” The scholars who prepared the Geneva Bible in 1560 were the first to render Job’s reply to Bildad that he had barely escaped with his life as “I have escaped with the

skinne of my teethe,” and their poetic translation was retained by the editors of the King James version of the Bible (Job 19:20). The full King James quotation is: “My bone cleaveth to my skin and to my flesh, and I am escaped with the skin of my teeth.” Despite objections that the teeth have no skin, centuries of Bible reading have given the expression a permanent place in the language as the description of a close escape, though it has been altered a hairbreadth to *by the skin of the teeth*. Thornton Wilder’s play *The Skin of Our Teeth* (1942) won a Pulitzer Prize in 1943.

by the snakes of Babylon! An old exclamation rarely, if ever, heard anymore. Other old-fashioned U.S. exclamations include: By chowder! By crackie! By dad! By fire! By gary! By ginger! By gory! By gull! By gum! By the holy smut! By the livin’ laws! By scissors! By smutt! and By zounds!

by-two coffee shop. Any shop in the south of India where two customers can share a cup of coffee between them, one-half a cup each. Such economical shops are the Starbucks of the poor and/or struggling.

C

C. The letter C is probably the highly modified form of an ancient sign for a camel. One of the strangest stories attached to any letter is told about it. It seems that an Admiral George Cockburn led the incendiaries who demolished the *National Intelligencer* when the British burned Washington during the War of 1812. This gentlemanly incendiary ordered his men to melt down all the Cs in the newspaper office, “so that later they can’t abuse my name.” A lowercase *c.* (with a period) signifies more than 30 things including “carat,” “cent,” “centimeter,” and “about” (for example, ca. 1776), deriving in the last case from the Latin *circa*, about. C. can abbreviate at least 10 things when capitalized, including “Centigrade,” “Catholic,” and “College.” After the clef sign on sheet music, the C is not an initial standing for “common” 4/4 time, but stands for an incomplete circle, a symbol representing what was once considered “imperfect time.” A circle, symbolizing the Trinity, was used in the early days of written music to indicate “perfect time,” three beats to the bar.

C; Secret Service. Ian Fleming gave the name M to the head of the British Secret Service (MI6) in his James Bond novels. But the only real-life head of the British espionage agency to go by an initial was the colorful John Cumming of World War I, who wrote in green ink and insisted on being called “C.” The term *Secret Service* itself is recorded as far back as 1737, in the reign of George II.

cab. The word *cabriolet*, for a type of light horse-drawn carriage, has been all but forgotten save for its use in abbreviated form for what is just as well known as a TAXI. *Cab* has been used in this sense since the early 1800s when cabriolets were available for hire in London. When motorcars could be hired *cab* was quickly applied to them.

cabal. This word, for a group of conspirators, has for many years been popularly regarded as the most famous acronym in English. Tradition has it that the word was formed from the initials of certain members of King Charles II’s infamous ministry in the years 1667–73. Clifford, Ashley (Shaftesbury), Buckingham, Arlington, and Lauderdale were only five among a number of Charles’s ministers who plotted often diametrically

opposed secret intrigues. They rarely met all together, although they did constitute the Privy Council foreign committee. The infamous five did, however, secretly sign the Treaty of Alliance with France in 1672, without Parliament’s approval, forcing the nation into war with Holland. After this shameful episode, their enemies were quick to point out that their initials formed the word *cabal*, but this does not say that *cabal* originated with the acrostic ministry. *Cabal*, for a society of intriguers, had previously been introduced into English from the Latin *cabbala*, which derives, in turn, from the Hebrew *qabbalah*. The *qabbalah* were doctrines said to be originally received from Moses, enabling their possessors to unlock secrets of magical power. During the Middle Ages, the secret meetings of *cabbala* groups claiming knowledge of such doctrines gave rise to the English word *cabal*. *Cabal* did, however, take on a new political significance and popularity in English with the machinations of Clifford and the others. The historian Macaulay writes, for example, that “These ministers were called the Cabal, and they soon made the appellation so infamous that it has never since their time been used except as a term of reproach.”

caballero. Deriving from the Spanish meaning “a man on horseback,” *caballero* came to signify “a gentleman” as well. It also meant, in the words of a Texas cowboy early in the 19th century, “a hardened but gay cowboy who can jump on his horse any minute and tell the world to go to hell.”

cabbage. Ask for a head of cabbage and you are repeating yourself, for *cabbage* means “head,” the name of the vegetable deriving from the Old French *caboce*, “swollen head.” *Caboce* itself comes from the Old French *boce*, “a swelling,” the *ca* in the word very likely suggested by the Latin *caput*, meaning “head.” Cabbage, probably the most ancient of vegetables, has been cultivated for more than 4,000 years. In Greek mythology it is said to have sprung from sweat on the head of Jupiter. The Greeks also believed that eating it cured baldness.

cabbage head. Describing a fool as a *cabbage head* dates back to the late 17th century and is best explained by the old

music-hall lyrics: "I ought to call him a cabbage head, / He is so very green . . ."

cabbages and kings. This expression meaning "odds and ends," "anything and everything," was used by O. Henry as the title for his first book of stories. It comes from Lewis Carroll's *Through the Looking Glass*:

"The time has come," the Walrus said,
 "To talk of many things:
 Of shoes and ships—and sealing wax—
 Of cabbages—and kings—
 And why the sea is boiling hot—
 And whether pigs have wings."

cabinet. A term heard in Massachusetts and Rhode Island for what is commonly called a milkshake in other places; it was possibly so named because the drugstore that first concocted it in Fall River, Massachusetts, kept the ice cream in a cabinet attached to the soda fountain. But perhaps the name has something to do with the earlier *cabinet pudding*, which is also a sweet dessert.

cablegram; telegram. First used in 1868, the word *cablegram* initially met with some resistance, scholars condemning it as a hybrid derived from Latin ("cable") and Greek ("gram"). Use the all-Greek *calogram* instead of the New York City-born monster, they suggested, but few agreed and the coinage proved durable. Something of the same happened with the earlier coinage *telegram*, which we know was invented by a friend of a man who wrote a letter to the *Albany Evening Journal* on April 6, 1852, asking that it be adopted in place of the clumsy "telegraphic dispatch" used at the time. Grammarians pointed out that *telegram* was not properly formed from its Greek elements and suggested "telegraphemie" instead, but the "barbaric new Yankee word" won out in the test of time. Such improperly formed words are of course common in English and there is a liberal supply of hybrids like *cablegram*, including such common words as because, dentist, grateful, starvation, talkative, and parliament.

caboose. Before it became "the last car on a train," a caboose, from the Dutch *kombius*, was a seaman's term for a ship's galley. The word went West in America to become the name for the cook wagon on the range and then became the car on a train carrying provisions.

caca. Though it appears to be simply the imitation of an infant's sounds, *caca*, for "excrement or a bowel movement," has an aristocratic Roman ancestor. The word derives from the Latin *cacare*, "to defecate."

ca' canny. This Scots expression for "go easily, don't exert yourself" is used by trade unions in Scotland when they want to bring pressure on their employers without going on strike. It amounts, in effect, to what Americans would call a *slowdown*.

cacao tree. The drink called "cocoa" is made from the cocoa beans of the South American cacao tree, *cocoa* being simply a variant spelling of *cacao*. Chocolate is also made from the

beans, taking its name from the Nahuatl (Aztec) word *xocoatl*, "food made from the cacao." For many years the cacao tree was confused with the coco tree because a printing error in Samuel Johnson's great dictionary (1755) listed the two trees together under the *cocoa* entry. See COCONUT.

cachalot. A *cachalot* is a sperm whale, the foremost example of which is Moby Dick. The word is French in origin, meaning "toothed," or perhaps comes from the Latin *cacabus*, "pot, skull." "The two characteristics of the sperm whale are its teeth and cranial reservoir," Weekley explains.

cachinnant. To laugh loudly or immoderately, as in the following from William Faulkner's *The Hamlet*, 1940: "Then he began to laugh, though almost at once it stopped being laughing and Ratliff knew that it had never been laughing, cachinnant, sobbing, already beyond the creature's power to stop it . . ."

cackle. See CHUCKLE; ONOMATOPOEIA.

cackleberry. A humorous American designation for eggs, dating back a century or so. It is said to have originated in early logging camps.

caconym. A *caconym*, deriving from the Greek *caco*, "bad, evil," and *onoma*, "name," is a bad or undesirable name. Many *caconyms* were given to people in German-speaking countries during the early 19th century, when all citizens were required to take surnames and village clerks often assigned objectionable ones unless bribes were given. An apocryphal story is told of two men who paid such bribes. "You can't imagine how much it cost to have the *m* put in my name," said Herr Schmeiss. (*Schmeiss* means "fling" in German, while *Scheiss* means "shit.") "You can't imagine how much I paid to have the *m* taken out of my name," replied his friend, Herr Schutz. (*Schutz* means "protection" in German, while *Schmutz* is "filth.")

cactus. See CARNEGIEA.

cad. A vulgar, bad-mannered man without any gentlemanly qualities who honors nothing and will stoop to anything. The word derives from the French *cadet*, which once meant a younger member of a noble family. Although the word is known in America, it is not widely used there. See CADDY.

cadaver. In the seventh century the scholar St. Isadore of Seville taught his students that the word *cadaver* was an acronym of the Latin *caro data vermibus* (flesh given to worms), this one of the earliest examples of folk etymology. *Cadaver*, a dead body or corpse, actually comes from a Latin word spelled, pronounced, and meaning the same—nowhere near as good a story as the worms crawl in, the worms crawl out . . . tale. Isadore had hundreds more stories in his 20-part encyclopedia *Books of Origins or Etymologies*.

caddy; cadet. According to legend, Mary Queen of Scots was the first woman golfer, so avid a player, in fact, that she continued playing her round when she was informed of her husband's

murder one day in 1567. An old story also claims that Mary introduced the word *cadet* (from the Gascon *capdet*, “little chief”) into English from French. *Cadet* first meant the youngest son of a noble, and by 1630 meant a young no-good who had taken to the streets—its spelling changed to *caddy*. By the mid-18th century a *caddy* came to mean a young porter on the streets and finally, a century later, a young porter who carried golf clubs. Independently, the word *cadet* for the youngest son of a nobleman came to mean a student at a military academy, because the youngest sons of nobles usually became soldiers.

Cadillac. Cadillac, which is of course a trade name, has long been to expensive automobiles what FORD has been to low-priced cars. Ironically, the Detroit Automobile Company, formed by Henry Ford in 1899, was the forerunner of the Cadillac Company, Cadillac later being absorbed by General Motors. The Cadillac, in the United States and elsewhere, has become a symbol of success to some, vulgar pretension to others, and is a synonym for an expensive car to all. It bears the name of Antoine de la Mothe Cadillac (1658–1730), a minor nobleman and French colonial governor who, in 1701, founded Detroit as an important post for French control of the fur trade. Cadillac also established a trading post in what is now Cadillac, Michigan, on Lake Cadillac. Unlike the car bearing his name, the Frenchman seems to have been popular with no one. Neither Indians nor settlers could get along with him at Fort Pontchartrain (present-day Detroit), and his later governorship of the vast Louisiana Territory (1711–16) met with similar hostility. Cadillac, recalled to France, died in his native Gascony.

Cadmean letters; Cadmean victory. Myth is often a reflection of fact, and the 16 letters of the old Greek alphabet said to be introduced to the Boeotians by the mythological hero Cadmus from Phoenicia really do derive from Phoenician script. It is uncertain whether there was an actual Cadmus, a prototype for the hero who introduced the Cadmean letters. A *Cadmean victory* refers to the same mythological warrior. It derives from the story that Cadmus killed a dragon and sowed the dragon’s teeth. Armed warriors sprang up and he set them fighting by throwing a stone among them; only five warriors survived, and these became the ancestors of the noble family of Thebes. A Cadmean victory, in remembrance of these five surviving stalwarts, became proverbial for a victory achieved where the victors can hardly be distinguished from the vanquished.

Cadogan hairstyle; Cadogan teapot. Perhaps the only man whose coiffure ever inspired a ladies’ hairstyle was William Cadogan, the first earl of Cadogan. Lord Cadogan (1675–1726) was a British soldier, famous for his intrepid leadership under Marlborough of “Cadogan’s Horse” cavalry. He later became commander in chief of the British army. A well-known portrait of Cadogan pictured his hair knotted in the back by a ribbon. This style was aped by 18th-century males, including many American founding fathers and became popular among ladies, too, when it was introduced by the duchess de Bourbon at the French court. The Cadogan teapot, a lidless teapot that is filled through the bottom, in an imitation of an inverted Chinese winepot, may also be named for Cadogan, though no one knows why.

cadre. *Cadre* are trained or key men, generally in the military, who instruct and supervise untrained troops. Thought to be the “skeleton” or foundation of an outfit, they appropriately take their name from the French *cadre*, “frame.” The word didn’t come into English until the mid-19th century.

Caesar, Caesarea, caesarean, Caesarism, Caesarist, Caesarize, Caesaropapism, Render Therefore unto Caesar. More than a score of expressions commemorate Gaius Julius Caesar or his descendants, most of these covered under separate entries. The great Roman soldier and statesman, whose name is responsible for more words in our language than any other, was probably born in 102 B.C., though the traditional date is two years earlier. After crossing the Rubicon in early 49 B.C., conquering Italy, and defeating Pompey in Greece, Caesar returned to Rome where he became dictator. He was assassinated during the Ides of March, on March 15, 44 B.C. Historical estimates of Caesar range from one extreme to the other, but the life of this commanding genius, who in Shakespeare’s words bestrode “the narrow world like a colossus,” is well known to many. His military genius, his address to Rome after he defeated Pharnaces at Zela in 47 B.C., “*Veni, vidi, vici*” (I came, I saw, I conquered) is folklore in many countries. His fascination for Cleopatra, by whom he had a son Caesarion (later put to death by order of Augustus), is also a familiar story. Most words deriving from his name reflect Caesar’s great power. Caesaria was an ancient seaport in Israel, the Roman capital of Palestine. *Caesarean* means pertaining to Caesar or the Caesars. Three other terms, *Caesarism* (imperialism), *Caesarist* (imperialist), and *Caesarize* (imperialize), commemorate the first Caesar’s adopted son and successor, Augustus, referring to the imperialist government the first Roman emperor instituted. *Caesaropapism* is the possession of supreme authority over both church and state by one person. Of the many proverbs that recall the great Roman’s name the most famous is probably “Render therefore unto Caesar the things which are Caesar’s, and to God the things that are God’s” which is the familiar biblical injunction from Jesus to the Pharisees. *See also* CAESAR CIPHER; CAESARIAN SECTION; CAESAR’S MUSHROOM; CAESAR’S WIFE; CZAR; JERSEY; JULIAN CALENDAR; JULY; KAISER; NEW JERSEY; SHERRY.

Caesar cipher. In his secret communications Caesar simply wrote down the third letter following the one he meant (thus in English today the letter *A* would be *D* and the word *dog* would be *GRJ*). Though this elementary cipher or substitution code was used long before him, cryptologists still call it the *Caesar cipher*. His successor, Augustus Caesar, made the process even simpler, merely substituting the letter immediately following the one he meant, which enabled him to write in code as quickly as he could in normal letters.

caesarean section. According to Pliny the Elder, the first of the Caesars was brought into the world by the *caesarean section* operation named in his honor. However, Julius Caesar probably wasn’t extracted from his mother’s womb by this incision through the abdominal walls, though the operation was commonly practiced on dead mothers in early times. Caesar, whose mother, Julia, lived many years after his death, probably has his name confused with the operation because it became mandatory under the *lex Caesarum* (“law of the Caesars,” the

codified Roman law of the time), just as it had been under the previous *lex regia* (royal law), that every woman dying in advanced pregnancy be so treated in an effort to save the baby. It is also possible that caesarean section simply comes from the Latin *caesus*, past participle of the verb *caedere*, “to cut.”

Caesar salad. This popular salad was not named after Julius Caesar nor any of his family. It seems to have been invented in the late 1920s by Caesar Gardini, a restaurant owner in Tijuana, Mexico, but there are several contenders for the honor. Anchovies weren't included in the original Caesar recipe; the ingredients were Romaine lettuce, eggs, Romano cheese, croutons, olive oil, lemon juice, and condiments.

Caesar's angel. Shakespeare has Mark Antony say this in *The Tragedy of Julius Caesar* (1599), referring to Brutus. *Caesar's angel* means “dear as his guardian angel.”

Caesar's mushroom. *Amanita caesaria* or Caesar's mushroom, honoring Julius Caesar, happens to be one species of the deadly *Amanita* genus that is edible, but more than a few “experts” have been poisoned thinking that they had distinguished this delicacy from its deadly relatives. Every summer brings scores of deaths from mushroom poisoning. Hippocrates referred to cases of mushroom poisoning in his day, and Horace warned the ancients to beware of all fungi, no matter how appetizing the appearance. One of the first recorded cases of mushroom poisoning occurred in the family of the Greek poet Euripides, who lost his wife, two sons and a daughter when they partook of a deadly *Amanita* species. Pope Clement VII, the Emperor Jovian, Emperor Charles VI, Czar Alexander I, the wife of Czar Alexis, and the Emperor Claudius (his niece and wife Agrippina poisoned his *boleti*) are among historical figures who lost their lives in the same way. Many species of *Amanita* are lethal even when eaten in minuscule amounts, and *Amanita verna*, the destroying angel, is easily confused with *Amanita caesaria* and the several other edible species. See MUSHROOM.

Caesar's wife must be above suspicion. According to Plutarch and Suetonius, Julius Caesar divorced his second wife, Pompeia, not because he believed her guilty of bedding down with Claudius, as rumor had it, but because he held that Caesar's wife must be clear of even the suspicion of wrongdoing. It is hard to believe that even Caesar would have been so vain as to take the word of any crank with a grudge against poor Pompeia. There was probably little love lost between the couple, Caesar's pronouncement constituting an easy way to get rid of his spouse.

café society. Said to be coined one night in 1919 by newspaper society columnist Cholly Knickerbocker (Maury Paul) when he saw a number of prominent socialites dining out at the Ritz-Carlton in midtown Manhattan. Up to that time, supposedly, most of this breed dined at home. Paramount Pictures later paid Lucius Beebe, another city newspaper columnist, \$50,000 for using the term *café society* as the title of a movie starring Madeleine Carroll—thinking he had invented the expression. But it is fairly certain that Champagne Cholly (as Paul was also known) deserves the honor. He is also said to have invented glamour girl, an old standby, but is mostly responsible

for such thankfully extinct cutesy coinages as sweetie sweets (nice people) and doughy dowagers (rich people).

cafeteria. A relatively young Americanism, *cafeteria* was probably introduced in 1893 at the Chicago World's Fair. It derives, however, from the Spanish *cafetería*, meaning the same.

cager. This early term for a basketball player still has some currency today. The word derives from the net-enclosed gyms the game was played in that prevented the ball from getting into the crowd and prevented zealous spectators from getting onto the court. See BASKETBALL.

cahoots. To be in partnership, often shady partnership, with. There are two theories about *cahoots*. First, that the word derives from the French *cahute*, “cabin,” suggesting that the two in cahoots shared a cabin together. Or, second, more probably, that *cahoots* derives from the French *cahorte*, “a gang.”

Cain. See MARK OF CAIN.

Ça ira. Benjamin Franklin is said to have invented this French phrase when he was asked in 1776, while ambassador to France, how the American Revolution was going and replied, *Ça ira*, “things will work out.” In 1790 the phrase became the refrain of the popular song “Carillon national” of the French Revolution.

Cajun. A group of people of French Catholic ancestry who were expelled from Acadia in the late 18th century and settled in Louisiana and Maine. The word, deriving from Acadian, is also applied to any of their characteristics, such as the French dialect they speak. Also Cajan.

cakebell. A glass or plastic container, often kept on a diner's counter, where pies and cakes are displayed and kept fresh. When a portion of one is sold, the pie or cake is put back under the cakebell. In his novel *The Road*, Cormac McCarthy tells of a cakebell with a severed human head in it.

cakes and ale. Long before it became the title of Somerset Maugham's novel, *Cakes and Ale* meant “fun or pleasant activity,” as in “life isn't all cakes and ale.” Shakespeare may have invented the expression, for he first recorded it in *Twelfth Night* (1600): “Dost thou think, because thou art virtuous, there shall be no more cakes and ale?”

calabash. Since the mid-19th century a *calabash* has meant an empty-headed person, someone with nobody home upstairs, in U.S. slang. *Calabash* in this sense derives from the gourd of the same name, which comes from the Arabic *qar 'ah yābisah*, “empty gourd.” Sherlock Holmes's famous pipe, readers may recall, was made from a hollowed-out calabash gourd.

calaboose. Any jail, but usually a small one in a small town. The word derives from the Spanish *calaboza* (dungeon).

Calamity Jane. Those who tried to outshoot Calamity Jane (Martha Jane Canary Burke, 1852–1903) brought calamity

upon themselves. The legendary markswoman's *nom de guerre* came to mean a woman who predicts or suffers calamity. It also describes the queen of spades (long associated with death) in poker.

calculate. The abacus, or counting board, was borrowed by the Romans from the Greeks, who called it an *abax*. Although today it contains wooden beads strung on wire, it was first divided into compartments, with pebbles moved from compartment to compartment as the reckoning progressed. Thus, from the Latin name for these abacus pebbles, *calculus*, comes our word for mathematical reckoning, *calculate*.

Calendar Islands. The Calendar Islands in Maine's Casco Bay are among the most appropriately named of island groups—there are exactly 365 of them.

calepin. I don't know of any synonym for a polyglot dictionary, one in many languages, save the unusual *calepin*. The word comes from the name of Italian Augustine friar Ambrosio Calepino, who in 1502 published a famous Latin dictionary that went through many editions and was *the* Latin dictionary of the day. Apparently this Latin dictionary of Calepino's was published in an "octoglot" edition, which led to the man's name being employed as it is. Anyway, *calepin* was used for "a polyglot dictionary, a dictionary, or any book of authority or reference" until well into the 18th century, and has had limited use since.

Calhounery. John C. Calhoun (1782–1850), the preeminent spokesman of the South and a giant intellect of his day, is remembered in historical dictionaries by this word, first recorded in 1837. *Calhounery*, despite the nice ring to it, was not of his making. It is a historical term once used to describe causes such as stuffing ballot boxes, permitting illegal votes to be cast, and so forth—all practices not of the vice president but of his supporters, who were called *Calhounites* or *Calhounists*.

Caliban. A brute; an ugly, degraded, beastlike man. The original was created by Shakespeare in *The Tempest* (1611), in which Caliban is the deformed semi-human son of a demon and the witch Sycorax. A slave of Prospero, the misshapen monster speaks poetic language still fascinating today. His name may be a variant of *Cariban*, a Carib, or could have been formed by metathesis from the Spanish CANNIBAL. At one point in the play he cries, "All the infections that the sun sucks up / From bogs, fens, flats, on Prosper fall and make him / By inch-meal a disease!"

calico. The cotton cloth is named after the Indian city of Calicut (now Kozhikode), from where it was first exported in 1498, when Vasco da Gama took it back to Portugal.

calico cat, et al. In the early 19th century, colorful printed calicos (see the above entry) were very popular in America, and they gave their name to calico cats, spotted calico horses, variegated calico salmon, the red-spotted calico crab, the spotted calico goldfish, and the spotted turnstone or calico bird, not to mention a number of vegetables and flowers.

California. Lexicographers aren't positive about the origin of *California*, but the state may be named after a woman named Calafia in an old Spanish romance, Calafia ruling over an island called California. On the other hand, other etymologists insist that *California* is a Catalan word meaning "hot oven"—a story that's not good for the tourist trade.

California blanket. A humorous term for layers of newspapers used as blankets. The Americanism dates back to the early 1900s, when it was apparently invented by hoboes in California.

California breakfast. A derogatory expression that, according to a January 1962 *Western Folklore* article, means "a cigarette and an orange."

California collar. A joking term given to the hangman's noose when vigilante justice ruled in early California.

California fever. The desire to go to California, the term first recorded not when gold was discovered but after explorer J. C. Frémont journeyed there in 1844.

California Joe. An American frontiersman whose real name was Moses Milner. A sharpshooter during the Civil War, he was appointed chief of scouts by Generals Custer and Sheridan. It is said that his new rank lasted only two hours, after he got so drunk that he had to be demoted. He died in a private fight in 1876, when only 46.

California prayer book. A joking term for playing cards, popular in gold-rush days.

California widow. The common ancestor of American golf widows, football widows, baseball widows, fishing widows, and computer widows, to name but a few species. *California widow* dates back to the 1850 gold rush in California, when women throughout the U.S. lost their husbands for a year or forever while the men tried their luck or pursued their fantasies in the gold fields. One such widow advertised in a San Francisco newspaper: "Husband Wanted—Whereas my husband has lately left my bed and board without provocation on my part, I hereby advertise for a suitable person to *fill the vacancy*." It should be noted that the term *American widow* preceded all those noted above; it was used in England to describe a woman whose husband had left home to seek a fortune in America. See GRASS WIDOW; GOLF WIDOW.

call a spade a spade. To be straightforward and call things by their right names, to avoid euphemisms or beating around the bush. The words are from the garden, not from the game of poker. So old is this expression that it wasn't original with Plutarch, who used it back in the first century when writing about Philip of Macedon, Alexander the Great's father. The saying has been credited to the Greek comic poet Menander, who described the life of ancient Athens so faithfully that he inspired a critic to exclaim, "O Menander and Life, which of you imitated the other?" If this is so, to "call a spade a spade" goes back to at least 300 B.C., and the faithful Menander could have been quoting a much older Greek proverb. The expression was

introduced into English by Protestant reformer John Knox, who translated it from the Latin of Erasmus as: “I have learned to call wickedness by its own terms: A fig, a fig, and a spade a spade.” Erasmus had taken the phrase from Lucian, a Greek writer of the second century and translated it as “to call a fig a fig and a boat a boat,” which is possible because the Greek words for boat and garden spade were very similar.

call his bluff. This widely used phrase certainly originated in American poker games of the early 19th century, bluffing being an integral part of poker, and *to call* meaning to match a bet. Some etymologists trace *bluff* itself back to the Low German *bluffen*, “to frighten by menacing conduct,” which became the Dutch *buffen*, “to make a trick at cards,” but *bluff* is first recorded in an 1838 account of an American poker game.

calligraphy. The word comes from the Greek for “beautiful writing.” In its sense of small handwriting the historical Hemingway of calligraphy is Peter Bales (1547–ca. 1610), who is also said to be one of the inventors of shorthand. Diarist John Evelyn tells us that the dexterous Bales wrote “the Lord’s Prayer, The Creed, Decalogue, with two short prayers in Latin, his own name, motto, day of the month, year of the Lord, and reign of the Queen, to whom he presented it at Hampton Court, all of it written within the circle of a single penny, incased in a ring and borders of gold, and covered with a crystal, so accurately wrought as to be plainly legible, to the great admiration of her majesty . . .” However, several later calligraphers bettered Bales’s record. According to *The Guinness Book of World Records* (1998), “During the mid 1950s Horace Dall of Luton, England built a pantograph—which reduces movement—fitted with a diamond stylus, with which he engraved writing small enough to fit 140 Bibles to one square inch.”

callipygian. According to Sir Thomas Browne, *callipygian* refers to “women largely composed from behind.” This is a term of admiration (unlike *STEATOPYGOS*), deriving from the Greek roots for “beauty” and “buttocks.” The *Callipygian Venus* is a famous classical statue of Venus with substantial, nicely shaped buttocks.

call the turn. Someone who *calls the turn* guesses correctly how an affair or transaction will turn out. The expression doesn’t derive from “turn out,” however, but comes to us instead from the card game *FARO*, a very popular game in 19th-century America. One who *calls the turn* in *faro*, that is, guesses correctly what the last three cards turned over will be, wins at high odds from the bank.

calluses on one’s feet. “He was born with calluses on his feet.” A colorful expression from the U.S. Appalachian Mountains, said of any child born fewer than nine months after his or her parents were married, because the child would have to walk fast to make a nine-month trip in less time.

calumny; libel; slander. The Romans branded false accusers with a *K* on the forehead, this standing for their word *kalumnia*, which became *calumnia* when they gave the *c* the *k* sound and for the most part stopped using the *k*. Our word *calumny*, a false accusation deliberately intended to hurt another’s

reputation, comes directly from the Latin *calumnia*, which means the same. Shakespeare and Shelley believed that only the dead knew not calumny, the bard writing in *Hamlet*: “Be thou chaste as ice, as pure as snow, thou shalt not escape calumny.” A false accuser, the slanderer who spreads calumnies, is called a calumniator, and those who are the victims of calumnious charges are the calumniated. “Calumny,” said Queen Elizabeth I, “will not fasten on me forever.” Libel is written or printed calumny, and slander is legally calumny by oral utterance. For example, Whistler’s paintings were slandered by English critic John Ruskin, but Ruskin was only sued for libel when he published such statements as “I . . . never expected to hear a coxcomb ask two hundred guineas for flinging a pot of paint in the public’s face.” Whistler won his case, but was awarded only a farthing, a coin then worth less than one cent.

Calvary. See *GOLGATHA*.

Calvary clover. Legend holds that the common trefoil Calvary clover (*Medicago echinus*) sprang up in the foot-steps of Pontius Pilate when he went to Christ’s cross at Calvary or Golgotha. Each of the plant’s three leaves has a carmine spot in the center, the leaves roughly form a cross in the daytime, and in flowering season the plant bears a little yellow flower resembling a crown of thorns.

Calvinism; Calvinist. The system of theological thought called *Calvinism* was founded by French Protestant reformer John Calvin, or Cauvin (1509–64). Calvinist beliefs, held in much modified form today in Presbyterian and Reformed churches, were formulated as the Five Points in 1618. These are, briefly: 1) Original Sin, man’s natural inability to exercise free will since Adam’s fall; 2) Predestination; 3) Irresistible grace; 4) Perseverance of the saints or elect; and 5) Particular redemption. *Calvinism* has overwhelmingly been regarded as a bleak, forbidding theology.

calzone. A favorite Italian food, consisting of a crisp Italian pastry made from pizza dough and filled with mozzarella and ricotta cheese, among other ingredients. So named from the Italian *calzone* for “trousers” because of its resemblance in shape to one leg of a pair of pants.

Cambridge flag. A popular name for the first flag of the American Continental Army at the start of the Revolutionary War. Its official name was the Grand Union flag (because it had been patterned on the British Grand Union flag with its red and white stripes and crosses), but it was popularly called the Cambridge flag because it was first flown near Boston and Cambridge, Massachusetts.

camellia. One of the most beautiful flowering plants, the evergreen camellia is named for George Joseph Kamel (1661–1706), a Moravian Jesuit missionary and amateur botanist who wrote extensive accounts of the shrub, which he found in the Philippine Islands in the late 17th century. Kamel, who called himself *Camellus*, the Latinized form of his name, operated a pharmacy for the poor in Manila, planting an herb garden to supply it. He published reports of the plants he grew in the Royal Society of London’s *Philosophical Transactions*, and some

authorities believe that Kamel sent the first specimens of the shiny-leaved camellia back to Europe. In any event, he was the first to describe the shrub, a relative of the tea plant, and the great Swedish botanist Linnaeus read his accounts in *Transactions* and named the plant camellia after him. Camellias are used extensively as garden shrubs in southern areas of the United States and England. Their wax-like, long-lasting flowers are white, red, or pink.

camelopard. See GIRAFFE.

Camelot. The legendary spot where King Arthur held court in British fable, which has come to mean any ideal place. The real Camelot has been located in Somerset near Winchester, in Wales, and in Scotland, among other places.

camel's hair. A German artist named Kemul may have given his name to camel's hair artists' brushes because he invented them, but there is no evidence to support the theory that *camel's hair* is a corruption of *Kemul's hair*. In any case, the name *camel's hair* is a misnomer: the artists' brushes are made from long tail hairs taken from squirrel species inhabiting cold areas such as Siberia. Most likely the brushes were erroneously named because people thought they were made from the fine hair of the two-humped Bactrian camel when the brushes were introduced in the 18th century. Camel hair, longer than sheep's wool and as fine as silk, had been used in Europe since the early 14th century for cloth, scarves, and other items.

Camera. See COMRADE.

Cameroon. This African country has an unusual name, one that derives from the Portuguese word for shrimp—*camarão*. Not because it is a small country, but due to the abundance of the crustaceans off its shores.

Camille. In *La Dame aux camélias* (1848), better known on the stage and screen as *Camille*, Alexandre Dumas fils wrote about Marguerite Gautier, a courtesan who wore no flower other than the camellia—a white camellia for 25 days of the month and a red camellia the other five days. One of the world's most endearing fictional creations, Marguerite was based on a real-life Parisian courtesan, or prostitute, Marie Duplessis, the mistress of many wealthy aristocrats and Dumas's lover for a time. Marie, who used the camellia as a trademark, died of tuberculosis at the age of 23, and Dumas immortalized her in his book, her name becoming a symbol for anyone like her.

camino real. A term from Spanish meaning "royal road" and once used in the Southwest for a main public highway built by the state. It also referred to several specific roads leading from Mexico into California and New Mexico.

cammies. I've only come across this word in a *New York Times* article (April 18, 2004) by Charles McGrath, but it is probably older. It is short for the camouflage uniform worn in the U.S. army and currently popular among civilians.

camouflage. In Parisian slang, prior to World War I, *camouflier* meant "to disguise." After 1914 the term was "naturalized

with remarkable rapidity" by the English as *camouflage* and applied to anything disguised from the enemy, whether a varicolored battleship or a convoy of trucks.

Camp David. The U.S. presidential retreat was named by President Dwight D. Eisenhower after his grandson, David Eisenhower. Previously the retreat in the beautiful verdant Catoctin Mountains of Maryland was named Shangri-La by President Franklin Roosevelt after the refuge in James Hilton's 1933 novel *Lost Horizon*.

campus. Campus, for the grounds of a university, college, school, or hospital, is a borrowing from the Latin *campus*, plain or field. According to *Chambers Dictionary of Etymology*, it is an Americanism first used at Princeton University in 1774.

Canaan. "A good land and a large . . . flowing with milk and honey," *Canaan* is the biblical name for Palestine, where blood has been flowing in our time. The land was named in the Old Testament after Canaan, the fourth son of Ham. It is also known as the Promised Land, promised by God to Abraham for his obedience (Ex. 12:25).

Canada. *Canada* actually appears to be an American Indian word, but several amusing stories are told regarding its origin. One has an Indian chief telling French explorer Jacques Cartier that his little village was named *Kana da* and Cartier thinking the name applied to the whole vast region. Another story has a Spanish explorer climbing a tree to sight what prominent geographic features lay to the north. "Aca nada (Nothing's there)," he called down to his comrades, who took to calling the region *Acanada*, which was soon corrupted to *Canada*.

canals, canali. In 1877 the Italian astronomer Giovanni Virginio Schiaparelli (1835–1910) observed faint lines on Mars through his telescope and in his treatise on the subject called them *canali*, Italian for "channels." But his English translator erroneously translated *canali* as "canals," a word carrying a strong connotation of something manmade, which *canali* doesn't. In any case, the long search by astronomers for life on Mars, suggested by such "manmade canals," was probably inspired by this poor translation of Schiaparelli's work.

canapé. *Canopy*, for a covering hung on poles over a bed or throne, derives from the Latin *canapeum*, meaning a mosquito net. The tasty *canapé* appetizer consisting of a cracker spread with cheese, paté, etc., seems to have been named after this bed canopy—probably because people felt the appetizer resembled a bed canopy in shape.

canard. *Canard* means "duck" in French, and the word *canard*, for "a ridiculously false story," comes from the French expression *vendre un canard à moitié*, literally, "to sell half a duck." The expression means to make a fool out of a buyer, or anyone else, with a false story. Tellers of "half-ducks," or *canards*, were known in France three centuries ago, and the word probably gained a firmer foothold with a hoax played by a Frenchman named Cornelessin, who, testing the gullibility of the public, published a story that he had 30 ducks, one of which he killed and threw to the other 29, who ate it. He then cut up a second,

then a third, until the 29th duck was eaten by the survivor—an excellent, bull, duck, or *canard* story.

canary; sing like a canary. How did dogs give their name to canaries? It happened that in about 40 B.C. Juba, the native chief of Mauritania, explored a group of islands far off the coast of his kingdom and named the largest of them Canaria, or “Island of Dogs,” because of the wild dogs inhabiting it. Later visitors called the whole island group the Canary Islands, and when the grayish-green songbird of the island was tamed and exported in the 16th century, it became widely known as “the bird from the Canary Islands,” which was inevitably shortened to *canary*. Informants, or stool pigeons, are sometimes said by police to *sing like a canary* when they reveal everything they know, the expression dating back to the late 19th century.

the canary that couldn't fly. The nickname gangsters gave to Kid Twist Reles, who informed on Murder, Inc., in the 1930s and was consequently pushed to his death from the window of a Coney Island hotel while he was being guarded by lawmen. See CANARY; MURDER, INC.

Canberra. The Australian capital's name is said by some to be an Aboriginal place-name that means “woman's breasts,” after a pair of prominent hills in the area.

cancan. University scholars in Paris often prefaced their erudite arguments about anything and everything with the Latin word *quamquam*, “although . . .” This ridiculous habit grew so common that the word soon meant “a piece of nonsense,” *quamquam* coming to be pronounced *concon*. Carousing French students of the 1830s, punning bawdily on the sound of *concon*, then made it the name of the high-kicking, skirt-lifting dance of Parisian cafés. So goes the most interesting story of the origin of *cancan*. Other experts say it is simply a repetitive French compound based on *can*, without further elaboration.

cancel. Medieval scribes crossed out errors on parchment by drawing lines obliquely across the words. They called such criss-crosses *cancelli*, “lattices,” because they resembled such structures, and the word *cancelli* for such cross-outs eventually gave us the English *cancel*.

candidate. Pure or not, political candidates take their name from the Latin *candidus*, white, symbolizing purity. In ancient times a Roman *candidatus* dressed in a white toga when he appeared at the forum to seek election to the magistracy.

candleberry bush. Another name for the bayberry bush, whose berries often were used to make candles in days past. Also called the bayberry tallow, candleberry tree, and best of all, light on a bush.

can do. See NO CAN DO.

candy. We know that candy of various kinds has been around for at least 4,000 years and that there are at least 2,000 varieties of it available today. It was probably the Greeks who brought the word *candy* into the language. It seems that a favorite of the troops of Alexander the Great was a Persian delicacy called

kand—a sweet reed garnished with honey, spices, and coloring. The word *candy* itself either came to us from this *kand* that Alexander's men brought home to Greece, or from the old Arab word for sugar, *quand*.

candytuft. These colorful flowers have nothing at all to do with candy, which they do not taste like or look like. *Candy* here is simply a variation on *Candia*, a city in Crete, where candytuft (*Iberis umbellata*) was originally found over a century ago.

cane; canebreak. See BAMBOO.

canfield. Lonely people playing solitaire can at least have the company of Richard C. Canfield (1855–1941), for this American gambler invented the world's most popular game of solitaire one summer toward the end of the 19th century during breaks from the gaming tables at the fashionable resort of Saratoga Springs, New York. Canfield based his new game, named *canfield* after himself, on the solitaire game called klondike, which gold miners in Alaska had invented a few decades before.

canicular days. See DOG DAYS.

canned milk. Condensed milk in a can. When canned milk came out, one cowpuncher had written in praise of it:

No tits to pull
No hay to pitch,
Just punch a hole
In the son of a bitch.

canned music; canned laughter. O. Henry coined the expression *canned music*, prerecorded music, in a 1904 story. “The Latin races . . . are peculiarly adapted to be victims of the phonograph,” advises one of his characters. Replies another character: “Then we'll export canned music to the Latins.” The term is based on canned tins of food, and it led to later expressions like *canned speeches* and the *canned laughter* used for radio and television shows. See KNOW ONE'S CANS.

cannel coal. This is not “channel coal.” Found in Kentucky and Indiana, *cannel coal* is “a brightly burning coal rich in hydrogen that burns well in open fireplaces” and is becoming popular again as fireplaces become more common. Because it gives off a lot of light compared with other coals, it was first called “candle coal,” the name eventually corrupted to *cannel*.

cannibal. When Columbus encountered the Caribs upon landing in the Lesser Antilles on his second voyage in 1493, these natives told him their name was Canibales. This word was merely a dialect form of *Caribs* and these people were Caribs themselves, but the Spanish thereafter called the whole Carib tribe Canibales. Because some of these fierce warriors ate human flesh, within a century their name was used in Europe as a synonym for man-eaters, and *cannibalism* was substituted for the classical *anthropophagy*. The word was probably also influenced by the Spanish word *canino*, meaning “canine” or “voracious.” Columbus, incidentally, thought he had landed in Asia and that the Canibales were subjects of the Great Khan, or

Cham, another doubtful but possible influence on the word's formation. See CARIBBEAN SEA.

cannoli. To be good, this Italian pastry has to be crispy when filled with its mixture of ricotta cheese, cream, candied fruits, and other ingredients. It shouldn't be filled hours before, which makes its shell soggy. The cannoli has become a popular "international food" today. The pastry is named from the Italian *cannolo* for "tube," being tubular in shape. However, *cannoli* is never used in the singular form, although one such pastry should technically be a *cannolo*.

canoe; paddle your own canoe. Abraham Lincoln's frequent use of the phrase *paddle your own canoe* did much to make it popular, but Captain Frederick Marryat, that unflattering critic of American manners, seems to have been the first to have used the expression in its figurative sense, "be independent," in his novel *The Settlers in Canada* (1844). *Canoe* probably derives from the Arawak word *canoa*, for "a small boat carved from a tree trunk," which Columbus recorded in his diary and introduced into Spanish.

canoe birch. The birchbark canoes of American Indian fame were made from the birch species *Betula papyrifera*, which is the most widespread birch in the world. This canoe birch is also called "white birch," "silver birch," and "paper birch" and is very common in eastern North America.

can of corn. A high, easy-to-catch flyball or pop-up. There are numerous explanations for this baseball expression, first recorded in the early 1920s. Paul Dickson's excellent *The Dickson Baseball Dictionary* (1989) discusses several, including the theory that the phrase comes "from the old time grocery store where the grocer used a pole or a mechanical grabber to tip an item, such as a can of corn, off a high shelf and let it tumble into his hands or his apron, which was held out in front like a fire net." The term is also used outside of baseball today, meaning any easy accomplishment.

can of worms. Any source of complex problems or troubles, usually unpredictable. The Americanism is first recorded in 1927 and is chiefly heard in the form of *don't open that can of worms*. *Can* here refers to an unopened can of food with worms or maggots inside.

canoodle. Hugging, snuggling, kissing, petting between a man and woman or boy and girl. The Americanism dates back to the mid-19th century and is still used in a humorous sense today, probably because the word itself sounds funny.

canopy. See CANAPÉ.

cant. *Cant*, for "a whining manner of speech or pious hypocritical talk," surely derives from the Latin *cantare*, "to sing or chant." Yet some evidence indicates that the word's meaning may have been influenced by the unpopularity of a Scottish preacher named Andrew Cant (1590–1663). In fact, the *Spectator* tried to trace *cant* to the Reverend Cant in an article written in 1711, observing that he talked "in the pulpit in such a dialect that it's said he was understood by none but his own

Congregation, and not by all of them." Most dictionaries do not recognize the connection between the preacher's name and *cant*—the usual explanation being that the word evolved from the Latin *cantare*, in reference to the whining speech of beggars. But there seems to be enough evidence to indicate that Reverend Andrew Cant's unpopularity at least strengthened the word's meaning.

Cantab; Cantabrigian. *Cantabrigian* has been since about 1645 a synonym for a resident of Cambridge, England, deriving from the Latin *Cantabrigia* for "Cambridge." Hence the word has long meant Cambridge or Harvard (in Cambridge, Massachusetts) students who are more commonly called *Cantabs*, even this shortened form dating back to early 18th-century England.

can't abide one. *Abide* means to endure, stand, or tolerate, usually in the negative sense, as in "I can't abide him." Mark Twain used this expression, which is now common nationally and has been considered standard American English since at least 1930.

cantaloupe. The melon called a cantaloupe in the United States is not a cantaloupe. The cantaloupe, a variety of muskmelon, is named for Cantalupo, the Pope's country seat near Rome, where the melon was first bred in Italy from an Armenian variety. True cantaloupes are only grown in Europe. The "cantaloupe" grown in the United States is really the netted or nutmeg muskmelon, which originated in Persia (Iran). Muskmelons were introduced to America by Columbus, who brought seeds to Hispaniola on his second voyage; the many delicious varieties of muskmelon include the honeydew, Persian, casaba, and banana melons.

cantankerous. Oliver Goldsmith coined this word for "contrary or ill-natured" in *She Stoops to Conquer* (1773). Or rather, he fashioned it from an earlier, now obsolete word, *cantecker*, meaning a quarrelsome, disputatious person.

Can't anyone here play this game? Casey Stengel, legendary manager of the New York Mets (and the New York Yankees previously), uttered this plaintive cry when one of his players committed two errors to lose an extra-inning game during the 1962 season. The hapless Mets finished last that year, 62½ games out of first place, losing more games than any other 20th-century team. Writer Jimmy Breslin called the Mets "a team . . . for losers, just like nearly everybody else in life." Since Stengel said them, the words have been widely used outside of baseball as a humorous admonition to anyone who can't do a job right. Incidentally, Stengel's real name was Charles Dillon Stengel. His nickname *Casey* came from *K.C.*, because he hailed from Kansas City.

can't cut the mustard; can't cut (hack) it. Whatever the origins of *can't cut the mustard*, and they are about as clear as mustard, the expression *too old to cut the mustard* is always applied to men today and conveys the idea of sexual inability. *Can't cut the mustard*, however, means not to be able to handle any job for any reason, not just because of old age. Preceding the derivation of *too old to cut the mustard* by about a half a century, it derives from the expression *to be the mustard*. "Mustard" was slang for the "genuine article" or "main attraction" at the time. Perhaps

someone cutting up to show that he was *the mustard*, or the greatest, was said to *cut the mustard* and the phrase later came to mean to be able to fill the bill or do the important or main job. In any case, O. Henry first used the words in this sense in his story “Heart of the West” (1907) when he wrote: “I looked around and found a proposition that exactly cut the mustard.” Today *can't cut the mustard* is usually *can't cut it* or *can't hack it*. A recent variant on *too old to cut the mustard* is *if you can't cut the mustard, you can lick the jar*.

canteen. *Canteen*, like *CANTINA*, derives from the Italian *cantina* for “wine cellar.” The word is often associated with U. S. O. canteens, free clubs for lonely servicemen during World War II, but it also means a small portable water bottle that soldiers carry in the field.

canter. Originally the canter—the gait of a horse between a trot and a gallop—was called a Canterbury gallop, because it was thought to be the traditional pace of pilgrims riding to the Canterbury shrine in England.

Canterbury bells. Pilgrims to Canterbury in Chaucer's time thought that the bellflowers (*Campanula medium*) they saw along the road resembled the little bells on their horses and called the flowers Canterbury bells. *Campanula* itself is the Latin word for “bell.”

can't get blood out of a stone. A 17th-century English proverb. A similar expression is *you can't get blood out of a turnip*, which has always been a more rural expression and is almost obsolete today.

can't hold a candle to. See *HOLD A CANDLE TO*.

cantina. A Spanish term for a bar or saloon in southwestern states, where cantinas with colorful names like “The Spring of Golden Dreams” were once common.

can't make head nor tail of it. “I can't understand this, it's totally confusing.” The saying, born in a rural world some three centuries ago, is applied today mainly to stories or explanations, though someone will occasionally say he or she *can't make head nor tail of* an object. It is sometimes heard as *I can't make head or tails of it*, this variation possibly suggested by coin flipping.

can't teach an old dog new tricks. A mid-16th-century English proverb still frequently used to describe a person, usually an old person, who can't adapt to new ways. However, as many old vaudeville acts attested, dogs can actually be taught to do many tricks, both old dogs and young dogs.

can't walk and chew gum at the same time. Is unusually stupid. We have it on the authority of John Kenneth Galbraith that President Lyndon Johnson said Congressman Gerald Ford “can't fart and chew gum at the same time,” which may be an old expression common in Johnson's home state of Texas. In any case, by the time Ford became president after Richard Nixon's resignation, the words had been laundered to *can't walk and chew gum at the same time*.

Canuck. *Canuck* as a derogatory name for a French Canadian has been around since about 1865, with both Canadians and Americans using it. It may be from *CANADA* and *CHINOOK*, but it may also be from *Canada* plus the Algonquin Indian ending *-uck*.

canvasback duck. Courtiers in the 17th century wore doublets that covered them from shoulders to waist. These were made of leather or other expensive materials, but some impecunious gallants couldn't afford such fine garments and had to settle for doublets made of leather in the front and cheaper canvas in the back. These “canvas back” garments later inspired the name *canvasback* for the North American duck with whitish back feathers.

canyon. Used mostly in the U.S. for a very deep valley or gorge with steep sides, sometimes with water flowing at the bottom; the word derives from the Spanish *canon* (a large tube or funnel).

Can You Top This? The name of a popular 1940s radio comedy show on which comedians told jokes, the audience deciding whose were the funniest. The title seems to derive from the earlier phrase *can you beat that*, first recorded in 1937 and meaning “can you beat that for impudence or excellence, or unexpectedness?”

Il Canzoniere. According to tradition, Petrarch wrote his poems for Laura, the daughter of Audibert de Noves and the wife of Count Hugo de Sade, an ancestor of the French nobleman who gave us sadism. Petrarch never revealed the real Laura's identity, guarding his secret jealously, but he wrote that he saw her for the first time in the church of St. Avignon on April 6, 1327, and that this first sight of her inspired him to become a poet. In the 18th century the Abbé de Sade identified her as the wife of Hugo de Sade, who bore the old man 11 children before dying of the plague in 1348, when she was only 40. But his identification is not certain: It is only known that Laura was a married woman who accepted Petrarch's devotion but refused all intimate relations. Their platonic love inspired the long series of poems, 366 in all, that are among the most beautiful amorous verse in literature, the most famous the sonnet in praise of their first meeting. The Italians call this collection of lyrics *Il Canzoniere* and it is entitled *Rime in Vita e Morte di Madonna Laura*. Petrarch died long after his Laura (whoever she was). Lord Byron put the whole affair in a more humorous perspective when he wrote in *Don Juan*: “Think you, if Laura has been Petrarch's wife,/ He would have written sonnets all his life.”

Capability Brown. “Your estate holds great capabilities” the great English landscape gardener and architect Lancelot Brown (1715–83) often told prospective employers. His words earned the founder of modern English landscape gardening many commissions and the nickname “Capability.”

capador. Edna Ferber defined this Spanish word in *Giant* (1952): “He's the capador. He castrates the males and that makes them steers. And [as an additional duty] he nicks a piece off the end of the left ear of male and female and sticks it

in his pocket, and he marks the right ear with a hole and a slit, for identification. At the end of the day he adds up, and the number of pieces of ear in his pocket shows the number of calves we've branded . . . [As for] the testicles of the castrated calves, [the vaqueros] roast them on the coals, they burst open and they eat them as you'd eat a roast oyster . . . very tasty . . . the vaqueros think they make you potent and strong as a bull."

Cape Caud. Often heard on Cape Cod as a pronunciation of the place-name. Thoreau called Cape Cod "the bare and bended arm of Massachusetts." The place was named by English navigator and colonizer Captain Bartholomew Gosnold on his voyage to the New World in 1602 when "Neere this Cape . . . we tooke great store of Codfish . . . and called it Cape Cod."

Cape Cod turkey. New Englanders have called baked codfish Cape Cod turkey for many years, at least since the mid-19th century, just as melted cheese has been called WELSH RABBIT the world over.

Cape Horn. See AROUND THE HORN.

Cape of Good Hope. The stormy southern tip of South Africa, which was so named because it seemed to be on the way to India and all its riches. When the inexperienced explorer Vasco da Gama rounded it in 1497, he reached India and opened up a new trade route to the world, bringing back a rich cargo of spices.

capital. Our word *capital*, for "wealth," comes to us from the Latin *caput*, "head," dating to days when a person's wealth was reckoned in the number of head of cattle that he owned.

the Capital of the World; the Second City of the World. Former New York City mayor Rudolf Giuliani has in recent years used this sobriquet for New York. But he didn't invent it. The name was given to the city in 1939 when the World's Fair was held there and became popular again when the United Nations made New York its home. In 1898, when a reorganization of the city took in Brooklyn and other parts, New York City became known as the Second City of the World, London being the First City. In recent times Chicago has commonly been called the Second City among American cities.

capital punishment. The word *capital* derives from the Latin *caput*, "head," and capital crimes in English law were at first crimes for which the offender literally lost his head, had it chopped off on the block. (The first recorded use of the word *capital* shows this: "To have capytl sentence & be beheaded," 1483). *Capital punishment* was used about a century later, by which time commoners sentenced to death were hanged and only nobles were allowed to have their heads chopped off. "Capital (or deadly) punishment is done sundry wayes," observed the first writer employing the term. The death penalty, of course, goes back to prehistoric times. It was originally used only to appease an offended deity because of a grave religious offense, but also came to be imposed for murder and many other crimes. Among the ancient Hebrews adultery, bestiality, blasphemy, cursing father or mother, idolatry, incest, rape,

sabbath-breaking, unchastity, and witchcraft were all punishable by death. The Romans punished by death crimes such as forgery by slaves, corruption, sodomy, and seduction, and in 18th-century England more than 200 crimes, most of them against property, called for capital punishment. Since the 19th century, crimes punished by death have been reduced greatly in number throughout the world and many countries have now abolished capital punishment.

capitol. A building in which a state legislature meets, or, when capitalized, the building where the U.S. Congress meets. The name comes from ancient Rome's Capitoline hill, on the summit of which was erected the great temple of the city's guardian, Jupiter Optimus Maximus. In A.D. 340 the Capitol was saved from the Gauls when the sacred geese kept there awakened its defenders, who repulsed a night attack. The U.S. Capitol building has 365 steps, one for each day of the year. In 1835 Richard Laurence, a deranged house painter, tried to assassinate President Andrew Jackson in the Capitol rotunda, unsuccessfully when both of his pistols failed to fire. See JACKSONIAN DEMOCRACY.

Capone. The 1920s criminal's name became synonymous both for an American mobster and for the cheap cigars he liked to smoke.

cappuccino. This Italian espresso coffee mixed with steamed milk or cream is so called because its color resembles the color of the habits worn by the CAPUCHIN monks.

capsule wisdom. No one has identified the inspired genius who invented small medicine capsules that dissolve in the stomach so that the terrible-tasting stuff inside never touches the tongue. From their shape these capsules seem to have been patterned on plant seeds, pods, or capsules, which take their name from the Latin *capsula*, a small box or case. The medicines were mass-produced by the middle of the 19th century, and the first recorded use of their name is in 1875. The little capsules, a clever idea themselves, became so common that soon after they were compared to anything short and concise, as in *capsule wisdom*, "a wise, pithy saying."

Captain Bligh. *Captain Bligh*, commemorating the captain of *Mutiny on the Bounty* fame, is still used to describe a cruel, cold-hearted task-master. Captain William Bligh is also remembered by the ackee fruit, which looks and tastes like scrambled eggs when properly prepared, but can be poisonous when over- or under-ripe. The ackee tree's botanical name is *Blighia sapida*, after the man who introduced it, along with breadfruit. Bligh was called "Breadfruit Bligh" for his discovery of that fruit's virtues and was in fact bringing specimens of the breadfruit tree from Tahiti to the West Indies in 1789 when his mutinous crew foiled his plans. The lesson of *Bounty* apparently taught him little or nothing, for his harsh methods and terrible temper aroused a second mutiny, the Rum Rebellion, while he served as governor of New South Wales. Bligh, a brave and able officer, retired from the Navy a vice admiral. He died in 1817, at age 63. See also BREADFRUIT.

captain cook. Captain James Cook and his men introduced the domesticated pig to New Zealand. Many of these animals

escaped into the wild and multiplied; there were soon so many that settlers took to calling the wild pigs *captain cooks*, after the great explorer.

Captain Half-Ass. Blackbeard, Diabolito, Long Knife, Captain Buzzard, Gentleman Harry, Big John, Black Bart, and Calico Jack—these are only a few of the many pirates who chose to live under colorful pseudonyms that they invented or had bestowed upon them. The pirate with the oddest *nom de guerre*, however, must be the 18th-century French pirate whose pseudonym translates as Captain Half-Ass, an appellation about which history remains silent.

Captain Kangaroo. See CLARABELL THE CLOWN.

captain of the heads. A jocular Navy term for the enlisted man responsible for keeping the lavatories, or *heads*, neat and clean. Wrote one proud mother to a friend: “My son is doing very well in the Navy. In only six months he’s been promoted to Captain of the Heads!” Heads are so called because they were originally in the bow, or head, of a ship.

Capuchin. The order of Capuchin monks, established in 1520, came into being when Franciscan friar Matteo di Bascio insisted that the habit worn by the Franciscans wasn’t the one that St. Francis had worn. He stubbornly fashioned himself a sharp-pointed pyramidal hood (*capuche*), let his beard grow, and went barefoot; the pope granted him permission eight years later to wear this costume and form a separate order that would preach to the poor. The new offshoot of Franciscans came to be named for the headdress its monks still wear, and it wasn’t long before a woman’s combined cloak and hood was dubbed a *capuchin* after the monks’ cowl. The tropical *Capuchin monkey* and *Capuchin pigeon* are named for the Capuchin’s costume—the monkey’s black hair and appearance resembling the monastic cowl, and the pigeon having a hoodlike tuft of black feathers.

caput. In medieval times, during bubonic plague epidemics, German burial squads counted each corpse as a head, from the Latin *caput*, “head,” the term used so often that the German *kaputt* came to mean anything “broken, wrecked, unserviceable, finished.” This is probably the origin of the English slang term *caput*, used in both England and America for “all gone, no more, done for.”

capybara. The South American capybara (*Hydrochoerus*) looks like a rat from out of a low-budget science-fiction movie, certainly taking the prize as the world’s largest rodent (up to 174 pounds and 4½ feet long). The animal bears its ages-old Tupi Indian name. Though as large as a pig, the gentle vegetarian, also called the *carpincho* or *water hog*, would rather hide than fight and makes its home in tall grasses along riverbanks. Unfortunately, it has many cunning enemies that it cannot always escape despite its swimming abilities. Its predators include the cougar, the jaguar, and man, all of whom hunt the giant rodent for food.

car. The word *car* comes from a Celtic word that sounded like *karra* to Julius Caesar, who gave the name to his chariots.

Karra later was Latinized to *carra*. Surprisingly the word *car* appears first around 1300; *carriage* evolved from it, then *horseless carriage*, and, finally, back to *car* again as a shortened form. See AUTOMOBILE.

caramba! A Spanish exclamation of admiration or annoyance, as in “Caramba! Look at that girl!” The word entered the American vocabulary through Mexico, though few dictionaries record it.

carbine. The carbine, a short, light rifle, probably takes its name from the Medieval Latin *Calabrinus*, meaning “a Calabrian.” Calabria in southern Italy was noted for its light horsemen or skirmishers, and the first such weapons were either used or manufactured there. “Carabins,” as the weapons were called in 16th-century England, were originally “large pistols . . . having barrels 3 ft. long.” They were much shorter and less cumbersome than muskets, however, and were employed by light cavalry troops. By the early 17th century *carbine* was being spelled in its present form, although it took many years for the weapon to develop into the short, light rifle that we know today.

carbon sink. A name for forests, which are so named because they drain carbon dioxide from the atmosphere. Many scientists say they offer the best way to reverse the *greenhouse effect*.

cardigan. “It is magnificent but it is not war,” was Maréchal Bosquet’s memorable remark on the Charge of the Light Brigade, famous in history and in Tennyson’s poem of the same name. The charge at Balaclava during the Crimean War was led by James Thomas Brudenell (1797–1868), the seventh earl of Cardigan. Cardigan, a foolish, vain, violent-tempered man, somewhat redeemed himself by his great personal courage. Cardigan’s troops were the most precisely drilled and splendidly dressed of British soldiers, their commander invariably surpassing them in the last respect. The knitted woolen vest he wore to protect himself against the Crimean winter was named in his honor during his fleeting moments of fame, but today the cardigan is a collarless, buttoned sweater or jacket with a round or V-neck, bearing little resemblance to the original.

cardinal. Certain Roman Catholic bishops were called cardinals, from the Latin *cardo* (“hinge”), because the election of the pope “hinged” on them. The handsome red bird we know as the cardinal was so called because of the Roman Catholic cardinal’s bright red hat. This name for the North American grosbeak was first recorded in 1802.

Cardinal Jaime Sin. The Philippine Roman Catholic cardinal (1931–2005) had a great sense of humor, even regarding his unlikely name. He would often refer to his residence as “the house of Sin.”

the cards beat all the players. The philosophy that fate or luck is all, despite our efforts. It is not certain with whom the saying originates, but Ralph Waldo Emerson was familiar with it, meditating on the words in his essay “Nominalist and Realist” (1844): “For though gamblers say that the cards beat all the players, though they were never so skillful, yet in the contest

we are now considering the players are also the game, and share the powers of the cards.”

careen. Careening a ship means to ground her at high tide, and when the tide has receded to heel her over on her side. This is sometimes done with small vessels so their bottoms can be scraped, caulked, or otherwise repaired. The word is first recorded in the late 16th century and derives from the French *carene*, “keel,” which comes from the Latin *carina*, “keel.” A ship is also said to *careen* when she inclines to one side or heels over when sailing on a wind. From this nautical expression comes our term for any leaning, swaying, or tipping to one side of something that is in motion, such as, “The car careened around the corner.”

Carême. “The king of cooks and the cook of kings” was born in Paris on June 8, 1784, in his own words one of 25 children “of one of the poorest families in France.” Marie-Antoine Carême worked from the time he was seven as a kitchen scullion. In his teens he was accepted as an apprentice chef and after much study under many masters went on to found *la grande cuisine française*, classic French cooking as we still know it today. Carême’s creations reflected his considerable artistic abilities, his pastries often looking more like sculpture than food. His supreme taste and meticulous standards illustrated in his many books, as well as his 48-course dinners, made French cuisine sovereign throughout Europe. Among other notables, Carême cooked for Talleyrand, the future George IV of England, Czar Alexander I, Lord Castlereagh, Baron Rothschild (the world’s richest man), and France’s Louis XVIII, who granted him the right to call himself “Carême of Paris.” But his motto was “One master: Talleyrand. One mistress: Cooking.” Monarch of the entire culinary empire, his name today symbolizes a great chef. He died on January 12, 1833 while sampling a *quenelle* of sole prepared by a student in his cooking school. Someone wrote that he had died “burnt out by the flame of his genius and the heat of his ovens.”

Caribbean Sea. The Caribs of the South American coast were far more adventurous and warlike than those of the larger islands such as Cuba, and it is from these expert mariners—they were one of the few New World peoples to use sails—that the Caribbean Sea takes its name. See AR-AWAK; CANNIBAL.

carnap. A term based on *kidnap* that in Philippine English means to steal a car. English and Tagalog are the official languages in the Philippines.

carnation. The word *carnation*, meaning “fleshlike,” was first the name of a fleshlike color developed by artists in the 15th century, derived from the Latin *carnis*, “flesh.” Soon a gillyflower of this color was developed and took the same name for its pinkish color. The carnation (*Dianthus caryophyllus*) has retained its name even though it is available in many other shades; in fact, it is also popularly called a “pink.” Carnations with two or three stripes of contrasting colors in the petals are called “bizarres,” while those with only one color are called “flakes.” A carnation played a part in the attempted rescue of Marie-Antoinette from the guillotine on August 28, 1793. On that day the royalist noble chevalier de Rougeville visited her in

her cell and left a carnation in which a tiny note was hidden telling the French queen of a plan to save her. The plot failed, and Marie was executed when her guard refused to go along with a bribe attempt, but the “affair of the carnation” lives on in history.

Carnegiea. One of the world’s richest men, Andrew Carnegie (1835–1919), gives his name to the largest cactus in the world, *Carnegiea gigantea*, or the saguaro. One *Carnegiea* specimen found near Madrona, New Mexico in 1950 had candelabra-like branches rising to 53 feet. *Carnegiea* had been named for Carnegie a half century before in gratitude for his help in financing Tucson’s Desert Laboratory. The millionaire, whose family emigrated to America from Scotland when he was a youth, rose from rags to riches, starting as a bobbin boy in a cotton factory at \$1.20 a week and becoming a multimillionaire with his Carnegie Steel Company, which was merged with the United States Steel Corporation when he retired in 1901 to live on his estate in Scotland. Carnegie believed that it was a disgrace to die rich. He became one of the greatest individual philanthropists in history, his benefactions totaling about \$350 million.

carnival. The word *carnival* is associated with fasting. Carnival was first the whole season leading up to Mardi Gras, the word deriving from the Latin *carne vale*, “flesh, farewell,” signifying that the revelry will soon be over and the lean days of Lent will be upon us.

carol. Our English word for a song, as in a *Christmas carol*, derives from the French word *carole*, meaning “ring.” This refers to the early carollers dancing around in a ring as they sang.

Carolina glass. A glass, often colored, used in the border of windows or for Carolina windows themselves.

Carolina rice. Some sources say that the first rice successfully grown in South Carolina was introduced into Charleston in 1694 by a Dutch brig out of Madagascar, while others hold that Yankee shipmaster Captain John Thurber presented a packet of Madagascar rice to one of the early settlers on pulling into Charleston harbor late in the 1680s. According to the latter story, the settler planted the rice rather than dining on it, and after it sprouted, he gave seed to his friends, who in turn raised rice on their fertile land. Charleston and the Carolina low country soon became the “Rice Coast,” rice fortunes building Charleston and marking the beginning of a plantocracy considered by many to be the New World aristocracy. The Madagascar rice raised there was being called Carolina rice or golden rice by 1787.

carotid artery. The ancients knew that if you pressed the arteries leading to the head long enough, unconsciousness would result. Thus they named these arteries *karotides*, from the Greek *karoun*, to stupefy. *Karotide* later became *carotid* in English.

carouse. An ancient Roman goblet used by the Germans was made in the shape of a crouching lion, with the belly as the bowl so that a drinker couldn’t put it down until he finished his

wine. This led to the German toast *Gar aus!*, meaning “Completely out!” or “Drink fully!” when drinkers lifted their goblets. Over the centuries *Gar aus* eventually became *garouse* and finally *carouse* in English, meaning to engage in a drunken revel or to drink deeply and frequently.

carpe diem. Latin for “seize the day,” enjoy the present instead of worrying about the future. The well-known phrase *seize the day* is the title of a 1956 novella by American Nobel laureate Saul Bellow.

carpetbagger. In Victorian times luggage made from red carpets became an institution and was so popular among embezzling bankers as a place to stash their loot that the embezzlers themselves were dubbed *carpetbaggers*. After the American Civil War carpetbags were used by most of the unscrupulous northern political adventurers, often poor whites, who packed their few worldly possessions in them to satisfy state property residence requirements and moved to the South to take advantage of the newly enfranchised blacks and to win power and fortune by controlling elections. These greedy, unprincipled men, carrying their red carpetbags, and the previous association of the bags with men who milked banks as these men were milking the South, gave birth to their name, *carpetbaggers*, as well as to the name *Carpetbag Era* in American history.

carpet knight. In days of old, when knighthood was in flower, *carpet knight* was a contemptuous term for a knight who fought all his battles in a lady’s bed or on her carpet, one who stayed home from the wars. The expression, first recorded in 1576, came over the years to mean someone who avoids practical work.

carrot. From the Latin *carota* for the vegetable, which derives from the Greek *karoton*. When carrots were first brought to England, women liked to use the plant’s fern-like leaves as hair decorations, but didn’t much care for them as food. The ancient Greeks extolled them as “love medicine” and called them *philtron*.

carry a torch. No one is sure of the origin of this expression meaning to love someone unrequitedly, the phrase dating back to the 1930s. Some writers suggest the source of the words is Venus, the Roman goddess of love, who often carried a torch, while others say the expression was coined by Broadway cabaret singer Tommy Lyman.

carry coals to Newcastle. England’s Newcastle-upon-Tyne was the first coal port in the world, the initial charter granted to the town for the digging of coal given by Henry III in 1239. The fact that no one in his right mind would import coal into this coal-mining county gave rise in the 19th century to the expression *to carry coals to Newcastle*, “to do something superfluous, to take something where it is already plentiful.”

Carry Nation. Any intemperate temperance agitator. Carry Nation (1846–1911), convinced that she was divinely appointed to bring about the downfall of the saloon, embarked upon her career in Kansas in 1899, chopping her way through the United States and Europe with her “hatchetings” or “hatchetations.”

Her temperance lectures were not as interesting as her spectacular destruction of saloon interiors with her trusty ax, but the title of her autobiography, *The Use and Need of the Life of Carry A. Nation* (1904), is a classic. The much ridiculed schoolteacher seemed to believe that she was made for martyrdom; she even enjoyed her frequent stays in jail.

carry the ball. The person in charge *carries the ball* and has been doing so since the 1920s, when the football term began to be used figuratively by Americans.

carry you; run a car. In the American South *carry you* means “drive you to the store in a car,” and one is taught “how to run a car,” *not* how to drive a car.

Carson City. The capital of Nevada is so named after Kit Carson (1809–68), John C. Frémont’s expedition guide and a Union Civil War general. The Los Angeles suburb called Carson City is also named for him and so is a California lake.

carte blanche. *Cartes blanches* is the plural, if anyone dares use it. The phrase simply means “white paper” in French and originated as a military term referring to unconditional surrender—a defeated government signing a blank sheet of paper on which the victor could write whatever terms he pleased. The phrase has been commonly used in English since the beginning of the 18th century, soon after which the expression took on its fuller meaning, by extension, of unconditional authority, total discretionary power.

Cartesian. *Cartesian* refers to the philosophy of René Descartes (1596–1650) and his followers, deriving from *Cartesius*, the Latinized form of his name. The French philosopher was an eminent mathematician who based the starting point of his philosophy on the famous phrase *Cogito, ergo sum* (“I think, therefore I am”). His influence on science, philosophy, and literature has been immense, for he was among the first to rely on the rule of reason, rejecting all philosophical tradition. *Cartesian* also means “the explanation of philosophical problems by mathematics.” Descartes spent much of his life in Holland, dying in Sweden, where he had been invited by Queen Christiana. His major work is *Discours de la Méthode* (1637). I remember reading somewhere that Descartes was fascinated all his life by women with a squint, which means absolutely nothing but might be of encouragement to some readers.

Carthage must be destroyed! When Rome destroyed Carthage she became the great power in the ancient world. That she destroyed Carthage is due in large part to the eloquent orator Cato, who inspired the Romans by using *Carthage must be destroyed!* (“*Carthago delenda est!*”) as the final words in every speech he made in the Roman Senate.

Carthaginian peace. A destructive peace settlement, one like the severe Punic War treaties that the Romans imposed on the Carthaginians.

Carvel. In 1934 Thomas Andreas Carvelas, a Yonkers, New York, resident, invented a machine for making soft, frozen custard ice cream, which he sold from a truck, competing with

such rivals as the Good Humor man. Carvelas later legally changed his name to Tom Carvel and sold franchises that made the Carvel name a household word for soft ice cream by the 1960s.

Carvel's ring. Captain Grose, in his *Dictionary of the Vulgar Tongue* (1785), relates the anecdote explaining why *Carvel's ring* means “a woman's private parts or the *pudendum muliebre*”: “Ham Carvel, a jealous old doctor, being in bed with his wife, dreamed that the Devil gave him a ring, which, so long as he had it on his finger, would prevent his being made a cuckold: waking he found he had got his finger the Lord knows where.” Rabelais also told this story.

Carver chair. A type of chair with three vertical and three horizontal spindles named for John Carver (1576–1621), first governor of the Plymouth Colony, who first owned one so designed. Carver, a rich man, is considered to be the chief figure in arranging the Pilgrim migration to America and chose the site at Plymouth for the colony.

caryatid; atlas. Caryatids are draped or partially clad female figures used in place of columns or pillars as supports, especially in classical architecture. They take their name from the maidens of Caryae (Latin for Karyai, a town in Laconia, Greece). The Karyatids, or maidens of Karyai, danced in temples at the festival of Artemis and occasionally assumed the poses represented in the statues. Some accounts say that their figures were first used by the Greeks as a reminder of Karyai's disgrace, for the Karyatids had supported the Persians at the battle of Thermopylae (480 B.C.). An atlas, the male counterpart of a caryatid, takes its name from the Titan who supported the Earth on his shoulders.

casaba. A variety of winter melon with a wrinkled skin and sweet, juicy green flesh. It is named after Kassaba (now Turgutlo), Turkey, where it was first grown about 1885. Also called “casaba melon” and “cassaba.”

Casablanca. When Warner Bros. warned the Marx Brothers not to use the name “Casablanca” in their film *A Night in Casablanca* because (the studio claimed) this would infringe upon the title of Warner's movie *Casablanca*, Groucho Marx wrote the company the following letter now in the Groucho collection of the Library of Congress. Jack Warner, who regarded actors as “bums” and writers as “schmucks with Underwoods,” was not amused. “Apparently there is more than one way of conquering a city and holding it as your own,” Groucho wrote. “For example, up to the time that we contemplated making a picture, I had no idea that the city of Casablanca belonged to Warner Bros. However, it was only a few days after our announcement appeared that we received a long ominous document warning us not to use the name ‘Casablanca.’ It seems in 1471, Ferdinand Balboa Warner, the great-great-grandfather of Harry and Jack, while looking for a shortcut to the city of Burbank, had stumbled on the shores of Africa and, raising his alpenstock, which he later turned in for a hundred shares of the common, he named it Casablanca. I just can't understand your attitude. Even if they plan on releasing the picture, I am sure that the average movie fan could learn to distinguish

between Ingrid Bergman and Harpo. I don't know whether I could, but I certainly would like to try. You claim you own Casablanca and that no one else can use that name without your permission. What about Warner Brothers—do you own that too? You probably have the right to use the name Warner, but what about Brothers? Professionally, we were brothers long before you were. Even before us, there had been other brothers—the Smith Brothers, the Brothers Karamazov, Dan Brothers, an outfielder with Detroit and ‘Brother, can you spare a dime?’ This was originally ‘Brothers, can you spare a dime,’ but this was spreading a dime pretty thin. The younger Warner Brother calls himself Jack. Does he claim that, too? It's not an original name—it was used long before he was born. Offhand, I can think of two Jacks—there was Jack of ‘Jack and the Beanstalk’ and Jack the Ripper, who cut quite a figure in his day . . .” And so the letter went on à la Groucho. Needless to say, *A Night in Casablanca* remained *A Night in Casablanca*.

Casanova. Giovanni Jacopo Casanova de Seingalt's famous memoirs run to some 1.5 million words and take us only through his 49th year. It is said that his autobiography should be trusted in the main as a portrait of the 18th century, but not in the details, yet it seems relatively tame today and the details are not as licentious or racy as they once appeared. It is often forgotten that the Italian adventurer was a man of many talents: in turn, journalist, raconteur, soldier, gambler, gastronome, preacher, abbe, philosopher, violinist, alchemist, businessman, diplomat, spy, and so on. Casanova is of course best remembered as a great lover, his name equaled only by DON JUAN as a synonym for a promiscuous womanizer.

case. Criminals case or survey a place in order to get useful information to enable them to rob it. This underworld expression dates back to early 20th-century America and has been adopted by the British and Australians.

a case of the tail . . . The humorist S. J. Perelman (1940–79) finally escaped a horde of Taipei prostitutes who had been following him through the streets, propositioning him. Looking back at them he punned, “a case of the tail dogging the wag.”

Casey at the bat.

Oh! somewhere in this favored land the sun is
shining bright,
The band is playing somewhere, and somewhere
hearts are light;
And somewhere men are laughing, and
somewhere children shout,
But there is no joy in Mudville—mighty Casey
has struck out.

This mock-heroic poem by Ernest Laurence Thayer (1863–1940) was first published in the *San Francisco Examiner* on June 3, 1888, and *Casey at the Bat* has been popular ever since. Its initial popularity was due as much to the actor De Wolf Hopper, who included the 13 stanza poem in his repertoire, as it was to the poet, a former editor of the *Harvard Lampoon*. Everyone knows that there was no joy in Mudville when the mighty Casey struck out, but few are aware that Thayer

patterned his fabled slugger on a real player, Daniel Maurice Casey, who was still posing for newspaper photographers 50 years after the poem's initial publication. Dan Casey, a native of Binghamton, New York, holds no records worthy of recording—not even as a strikeout king. He was a pitcher and an outfielder for Detroit and Philadelphia, but his career was overshadowed by the exploits of his elder brother, Dennis, an outfielder for Baltimore and New York. Casey died in 1943, when he was 78, in Washington, D.C. As for Thayer, he was paid only five dollars for his poem, which De Wolf Hopper recited over 5,000 times.

Casey Jones. Engineer John Luther Jones, who died in a wreck of the Chicago and New Orleans Limited on March 18, 1900, probably inspired the perennially popular folk ballad, “Casey Jones.” The song’s authorship is unknown and it may have been adapted from a ballad about a black railroad fireman. There are numerous versions of both music and lyrics, the folk song based on the tradition that “there’s many a man killed on the railroad and laid in his lonesome grave.” Casey Jones’s story was dramatized in Robert Ardrey’s *Casey Jones* (1938).

cash; hard cash. *Cash* is a back-formation from *cashier*, the keeper of any money box, or *caisse* as the French called it. The word came into English in about 1600. *Hard cash* means actual currency without any checks among it and got its name because it first meant only hard metal money.

cash cow. A generous source of money or income; any investment, business operation, or product that pays well, pays steadily, and is dependable. Though *cash cow* is first recorded as a slang expression in the 1970s, the term *milch cow*, meaning the same, dates back to 1424, according to the *OED*. Weekley mentions the Anglo-Saxon *thri-milce*, “the month of May when cows can be milked three times a day.” Certainly a time when cows can be profitable. *See* MAY.

cashier. *Cashier* is recorded as far back as 1596, as “a person who handles financial transactions.” The term derives from the French *caisse*, meaning “money box.”

cash in one’s chips. *See* CHIP IN.

cash on the barrelhead. Though there is no proof of it, the origins of this expression most likely lie in the makeshift saloons on the American frontier over a century ago, which were often no more than a room in a log cabin with a barrel serving as both booze container and counter. No credit was extended, and any customer who wanted a smack of tarantula juice, or any rotgut likely to make him brave enough not to want to pay, was required to put down cash on the barrelhead, or counter.

cash register. The term *cash register* was devised by the machine’s inventor—Dayton, Ohio restaurant owner James J. Ritty—who called it the “Cash Register and Indicator” in his patent filed March 26, 1879. Ritty invented the machine to help prevent his cashiers from stealing and, in fact, called it the

Incorruptible Cashier. Unfortunately, he sold out his company after two years, discouraged by slow sales, never really cashing in on what would prove to be a billion-dollar invention.

casino. *Casino* means “little house” in Italian, the diminutive of the Italian *casa*, “house,” which comes from the Latin *casa* meaning the same. The word was first used for a country house and then for a building or room in a building where one could dance or gamble. This last meaning, first recorded in 1851, gave us our words for a gambling establishment and the card game called casino.

Cassandra. Any prophet of doom, woman or man, is called a *Cassandra* after Cassandra, King Priam of Troy’s daughter, who had been given the gift of prophecy by the god Apollo and frequently warned her people of impending disaster. Her prophecies always went unheeded because she spurned the advances of Apollo, and she met a violent end after her father declared her mad.

cassava. *See* MANIOC.

castanet. The first castanets were made of ivory or very hard wood, but the Spanish dancers who invented this musical instrument saw their resemblance to two chestnuts and gave them the Spanish name for that nut.

Castilloa elastica. This tree species—commonly called the ule or Mexican rubber tree—is not by any means the most important source of rubber today, but is a historical curiosity, having yielded the heavy black rubber balls Columbus was amazed to see natives playing with on his second voyage to South America—the first recorded observation of rubber by a European. The tree *C. elastica* is a species of the *Castilloa* genus of the mulberry family, and is named for Spanish botanist Juan Castillo y Lopez. Like Columbus, later explorers were astounded by the resilient balls made from the tree’s vegetable gum, remarking that they rebounded so much that they “seemed alive,” but rubber wasn’t brought into commercial use in Europe until three centuries after its discovery. The tree *Hevea brasiliensis*, yielding high-grade Para, is by far the most important rubber source today. *Castilloa elastica*, however, still yields a good quality Caucho rubber, the large tree being particularly valuable when Para rubber is high priced. *See* RUBBER.

cast-iron plant. *See* ASPIDISTRA.

Castle Garden. *See* ELLIS ISLAND.

castles in the air. Boswell’s famous remark that he was the first man to live in a castle in the air was charming self-analysis, and Bulwer-Lytton’s observation that such castles are cheap to build but expensive to maintain is profound. However, the expression came into English long before both writers from the French *un chateau en Espagne* (“a castle in Spain”) in about 1400, which later became *castles in the air*. French dreamers had been building castles in far off Spain or *Albanie* or *Asie* since the 11th century, when a poem called “The Roumant of the Rose” introduced the French phrase into English:

Thou shalt make castels thanne in Spayne,
And dream of Ioye [jfoy] all but in vayne.

cast pearls before swine. This is a familiar biblical injunction, from Matt. 7:6: “Give not that which is holy unto the dogs, neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you.” John Wyclif, commenting on the passage in 1380, added that “men should not give holy things to hounds,” a phrase that has been used much more sparingly. *See* PEARLS BEFORE SWINE.

Castroism, Fidelism. Both eponymous words describe the communism of Cuban revolutionary and dictator Fidel Castro (b. 1927). *See also* MAOISM.

casus belli. Latin for “an act that justifies or provokes war.” The phrase, first recorded in the 19th century, comes from *causus*, “cause,” and *belli* “of war.”

catamaran. Today’s *catamaran*, a vessel with two hulls held side by side some distance apart by a frame above them, bears only a slight resemblance to the rafts formed by a number of logs tied side by side at some distance apart that the British first saw in India late in the 17th century. But the Tamil *kattamaran*, “tied wood,” for the rafts served well as a name for “two boats tied together at a distance apart” and finally for the vessel now called a *catamaran*. How *catamaran* became a synonym for a quarrelsome woman is anybody’s guess. The term seems to have originated in America, *catamaran* possibly having been confused with “catamount,” a bad-tempered cat also known as the cougar.

cat and dog talk. The cat is a better speaker than the dog, according to Pierre-Samuel du Pont de Nemours (1739–1817), the eccentric French aristocrat who immigrated to the United States and founded the Dupont Company. “The cat,” he explained, “has the advantage of a language which has the same vowels as pronounced by the dog, with six consonants in addition: m, n, g, h, v, and f. Consequently, the cat has a greater number of words.” *See* CROW-FRENCH.

cat and mouse. Surprisingly enough, suffragettes arrested in England in about 1913 inspired the first popular use of this expression. The suffragettes often went on hunger strikes when imprisoned, and the government retaliated by passing the “Prisoners’ Temporary Discharge for Ill-Health Act,” which said that prisoners could be set free while fasting but were liable for rearrest when they recovered from their fasts to serve the remainder of their sentences. Critics compared the government’s action to a big cat cruelly playing with a little mouse and dubbed the legislation “The Cat and Mouse Act.” From the act, which wasn’t particularly successful, came the popularization of *to play cat and mouse with*, though the expression may have been used long before this.

Catawaba. Catawaba, an oral language with no written form, lost its last speaker early in 1996 with the death of Red Thunder Cloud. It is said that Red Thunder Cloud prayed in Catawba every night and that with his final prayer the language died. According to Carl Teeter, emeritus professor of linguistics at

Harvard University, “There were once about 500 [American Indian] languages in North America. About a hundred are still spoken and half of them are spoken by older people.” *See also* AMERICAN INDIAN LANGUAGE WORDS; CATAWBA GRAPES; SEQUOIA.

Catawba grapes; Concord. A light reddish variety of grape grown in the eastern United States, the Catawba was developed by John Adlum in his vineyard near Georgetown in 1829, its dominant parent being the northern fox grape. It was named three years later for the Catawba Indians of the Carolinas, or for the Catawba River, which takes its name from the Indian tribe. The Catawba, long a traditional favorite, contains some vinifera blood and is one of the best grapes for white domestic wines. By 1860, nine-tenths of all grapes grown east of the Rockies were Catawbas, but they were thereafter replaced by the Concord, perfected in 1850, as the leading American variety. *See also* CATAWBA.

catbird; catbird seat. The slate-colored North American thrush (*Dumetella carolinensis*) has been called the *catbird* since the early 18th century because “its ordinary cry of alarm . . . somewhat resembles the mew of a cat.” The name is also given to several Australian birds with similar cries. *To be in the catbird seat*, to be sitting pretty, is a southern Americanism dating back to the 19th century but popularized nationally by Brooklyn Dodger baseball announcer Red Barber, who used it frequently, and James Thurber’s story “The Catbird Seat.” *See also* TEARING UP THE PEA PATCH.

catboat. *Catboat* remains a double etymological mystery. No one knows why the name *cat* was given in the late 17th century to “a large vessel formerly used in the English coal trade and capable of carrying some 600 tons.” Neither is it known why this name was later transferred to the small single-masted pleasure sailboat known as a *catboat* today. Perhaps the two boats were named independently, the reason for the former’s name anybody’s guess, and the *cat* sailboat so named because it is small and moves quickly and quietly, like a cat.

catcalls. Though this word, first recorded in 1659, is inspired by the nocturnal cry, or “waul,” of the cat, catcalls are actually “human whistles expressing disapproval.” A catcall was apparently first “a squeaking instrument, a kind of whistle used especially in British music halls to express impatience or disapprobation.” It then came to mean a shrill shrieking whistle people made in imitation of the instrument and used for the same purposes. In America, however, such shrill whistles (though in this case not called catcalls) can be expressions of approval of a performance.

catch a crab. When an oarsman *catches a crab* he of course doesn’t literally catch one on his oar. The expression, dating back to the 19th century, means that the oarsman has slowed down the speed of the boat either by missing the water on a stroke, or, more commonly, by making a poor, awkward stroke that doesn’t completely clear the water when completed.

catch colt. A Western euphemism for an illegitimate child, called an *old-field colt* and a *woods colt* in other areas. Originally the term meant a colt that wasn’t the result of its owner intentionally breeding its parents.

catch on the rebound. This metaphor has been used for close to a century, and it means to capture the heart of someone after he or she has been rejected by another person. It has a sports origin and could refer to a rebound in basketball, a baseball rebounding off an outfield wall, or even a rebounding hockey puck.

catchpenny. Back in 1824 London printer James Catnach sold at one penny each the “last speech by the condemned murderers” of a merchant named Weare. After the sheet sold out in a day, Catnach realized he had a good thing, and he headlined another penny paper WE ARE ALIVE AGAIN but ran the first two words together so that the banner read WEARE ALIVE AGAIN. Buyers of the Catnach penny paper punned on his name after discovering the cheap trick, referring to his paper as *catchpenny*, which soon came to mean any low-priced, fraudulent item. This is a good story, one of the best and earliest examples of folk etymology. However, the fault in this ingenious yarn lies in the fact that *catchpenny* was used in the same sense, “any flimflam that might catch a penny,” 65 years before the very real Catnach ploy.

catchphrase. *Catchphrase* means simply a phrase that catches one’s attention, especially a clever expression that lasts long enough to become a slogan. There are thousands if not millions of them, including advertising catchphrases (*Coke is it*) and political catchphrases (“Read my lips, no new taxes”), among many other groupings.

catch-22. Joseph Heller’s novel *Catch-22* gave us this expression for an “insoluble dilemma, a double bind.” In the novel, American pilots, forced to fly an excessive number of dangerous missions, could not be relieved of duty unless they were diagnosed insane. On the other hand, the same regulations stipulated that a pilot who refused to fly, so that he wouldn’t be killed, could not be insane because he was thinking too clearly. There was no way out. By the way, Heller’s *Catch-22* was originally titled *Catch-18*, the title changed at the last minute because Leon Uris’s novel *Mila-18* came out just before Heller’s book was to be published. Save for this we would be saying *catch-18*.

catchword. Catchwords are expressions caught up and repeated for effect. Because catchwords are often used by political parties, the term has become a contemptuous one, applied to insincere, misleading statements. *Catchword*, however, has an honorable history. Books were once printed with the word that began the first line on the next page directly under the last line of the preceding page. Such words, designed to catch the reader’s attention and make him turn to the next page, were called *catchwords*. Then the term began to be applied to the last word, or cue, in an actor’s speech and finally to any expression that catches the attention.

caterpillar. A caterpillar is a *chatepelos*, a “hairy cat,” in French and it is from this word that we originally got our word for the “wurm among fruite,” as the English once called the creature. But the meaning and spelling of *caterpillar* were strengthened and changed by two old English words. “To pill” meant “to strip or plunder,” as in “pillage,” which came to be associated with the little worm stripping the bark off trees, and a

glutton was a “cater,” which the creature most certainly is. Thus the caterpillar became a “greedy pillager” as well as a “hairy cat,” both good descriptions of its mien and manner.

catgut. Stray cats aren’t killed to get it, as some people believe. *Catgut* is a misnomer, actually being the intestines of sheep, and sometimes horses and mules, used to make the tough cords that violins and tennis rackets are strung with (when nylon isn’t employed). Probably the word *catgut* was originally *kitgut*, the word *kit* meaning a small fiddle as well as a kitten, but the English word *catlings*, “small strings for musical instruments,” contributed to the confusion, too. The toughest and best catgut comes from the intestines of lean, poorly fed animals. “Roman strings,” the best catgut strings for musical instruments, are made in Italy. Catgut is also used for hanging clock weights and for sutures in surgery.

a cat has nine lives. Recorded in 1546, this old English saying surely goes back well before the 16th century. Cats were regarded as tenacious of life because of their careful, suspicious nature and because they are supple animals that can survive long falls, though not from the top of a skyscraper as some people believe.

cat-hauling. A vicious punishment used mostly on slaves in which a man was fastened down and a huge, fierce tomcat was taken by the tail and hauled down along the man’s bare back, the cat’s claws ripping flesh all the way.

Cathedral of Commerce. In 1919 the Reverend Dr. S. Parker Cadman christened New York’s Gothic-style Woolworth Building, with its silvery lacework, the *Cathedral of Commerce*. Later, visiting British statesman Arthur Balfour observed: “What shall I say of a city that builds the most beautiful cathedral in the world and calls it an office building.” Woolworth’s 50-story “Skyqueen,” modeled after London’s House of Parliament, was then the world’s tallest skyscraper, at 792 feet, but was proportioned so gracefully by architect Cass Gilbert that it is still regarded as one of the most majestic buildings in the City of Towers. Frank Woolworth’s office inside is a replica of the Empire Room of Napoleon Bonaparte’s palace in Comiègne. But amid all the superlatives about the building, too myriad to catalog here, perhaps the most amazing is that it was built without a mortgage and without a single dollar’s indebtedness. Frank Woolworth just shelled out \$13.5 million in cold cash—unique in the history of great buildings in the United States or anywhere else for that matter.

Catherine wheel. The Christian martyr St. Catherine of Alexandria is said to have confessed her faith to Roman Emperor Maximinus and rebuked him for the worship of false gods. After she converted his wife and the Roman general who escorted her to prison, Maximinus ordered her broken on the wheel, but the spiked wheel was shattered to pieces by her touch. This virgin of royal descent was then put to death by the ax, and tradition has it that her body was carried by angels to Mount Sinai where Justinian I built a famous monastery in her honor. St. Catherine is known as the patron saint of wheelwrights and mechanics, and her name day is November 25. The Catherine wheel, fireworks in the shape of a wheel rotated by the explosions; the circular, spoked Catherine wheel

window; and Catherine wheels, lateral somersaults, all derive from her name.

cathode. See FARAD.

cathouse; cat wagon. *Cat* was slang for a prostitute as far back as 1401, when a poem of the day warned men to “beware of cats’ tails.” Though the term associating the cat and commercial sex is obsolete, the connotation hangs on in the word *cat-house*, for “a bordello, crib, fancy house, whorehouse, or sporting house.” A cathouse is usually a cheap bordello, and even cheaper cat wagons pulled by horses brought harlots thataway when the West was being won. It’s anybody’s guess whether the cathouses take their name in some obscure way from the old word for harlot or were named independently after the sexual qualities usually attributed to cats.

cat ice. Thin, dangerous ice that would not support the weight of a (light-footed) cat. Dating back to late 19th-century America, the phrase has the same figurative meaning as thin ice, as in, “You’re skating on cat ice taking a position like that.”

Catiline; Catilinarian. Catiline’s conspiracy (64 B.C.) gives us the term *Catiline* for a conspirator or plotter against the government. Lucius Sergius Catiline (ca. 108–62 B.C.), already guilty of at least one murder and extortion, had plotted with other nobles to kill the consuls, plunder the treasury, and set Rome on fire, but Cicero’s eloquent *Catilinarian oration* alerted the public, foiling the conspirators. Catiline, sentenced to death, attempted to escape but was defeated in battle by Antonius and slain near Pistoria. Catiline represented himself as a democrat who would cancel all debts and outlaw all wealthy citizens. Ironically, Julius Caesar, the victim of assassins himself 20 years later, was probably a party to the planned assassinations.

cat in the meal. Something hidden or sinister. The expression comes from a story in the once-popular Webster’s “Blue-Backed Speller” a century ago and is still used today.

catlinite. A clay stone of pale grayish-red to dark red, *catlinite* honors American painter and writer George Catlin (1796–1872). Catlin, a self-taught artist, is remembered for his primitive but authentic paintings of Indian life. An impresario, too, he displayed troupes of Indians in the East and Europe long before Buffalo Bill or Barnum. Early used by American Indians for making pipes, catlinite is commonly called pipe rock.

Cato. The name of a famous Roman family, their name coming from the Latin *catus*, sagacious. Many of its members were noted for stoicism, austerity, and unbending will. Most Catos, however, were considered “deficient in generosity and in human kindness.” The word *catoism*, “austerity,” also derives from the Cato family name.

the Cato conspiracy. A 1739 slave revolt (not to be confused with London’s Cato Street Conspiracy, 1820) in which South Carolina slaves broke into a store for arms and marched toward St. Augustine, Florida, and freedom, 44 blacks and 30 whites killed along the way. A leader of this very early slave revolt was

named Cato, thus *the Cato conspiracy*. Cato’s name, in turn, comes from Marcus Porcius Cato, Cato the Censor (234–149 B.C.), Roman writer and moralist, who opposed introducing Greek culture, including the Greek language, to Rome, and proposed an agricultural state. Cato did in his late years learn Greek. His *De Re Rustica* is said to be the oldest literary prose work in the Latin language. To this Roman censor we owe the word *catoism*, austerity. It was his great-grandson Marcus Porcius Cato of Utica who took his own life in 45 B.C. rather than submit to Caesar and centuries later became in part the subject of Joseph Addison’s great tragedy *Cato* (1713). English writer Eustace Budgell (1686–1737) left a note on his desk before committing suicide. The note read: “What Cato did and Addison approved cannot be wrong.” See CATILINE; COME OUT OF THE CLOSET.

cat on a hot tin roof. Best known today as the title of Tennessee Williams’s famous play, the expression has been in wide use in America since the turn of the 19th century. *Like a cat on a hot tin roof* derives from a similar British phrase, *like a cat on hot bricks*, which was first recorded about 1880 and also means someone ill at ease, uncomfortable, not at home in a place or situation.

cat-o’-nine-tails. Some black humorist probably coined the name for this terrible scourge—because it scratched the back like a cat—but the fact that the first Egyptian scourges were made of thongs of cat hide may have had something to do with the word’s origin. The nine tails of the scourge, similar to the “nine lives” of a cat, could also have suggested the name. Scourging criminal offenders with a whip is a punishment as old as history. There are cases in medieval England of prisoners receiving 60,000 stripes from whips with three lashes and 20 knots in each tail. But the cat-o’-nine-tails, composed of one 18-inch handle with nine tails and three or more knots on each tail, only dates back to about 1670. Men were flayed alive with this scourge, which people believed was more holy, and thus effective, because its nine tails were a “trinity of trinities” (3×3=9).

cat’s. All cat’s expressions, including the *cat’s meow*, *cat’s pyjamas*, *cat’s whiskers*, *cat’s kittens*, *cat’s ass*, *cat’s balls*, *cat’s nuts* and *cat’s eyebrows*, are American slang dating back to about the 1920s. All mean superlative, excellent, the best.

cats and dogs. See BLUE-CHIP STOCKS.

cats are snakes with fur. So says Pauli Walnuts in the last episode of the TV show *The Sopranos*. This isn’t true of course, but it sounds like the character the cat-hating Pauli Walnuts is playing. I can find no other use of the phrase.

cat’s cradle. Word detectives have given this one up as a bad job. The first mention of the child’s game is in a little-known book called *The Light of Nature Pursued* (1768), in which the author attempts to explain it: “An ingenious play they call cat’s cradle; one ties the two ends of a packthread together, and then winds it about his fingers, another with both hands takes it off perhaps in the shape of a gridiron, the first takes it again from him in another form, and so on alternately changing the packthread into a multitude of figures whose names I forget, it being

so many years since I played it myself.” Some say that suggestions that the game’s name is a corruption of *cratch-cradle*, the manger cradle in which Christ was born, are not founded in facts. The story I was told when a boy had it that the first figure in the game resembled a *cratch*, a medieval English word for a hayrack, while the last figure resembled a cradle. Supposedly the game was first called *cratch-cradle* and this was changed to *cat’s cradle* in later years when the hay cratch was no longer used or familiar to people—not because cats had anything to do with the game but because the word *cat* sounded something like *cratch*. Moreover, before its meaning as a hayrack, *cratch* was a verb meaning “to seize, snatch, grab”—so maybe the cratching, or grabbing, of the string became the cat in the name. Then again perhaps I, too, should give this one up.

the cat’s meow. There is a large litter of terms equating the cat with excellence, all of them Americanisms first recorded in the early 1920s. These are *the cat’s meow*, *the cat’s nuts*, *the cat’s whiskers*, *the cat’s pajamas*, and *the cat’s kittens*. What is especially excellent about a cat’s meow or any of the other collection of cat terms remains a mystery. See BEE’S KNEES.

cat’s-paw. A cat’s-paw is light air during a calm that moves as silently as a cat and causes ripples on the water, indicating a coming storm. The term is recorded as early as 1769. Captain Frederick Marryat wrote in *Jacob Faithful* (1834): “Cat’s paws of wind, as they call them, flew across the water here and there, ruffling its smooth surface.” In the old folktale a monkey tricks a cat into using its paw to pull chestnuts from a fire, the monkey getting the nuts and the cat getting a burnt paw. From the tale comes our expression *cat’s-paw*, for “a dupe.”

catsup. See KETCHUP.

“The Cat’s Waltz.” This Chopin composition is so named because when Chopin was composing his Waltz No. 3 in F Major, his cat scrambled across the keys of his piano and he tried to reproduce the same sounds in his piece. See also KREUTZER SONATA.

cattail pine. See BRISTLECONE PINE.

cat the anchor. *Catting the anchor* simply means to keep the anchor clear of the ship by hanging it outside the vessel on a piece of timber called the cathead. The term dates back to at least the early 19th century.

cattle; chattel. Capitalists and cows have much in common, *cattle* being a corruption of the Latin *capitale*, “capital or principal holdings,” a word that medieval English peasants found hard to pronounce and altered to *catel* and finally *cattle*. Because the principal holdings of peasants were often livestock, especially cows, cattle came to mean what it does today, while the medieval French *chatel*, another corruption of the Latin *capitale*, entered English as *chattel*, our legal term for all personal property.

cattle call. Alfred Hitchcock famously called actors “cattle,” and the term is still used in Hollywood. So is *cattle call*, first recorded in 1952, an open casting call or audition of many actors

for one part or more parts. A cattle call for models is called a “go-see.” The use of *cattle* as a derogatory term for people dates back to at least 1673, when it is first recorded in this sense. The theatrical use of the term may have originated with actors who thought they were treated like cattle.

Cattle Kate. An old term for a woman cattle rustler; after “Cattle Kate Maxwell” (Ella Watson), who was hanged for rustling in 1889, though she may have been innocent. It is said that she traded sexual favors to rustlers for payment in cattle.

cattle singer. An interesting Americanism explained by Edna Ferber in *Cimarron* (1930):

... Shanghai Wiley, up from Texas, was the most famous cattle singer in the whole Southwest. . . . Possessed of a remarkably high sweet tenor voice . . . he had been known to quiet a whole herd of restless cattle on the verge of a mad stampede. It was an art he had learned when a cowboy on the range. Many cowboys had it, but none possessed the magic soothing quality of Shanghai’s voice. It was reputed to have in it the sorcery of the superhuman. It was told of him that in a milling herd, their nostrils distended, their flanks heaving, he had been seen to leap from the back of one maddened steer to another, traveling that moving mass that was like a shifting sea, singing to them in his magic tenor, stopping them just as they were about to plunge into the Rio Grande.

cattleya. This most popular of florist’s orchids has nothing to do with cattle, having been named for William Cattley (d. 1832), English amateur botanist and botany patron. The *Cattleya* genus includes some 40 species, though over 300 hybridized forms are known. *Cattleya labiata*, with its 200 or so named varieties, is the most commonly cultivated orchid in America—the showy magenta-purple-lipped, yellow-throated “florist’s orchid”—although the enormous orchid family contains perhaps 500 genera and 15,000 species. The *Cattleya fly* and the *Cattley guava*, a subtropical fruit, also commemorate the English plant lover.

Caucasian. When the German anthropologist Johann Blumenbach divided mankind into the Caucasian, Mongolian, Ethiopian, American, and Malayan races in 1795, he chose a skull from the Caucasus, in what is now the Soviet Union, as the perfect type in his collection. He also claimed that the Caucasus area was the home of the hypothetical race known as “Indo-Europeans,” to whom many languages can be traced. Blumenbach’s theories proved unscientific and tinged with racism. In *Webster’s New 20th Century Dictionary* the word he coined is now given “in default of a better” and as “one of the main ethnic divisions of the human race: [including] the Mediterranean, Alpine, and Nordic subdivisions, and is loosely called the white race.”

caucus. In American politics party leaders hold caucuses, off-the-record meetings, to select leaders and form policy. These leaders are in one sense counselors or advisers, and it is probably the Algonquin Indian word *caucauasus*, meaning “counselor or adviser,” that gives us the Americanism *caucus*, first recorded in 1773.

caught. Become pregnant. Wrote William Faulkner in *The Hamlet*, 1940: “So there was an old woman told my mammy once that if a woman showed her belly to the moon after she had done caught, it would be a gal. So Mrs. Varner taken and laid every night with the moon on her nekid belly, until it fulled and after. I could lay my ear to her belly and hear Eula kicking and scrouging like all get out, feeling the moon.”

caught between the hammer and the anvil. To be surrounded by powerful enemy forces. The allusion is to the blacksmith's hammer and anvil, but the expression was first heard by most Americans from the lips of General Tommy R. Franks, regional commander of American forces in the war against terrorism (2001), who referred to Al-Qaeda forces trapped on the battlefield in Afghanistan.

caught flat-footed. Americans have only used this expression, meaning “to be caught unprepared,” since about 1910. However, it has been traced to the reign of Queen Anne in England, where it was first applied to horses left at the line after the start of a horse race. These horses weren't dancing forward on their toes, but had all four feet flat on the ground. In fact, the term *flat-footed* for someone with little or no hollow in the sole and a low instep, was first used to describe animals afflicted with the condition, especially horses with flat hooves and soles near the ground. Later *caught flat-footed* must have been a good description for a runner not on his toes and left at the mark when a footrace began, and it was eventually generalized to mean anyone asleep at the switch.

caught red-handed. *To be taken with red hand* in ancient times was to be caught in the act, like a murderer, his hands red with his victim's blood. The use of *red hand* in this sense goes back to 15th-century Scotland and Scottish law. Scott's *Ivanhoe* has the first recorded use of *taken red-handed* for someone apprehended in the act of committing a crime. Not long after, the expression became more common as *caught red-handed*.

caught with his pants down. Partridge has managed to trace this expression only to 1920, to England, where it was, of course, *caught with one's trousers down*. But possibly the phrase is much older and was kept out of print for prudish reasons until the '20s. Two explanations are given for its origins: that it refers to a man caught with a lady *in medias res* by her husband; or that it arose when a hostile Indian came upon a frontiersman answering the call of nature in the woods without his rifle at his side. The phrase *in medias res*, into the middle of things, was coined by Horace.

cauliflower. Cultivated for some 2,000 years, cauliflower takes its name from the Latin *caulis*, “cabbage,” and *floris*, “flower.” Its delicate flavor led Mark Twain to call it “cabbage with a college education.” It is a relative youngster, however, when compared with cabbage, which has been grown for more than 4,000 years. *See* CABBAGE.

cauliflower ear. The white, gnarled scar tissue that forms on an ear repeatedly injured by boxing gloves gives that deformed ear the look of a head of cauliflower. The term has been around

for a century or so and is even used by doctors to describe the condition.

cause célèbre. French for any famous law case, especially one that attracts worldwide attention.

caustic; cauterize. *See* HOLOCAUST.

cavalry steak. An old army name for the meat of mules and horses. “Army veterinarians who under ordinary circumstances were supposed to care for the health of the pack mules and horses had instead [during the Baatan retreat in World War II] been overseeing their slaughter for ‘cavalry steak.’” (Hampton Sides, *Ghost Soldiers*, 2001).

cave!; Five-O; shot! In Britain *cave!* (pronounced in two syllables) has traditionally been used by schoolboy lookouts to warn others in a group that a master (teacher), policeman, or any adult is approaching and they'd better clear out or stop what they are doing. *Cave* is Latin for “beware,” and *Cave Canem* signs in ancient Rome meant *Beware of Dog*. In the U.S. the warning would be CHICKEE! or CHEESE IT, or *Five-O* (after the police drama *Hawaii Five-O*). The Scottish equivalent is *shot!*

caveat emptor. Latin for the still familiar phrase “buyer beware” that has guided millions.

caveman. Fred Flintstone didn't inspire this term for a man, sometimes crude and brutal, but often attractive, who has a rough primitive manner, especially toward women. The word, used in this sense, comes from the title of John Corbin's *The Cave Man* (1907), a romantic novel that was a best-seller in its day. Outside of U.S. slang, *caveman* means a cave dweller of the Stone Age, the word used in that sense since about 1860.

caviar. *Caviar* derives from the Persian *khavyar*, salted sturgeon eggs. The Russians call the fish eggs *ikra*, not caviar, and it is from a select sturgeon species called the beluga that the highly regarded Beluga caviar comes. Actually, the most prized caviar of all is that made from selected golden sterlet's eggs of the *Acipenser ruthenus* species, produced by sterlets “with a particularly happy frame of mind.” While dispelling myths about caviar, we should mention that *malossol* isn't a quality name like Beluga; it is just less salty caviar, and you can buy Beluga malossol, Sevruga malossol, et cetera.

caviar to the general. “I heard thee speak me a speech once,” Hamlet says to the players at Elsinore, “but it was never acted . . . ; for the play, I remember, pleased not the million, 'twas caviar to the general.” When Shakespeare says “general” here, he means the general public, the generality, the masses as they were later called, not the general of an army. The play he refers to (which was actually pretty bad, judging by the fragments presented) is, like caviar, for the tastes of only the most discriminating people; others would find it repugnant because they haven't acquired fine tastes. The rather snobbish remark is still commonplace in describing something for which one has to acquire a taste.

cavy. See UNCLE!

cayenne pepper. *Cayenne* is an English word contributed by the Tupi language of Brazil. It derives from the Tupi *quiynha*, meaning “capsicum,” *quiynha* deriving from the name of the island (now called Cayenne) where the pepper is ground.

cayuse. Characters in westerns sometimes use the word *cayuse* to describe a horse of little value, but *cayuse*, strictly, is a name for Indian ponies, a breed that western pioneers knew as *kiyuse* and which were rarely properly tamed by white men. The *cayuse* takes its name from the Cayuse Indians of Oregon and Washington, who bred the small horse. In 1847, blaming whites for a smallpox epidemic, the tribe attacked and killed 14 missionaries near the present city of Walla Walla, Washington. Subdued and put on a reservation in 1855, their ranks decimated by disease, they died as a people, with no full-blooded Cayuse Indian surviving today.

caziques. These are dictionary-defined as “Caribbean tribal leaders,” but they only grace this page because the word produced the highest one-turn score in any official Scrabble contest. The competition was held in Manchester, England, in 1982, and Dr. Karl Khoshnaw used *caziques* to score 392 points.

CC. A song that became a slang nickname for a city. In 1975 George Clinton entitled a song *Chocolate City*, referring to Washington, D.C., and its large African-American population. Soon after, the initials CC from the song’s title became slang for D.C.

CC; copycat. CC, for copycat, is the name of the first kitten ever cloned, born on December 22, 2001, at Texas A&M. She is the genetically identical copy of a two-year-old cat named Rainbow and developed inside Allie, her surrogate mother. CC is the sixth animal to be cloned around the world, the first being a sheep named Dolly.

CCCP. There isn’t a “Communist” behind any of these “C’s”. The common abbreviation stands for *Soiuz Sovetskikh Sotsialisticheskikh Respublik*, the former Union of Soviet Socialist Republics, written as CCCP in English because in the Russian alphabet *c* is equivalent to our *s* and *p* to our *r*.

Cecil’s fast. In an attempt to improve the fish trade in England, Queen Elizabeth’s longtime minister William Cecil, baron Burghley, had legislation passed requiring Englishmen to eat fish and no meat on certain days of the week. Beef-eating and mutton-eating Britons didn’t much like the idea and dubbed all fish dinners *Cecil’s fasts*. Possibly the idea remained distasteful to Englishmen for over two centuries, because in the early 1800s, cold hash patties were being called Cecils—another substitute for “real” meat.

celadon. One of the few colors named after a person real or unreal, *celadon*, a pale green, was in 1760–70 named after Celadon, the name of a character in *L. Astrei*, a tale by the French writer H. d’Urfe (1568–1625).

celery. Celery is the *selimon* mentioned by Homer in the *Odyssey*, but the word comes to us directly from the French *céleri*, a derivation from the Greek word for the vegetable. Celery has been cultivated for centuries and its wild form, smallage, has been gathered in its native Mediterranean home for thousands of years. The Greeks held bitter smallage in high esteem and awarded stalks of it to winners of athletic contests.

cellar. *Cellar*, for “the lowest position in league rank for a baseball team” is first recorded in a *New York Times* headline of July 9, 1922: “Red Sox Are Up Again. Leave Cellar to Athletics by Taking Final of Series, 4 to 1.” Thus the Philadelphia Athletics were the first baseball team to be in the cellar. *Cellar*, for “an underground room or basement,” dates back to the 14th century and derives from the Latin *cella*, “cell.”

cellophane. *Cellophane* is a good example of a trademark name that became a generic term. The transparent, waterproof, paperlike substance commonly used to wrap products was a trademark up until 1915, when the courts ruled that it had been used too often generically to be protected anymore. Much the same happened to the word *celluloid*, the first synthetic plastic. *Cellophane* derives from *cellulose*, the main constituent of plant tissue, and the French *diaphane*, “transparent.” See ASPIRIN.

Celsius scale. The centigrade thermometer is often called the Celsius thermometer in honor of the eminent Swedish astronomer who invented the Celsius scale. Anders Celsius (1701–44) first suggested his improvement of the Fahrenheit scale before the Swedish Academy of Sciences in 1742, proposing the more obvious gradation between 0 and 100. Today the mercury thermometer patterned on this scale is widely used in Europe for meteorological and all other temperatures. Celsius also founded the observatory at Uppsala, where he was a professor, and made and collected many observations of the aurora borealis. Boiling water measures 212 degrees on the Fahrenheit scale and 100 degrees on the *Celsius* or centigrade scale; water freezes at 0 degrees centigrade and 32 degrees Fahrenheit. See F; OLD PHILADELPHIA LADY.

Celtic words. English words that come to us from Celtic include: bin, crag, curse, the color dun and possibly ass (perhaps a Celtic contraction of the Latin *asinus*). Whiskey, clan, glen, heather, shillelagh, claymore, slogan, dirk, brogue, wraith, bog, plaid, and bard are Celtic, too, but are modern borrowings from the Irish and Scots. Celtic words also survive in British place names, such as the Avon (“water”), Dover (“black”) and YORK. See TOR.

cemetery. With all the talk about the euphemisms used by today’s “morticians” it is often forgotten that *cemetery* is a euphemism coined by early Christian writers from the Greek word for dormitory, a place where one sleeps. *Cemetery* is first recorded in English in 1387, over a century after *burial ground* (ca. 1250). *Graveyard* isn’t recorded until the early 19th century. See GRAVEYARD SHIP.

cent. *Cent* is an Americanism introduced during the Revolution by Gouverneur Morris to replace the British word “penny.”

Though both words are still used today, *cent*, deriving from the Latin *centum* for “one-hundredth,” (of a dollar) is more common than PENNY.

Centennial State. Colorado has had the nickname Centennial State since it was admitted into the Union in 1876. It has also been called the Switzerland of America (New Hampshire, New Jersey, West Virginia and Maine also claim this title) the Silver State (Nevada claims this one, too) and the Treasure State (Montana is its competitor here).

cento. The Roman poet Virgil (70–19 B.C.) was so popular in ancient times that an artificial poem called the *cento*, a “patchwork” or “crazy quilt” poem, was made by putting together bits of lines of his poetry. Much later, Virgil’s epic poem, *The Aeneid*, became so venerated that it was used to foretell the future. A page, selected by opening a volume at random, supposedly could predict what was to come.

Central Park. Work began on the great Manhattan park in 1857 based on designs by Frederick Law Olmsted and Calvert Vaux. The park was partially inspired by public grounds in great European cities and was meant to improve New York’s reputation and provide a recreational area for its citizens. The original grounds covered 700 acres running from 59th Street to 106th Street between Fifth Avenue and Eighth Avenue. Olmsted and Vaux’s design called for a combination of pastoral settings and recreational facilities and included features such as the Sheep Meadow and carriage drives. The park opened in 1859 and in 1863 its northern edge moved to 110th Street, increasing the grounds to 843 acres. In the 1930s progressive reformers and Parks Commissioner Robert Moses built numerous playgrounds at the park’s edges, constructed ballfields, renovated the zoo, and increased recreational activities. Since its opening, the park has been an important part of New York life, particularly in summertime. Among the park’s best-known features are the Children’s Zoo, the Delacorte Theater, the Carousel, the Great Lawn, the Metropolitan Museum of Art, and Tavern on the Green restaurant.

cent shop. Hard to understand in an age when pennies are thrown away, this is a historical term describing a small shop in which all or many cheap articles were sold for only a cent each.

centurion. The Roman noncommissioned officer was named a centurion because he was in charge of a *century*, originally a hundred legionaries, or ordinary soldiers of the Roman legion (consisting of 3,000–6,000 soldiers).

century plant. See AGAVE.

Cerberus. The many-headed dog of Greek mythology who guards the entrance of the infernal regions. Cerberus (pronounced *Sir-burr-rus*) has been represented with from three to 100 heads, with snakes for hair and the tail of a serpent. Described by Lucretius, Horace, Ovid, and Virgil, among other great Latin poets, the huge and fearsome guardian of the gates of the Underworld gives his name to any formidable and often

surly guard or gatekeeper, animal or human. Cerberus was not infallible: Hercules dragged him back to Earth in his legendary 12th labor and Orpheus lulled him to sleep with his lyre. The myth of the watchdog of Hell has its roots in the ancient Egyptian custom of guarding graves with dogs. See GIVE A SOP TO CERBERUS.

cereal. Gardeners have prayed to many garden deities through the ages. After a drought ruined crops in 496 B.C., Roman priests insisted that a new goddess named Ceres be worshipped and prayed to for rain. When the drought ended, Ceres became protector of the crops and the first grains harvested each year were sacrificed to her and called *cerealis*, meaning “of Ceres.” From *cerealis* came the English word *cereal*, which honors the goddess every morning on millions of breakfast tables. Ceres’ Greek counterpart was Demeter, the goddess of fruit, crops, and vegetables.

cesspool. Cesspool, a covered hole for sewage, or any filthy, disgusting place, may come from the Italian *cesso*, privy, which is from the Latin *secessus*. A more likely candidate is the French *souspirail*, a vent or breathing hole. Cesspool has many figurative uses, as in “He has a mind like a cesspool,” or “The man is a deep cesspool of ego.”

c’est la guerre! French for “It is the war.” Everything that went wrong, every shortage or shortcoming, large or small, was blamed on the war in France in World War I.

cestus. *Cestus* refers to a leather belt covered with metal spikes and studs that was wrapped around the fists of Greek gladiators when they stood toe-to-toe in arenas and fought to the death. The greatest cestus “boxer” was Theagenes of Thasos, said to have maimed or killed all 1,425 of his opponents.

cha. See TEA.

Chablis. Though its name has been widely appropriated in other wine producing countries, true Chablis, a dry white Burgundy, is produced near the town of Chablis, southeast of Paris, and made only of Chardonnay grapes.

cha cha. This dance should properly be called the cha cha cha, as it takes its name from the sound of its musical accompaniment. In fact, it is called the cha cha cha in Cuba, where it originated, and people dancing it call out *cha cha cha*, not *cha cha*.

chachalaca. Native Americans named the turkeylike bird chachalaca in imitation of the loud, harsh cackling cry it makes, the bird’s name being *chachalacametl* in Nahuatl. Common in Texas, the bird’s scientific name is *Ortalis vetula macalli*.

chad. A relatively new word, made famous during the 2000 presidential election, but dating back to about the late 1960s, for (of all things!) the bits of cardboard remnants that are punched out from computer ballot cards or from any paper on which a paper punch is used. “What the city is trying to avoid,” the *Los Angeles Times* (5/19/81) reported “is a repeat of April’s

Great Chad Chore, when more than 40,000 ballots had to be recounted because their chads—the punched-out portions—failed to break loose.” *Chad* may derive from the mining term *chat* meaning bits of white gravel-like rock, a by-product of lead mining, that are sometimes used to surface roads. A recent synonym for *chads* is “confetti.” A *pregnant chad* is a chad with a “dimple” on it, made by the stylus pushing too lightly against it.

Chagas’ disease. A disease spread by the kissing bug (qv), which is named for Brazilian physician Carlos Chagas (1879–1934), who in 1909 first described it. Chagas’ is found only in the Americas, where it kills 50,000 people a year. Sometimes the kissing bug bites its victims while they are sleeping.

chain lightning. Lightning bolts that appear to move very quickly in wavy and zigzag lines. The term is an Americanism coined in about 1825.

chair days. *Not* the days someone presides over the chair of any assembly. The old phrase *chair days*, used by Shakespeare in *Henry VI, Part 2*, means old age, a time when many people spend more hours than ever before in their comfortable chairs.

chaise lounge. The French called it a *chaise longue*, or “long chair,” but Americans, on importing it from France, assumed that the *longue* in the term was French for “lounge.” *Chaise lounge* it has remained ever since, despite all the efforts of purists.

Champ. A fabled water creature said to reside in Lake Champlain; the American counterpart of the Loch Ness Monster. Explorer Samuel de Champlain first sighted the creature in 1609, describing it as a “barrell thick monster . . . [with a] horseshaped head.” Descriptions have varied since.

champagne. As defined by French law only sparkling wine produced from grapes grown in the French province of Champagne can, strictly speaking, be called champagne. It must be fermented in the bottle and varies from *brut*, the driest, to sweeter *doux* champagnes. Champagne has been called “the wine of love,” “the wine of the gods,” “the devil’s wine,” “the laugh of a pretty girl,” “the only wine that leaves a woman beautiful after drinking it,” and “the barometer of happiness.” It is of course produced all over the world today and is still “the wine of wines,” the most celebrated of all festive drinks. DOM PÉRIGNON is said to have cried out when he first tasted his historic version of it, “Come quickly, I am tasting stars!”

champ at the bit. An expression that has been used figuratively since the late 17th century to describe someone impatient or anxious while waiting—like a horse ready to run, champing at the bit in its mouth and stomping the ground. Both *champ* and *chomp* mean “to bite upon or grind,” *chomp* probably deriving from the earlier *champ* for reasons unknown.

champion. Knights of old fought for their honor on a field, *campus* in Latin. A knight was thus called a *campion*, a fighter in the field, this word becoming *champion* in English.

Champion came to have its present meaning of one who wins first place, or one who is clearly superior because a knight remained in the field only if he won or was superior.

Chanukah. A Jewish festival of eight days that usually falls in December commemorating the rededication of the Temple of Jerusalem by the Maccabees after the victory over the Syrian Antiochus IV. The festival is characterized by the lighting of the MENORAH on each of the festival nights, the giving of small cash gifts (*Chanukah gelt*) and games such as one played with a four-sided top, or *dreidel*. *Chanukah* is the Hebrew word for “a dedicating.” It is also spelled Hanukkah and is called “The Festival of Lights” and “The Feast of Dedication.”

Chaos chaos. Linnaeus discovered and christened this microscopic animal in 1775. It has since been identified only 50 times. The Swedish founder of scientific nomenclature gave the one-celled animal its name because of the chaos it creates. The voracious *Chaos chaos* never fails to attack and destroy all smaller protozoa it encounters.

chap. The word *chapman*, for “a wandering peddler,” lives in the language long after the last chapman has passed from the scene. For the British term *chap*, “fellow or man,” as in “he’s a good old chap,” is simply an abbreviation of *chapman*—a good chapman, or *chap*, became in time a good fellow. The old English word *chop*, “to barter,” gave us both *chapman* and *cheap*.

chaparral. Any dense growth of shrubs or small trees, a tangle, a thicket. The Spanish word is used mainly in the Southwest but has national use due to its use in western stories and movies.

chapel; chaplain. St. Martin of Tours converted to Christianity as a young pagan soldier in the Roman army under Constantine. According to Butler’s *Lives of the Saints*, “In a very hard winter, during a severe frost, he met at the gate of the city a poor man almost naked, begging alms of them that passed by. Martin, seeing those that went before take no notice of this miserable creature . . . had nothing but his clothes. So drawing his sword, he cut his cloak into two pieces, gave one to the beggar and wrapped himself in the other half.” That night Martin saw a vision of Christ “dressed in that half of the garment he had given away” and decided to enter into the religious life. He eventually became bishop of Tours and was credited with many cures and miracles. After his death in about A.D. 400, Martin became patron saint of the Frankish kings, who preserved the remaining half of his cloak, or *cappella*, as a relic. It was enshrined in a chest in “a special sanctuary,” which also came to be known as a *cappella*, and the soldiers who watched over it, or carried it into battle and from place to place, were called *capPELLANI*. These two words, in French *chapelle* and *chaplain*, are the source of the English *chapel* and *chaplain*, the former deriving initially from St. Martin’s cape and the latter from the soldiers who guarded it in its sanctuary.

chaperone. The *chaperone* was originally a hood or mantle worn by priests and others in medieval France, the word itself meaning “little mantle.” It was later adopted as a fashion by English ladies, but it wasn’t until the 18th century that *chaperone*

meant a married woman who shelters or protects a young woman, much as the hood protects the face.

Chapin stigmata. In his *City Editor* (1934), Stanley Walker wrote of another city editor, Charles E. Chapin, who was widely respected for his cold-hearted, efficient methods. Chapin fired 108 men when city editor of the *New York Evening World*. When *World* reporter Irvin S. Cobb heard he was ill one day, he remarked “I trust it’s nothing trivial.” Walker writes that “Today, men who develop traits and methods similar to his are said to be marked with the ‘Chapin stigmata.’” Chapin died in 1930, in Sing Sing prison, where he was sent after killing his wife.

chaps. The leather leggings worn by cowboys take their name from the CHAPARRAL (the dense growth of tangled shrubs and thickets) that chaps are designed to protect against.

the chapter of accidents. According to poet Robert Southey, the English politician and writer John Wilkes (1727–97) told him “The chapter of accidents is the longest in the book,” an observation Wilkes apparently made.

chard. See SWISS CHARD.

charge it to the dust and let the rain settle it. A sassy term meaning “charge it on the books, it probably won’t be paid anyway; in any event, it’s not my responsibility and I’m not going to worry about it”; also “charge it to the sand.”

Charing Cross. In 1290 Edward I erected a cross to the memory of his beloved Queen Eleanor (*chère reine*, his “dear queen”) in the center of the ancient village of Charin, midway between London and Westminster. He chose the spot because it was there that her coffin rested for the last time before her burial in Westminster. The Puritans destroyed the original cross in 1647 (it stood on the south side of Trafalgar Square, on the site now occupied by an equestrian statue of Charles I), but a new one was erected in 1865 in the courtyard of what is now called Charing Cross Station.

charity begins at home. An ancient saying, *charity begins at home* was probably old when the Roman author Terence expressed the idea in a comic play: *Proximus sum egomet mihi*. Similar words are first recorded in English late in the 14th century.

charlatan. *Charlatan* can be traced to the Italian *ciarlatano*, for “a quack,” but a notorious quack dentist may have helped it along. A. M. Latan, it is said, was a 19th-century Frenchman who dressed in a long-robed exotic costume and often toured Paris in a magnificent dispensary car, a horn player heralding his approach. Spectators would cry out “*Voilà le char de Latan*” (“There is Latan’s car”), the words *le char de latan* popularizing *charlatan*. Most likely Latan was an assumed name, chosen to accompany his *char*, but the mischievous Frenchman probably strengthened the meaning of a word that had been used in English since the early 17th century.

Charles’s Wain. Much legend surrounds Charlemagne, Charles the Great (742–814 A.D.), king of the Franks and

founder of the Holy Roman Empire. Charlemagne is said to have been eight feet tall and so strong that he could bend three horseshoes at once. He had four wives and five mistresses who among them presented him with 50 children. Charles the Great was also associated, probably erroneously, with the legendary King Arthur. The constellation now better known as the Big Dipper, the Plough, Ursa Major, or the Great Bear was at one time called Arthur’s Wain because it resembled a wain, or wagon of old, the stars in the handle of the Dipper being the wagon’s shaft. Since there was a legendary association between Charles the Great and King Arthur, the star cluster called Arthur’s Wain eventually became known as Charles’s Wain, too.

Charleston. This peppy dance, symbolic of the Roaring Twenties, takes its name from Charleston, South Carolina, where it was probably first introduced as a variation of an earlier dance originated by American blacks. The word is first recorded in 1925.

Charley; Charlie; charlies. Long before English policemen were dubbed bobbies, London night watchmen were called Charleys, or Charlies. The obsolete designation is believed to derive from the name of Charles I, who extended and improved the London night watch in order to curb street offenses in 1640, or from his son the lascivious Charles II. Charles I, beheaded by Cromwell in 1649, also wore a short, triangular beard called a Charlie that is now known as a VANDYKE. The slang *charlies*, for a woman’s breasts, one etymologist suggests, derives from “the opulent charms displayed by the mistresses of Charles II”—*charlies* was probably originally *charlie’s* because they were “playthings belonging to the king.” *Charley* was also the term for a fox used by the English for almost a century, beginning in the late 1700s. The eponym here is brilliant British politician and Foreign Secretary Charles James Fox (1749–1806), who constantly outfoxed the opposition. See BOBBY; CHARLEY HORSE.

charley horse. Back in 1946 the *Journal of the American Medical Association* published an article entitled “Treatment of the Charley Horse,” rather than “Treatment of Injury to Quadriceps Femoris.” This would indicate that *charley horse* has been a part of formal English for at least 50 years. But did this term for “a leg cramp” arise from a lame horse named Charley that pulled a roller across the infield in the Chicago White Sox ballpark in the 1890s? That’s the old story, and there was such a horse, but the expression may have been printed several years before his baseball days, in 1888, to describe a ballplayer’s stiffness or lameness. Another derivation that seems likely but hasn’t been proved traces *charley horse* to the constables, or Charleys, of 17th-century England. According to this theory, *Charleys*, for “local police,” survived in America through the 19th century and because aching legs were an occupational disease among Charleys, ballplayers suffering such maladies were compared to the coppers and said to be “weary from riding Charley’s horse.” See CHARLEY.

Charley More. “Charley More—the fair (or square) thing” was the legend on the huge tavern sign of a Maltese publican about 1840. His name became synonymous with fair or straight

dealing, and *Charley More* became a British term for one who is honest and upright.

Charley Noble. Commander, captain, or ship's cook Charles Noble (ca. 1840) demanded that the cowl of the copper funnel of his galley stove always be kept brightly polished. So obsessed was he with the idea that galley funnels were dubbed *Charley Nobles* in his honor. See GRABLE-BODIED SEAMAN.

Charlie Chaplin, chaplinesque, Charlie Chaplain mustache. The great film comedian, born in England on April 16, 1889, began his career in London vaudeville, going to Hollywood in 1910, where Mack Sennett eventually hired him to make movies with the Keystone Comedy Company. Of his many famous pictures, *The Gold Rush* is considered his masterpiece. Chaplin's brilliant creation of the wistful tramp that he consistently played resulted in a number of familiar words, including *Chaplinesque*, *Charlie Chaplin walk*, and the toothbrush *Charlie Chaplin mustache*.

Charlie Dunns. Custom-made cowboy boots worn by many celebrities, including Gene Autry, Slim Pickens, Arnold Palmer, and Harry Belafonte, costing up to \$3,000 and fashioned of leather and exotic skins like ostrich. The boots were made in Austin, Texas by Charlie Dunn, whose father, grandfather, and great-grandfather before him were Texas bootmakers. Mr. Dunn, who died in 1993 at 95, is also remembered by the popular country-western song "Charlie Dunn," first recorded in the 1970s.

charlotte russe; apple charlotte. Marie-Antoine Carême, the greatest chef of his day, created a lavish pastry that he called the apple charlotte, after England's Princess Charlotte, George IV's only daughter. The master chef apparently could not forget Charlotte, for while serving Czar Alexander in Russia, he created a jellied custard set in a crown of ladyfingers that he named the charlotte russe in her honor. Carême's creations were so valued that it is said that they were stolen from the table at the court of George IV—not to be relished at home, but to be sold in the market at high prices. See CARÊME.

charm string. Buttons displayed on a string like a necklace. According to the *Miami Herald*, at the turn of the century: "Young girls . . . sometimes collected buttons or received them as gifts. They would be strung and counted. Supposedly when the girl reached 999 buttons, her final prize would be Prince Charming, who would come and take her away and they would live happily ever after."

Charon's toll. See RIVER STYX.

Charterhouse. Charterhouse, the venerable London public school and hospital, was, in the 14th century, the site of a religious house of the Carthusian monks. When one Thomas Sutton died in 1611, he endowed a hospital, chapel, and school on this property, which had come into his possession that same year. All three institutions were called *Charterhouse* as was the Carthusian monastery before them, the word deriving from the early English spelling (Chartrouse) of the French *maison Chartreuse*, "Carthusian house." The school moved to Surrey in

1872, but the hospital, or almshouse, still stands on its old site. Many of the Charterhouse buildings were destroyed in World War II. See CHARTREUSE LIQUEUR.

Chartreuse liqueur. A cordial that takes its name from a monastery of the Carthusian monks. La Grande Chartreuse, the mother house of the Carthusian order, was founded by St. Bruno of Cologne in 1084 near Grenoble, France, the monastery taking its name from nearby Carthusia, after which the Carthusians had been named. Early in the 17th century the Maréchal d'Estrées gave the monks a recipe for a liqueur made from fragrant herbs and brandy; the Carthusians called the liqueur Chartreuse. They began to manufacture and sell it on a large scale only when they returned to La Grande Chartreuse after their expulsion during the French Revolution, using the revenues to rebuild and maintain their devastated monastery. Les Chartreux, as the French call the Carthusians, were again expelled from France in 1903, their distillery and trademark being sold and an imitation Chartreuse marketed by a commercial firm. Cognoscenti hold that only the liqueur made by the monks is worthy of the name, claiming that Chartreuse owes its distinctive flavor to the still-secret formula that employs angelica root and other herbs of the Grenoble region. The Carthusians were allowed to return to Grenoble in 1938, and now sell their liqueur under the *Les Pères Chartreux* trademark. The best Chartreuse is a pale apple-green, hence the name of the color chartreuse. See CHARTERHOUSE.

chaste tree. See VITEX.

chat; chatter; chatterbox. *Chat*, like BLAB, is a truncated form of an earlier word, *chatter*, which is supposed to be an echoic word imitative of the sound of birds chirping. *Chatter* is first recorded in about 1225, *chat*, for "to talk idly," about three centuries later. *Chatterbox* is an Americanism first recorded in 1814.

Chateaubriand. One old story tells us that Brillat-Savarin dined in Paris with the vicomte François-Auguste-René-de Chateaubriand on the night that an anonymous restaurant proprietor invented steak Chateaubriand in his honor. The occasion, according to this version, was the publication of the French romantic's *la Génie du christianisme*, and the succulent tenderloin was encased between two flank steaks, symbolizing Christ and the thieves. The outer steaks, seared black, were discarded, leaving the tenderloin rare and juicy. More likely, steak Chateaubriand was invented and named by the novelist's chef, Montmirel, and served for the first time at the French embassy in London. See also BRILLAT-SAVARIN.

chattel. See CATTLE.

chatterbox. See CHAT.

chauffeur. The first chauffeurs known to the world were members of a band of brigands led by Jean l'Ecorcheur (Jack the Scorcher), a bandit leader who took advantage of the chaos created by the French Revolution to terrorize the French countryside in the late 18th century. Jack's gang would force

their way into homes and demand that all hidden valuables be surrendered, tying up those householders who refused and roasting their bare feet in the fire until they capitulated. They thus came to be known as *chauffeurs*, “firemen,” their nickname deriving from the French *chauffer*, “to heat or stoke.” Many years after its application to Jack the Scorcher and his *chauffeurs*, the word was logically applied to steamship stokers, locomotive firemen, and, finally, to the stokers required to tend early powered automobiles. These last stokers often operated someone else’s car, and the word was retained when *chauffeurs* no longer needed to be firemen in addition to drivers.

Chautauqua. Chautauqua, New York, which takes its name from a Seneca Indian word possibly meaning “one has taken out fish there,” was the home of a Methodist summer colony where various cultural activities were offered beginning in 1874. Lectures there came to be called *Chautauquas* and by the end of the century lecturers giving lectures in towns and cities across the country were calling them *Chautauquas* no matter where they were held.

chauvinism. Nicolas Chauvin of Rochefort was a genuine hero, wounded 17 times in service of the French Grande Armée and retiring only when so scarred that he could no longer lift a sword. How then did his name become associated with excessive nationalism or superpatriotism? Chauvin actually was left with little after his war service. For his wounds and valor he received a medal, a ceremonial saber, and a pension of about 40 dollars a year. Instead of growing bitter, the old soldier turned in the opposite direction, for, after all, his sacrifices had to mean something. Chauvin became an idolator of the Little Corporal; even after Waterloo and Napoleon’s exile, he spoke of little but his hero’s infallibility and the glory of France. The veteran became a laughingstock in his village, but he would have escaped national attention if dramatists Charles and Jean Cogniard hadn’t heard of him and used him as a character in their comedy *La Cocarde tricolore* (1831). The play truthfully represented Chauvin as an almost idolatrous worshipper of Napoleon and was followed by at least four more comedies by other authors caricaturing the old soldier. As a result the French word *chauvinisme*, or “chauvinism,” became synonymous with fanatical, unreasoning patriotism and all that such blind, bellicose worship of national prowess implies. The closest English synonym is -JINGOISM, while the Germans use *Hurratriotismus*.

chaw stick; chew stick. The ancient chew stick or chaw stick is the branches and twigs of the *Gouauia domingenia* tree. These were and are still used in the West Indies for cleansing the teeth and sweetening the breath, just as the roots of the cola tree, called chew stick, are used in Sierra Leone.

cheap as a Sardinian. Many groups of people have been unfairly characterized as cheap, but the Sardinians do not carry this stigma. The phrase *cheap as a Sardinian* refers not to penny-pinching Sardinians but to the fact that the Romans under Tiberius Gracchus auctioned off great numbers of Sardinian prisoners in Rome for whatever price they could get, no matter how cheap.

cheap John. For well over a century *cheap John* has meant inferior goods, a person who deals in them, and, by extension, any cheap person. There is even a chain of stores called Cheap Johns today. “None of your cheap-John turn-outs for me. I’m here to have a good time, and money ain’t any object,” wrote Mark Twain in *Roughing It* (1872).

cheapskate; a good skate. Revolutionary War soldiers liked to sing the Scottish song “Maggie Lauder,” the chorus of which chided a *blatherskate*, a gabby person full of nonsense or hot air. The song is a very old one, dating back to the 17th century, and the word *blatherskate* is older still, formed from *bladder*, an obsolete English word for an inflated pretentious man, a windbag, and a contemptuous use of the word *skate*, referring to the common food fish. Why the skate was chosen for the humorous word isn’t clear, perhaps because it was believed to inflate itself like a blowfish, or possibly just because it was common. In any case, “Maggie Lauder” made *blatherskate* popular in America and later, in the 19th century, when Americans invented their native word *cheapskate*, for a tightwad, they borrowed the *skate* from it. This is a more roundabout explanation than the theory that the *skate* in *cheapskate* comes from a British slang word for chap, but it seems more logical, as *skate* in the sense of *chap* never had much currency in the U.S., except in the term *good skate*, meaning a good person.

cheat. In feudal times *escheators* were officers of the king’s exchequer appointed to receive dues and taxes and handle estates that might possibly revert to the crown because of failure of descendants to qualify as heirs. The escheators did so many people out of money unscrupulously that their name was inherited by future generations in the form of *cheat*.

check. See BILL; CHECKMARK.

checkered cabs. New York City taxis with checkered lines along the sides and around the roof. Thousands of them worked city streets in days past, but the last one was retired in 2000.

✓ (**checkmark**). As far back as the 17th century teachers were for some unknown reason using the checkmark (✓) to mean “correct.” The word *check* is much older, deriving ultimately from the Persian *shah*, for “king,” which became the *check* in the game of chess and, from its use in the game, was widely transferred to other meanings in English. See CHECKMATE.

checkmate; chess. Chess was already an ancient game when the Persians introduced it to the Arabs. The Arabs retained the Persian word *shah* for the king, the most important piece in the game, and when the *shah* (pronounced “shag” by the Arabs) was maneuvered into a helpless position, ending play, they exclaimed *shah mat*, “[your] king is dead.” Soon after the Arabs introduced chess into Spain in the eighth century this expression became *xague mate*, from which derived the French *eschec mate* and finally the English *checkmate*. For many years *checkmate* was restricted to chess, but by the 14th century Chaucer and other writers were using it in the figurative sense of “to thwart, defeat, or frustrate.” Our word *chess* comes from a shortening of the French *eschis*, the plural of *eschec*, so the

game's name really means "kings." By a similar process the king in the game, the *shah* that became the French *eschec*, is also the source of every use of the word *check* in English, from bank checks to security checks. See also CHECKMARK.

cheddar. Originally a cheese made in the village of Cheddar in England's Somerset County, *cheddar* today refers to "a wide variety of hard, crumbly cheeses ranging in flavor from mild to sharp and in color from yellow to orange." The word is first recorded in 1666, but the cheese probably was made long before then.

cheechako. A newcomer, tenderfoot, or greenhorn in Alaska and northern Canada. The term comes from Chinook jargon and is often spelled cheehako and cheechaco. First recorded in about 1895, the word (in the form of *chechaquo*) is used to describe the main character in Jack London's famous short story "To Build a Fire" (1908).

cheek by cheek; cheek by jowl. *Cheek by cheek*, recorded over six centuries ago, implies closeness, intimacy. *Cheek by jowl* is just a variation invented some two centuries later, substituting the French *jowl*, "cheek," for the second cheek in the phrase.

cheerio; cheers. *Cheerio* means good-bye or good health. Used as a toast and when parting among the British, the word was first recorded in 1910 as *cheero*, which is rarely heard today. The British also use *cheers* as a toast, as do Americans, and the British and Irish say *cheers* as a synonym for "thanks" when acknowledging a small favor.

cheerleader. The young men and women who lead formal cheers at sports events began to be called cheerleaders in the early years of this century. The first to officially bear the name seem to have been those who cheered Amos Stagg's University of Chicago Maroons, a football powerhouse at the time.

cheer up; cheer up—the worst is yet to come. The British have been using the expression *cheer up* since at least 1597. It took over three centuries but an Americanism finally managed to cheerfully deflate these encouraging words, with *cheer up—the worst is yet to come*, first recorded in 1920.

cheese. Clifton Fadiman wrote that cheese is "milk's leap to immortality." The word *cheese* itself comes from the Latin *caseus* for the food, whose origin dates back several thousand years before Christ. One legend claims that cheese was discovered by a traveling merchant named Kanana. When he started on one long trip, Kanana put his supply of milk in a pouch made of a sheep's stomach. The heat and shaking of the pouch on the journey, plus the rennet in the lining of the stomach, caused the curds in the milk to separate from the whey, and when he sat down to eat his lunch, Kanana found delicious cheese. In any case, there are thousands of cheeses produced today. Most are named for the regions where they were born. Some important examples are Roquefort and Camembert, from France; Cheddar and Cheshire, from England; Edam from Holland; Muenster from Germany; Swiss from Switzerland; and Limburger from Limburg, Belgium. It would be im-

possible to list them all. In fact, France alone has enough varieties to fill a volume. French President Charles de Gaulle once remarked, "How can you govern a nation which has 246 kinds of cheese?"

cheesecake; beefcake. The old story is that in 1912 *New York Journal* photographer James Kane was developing a picture of an actress that included "more of herself than either he or she expected." As he looked at it, he searched for the greatest superlative he knew of to express his delight and exclaimed, "That's real cheesecake!" The word soon became synonymous with photographs of delectable models. In the 1970s, *beefcake* became the male equivalent.

cheese it, the cops! If you've ever wondered why *cheese it* means "stop it," or "watch it," Partridge has an answer for you. He suggests that the term, first recorded in England in 1812, is a mispronunciation of "cease it."

CHEETA. The Committee to Help the Environments of Endangered and Threatened Apes. The organization provides a primate sanctuary in Palm Springs, California, where resides Cheeta, the chimpanzee that up until 1967 played in the Tarzan movies. Cheeta, retired at 73, is the world's oldest chimp.

the chef of kings and the king of chefs. See CARÊME.

Chekhov's seagull. The image of the seagull brought down by a thoughtless hunter, so central to Chekhov's classic *The Seagull*, was suggested by a woodcock winged by the playwright's friend Isaak Levitan while they were hunting together. Levitan could not finish off the bird staring at them with bright black eyes and begged Chekhov to do so. Chekhov finally agreed and smashed its head with the butt of his rifle. Later he wrote to a friend: "And while two idiots went home and sat down to dinner, there was one less beautiful, infatuated creature in the world."

chelae. You may have eaten them many times, but you probably don't know their name. They are chelae, the large pincer-like claws of the lobster and other crustaceans, which are named from the Greek *chelé* for "claw." They are usually banded at the market for good reason: among many other cases, one lobster chela nearly amputated a child's finger, and another one reached up and snapped in half a Maine lobsterman's pipe!

chemotherapy; magic bullet. German scientist Paul Ehrlich (1854–1915) coined the term *chemotherapy*, the treatment of disease using chemical agents or drugs that are selectively toxic to the causative agent of the disease. He also introduced the term *magic bullet*, something that cures without harmful side effects. He won the Nobel Prize in medicine in 1908.

chenangoe. Upstate New York farms in Chenango County supplied many of the longshoremen who worked the New York waterfront in the late 19th century. So many, in fact, that *chenangoe* became a term for any longshoreman who loads cargo from railroad barges to ships. Before this the chenangoe had been a popular variety of potato.

cheri. A nice story has it that *cheri* for a charming, adorable, often young woman, may come to us from Rose Cheri, the stage name of a French actress who appeared in Paris from 1840 to 1860. “She was a singularly pure woman,” writes J. Redding Ware in *Passing English* (1909), “and an angelic actress. The word [first became] used by upper class men in society . . . to describe the nature of their mistresses.” But nice story or naughty there is no absolute proof of the Rose Cheri derivative, and the word may simply come from the French *chère*, meaning “dear,” “sweetheart.”

cherish a serpent in his bosom. An ancient Greek legend tells of a man who found a frozen serpent that he put beneath his shirt against his breast, only to have the snake, revived by the warmth of his bosom, bite and kill him. The story, adapted by Shakespeare, became the basis of the saying to *cherish* (or *nurse*) a serpent in his bosom, “to show kindness to someone who proves ungrateful.”

Cherokee. The name of this Indian tribe is a mystery, their name perhaps stolen from them like their land. “The word *Cherokee* itself has no meaning in the Indian language,” writes Michael Frome in *Strangers in High Places* (1966). “It may have had its origin in the time of the [Fernando] de Soto expedition (1540) with the word Achelaque, modified in stages to spell Cherokee, until not even their name remained to them.” See TRAIL OF TEARS.

cheroot. Originally only a thick stubby cigar with open untapered ends, *cheroot* has also come to mean any small cigar. It is one of the few words English has taken from the Indian and Ceylon Tamil language, deriving from the Tamil *curuttu*, roll (of tobacco leaf).

cherry. *Cherries* in English first meant *one cherry*, the word deriving from the French *cerise* (which came from the Latin *cerasus*) for the fruit. *Cerise* became *cherries*, but the *s* in *cherries* was dropped, because it made the singular word sound like a plural, and the result was *cherrie* or *cherry*. Much used as a simile in love poetry, from the Chinese poet Po Chu-*i*’s “mouth like a red cherry,” to Robert Herrick’s “cherry ripe,” the cherry surprisingly doesn’t have much of a reputation as a love food. At least there are not many erotic recipes available using it, save for standards like cherry pie and Cherries Jubilee. The word, of course, has served as both a synonym for a young girl and a young woman’s or young man’s virginity.

The Cornelian cherry (*Cornus mas*) has exceedingly hard wood that is said to have been used for the Trojan horse, and its bark yields the red dye used for the traditional Turkish fez. Berries from a dwarf form of it were believed by the Scottish Highlanders to create appetite, and they thus named the plant “Lus-achracis,” Gaelic for “plant of gluttony.”

cherry-picking. Discounters are often accused of “cherry-picking”—selling a great volume of a small selection of high turnover merchandise, or as *Fortune Magazine* once put it, a policy that concentrates only on fast-money, high-profit goods that are constantly in demand by an overwhelming majority of

customers. “We’re only giving the public what it wants,” the discounters reply. The practice is sometimes called “creaming.”

Cheshire cat. See GRIN LIKE A CHESHIRE CAT.

chess. See CHECKMATE.

chesterfield. *Chesterfieldian* usually means writings on dress and manners, referring to Philip Dormer Stanhope, the fourth earl of Chesterfield (1694–1773), whose posthumous “Letter to His Son” and “Letter to His Godson” are models of their kind. Lord Chesterfield, whose last words were “Give Dayrolles [a visitor] a chair,” did not intend his letters for publication. Dr. Johnson described them as teaching “the morals of a whore and the manners of a dancing master”—but then the Great Cham was hardly an unprejudiced judge, Chesterfield having neglected the plan for his great *English Dictionary*, which resulted in Johnson’s famous letter rejecting his support when it was finished. The witty “Letters” of the statesman and diplomat were meant to be filled with worldly knowledge and thus reflected the morality of the age. The large overstuffed chesterfield couch and the man’s velvet-collared overcoat with concealed buttons called a chesterfield were introduced in the 19th century. Both may have been named in honor of Philip Stanhope, but it is more likely that they commemorate a later earl of Chesterfield, who may even have invented them. Just which earl no one seems to know.

chestnut. No one is sure about the antecedents of chestnut. The word may derive from the name of Castana in Asia Minor, a city near which chestnuts grew, or from the Armenian *kaskene*, meaning “chestnut.” See also OLD CHESTNUT.

chestnut blight. A fungus disease mainly of the American chestnut (*Castanea dentata*), making it impossible to grow beyond a small size and to produce chestnuts. The culprit is *Endothia parasitica*, which doesn’t seem to bother the *European*, *Chinese*, and *Japanese chestnuts*. The blight is first recorded in about 1905, after the village smithy labored under the spreading chestnut tree and Longfellow received \$15 for his poem “The Village Blacksmith” in 1841.

Chevrolet. Swiss engineer Louis Chevrolet worked for U.S. car manufacturer William Durant as a racing driver. When Durant opened his new automobile company, he named it the Chevrolet Motor Company after Chevrolet because, he explained, his driver’s name “had a musical sound and the romance of foreign origin.”

chewing gum. The world’s first modern chewing gum was Adams’ New York Gum No.1—Snapping and Stretching. (Previously there were gums made of spruce sap, paraffin, and other substances.) Adams’ was concocted by Thomas Adams Sr. on his Jersey City kitchen stove around 1869 and later manufactured in New York City. Adams’ was the first commercial gum to be made with chicle and this milky liquid from the sapodilla tree was, according to one story, supplied to the inventor by General Antonio López de Santa Anna, Mexican conqueror of the Alamo, who was exiled in Staten Island at the

time. Adams first tried to make a cheap rubber substitute from the chicle, as Santa Anna had urged him to do; he failed but then came up with the great gum idea. Later his company merged with eight others into the American Chicle Company. The first successful *bubblegum* was invented by Fleer's employee Walter Diemer in 1928.

chewing gum of American literature. Author Mickey Spillane (1918–2006) liked to call his own work the “chewing gum of American literature,” especially after a critic castigated his “nasty novels.” *Saturday Review of Literature* summarized *I, The Jury*, his first novel, as “lurid action, lurid characters, lurid plot, lurid finish.” But none of that bothered Mr. Spillane. He didn't write for the critics, he explained, he wrote for the public; he was a “money writer.” He just went on writing violent popular books like *Kiss Me Deadly*, *My Gun Is Quick*, and *Vengeance Is Mine*. He was, he said, “critic-proof.”

chew the fat (rag). One guess is that this expression was originally a nautical one: Sailors working their jaws on the tough salt pork rationed out when supplies ran low constantly grumbled about their poor fare while literally chewing the fat. *Chewing the rag* also had a grouchy connotation when first recorded in print at about the same time, in 1885. There are a few stories relating these words to actual rag chewing (men chewing pieces of rags when out of tobacco and grouching about it, etc.), but more than likely the expression has its roots in the English verb *to rag*, “to scold,” its origin unknown. Both phrases are probably much older than their first appearance in print, and both are used more often today to mean a talkfest between friends than the act of complaining.

chew up the scenery. To overact or ham it up. Originally only a theatrical expression, these words can be traced to their inventor, Dorothy Parker, who used them first in a 1930 theater review: “More glutton than artist . . . he commences to chew up the scenery.”

Cheyenne. No one is certain about it, but the name of this North American Indian tribe of the Algonquian linguistic family, now found in Montana and Oklahoma, may derive from the French feminine for dog, *chienne*. French traders in Minnesota may have so named them because the tribe, like many Indian tribes, ate dog meat.

Cheyne-Stokes breathing. A medical term for gasping breathing that ceases for up to a minute, continues, and keeps alternating between gasping and breathlessness until death comes. As he lay on his deathbed, British poet A. E. Housman (1859–1936) remembered a passage from Arnold Bennett's novel *Clayhanger* describing this “death breathing” named for William Cheyne and William Stokes, the physicians who first described it. This may have been his *last* terrible memory, for he remembered it when he began the same “death breathing.” But then maybe he realized the joke of it all and DIED GENTLY LAUGHING.

Chianti. The Chianti mountains in Tuscany, where this wine is produced, give their name to the best-known of Italian reds, their squat flasks traditionally wrapped in straw.

chiasmus. A *chiasmus* is “a reversal in the order of words in two otherwise parallel phrases,” as in Shakespeare's “Suit the action to the word, the word to the action” (*Hamlet*); or “This man I thought had been a Lord among wits; but, I find, he is only a wit among Lords” (Dr. Johnson of Lord Chesterfield). These quotes are from among the hundreds in Dr. Mardy Grothe's *Never Let a Fool Kiss You or a Kiss Fool You* (1999), the title of which is also a chiasmus.

Chicago. The Windy City unfortunately derives its name from an Indian word that means “place of the bad smell,” “place of skunk smells,” or “skunktown.” There is only a slight chance that the Indian word means “wild onion place,” as has been suggested.

Chicago fire. The only plant named after a great fire, this midwestern bush (*Kochia scoparia*) with bright red foliage takes its unusual name from the Chicago fire of 1871, which raged for three days and took several hundred lives. It is also called “firebush,” “burning bush,” “summer cypress,” and “Kochia bush,” after the German botanist W. D. J. Koch, for whom the brilliant Eurasian genus is named. The Chinese make brushes from the bushy plant, which is grown as an ornamental here.

the Chicago way. Eliot Ness, played by Kevin Costner, is told the meaning of this expression in the movie *The Untouchables* (2000) by a tough Chicago cop named Malone, played by Sean Connery: “If you open the can on these worms you must be prepared to go all the way, because they're not gonna give up the fight until one of you is dead,” he says. “You wanna know how you do it? They pull a knife, you pull a gun. He sends one of yours to the hospital, you send one of his to the morgue. That's the Chicago way, and that's how you get Capone. Now do you want to do that? Are you ready to do that?”

chicanery. *Chicanery*, the use of mean, petty subterfuge, especially legal dodges and quibbles, came into English through a French word meaning the same. It seems originally to have derived from the Persian *chaugan*, for the crooked stick used in polo. The stick's name somehow came to mean a dispute in polo and other games, then took on the meaning of a sharp, crooked practice in those games and in general.

Chicano. An American of Mexican descent. One explanation claims this word is a contraction of the Spanish for “I am not a boy.” Another suggests it comes from the ending of the word *Mexicano*, which the Aztecs pronounced “Meshicano,” this eventually shortened to *shicano* and then *chicano*.

chichi. Slang for the female breasts as sexual objects, *chichi* or *chi-chi* can also mean anything sexually stimulating. The term arose after World War II during the U.S. occupation of Japan and derives from *chisai chichi*, a corruption of the Japanese words meaning “little breasts.” The expression had widespread use in Korea.

chickaree. A name in many parts of the U.S. for the red squirrel, the appellation deriving from the cry the red squirrel makes.

chickee. 1) An American term for someone who serves as a lookout in a crime such as a burglary. “You guys go in, I’ll play (or lay) chickee.” 2) A cry made by a criminal or schoolboy lookout meaning stop what you’re doing and get out of there, as in “Chickee, the cops!” Both uses date back to at least the 1930s, and the word is often spelled chickie. *See* CAVE; CHEEZIT.

chicken. A game teenagers have played since at least the late 1940s in which two drivers (often with passengers) drive their cars directly at each other at high speed, the loser, or chicken, the one who first swerves out of the way. It can also be played by driving at telephone poles, etc., to see how narrowly a driver can avoid hitting them, and by racing another car toward a cliff, as famously depicted in the film *Rebel Without a Cause*, starring James Dean. The game takes its name from *to chicken out*, to back away in fear, CHICKEN-HEARTED or *chicken* as a slang synonym for a coward. The expression has often been used figuratively, as in the words of military expert Stephen Philip Cohen (12/23/01): “The Indians are playing chicken. They’re counting on the United States to jerk the steering wheel so the Pakistanis do swerve out of the path of an onrushing Indian vehicle.”

chicken à la king. Chicken à la king, diced pieces of chicken in a sherry cream sauce, is now available canned, frozen, and even in Army mess halls, a long way from the *éclair* tables where it was served in the late 19th century. The dish was not invented for a king, as is popularly believed, yet it’s hard to pinpoint just whom chicken à la king does honor. Some say that New Yorker Foxhall Keene, self-proclaimed “world’s greatest amateur athlete,” suggested the concoction to a chef at Delmonico’s. Of the numerous stories surrounding the dish’s creation the most reliable seems to be that of the famous Claridge’s Hotel in London. Claridge’s claimed that the dish was invented by its chef to honor J. R. Keene, whose horse had won the Grand Prix in 1881. Perhaps J. R. passed on the recipe to his son, the peerless Foxhall. At any rate, the Keenes did not hold public interest long enough, and the Keene in *Chicken à la Keene* eventually became *king*.

chicken feed. Chickens were fed grain too poor for any other use by American pioneers, and these pieces of poor-quality grain had to be small so the chickens could swallow them. This obviously suggested the contemptuous term *chicken feed* for small change (pennies, nickels, and dimes) to riverboat gamblers fleecing small-town suckers. The first in-print mention of the expression is in *Colonel [Davy] Crockett’s Exploits* (1836): “I stood looking on, seeing him pick up chicken feed from the green horns.” By extension, *chicken feed* has come to mean any small or insignificant amount of money, and even (rarely today) misleading information deliberately supplied or leaked by a government to spies employed by another government.

chicken guts. A humorous term for the gold trim on the cuffs of Confederate uniforms during the Civil War. Also a name used by children for the symbol “&,” the ampersand.

chickenhearted; chicken-livered. Not nearly a new expression, *chickenhearted* is first recorded in a 1681 poem by John Dryden: “Where ’tis agreed by bullies chickenhearted/ To fight

the ladies first, and then be parted.” *Chicken-heart*, for a heart, or courage, as weak as a chicken’s, is first attested in 1602. *Chicken-livered* is a variant of the term, first recorded in America in 1857.

a chicken in every pot. Often attributed to Herbert Hoover, this synonym for prosperity was, indeed, a Republican campaign slogan during the election of 1932—a ridiculous one that helped the Democrats more than the Republicans, with the Great Depression gripping the land. The words can actually be traced to Henry IV of France and his vow on being crowned king in 1589: “If God grants me the usual length of life, I hope to make France so prosperous that every peasant will have a chicken in his pot on Sunday.” Assassinated in 1610 when only 57, Henry wasn’t able to provide such prosperity.

Chicken Little. Someone who is a confirmed pessimist is often called a *Chicken Little*. The name is from a character in an old story who believes the sky is falling when an acorn falls on his head.

chicken-livered. *See* CHICKENHEARTED.

chicken Marengo. Napoleon’s chef invented chicken Marengo at the Battle of Marengo in Lombardy during the Italian campaign, the quite exact date being two o’clock in the afternoon of June 14, 1800. Having no butter on hand, the resourceful but anonymous chef sautéed the chicken in the local olive oil, adding the sauce consisting of tomatoes, herbs, mushrooms, and white wine.

the chicken or the egg? An abbreviation of the old puzzle, “Which came first, the chicken or the egg?” The answer seems to be that each thing is necessary to the other. People have been asking this question since at least the time of Macrobius in about A.D. 400, the Latin author using it in his *Saturnalia* or *Feast of Saturn* at that time: *Ovumme prius fuerit aut gallina?*

chicken pulling. A game of Mexican origin played by U.S. cowboys that consisted of burying a live chicken in soft ground up to its neck, the players riding by at a gallop and attempting to pick the chicken out of the ground, usually breaking its neck in the process. The game, also called pulling the chicken, fortunately isn’t played much anymore, if at all.

chicken ranch. Unlike most sexual euphemisms, this synonym for “a brothel” takes its name from a real place. The original Chicken Ranch was a bordello in Gilbert, Texas, early in this century, so named because poor farmer clients often paid for their visits with chickens. It is celebrated in the play *The Best Little Whorehouse in Texas*.

chickens come home to roost. Malcolm X stirred up a hornet’s nest when he said this about John F. Kennedy after the president was assassinated, possibly alluding to alleged C.I.A. attempts on Fidel Castro’s life. But the saying is an old one, dating back to at least 1810 in the form of “Curses are like young chickens; they always come home to roost,” which appears to have been the invention of English poet laureate

Robert Southey as the motto of his poem “The Curse of Kehama.” The idea, of course, is that every curse or evil act returns to its originator as chickens return to their roost at night.

chicken scratch; crow tracks. These are Americanisms for illegible handwriting. *Chicken scratch* is first recorded in 1956 but is probably much older, while *crow tracks* dates back to at least 1875. Variations are *hen tracks* and *turkey tracks*.

chickenshit. Petty rules, especially in the Army, probably had been called chickenshit before the first recorded use of the expression in this sense in the 1930s. The early Canadian term *chickenshit* for “information from a superior officer” may be the source for the term.

chickens today, feathers tomorrow. Well-off one day, impoverished the next. The saying probably dates back to at least the 1930s, when people were still plucking chickens that many still raised in their yards.

chicken Tetrizzini. Luisa Tetrizzini, the Italian-born diva whose role of Lucia di Lammermoor made her famous to opera lovers throughout the world early in this century, counted this dish as her favorite. Chicken Tetrizzini is diced chicken in cream sauce flavored with sherry and baked in a casserole with thin spaghetti, cheese, and mushrooms. According to those who saw her, Madame Tetrizzini shared a problem common to most opera stars, looking as if she had dined many times on the highly caloric dish. The coloratura soprano made her debut in Florence in 1895 and ended her concert career in 1931, after starring in Spain, Portugal, Russia, England, America, and many other countries. She died in 1941, aged 69.

chickenweed. This name is given to common ragwort, a bane of gardeners, because its seed used to be mixed with chicken feed as a remedy for various maladies of chickens. Other plants named after chickens include the “chicken grape” of the South, valued for its fragrance, the common “hen and chicks” and “chicken on the wing” (the fringed polygala), so called because of the shape of its flower.

chick pea. *Chick pea* came into English in the 16th century from the French *pois chiche* for the vegetable and was originally called the *chiche pea*, until people began to confuse the word *chiche* with *chick*. *Cicer arietium* is also known as the *chick bean*. The word has nothing to do with the *chick* of *chicken*, as is often claimed.

chicory. An Old World perennial plant, naturalized in the United States, whose blue flowers decorate curbsides and whose dried, roasted, and ground roots are used as a coffee substitute. Chicory, also called *suscory*, was popular in both Union and Confederate Civil War camps: “How about a cup of chicory, Johnny?”

Chic Sales. Outhouses have been called Chic Sales, Chic Sale or Chick Sales since the 1920s after American vaudevillian Chick Sale, who had a comedy routine about building an outhouse and wrote a book about his “specialty.” See OUTHOUSE.

chief cook and bottle washer. A humorous expression meaning someone who does a lot of menial work, or any person in charge of many things. The expression is first recorded as far back as 1840 and is usually said in a spirit of fun.

chigger. Both mites and fleas are called chiggers, the name deriving from the African *jigger*, for “a blood-sucking mite.” In fact, even in this country *jigger* is sometimes used. *Chigger* came to mean a flea as well as a mite because it was confused with the West Indian *chigoe*, for “a flea,” somewhere along the line.

Chihuahua. A very small breed of dog native to Mexico, especially the state of Chihuahua. They can weigh as little as one pound or as much as six pounds and are considered to be the world’s smallest dog. See IRISH WOLFHOUND.

child. “A boy or a child, I wonder?” Shakespeare wrote in *The Winter’s Tale* (1610). In fact, as Ernest Weekley pointed out in *An Etymological Dictionary of Modern English* (1921), “my child in Shakespeare never refers to son,” for *child* originally meant a female infant in Anglo-Saxon, as it did in Middle English and in English dialect. See BOX; INFANT.

Childe ballad. American ballads are generally classified in three groups: Childe ballads, broadside ballads, and native American ballads. Childe ballads are not about children but refer to the 305 early songs collected by Harvard English professor Francis James Childe (1825–96) in the late 19th century. Of Childe’s *English and Scottish Popular Ballads*, half the songs were brought to America by English settlers; they are considered the best of American ballads, and are still sung today, although many have undergone great transformations through the years.

children. See EN.

children and chicken must always be pickin’. Both are always hungry and ready to eat, testing everything for food. The saying, first recorded in 1682 as an old proverb, uses *chicken* as a plural, one of the few cases in English where this still occurs. William Carew Hazlitt (1834–1913) included this wise observation in his *English Proverbs and Proverbial Phrases Collected From the Most Authentic Sources* (1882). Hazlitt was the grandson of the more famous William Hazlitt (1778–1830), said to be the first English writer to make a living as a critic.

children’s death. The terrible common name of this plant (*Cicuta maculata*) reflects the fact that children have died after mistaking its root for an edible carrot and eating it. It is also called “children’s bane,” “musquash root,” “beaver poison,” “spotted cowbane” and, most frequently, “water hemlock.” A member of the carrot family with feathery leaves, its roots contain a deadly alkaloid. It thrives on pond edges and in bogs.

children should be seen but not heard. This old phrase dates back to at least the 15th century. Sometimes heard as “Little children . . .”

chili. Short for the Spanish *chili con carne*, a thick meat stew, sometimes including beans, spiced with chilies.

chili pepper. The pungent pods of *Capsicum annuum longum* and several other species are named after the Nahuatl *chilli*, meaning the same. *Chilli*, in turn, derives from a Nahuatl word meaning “sharp” or “pointed,” because it is so pungent or biting to the tongue. Both “hot” and “sweet” varieties of garden peppers belong to the *Capsicum* genus native to tropical America. They are no relation to the condiment pepper, which is made from the berries of a climbing shrub of the *Piper* genus. Hottest of the hot chili peppers is the *habanero* variety, which is said to cause slight, temporary deafness—so you don’t hear your screams when you eat them, some people believe. *See also* CAYENNE PEPPER; PEPPER.

chime in. When someone butts into a conversation he can interrupt with words of agreement or disagreement, but a person who intrudes by chiming in usually echoes the words of the last speaker. The term is often labeled slang in this sense but is really standard English now, common since Byron used it in the early 19th century. It has its origins in the harmonious chimes or bells in church towers, a music known since before the 14th century wherein a simple melody is struck and the other bells repeat it many times. As a musical term, meaning to join in harmoniously or in unison, the expression has been used since the late 19th century.

chimpanzee. *Chimpanzee*, from the Bantu *chimpanzee*, meaning “mock man,” entered the English lexicon in 1738 when British explorers shipped the first of such animals to England from Angola. The highly intelligent ape more closely resembles man than any of the other anthropoids. British zoologist Jane Goodall, who spent years in Africa studying chimps, says they don’t “have a language that can be compared with ours, but they do have a tremendous variety of calls, each one induced by a different emotion.” Studies of chimps raised in captivity show that they use a vocabulary of about two dozen “words” or utterances. One chimp, Viki, raised from birth by Keith and Cathy Hayes in Florida, after three years learned to speak three human words (papa, mamma, and cup), none of them very well—at the same age when a human child knows 200 or more words. *See* DOLPHIN; PARROT.

chin. Familiar to many are the boxing phrases *lead with one’s chin* and *take it on the chin* (qv). But the boxing expression *chin* itself isn’t well known outside the ring. *Chin* there is the ability to take a punch on the chin without going down, which some fighters have and some do not—without it winning is not likely. “He ain’t got chin, I predict a knockout. He’s got a *glass jaw*, a *china chin*.” *See* KNOCKOUT BLOW.

China; sinologist. China was not the name of the country that ancient Romans in Persia heard about from Chinese traders. The country is so named by mistake, because when asked where they came from, the Chinese would diplomatically give the name of the ruling dynasty at the time, the *Ch’in*, instead of the name of their country, *Chung-kuo*, “the Middle Kingdom” or “Central Country.” *Ch’in* was Latinized by the Romans as *Sina*, which became the English *China*, as well as the basis for words like *sinologist*. The term *china* (lowercased here) refers to the fine porcelain brought to Europe from the Far East as early as the 16th century.

Chinaman’s chance. The Chinese immigrants who built so many miles of American railroads often tried to make their fortune by working old claims and streams abandoned by white prospectors during the California gold rush of 1849. They had an extremely poor chance of finding any gold in such abandoned claims, and thus a *Chinaman’s chance* came to mean “no chance at all.” The poor lot of Chinese in a segregated society probably reinforced the phrase, for the Chinese had as poor a chance on the railroads and other places as they did in the gold fields.

China syndrome. The phrase is a familiar one due to the movie *The China Syndrome* (1979) and after a joke about a nuclear accident in which a reactor melts through the Earth from the United States all the way to China. It is first recorded in about 1975.

chin chin. Relatively few Americans have been greeted by anyone using this expression, but it is an oriental English greeting often encountered in literature since the early 19th century. There is no connection here with the lower jaw, the word for which derives from the old English *cin*. *Chin chin* is just a corruption of the Chinese salutation *ts’ing ts’ing*.

Chinese home run. Because Chinese immigrants were forced to work for little pay in a segregated society, their name came to mean “cheap” in American slang and formed the basis of a number of expressions. *Chinese home run* is the only one of these that still has much currency. It describes a cheap home run, one that just makes it over the fence. No one is sure who coined the phrase. It either arose in some ballpark on the West Coast at the turn of the century and was brought East by the cartoonist “Tad” Dorgan (who is also responsible for the words YES-MAN and HOT DOG), or it originated in a baseball park with a fence a relatively short distance from home, possibly the old 239-foot right-field fence in Philadelphia’s Shibe Park, or the short right-field fence in New York’s old Polo Grounds.

Chinese language contributions to English. One out of every four people in the world speaks Chinese, “the world’s first language.” A good number of English words have Chinese ancestors. Among these are: BEEZER for a nose (from the Chinese *ta-bee-tsu* for Westerners, “the great-nosed ones”); BRAIN-WASHING (originally a Korean conflict term that is a direct translation of the Chinese *hsi nao*, “to wash the brain”); CHOP-CHOP (“hurry,” from pidgin English); CHOP SUEY; CHOW; chow mein; fantan; GUNG HO; JOSS; KOWTOW; LONG TIME NO SEE; MAH-JONGG (although the Cantonese Chinese word really means “house sparrow”); NO CAN DO (from pidgin English); tong; and typhoon. The Chinese have a proverb *cat gone, old rat comes out* that is much older than our centuries-old *when the cat’s away the mice will play*. Even the insulting, abusive word *Chink* for a Chinese person is said to be a mispronunciation of the Chinese word *Chung-kuo* for “China.” *See also* CHINAMAN’S CHANCE; PIDGIN ENGLISH.

Chink. *See* CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.

Chinook; Chinook wind. Chinook, an important pidgin language, enabled 18th- and 19th-century American farmers

and traders, French trappers, and even visiting Russian seal hunters to converse with Indians in the Pacific Northwest. Chinook jargon was used for more than 100 years. Named for the Chinook Indians, who had large settlements along the Columbia River, this lingua franca combined various Chinook dialects, other Indian languages, English, French, and probably Russian. Chinook wind, so called by early settlers because it blew from the direction of the Chinook Indian camps, designates a dry wind blowing from the west or north over the Rocky Mountains—warm in winter and cool in summer—while a wet Chinook is a warm, moist wind blowing from sea to land in Washington and Oregon.

Chinook State. See EVERGREEN STATE.

chintzy. *Chintzy* is American slang for “cheap,” or “poorly made,” or even “stingy,” dating back to about the 1940s. But it comes from the plural of the Hindu word *chint*, for “a glazed cotton fabric with flowery designs” first made in India. The British mistook the plural of the word, *chints*, for the singular, applying it to the cloth and eventually spelling it *chintz*. Regarded as a cheap material in America, *chintz* finally gave us the word *chintzy*.

chin whiskers. A beard, a term that was apparently coined in California in gold-rush days.

chip butty. A french-fries-and-butter sandwich doused in vinegar that is popular among schoolchildren in England, especially in the north of the country. See CRISP; TURKEY TWIZZLER.

chip in; blue-chip, etc. Poker chips are the basis of a number of English expressions. *To chip in*, “to share expenses,” derives from the practice of each player putting up his ante of chips at the start of the card game and chipping in with each bet. *To cash in one’s chips*, or *hand*, that is, “to die,” comes from the end of a poker game, when players turn in their chips to the cashier for money. *In the chips*, “affluent,” refers to having a lot of poker chips, and *the chips are down*, signifying a situation of urgency, means literally that all bets are in the pot, the hand is over and the cards now have to be shown to determine the winning hand. All of these expressions date back to the 19th century, when poker became our national card game. So does a *blue-chip stock*, a high-priced common stock that pays high dividends consistently over a long period, which derives from poker’s highest-valued blue chips.

chipmunk. This small striped squirrel-like rodent takes its name from the way it descends trees. *Chipmunk* comes from the Chippewa Indian *atchitamón*, meaning “head first.”

chip off the old block. A son or daughter who strongly resembles his or her father or mother. The phrase, recorded in the 1600s, was originally British, but is now widely used and refers to the chip off a block of wood. A variation on the expression is found in a remark of Eugene O’Neill’s father, James, who gave up a promising career for the financial security of playing only the leading role in *The Count of Monte Cristo*, which he played over 5,000 times. “A chip off the old block, eh?” his son Eugene said to him soon after he, too, had chosen the theater as

a career. “Say, rather, a slice off the old ham,” James O’Neill replied.

chip on one’s shoulder. In 1830 the *Long Island Telegraph* in Hempstead, New York reported that “When two churlish boys were determined to fight, a *chip* would be placed on the shoulder of one, and the other demanded to knock it off at his peril.” From this New York State boyhood custom, first recorded above, comes the expression *to have a chip on one’s shoulder*, “to be sullen or angry, looking for a fight.” The phrase itself isn’t recorded until 1934, but is probably much older.

Chippendale. Thomas Chippendale (ca. 1718–79) worked primarily in the French rococo, Chinese, and Gothic styles, sometimes combining them without incongruous results. Setting up his factory in London in 1749, he later published *The Gentleman and Cabinet Maker’s Directory* (1754), in which he illustrated some 160 designs. Chippendale almost invariably managed to combine comfort, grace, and solidity in his wide variety of furniture, which is highly valued today. So many of his designs were slavishly copied during the latter half of the 18th century that it has always been difficult to identify his own work, dealers generally using the term *Chippendale* to designate a large variety of furniture in his style.

chipper. A gasoline-run machine of various sizes used by tree surgeons, farmers, and others to cut tree limbs into small chips that can be used as mulch.

chippy. Most sources say *chippy*, first recorded in the late 1880s, comes from *chip*, “to chirp,” as a streetwalker might do when a prospective client walked by. But it’s hard to believe that prostitutes commonly chirped at men. More likely, this name for a whore derives from the *chips* prostitutes were paid with by clients in Mexican-American whorehouses (*chippy houses*) in the western United States. The customers purchased chips from the madam, paid the women with them and the women cashed them in for their percentage.

chips are down. See CHIP IN.

Chisholm Trail. In the spring of 1866 Jesse Chisholm (ca. 1806–68), a halfbreed Cherokee Indian trader and government agent, drove his wagon loaded with buffalo hides through the Oklahoma territory to Wichita, Kansas. The wheels cut deep into the prairie, providing rut marks for a route that was to become the most important and famous of all western cattle trails, extending from San Antonio, Texas to Abilene and other Kansas railheads. The trail was used for more than 20 years after the Civil War, and 450,000 Texas longhorns were driven up it in 1872 alone. Remnants of the trail, celebrated in folklore and cowboy ballads such as “The Old Chisholm Trail,” still remain along the Santa Fe Railroad line.

chit. *Chit*, for “an I.O.U.” or “a voucher of money owed for food or drink,” derives from the Hindustani *citthi*, “a short note.” In British colonial India, Hindu civil servants seem to have been in the habit of writing an inordinate amount of *citthis* about every conceivable matter. The British found this practice time-consuming and inefficient, criticizing it so often

that the word *citthi* eventually became the easier to pronounce *chitty* and then *chit* in their vocabulary. They used *chit-coolies* as a term for Indian messengers, and soon they used *chit* for the notes they signed for drinks and food at their clubs. The *chit* that means a young, often insignificant person or a child (“a chit of a girl”) goes back much further in time. Found in Wycliffe, it refers to the young of an animal and probably derives from *kitten* or *kit*.

chitterlings. Hog intestines made into a popular Southern dish; usually pronounced *chitlins*.

chivalry; shovelry; the Great Entrencher. The *chivalry* means a group of knights or gallant gentlemen. The word derives ultimately from the Latin word *caballus* for a horse, knights and gentlemen usually being the only ones who could afford to own horses. It is often forgotten that in the American South up until the Civil War the wealthy ruling class was frequently called *the chivalry*, sometimes in a joking way or sarcastically. In the North Robert E. Lee’s forces were called the *shovelry* toward the end of the war, because all they seemed to do was dig in deeper. Lee himself was called “The Great Entrencher” by his own troops.

cho cho. One of the few Basque words that has entered American English. *Cho cho* means a young child or boy and is sometimes used by non-Basque speakers in parts of the West.

chockablock. Originally a nautical term meaning “no more slack can be taken on rope,” *chockablock* came to mean “completely full” ashore. *Chockfull*, which has more currency countrywide, comes from the same source, dating back to the 14th century.

chocolate. See CACAO TREE.

chocolate mousse. One theory has it that this dessert was invented by French artist Henri de Toulouse-Lautrec a century ago. Lautrec gave it the witty name *chocolate mayonnaise*, but this was changed to *chocolate mousse*, (“foam,” “lather”) over the years.

Choctaw. *Choctaw*, a fancy step in ice-skating, and southern slang for unintelligible speech, is from the Choctaw Indian tribe of southern Mississippi. The Choctaws, named from the Spanish *chato* (“flattened”) for their practice of flattening the heads of male infants, fought against the British during the American Revolution and aided the United States in later years against the Creeks. They ceded their lands to the government in 1832, the majority moving to reservations in what is now Oklahoma. See LUTZ.

choke'em. A colorful popular name in the western United States for dodder, a plant of the genus *Cuscuta*, because of its parasitic effect on host plants: it literally chokes or smothers them to death. Few plants can match dodder’s colorful derogatory names. The sprawling, yellow, threadlike plants are also called “beggarweed,” “devil’s guts,” “hairybird,” “hellweed,” “robber vine,” “strangle-weed,” “tangle-gut,” “love-in-a-tangle,” and “witch shoelaces.”

choke pear; chokecherry. Because of its rough, astringent taste, which could make a person choke, this fruit was called a choke pear. Later the term was applied, figuratively, to anything that stopped someone from speaking, such as biting sarcasm or an unanswerable argument. The wild black cherry is sometimes called the *chokecherry* for similar reasons, and there is a berry called the *chokeberry*. See CHOKE-PEAR; PEARS OF AGONY.

choke-pear; pears of agony. The choke-pear, whose name also became the synonym for “a severe reproof” in the 16th century, has to be among the most perverse instruments of torture man has invented. Named after the indigestible pear called a CHOKE PEAR, it was “of iron, shaped like a pear” and originally “used in Holland” by robbers. According to an early source: “This iron pear they forced into the mouths of persons from whom they intended to extort money; and of turning a key, certain interior springs thrust forth a number of points, in all directions, which so enlarged it, that it could not be taken from the mouth: and the iron, being case-hardened, could not be filed; the only methods of getting rid of it were either by cutting the mouth, or advertising a reward for the key. These pears were also called pears of agony.”

cholmondely. Spelled *cholmondely* and pronounced *chumley*, this is an old South Carolinian way to say *chimney*.

choo-choo. Imitative of the sound of a train locomotive, this baby-talk expression has for over a century meant either the sound of a locomotive or a locomotive itself or a train (sometimes called a *choo-choo train*). The train could be a real train or a toy train.

chop-chop. Noticing how fast the Chinese ate with chopsticks, 19th-century traders in China adopted the “chop” from the word *chopsticks* and invented the pidgin English expression *chop chop*—“quick, fast, or make it snappy.” The word *chopsticks* itself is a corruption of the Chinese name for the eating implements, *k’wai-tse*, which means “the quick or nimble ones.” See LONG TIME NO SEE.

chop-chop square. Friday is a good time to keep away from the main square in Riyadh, Saudi Arabia. There strict shariah law demands that *chop-chop square*, as it is nicknamed, must be the site of all beheadings, hand chopplings, and other vicious punishments.

chopped liver. Said of something or someone trivial. First recorded in a famous line of American comedian Jimmy Durante: “Now that ain’t chopped liver!” Often heard today in the half-humorous complaint “What am I, chopped liver?”

chopper. *Chopper* for a machine gun dates back to the late 1920s (see TOMMY GUN), but *chopper* for a helicopter wasn’t coined until the Korean War.

chopsticks. See CHOP-CHOP.

chop suey. Chop suey isn’t native to China; in fact, most accounts of its origin say that the dish was invented in America.

The widely accepted theory, advanced by Herbert Asbury in his *Gangs of New York* (1928), makes the tasty melange the brainchild of a San Francisco dishwasher, though the Chinese dishwasher is sometimes promoted to a “cook in a California gold mining camp.” I’ve traced the term’s invention, however, to 1896, when it was concocted in New York by Chinese ambassador Li Hung-chang’s chef, who tried to devise a dish appealing to both American and Chinese tastes. Since the ambassador had three chefs, it’s hard to say which one invented chop suey. The name has nothing to do with the English word “chop,” deriving instead from the Cantonese dialect *shap sui*, which means “pieces of mixed bits,” *sui* being the Chinese for “bits.” The chef who invented it took leftover pieces of pork and chicken and cooked them together with bean sprouts, green peppers, mushrooms, and seasonings in a gravy, serving it with rice and soy sauce.

chortle. Author Lewis Carroll coined *chortle*, “to chuckle gleefully,” in *Through the Looking Glass* (1871)—the word a blend of “snort” and “chuckle.”

chouse. The word *chouse*, “to cheat or swindle,” is thought to derive from the Turkish *chaush*, for “an official messenger.” How the messenger became a swindler is an interesting story. It seems that in 1609 the English adventurer Sir Robert Shirley, who had been barred from his homeland, sent a Turkish messenger to England to transact business with Turkish and Persian merchants there. The messenger *choused* the merchants of 4,000 pounds and disappeared, the notoriety of his swindle leading to the coining of the word. However, this derivation is not certain because there are no contemporary records of the swindle.

chow. *Chào*, the Mandarin Chinese for “to fry or cook,” probably gives us the word *chow*, an Americanism first recorded in the 1850s in California, where there were many Chinese laborers and cooks working on the railroads. See CHOW CHOW.

chow chow. Chow chow, or chow, a medium-sized, generally red, black, or brown nonsporting dog of Chinese breed, may derive its name from *chow*, a pidgin word for food, or from *chow-chow*, the Chinese mixed-fruit preserve. Another theory, which seems more plausible, is that it is simply from the Chinese *Chou*, this being the name of the ancient Chinese race that formed the Chou dynasty, which ruled from about 1122 to 256 B.C., and which brought China’s first “golden age.” The chow is noted for its sturdy build, large head, and deep-set eyes. Probably originally bred in northern China, it can be traced back as early as 150 B.C.

chowder. *Chowder* derives from the French *chaudière*, stew pot, the word brought to the New World by Breton fishermen who settled the Maritime Provinces of Canada. The soup called a clam chowder is made with milk, vegetables, and clams in Maine and Massachusetts, this being the famous New England clam chowder. But in Rhode Island and as far away as New York, it often is made with water, vegetables, tomatoes, and clams, this called Manhattan clam chowder. The two schools are not at all tolerant of each other. One Maine legislator, in fact, introduced a bill making it *illegal* to add tomatoes to

chowder within the state of Maine, the penalty being that the offender dig up a barrel of clams at high tide.

chowderhead. According to one theory, neither clam chowder nor any other chowder has anything to do with this expression, used to mean a dolt or a stupid, clumsy person. *Chowderhead*, this theory holds, is a mispronunciation of *cholterhead*, which dates back to the 16th century and is derived from the older term *jolthead*. Unfortunately, we’re all a bunch of chowderheads when it comes to the origins of *jolthead*.

Christ bird. According to ancient legend, the robin is called the “Christ bird” because its breast was stained red by Christ’s blood when the bird tried to comfort him on the cross.

Christian. The first known usage of *Christians*, for “followers of Christ,” is recorded in the Bible, Acts 11:25–26: “So Barnabus went to Tarsus to look for Saul; and when he had found him, he brought him to Antioch. For a whole year they met with the church, and taught a large company of people; and in Antioch the disciples were for the first time called Christians.” The word *Christ* is from the Greek *Christos*, “the anointed one.” See BUDDHISM; JEW.

Christian name. A term often used by Christians for a given or first name. Here the word *Christian* represents not the name of the religion, as most people believe, but *christen* or *christened name*, the name given at a christening. Over the years, folk etymology made *christened name* into *Christian name*.

Christmas. *Christmas* simply means Christ’s mass. The Christian holiday celebrates Christ’s birth, but there are no trustworthy records of the real date—August 28, May 20, April 19 or 20, November 17, and March 28 having all been suggested by scholars as more accurate than December 25. In northern Europe, Christmas was originally a pagan feast celebrating the winter solstice, a time when ancient peoples built great bonfires to give the winter sun god strength and to receive him. The early church fathers wisely chose a day near the winter solstice as the date to celebrate Christ’s birth, the return of light becoming associated with the hope of the world in the birth of the savior.

Christmas card. The idea for the Christmas card was conceived in 1843 by Sir Henry Cole, the Englishman who drew the sketch for the world’s first postage stamp, the Penny Black. Cole suggested the idea to Royal Academician John Horsley, who designed the card, which depicted three generations of a family toasting the season with wine. About 1,000 of the cards sold that first year, a figure that would rise to billions.

Christmas gift! A greeting used on Christmas morning, with the first person saying it traditionally receiving a gift. The custom, which has been traced back to as early as 1844, is no longer observed, but *Christmas gift!* is still heard among older people.

Christmas tree. The Christmas tree is an ancient German custom, though Germans call the small decorated firs or spruces they use a *Weihnachtsbaum*, or “holy-night tree.” German settlers brought the custom to America, where English-speaking

settlers dubbed it the Christmas tree as early as 1838, the first recorded use of the term. Americans thought the trees idolatrous at first, but soon realized the German immigrants weren't worshipping the tree and adopted the custom themselves. One of the oddest of nicknames belonged to Christmas Tree Murphy, an American of a century ago who killed an opponent in a brawl with—you guessed it!—a Christmas tree.

christy. Also called a christiania, the christy is a quick turn in skiing, so named for the capital of Norway, Christiania (now Oslo), where it was invented.

Christy minstrels. Folk music fans may be surprised to learn that the name of this popular group honors an early American songwriter and that the term *Christy minstrels* is a synonym for Negro minstrel-type groups. Edwin Christy (1815–62) popularized his songs through his black-face troupe, which toured America and England and was widely imitated up until the beginning of this century. Christy wasn't the first to perform in blackface, but his group brought the minstrel show to perfection. His name had such great drawing power that it was assumed by the man who led the troupe when Christy retired.

chrononhotonthologos. The longest words ever delivered on stage were: "Aldiborontiphosphornio! Where left you Chrononhotonthologos?" which begins Henry Carey's farce *Chrononhotonthologos, the Most Tragical Tragedy That Ever Was Tragedized by Any Company of Tragedians* (1734). Chrononhotonthologos was the King of Queerummania, and his name is now used (though seldom, if ever, verbally) for any bombastic person delivering an inflated address. Aldiborontiphosphornio was a courier in the play. Carey, who wrote the popular song "Sally in My Alley," may have written the words and music to the British anthem, "God Save the King."

chrysanthemum. These fall flowers are of many colors today, but when the ancient Greeks grew them they were mostly gold-colored; hence their name *chrysanthemum* from the Greek *chrysos anthemon*, gold flowers. In the city of Himeji, Japan locals consider the chrysanthemum unlucky and refuse to grow the flower or display it. This stems from a legend about a servant girl named Chrysanthemum Blossom (O-Kiku) who threw herself into a well and drowned upon discovering that one of 10 golden plates it was her duty to safeguard had disappeared. According to the story, Chrysanthemum Blossom's spirit returned every night to the castle where she had lived to count the plates, screaming each time she reached the count of nine. So persistent were her visits and so fiendish her screams that the inhabitants of the castle were forced to desert it. In most of Japan, of course, the chrysanthemum is a much-prized symbol of the nation. The largest fireworks in the world, more than 2,000 feet in diameter, are made in Japan and explode into the shape of a chrysanthemum. The chrysanthemum's botanical name has recently been changed to *Dendranthema x grandiflora*. But people will still be calling the flowers "mums" for years to come. It should finally be added that the chrysanthemum was the favorite flower of the Chinese philosopher Confucius and is so beloved in Japan that it inspired a national holiday. Mum tea and mum soup are among Chinese favorites.

Chrysler Building. A skyscraper on Lexington Avenue in Manhattan that was briefly the tallest building in the world. The story is told in *The New York City Guide* (1939): "William Van Alen, architect of the Chrysler Building, and his former partner, H. Crain Severance, became rivals when each was commissioned to design the world's tallest building. When the Chrysler tower seemed likely to terminate at 925 feet, the builders of the Bank of Manhattan Company structure (or Manhattan Company Building) at 40 Wall Street (designed by Severance and Yasuo Matsui) decided to halt their operations at 927 feet. Meanwhile, steelworkers were secretly assembling the rustless steel section of the Chrysler spire, which, when lifted through the dome and bolted into place, brought the building to its triumphant height of 1,048 feet. Subsequently the Empire State Building stole the laurels."

chrysocracy. A word that didn't make it, even though the venerable Oliver Wendell Holmes coined it in his popular novel *Elsie Venner* (1861). Holmes later wrote in a letter: "In 'Elsie Venner' I made the word *chrysocracy*, thinking it would take its place; but it didn't; *plutocracy*, meaning the same thing, was adopted instead. See ANESTHESIA.

chubby. For nearly 400 years now overweight people have been called chubby after the thick, fat, and roundcheeked fish named the chub, a type of carp common in England and northern Europe. The American fish called the chub is not the same fish at all.

chuck; chuck wagon. Food or provisions in general; a meal. The term is an Americanism first used in about 1840 and probably derives from the cut of meat (beef) called chuck. The first chuck wagon was made from a surplus Civil War army wagon in 1867 by rancher Charles Goodnight. By the 1880s the term was common for a wagon carrying provisions and equipment for cooking, the Studebaker Company by then manufacturing them for \$75 to \$100.

chucker-out. See BOUNCER.

chuck hole. A hole in a field or a road made by burrowing woodchucks, the term an Americanism first used in about 1830.

chuckle; cackle. The *O.E.D.* says *chuckle* is an echoic word like *cackle*, both perhaps suggested by sounds chickens make. *Chuckle* provides a problem, however, because it meant "to laugh vehemently or convulsively" when first recorded in 1598, and such laughter, to my ear, hardly sounds anything like a chicken. The soft, suppressed laughter that is *chuckle's* meaning today does fit such origins, though. See ONOMATOPOEIA.

chum. *Chum*, for "close friend or pal," came into English only in the late 17th century, probably from British university slang. It possibly is a shortening and slight alteration of *chambermate* (roommate), but there are no quotations to prove this. *Chum*, for "fishing bait," possibly comes from a Scottish dialect word

meaning “food”; in any case, it derives from a different source from the *chum* meaning “pal.”

chump. See *SAP*.

chump change. “He is making \$146,000 a year; not nearly what he’s making as a commentator, but not chump change either” (a Washington correspondent). The term, meaning chicken feed, a small amount of money, is said to be black English first recorded in 1967, but several authorities say it dates back to the 1950s.

Chunnel. The name for the railroad tunnel under the English Channel from England to France, which was not built for many years, mainly because of British fears of invasion from Europe through it. It was finally opened to the public in 1994. *Chunnel* is a combination of *channel* and *tunnel*. When uncapitalized it can be used as the name for any underwater tunnel.

Churchill Downs. *Downs* are open, rolling, upland country. These are located in Louisville, Kentucky, and are named not after British great Winston Churchill but for the original property owners, the brothers John and Henry Churchill. Churchill Downs has been synonymous with the Kentucky Derby, established there in 1875 as an annual race for three-year-olds. The Kentucky Derby itself was named after the English Derby (pronounced Darby) at Epsom Downs, first held in 1780 when established by the 12th earl of Derby. The first Kentucky Derby, the oldest American horse race, awarded the winner a purse of \$1,000, plus the entry fees of all the horses. See *DERBY*.

Churchillian. Often accompanying elegant oratory or prose, great wit, and statesmanship, and even a large cigar, this familiar adjective commemorates British prime minister Sir Winston Leonard Spencer Churchill (1874–1965). “On the 30th of November at Blenheim Palace, the Lady Randolph Churchill, prematurely, of a son,” read the one line notice in the *London Times* announcing his birth, but Churchill’s life was to fill volumes. Soldier, journalist, writer, and statesman, his brilliant public career included service as home secretary of state for war, and chancellor of the exchequer. Yet all his life, he felt, was merely a preparation for his crucial prime ministership during World War II. Some have gone so far as to say that England would not have survived the Blitz of 1940–41 without his leadership. Great Churchillian words and phrases include the much quoted, “I have nothing to offer but blood, toil, tears and sweat”; “Never in the field of human conflict was so much owed by so many to so few”; “The soft underbelly of the Axis”; the “iron curtain”; and his words on the fall of France: “Let us therefore brace ourselves to our duties, and so bear ourselves that if the British Empire and its Commonwealth last for a thousand years, men will still say: ‘This was their finest hour!’” On April 9, 1963, Winston Churchill was paid the unique honor of being proclaimed a citizen of the United States.

Church of the Holy Rifles. Preacher and author Henry Ward Beecher (1813–87), brother of Harriet Beecher Stowe, was a complex man whose interests ranged from involvement in antislavery movements to involvement with female members of

his congregation. Beecher’s Bibles, for example, were Sharp repeater rifles that the reverend, one of America’s most famous and controversial preachers, raised money for at his Brooklyn Heights church in New York and shipped to Bloody Kansas in crates labeled “Bibles.” Beecher encouraged his parishioners to join the “underground railroad” and even held mock slave auctions at Plymouth Congregational Church to illustrate the evils of slavery. The church, still in use, was called the “Church of the Holy Rifles” and is now a national shrine. Beecher once wrote that “the Sharp rifle was a truly moral agency . . . [had] more moral power . . . than a hundred Bibles.”

churl. See *EARL*.

churrigueresque. This man’s name itself is elaborate, suggesting the style it represents. Extravagant overornate architecture, especially that of 17th- and 18th-century Spain, is called *churrigueresque*, after Spanish architect and sculptor José Churriguera (1650–1725). Churriguera, a native of Salamanca, was an architect of the baroque school whose important works include the great catafalque for Queen Maria Louisa (1688), the palace of Don Juan de Goyeneche, and a portal of the Church of Santo Gayetano. Spanish baroque, with its free lines and vast profusion of detailed ornament, is named for him because he and his two sons were the most successful practitioners of this Renaissance form. *Churrigueresque* strongly influenced the Spanish colonial style in the southwestern part of Spain and in Mexico.

chutzpa. *Chutzpa*, or *chutzpah*, derives from a Hebrew word meaning “insolence, audacity.” Signifying impudence, gall, brazen nerve, incredible cheek, and unmitigated audacity in Yiddish and in American slang, it more often today indicates an admirable quality in a person—guts bordering on the heroic. Leo Rosten gives the classic definition of *chutzpa* in *The Joys of Yiddish*: “that quality enshrined in a man who, having killed his mother and father, throws himself on the mercy of the court because he is an orphan.” (No one knows if this ever happened, but a 19th-century anecdote does mention such a man.)

CIA. See *OUTFIT*.

ciao! *Ciao* (pronounced “chow”) is an Italian word for “hello” or “good-bye” used frequently in the U.S. over the past 20 years or so. *Ciao!* derives from the Italian *schiaivo*, “I am your slave,” according to one inventive wordsmith. Another source says *ciao!* is an adaptation of the Swiss-German *Tschau* used by Italians vacationing at Swiss ski resorts.

Cibola. Coronado, among other early Spanish explorers, searched in vain for a fabled land of great wealth in the U.S. Southwest called “Cibola,” or the “Seven Cities of Cibola,” which later proved to be an area in western New Mexico inhabited by the Zuri Indians, who had no great material wealth. The name, which derives from a native term for buffalo, was once suggested as a state name for the territory that became Colorado.

Cicero; cicerone; Ciceronian. If you travel in Italy, any guide you hire will be called a *cicerone*, these guides often being well versed about the places of interest and objects they point out. The Italians invoke the name of Marcus Tullius Cicero (100–43 B.C.) for this word because the eloquent statesman, orator, and writer epitomized the knowledge and style they expected of their *cicerones*. The story, from Plutarch, is that Cicero got his name from the Latin *cicer* (“a wart”), due to the “flat excrescence on the tip of his nose.” Cicero is also honored by *Ciceronian*, pertaining to his clear, forceful, and melodious oratorical or prose style, and *Cicero*, a unit of print similar to a pica. Today, *cicerone* has come to mean a guide in any country.

cider. That cider was originally hard cider—that is, a fermented alcoholic drink—is witnessed by the derivation of the word, which came into English, via French (*cidre*), from the Latin word *sicera*, which comes from the Hebrew *shekar*, “strong drink.” General William Henry Harrison of “Old Tippecanoe and Tyler, too” fame (he was called Tippecanoe because he won a battle against Indians at Tippecanoe River), was also known as the “log cabin and hard cider candidate” when he defeated Martin Van Buren for the presidency in 1840. As a campaign song put it:

Let Van from his cooler of silver wine drink
And lounge on his silken settee.
Our man on a log-cabin bench can recline;
Content with hard cider is he!

See POLITICAL SLOGANS; SLOGAN.

cigar. From the Spanish *cigaro* meaning the same. *Close but no cigar* means “not a winning effort.” One of Sigmund Freud’s students, knowing the cigar is often viewed as a phallic symbol by psychiatrists, asked the confirmed cigar smoker what he thought of this theory. Between puffs on his long Havana, Freud replied, “Sometimes . . . a cigar is just a cigar.”

cigarette. See COFFIN NAILS.

cigarette punch. A powerful, bone-breaking uppercut to the jaw of someone who has relaxed and begun to open his mouth after being offered a cigarette. Invented by the Cockney career criminal Ronnie Kray (1934–95), who, along with his twin brother, Reggie (d. 2000), ran London’s underworld from about 1955 to 1970, heading a crime family called the Firm. The Firm is also a nickname for the American CIA, which is usually called the Company.

cimarron. This big-horned sheep ultimately takes its name from a plant. The Latin *cyma*, meaning the spring shoots of any plant, yielded the Spanish *cima*, mountain peak or summit. This became the Spanish *cimaron*, meaning any wild, unruly solitary creature, probably because such animals roamed the mountains. In American English, however, *cimarron* is mainly used for the bighorn or mountain sheep (*Ovis canadensis*), the word first recorded in 1840. In *Western Words* (1944), Ramon Adams points out that Mexicans and some Americans in the West use *cimarron* “for an animal, horse, bovine or even human, which, deserted by all its friends, runs alone and has little to do with the rest of its kind.” Literally, it

signifies one who flees from civilization and becomes a fugitive or wild person.

Cimmerian darkness; Crimea. The ancient Cimmerians were believed to live in total darkness in a land where the sun never shone—hence the expression *Cimmerian darkness*, often “the darkness of ignorance.” Homer used the term *Cimmerian darkness* in the *Odyssey*. These wandering nomads also gave their name to the *Crimea* because they lived on the shores of the Black Sea.

Cinc. A new term, from the war on terrorism, meaning commander in chief, as in “The Cinc—General Tommy R. Franks, the commander of the war in Afghanistan—relies on his commanders on the ground to make those assessments” (*N.Y. Times*, 3/14/02).

cinch. A strong belly band used on horse saddles with a ring on each end to which a strap running from the saddle is secured. *Cinch*, from the Spanish *cincha* (saddle girth), came to mean a firm hold or tight grip and then became an American term for something sure and easy, as in “It’s a cinch.”

cinchona; quinine. About 1639 the condesa Ana de Chinchón, wife of the conde de Chinchón (ca. 1590–1647), Spanish viceroy of Peru, was stricken with a persistent tropical fever. After European doctors failed to restore her health, she was cured by taking the powdered bark of a native evergreen tree that Peruvian Indians brought her. The condesa and her husband collected the dried bark, which contained quinine, and sent it back to Spain. There the miracle bark was at first called “Countess bark” or “Peruvian bark,” but when Linnaeus named the genus of trees and shrubs yielding it in the condesa’s honor, he misspelled her name. What should have been the “Chinchona tree” became known to history as the *Cinchona tree*. Today the native South American *Cinchona* is widely grown throughout the world, notably in Java and India. The *quinine* extracted from its bark derives its name from *quinaquina*, its Peruvian Indian name.

Cincinnati. Cincinnati, Ohio, takes its name from the Society of the *Cincinnati*, honoring the Roman statesman Cincinnatus, which former Revolutionary officers in the area founded in 1783.

Cincinnatus. In the early days of the republic George Washington was called the Cincinnatus of America, after the hero of that name who in about 458 B.C. came out of retirement on his farm to lead the Roman army to victory. Returning to the plow, Cincinnatus again served as dictator many years later to successfully avert a civil war. Like Lucius Quinctius Cincinnatus, Washington was a simple, dignified man. See CINCINNATI.

CINCUS; FIB. No doubt the most embarrassing acronym in naval history was CINCUS (pronounced “sink us”), which stood for the Commander in chief of the United States Navy before World War II, but was dropped from use following Pearl Harbor. Another amusing nautical acronym is FIB, standing for the Fisherman’s Information Bureau of Chicago.

cineaste. See AUTEUR.

cinema vérité. Documentary filmmaking in which the camera records events without directional control. The technique was introduced in France from one developed by Russian filmmaker Dziga Vertov (1896–1954). It can also mean any film using this technique or a simulation of it.

cinnamon. Cinnamon was called *Kinnamomon* by the Greeks, who may have adapted the word from an earlier Semitic one. The bark of the tropical cinnamon tree (*Cinnamomum zeylanium*) yields cinnamon, which has been used as a spice for thousands of years. Most of it comes from Malaya and Indonesia, and the Arabs, seeking to keep their monopoly on trading it, concocted some incredible tales about its harvesting. The Greek historian Herodotus repeated this story:

What they say is that the dry sticks . . . are brought by large birds which carry them to their nests, made of mud, on mountain precipices which no man can climb, and that the method the Arabians have invented for getting hold of them is to cut up the bodies of dead oxen, or donkeys, or other animals, into very large joints which they carry to the spot in question and leave on the ground near the nests. They then retire to a safe distance and the birds fly down and carry off the joints of meat to their nests, which, not being strong enough to bear the weight, break, and fall to the ground. Then the men come along and pick up the cinnamon, which . . . exported to other countries.

cinque ports. From the 13th to the 17th century and even later the British crown granted special privileges to the ports of Hastings, Sandwich, Dover, Romney, and Hythe, because they provided men and ships for the defense of the English Channel. The ports of Rye and Winchelsea were later added, but the favored ports were still called cinque ports, from the Latin *quinque*, “five.”

Circassian. *Circassian beauty* refers to the legendary charms of the Circassian women, inhabitants of a region in the north-east Caucasus once known as Circassia, where fathers often sold their beautiful daughters to Turkish merchants for the harem of Eastern monarchs. No degradation was implied; the women considered their sale an honor. The Circassians had a number of unusual customs: any young man who purchased a bride was required to come with friends, fully armed, and carry her off from her father’s house; a younger brother had to rise from his seat whenever an elder brother entered the room and remain silent whenever he spoke; a murderer could escape punishment by rearing the newborn child of his victim until his or her education was completed; and any man pursued by enemies had sanctuary after he touched the hand of a woman, so long as he remained under her roof. Russia finally subjugated these proud, warlike Muslims in 1864, after which many of them migrated to Turkish territory. Today Circassia forms part of the Russian federation.

Circe. A dangerous, irresistibly fascinating woman, like the sorceress and enchantress Circe, who in *The Odyssey* turned the companions of Odysseus into swine by means of a magic

potion. Odysseus himself was protected by the herb moly, given him by Hermes, and after a year passed persuaded Circe to restore his companions to human beings and let them all leave her island of Aeaea. Circe, whose name derives from the Greek *kirkos*, falcon, bore Odysseus a son, Telegonus, and years later Telegonus unwittingly slayed his father while he was searching for Odysseus in Ithaca. Circe, the daughter of Helios, the sun god in Greek mythology, lived on with the wild animals on her island.

circus. A traffic circle in British cities that is called a circle in the U.S. The most famous one in Britain is London’s Piccadilly Circus. New York’s Columbus Circle is an American counterpart. Both are open circle areas where several roads merge.

circus; charity circus. The expression *charity circus* for a circus that donates part of its proceeds to charity dates back to famous American circus owner and clown Dan Rice, who helped popularize his circus by donating part of the proceeds in the 1850s and gave performances for the Union cause during the Civil War. Circuses in America go back to at least 1785, however, and circuses were popular in Roman times, the word *circus* itself deriving from the Latin *circus* for ring. A *three ring circus* is thus, strictly speaking, “a three ring ring.”

cisatlantic. *Cisatlantic* is the opposite of *transatlantic*, *cis* being the Latin prefix for “on this side of,” while *trans* means “on the other side of.”

a citizen of the world. A cosmopolitan person at home anywhere. According to Plutarch, more than two millennia ago Socrates said, “I am not an Athenian or a Greek but a citizen of the world.” Others trace the words to Cicero, who in the first century B.C. wrote *civem totius mundi*, while still others pick Francis Bacon (“If a man be gracious and courteous to strangers, it shows he is a citizen of the world,” 1625), and some nominate the prophet Baha’u’L-ah, who a century ago declared: “The earth is but one country and mankind its citizens.”

city. Manhattan, one of the five boroughs of New York City, is *the city* to anyone living in any of the other four boroughs, and that person would usually say “I’m going to the city” if he or she was going to Manhattan, although “I’m going to Manhattan” might also be used. Out in the suburbs of Long Island, Connecticut, and New Jersey, however, one might say “I’m going to the city” and mean he or she is going to the boroughs of Brooklyn, Queens, Staten Island, or the Bronx as well.

City of Corruption. An old name for San Francisco, California, in the late 19th century, when vigilantes patrolled the city streets night and day.

City of Light. A romantic name for Paris long before illumination of its streets and monuments. It is, in fact, intellectually and artistically, the city of light.

City of the Saints. Salt Lake City, Utah, home of the Mormon Church, or Church of Jesus Christ of Latter-day Saints.

City Where the West Begins. A nickname for Fort Worth, Texas.

civet. Civet cats are raised commercially in Ethiopia for the civet excretion used in making perfume. Wild male civets are captured, caged, and well cared for because they constitute about a fifth of each villager's income. Typically, a stick is inserted into the cage. The civet grabs it with his teeth, and then the animal's rear legs are held by a worker while the oil is removed from an external sac in the genital area. Ethiopia exports a ton or so of rare civet every year. *Civet* comes ultimately from the Arabic *zabad*, meaning civet perfume. For centuries its excretion has been considered an aphrodisiac as well as a perfume agent. Wrote Shakespeare in *King Lear* (1604–5): "Give me an ounce of civet, good apothecary, to sweeten my imagination."

Civil War. The northern name for what some southerners called the War, the Revolution, the War of Independence, the Second War of Independence, the Second War of Secession, the Confederate War, the Glorious Cause, the War Between the States, the Unpleasantness, the Second American Revolution, the War for Constitutional Liberty, the War for Nationality, the War for Separation, the War for Southern Freedom, the War for Southern Independence, the War for Southern Nationality, the War for Southern Rights, the War for States' Rights, the War of the North and South, the War of the Sixties, the War to Suppress Yankee Arrogance, the Yankee Invasion, the Late Unpleasantness, and Mr. Lincoln's War. All of these terms, including *Civil War*, were first recorded in 1861. See ABE LINCOLN WAR.

claim jumper. One who illegally takes possession of another's land claim. Wrote Philip Johnston in *Lost and Living Cities of the California Gold Rush* (1948): "Occasionally, a claim jumper was hauled into court; but the practice of locating another man's ground became distinctly hazardous, it did not occur with the frequency that many writers of Western fiction would have us believe."

clam chowder. By New England definition clam chowder is a dish made with clams, vegetables and *milk*—never with a tomato base. Manhattan clam chowder, however, is *always* made with tomatoes. This great American gastronomic controversy became national news in February 1939 when Assemblyman James Seeder introduced a bill into the Maine legislature making the use of tomatoes in clam chowder illegal. The punishment his unenacted bill specified: Make any offender harvest two bushels of clams at high tide. See CHOWDER.

clam up. *Clam up* is an Americanism for "to become silent, refuse to disclose information," dating back to 1916 and referring to the difficulty of opening the "lips" of the clam. *Clam*, for "mouth," has been common in America since the early 19th century. *Close as a clam*, describing a stingy person, is an older expression that probably originated in England. See HAPPY AS A CLAM AT HIGH TIDE.

the clap. The Old French *clapoire* ("bulge," "venereal sore"), which comes from the Old French *clapier* ("brothel"), gives us

the word *clap* for gonorrhoea. Partridge advises that the word was standard English from its introduction in the 16th century until Victorian times, noting, interestingly enough, that "They sing, they dance, clean shoes, or cure a clap" (in the poem "London") is "almost the sole instance in Dr. Johnson's work of a monosyllabic sentence."

claptrap. *Claptrap*, first recorded in 1727, initially meant a playwright's trick or device to catch applause, "a trap to catch a clap by way of applause from the spectators at a play," as the first person to define the term put it. The word finally came to mean pretentious, insincere, or empty language.

claque. Playwrights have had an advantage over most authors in the past because they or their backers could hire a *claque*, a body of people to applaud their work. The French, who originated the system in 1820 or so, had it down to a science. *Claqueurs* were divided into:

Commissaires—memorized the play and pointed out its literary merits.

Rieurs—hired to laugh at the jokes.

Pleureurs—women hired to cry when appropriate.

Chatouilleurs—kept the audience in good spirits.

Bisseurs—hired to cry "bis!" "encore!"

Clarabell the Clown. A *Howdy Doody Show* star who was played mostly by Lew Anderson (1922–2006), though others played Clarabell before him. Honking on his horn as Harpo Marx did, Anderson played practical jokes on his buddies Buffalo Bob Smith and Howdy Doody for 2,243 episodes of the first TV show directed at what is now called the baby boomer generation. Another Clarabell before him was Bob Keeshan, later the star of early morning children's show *Captain Kangaroo*. Anderson was also a highly regarded bandleader and songwriter.

Clarence. See SAILOR KING.

claret. Though it hasn't been heard much since the 1930s, when radio fight announcers popularized it, *claret* is one of the oldest boxing terms. Used to describe the blood drawn in a boxing match, it is named after red claret wine; the term is recorded in the description of a boxing match held in 1604.

Clarkia; Lewisia. Captain William Clark (1770–1838) is best known for his leadership with Meriwether Lewis of the Lewis and Clark Expedition to find an overland route to the Pacific, their party being the first to cross the continent within the limits of the United States. But the Army officer and veteran Indian fighter had an avid interest in natural history, describing many plants in his journals covering the 1803–07 expedition. The showy *Clarkia* genus, native to California, was named in his honor. Clark, the youngest brother of the famous frontier military leader, George Rogers Clark, was appointed superintendent of Indian affairs when his expedition returned. Clark's partner Captain Meriwether Lewis has *Lewisia*, a genus of 12 species of low-growing perennial flowers widely grown in the rock garden, named in his honor. Lewis, who had been Thomas Jefferson's secretary, was appointed governor of the

newly acquired Louisiana Territory after the expedition. He died suddenly in 1808, only 35 years old, his death shrouded in mystery. He had been traveling to Washington to prepare the expedition journals when he died alone in an inn near Nashville, Tennessee. Suicide, or more probably murder, has been suggested as the cause of his death.

class. See UPPER CLASS.

classic; classical. The Roman author of *Attic Nights*, Aulus Gellius (ca. 123–ca. 165) is said to have invented the terms *classic* and *classical*, by which he meant “art of the first class.” More likely, the terms have their origins in the Roman five classes of citizens, of which the highest class were termed *classici*. Later, during the Renaissance, the best authors, thought to be Greek and Latin, were called *classici auctores* (classic authors) and their works were called *classics*. Today *classic* can mean 1) first class 2) ancient 3) typical (as in “She has a classic case of flu.”)

clatter. See ONOMATOPOEIA.

Clausewitz. This term refers to any formidable war strategist, recalling Prussian army officer Carl von Clausewitz (1780–1831), who was known for his writings on the science of war.

clavicle. *Clavicle*, or collarbone, derives from the Latin *clavicula*, meaning “little key.” According to Littré’s *Dictionnaire de la langue française* (1863–77) “because it was compared to the key of a vault, or, as others think, because its form is that of the ancient bolts.”

clay-eater. One who eats clay for its nutritional content, especially a poor white or black. “He was a little, dried up withered atomy—a jaundiced sand-lapper or clay-eater from the Wassamasaw county,” William Gilmore Simms wrote in *The Scout* (1854). The term has often been used disparagingly, along with terms like *poor white*, *hillbilly*, and *redneck*. *Clay-eating, also called dirt-eating, is still practiced in parts of the South, especially in the South Carolina and Georgia low country.*

clay pigeon. George Ligowsky of Cincinnati, Ohio, was in spirit an early conservationist who deplored the practice of using live birds in target shooting. One afternoon while watching boys skipping flat stones over the surface of a pond, he got the idea of making a clay target that could be released and shot at in place of pigeons or other birds. Ligowsky patented his invention in 1881, calling them flying targets, but because they usually took the place of pigeons, they quickly came to be called clay pigeons. Since then, for obvious reasons, *clay pigeons* has also become widespread American slang for an easy target, someone who is easily duped, a sucker.

clean as a peeled egg. This phrase refers to a cooked egg with its shell removed, which is of course a shiny white.

clean as a whistle. One possibility is that the old simile describes the whistling sound of a sword as it swishes through the air to decapitate someone, and an early 19th-century quotation does suggest this connection: “A first rate shot . . . [his]

head taken off as clean as a whistle.” The expression is proverbial, at least since the 18th century, when Robert Burns used a variation on it. More likely the basic idea suggests the clear, pure sound a whistle makes, or the slippery smooth surface of a willow stick debarked to make a whistle. But there is also a chance that the phrase may have originally been *as clean as a whittle*, referring to a piece of smooth wood after it is whittled.

a clean bill of health. Used generally today this term has its origin in the document issued to a ship showing that the port it left was suffering from no epidemic or infection at the time of departure. Its antonym is *a foul bill of health*, both expressions dating back to the 18th century.

clean heart. Pure. An English translation of a word from a local language in Kenya, where English is the official language along with Swahili.

cleanliness is next to godliness. Writers have variously assumed that this proverb originated with the American Puritans, that Benjamin Franklin created it in *Poor Richard’s Almanac*, or that it is from the Bible. The truth is that it can be traced back to writings of Phinehas ben Yair, an ancient rabbi, and is found in the Talmud in this form: “The doctrines of religion are resolved into carefulness; carefulness into vigorousness; vigorousness into guiltlessness; guiltlessness into abstemiousness; abstemiousness into cleanliness; cleanliness into godliness.” In this quotation “cleanliness” is literally next to “godliness.” The first written record of the expression in English is by John Wesley, the founder of Methodism, who in a 1778 sermon wrote “Cleanliness is indeed next to godliness” and put the words in quotes as if to indicate that he had borrowed or slightly changed them from another source. Wesley said, “I look upon all the world as my parish.” His “Rule of Conduct” was:

Do all the good you can,
By all the means you can,
In all the ways you can,
In all the places you can,
At all the times you can,
To all the people you can,
As long as ever you can.

clean one’s plow. To beat someone severely in a fight, as in “He better watch it or I’ll clean his plow!” Said to derive from the way farmers clean their plows by dragging them through gravel. The phrase, first recorded in 1919, has several synonyms, including *clean one’s clock*, *clean one’s canyon*, and *clean one’s greens*.

cleanse the Augean stables. This means a formidable if not impossible task. It was one of the 12 tasks of Hercules, hero of Greek mythology, given to him by Eurysteus before he could gain immortality. Hercules managed to clean the stables of King Augeus in one day, even though they contained 3,000 oxen, by turning the course of two rivers through the stalls.

clean sweep. Though it is often used in sports for the winning of every game in a series, this expression may be of nautical

origin. It could refer to a huge wave from a typhoon or the like sweeping everything off the deck of a ship, even permanent structures. It's possible, however, that a storm or tornado causing the same destruction on land may have suggested the words. A third choice would be someone sweeping out a room or house with a broom.

clean up. In the early 19th century, American farmers used the expression *to clean up* as a synonym for gathering the harvest, stripping all the grain from a field. However, this doesn't appear to be the source when the expression means "to make an exceptional financial success," a "big haul." In this sense *clean up* came into the language after the gold strikes toward the end of the 19th century. It apparently derives from the mining term *clean-up*, which describes the process of separating gold from the gravel and rock that collected in the sluices or at the stamping mill.

cleanup spot. The term CLEAN UP above apparently gives us the expression *cleanup spot* for "the fourth position in a baseball team's batting order." The batter in the cleanup spot is always a long-ball hitter who is expected to empty, or clean up, the bases of any teammates, that is, to bring them all home with a long hit.

a clear and present danger; Every idea is an incitement; The Great Dissenter. In the 1919 case *Schenk v. United States* the U.S. Supreme Court, in a unanimous decision written by Justice Oliver Wendell Holmes, held that speech must present "a clear and present danger" to be considered criminal. Later, in 1925, Holmes dissented from the majority in the *Gitlow v. New York* case, in which Benjamin Gitlow, during the Red Scare, published a communist manifesto. Wrote Holmes: "It is said that this manifesto is more than a theory, that it was an incitement. Every idea is an incitement." For these and many other liberal opinions Holmes became known as The Great Dissenter, his memorable phrases becoming part of the language.

clear the decks. Make everything ready, especially before a great activity such as a fight. The expression goes back to the 18th century or earlier, when it was a naval command ordering seamen to prepare the ship for a battle.

clematis. The clematis is a woody twining vine, which led the Greeks to name it *klematis* from their word *klema* or "vine branch." The species *Clematis virginiana* is popularly called "old man's beard" because its seed pods have feathery appendages. The *Clematis* genus contains some of the most beautiful of climbing plants and there are thousands of varieties available.

Cleopatra. Cleopatra was only 38 when she died in 30 B.C., but in her short life she became one of the great romantic heroines of all time, her name still synonymous with feminine allurements and charm. At the age of 17, the Queen of the Nile married her younger brother, as was the custom, and led a revolt against Ptolemy XIII when he deprived her of her royal authority. Inducing Julius Caesar to fight a war to place her on the throne, she became his mistress, living openly in Rome with

him after she poisoned her second younger sibling-husband. Caesar's assassination marked her return to Egypt with their son, Caesarion. There, in 41 B.C., Mark Antony fell under her spell and gave up his wife for her. Cleopatra hoped that Antony would restore her former powers. However, Octavian (later Emperor Augustus) declared war on them, vowing to destroy the two lovers, and defeated Antony at Actium. Cleopatra coldly accepted Octavian's proposal to assassinate Antony and persuaded him to commit suicide so that "they might die together." Antony took his life by falling on his sword, believing that Cleopatra had already died, but "the serpent of the old Nile" was unable to win over Octavian, despite her treachery. She ended her own life by putting an asp to her breast. Her three sons by Antony were allowed to live, but Caesarion was put to death soon after.

Cleopatra's Needles. *Cleopatra's Needles* is a misnomer. The two originally pink obelisks—one 68½ feet tall standing on the Thames embankment, and the other 69½ feet tall in New York's Central Park—really have nothing at all to do with the Queen of the Nile. Hieroglyphics on the needles show that Pharaoh Thutmose III erected them centuries before Cleopatra. Originally raised at Heliopolis in 1475 B.C., the obelisks were moved to Alexandria under Augustus in about 14 B.C., where they adorned the Caesareum. In 1878 and 1880, respectively, Ismail Pasha made gifts of them to England and the United States, and it is said that they have suffered more from erosion in their present locations over the last 90-odd years than they did over thousands of years in Egypt. The formerly rose-red syenite granite obelisks were probably named for Cleopatra because they stood outside the Caesareum, honoring her dictator lover.

Cleopatra's nose. "If the nose of Cleopatra had been shorter the whole face of the earth would have been changed," wrote the French philosopher Blaise Pascal (1623–62) in his famous *Pensées*. His proverbial observation refers to the effects of Cleopatra's charms on Caesar and Mark Antony, but a different nose length, at least a moderately different one, would probably have made little difference to history. For Cleopatra's allure did not depend on her physical beauty; most sources, in fact, indicate that she wasn't a beautiful woman at all. What she was was an accomplished, artful lover, and the "salad days" that Shakespeare has her admit to—when she was young and loved unskillfully, like a salad, green and cold—were distant memories long before she had married at 17.

Cleopatra's pearl. *Cleopatra's pearl* concerns a sumptuous banquet Cleopatra gave for Antony. Her lover, the legend tells us, expressed astonishment at the costly meal, and she promptly removed a pearl earring, dropped it in a cup of vinegar and let it dissolve, saying, "My draft to Antony shall far exceed it." Vinegar cannot dissolve a pearl, however, and anything strong enough to do so wouldn't have conveniently been on Cleopatra's table—unless the wileful woman planted it there, in which case it is just as possible that she used a fake pearl.

clerical collar. Also called the *Roman collar* and the *reversed collar*, the clerical collar is a stiff narrow white collar fastened at the back and worn by some clerics. The term is first recorded in the mid-19th century. See CLERK.

clerihew.

Sir Humphry Davy
 Abominated gravy
 He lived in the odium
 Of having discovered sodium.

This was the first *clerihew* written by Edmund Clerihew Bentley (1875–1956). The English detective-story writer composed it while only a schoolboy, according to his schoolmate G. K. Chesterton, “when he sat listening to a chemical exposition, with his rather bored air and a blank sheet of blotting paper before him.” Bentley, one of the few people to have a word honoring his middle name, could in Chesterton’s words “write clear and unadulterated nonsense with . . . serious simplicity.” See GEORGIAN.

clerk. Clerks were originally scholars; the word *clerk* is simply a slurred pronunciation of the word *cleric*, which in medieval times meant a member of a religious order, all of whom were regarded as scholars because they could read and write. When education became more widespread, the term *clerk* gradually lost its scholarly connotation and assumed the meaning it has today, surviving in its old sense in legal circles, where, for example, a clerk to a Supreme Court Justice is still considered a scholar.

Cleveland. Cleveland, Ohio was laid out in 1796 by General Moses Cleaveland and was later named for him. Still later, a descendant of the general, Grover Cleveland, became president.

Cleveland Indians. There has been controversy recently over whether sports teams should be given Indian names, which has been a practice for over a century. One of the oldest was the name *Cleveland Indians*, the winning entry in a 1915 newspaper contest to rename the team. (It was formerly known as the Naps, in honor of star second baseman Napoleon Lajoie, who had just retired.) The team’s new name honored Louis Sockalexis, a Penobscot Indian from Old Town, Maine, who had played college ball at Holy Cross and Notre Dame before signing with Cleveland in 1897 to become the first American Indian to play in the majors. After an excellent rookie year in which he batted .338 and was known for his power hitting and strong throwing arm, Sockalexis apparently succumbed to the pressures of his situation, which included loud war whoops from the fans when he came to bat. He began drinking heavily, and his playing deteriorated until he was dropped from the club in 1899. Although he played only 94 games, he remains the only person after whom an existing major league baseball team was named. Football’s Kansas City Chiefs were named after the mayor of Kansas City, who was instrumental in bringing the franchise from Dallas to Missouri and was popularly nicknamed “the Chief.” Other teams bearing “Indian” related designations include football’s Washington Redskins and basketball’s Golden State Warriors. Baseball’s Atlanta Braves took the name of their predecessor, the Boston Braves, who were named not for any American Indians but for the emblem (an Indian brave) of New York City’s Tammany Hall political machine—members of which had invested in the team. See INDIAN.

the clicker. A common name for the television ultrasonic remote control device used to change TV channels without

leaving one’s seat, or for turning the TV on or off. The device was invented by physicist Robert Adler, who worked for Zenith Electronics, in 1956. Known as “the father of the clicker” though he held some 200 other patents as well, Adler’s coinventor was Zenith Electronics engineer Eugene Polley. Ads featuring the clicker proclaimed: “Nothing between you and the set but space.” Some 10 million devices were sold.

clicketing. In days past, people had more names for natural things than we can imagine today. *Clicketing*—not slang, but standard English—means “the copulation of foxes” and has been used in this sense since the late 16th century or before. This is perhaps a distinct word from *clicket*, meaning “to chatter,” the first recorded use of it explaining: “When a bytche foxe goeth on clycqueting . . . she cryeth with a hollow voyce like unto the howling of a madde dogge . . .” The term is also applied to the wolf.

client. In ancient Rome a *client* (Latin for “learning”) was a plebeian under the patronage of a patrician who was called his patron, the client performing certain services for the patron in exchange for the patron’s protection of his life and interests. Hundreds of years later, in the 15th century, the word’s meaning changed to describe a person who employs the services of a legal adviser or a person who employs the services of any professional businessman.

cliff dwellers. Prehistoric people of the Southwest who were ancestors of the Pueblo Indians and were named Cliff Dwellers because they built their homes in caves or on the ledges of cliffs. The name is now humorously applied to residents of tall apartment houses in large cities.

Cliffs Notes. These study guides to literary classics such as *Moby-Dick* and *Wuthering Heights*, used by generations of students since 1958, were published by and named after Clifton Keith Hillegass (1918–2001). Though popular with students, they are not much loved by educators, several universities having banned their sale on campus. A *New York Times* obituary of Hillegass noted that “the phrase ‘Cliff Notes’ has entered the language as a shorthand for shortcut, often used in a way that implies a lack of nuance or thorough understanding.” But the publisher never intended the guides to be used as “cheat sheets” by students who never read original texts. Until he sold his firm in 1998 for \$14 million, he sold over 50 million copies of 220 titles.

climate. The ancient Greeks thought that the earth sloped toward the North Pole from the equator and for this reason named any particular part or region of the earth *klima*, “slope.” Since they also believed that the earth’s slope accounted for the varied weather in these different regions, they called the weather of a specific region its *clima*, which evolved into the English *climate*.

climb a sour apple tree. First recorded in the early 1900s but probably older, *go climb a sour apple tree* means “go to blazes, go to hell.” It is an Americanism that is still occasionally heard.

clink. *Clink*, which is still heard humorously as the term for a jail, dates back at least to 1515, when a writer noted, “Then art thou clapped in the . . . Clink.” One theory has the word deriving from “a noted jail in the borough of Southwark.” Milton is among the distinguished writers to have used the term. *To kiss the clink* was an expression, now virtually obsolete, meaning to be imprisoned.

clipped ears. Though the term isn’t recorded in *A Dictionary of Americanisms*, Australians who migrated to the California gold fields in 1849 were often called *clipped ears*, because a certain number of them had been criminals who had suffered the punishment of ear clipping in Australia.

clipper ship; Flying Clipper. The origin of the *clipper* in *clipper ship* is not definitely known, but we may owe the expression to Cleopatra. The first authentic clipper ship was the *Ann McKim*, built in Baltimore in 1832, but an early French ship of this type was christened *Cleopatra-cum-Antonio*. The French ship’s name, some scholars say, was shortened in usage to *Clipster* and then to *Clipper*, the last becoming the designation for all vessels of this class. Other authorities contend that rude clippers were being built before the War of 1812 and were known as Baltimore clippers because they clipped the the surface of the sea as they sped over the waves. Still another source holds that the expression *going at a clip* resulted in the word; and some investigators even claim that *clipper* is an invention of either Robert Burns or Percy Bysshe Shelley. But the French developed the principle for this type of ship in the 18th century, long before the Baltimore clippers, and as the *Cleopatra-cum-Antonio* dates from that period, the Cleopatra theory has much to say for it. *Clipper ship* was later applied to transoceanic flying boats, the famed Flying Clippers.

the clitoris of Paris. The deserted Place Dauphine, named for the son of Henri IV in the early 1600s, has been called the *clitoris of Paris* ever since, according to Andrew Hussey’s book *Paris* (2007).

cloak and dagger. The immensely popular Spanish playwright Lope de Vega (see *ES DE LOPE*) wrote many plays that were called *comedies de capa y espada* (comedies of cloak and sword) because they featured spies and other adventurers armed with cloaks and daggers. The phrase passed over into French, and by the early 1900s came into English as a term for any action that involved spying or other intrigue.

clodhopper; country bumpkin; hayseed; hick; rube. *Clodhopper*, before it became a word for “shoes,” was an old 17th-century English term for a farmer or rural dweller who hopped over clods of dirt in the fields. *Country bumpkin*, from the Dutch *boomkin*, “little tree,” became common in England a century later. *Rube* (from “Rustic Rueben”), *hick* (a pet name for “Richard”) and *hayseed* are 19th-century Americanisms.

close as a clam. See *CLAM UP*.

close as a coat of paint. Very close, as close as a coat of paint is to the wall or the skin is to a grape, etc. Heard several times

in early 2004, as in “He kept close to him as a coat of paint.” Apparently a variation of *close as wallpaper*.

close but no cigar. Not quite correct. This appears to be an American phrase from the late 19th century, possibly of carnival origin, where the mike man running a game of chance advises that a player has not won the cigar prize.

close shave; close call. Both phrases mean a narrow escape, *close shave* dating back to about 1835 and American barber-shops. *Close call* means the same and probably derives from an umpire’s call in a baseball game.

closet. To be in the closet originally referred to any drinker who tried to hide his drinking from others. Later, in about 1959, the U.S. term was first applied to gays, especially in the expression *come out of the closet*.

close your eyes and think of England. Partridge, quoting a correspondent, claims that this humorous risqué expression first appeared in Lady Alice Hillingdon’s *Journal* of 1912. The pertinent quote from the lady is: “I am happy now that Charles calls on my bed chamber less frequently than of old. As it is, I endure but two calls a week and when I hear his steps outside my door I lie down on my bed, close my eyes, open my legs, and think of England.”

This advice was often given to Britons working hard with great difficulty in places far from England.

clothes make the man. Apparently *clothes make the man* is an “alteration” of Shakespeare’s “The apparel oft proclaims the man,” which the Bard puts into the mouth of Polonius in *Hamlet*.

Cloud Cuckoo Land. Unrelated to life, an imaginary state of affairs. The reference is to the imaginary city built in the air in Aristophanes’ comedy *The Birds* (414 B.C.).

cloud mesa. Willa Cather, whose *Death Comes for the Archbishop* (1927) is one of the great American novels, described the mesas in great detail: “One thing which struck him at once was that every mesa was duplicated by a cloud mesa, like a reflection, which lay motionless above it or moved slowly up from behind it. These cloud formations seemed to be always there, however hot and blue the sky. Sometimes they were dime-shaped, or fantastic, like the tops of silvery pagodas, rising one above another, as if an oriental city lay directly behind the rock. The great tables of granite set down in an empty plain were inconceivable without their attendant clouds, which were a part of them, as the smoke is part of the censer, or the foam of the wave.”

clover. Rather than the other way around, as one might expect, the clover of the *Trifolium* genus takes its name from the suit of clubs at cards, which was *claver* in Old English. The four-leaf clover has, of course, long been a symbol of luck, having one more leaf than clovers usually do (this tradition was first recorded in about 1840), but there have been several authenticated cases of people finding 14-leaf clovers. Someone

who is “in clover” is well nourished, rich, and happy. This American metaphor, first recorded in 1847, has its source in the protein-rich clover species used here for fattening cattle. *See* LIKE PIGS IN CLOVER.

clown white. White makeup once used for clowns on the stage and in the circus. It is said that Thespis himself painted his face with white lead before he invented the unpainted linen mask of the Greeks. From earliest times, actors used such dangerous substances for makeup. In the religious dramas of medieval times, for example, white lead and gold paint were applied to the face and hands of actors portraying Christ, even though they were known to be poisonous. In 1513, “a naked gilded child,” who was supposed to represent the golden age, died after being painted gold.

clue. Tracing *clue*, or *claw*, back in time we find that it first meant (in about 1393) “a ball of yarn or thread.” Two centuries passed and *clues*, balls of thread, began to be used to guide people “threading” their way out of garden labyrinths or mazes. This soon led to the use of the word *clue* for something that “points the way, indicates a solution, or puts one on the track of a discovery or solving a mystery.”

Clydesdale. The upper Clydesdale river region in Scotland gives its name to this large, powerful draft horse originally bred in the area. The *Clydesdale* is noted for the white, feathered hair on its fetlocks.

C.M.G. A British term that has some use in the U.S. It is the initials for Call Me God and is used derisively for any vain self-important person who is a V.I.P. to himself or herself: “Here comes C.M.G.”

coach. The little village of Kocs in northwestern Hungary is responsible for the word *coach* in all its senses of the word “carriage” and for academic and athletic *coaches* as well. In the 15th century an unknown carriage maker in Kocs devised a larger, more comfortable carriage than any known at the time. It was called a *Koczi szeter*, a “wagon of Kocs,” which was shortened to *kocsi*. Copied all over Europe in the next century it eventually became a *coche* and then a *coach* in English. From the name of the English horse-drawn coach came all stagecoaches, motor coaches, and finally air coaches. *Coach*, for “an instructor,” arose as college slang—a coach was a figurative carriage whose coaching would “carry” you through exams. The same idea was applied to athletic coaches, who were, however, known as *coachers* up until the late 1880s, when they became *coaches*.

coast is clear. When this expression was first recorded in 1531 it described a ship that had safely cleared the coast in England. Later Shakespeare used the expression similarly in *Henry VI*, but the phrase’s nefarious connotation suggests that it may at one time have had some reference to smuggling as well.

cobbler should stick to his last; ultracrepedarian. Alexander the Great’s favorite artist, Apelles, corrected his drawing of a man’s sandal latchet in one of his paintings when a cobbler criticized it. But when the shoemaker went on to criticize the way Apelles had drawn the man’s legs, the artist admonished

him: *Ne sutor ultra crepidam*, “The cobbler should stick to his last [the metal foot-model on which shoes are shaped].” Apelles’ words give us not only the familiar expression but the term *ultracrepedarian*, meaning “criticism ranging beyond the critic’s range of knowledge.” Its first recorded use is by Hazlitt in an 1819 letter to critic William Gifford, who had savaged Keat’s “Endymion” in the *Quarterly Review*.

cobra. The deadly snake was so named by one of Vasco da Gama’s men when the Portuguese explorer landed in India in 1498. Because the snake (whose name was *nag* in Hindi) had a head shaped like a hood, this unknown person called it a *cobra de capello* a “hooded snake.” Over time its name was shortened to *cobra*, which simply means “snake” in Portuguese.

CoBrA. A European postwar art movement known for its “wild, vibrant artistic” works. The name is an acronym for Copenhagen, Brussels, and Amsterdam—“all cities from which its founders came” in the late 1940s.

cobwebs; spiderweb. Dating back to at least 1300, *cobweb* is older than *spiderweb* by about 200 years. *Cob* is a form of *cop*, a Middle English word for spider. Strangely enough, although *cobweb* is of older ancestry than *spiderweb*, *cob* or *cop* was only rarely used as a separate word for *spider*. It is a back formation from *cobweb*, which means that we have to look elsewhere for the origin of *cobweb*. Possibly the answer may be found in an earlier use of *cob* or *cop* for “head.” *Cobweb* may have been suggested by people walking into spiderwebs and brushing their heads (*cobs*) in the webs.

Coca-Cola. *See* COKE.

Cochise. An Arizona county and a mountain are named for the Apache Chiricahua chief Cochise (1815–74), long noted for his courage, integrity, and military skill.

cock. The word *cock*, for “the penis or male sexual organ,” is included in the great *O.E.D.*, which traces it to the earlier term *cock*, for “the spout or short pipe serving as a channel for passing liquids through . . .” *Cock* for the penis is, however, recorded earlier than the *O.E.D.*’s date of 1730, being first found in Beaumont and Fletcher’s comedy *The Custom of the Country* (ca. 1619). *Cock* for a rooster is recorded much earlier, in ca. 897, its origin unknown, although it is earlier *cocc* in Old English. In the U.S. South *cock* is a name for the female sexual organ rather than the penis, as is the case in the rest of the country. “She’s a good piece of cock,” is a rather common expression. Several authorities, including Hugh Rawson’s *Dictionary of Euphemisms*, make note of this.

cockadau. Vietnamese slang from the Vietnam War, meaning to kill. “VC (Viet Cong) number ten, cockadau beaucoup G.I.” *Beaucoup* here means “many” and is military slang dating back at least to the mid-19th century.

cock-a-doodle-doo. English speakers might think that the use of our centuries-old echoic word for the sound of the crowing of a rooster would be universal, but only the “k” sound in

the word is common to most languages, their echoic words for the cock's crowing being quite different. German, for example, uses *kikiriki*; Italian, *chicchirichi*; French, *cocorico*; Spanish, *quiquiriqui*; Russian, *kikareku*; Rumanian, *cucuriqui*; Vietnamese, *cuc-cu*; Japanese, *kokekkoko*; and Arabic, *ko-ko*. The same is true for many echoic words. See MEOW.

cockamamie. *Cockamamie* means something worthless or trifling, even absurd or strange; a *cockamamie* excuse or story is an implausible, ridiculous one. The word may be a corruption of *decalcomania* ("a cheap picture or design on specially prepared paper that is transferred to china, wood, etc."), a word youngsters on New York's Lower East Side early in the century found tiring to pronounce and impossible to spell.

cock and bull story. This long, rambling, unlikely yarn, like the similar CANARD, takes its name from the barnyard. The phrase first appeared in about 1600 and has been constantly used ever since; even in classics like Laurence Sterne's *Tristram Shandy* (1767), one of our most imaginative and whimsical novels, where the words end the book: "'L—d' said my mother, 'what is this story all about.' '—A COCK and a BULL,' said Yorick—'and one of the best of its kind, I ever heard.'" The expression *cock and bull story* hasn't been traced to the specific fable where it originated, but it arose in all probability from a fantastic tale about a cock and bull who talked to each other in human language. Since people knew that such a conversation was impossible, they most likely labeled any incredible yarns *cock and bull stories*. The French have used the expression *coq-à-lâne*—literally "cock to the donkey"—in the same sense as *cock and bull* for almost four centuries, too. But it is also the term for a satirical verse genre that ridicules the follies and vices of society, deriving in this sense from the old French proverbial expression *c'est bien sauté du coq à lâne*, which signifies incoherent speech or writing.

cock a snook. A British expression, with some U.S. currency, for defiantly thumbing one's nose at somebody. Precisely it means to place the thumb on the nose and spread out the fingers (which is why it is also called "Queen Anne's fan"). *Snook* is of unknown origin.

cockatoo. A crested parrot native to Australia and other places, *cockatoo* derives from Malay *kakatua*, which is said to be an imitation of a common sound the bird makes. Thousands of cockatoos are non-natives in cages all over the world. See COCK-A-DOODLE-DOO.

cockatrice; ichneumon. Thanks to Pliny and other incredulous observers, people were terrified of this fantastic monster with the wings of a bird, the tail of a dragon, and the crested head of a cock until well into the 17th century. Said to be born of a cock's egg, the monster was, according to one old description, about "a foot long, with black and yellow skin and fiery red eyes," but others described it as much larger. It could be killed only by the crowing of a cock and so travelers often carried roosters with them to Africa or wherever they feared a cockatrice might be encountered. Otherwise, just a glance from the fabulous creature's eye could kill them, with only the crafty

weasel immune to its "death rays." The cockatrice takes its name from the Greek *ichneumon*, which means "a tracker." This was translated into the Latin *calcatrrix*, "a tracker," and *calcatrrix* was ultimately corrupted to the English *cockatrice*. The mythical creature was called "a tracker" by the Greeks because they believed that it tracked down and devoured the eggs and young of the crocodile. In this respect it was probably given the characteristics of the real Egyptian *ichneumon*, an animal that does hunt down and devour crocodile eggs.

cocker spaniel. The dog is not so named because it's "cocky," but because it was bred for hunting and retrieving woodcock, among other small game birds or, possibly, from the way the dog *cocks* its long, drooping ears. *Spaniel* simply means "Spanish dog," deriving from the Old French *Chien espagneul*, which was shortened to *espagnol*, "Spanish," and became *spaniel* in English. The spaniel may have been a breed developed in Spain, or perhaps the breed's silky hair and soft, soulful eyes suggested the appearance of the Spaniards, though there is no hard evidence of this. *Spaniel* has served as a verb and adjective, a symbol of affectionate humility, as well as a noun. Shakespeare has Antony speak of the "hearts that spaniel'd me at heels, to whom I gave their wishes."

cockles. See WARM THE COCKLES OF ONE'S HEART.

cockney. *Cockney* literally means a "cock's egg," deriving from the Middle English *cokeney*. The word first meant a foolish child or a foolish person who did not know a good egg from a cock's egg or cockney (a small egg with no yolk). Country people next applied the term to city people in general, then to Londoners and finally to London East Enders, people born within sound of the bells of St. Mary-le Bow (Bow Bells) in London who share a characteristic accent called *Cockney*. See GEORDIE.

cockpit; cockpit of Europe. Belgium has long been known as the cockpit of Europe because so many important European battles have been fought there, from the battle of Oudenarde in 1708, to Waterloo in 1815, and the many battles fought there during World Wars I and II. *Cockpit* is of course an allusion to the arena where gamecocks are set to fight, which also gave its name to the space in fighter planes where the pilot sits.

cockroach. Captain John Smith must have had a lot of trouble with cockroaches, judging by his description of the nocturnal household pest in his *The generall historie of Virginia, New England and the Summer Isles* (1624). Smith described the insect as "A certaine India Bug, called by the Spaniards a Cacarootch, the which creeping into Chests they wat and defile with their ill-scented dung." His rendition of the Spanish *cucaracha* as *cacarootch* started the long and involved process whereby the name for the bug became *cockroach* in English. The most famous literary cockroach is undoubtedly American humorist Don Marquis's Archy, who wrote modern free verse because he couldn't work the typewriter shift key—along with his friend Mehitabel the cat, he is immortalized in *archy and mehitabel* (1927) and a number of sequels. It was once thought that the smell of the cockroach apple, a Jamaican plant, would kill cockroaches.

cocksure. Since the word *cocksure* first meant secure, safe, and certain—not dogmatic and self-confident, as it does today—it probably didn’t originally have anything to do with the pompous, strutting rooster usually associated with it. But no one is cocksure about *cocksure’s* origins, which go back almost five centuries. In its now obsolete sense of lecherous, *cocksure* is much younger, so that eliminates a likely source and a better story. A real possibility is that the word was just a euphemism for *God sure!*—since *cock* was often a euphemism for God in oaths. Or it may have first meant the security of God, as in the following quote from Foxe’s *Book of Martyrs* (1563): “Who so dwelleth under . . . the help of the Lord, shall be cocksure for evermore.” Shakespeare uses the word as if it derives from the sureness of the cock on the firelock of a gun, a cock that keeps the gun from going off, and the *O.E.D.* suggests as a source the cock, or tap, on a barrel of whiskey, which secured the liquor inside, preventing its escape. The Welsh word *coc*, “cog,” has also been nominated—*cocksure* would thus mean “as sure as cogs fit into one another.” So has the Irish *coc*, “manifest,” and the Old English *cock*, for “the notch of a bow”—an arrow would have to be set *cocksure* to hit its target. No matter which is correct, it’s almost certain that the idea of the strutting aplomb of a barnyard cock and the phallic associations of the word contributed to its later meaning of “pert and cocky.”

cocktail. There are well over 50 theories as to the word *cocktail’s* origin, H. L. Mencken alone presenting seven plausible ones in his *American Language*. These include a derivation from the French *coquetier*, “an egg cup,” in which the drink was supposedly first served in 1800; from *coquetel*, “a mixed drink of the French Revolution period”; from the English *cock-ale*, “fed to fighting cocks”; from *cocktailings*, “the last of several liquors mixed together”; and from a toast to that cock that after a cockfight had the most feathers left in its tail. Just as reliable as any of these guesses is the old folktale that Aztec King Axolotl VIII’s daughter Octel or Xochitl concocted the first cocktail; or, in another version, that an Aztec noble sent his emperor a drink made of cactus juice by his daughter, the emperor enjoying it so much that he married the girl and called the drink by her name—again Octel or Xochitl. According to this story, General Scott’s soldiers are supposed to have brought the drink back to America centuries later. Suffice it to say that the origin of the word, first printed in 1806, is really unknown.

cocktail party. Cocktail parties have been traced back as far as ancient Athens, where you could drop by a neighbor’s early in the evening with your own goatskin of wine and be treated to a variety of “provocatives to drinking” that included caviar, oysters, shrimp, cheese, and even marinated octopus and roasted grasshoppers. The literary cocktail party is a creature of recent times, possibly evolving from the literary dinner parties so popular in the 19th century. Sherwood Anderson died of peritonitis and its complications after swallowing a toothpick with an hors d’oeuvre at a cocktail party.

coconut; copra. Safe in its buoyant, waterproof pod, the coconut sailed the high seas from southern Asia in prehistoric times and was propagated and cultivated throughout tropical regions. But it wasn’t given its present name until the late 15th century, when Portuguese explorers came upon it in the Indian

Ocean islands and fancied that the little indentations at the base of the nut looked like eyes. Thinking that these three “eyes” gave the nut the look of a grinning face, they named it the *coco-nut*, *coco* being the Portuguese word for “a grinning face.” The nut deserves a better appellation, having been “the fruit of life” for ages, providing people with food, drink, oil, medicines, fuel, and even bowls, not to mention the many uses of the 60- to 100-foot tree it grows on. Copra, important to the plot of many a South Sea tale, is the dried meat of coconuts that oil is pressed from, and *coconut* itself is slang for “a head,” which takes the word back to its origins. *Copra* derives from the Hindu *Rhopra* for coconut.

coconut crab; robber crab. The large robber crab or coconut crab (*Birgus latro*) of the Pacific islands is closely related to hermit crabs, but has given up carrying a portable dwelling and developed a permanent hard-plated shell. Called the *coconut crab* because it climbs palm trees to get the fruit, it is named the *robber crab* for an entirely different reason. After chasing another crab, *Cardisoma*, into its hole in the ground, the robber crab threatens to enter. When *Cardisoma* thrusts out its big claw to guard the entrance, the robber crab seizes it, twists it off, and scuttles off to enjoy a gourmet feast.

cod; you can’t cod me. Experts have suggested that *cod* might derive from an old Danish word for “bag” (because it was said to be a “bag fish,” in reference to its shape), but its origin must be marked unknown due to lack of evidence, even though the word has been with us at least since the 14th century. The North Atlantic cod (*Gadus morrhua*), reaching a length of up to three feet and a weight of up to 50 pounds, has long been one of the most important fish of commerce (see CODFISH ARISTOCRACY). It is called the *sacred cod* because it is said to be the fish that Christ multiplied and fed to the multitude. According to one early-19th-century writer: “Even today the marks of His thumbs and forefingers are plainly visible on the codfish. His Satanic majesty stood by and said he, too, could multiply fish and feed multitudes. Reaching for one of the fish it wriggled and slid down his red-hot fingers, burning two black stripes down its side and thus clearly differentiating the haddock from the sacred cod. These markings, in actual practice, do distinguish one fish from another.” *You can’t cod me* means “You can’t get a rise out of me, you won’t make me rise to the bait like a codfish.”

code. See BOOK.

Code of Hammurabi. One of the first legal codes, instituted in the 20th century B.C. by Babylonian ruler Hammurabi. His code of laws is generally humanitarian, except for its *eye for an eye* provision. It is carved on a diorite column in 3,600 lines of cuneiform. See EYE FOR AN EYE.

code pricing. Still practiced on occasion, but rarely used anymore, code pricing was common in early American country stores. It gave a storekeeper an added advantage when bargaining with a customer because he could tell what every piece of merchandise cost without the customer’s knowing. A merchant, for instance, might make the letters in NOW BE SHARP

represent 1 2 3 4 5 6 7 8 9 10 (an N would equal the numeral 1, an O the numeral 2, a W the numeral 3, and so on). Every trusted clerk would be given this equation, and if a piece of merchandise was marked, say, NWW on the back, anyone with the formula would know its cost was \$1.33.

code talkers. (1) A group of Navajo Indians selected by the U.S. Army to send combat messages in their own language, which the Japanese in the World War II Pacific theater could not decipher. (2) A smaller group of Comanche U.S. soldiers that performed the same duty against the Germans for the Allies in Europe.

codfish aristocracy.

Of all the fish that swim or swish
In ocean's deep autocracy,
There's none possesses such haughtiness
As the codfish aristocracy.

—Wallace Irwin

It's hard to think of any group haughtier than the Cabots and Lowells (who spoke only to God, according to another old poem), but the Boston nouveau riche who made their money from the codfishing industry in the late 18th and early 19th century apparently gave a grand imitation of them. At any rate, they were disliked enough to inspire the derogatory expression *codfish aristocracy*, for "any pretentious, newly rich person."

codger. An old codger is generally a nuisance or an eccentric old man, but can also be a term of affection akin to "old chap" or "old fellow." No dictionary honors the derivation, but both definitions may have been strengthened by the existence of a club called The Ancient Society of Coggers in London in the 1860s. The Coggers came onto the scene half a century after *codger* was first used in its whimsical sense, but they were well known, all prominent writers and artists. The debating club derived its name from the word "cognition" and these thinking men, "ancient" at least by title, met at the Barley Mow Tavern on Fleet Street. (The tavern is now named The Coggers in their honor, though they moved to the Cock Tavern in 1921.) Codger probably comes from the Scottish *cadger*, for "a wandering peddler or beggar," but it is not hard to imagine the Coggers' influence on the word. "Ancient . . . Coggers" could easily have become *old codgers*, meant either affectionately or derisively.

codpiece. The *cod* in the word originally meant "the bag enveloping the testicles, the scrotum." In the 15th century the *codpiece* was introduced as a simple leather bagged appendage attached to the front of breeches, the word first recorded in 1460. But within a century the appendage became a spectacular ornament, brightly colored and often the size of a small melon. In *The Unfashionable Human Body*, Bernard Rudofsky claims that the codpiece died as a fashion in the 17th century because the male genitals "seem too unsubstantial to warrant display." This may be the case, because men often used the codpiece as a kind of pocket, storing things like money and bonbons in it. Robert Herrick wrote of a thieving dinner guest in *Hesperides* (1648): "If the servants search, they may decry in his wide codpiece, dinner being done, Two napkins cramm'd up, and a silver spoone."

codswallop. I came across *codswallop* in a newspaper account about a scientist's charge that a rare and extremely important bird fossil (the *ARCHAEOPTERYX*, pronounced "arky-opterix") in the British Museum was a fake. The account quoted several British Museum curators on the charge: "It's rubbish," one official said. "Absolutely ludicrous," added another. "Codswallop," echoed a third. *Codswallop*? Does it mean to flop about like a cod, in reference to the scandalmonger's tongue. *Wallop* does mean in one sense "to flop about." Or does it stand for "cod's beer," meaning the charge is an awful concoction? (*Wallop* is British slang for beer.) To tell the truth I don't know. And neither does the *O.E.D.*, Mencken, Flexner, Partridge, and all those other high-flying etymology birds. Hawkeyed William Safire, however, noted in his *New York Times Magazine* column that James McDonald's *Wordly Wise* (1984) mentions a 19th-century "inventor called Hiram Codd [who] patented a new type of bottle with a glass marble in its neck. Mineral waters were sold in such bottles, and, *wallop* being a slang term for fizzy ale, the contents became known as *Codd's Wallop*." And if this explanation doesn't satisfy you, either, perhaps *codswallop*, as Mr. Safire also points out, derives in some way from the British slang *cod*, meaning "to horse around."

coelacanth. For many years no one believed that the coelacanth still existed. This prehistoric link between sea and land creatures (some scientists think that the stumps connecting its fins to its body were the beginning of legs) was thought to have become extinct some 70 million years ago, according to researchers who had studied its plentiful fossil remains. After evolving 200 million years before the first dinosaur appeared on Earth and thriving for millions of years, they said, it had died out or evolved into a lizardlike form that crawled ashore. Then in late 1938 a strange fish was netted by a South African trawler off the southeast coast of Africa. Five feet long and weighing 125 pounds, it was steel-blue in color and had large scales and stumpy fins. In the four hours that it lived, the fish snapped its sharp teeth at any hand that came near its gaping jaws. Fishermen had never seen a specimen like it, nor had scientists, who named it after the Greek words for "hollow spined." Obviously some coelacanths hadn't died or crawled up onto land and still remained in the sea. But it took a full 14 years before a fisherman working in the Indian Ocean hauled in another of the "monsters." Since then, at least 10 more specimens have been found of the fish that brought animal life to land, perhaps the greatest biological discovery of the 20th century. The story certainly goes to prove that no one really knows what goes on in the great depths of the sea where the coelacanth lives, that despite the intense cold, pressure, and darkness, creatures can survive there—"monsters" perhaps more incredible than "the fish that couldn't be." The coelacanth's scientific name (*Yatimeria Chaluminae Smith*) derives from the name of Marjorie Courtney Yatimer, director of the East London Museum in 1938; The Chalumna River in South Africa, where the fish was first discovered; and the name of prominent South African fish biologist Dr. J. L. B. Smith.

Coeur d'Alene. It is said that the Skitswish Indians of northern Idaho took the name *Coeur d'Alene* (French for "awl-heart") after some unknown chief of the tribe used the words to describe the size of a dishonest white trader's heart, which he compared to the small point of an awl.

coffee. *Coffee* was introduced to England from Turkey, where it was called *qahwah*, pronounced *kahveh*, a word that apparently first meant some kind of wine and derived from a verb meaning “to have no appetite.” The word came to England, perhaps from the Italian *caffè*, in about 1600. At first coffee’s reputation wasn’t good, one early English traveler warning that it “intoxicated the brain.” It has had widely varying reviews since.

coffee as a secret weapon. Today’s Starbucks drinkers would not appreciate the potent coffee Honoré de Balzac liked to drink. The French author liked to begin work at midnight and write for 18 hours at a stretch. Often, he kept himself awake by drinking 30 cups of coffee a night, and he was so poor while writing the *Comédie Humaine* that he had to lock himself up in a secret writing room to hide from creditors. The caffeine-loaded sludgelike coffee he drank stimulated his mind, he claimed; after he drank it ideas “poured out like the regiments of the Grand Army over the battlefield.”

coffee break. See ELEVENSES.

coffin money. Burial insurance, or the periodic payment for burial insurance (life insurance bought for this purpose). “I got my coffin money all saved up.”

coffin nails. *Coffin nails* has been American slang for cigarettes since the 1880s, at least 20 years before cigarettes were called weeds and 40 years before they were called butts. *Another nail in my coffin*, said by a person lighting a cigarette, has been a catchphrase since about 1910, when it was first recorded in Australia. Cigarette itself is first recorded in England in 1842, though these “little cigars” had been smoked for at least two centuries before then.

cognac. The town of Cognac in southwestern France gives its name to this high-quality brandy, produced by the old pot-still method and aged two to five years or more in oak barrels.

coin. Our coin takes its name from the wedge-shaped die once used to make pieces of metal money. The French *coign*, deriving from the Latin *cuneus* and meaning wedge, was given first to the die and then to the money made on the die. *Coign* later passed into English as *coin*. *Coin* came to be a general word for money in early times because most money was in the form of coins.

Coke; cola. Coke, or Coca-Cola (both registered trademarks), was invented by Atlanta, Georgia, druggist Dr. John S. Pemberton in 1886, and is so named because its original ingredients were derived from coca leaves and cola nuts. *Coke* is also slang for *cocaine* and for this reason the Coca-Cola Company long avoided use of this name—especially because, up until 1909, Coca-Cola did contain minute amounts of cocaine. While the Supreme Court declared *Coca-Cola* and *Coke* exclusive trademarks, *cola* was ruled a generic word that anyone could use. Coca-Cola’s slogans “The pause that refreshes” and “Coke is it” are also well known. In 1985 a Mr. Frederick Koch (pronounced “Coke”) of Guilford, Vermont, got tired of people pronouncing his last name “Kotch” and changed it to

Coke-Is-It. Coca-Cola objected to the use of its trademark, but finally reached a settlement with Mr. Coke-Is-It, letting him keep his new name. For the record, the actual coiner of the name Coca-Cola was Pemberton’s bookkeeper, Frank M. Robinson, who invented it in 1893. In those early days Coca-Cola was advertised as the “Esteemed Brain Tonic and Intellectual Beverage.”

Coke upon Littleton. This expression suggests the shades or subtleties of law and honors British legal experts Edward Coke (1552–1664) and Thomas Littleton (1407–81).

cola. See COKE.

Cold Arse. One of the most distinctively named places in the nation: an island near Port Clyde, Maine, said to be so called after the fundament of a fisherman who was marooned there one freezing night.

cold blood. Early physiologists believed that the blood actually boiled within the body when a person grew excited and that it grew cold when someone was calm or detached. While the term *in hot blood* suggested by the belief is no longer heard (*hot-blooded* is), *in cold blood* remains as common as it was back in the late 16th century. Generally it is used today to describe a deliberate act of murder, as in Truman Capote’s *In Cold Blood*. Mankind has always regarded calculated killing in cold blood as something less than human. Trollope summed up the idea in describing one of his characters: “But then Aylmer was a cold-blooded man—more like a fish than a man.”

cold burning. *Cold burning?* Yes. In the late 18th to early 19th century *cold burning* was a British navy and army punishment for minor offenses in which ice-cold water (“so cold that it burns”) was poured down a man’s upraised arm so that it came out “at his breeches-knees.” According to one explanation: “The prisoner is set against the wall, with the arm which is to be burned tied as high above his head as possible. The executioner then ascends a stool, and having a bottle of cold water, pours it slowly down the sleeve of the delinquent, patting him, and leading the water gently down him till it runs out at his breeches-knees.”

cold enough to freeze the balls off a brass monkey. Here and in Australia the saying is as above; in Canada it is often the euphemistic *freeze the ears off a brass monkey*. Partridge indicates this is a late-19th-century Australian saying for very, very cold indeed, but I have heard others claim it for America and Ireland. Some say the “monkey” here is not the brass image of a monkey but a rack called the “monkey” used on wooden naval ships in the days of sail to hold cannonballs in place, to keep them from rolling all over the deck. But no one as yet has proved the existence of any rack called a “monkey,” one made of brass or anything else. And how cold weather could cause cannonballs to spill from a rack also remains to be explained.

cold feet. The old Italian expression *avegh minga frecc i pee* literally means “to have cold feet” and the proverb in a figurative

sense of “to be without money” was used by Ben Jonson in his play *Volpone*. Professor Kenneth McKenzie pointed this out in an article in *Modern Language Notes* (Vol. XXVII, 1912) and also explained how a phrase meaning “to be without money” could come to mean “to lose one’s nerve.” In card-playing, he wrote, a player “as a pretext for quitting a game in which he has lost money, [might] say that his feet are cold, [and] the expression might come to mean in general ‘to recede from a difficult position,’ or more specifically, ‘to have cold feet.’” This may be true, but if it is, it didn’t happen in Ben Jonson’s time, to the best of our knowledge. *Cold feet* in the sense of “fear,” originated as an American expression in the early 1890s. It could, however, have journeyed here with Italian immigrants, as the Italian proverb was still used in Lombardy at the time. Otherwise the expression must be marked “of unknown origin” and perhaps refers to the association of fright with cold—chattering teeth, shivers, and chills, etc.

cold fish. An emotionally cold, impassive person, either a man or a woman. The expression, first recorded in the early 1920s in the U.S., can also mean a sexually cold or frigid person.

cold in the pants. A colorful term American mountain men used to mean “gonorrhea.” “He ain’t had two women this spree. A body’d think he was still feared of catchin’ a cold in his pants.”

cold shoulder. “Cold shoulders” have been turned to so many passionate advances that this expression is usually thought to be connected with women spurning unacceptable men. But it seems that the phrase has no romantic origins. In the early 19th century, when the phrase was first recorded by Sir Walter Scott, it was the custom of hostesses to serve hot meat to a welcome visitor and to bring out a cold shoulder of mutton to someone who had overstayed his welcome or wasn’t particularly welcome in the first place. That this is the source of *cold shoulder* can best be seen in the Victorian slang *to give the cold shoulder of mutton*, meaning the same thing.

cold war. *Cold war*, for a situation where two nations aren’t actually at war but are doing everything they can to damage each other short of war, is first recorded in 1947, when Walter Lippmann’s *The Cold War*, a study of American-Soviet relations, was published. More specifically, others advise that *cold war* was named “in a 1947 speech by Bernard Baruch, written by Herbert Bayard Swope.” But George Orwell wrote in 1945 of “A State which was . . . in a permanent state of ‘cold war’ with its neighbors.”

cold-water flat. This term was originally applied to apartment houses with common toilets in the backyard or hall and only cold running water in the sinks; it then came to mean any apartment with poor plumbing.

coleslaw; hot slaw. The word is *coleslaw*, not *cold slaw*, and isn’t so named because the dish is served cold. An Americanism of Dutch origin, *coleslaw* derives from the Dutch *koolsla*, composed of *kool*, “cabbage,” plus *sla*, “salad.” First recorded in

1792, it must be older, as Dutch farmers on Long Island cultivated the first cabbage in America long before this. Though there is no *cold slaw*, there is a *hot slaw*, the word for this dish first recorded in 1870.

collage. The device of using pieces of newspaper in paintings was much used by the Cubists, who called the technique *collage*. But Matisse and many other artists before them built pictures partly or wholly of pieces of paper, cloth, and similar materials. The word *collage* comes from the French *coller*, “to stick.”

collards. Although they are associated with southern cooking in the United States, collards, which take their name from the Anglo-Saxon *coleworts*, “cabbage plants,” probably originated in Asia Minor. One of the most primitive members of the cabbage family, they were grown by the ancient Greeks. The Romans brought them to England.

collateral damage. Originally military jargon, *collateral damage* has become widely used since the Gulf War (1991), especially in the war against terrorism (2001). It strictly means damage to a civilian area near a target by bombs or missiles that did not hit the exact target. It is now a euphemism for civilian deaths caused unintentionally by these same weapons.

collective bargaining. Beatrice Webb of the FABIANS first suggested this term in 1891. In America *collective bargaining* came to mean, after the 1935 Wagner Act, “the process by which wages and working conditions are negotiated and agreed upon by a union with an employer for all the employees that the union collectively represents.”

collective nouns. Collective nouns are also called *group nouns* and *nouns of assemblage*. Many describing animals are amusing, colorful, and even beautiful. Most collective nouns make good sense if the animal’s habits are known.

colleen. A young Irish girl. The word derives from the Irish Gaelic *cailin*, meaning the same, which in turn comes from Old Irish. Gaelic, incidentally, is still spoken by anywhere from 40,000 to 600,000 people in Ireland, depending on whose estimate you accept. A marriageable Irish girl is called a “colleen bawn.”

collie. Though they are generally white and brown today, *collies* were originally black medium-sized shepherd’s dogs when bred in 17th-century Scotland. They may have taken their name from their black color, being first called *coalies*, then *collies*. But the dogs could also have been named after the common Scottish name Colin, which in pastoral verse denotes “a shepherd.”

a collision at sea can ruin your entire day. Thucydides, Greek statesman, sailor, and adventurer of the fourth century B.C., was a cool customer, judging by this remark he made after his boat was rammed by another; it has since been repeated by other

blásé boatmen. During the cold war era, a popular bumper sticker read: “A nuclear bomb can ruin your whole day.”

colly birds. If you’ve ever wondered what the gift of “colly birds” was on the fourth day of Christmas in the traditional song “The Twelve Days of Christmas,” wonder no more: *colly bird* is simply an old name for a blackbird, *colly* a dialect word for soot or coal dust that derives from English *col*, coal.

Collyers’ Mansion. A legendary house in New York City where brothers Langley and Homer Collyer were found dead in 1947 among some 100 tons of valuables and trash, including newspapers, magazines, and a myriad of things garbage cans can yield. The Collyers were packrats extraordinary whose mansion in Harlem once signified their prestigious family. Apparently, the brothers were victims of their own booby traps, set to catch intruders. A *Collyers’ mansion* (or *house*) has come to mean any such house almost anywhere—inhabited dwellings filled with debris that are especially dangerous to firefighters. The phrase has often been transferred from parents to children, as in the words, “Get that room of yours cleaned up: It looks like the Collyers’ House!”

collywobbles. No relation to colly birds above, *collywobbles* seems to have been suggested by *colic* and *wobble*. It means a rumbling upset stomach, a bellyache, cramps, or even a feeling of fear and is first recorded in 1823. Often but not always called the *collywobbles*, as in “He had a good case of the *collywobbles*.”

cologne. A scent that almost takes its name from a woman. The Roman emperor Claudius established a colony in what was then Oppidum Ubiorum in 50 A.D., renaming the place Colonia Agrippina (“colony of Agrippina”) after his wife, Nero’s mother, who had been born there. This cumbersome name was later modified by the French to *Cologne*, which grew into the beautiful German cathedral city that we know today. When centuries later a resident Italian chemist, Johann Maria Farina, invented a perfume made with alcohol and aromatic citrus oils, it was named *eau de cologne* or *cologne water*, for the city where he had settled in 1709. “Agrippina” had been lost over the years and only a fragment of her *colonia* remained, but the perfume was unknowingly and obliquely named for her.

colon. See COMMA.

colonel. An honorary title in the American South, as are major and general, since the 18th century. William Faulkner explained it this way: “Jefferson, Mississippi, the whole South for that matter, was still full at that time of men called General or Colonel or Major because their fathers or grandfathers had been generals or colonels or majors or maybe just privates, in Confederate armies, or who had contributed to the campaign funds of successful state governors” (*The Town*, 1957). The unofficial title of respect is also used in an ironic or joking sense. The confusing pronunciation of *colonel* is due to several errors. *Colonel* comes from the Italian *colonello*, which meant “the officer who led ‘a little column’ of soldiers at the head of a regiment.” This became the French *colonelle*, meaning the same. So

far, so good. But the French word became corrupted to *coronel* in Spanish through faulty pronunciation and was introduced into England in this form. Until the 17th century the word was spelled and pronounced *coronel*, and then its spelling was changed to the current *colonel*. Yet despite the efforts of teachers and pronouncing dictionaries, people refused to pronounce the word *colonel*. Early habits were too great to overcome and they continued to pronounce it like *coronel*, the experts finally giving up and accepting this as the standard pronunciation.

colophon. Originally, this word, derived from the Greek *kolophon*, meaning “summit” or “finish,” was the “finishing touch” at the end of a book, a bibliographical note on the last page giving the printer, date, place, and so on. Today the word has two meanings—the original one, which has been expanded to include design and typographic information, and a new one, referring to the publisher’s trademark or logo, which often appears on the title page of the book. The great Italian printer Aldus Manutius established the custom of the publisher’s colophon; his was a dolphin, symbolizing speed, and an anchor, symbolizing stability. A compulsive worker, he hung this inscription over the door of his study: “Whoever thou art, Thou art earnestly requested by Aldus to state thy business briefly, and to take thy departure promptly . . . For this is a place of work.” See ITALIC.

Colorado. Colorado was the Colorado Territory before it was admitted to the Union in 1876 as our 38th state. “The Centennial State” takes its name Colorado from the Spanish *colorado*, “red land,” or “red earth.”

Colorado potato beetle. A yellow, black-striped beetle (*Leptinotarsa decemlineata*) very harmful to potatoes, which was originally confined to Colorado and vicinity before potatoes began to be extensively cultivated in the United States.

color-blind. See DALTONISM.

Colosseum. Its size had nothing to do with the name of the Roman arena called the Colosseum, which gives its name to all coliseums. The original Colosseum took its name for a colossal statue of Nero that stood near it, the statue placed there after the dissolute emperor’s palace had been destroyed, when Rome burned. See THEATER.

colporteur. Today’s book salesmen follow an honorable calling, one that dates back hundreds of years to when their kind carried Bibles and other books in a basket or pack hanging from their necks by a strap. For this reason they were, and sometimes still are, called *colporteurs*, from the French *col*, “neck,” and *porter*, “to carry.” Typical of these was Old Parson Weems, noted for his charming fabrication of George Washington chopping down the cherry tree, not to mention his bold Homeric yarns about Ben Franklin and General Francis “the Swamp Fox” Marion.

colt. When Samuel Colt (1814–62) ran away to sea from his home in Hartford, Connecticut at 16, he spent his lonely nights on deck whittling a wooden model of the Colt revolver that was

to make him famous. Young Colt had several metal models made of his gun upon arriving home and patented his invention. He built his armory into the largest in the world, his use of interchangeable parts and the production line making him one of the richest men in America. As for the Colt, the first pistol that could be effectively employed by a man on horseback, it played a more important part in the conquest of the West than any other weapon, the famed “six-shooter” becoming so popular that its name became a generic term for revolver. *Colt* for a young horse comes from the Old English *colt* meaning the same.

Columbia; columbium. Although AMERICA was named for someone else, Columbus did win fame on the globe in the name for Colombia, South America, the U.S. District of Columbia, and a number of towns and cities. *Columbus* itself has for centuries meant an intrepid discoverer or explorer; Columbus Day (October 12) commemorates the discovery of America; and Columbia is the feminine symbol for America from which the element columbium is named. Christopher Columbus—Cristoforo Colombo in his native Italian and Christóbal Colón in Spanish—arrived in America in 1492, a familiar story that needs no repeating here. He may have come ashore in the Bahamas on an island he named San Salvador and which is now called Cat or Watlings Island, but his landing site is disputed by historians. A sailor named Rodrigo de Triana first sighted the New World. See AMERICA; VERRAZANO.

Columbia the Gem of the Ocean. English actors David T. Shaw and Thomas A. Becket are said to have written this patriotic song for an 1843 benefit performance in America. But it has also been claimed that they first wrote it in England as “Britannia the Pride of the Ocean,” later changing it for American consumption. See GOD BLESS AMERICA.

columbine. In medieval times people thought the inverted white flower on this plant bore a resemblance to five doves or pigeons clustered together and it was given the name columbine from the Latin *columba*, “dove.” There are 60 known species of the genus *Aquilegia* comprising columbines, and the flowers’ horned nectaries were once symbols of cuckoldry.

With a capital C, this is a reference to the most gruesome high school massacre in U.S. history. On April 20, 1999, two students rampaged through Columbine High School, killing 13 and wounding 23 others before committing suicide.

Columbus’s egg. Washington Irving told this proverbial tale in his *History of . . . Christopher Columbus*. It relates a classic squelch supposedly made by Columbus at a banquet given by Cardinal Mendoza shortly after the explorer had returned from his first voyage:

A shallow courtier present, impatient of the honors paid to Columbus, abruptly asked him whether he thought that in case he had not discovered the Indies, there were not other men in Spain who would have been capable of the enterprise. To this Columbus made no immediate reply, but taking an egg, invited the company to make it stand on end. Every one attempted it, but in vain. Whereupon he struck it upon the table so as to break the end and left it standing on the broken part; illustrating in his simple manner that when he had

once shown the way to the New World nothing was easier than to follow it.

Although Irving had the tale on good authority, it may really apply to an earlier historical figure, an Italian architect named Filippo Brunelleschi.

Coma Berenices; varnish; vernis martin. Berenice’s hair, or *coma Berenices*, is the lock of a woman’s hair that became a constellation. It was made famous by the five surviving lines of the poem *The Lock of Berenice* by the Greek poet Callimachus, which is said to be based on a true story. Berenice was married to Ptolemy III, king of Egypt, and when he invaded Syria in 236 B.C. to avenge the murder of his sister, she dedicated a lock of her hair to the gods as an offering for his safe return. The hair mysteriously disappeared, but the court astronomer, Conon of Samos, perhaps to assuage her, pretended to discover that it had been carried to heaven and transformed into a constellation of the Northern Hemisphere, which has been known ever since as Coma Berenices. (A coma is the hazy envelope around a comet, and the word *comet* itself derives from the Greek and Latin words for hair, alluding to a fancied resemblance between the tails of comets and hair blowing in the wind.) Ptolemy returned from the wars safely, but soon after his death in 221 B.C. the fabled Berenice was murdered at the instigation of her son. Later the Greeks named the town of Berenike in Libya for Berenice. Here a paint industry thrived and one new coating was called Berenice, its color said to resemble the amber hair of the queen. This paint was called *bernix* in medieval Latin, but the Italians corrupted its name to *vernice*, which became *vernis* in French and *varnish* in English—the chances being that the floor under your feet has something of the color of Berenice’s hair. *Vernis martin*, or Martin varnish, a finish for furniture, is twice eponymous, being also named for the brothers Martin, 18th-century French craftsmen who invented it in imitation of Chinese lacquer.

Comanche moon. The full moon of every month, perhaps because it was thought to aid the Comanches in their night raids. The Comanches, however, called the full moon the *Mexican moon*.

comanchero. An old Spanish term for a man of Mexican-Indian origin; comancheros were often traders between the Indians and the Mexicans or whites.

Comanche yell. A blood-curdling yell used by Comanche Indians in battle; said by some to be the basis for the REBEL YELL.

come a cropper. To fall head over heels, to fail, or be struck by some misfortune. This is a British expression that originally meant only to fall head over heels from a horse, to fall to the ground completely, neck and crop, but it most likely refers to the crop, or back, of a horse—when a horse falls neck and crop, it falls completely, all together in one heap.

come again? “What did you say?” “Please repeat what you just said; please explain.” This term dates back to about World War I in England, but has been traced to 1884 in the United States.

come day, go day, God send Sunday. Said of a worker who does not do more than he or she has to do, if that; a clockwatcher or loafer. The expression is probably nautical in origin.

Comédie-Française. The French national theater, famous for its extensive repertoire of classical French drama, is also called the Théâtre-Français and La Maison de Molière, but it is best known as the Comédie-Française. Celebrated as “the glory of the French theater” by more than one critic, it was founded in 1680 and before the end of the decade moved into a playhouse built for it in an indoor tennis court, whose layout, with its boxes for spectators, was easily converted to a theater. Since 1770, it has remained at the site of what was the Palais Royal Theater, which is now called the Comédie-Française. The acting company is a cooperative society, each actor holding from one-quarter to one full share (depending on the actor’s experience or importance) once he or she is admitted to the company. Admission comes after the actor successfully performs a role of his or her choosing and serves a salaried probationary period of up to several years. At that point the actor becomes a full member, sharing in the company’s profits, and is entitled to a pension after twenty years’ service. The head of the company, called the *doyen*, is its oldest member.

come down like a ton of bricks on someone. To be very severe with someone, to come down hard on him. This Americanism dates back to the 19th century and sounds much better than the British *come down like a thousand bricks on him*. But it has been pointed out that the British expression is more technically accurate, in that bricks aren’t sold or measured by the ton.

comedy. The word *comedy* may derive from the Greek word *kome* for “village,” because the first comic thespians were scorned in the cities and had to wander about rural villages to give performances. This was Aristotle’s belief, but others say *comedy* comes from Greek *komas*, meaning “revel,” because it first was performed by revelers at festivals.

comedy of errors. The idiom a *comedy of errors*, a ludicrous sequence of events, takes its name from the title of Shakespeare’s play *The Comedy of Errors*, which was acted in 1594 and was probably written some 10 years earlier.

come hell or high water. The ancestor of this common expression is apparently BETWEEN THE DEVIL AND THE DEEP BLUE SEA. Between hell and high water seems to have been a 20th-century variation on (or deviation from) the earlier phrase. Then the variation took on a life of its own in the expression *come hell or high water*, meaning “no matter what,” as in “Come hell or high water, I’ll finish it!”

come in with one’s five eggs. See PUT IN ONE’S TWO CENTS’ WORTH.

come off it. Stop your nonsense, cut it out, don’t give me that. Originally the phrase was *come off*, first recorded in the late 19th century. *Come off it* seems to have first found print in Ernest Hemingway’s *The Sun Also Rises* (1926), when Hemingway put the words in the mouth of Lady Brett Ashley.

come out of here, you damned old reb. See IN THE NAME OF . . .

come out of the closet. To acknowledge that one is a homosexual. Though the expression is first recorded in this sense in 1971, it is much older in other meanings. For instance, the great scholar and writer Joseph Addison (1672–1719) wrote: “I shall be ambitious to have it said of me, that I have brought philosophy out of closets, schools and libraries, to dwell in clubs and assemblies, at tea-tables and coffee-houses.” See CATO CONSPIRACY; CATILINE.

come out the little end of the horn. That prolific Canadian word coiner Thomas Haliburton (see *Index*) may have invented this expression meaning to end in failure, in allusion to the pointed end of the cornucopia or horn of plenty. At least Haliburton used it in his *The Clockmaker; or, The Sayings and Doings of Samuel Slick, of Slickville* (1837–1840): “Can you wonder that people who also keep such an unprofitable stock, come out of the small end of the horn in the long run?”

come see. A lovely expression from the Gullah dialect of the American South that means a delicate child, one who has come to see this world and decide whether or not it wishes to stay, which is to say its life may be very brief.

come to a head. When we wait for something to come to a head, wait for it to come to maturity, we are doing what farmers have long done in waiting for cabbage leaves to come together and form a head. The expression is an old one from the farm, probably dating back centuries.

come to a screeching halt. To stop immediately, abruptly, like car brakes screeching to a stop, with tires burning the road.

come-too-soon. Euphemism for an illegitimate child or a child born less than nine months after a couple gets married.

come up and see me sometime. The still much-imitated words of actress Mae West to her leading man Cary Grant in the 1933 film *She Done Him Wrong*. Her actual words, however, were, “Why don’t you come up some time and see me?” Another memorable Mae West line is her “Beulah, peel me a grape!” to her maid in the movie *I’m No Angel* (1933).

come up for air. The allusion here can’t be to a scuba diver or suited diver, who usually have plenty of air, but it might refer to pearl or sponge divers, who must surface periodically to breathe fresh air. The words are often humorously said to a person so immersed in something (reading, writing, etc.) that he or she ignores everything and everybody else, to a point where it might not be healthy.

comeuppance. Whether this expression is an Americanism or not is the subject of some dispute; it is first recorded in America in 1859 and in England some 20 years later, if that proves anything. *Comeuppance* means “just desserts” or “merited punishment,” and has several dialect versions in different

areas, including *comings* and *come-uppings*, the British once using *come-uppings* for a flogging. Possibly the expression *come up*, “to present oneself for judgment before a tribunal,” fathered the phrase.

come up roses. See EVERYTHING’S COMING UP ROSES.

come up to scratch. Deaths and maimings were so frequent in the lawless early days of boxing that one rule had to be established if there were to be enough boxers alive to please the crowd. A line was scratched in the center of the ring (in the ground or on the canvas) and a fighter who couldn’t “come up to scratch” when the bell sounded for a new round was considered physically unable to fight any longer. This early version of the technical knockout probably led to use of *to come up to scratch* as a figurative expression for fulfilling or meeting requirements of any nature. *Scratch*, however, was the term for a starting point or boundary in cricket, shooting matches, horse racing, and cockfighting as well as boxing, so the expression could have originated in one of these sports, especially from cockfighting, where a cock that doesn’t come up to scratch and fight is considered an inferior specimen.

come what may. *Come what may* means whatever happens, come hell or high water, rain or shine.

comfort me with apples. The phrase is from the Bible, the Song of Solomon II, 5: “Stay me with flagons [bottles of wine], comfort me with apples: for I am sick of love.” Paulus Silentiarius, a sixth-century Greek poet, noted a certain deficiency in comforting anyone with apples. “If, my pet,” he wrote, “you gave me these two apples as tokens of your breasts I bless you for your great kindness. But if your gift does not go beyond the apples, you wrong me by refusing to quench the fierce fire you lit.” His words may have inspired another phrase, *to go beyond the apples*, but if they did, I’ve been unable to prove that saying’s existence.

comic strip. The term *comic strip* isn’t recorded until 1920, but the first such drawings date back to at least 1866, when a comic strip appeared in the British newspaper *The Boys of England*. Numerous comic strips have been praised as humorous masterpieces and works of art. *Strip cartoon* is the British term for *comic strip*.

coming, Mother. “Henry, Hen-ry Aldrich!” called the annoyed mom in the radio program *Henry Aldrich*, very popular in the 1940s. Henry’s reply, “Coming, Mother,” became a well-known expression that lasted at least until the late 1950s and the advent of television.

coming apart at the seams; seamless. *Seam*, an Anglo-Saxon word, has been used figuratively since at least the 12th century. Chaucer wrote of “the semes of freenshippe,” Shakespeare of “the rough seames of the waters,” and Ben Jonson of “poor seam-rent fellows.” Similarly, *coming apart at the seams* describes someone suffering from a mental or physical breakdown. On the other hand, *seamless* means something perfectly consistent. See SEAMY SIDE.

comma; colon; period. Before they became common terms used for punctuation, these words were the names of elements of sentence structure. A comma was a short phrase or clause, a colon a long phrase, and a period two or more colons. *Period*, for example, was recorded as early as 1533 for a sentence of several clauses, almost a century before it meant the point or character that marks the end of such a sentence. Has anyone written a book about periods, those at the end of sentences? I don’t know, but an entire book (Hendrik Hertzberg’s *One Million*, 1980) is filled with dots, which might loosely be considered periods. Periods are not always the last thing in a sentence; for example, a sentence ending with a quoted word must have its period inside the quotation marks. Christopher Marlowe wrote of all poetry distilled into “one poem’s period,” but the period’s great lover in literary history was Russian author Isaac Babel. Babel, murdered by Soviet secret police in 1939, wrote: “No iron can stab the heart with such force as a period put just at the right place.” In Scandinavian author Gustav Wiel’s novel *Knagsted* (1902), one of his eponymous character’s creations is a full-length book collection of Danish writers’ commas. The most costly grammatical error in history occurred when the U.S. space probe *Mariner 1*, bound for Venus, headed off course and had to be destroyed at a cost of \$18.5 million. The rocket responded erratically because an anonymous flight computer programmer left out a comma from *Mariner’s* computer program. See HYPHEN; PUNCTUATION.

commander in chief of the navy. See CONTINENTAL NAVY.

commando. This term was adapted by the British during World War II when they established their specially trained commando units to raid enemy territory. It derives, however, from the Portuguese word for “small commands that raided native villages in South Africa,” a word the Boers borrowed when they used similar tactics to wipe out thousands of bushmen in their villages.

comme ci, comme ça. A well-known phrase that is French for “so-so,” “who cares.”

comme il faut. French for “as it should be,” as in, “Her manners were truly *comme il faut*.”

commerce. See MERCHANT.

commercial. An American term for a radio or TV ad. The term was first recorded on a 1923 *Eveready Flashlight Hour* radio show. According to one ad executive, ad agencies today air 300,000 commercials a year. The highest price ever paid for a commercial was the \$1.3 million paid for a 30-second spot by Pepsi Cola during Super Bowl XXXI in 1997.

Common. Short for the Boston Common (the last word always singular), a public park in Boston once used in common by all the people for grazing their cattle. Robert E. Parker wrote in *Spenser’s Boston* (1994): “Hayshakers from New York and Los Angeles are always looking ignorant by saying . . . Boston Commons, and generally disgracing themselves in front of us Bostonion sophisticates.”

common. When in 1948 Henry Wallace campaigned with the slogan that this was “the century of the common man,” many southerners had trouble understanding at first, for *common* is often a term of contempt in the South, far more than in the rest of the United States. It can also be a complimentary term for an unassuming, friendly person, as in “He’s a real common man.”

common as an old shoe. Down to earth, unpretentious; a high compliment to a person in the hills of Tennessee.

commoner; the Great Commoner. In Britain a man or woman below the rank of peer is a *commoner*. British statesman William Pitt the Elder (1708–78) was called the *Great Commoner* before he became the earl of Chatham. The name honored his great speeches in the House of Commons.

the commonest English words. According to a count made by the *World Almanac* (1950) of 240,000 words from books, magazines, and newspapers, the 12 most commonly used written English words are: 1) *the* 2) *of* 3) *and* 4) *to* 5) *a* 6) *in* 7) *that* 8) *is* 9) *I* 10) *it* 11) *for* 12) *as*. This is seconded by a *Guinness Book of World Records* study (1998), which adds that the commonest word used in conversations is *I*. But the *American Heritage Word Frequency Book* (1971) doesn’t agree, listing the 12 most commonly written words as: *the, of, and, a, to, in, is, you, that, it, be, and for*—in that order. Stuart Berg Flexner, in *I Hear America Talking* (1976), says that the four most common spoken English words are *I, you* (these two account for 10 percent of all “informal conversation”), *the, and a*. The rest of his top 50 spoken words (in no special order) are: *he, she, it, we, they, me, him, her, them, what, an, on, to, of, in, for, with, out, from, over, and, about, now, just, that, not, this, is, get, was, will, have, don’t, do, are, want, can, would, go, think, say, be, see, know, tell, and thing*. Flexner points out that 10 basic words account for 25 percent of all English speech, 50 simple words account for about 60 percent, and just 1,500–2,000 words account for 99 percent of all we say. Seventy words make up 50 percent of our written language. Amazing statistics, considering that the English language contains about 800,000 words (including technical terms). Today the average American uses something like 2,000 words in everyday speech, while extremely learned persons use as many as 60,000 of the 800,000 or so words in English, which has the largest vocabulary of any language. Shakespeare possessed a large vocabulary for his or any time, using 22,000 different words in his plays, only 6,000 having been used in the entire Old Testament.

commonwealth. Officially, Massachusetts is not a U.S. state, but a commonwealth, as are Virginia, Maryland, Pennsylvania, and Kentucky. Technically, Rhode Island is not exactly a state, either; its official title is the State of Rhode Island and Providence Plantations.

commute. The verb *to commute* developed as a back formation from the noun *commutation* at about the time of the Civil War—Americans were commuting to work on the train even at that early date. *Commute* later became the word for a railroad ticket, a shortening of “commutation ticket.” *Commute* has its

roots in the Latin *commutare*, to change, thus someone commuting is changing from one place to another.

compadre. A Spanish term for a godfather or very close friend that has long been used in the American West for one’s partner or close friend and which has wide use throughout the country from its frequent use in cowboy novels and movies. *Comadre* is the female version.

company. A business company, in the strictest sense of the word, is a group of people who sit down and share bread together. For *company* derives from the Latin *con* “together,” and *panin*, “bread.” The idea is that a company consists of friends so close that they sit at the same table sharing any bread they have.

company store. See TOMMYROT.

comparisons are odious. The correct word in the proverb is *odious*, not *odorous*, and the prolific poet and monk John Lydgate was the first to put the idea on paper, in 1430: “Odyous of olde have been comparisons,/And of comparisons engendyr is haterede.” Cervantes, Donne, Swift, and Hazlitt are other great writers who used the proverb, and Shakespeare had Dogberry give his variation on the expression, *comparisons are odorous*, in *Much Ado About Nothing*. Lydgate’s version was printed some 40 years before that of John Fortescue, to whom *Bartlett’s* credits the phrase.

comparison shopper. Comparison shoppers had their heyday from the 1920s to the 1960s. They originated, however, in the early 20th century price wars of department stores and were at first simply a clerk whom a buyer would send across the street to get an idea of his competitor’s prices. Then comparison departments were formed, the average New York department store employing four or five professional shoppers, “the eyes and ears of the store,” to study the stock, prices, and customers of rival stores and report back to their employers. This was essential to stores like Macy’s with its long-standing policy of selling all merchandise at 6 percent below the prices of other stores. Macy’s comparison shoppers were so wily that they sometimes wore disguises.

compass cactus. Western settlers in the U.S. gave this name to the barrel cactus (*Echinocactus*) because it almost always leans southwest, and they could tell directions by it.

compassionate conservatism. A philosophy stressing using conservative concepts to improve society. It was coined by Michael Gerson, White House speechwriter for President George W. Bush during his two administrations. See also AXIS.

compass plant; polar plant; pilotweed.

Look at this vigorous plant that lifts its head from the meadow,
See how its leaves are turned to the north, as true as the magnet;

This is the compass flower, that the finger of God has
planted
Here in the houseless wild, to direct the traveler's
journey
Over the sea-like, pathless, limitless waste of the desert.
—Longfellow, *Evangeline* (1847)

A huge coarse-stemmed plant six to eight feet tall with flowers like the sunflower, the compass plant (*Silphium laciniatum*) was much valued by pioneers on the great western plains because its leaves show polarity, always pointing north and south. For this reason it was called not only the compass plant, but polar plant and pilotweed as well.

competitive golf. The great American golfer Robert Tyre “Bobby” Jones (1902–71) defined competitive golf as a game played on a five-inch course, in the space between the ears.

complected. The journals of the Lewis and Clark expedition in 1806 contain the first recorded use of the word *complected* for being of a particular facial complexion. The word is used throughout the U.S., as in “She is dark complected and he is rather light complected.”

complications. The word is often seen in obituary notices, as in “He died of complications of pneumonia.” A headstone in a Maine graveyard reads: “He was a simple man who died of complications.” *Complicate* is from the Latin *complicare*, to fold together.

compound. English merchants in the Orient during the 18th century often built enclosed trading stations to protect themselves and their goods from thieves. They called these stockaded enclosures compounds, from the Malay *kampong*, “enclosure.” This *compound* is no relation to the chemist’s *compound*, which derives from the Latin *componere*, “put together.”

comptonia. Henry Compton, bishop of London, was a collector of rare and exotic plants. The prelate, an anti-papal leader during the Revolution of 1688, had many admirers in England, even after his death in 1713 at the age of 81. One of these was the great naturalist Sir Joseph Banks, who traveled to Newfoundland and Labrador in 1766 to collect native plants and accompanied Captain Cook on his first voyage two years later for the same purpose. Banks expressed his admiration for the plant-loving divine by naming the comptonia bush (*Comptonia peregrina*) after him. The *Comptonia* is a single shrub, sometimes called sweet bush or sweet fern. Native to eastern North America, it is highly aromatic, with fernlike leaves and green, rather inconspicuous flowers.

comptroller. There is really no good reason for this word. It is pronounced the same as *controller* and means the same, except that it looks a bit more elegant than its counterpart. Probably influenced in spelling by the French *compte*, “account,” *comptroller* means the official in a business firm who controls funds, just as *controller* does.

computer. *Computer*, for a person who computes, goes back to the mid-17th century. The word was not applied to the machine

we call the *computer* until 1944, when it was so used in a *London Times* story. Though there have been a number of mechanical computers over the years, the first electronic computer, using 18,000 radio tubes, was built in 1946 by three scientists at The University of Pennsylvania—Dr. John W. Manchly, J. Presper Eckert, Jr., and J. G. Brainerd. Their ENIAC—Electronic Numerical Integrator And Computer—cost \$400,000 and had to be housed in a 30-foot by 50-foot room.

comrade; camera. Three centuries and more ago Spanish soldiers resided in separate chambers called *camaradas*, two or more to the room, instead of barracks. Soldiers who shared the same chambers came to call themselves *comaradas*, which in time became the English word *comrade*. The Italian word *camera* is similar to the Spanish *camarado*, and also means “room.” From the *camera oscura* (“dark room”) used for projecting and viewing outdoor scenes through a lens or pinhole, we get our word *camera*.

comstockery. About 160 tons of books, stereotyped plates, magazines, and pictures were destroyed by Anthony Comstock (1844–1915), founder of the New York Society for the Suppression of Vice, in his long career as a self-appointed crusader against immorality in literature. Comstock, who inspired Boston’s Watch and Ward Society, headed a YMCA campaign against obscene literature in 1873, the same year in which he came to national prominence by founding his society and securing federal passage of the so-called Comstock Laws to exclude objectionable matter from the mails. Appointed special agent of the Post Office Department and chief special agent for the Society, Comstock had the power of an inquisitor, and *comstockery* became a synonym for narrowminded, bigoted, and self-righteous moral censorship. The crusader particularly objected to George Bernard Shaw’s play, *Mrs. Warren’s Profession*, and Shaw coined the word, making good clean fun of the censor’s name.

Comstock lode. A Nevada shepherd and prospector named Henry Tompkins Paige Comstock first laid claim to the Comstock lode that bears his name. In 1859, Old Pancake, as he was known, had taken possession of a cabin belonging to other prospectors who had discovered the lode but had died tragically before filing their claim. Comstock filed his claim, but he later sold all his rights for a pittance and the Virginia City mine became the world’s richest known silver deposit, producing \$20 million to \$30 million annually at its peak and making great fortunes for many a “silver king.” Virginia City mushroomed to 40,000 inhabitants and anyone associated with the mines, hopeful prospector or millionaire, was called a comstocker.

con; con game; con man. Just after the Civil War, one of the most common frauds in America was the sale of fake gold mine stock in the West. Sometimes gold would be salted in played-out “mines” to fool “marks,” but the swindlers who worked the scheme usually settled for a small score from a great number of investors and never bothered about tricking up a real mine. Investors were often reluctant to advance funds without examining the property, however, and the swindlers asked their victims to make a small investment in advance “just

as a gesture of confidence,” deposits that they quickly absconded with. The trick was soon dubbed the *confidence game*, and, in time, its fast-moving practitioners became known as *con men*. Reinforcing the word is the idea that victims of a con game are bamboozled into confidence that they’re going to make a killing. To con, in this sense, has nothing to do with the older English verb *to con*, to study or commit to memory, which derives from the Middle English *cunnen*, “to try.” *Con games* were practiced, of course, long before this word for them was coined. On the American continent, for example, Mayan swindlers painstakingly drilled small holes in cocoa beans, emptied out their precious powder and refilled them with dirt before selling them to Europeans.

concatenation; concatenated sins. *Concatenation* simply means a chain, the word deriving from the Latin *catena*, “chain.” One early (1688) felicitous writer described two lovers as “the most affectionate couple since the concatenation of Adam and Eve,” while John Donne wrote of “concatenated sins.”

conceive. *Conceive*, ultimately from the Latin *concipere*, to take fully, to take in, can mean “to hold or form an opinion,” or “to become pregnant.” Both uses are illustrated in a story about 18th-century British author and politician Joseph Addison, who once gave a speech in the House of Commons beginning: “Mr. Speaker, I conceive—I conceive, sire—sir, I conceive—” At this point he was interrupted by a member who quipped: “The right honorable secretary of state has conceived thrice and brought forth nothing.” See PROPOSITION.

conch. Pronounced “conk,” this is an often derogatory term for a white resident of the Florida Keys, though *conchs* in the past also lived along the south coast of Florida and in North Carolina. The term dates back to the early 19th century when white native Bahamians were called conchs because they were skilled in diving for the large shellfish called the conch (*Strombus alatus*), an important item in their diet. The descendants of a band of Cockney Englishmen called the Eleutherian Adventurers who migrated from London to Bermuda in about 1649 in search of religious and political freedom, these Bahamians came to the Florida Keys from Eleuthera in the 19th century. One persistent old story has the conchs able to dive fathoms in search of their quarry. According to the *New York Weekly Tribune*, May 1, 1852, “Nearly half of all residents [of Key West] are natives of the Bahama Islands. They are called Conch-men or Conchs by reason of their skill in diving for conchs, which they are said to locate underwater and crack open with their teeth!”

conchie; CO. *Conchie* was sometimes disparaging slang for a conscientious objector during World War I and World War II, that is, someone exempted from military service on grounds of conscience. *Conchie* (KON-chee) is first recorded in 1917 in England and a year later in the U.S.; *conscientious objector* had been used in the late 19th century to mean someone who objected to vaccination. *CO* was another term for a conscientious objector, as were *conchy* and *conshie*. In Australia, *conchie* means a person who is too conscientious and works too hard, often trying to impress someone. In Britain those who wanted *CO* status had to be questioned by a government panel. According to Robert Graves in *Goodbye to All That*, when the

author Lytton Strachey was asked what he’d do if he saw a German soldier trying to ravish his sister, he replied, “I would try to get between them.”

conclave. This word, now applied to any secret or confidential meeting, once meant only the assembly of cardinals that meets to elect the pope of the Roman Catholic Church. *Conclave* itself comes from the Latin *conclave* (*con*, with, and *clave*, key), “a room or place with key” and was initially used to describe the small cells or apartments of the Vatican given to each member of the College of Cardinals at the assembly, which was established by Pope Gregory X in 1274.

Concord grape. See CATAWBA GRAPES.

concrete boat; marble boat. According to legend, the relics of the Apostle St. James were miraculously transported from Jerusalem in a “marble boat” with sails—and a huge stone used to be exhibited as this boat at Padron on the Spanish coast. It is definitely no legend that “concrete boats” were built in the U.S. during World War I to help conserve steel. These reinforced concrete ships performed well but weren’t kept in operation after the war.

concubine. An old English word recorded in the 13th century for a woman who cohabits with a man she isn’t married to, or a woman who is kept in a harem. The word ultimately derives from the Latin *con*, with, plus *cubare*, to lie down, hence a woman who lies down with (a man).

condign punishment. Just a fancy way of saying an appropriate punishment, a punishment that fits the crime. *Condign* (pronounced kun-dine) is from the Latin *condignus*, “altogether worthy.” The phrase *condign punishment* has been commonly used since it originated in the Tudor Acts of Parliament, and the two words have become so inseparably yoked that *condign* is rarely used in any other way. Thomas De Quincey complained about this back in 1859, but it did no good: “Capriciously . . . the word *condign* is only used in connection with the word *punishment*. These and other words, if unlocked from their absurd imprisonment, would become extensively useful. We should say, for example, ‘condign honors,’ ‘condign reward,’ ‘condign treatment’ . . .”

condom. *Condom* may derive from either of two real names. Proksch in his *Prevention of Venereal Diseases* traces *condom* to a London doctor in the court of Charles II named Dr. Conton and insists that the contraceptives should thus be called “contons.” Dr. Conton’s invention is said to have been made from lamb intestines, dried and well oiled to make them soft and pliable. They immediately became popular, and Casanova is on record as buying a dozen, though he called them “English caps.” It was only in 1826, Proksch claims, that a papal bull by Leo XIII damned Conton’s discovery, “because it hindered the arrangement of providence.” Dr. Conton probably did improve upon the *condom*, but an equally reliable source traces the word derivation to a Colonel Condom of Britain’s Royal Guards. This authority notes that the colonel devised the “French letter” early in the mid-17th century to protect his troops from the French. (The French, chauvinistic, too, called *condoms* “English letters.”)

In 1667 three English courtiers—Rochester, Roscommon, and Dorset—even wrote a pamphlet entitled *A Panegyric Upon Condom*, extolling their countryman's invention. An excellent monograph on the origin of *condom* is William E. Kruck's *Looking for Dr. Condom* (University of Alabama Press, 1982). The largest known condom is a 72-foot-tall specimen made December 3, 1993, to mark World AIDS Day and fitted over the obelisk in the Place de la Concorde, Paris, France.

condominium. *Condominium*, meaning “an apartment owned by tenants rather than rented” (although the owners do pay a monthly maintenance charge), is composed of the Latin *con*, “together,” and *dominion*, “property.” The word has been used for the joint control of a territory by two states since the early 18th century, but its newer usage dates back only to the late 1950s.

Conestoga wagons; stogy. The heavy, covered, broad-wheeled Conestoga wagons that carried American pioneers westward, crossing many a waving sea of grass like “prairie schooners,” were named for the Conestoga Valley in Pennsylvania, where they were first made in about 1750. But as Mencken points out, *Conestoga Valley* derives in turn from the name of a long-extinct band of Iroquois Indians. So little has been done for the Indian that we should honor him where we can. The wagons, pulled by their six-horse teams, also supplied the West with manufactured goods and brought back raw materials, some carrying up to eight tons of freight. *Stogy*, a cheap cigar today, was coined by the Conestoga teamsters—either after the Conestoga Valley tobacco that they rolled into thin, unbound cigars for their long trips or after the wagons themselves.

Coney Island; coney. The *Coney* in *Coney Island* should really be pronounced to rhyme with *honey* or *money*. The word derives from *cony* (or *coney* or *cuny*), meaning the adult long-eared rabbit (*Lepus cunicula*) after which the Brooklyn, New York community was named. However, *cony*, pronounced *cunny*, became a term for the female genitals in British slang, and proper Victorians stopped using the word, substituting *rabbit*, which previously had meant only the young of the cony species. The only trouble remaining was that *cony* appeared throughout the King James Bible, which had to be read aloud during church services. Proper Victorians solved this problem by changing the pronunciation of *cony* to *coney* (rhymes with *boney*), which it remains to this day in *Coney Island* as well as the Bible.

Confederate money. A term that means “money not worth the paper it is printed on,” referring to the worthless banknotes of the Confederacy after the Civil War. At that time, according to Margaret Mitchell in *Gone With the Wind* (1936), an anonymous poem entitled “Lines on the Back of a Confederate Note” was circulated in the South, sometimes written by hand on pieces of paper pasted to the backs of the “useless” Confederate notes:

Representing nothing on God's Earth now
And naught in the waters below it—
As the pledge of a nation that's passed away
Keep it, dear friend, and show it.

Show it to those who will lend an ear
To the tale this trifle will tell
Of Liberty, born of patriot's dream,
Of a storm-cradled nation that fell.

See also BLUEBACKS.

Confederate states. The U.S. Confederate states, which seceded from the Union, were Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

confession magazines. Confession magazines, which have been with us now for over 65 years, are an American invention that were an outgrowth of long soul-searching letters sent to physical culture crusader Bernard MacFadden's *Physical Culture* magazine in 1919. MacFadden's first confession book was *True Story*, the great-grandmother of the genre, which currently has a circulation of 5 million, but there are scores of other confessions on the newsstands today. The first stories dealt with sweet young things who were so wicked that they dared to elope against their parents' wishes, etc., while contemporary tales have virtually no taboo themes, ranging from well-written confessions about incest to stories such as “My Bride Is a Man” (where Julie was Jules before her sex-change operation). The yarns, which earn five to 10 cents a word, aren't all written by readers. Professional writers turn out a large number, perhaps the majority of them, though some magazines do require an author to sign a release saying his or her story is based on a true experience.

Confucius say; kung-fu. Historians tell us that there is little positive evidence of the Chinese philosopher's life, but it is said that the Chinese K'ung clan, descendants of Confucius, numbers over 50,000 today and that Confucius's burial place outside Kufow is still a place of homage. Confucius is the Latinized form of the philosopher's name, K'ung Fu-tzu (“philosopher,” or “master,” K'ung), which may be the origin of the oriental martial art kung-fu, though no hard evidence supports this theory. Born around 551 B.C. of a poor but noble family, Confucius taught and held a number of government posts. By his death at about 72, the philosopher had attracted some 3,000 disciples who helped spread his ethical teachings, which were based primarily on his “golden rule”: “What you do not like when done to yourself do not do to others.”

confused flower beetle. This little fellow is so named not because he is frequently confused, but because scientists often have trouble identifying him. The confused flower beetle (*Tribolium confusum*), it seems, looks remarkably like the red flower beetle (*Tribolium castaneum*). See BEETLE.

congratulatory first-class degree. A highly unusual academic degree. Sir Bernard Williams (1930–2003) received this honor from Oxford in which “the examining professors ask no questions about the candidate's written work but simply stand and applaud.”

congregation. The use of the term *flock* as a synonym for a church's congregation has an etymological as well as poetic basis, for *congregation* derives from the Latin *congregare*, to flock

together, suggesting birds rather than lambs or sheep, however. Daniel Defoe's verse satire *The True-Born Englishman* (1710), which sold some 80,000 copies on the streets, had this to say on the subject:

Whenever God erects a house of prayer
The devil always builds a chapel there;
And 'twill be found upon examination,
The latter has the larger congregation.

congressane. See CORTISONE.

Congressional Medal of Honor. See MEDAL OF HONOR.

Congreve rocket. This is the proper name of the rocket used in 1814 during the British bombardment of Fort MCHENRY that inspired Francis Scott Key to write his poem "The Star-Spangled Banner," which later became the U.S. national anthem. Before "the rocket's red glare" at Fort MCHENRY it had been used as early as 1806. The rocket was invented by Sir William Congreve (1772–1828), who named it after himself.

conjure bag. A collection of magic charms tied in a ball and kept in a small bag, used to ward off evil spirits or gain control over someone; also called a conjure ball and kungu. "The conjurer's bag of the Africans . . . is called 'waiter' or 'kunger' by blacks, and is supposed to have the power to charm away evil spirits, and do all manner of miraculously good things for its wearers," Edmund Kirks wrote in *My Southern Friends* (1863).

Conjurer John. "Solomon's seal," a member of the lily family, was dubbed "Conjurer John" because the plant was considered a powerful charm in conjuring. It is also called "Big John the Conjurer" and "Big John the Conqueror." In the southern United States it has been used to induce spells in voodoo ceremonies.

conk. A once popular hairstyle worn by African-Americans that straightens and waves curly hair. It probably takes its name from the slang *conk* for head and/or from the commercial preparation Congolene used to so fashion hair. The term is used widely throughout the United States, but its point of origin is unknown. It is also called a process. See also CONK OUT.

conker. This name for the horse chestnut is used mainly in England, but the English game called "conkers" is sometimes played by children in the United States. In the game, a horse chestnut is hollowed out with a penknife and is knotted to one end of a length of string. The children then swing their strings, trying to break each other's conkers. The game may have first been called "conqueroi," which was corrupted to *conker*, which in turn gave its name to the horse chestnut used in the game. It could, however, derive from the French *conque*, a "shell" for the game was originally played with small shells instead of horse chestnuts. See HONG KONG.

conk out. Partridge suggests that this aviation term for "the stalling of an engine," which is also applied to "someone who falls asleep, passes out, or dies," stems from the words "to be

conquered," an ingenious theory, while the *O.E.D.* says it may come from a Russian word meaning "to stall." The word seems to have been coined by World War I military aviators and may just be imitative of the "conking" sound a motor makes when it stalls. Another theory is that *conk out* derives from the *conk* that means "a blow on the head," which has been common in England and America since about 1870. *Conk* in this sense is a direct ancestor of the British slang word *conk*, for the head itself, known in England since the early 19th century: a blow on the *conk* was probably dubbed a *conk* because the blow was associated with the head (*conk*) and sometimes sounded like a "conk" as well. *Conk* for the head, in turn, is probably a variant spelling of the Latin word *concha*, "the head," the same word that gives us the *conch* (pronounced "conk") shell.

Connecticut. "The Nutmeg State," the fifth to enter the Union, in 1788, takes its name from the Mohegan Indian *quin-nitukqut*, "at the long tidal river," in reference to the state's location on what is now the Connecticut River.

Connecticut warbler. This bird is not seen much in Connecticut and New England. It is so named because the first specimen was collected in Connecticut, through which the bird was migrating. It is mainly found in south-central Canada and northern Minnesota, Wisconsin, and Michigan.

Connecticut Yankee. An old term for a very sharp and cunning person; Mark Twain used it in his *A Connecticut Yankee in King Arthur's Court* (1889), in which an ingenious Yankee mechanic, knocked out in a fight, awakens to find himself in Camelot.

connect the dots. To make a coherent picture out of a mass of information. The phrase seems to have been suggested by children's coloring books in which the kids consecutively connect a series of numbered dots and then color the resulting picture. The game dates back even before that to a game popular with children in the late 19th century. In the controversy about possible warnings of the 9/11 terrorist attack, government agencies were accused of failing to connect the dots, that is, not putting the information they had together and preventing the tragedy.

conniption fit. The English dialect word *canapshus*, meaning "ill-tempered, captious," is the ancestor of the Americanism *conniption*, for "a fit of rage or anger." A person can go into con-niptions, have a conniption fit, or go into a fit of conniptions—all mean the same. The expression is first recorded in 1833: "Ant Keziah fell down in a conniption fit."

consarn. A euphemism for *damn*. Jabez Stone's mother frequently admonishes him for using it in Stephen Vincent Benét's "The Devil and Daniel Webster" (1937).

conscience makes cowards of us all. The proverb was probably invented by Shakespeare in *Hamlet* (1601): "Thus conscience does make cowards of us all." However, the Indian scholar Bidpai (or Pilpay) wrote c. 326 B.C.: "Guilty consciences always make people cowards." Shakespeare may have known Bidpai's work, which was translated into English in 1570.

considerable. Considerably; noticeably; much; a non-standard usage common in the U.S. that actually dates back to 14th-century England. As in, “I’m feeling considerable better now.”

consigliore. A term that became familiar to millions of Americans through Mario Puzo’s *The Godfather* (1969) and the movies made from it. Puzo defined the word in the book: “The Consigliori was also what his name implied [*consigliore* in Italian means adviser]. He was counselor to the Don, his right hand man, his auxiliary brain.” Since that time *Consigliore*, often capitalized, has become in popular speech any person in an important advisory position.

consistency is the hobgoblin of little minds. It is hard to understand how Ralph Waldo Emerson, as reasonable and consistent as anyone and certainly no little mind, could have written this until you look at what he really wrote in his essay “Self-Reliance” (1841). There is quite a difference in the qualification he makes: A *foolish* consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines.”

conspicuous by one’s absence. Someone or something not present in a place where he, she, or it should be. The Roman historian Tacitus (ca. A.D. 56–120) seems to have coined this term (or the germ of it) in his *Annals* when he wrote of the funeral procession of Junia, the sister of Brutus and widow of Cassius: “The effigies of twenty highly distinguished families headed the procession. But Cassius and Brutus were the most gloriously conspicuous—precisely because their statues were not to be seen.” Brutus and Cassius, of course, were the leaders of the conspirators who assassinated Julius Caesar, both of them later committing suicide.

conspiracy of silence. I can find no earlier use of this term than that of popular Victorian poet Sir Lewis Morris (1833–1907), who complained that no one reviewed his work. Approaching Oscar Wilde, he said, “Oscar, there’s a conspiracy of silence against me. What shall I do?” Advised Oscar: “Join it.”

constable. *Constable*, for “a police officer,” comes from the late Latin *comes stabuli*—any count, or officer, of the stable, or “master of the horse,” under the Theodosian Code in about A.D. 438. In England the word first meant the chief officer of the court or of the nation’s military forces.

Constellation. Though there is some question about its authenticity (some historians say it was broken up in 1854 and an entirely new ship built in its place), the *Constellation*, launched in 1797, is still called the oldest American warship afloat and honored as a national shrine in its Baltimore Harbor slip. It was renowned in its time for its valiant battle against the French *Insurgente* in 1799. “We would put any man to death on this ship for looking pale,” said a combative officer of its combative crew.

contemplate one’s navel. The first recorded mention of this expression is in Robert A. Vaughan’s *Hours With the Mystics* (1860): “They call these mystics Navel contemplators.”

Vaughan’s mystics were meditating or reflecting on inner spiritual matters, but over the years the phrase *to contemplate one’s navel* took on the additional meaning of excessive self-absorption, what is also called “navel-gazing.” The best example history offers of navel (or umbilicus, or belly button) gazing is that *Guinness Book of Records* record holder who for over a period of 15 years has collected some 51/2 ounces of lint (fluff) from his navel, his goal being enough lint to someday make a pillow. Now that is really contemplating one’s navel. See PROUD BELOW THE NAVEL.

contempt. Disparaging disdain for something regarded as base or unworthy. The word, first recorded in 1393, comes to us from *contemptus*, the past participle of the Latin word for to despise. Writing to Mademoiselle Quinault, Voltaire was the first to point out what has become almost a literary maxim: “The only reward to be expected for the cultivation of literature is contempt if one fails and hatred if one succeeds.”

Continental navy. America had a colonial Navy until 1631, but this was replaced by the 53-ship Continental navy in 1776 after the break with Great Britain and the Revolutionary War. Commodore Esek Hopkins was appointed its commander in chief (the only time a navy head has held that title aside from presidents). The Continental Navy became the U.S. Navy in 1794.

contract hitter. A professional killer who gets a contract, often from the mob, to kill someone.

contranym. A word that can mean the opposite of itself, as, for example, *clip* (to attach or to cut off).

controller. See COMPTROLLER.

conventional wisdom. See AFFLUENT SOCIETY.

conversation; criminal conversation. As early as 1511 *conversation* was used as a synonym for sexual intercourse, Shakespeare employing it this way in *Richard III* (1594). *Conversation* derives from the Latin *conversari* “to turn oneself about, to move to and fro, pass one’s life, dwell, live somewhere, keep company with.” It was used in these senses long before it came to mean “to communicate by speech or writing” in the late 16th century. *Converse* no longer means to have sexual intercourse, but *criminal conversation*, used at least since the late 18th century, and often abbreviated to *crim. con.*, is still a legal term for adultery.

coo-chi-coo. Popular baby talk while talking softly to an infant trying to make him happy. Often a finger is gently wagged in the air (or the infant is tickled under the chin or on the tummy) while the conversation continues.

the cook did it. Antiquarian John Warburton (1682–1759) collected 50 or so Jacobean plays, three of which now survive as the priceless Lansdowne manuscripts at the British Museum. Most of the often unique plays were destroyed when

Warburton left them in the care of his cook, Betsy Baker, who burned them for fuel or used them as linings for her pie pans.

cooker. The usual British name for a kitchen stove. It is safe to say that the term is never used (except by Brits) in the U.S., where *stove* and *range* are the common terms. See RUMFORD STOVE.

cook his (her) goose. The Mad King of Sweden, Eric XIV, was supposedly so enraged because residents of a medieval town he had attacked hung out a goose, a symbol of stupidity, to “slyghte his forces” that he told the residents “[I will] cook your goose” and proceeded to burn the town to the ground. This story is generally disregarded, because Mad King Eric supposedly avenged his insult in about 1560 and the expression *cook his goose*—“to put an end to, ruin”—isn’t recorded until 1851. Attempts have been made to relate the phrase to the old Greek fable of the goose that laid the golden eggs. The peasant couple to whom that goose belonged, you’ll remember, killed it (and perhaps cooked it later) because they were eager to get at the golden eggs within its body, which turned out to be undeveloped in any case. The first recorded use of the phrase *cook his goose* is in a London street ballad condemning “Papal Aggression” when Pope Pius IX tried to strengthen the power of the Catholic church in England with his appointment of Nicholas Wiseman as English cardinal:

If they come here we’ll cook their goose,
The Pope and Cardinal Wiseman.

cookin’ with gas. Efficient gas ranges were common in the United States before World War I, models including the 1912 Lindemann with four burners, a broiler, and an oven for \$57. But starting in the 1930s, the U.S. gas industry began a public relations campaign trying to convince consumers to use gas rather than increasingly popular electric ranges. This resulted in the widely used saying *now you’re cookin’ with gas*, “now you’ve got the right idea, are on the right track,” etc. The same is true of the synonym *to cook on the front burner* (“Brother, you’re cookin’ on the front burner”).

Cook’s tour. *Cook’s tours* were invented by English travel agent and former missionary Thomas Cook, who founded the venerable Thomas Cook & Son travel agency in 1841. His first tour was a railroad excursion to a temperance convention, for which he charged a shilling a head. Cook’s first grand tour of Europe, which he organized in 1856, was more expensive, and its excellent organization, along with the high quality of tours to follow, made *Cook’s tour* the byword for any complete, well-organized travel tour. So reliable was the agency that the British government hired it to convey General Gordon and his troopers to the Sudan in 1884, making it probably the only travel agency ever to accommodate an army.

cool. *Everything is cool. That’s cool. Real cool. Cool, man. Cool.* Truly, *cool* has become among the most used or overused workhorse words in the language and its use seems in no way to be abating, though some people believe the “cool” invasion “sucks” (often *cool’s* overused antonym). No one is sure where *cool* as a term of approval comes from. It could derive ultimately from the British English *cool* meaning impudent or insolent.

According to this theory, the impudent meaning, first recorded in 1825, became extended to mean clever or shrewd by the time of World War I. This in turn probably yielded the black English *cool* for great, excellent, superlative, which arose during the early years of the Great Depression and has become more common ever since. *Cool* meaning to be under control, dispassionate, as in *play it cool, cool it, lose one’s cool, supercool, cool out, cool hand*, and even the old saying COOL AS A CUCUMBER, is a workhorse of a different color. It appears to ultimately date back to the year 1000, when it meant to cool down, be unemotional, and is found in the works of Chaucer and Shakespeare, among other great writers.

cool as a cucumber. It took scientists with thermometers until 1970 to find out what has been folk knowledge for centuries—that cucumbers are indeed cool, so much so that the inside of a field cucumber on a warm day registers about 20 degrees cooler than the outside air. The belief is ancient, but was first put on paper by Francis Beaumont and John Fletcher in their play *Cupid’s Revenge* (1610), when they referred to certain women “as cold as cucumbers.” The metaphor describes anyone self-possessed and unemotional. *Cucumber*, which derives from the Latin *cucumir*, was considered “bookish” and commonly pronounced *cowcumber* in England in the early 19th century, the way Sara Gamp said it in Dickens’s *Martin Chuzzlewit*. Roman emperor Tiberius is said to have enjoyed the “fruits” so much that he ordered them served to him every day, even though they had to be grown in greenhouses out of season.

Coolidge effect. Old Cal Coolidge isn’t remembered for his great wit; in fact, he is probably the butt of more jokes than any other American president (when told that he had died, Dorothy Parker quipped, “How could they tell?”). The *Coolidge effect* appears to be one more joke on Silent Cal. According to *The Penguin Dictionary of Psychology*, this is “the phenomenon that the males of many species will show high continuous sexual performance for extended periods of time with successive introduction of new, receptive females.” Our authority goes on to claim that “the name for the effect derives from an old and very bad joke about the American president Calvin Coolidge which space limitations prevent telling here.” I haven’t yet been able to find the old joke about the president who “looked like he’d been weaned on a pickle,” but when I do I’ll share it. See ALICE BLUE; I DO NOT CHOOSE TO RUN.

coolie. Coolies did not originally come from China. The word for an unskilled laborer almost certainly derives from the name of the aboriginal Kuli or Koli tribe of Gujerat, an Indian province. Ironically, coolie labor emigration came about mainly as the result of the outlawing of slavery in British colonies in 1834. Cheap labor was needed, and obtained, primarily from India and China in the form of natives hired under five-year contracts that were enforceable by prison terms. Conditions were often intolerable for these coolies, of whom the *Kulis* were apparently the first, their home on the northern Indian coast making it easy to recruit them. Many thousands of them died on the long voyages aboard coolie ships, which were often as inhuman as African slave ships. Another possible source for the word *coolie* is the Urdu or Tamil *kuli*—both words meaning “hireling”—but most writers support the Indian tribe theory.

Coombs test. A test devised by British immunologist Dr. Robin Coombs (1921–2006) to prevent negative reactions to blood transfusions.

coon. This racial slur against a black person may have nothing to do with the animal called a raccoon, or coon, which derives from an American Indian word. *Coon* here possibly comes from the last syllable of the Portuguese *barracoos*, which is pronounced *coon* and meant “buildings especially constructed to hold slaves for sale.”

a coon’s age. Meaning “a very long time,” *a coon’s age* is an Americanism recorded in 1843 and probably related to the old English expression “in a crow’s age,” meaning the same. The American term is an improvement, if only because the raccoon usually lives longer—up to 13 years in the wild—than the crow.

cooper. Dr. Kenneth Cooper, an American physician, wrote a book on aerobic exercise, including jogging, that was a worldwide bestseller in the 1960s. No word honors him in the U.S. for the many lives he saved, but in Brazil the word *cooper* means to go jogging. See AEROBICS.

Cooper’s Droop. *Cooper’s Droop* provides another name linked forever with female breasts (see CHARLEY). Honoring 19th-century British surgeon Sir Pastor Cooper, *Cooper’s Droop* contradicts the current case for nonsupport, or wearing no bra. It seems that Cooper discovered that going without a support, or without a firm enough one, can stretch Cooper’s ligaments, which attach the breasts to the body, causing the breasts to sag—a condition for which there is no recuperative exercise.

Coors. A beer brewed in Colorado and mainly popular throughout the West until relatively recent times.

to coot; old coot. Applied to tortoises, the obsolete verb *coot* meant “to copulate.” Recorded in 1667, its origin is unknown, but it is responsible for the name of two amorous American turtles commonly called the cooter (*Chrysemys concinna*). The first recorded use of the word: “The Tortoises . . . coot for fourteen daies together.” The Americanism *old coot* for a foolish or crotchety old man comes from the name of the coot, a North American rail of the genus *Fulica* noted for its laugh-like cry.

cooties. Our slang word *cooties*, for “body lice,” derives from the Malayan-Polynesian *kutu*, “louse,” which British sailors became familiar with (both word and nit) in the early years of this century.

coot stew. A few generations ago people actually enjoyed this dish. Wrote one feisty Yankee world traveler in the late 19th century: “Frederick’s pressed duck at the Tour d’Argent isn’t bad, but it can’t hold a candle to coot stew.” There is a real recipe for coot stew, but the anonymous old Maine recipe for it is more famous: “Place the bird in a kettle of water with a red building brick free of mortar and blemishes. Parboil that coot and brick together for three hours. Pour off the water, fill the kettle, and again parboil three hours. Once more throw off the

water, refill the kettle, and this time let the coot and brick simmer together overnight. In the morning throw away the coot and eat the brick.”

cop. Many authorities say that the word *cop* for a police officer has nothing to do with copper buttons or shields, tracing it back to the verb *cop*, which was recorded in the sense of “to catch or capture” in early 18th-century England. But a more colorful derivation is offered by Herbert Asbury in *The Gangs of New York*. Asbury traces the term to the early days of the old Bowery Theatre in New York. “For many years,” he writes, “it was one of the foremost theaters on the continent; its boards creaked beneath the tread of some of the greatest players of the time. It was then the largest playhouse in the city, with a seating capacity of 3,000, and was the first to be equipped with gas [lighting]. The structure was burned three times between 1826 and 1838, and again caught fire some fifteen years before the Civil War, when the police, recently uniformed by order of Mayor Harper, appeared on the scene in all the glory of their new suits and glistening brass buttons. They ordered the spectators to make way for the firemen, but the Bowery gangsters jeered and laughed at them as liveries lackeys, and refused to do their bidding. The thugs attacked with great ferocity when someone howled that the policemen were trying to imitate the English bobbies, and many were injured before they were subdued. So much ill-feeling arose because of this and similar incidents that the uniforms were called in, and for several years the police appeared on the street with no other insignia than a star-shaped copper shield, whence came the name *coppers* and *cop*.” See BOBBY.

copacetic. The word is also spelled *copesetic*, leading Partridge to suggest that this slang for “excellent, all right,” or “all safe or clear,” as he defines it, is a combination of *cope* and *antiseptic*. But the expression is American and was largely confined to black speech when first recorded in the 1920s. Luther Bill “Bojangles” Robinson may have invented *copacetic*, and the great tap dancer certainly did popularize it in his routines, giving the word wide currency. Robinson claimed he coined it when he was a shoeshine boy in Richmond. But a number of southerners have testified that they heard the expression used by parents or grandparents long before this. Another theory holds that *copesetic* is from a Yiddish word meaning the same. It’s also spelled *kopasetic* and *kopesetic*.

cop a plea. For a criminal to plead guilty to a lesser crime, thus escaping a worse punishment; also called plea bargaining; the term dates back to the late 19th or early 20th century. A recent *New York Times* headline (January 5, 2006) reads: Lobbyist Accepts Plea Deal.

Copenhagen. In 1807 the British destroyed the Danish fleet in a surprise attack off Copenhagen. As a result, all surprise attacks came to be called Copenhagens after the site of the original battle.

Copernican; Copernican theory. Early in the 16th century the Copernican theory established that all the planets, including the earth, revolve in orbits around the sun, in opposition to the older Ptolemaic theory (see PTOLEMAIC SYSTEM) that the

sun and planets move around the earth. It immortalizes Copernicus (1473–1543), the Latinized form of the surname of Mikolaj Koppernigk, whose work revolutionized astronomy, changing man's entire outlook on the universe and influencing a profound change on the inner man as well. The great astronomer, born in Prussian Poland, made his living as a physician and canon of the cathedral of Frauenburg. He completed his theory as early as 1530, when he circulated in manuscript a brief popular account of it, but *De Revolutionibus Orbium Coelestium* wasn't published until 13 years later, when he lay on his deathbed. Though the work was dedicated to Pope Paul III, it was placed on the church's index of forbidden books. *Copernican* also means revolutionary, in reference to the new system's impact on the world. See FLATEARTHERS.

copper. *Copper*, first recorded in English in about 1000, comes from the Low Latin *cuprum*, “metal of Cyprus,” the island of Cyprus having an exceptional wealth in copper in ancient times.

copperhead. Northerners sympathetic to the southern cause during the Civil War were called *copperheads* after the poisonous “sneak snake” of that name that strikes without warning and is so named for its copper color. The term was coined by a *New York Tribune* editorial writer on July 20, 1861, and is still used today to denote “an enemy sympathizer.”

copra. See COCONUT.

Coptic words. The Coptic language, now extinct, was superseded by Arabic, but it was the ancient Egyptian language most spoken in early Christian times. Two English words that come to us from Coptic are *oasis* and *ebony*.

coquette. This French word adopted into English signifies a flirt, a woman who makes teasing sexual or romantic overtures. In an etymological sense the word is oddly inappropriate, for it derives from the French *coquet*, a man who strutted about and was as promiscuous as a barnyard *coq* (cock) or rooster. *Coquette* is just the diminutive of *coquet* and literally means a woman who is a “little cock.”

coral. Its ancestor an old Greek word, *coral* first meant the beautiful red coral of the Red Sea and the Mediterranean. It was then extended to mean coral of all colors. In ancient times red coral was a highly prized precious gem and was believed to be a charm against shipwreck, lightning, whirlwinds, and shipboard fire. The Romans hung it in necklaces around the necks of infants to “preserve and fasten their teeth.”

cord of wood. Stacks of firewood were once measured with cords of rope, this practice giving us the term *cord of wood* for “a pile of split logs stacked eight feet long and four feet high and wide.” The expression was used, indicating the same dimensions, as early as 1616.

cordons bleu. See BLUE RIBBON.

corduroy. Plebeian cotton forms the basis for the ribbed cloth we know as *corduroy* today, but the fabric was once woven

from regal silk. The word had generally been thought to derive from the French *corde du Roi* (“cord of the King”), no one venturing to say which Gallic king first wore the material. But no such word has ever been used by the French, *velours à côtes* being their name for corduroy. Thus it has been suggested that the fabric had its origins in England, the *O.E.D.* pointing out that an 1807 French list of cloths used the English words “king's cordes.” The surname Corderoy or Corderoy is one possibility, from its first manufacturer's name, or it may be that some enterprising merchant, relying on snob appeal in advertising, christened the product “cord of the king,” using the French *corde du Roi* for even greater distinction. The word was first used for a cloth in 1787.

core. *Core* for the central part of something—anything from an apple to a doctrine—probably derives from the Latin word *cor*, meaning “heart.” Words like the French *coeur* and the Spanish *corazon* for “heart” suggest this, though the English word has not been traced back to the original Latin. *Core* was first recorded in 1398.

coreopsis. No one calls it the “bedbug plant,” but this beautiful long-blooming member of the daisy family has seeds that look like little bedbugs, which inspired gardeners of old to name it *coreopsis* from the Greek *koris*, “bug,” and *opsis*, “appearance.”

corker. Someone or something very good, remarkable, as in: “He's a real corker.” The term is American, possibly with Irish roots, and is first recorded in 1891.

corkers. The word has the same history and derivation as *corker* above, but corks were also nickel and dime bargains in the 1880s, F. W. Woolworth's Five and Dime stores being the best example. See FIVE AND TEN.

corn; maize. When in Keats's “Ode to a Nightingale” a homesick Ruth stands “in tears amid the alien corn” (the phrase is Keats's own and not from the King James Bible), she is standing in a field of wheat or rye, any grain but New World corn. The English have always used the word *corn* to describe all grains used for food and never specifically for the grain that built the Mayan and Incan empires. *Corn* derives from the Old Teutonic *kurnom*, which is akin to *granum*, the Latin word for grain. *Kurnom* eventually became the Old Saxon *korn* and then *corn* in Old English. The semantic confusion arose when English settlers in America named corn on the cob “Indian corn” soon after Squanto brought ears to the starving Puritan colony in Massachusetts; the settlers then dropped the cumbersome qualifying adjective “Indian” over the years.

The British call our “corn” *maize*, a word that derives from the Spanish *maiz*, which has its origins in *mahiz*, a Caribbean Indian tribe's name for the plant. But while “corn” is the most valuable food plant native to the New World and has a fascinating history and manifold uses (employed in more than 600 products, it may even have been used as a binding for this book), it is still little known in Europe. This is perhaps because most corn loses some 90 percent of its sugar content an hour after harvesting and can't survive a transatlantic voyage without losing practically all its taste, though today there are new varieties that hold their sugar much longer.

corn coffee. A substitute coffee made from parched corn and other ingredients. In 1844, an American traveler wrote: “The supper consisted of coffee made of burnt acorns and maize . . . He advised us to drink some of this corn coffee.” The traveler didn’t like it very much.

corn dodger. Usually a fried or baked corn bread cake, though it can be boiled. In fact, one theory has it that the name *dodger* for this southern treat comes from the boiling water moving them around in the pot.

corned beef. There is of course no corn in corned beef. The *corned* here is for the corns, or grains, of salt used in preparing this “salted beef.”

Cornelian cherry. The berries of several dogwood species are edible, but those of the Cornelian cherry (*Cornus mas*) have the longest history as a food. Called “cornet plums” in England, this tree’s scarlet berries were once used to make preserves, tarts, and drinks, and were even packed in brine to be used like olives. In addition, the Cornelian cherry has exceedingly hard wood that gives more heat than most firewoods, and is said to have been used to build the Trojan horse. Its bark yields the red dye used for the traditional Turkish fez, and the berries of a dwarf form of it (*Cornus sericea*) were believed by the Scottish Highlanders to create appetite, inspiring them to name the plant *Lus-a-chraois*, Gaelic for “plant of gluttony.” Like all species of dogwood, the Cornelian cherry’s bark is rich in tannin and has been used medicinally (just as the bark of the flowering dogwood, *Cornus florida*, was used as a substitute for quinine). Virgil in the *Aeneid* tells how Aeneas, landing in Thrace, pulls up several Cornelian cherry bushes and finds their roots dripping blood. Groans come from the hole and a voice cries out that his murdered kinsman Polydorus is buried there. Aeneas then performs funeral rites so that the spirit of Polydorus can rest in peace. See DOGWOOD TREE.

corner the market. This term arose in U.S. financial circles toward the middle of the 19th century. Used generally today, it originally meant only to buy “one kind of stock or commodity, thereby driving potential buyers and sellers into a corner because they have no option but to yield to the price demands of those controlling the stock.”

Corn Husker’s State. This is the popular nickname for Nebraska, deriving from the nickname of the University of Nebraska football team. But a 1895 Nebraska law made it officially the Tree Planters State. It has also been called the Beef State, the Antelope State, and the Black Water State (from the dark color of its rivers). Its humorous nickname the Bugeater’s State dates back to the 19th century, when Nebraskans were called bugeaters because of widespread poverty in the state.

corn in Egypt. An expression that has come to mean anything that can be purchased relatively cheaply in abundance. The Bible is the origin of the expression (Gen. 42:2): “And he said, behold, I have heard that there is corn in Egypt; get you down hither, and buy us from thence; that we may live, and not die.”

corn pone. *Corn pone* is a famous southern American cornmeal cake or bread, defined by *Bartlett* in 1859 as “a superior type of corn bread, made with milk and eggs and cooked in a pan.” It is often called “corn bread.” *Cornpone* has also come to be a derogatory term for someone or something rural and unsophisticated: “That’s a cornpone story.” The word *pone* comes from the Powhatan Indian word *apan*, something baked.

corny. *Corny*, for something old-fashioned, unsophisticated, and unsubtle, what is often called “tacky” in today’s slang, has its origin in America’s Corn Belt. Comedians playing to unsophisticated “corn-fed” audiences in the Midwest gave them the corn-fed humor they wanted, so much so that corn came to be known as “what farmers feed pigs and comedians feed farmers.” Soon *corn-fed humor* became simply *corny jokes*, the phrase possibly helped along by the Italian word *carne* “cheap meat,” being applied to the “cheap jokes” the comedians told. *Corny* eventually was used to describe anything old-fashioned, full of clichés, or mawkishly sentimental.

coroner. Shakespeare called a *coroner* a *crowner*, which is nearer to the word’s meaning of a “crown officer” (from the Latin *corona*, “crown”). Coroners, or crowners, collected the Crown revenues in Saxon days, and did not assume their official Crown duties of looking over corpses and holding inquests on suspicious deaths until the 18th century.

Corporal Violet; Little Corporal. Napoleon Bonaparte, the Little Corporal, who stood barely 5’2”, was nicknamed Corporal Violet by his followers after he was banished to Elba and boasted that he would return with the violets. His followers used the question “Do you like violets?” to identify each other.

corporation. *Corporation* can be either singular or plural, depending on whether the writer regards it as an entity or has in mind the individual stockholders. Corporations generally use the plural in their communications (“Write for our catalogue,” etc.), but it is equally correct to say “Sears have issued their catalog,” or “Sears has issued its catalog.” Many great writers have mixed a singular verb and a plural pronoun, as in the second example, including the framers of the Constitution. Tertullian, one of the fathers of the Christian church, coined the word *corporation* in A.D. 190 from the Latin *corporare*, “to make into a body,” using it in ecclesiastical law. By the 17th century the word began to take on the meaning that it has today.

corpse flower. A plant (*Amorphophallus titanum*) native to Sumatra that blooms after long periods. It is called the *corpse flower* because in bloom it smells like “spoiled meat or rotting fish,” which is close enough to a corpse. It is also regarded as an aphrodisiac by many Sumatrans, as the *phallus* in its name suggests. See the *New York Times* (September 10, 2006) for more on the storied plant.

corpus delicti. *Corpus delicti*, first recorded in 1832, is *not* the corpse in a murder case, as is commonly thought. The term, translating from the Latin as “the body of the offense,” refers to

the basic element of a crime, which in a murder would be the death of the murdered person.

corral. *Corral* has for well over a century had many more meanings than simply an enclosure for animals. In a letter to the *New York Tribune* in 1867, a rancher in the Montana Territory put it this way: “If a man is embarrassed in any way, he is ‘corraled.’ Indians ‘corral’ men on the plains; storms ‘corral’ tourists. The criminal is ‘corraled’ in prison, the gambler ‘corrals’ the [gold] dust of the miner.”

correspondence. *Correspondence*, from the Latin *correspondenta*, can be an exchange of letters and, in our time, e-mail. It can also mean similarity or analogy, and agreement or conformity. English clergyman and wit Sydney Smith (1771–1845) once wrote to a correspondent: “Correspondences are like small-clothes [knee britches] before the invention of suspenders: It is impossible to keep them up.” But consider that from 1961 until his bedridden wife died in 1985 Uichi Noda wrote her 1,307 long letters during his travels. This world record for correspondence was published in 25 books totaling 12,404 pages.

corridors of power. This expression was first a name for the British Whitehall ministries and the senior civil servants who run them, those top people who can make important decisions. Now *corridors of power* has come to be used all over the world. The term was popularized by C. P. Snow’s novel *Corridors of Power* (1964), but Snow himself had employed it years before in his novel *Homecomings* (1959). No one seems to know who coined it.

corsair. *Corsair*, which came into English in the late 16th century, was a Spanish word for someone between a pirate and a privateer, while “sea robbers” and “sea rovers” were German and Dutch inventions, also carelessly applied. At any rate, very few of these thieves of the sea were not the *hostes humani generi*, “enemies of the human race,” that the Roman orator Cicero called all pirates centuries ago—though it is important to note that almost all pirates euphemistically called themselves PRIVATEERS.

corsets in literature. The Italian poet Petrarch pitied the corseted Renaissance women, most of whom wore corsets that could be tightened by turning a key. “Their bellies,” he once said, “are so cruelly squeezed that they suffer as much pain from vanity as the martyrs suffered for religion.”

corsned. This unusual word means “an ordeal by bread.” In medieval times guilt was sometimes determined by making the accused swallow an ounce of bread or cheese consecrated by a priest—if the accused choked on the bread he was considered guilty. Blackstone explained in his *Commentaries* that people believed that the Almighty would “cause convulsions and paleness and [the bread would] find no passage if the man was really guilty, but might turn to health and nourishment if he was innocent.” The practice is recorded as early as the 10th century and the word *corsned* derives from the Old English *cor*, “trial,” and *snaed*, “piece.”

cortisone. Recognizing that the scientific name 17 α dihydroxy-4-pregnene-3,11,20-trione would never do, Dr. Edward C. Kendall, one of the pioneers in using that drug, cut out a lot of the letters and came up with *corsonone*. But his colleague at the Mayo Clinic, Dr. Philip S. Hench, thought that the prominence of *cor*, Latin for heart, might suggest that the drug had some use in treating heart disease. He accordingly inserted a *ti* in *corsonone* to make it *cortisone*. The new word was appearing in dictionaries by 1949.

corvette. Originally *corvettes* were cumbersome, ponderous freighters, “old baskets” that took their name from the Latin *corbis*, “basket.” Over the years, as the design changed, they became swift, streamlined armored cruisers.

Cosa Nostra. The Italian words mean “our thing,” and the mob has adopted them as another name for the Mafia. Wrote Mario Puzo in *The Godfather* (1969): “‘Sonna cosa nostra,’ Don Corleone said, ‘These are our own affairs. We will manage our world for ourselves because it is our world, *cosa nostra*.’”

cosine. See ACCORDING TO GUNTER.

cosmonaut. See COSMOPOLITAN.

cosmopolitan; cosmonaut. Socrates, Diogenes, and Alexander the Great all claimed to be “citizens of the world,” which in Greek is *kosmopolitis*, the root of our word *cosmopolitan*. Today we apply *cosmopolitan* to a man at home anywhere, the word’s latest relative being *cosmonaut*, the Russian space pilot.

Cossack. The Cossacks, quartered in 11 communities throughout Russia, were 4 million strong before the country’s revolution. In return for certain privileges their men were all required to give military service for 20 years, from age 18. These cruel, fearless fighters and expert horsemen, constituting an elite Russian cavalry, were used by the czars to suppress revolution and were much feared by the people. *Cossack* is still often used to describe a brutal or brave warrior. The Cossacks were descended from serfs who had fled their masters in the 15th to 17th century and settled on the border steppes, their name coming from the Russian *Kayaki*, “wanderers.” In World War II they were used as cavalry by the Soviet Union. See GUSSUK.

costermonger. An old rare British term familiar to Americans through their reading. *Costermonger* means a pushcart vendor of fruits and vegetables, but was originally, in the 16th century, an apple-seller, hawking large ribbed cooking apples called *castards* that are not grown today. *Monger* means a trader or dealer, deriving from the Old English *mangian*, to trade. Today supermarkets are far more common than costermongers in Britain.

cot. At first a *cot* was a light-framed Indian bed strung with ropes, and named by British traders from the Hindi word for the bed, *khat*, in the early 17th century. In time *cot* was applied to any narrow bed and even, in England but not the U.S., to a child’s crib.

cotangent. See ACCORDING TO GUNTER.

Cotterel's salad. Hanged for rape in the early 18th century, Sir James Cotterel had no chance to see his name immortalized in this historical pun. As the baronet was hanged for rape and rape is also the name of a rather hot salad green, *Cotterel's salad* became the synonym for a hemp rope, like the one that burned his neck.

cotton broker. One who brokers cotton, or in Erskine Caldwell's words (*God's Little Acre*, 1933): "Do you know why they're called brokers?" "Why?" "Because they keep the farmers broke all the time. They lend a little money, and then they take the whole dam'd crop. Or else they suck the blood out of a man by running the price up and down forcing him to sell. That's why they call them cotton brokers."

cotton-eyed. Eyes prominently white, as in the folk song "Cotton-eyed Joe."

cotton gin. See ENGINE.

cotton-pickin'. Despicable, wretched, damned; now sometimes used in a humorous sense. The term has its roots in the inferior status of poor farmers and field hands in the southern United States and dates back to the 19th century. The word is often heard in the expression "Get your cotton-pickin' hands off me!"

Cotton State. A nickname for Alabama, which is also called the Lizard State, and the Yellow Hammer State (after the beautiful yellow-hammer woodpecker, or after the yellowish home-dyed uniforms of Alabama Confederate soldiers).

cotton to. Cotton clings readily to many surfaces, and clung to the machines, clothing, and hair of the English weavers who worked with it in the 16th century. This clinging quality of cotton probably suggested the expression *cotton to*, "to like or be attracted to a person or thing." Although an earlier phrase used the word in essentially the same sense, its first recorded use by itself is in an old English play (1605): "John a Nokes and John a Style and I cannot cotton." Early technical processes of cloth manufacturing may have been responsible for the idea, as the *O.E.D.* points out, but it all amounts to the same thing—cotton sticking to something. No one has offered any proof that the expression derives from *kowtow*, or the French *côté*, "side," or from the obsolete slang *to cotton*, "to perform coition."

cottonwood blossom. In the Old West, an outlaw hanged from the limb of any tree was called a cottonwood blossom after the common cottonwood tree (*Populus balsamifera*), which was often used as a gallows tree. This use of the cottonwood led to the saying *have the cottonwood on him*, meaning to have the advantage over someone. Among the most unusual American desserts of pioneer days was cottonwood ice cream, a sweet, pulpy white mass scraped in the spring from the inner bark of the cottonwood.

couch potato. A phrase from a pun. *Couch potato* means a lazy, inactive person who does little else in leisure time save lie on the couch watching TV. As for the punning derivation of *couch potato*, first came the slang term *boob tube* for television, recorded in 1963. Someone who watched too much of the boob tube was shortly after dubbed a "boob-tuber." *Boob tuber* suggested the potato, a plant tuber, to Tom Iacino of Pasadena, California, in 1976, and he invented the term *couch potato*, which he registered as a trademark eight years later. Soon after his inventive punning, Iacino and some friends formed a club called the Couch Potatoes, which appeared in the 1979 Pasadena Doo Dah Parade, in which they lay on couches watching TV while their float was pulled through the streets. Little remained but for cartoonist Robert Armstrong to draw the familiar image of a couch potato—a potato sprawled out on a couch watching TV—for his book *Dr. Spudd's Etiquette for the Couch Potato* (1982).

Couéism. "Every day, in every way, I am getting better and better." The bowlegged man who repeated this famous psychotherapeutic formula too often and became merely knock-kneed is a myth, but Emile Coué (1857–1926) is not. The French pharmacist and hypnotist turned psychotherapist established a free clinic in Nancy in 1910. Here he put into practice his system of therapeutics, based primarily on his theory that, by means of autosuggestion, ideas that cause illness may be eliminated from the will. This power of the imagination over the will was best expressed in his formula, and Coué claimed to have effected organic changes. He lectured widely abroad and his healing methods became well known in the United States and England during the 1920s.

cough; whooping cough. *Cough* was defined by Dr. Johnson as "a convulsion of the lungs, vellicated by some sharp serosity!" First recorded in about 1325 it is of echoic origin, "representing various sounds and actions made with the breath," as are many words, including *whoop*. Thus *whooping cough* is an echoic term.

cough up. Four centuries ago *to cough up* meant to disclose. It did not take on its present meaning of "to pay up or hand over" until the end of the 19th century, probably originating in this sense as American criminal slang. One theory is that underworld suspects tried to bribe police officers with money instead of coughing up information about crimes, and that *cough up* then came to mean "pay up."

couldn't hit the broad side of a barn. Said of someone with very bad aim, usually with a gun. The expression, and variations on it, dates from the early 1900s.

couldn't hit the ground if he (she) fell. Said of a clumsy person, or even someone inept at any venture.

could talk a cat down out of a tree. Very persuasive, loquacious. "At any rate, she could talk a cat down out of a tree."

coulee. A deep ravine or gulch with sloping sides, formed by running water, that is often dry in summer; it can also be a

small valley or a small stream. The word derives from the French *couler* (to flow). Grand Coulee Dam is at the end of the deep, dry canyon called Grand Coulee that is cut by the Columbia River in the state of Washington.

coulomb. Charles-Augustin de Coulomb (1736–1806), a French military engineer who became a physicist when bad health forced his retirement from the army, did much work on electricity and magnetism. He designed his torsion balance for measuring the force of magnetic and electric attraction in 1777, while still an army engineer, but didn't publish his findings until about 10 years later, finding that Michell had invented the same system independently. Bearing his name are Coulomb's law of magnetism; the coulomb, a unit for measuring the quantity of an electrical current; and the coulometer, which is more often called a voltmeter. *See* VOLT.

countdown. Ninety-nine people in a hundred would say that the countdown, counting backwards for rocket launches, was invented at Cape Canaveral. But the technique was conceived and the word coined by film director Fritz Lang in his science-fiction classic *The Lady in the Moon*, to give the rocket launching in his realistic movie greater suspense. Persecuted by the Nazis, Lang fled Germany in the 1930s, but his countdown invention was used in early German rocket experiments leading to the V-2 and brought to America by German scientists who had worked on the early rockets.

counterpoint. Originally, *counterpoint* was the Latin musical term *punctus contra punctus*, "note against note." This means "melody against melody or simultaneous independent melodic lines," and was shortened to *counterpunctus*, which became the English *counterpoint* with its general as well as musical meaning. The word is first recorded in the early 16th century.

Countervailing Donor. *See* AFFLUENT SOCIETY.

count noses. This expression meaning to count the number of people in an audience may come from the old practice of horse dealers counting horses by the nose, or may go back to the Danes, who invaded Ireland in the ninth century and took a census by counting noses.

country bumpkin. *See* CLODHOPPER.

country matters. A coinage of Shakespeare's meaning sexual intercourse. It is from *Hamlet* (1601) when Hamlet asks Ophelia if she thought he meant "country matters" when he asked if he could lie in her lap.

country mile. Any long distance; a widely used Americanism that apparently originated a century ago in some rural area. Also called a country block. In baseball we often hear the expression "He hit the ball a country mile."

country pay. Trading in early American country stores was often conducted by barter, or country pay, as it was called, with customers exchanging corn, wheat, rye, and flax, or articles of

household manufacture like blankets and baskets for goods on the merchant's shelves. Homemade Indian brooms, maple syrup, aphrodisiac ginseng (sold in China), barrel staves, dried fruits, the potash and charcoal left when forests were burned down to clear land, even Indian wampum—all these and a hundred other things were used as country pay.

country stores. Far from being "fancy" or "citified," American country stores traded with customers everywhere in rural areas. For more than 20 years after paper bags were invented in 1850, clerks were still wrapping most packages into "pokes," brown wrapping paper adeptly shaped into cornucopias, folded over, and tied with string. *See* COUNTRY PAY.

count your chickens. *See* DON'T COUNT YOUR CHICKENS BEFORE THEY'RE HATCHED.

coup de grâce. French for a deadly blow, especially one for a fighter who can barely stay on his feet, the blow an act of mercy.

the course of true love never did run smooth. Another coinage or borrowing by Shakespeare, this one from *A Midsummer Night's Dream*, not *Romeo and Juliet*.

courting stick. A slender wooden tube about six feet long, round at one end and octagonal at the other, and fitted at either end for ear and mouthpiece. It is said by some historians to have been used by New England courting couples to speak to each other privately while in the presence of others. Some regard the story as folklore.

couvade. The custom among some American Indian tribes in which a father-to-be retires to bed and simulates childbirth. He believes that by doing this he prevents his regular daily exertions from harming the child, that he is magically assisting in the birth of the child, and that the act is "a symbolic assertion of identification of father and child." *Couvade* is from the French *couver*, "to hatch," which comes from the Latin *cubare*, "to lie down."

Coventry blue. *See* SEND TO COVENTRY.

cover girl. A term popularized by the Conover modeling agency, but dating back to the late 19th century, when it was suggested by the GIBSON GIRLS, who graced so many magazine covers. In fact, the term was originally *magazine cover girl*.

cowabunga! *Cowabunga!* has recently come to be used as a general cry of delight, due to its popularization by the Teenage Mutant Ninja Turtles and Bart Simpson of television fame. An earlier TV character, Chief Thunderthud of the *Howdy Doody Show*, used the expression in the 1950s, and it was picked up by surfers in the 60s.

coward. *Coward* derives ultimately from the French *coue*, "tail," and was possibly first suggested to hunters by the white tail of a frightened animal, such as a hare or deer, seen when it

turns and runs. In any case, *coue* became the French *coart*, which came into English as *coward*. “The cowards never started and the weak died on the way,” was a popular saying about those who made their way West on the Oregon Trail beginning in 1843.

cowards die many times before their deaths. A proverb of the late 16th century that Shakespeare likely improved upon in *The Tragedy of Julius Caesar* (1599): “Cowards die many times before their deaths. The valiant never taste of death but once.”

cowboy. A term first applied to members of Tory bands in New York state who rustled cows, but by the mid-19th century, it came to mean a man who herds and tends cattle on a ranch, most of his work done on horseback. Because of Hollywood westerns, *cowboy* has also taken on the meaning of any reckless person, such as a speeding automobile driver. Ironically, in recent times the word has been applied as much to handlers of sheep as to handlers of cattle.

cowboy boots; cowboy hats; cowboy shirts. Cowboys never called them this, at least not until the term was invented in the East in about 1912. Cowboys just called them *boots* or *cowhides* until then. In about 1860, however, cowboys did begin to wear boots with higher heels and pointed toes that better fit the stirrups. Edna Ferber describes a fancy pair in *Cimarron* (1930): “The gay tops were of shiny leather, and alternating around them was the figure of a dancing girl with flaring skirts, and a poker hand of cards which she learned was a royal flush, all handsomely embossed on the patent leather cuffs of the boots.” Similarly, cowboys simply called their hats *hats*, and there were many kinds of them, all with wide brims to keep the weather off their faces. *Cowboy hat* was coined in the East in about 1900. Real cowboys didn’t wear fancy bright-colored shirts until recently, either; the term *cowboy shirt* isn’t recorded until about 1930 when such shirts were popularized by cowboy movie star Tom Mix. See CHARLIE DUNNS; JUSTINS.

Cowboy President. A nickname given to President Theodore Roosevelt, who was a North Dakota ranchman from 1884–86 and remained interested in cowboy life.

cowboy saddle. The original name of the common western saddle, first recorded in the 1870s. Vaqueros developed this saddle with a high pommel and cantle from the war saddle of the Spanish conquistadores.

cowboys and Indians. No one knows exactly when children started playing cowboys and Indians in the 19th century (or possibly earlier), but the first recorded use of this name for the game has been traced to 1887.

cowgirl. When it was first recorded in 1884, *cowgirl* meant a female rancher or a rancher’s daughter; it later came to mean a cowpuncher as well.

cowlick. This word for “a tuft of hair that refuses to lie down” is British in origin. It almost certainly comes from a comparison with the projecting ridge of hairs on a cow’s hide, licked

into that shape by the animal. The word is first recorded in 1598.

cowpoke; cowpuncher. Cowpokes and cowpunchers were originally cowboys who poked cattle onto railroad cars with long poles. The terms, first recorded in 1880, were soon applied to all cowboys.

cow pony. This cowboy horse used to work cattle weighs 700–900 pounds and is 12–14 hands high. The name is first recorded in 1874. It is also called a cow horse.

cowslip. This pretty flower takes its name from the droppings, or slips, of cattle, because it grew best and thickest in English pastures where cattle grazed. The ancient word dates back to at least A.D. 1000.

Coxey’s Army. Over his long life—he died in 1951, aged 97—Jacob Sechler Coxey lived through everything from the Civil War to the atomic bomb. His Coxey’s Army was one of the first and best remembered groups to march on Washington, D.C., to demand change of some kind. Coxey’s followers were a band of unemployed workers who presented Congress with a “petition in boots” the year following the Panic of 1893. It was their leader’s plan to have Congress authorize money for public construction, which would provide employment, an idea that would be implemented during the Great Depression in the 1930s. But his highly publicized march from Massillon, Ohio on Easter Sunday failed to accomplish its purpose. The 100 men who started never swelled to 100,000 as he had predicted, and only about 500 reached Washington on May Day to protest their situation. “The Commonwealth of Christ” came to an anti-climactic end when its leaders were arrested for walking on the Capitol lawn.

coxswain. Several centuries ago a *coxswain* was the *swain* (“boy servant”) in charge of the small cock, or cockboat, that was kept aboard for the ship’s captain and used to row him to and from the ship. But with the passing of time the *coxswain* became the helmsman of any boat, regardless of size.

coyote. Its name deriving from the Nahuatl *coyotl*, meaning the same, the coyote (*Canis latrans*) is a canid distinguished from the wolf by its smaller size, slender build, large ears and narrow muzzle. *Coyote* is also used today to mean a contemptible person, a liar, or a cheat. In its most recent usage it describes a person who smuggles Mexicans across the U.S. border. Other names for the coyote include the prairie wolf, medicine wolf, and brush wolf.

Coyote State. A nickname for South Dakota, after the prairie wolf (*Canis latrans*) resident there. South Dakota has also been called the Artesian State, the Sunshine State, the Blizzard State and the Land of Plenty.

CQD; Mayday. One of the telegraph symbols for requesting aid was CQD (CQ, the general call alerting other ships that a message follows, and the *D* standing for “danger”). But these letters, proposed after the *Titanic* sank in 1912, proved

unsatisfactory for technical reasons and the easy-to-remember dashes and dots that coincidentally spell out SOS were retained. *Mayday*, not SOS, is the *oral* radio signal for requesting aid and probably derives from the French *maidez*, “help me.” See *sos*.

crabburger. A hamburger-shaped pattie made of crabmeat and served on a hamburger roll. A favorite in Louisiana.

crabby. Jacob Grimm contended that the German word *Krabbe*, from which our *crabby* ultimately derives, meaning “a cross, ill-tempered person,” owes its origin to the crab, “because these animals are malicious and do not easily let go of what they have.” But another authority has it that the primary reference here is “to the crooked or wayward gait of the crustacean, and the contradictory, perverse and fractious disposition which this expresses.”

crabs in a bucket. The words of a resident in a New York City housing project where feuds and crime have caused death and suffering (*New York Times*, August 23, 2004): “It’s crabs in a bucket out here. They’re all climbing up over each other to get out, but meanwhile they’re all pulling each other back down.” Crabs are commonly stored in a bushel basket or bucket when caught while crabbing.

crack. Very potent, addictive, chemically purified cocaine that is smoked through a glass pipe. Crack cocaine takes its name from the crackling sound the drug mixture makes when it is crystallized to form “rocks.” The term was first recorded in *Time* magazine in 1985 and only a year more passed before *crackheads* was applied to those addicted to the substance.

cracked; crack-brained. *Cracked* has meant “crazy” in English since at least the 16th century and was indeed Standard English until about 1830, when it was labeled slang. But the expression is much older than this, for a character in Aristophanes’s (ca. 448–ca. 388 B.C.) *The Frogs* is said to be *cracked*. A variant is *crack-brained*, first recorded in 1557.

cracker. A poor white person, especially one from Georgia (the Cracker State), so called, perhaps, from their use of cracked corn. Originally the expression was *corncracker*, someone who cracks corn to make grits or cornmeal. At one time (1766), *cracker* meant “a liar,” but when, after the Civil War, many people in the South became too poor to buy cornmeal and had to make their own, *cracker* came to mean a backwoodsman and then a poor white, generally a person living in the southern states of Georgia and Florida. Others say that cracker was originally applied to Florida cowboys and derived from their cracking their whips as they herded cattle. In any case, the term is generally an offensive one and is now regarded as a racial epithet that is a violation under the Florida Hate Crimes Act. Many people, however, are proud to call themselves *Georgia crackers*, *Florida crackers*, etc., just so long as they’re doing the calling.

cracker-barrel philosopher. One small-town Missouri storekeeper in 1829 sold a line of books that included Homer, Herodotus, Josephus, Shakespeare, Cervantes, Milton, Defoe, Bunyan, Smollett, Hume, Fielding, and Scott. A town’s most educated

man aside from the schoolteacher and the preacher, the country storekeeper was usually the local crackerbox philosopher, and he and others of his breed often sat around on the large cracker barrels in general stores philosophizing on all the issues of the day. Such wise rustics were probably called cracker-barrel philosophers at the time, though the term isn’t recorded until 1938 in a *Time* magazine piece.

crackerberry. No, this berry doesn’t taste like or resemble a cracker. *Crackerberry* is simply another name for the common huckleberry (*Gaylussacia baccata*), also called “cracker” and “black snap,” because its seeds crack or snap between biting teeth.

crackle. See ONOMATOPOEIA.

Cradle of American Liberty. A nickname for Massachusetts, where the Revolutionary War began. However, Boston is called the Cradle of the Revolution as well as the City of Nations. Faneuil Hall in Boston is also called the Cradle of Liberty.

Cradle of the Confederacy. A nickname given to Montgomery, Alabama, where the seceded southern states met on February 4, 1861, to form the Confederate States of America.

crag. See HOG.

cranberry. This berry grows wild in the marshlands favored by cranes, which leads some experts to trace it to the Low German word *kraanbere*. However, since the word is recorded in America as early as 1647—a time when it is unlikely that Low German terms would have much currency here—it could be that Americans coined the word independently, noting themselves that the berry grew where cranes lived.

crap; crapper. Poor Thomas Crapper, whose name is about as close as anyone would normally want to get to the fourth most expurgated word in the English language, was an Englishman who developed and manufactured the modern toilet bowl, which U.S. soldiers in World War I saw and used everywhere, bringing the name *crapper* home with them to America. The story of his life, of “the power behind the throne,” has recently been published under the title *Flushed with Pride*. It is apparently not a put-on, although it has the ring of a classic hoax. Crapper’s name, of course, is only a lucky or unlucky coincidence. It does not give us the word *crap* from the Dutch, *krappe*, “scraps,” which through the ages has been applied to of-fal or excrement. Crap is now most often used metaphorically to mean “nonsense or lying,” as in “That’s a lot of crap.”

craps. Dice have been found in ancient Egyptian tombs and in the ruins of Babylon, but the game of dice as we know it today dates to the early 19th century and may owe its name, craps, to a Frenchman. Johnny Crapaud was the sobriquet of French gambler Bernard Marigny, who introduced dice to New Orleans in about 1800 (*Crapaud* being slang for any Frenchman, owing to the belief that three *crapauds*, or toads, were the ancient arms of France). High-roller Marigny became associated with the game, which was named *Johnny Crapaud’s game*

after his nickname, this eventually shortened to *craps*. It is said that Marigny even named the present Burgundy Street “Craps Street” in honor of his favorite pastime.

crash. *Crash* in the sense of to *crash a party* is an Americanism that derives from *gate-crasher*, an American expression that originated in about 1920. The latter term has its roots in the idea of a person forcing his way through a gate into a sporting event. *Gate-crashing* is not much heard of anymore, but *crashing* and *party-crashing* are commonly used.

Crassus. *Crassus* describes “a rich man of unbounded avarice and ambition.” Marcus Licinius Crassus (ca. 115–53 B.C.), Roman “real estate dealer,” military leader, and statesman, personified these qualities. It is said that crafty Crassus made his fortune by forming his own fire-fighting company and forcing the sale of houses on fire by letting them burn until he could buy cheap—holding off his fire brigade until the sale was consummated. Other ploys of his included buying property at nominal prices confiscated from those outlawed by Sulla, under whom he served; by slave trafficking; and by usury. Thus he became the richest man in Rome and a force to be reckoned with in the corrupt politics of the day. Crassus suppressed the slave uprising of Spartacus in 71 B.C. and was elected consul with Pompey the following year, both men joining with Caesar in forming Rome’s First Triumvirate 10 years later. In this last capacity Crassus encouraged the infamous Cataline conspiracy. Finally, his ambitions outran his ability. Lusting for military glory, he launched a campaign against the Parthians in Syria. However, his army was routed by Parthian archers at Carrhae in one of the most notable examples of military stupidity in history. Crassus was captured by the Parthians and put to death; one story has it that they poured molten silver down his throat.

crate. Americans began using *crate* for a beat-up old car, or even boat or plane, in about 1920. However, the term dates back before that to 1917, when Partridge says it was first applied in the R.A.F. to old planes. The old biplanes would seem to resemble a wooden crate more than any car would and this is probably the word’s source. *Old crate* is more common than *crate* today.

crater. See PULLING A CRATER.

cravat. The modern *cravat*, another word for “necktie,” was originally a huge colorful linen or muslin scarf edged with lace and worn knotted loosely around the neck. The scarves were introduced into France by mercenaries enlisted in the royal Croatian regiment during the Thirty Years War (1618–48). French men and women, impressed by such sartorial splendor, adopted the scarves, tying them with long flowing ends and calling them *cravats*, after the French word (*Cravate*), for “Croatian.” Croatia was part of Austria at the time.

crawler. A relatively recent term for news information that moves across the television screen (sometimes continuously) while another program is going on. First recorded in 1967 as *crawl*, it is also called a *worm* or a *snake* today.

crayfish. The crayfish, not a fish but a crustacean, takes its name from an error of pronunciation. *Crayfish*’s source was the Old High German *kreliz*, “edible crustacean,” which became *crevice* in Middle English. But the last part of *crevice* began to be pronounced “fish” and by the late 16th century the word was being pronounced and spelled *crayfish*. *Crawfish* is a synonym, as is *crawdad* in the American South.

crazy as a bedbug. That great Yankee homespun humorist Seba Smith (1792–1868) may have coined *crazy as a bedbug* in the series of letters by “Major Jack Downing” that he published in his newspaper, *The Portland Courier*, in 1832: “Nabby ran about from house to house like a crazy bedbug.” *Crazy as a bedbug* means completely crazy. It may be that bedbugs scoot about crazily at times, or that their victims jump out of bed and run around crazily when bitten by them. The word *bedbug*, incidentally, is also an American invention.

crazy as a coot. As far back as the 18th century the coot’s stupid facial expressions and clownish behavior inspired the expression *silly as a coot*, *stupid as a coot*, and *crazy as a coot*. “During the breeding season *Fulica americana* acts especially odd, breaking water, flapping wings, sitting on their tails, slashing at one another with taloned feet and thrusting with their bills,” one expert explains. See BALD AS A COOT.

crazy as a loon; loony. The common loon (*Gavia immer*) is noted for what one expert calls its “mirthless laughter, a high, far-crying, liquid tremolo that sets your spine atingle.” This water bird’s name may come from the Dutch *loen*. The loon has nothing to do with the word *loony*, for “crazy,” which is a shortening of *lunatic*, but it does give us the expression *crazy as a loon*.

crazy as a shithouse rat. Very crazy, as in “These sumbucks are crazy as a shithouse rat.”

crazy bone. See FUNNY BONE.

crazy like a fox. The fox is, of course, traditionally regarded as sly and crafty. Its reputation for cunning led to the Americanism *crazy like a fox*, which is first recorded in 1908 and is used to describe someone who seems to be a fool but is putting on an act and is really exceedingly clever.

creasing. (1) A painful method of capturing a wild horse by shooting it in the crest of the neck above the cervical vertebrae and stunning it. The practice is recorded in Texas as early as 1820. (2) Barely wounding someone: “He just creased him.”

credenza. In the Middle Ages servants of the nobility were expected to taste a master’s food and wine before serving him, to help prevent their employer from being poisoned. This of course gave confidence or trust (*credenza* in Italian) to the master, and since the food or wine to be served at table was placed on the sideboard before being tested, the sideboard itself came to be called a credenza.

credibility gap. A lack of public confidence in the truth of claims or statements made by the government, large

corporations, politicians, or other individuals. The term originated during the Vietnam War, when there was widespread distrust of the veracity of official government statements. No one is sure who coined it.

credit. According to J. P. Morgan, loans are made safe by character rather than collateral. This idea is reflected in the word *credit*, which derives from the Latin *credo*, meaning “I believe,” which indicates that the person giving credit “believes” in the person to whom he gives it. The word, in its financial sense, was first recorded in 1542.

creepmouse. “Here comes a little mouse/creeping up to baby’s house” is the rhyme often used in this familiar game played with infants. Most common in the South under the name *creepmouse*, the game is played everywhere, the idea “to tickle babies to make them laugh by moving the fingers rapidly on their bodies as if a mouse was running over them.” The name *creepmouse* is first recorded in 1899.

creosote. *Creosote* was coined in the early 19th century from Greek words that the word’s inventor thought meant “flesh saving”; though the Greek meant something else entirely, *creosote* has never been abandoned. Creosote, an oily liquid with a burning taste and penetrating odor, is obtained by the distillation of wood tar, and it is a “flesh saver” because of its early use as a preservative of meat and fish. (Now, when used at all, it is to preserve wood.) The evergreen Creosote bush (*Larrea tridentata*), which has a strong odor of creosote, is now regarded as the world’s oldest known living plant; a specimen found in 1985 in the Mojave Desert is believed to be 11,700 years old, making it far older than the previous record holder, a 5,000-year-old bristlecone pine.

crêpe suzette. When or where crêpes suzette were invented in France remains a mystery, but the dessert pancake must have been named for someone’s favorite Susy, *Suzette* being the French diminutive for the proper name Suzanne. The thin, rolled pancakes, or *crêpes*, are generally heated in an orange-flavored liqueur sauce and flambéed at the table, making the blazing dessert one of the more spectacular glories of the French cuisine. One theory has the dish created by San Francisco chef Henri Charpentier, but it was more likely invented by a chef known only as M. Joseph at the Restaurant Marivaux in Paris and named in honor of actress Suzanne Reichenberg.

Crescent City. A nickname for New Orleans, because, according to Joseph Ingraham in *The South-West* (1835), “it is built around the segment of a circle formed by a graceful curve of the Mississippi River.”

cress. See WATERCRESS.

crestfallen. A term from the ancient “sport” of cockfighting, *crestfallen* refers to a defeated bird that stands waiting for the death blow with crest fallen to its beak, no longer erect and proud. Shakespeare appears to have been the first writer to apply the term to humans, in *Henry VI* (1593). See SHOW THE WHITE FEATHER.

cretan. Ever since the semilegendary prophet and poet Epimenides wrote that “the cretans are always liars, evil beasts . . .” *cretan* has meant a liar. Ironically, Epimenides came from Crete. Epimenides is said to have as a boy fallen into a sleep prolonged for 57 years and afterward to have lived a long life—which sounds a lot like a lie itself. A Cretan, capitalized, is an inhabitant of the island of Crete.

cretin. Our pejorative *cretin*, for “an idiot,” began as a kindly word. In the Middle Ages many deformed people with a low mentality lived in the Alpine regions, their condition resulting from a thyroid condition now known as myxedema, which was possibly caused by a deficiency of iodine in their drinking water. These unfortunates were called *Chrétiens*, “Christians,” by the Swiss because the word distinguished human beings like these people from brutes and they believed these childlike innocents were incapable of actual sin. But the kindly word went into French as *cretin*, meaning “idiot,” and retained the same meaning when it passed into English.

cretonne. About 1865 the French village of Creton in Normandy began making the heavy cotton material called “cretonne” in its honor. The material, with its colorful printed designs, is used mainly for slipcovers and draperies.

crib. Recent slang use of *crib* for “apartment” isn’t new at all; *crib* has been used in this sense since the early 19th century and not long after became slang for either a bed or a small room in a brothel big enough to contain just a bed. *Cribbing* from *crib sheets* on an examination, a kind of euphemism among students for cheating, has its origins in the use of *to crib* for “to pilfer or take furtively,” common since about 1740. The reasoning behind this last was probably the idea that cribs or wicker baskets were used by thieves to hide stolen articles. It is said that thieves in London carried baskets in which to stash stolen goods and that they were hard to spot because most women in the marketplaces carried the same baskets.

cribbage. The brilliant Cavalier poet and playwright Sir John Suckling (1609–41) is probably the only poet ever to invent a popular card game. According to his contemporary John Aubrey’s *Lives* (first published 1813), Suckling, the greatest gallant and gamester of his day, invented and named the game of cribbage in about 1630. He named the game for the set of cards in it called the crib. The only other author I can think of who invented a card game is American novelist Frank Harris. His pornographic game, called *Dirty Banshee*, came complete with playing cards depicting satyrs and goddesses engaged in sexual acts. It was never sold to the public.

cricket; it’s not cricket. In 1622 villagers in Boxgrove, England, near the cathedral city of Chichester, were prosecuted for playing the game of cricket on a Sunday, and replied that “It’s not cricket!” This is reportedly the first use of the expression and, clearly, if these villagers did say it, they were just trying to get out of paying a fine. In any case, over the years, perhaps after the villagers paid their fine, the phrase *it’s not cricket* came to mean it’s unfair, it’s “not playing the game.” I can find no

proof of the story except in the one source that gives it and the earliest I can trace the expression to is 1900, though it is foreshadowed in 1867. *Cricket* itself is of unknown origin, possibly coming from the Old English *cric*, “a staff,” for the bat used in the game. John Gunther in *Inside Europe* (1943) writes of the British national game of cricket “and the ritualistic attitude to fair play that it has proclaimed.”

cri de coeur. French for “an appeal to the heart,” as in “Kill me if you must, but let it be the last killing!”

crikey! An oath, meaning “Christ.” Since about 1835 the word has mainly been an exclamation. Also by crikey!

Crillon. “The bravest of the brave,” as he was called by Henry IV, is still remembered more than four centuries after his birth, by the famed Paris *hôtel* named in his honor. Louis Balbis de Berton de Crillon (1541 or 1543–1615) was a French soldier who joined the army when only 14, distinguished himself in many battles, was wounded numerous times, and became one of the greatest captains of the 16th century. It is said that in his old age Crillon was listening to the story of the crucifixion in church one day and, unable to bear the outrages Christ had suffered any longer, leaped to his feet, drawing his sword and crying out, “Where were you then, Crillon?”

Crimea. See CIMMERIAN DARKNESS.

criminal conversation. See CONVERSATION.

crimson. The kermes, or scarlet grain insect, which takes its name, ultimately, from the Sanskrit *krmi*, “worm,” gives its name to the red dye called *crimson* that is made from it, the word familiar in England since the 15th century.

Crippen. *Crippen* is used to describe any man wild and unkempt in appearance, but is more common for a doctor-murderer, of which there have unfortunately been too many. Dr. Hawley Harvey Crippen, English murderer, killed his wife, Cora, and was hanged for his crime on November 23, 1910. Captain Kendall of *The Montrose* transmitted a message on July 22 of that year leading to Crippen’s capture, marking the murderer the first to be caught by wireless telegraph. Dr. Crippen, born in Michigan in 1861, received his medical education in London and settled there in 1896 with his wife, who had previously appeared unsuccessfully in opera and on the music hall stage as Belle Elmore. Crippen fell in love with his secretary and on New Year’s Eve, 1909, poisoned his wife, dissected the body and, after destroying what he could by fire, interred the remains in the cellar. He and Ethel le Neve, who disguised herself as a boy, eventually fled England, but on the boat crossing the Atlantic Captain Kendall recognized them from their pictures and wired the police to come aboard when *The Montrose* reached Canadian waters.

crisis. *Crisis*, strictly speaking, means “the ability to judge,” deriving from the Greek *krinein*, “to decide or determine.” In ancient times physicians believed that “the humours of the

body ebbed and flowed like the tides of the sea.” *Brewer* notes that Hippocrates called these tidal days *critical days* and called the tide itself a *crisis*, “because it was on these days that the physician could determine whether the disorder was taking a good or bad turn.” From this original use the word *crisis* took on its present meaning of “a turning point.”

crisp. *Crisp* is British slang for what Americans call a potato chip. But in British English *crisp* also means to die by arson, as in “He was crisped in that big fire.” *Crisp bread* are crackers popular as a bread substitute for dieters. See CHIP BUTTY; TURKEY TWIZZLER.

Crispin. A word often found in literature for “a shoemaker,” but rarely used in everyday speech, *Crispin* commemorates the legendary brothers Crispin and Crispinian, patron saints of shoemakers and all leather workers, noble Romans who left Rome for Gaul in A.D. 303 to preach Christianity, supporting themselves by their craft. They made many converts and survived several attempts by Emperor Maximian to put them to death, but were finally beheaded. The martyrs also have St. Crispin’s lance, humorous for “a shoemaker’s awl,” named after them. St. Crispin’s Day is October 25.

criss-cross. *Criss-cross* sounds like a mere reduplication of sounds similar to zigzag, or ding-dong, but when we call a series of crossing lines *criss-cross* we are really saying Christ-cross, “the cross of Christ.” In the old 16th-century hornbook primer—originally one vellum sheet slotted into a wainscot board frame and protected by a thin transparent front covering of horn—only the alphabet, a few numbers, a little spelling, and the Lord’s Prayer were taught. Most teachers at the time were trained for the ministry and so there was a close connection between education and religion. Thus the alphabet printed on the sheet’s top line was preceded by a small cross that was referred to as the Christ-cross, or Christ’s cross. Soon the alphabet row came to be called Christ-cross row, this eventually becoming *criss-cross* row due to the duplicative tendency of tongues, or perhaps because the word was pronounced slurred, like “Christmas” or “Christian.” Eventually *criss-cross* alone was applied to any pattern of crossing lines similar to the cross at the beginning of *criss-cross* row.

critic. *Critic*, referring to someone who passes judgment on something, was first recorded by Shakespeare in *Love’s Labour’s Lost* (1588), but we don’t know if the bard coined the word, which is based ultimately on a Greek word meaning the same. Shakespeare is said to have been the first to record over 1,700 words.

critical list. Someone in critical condition medically has abnormal, unstable vital signs and other unfavorable signs such as loss of appetite and unconsciousness. Such a person is put on the “critical list” in a hospital, and this is reported to callers or visitors seeking the patient’s condition. The British call the same list by the somewhat less ominous term *danger list*. “He’s better now, he’s off the critical (danger) list.”

critic-proof. See CHEWING GUM OF AMERICAN LITERATURE.

critters. Though western movies have long favored this corruption of “creatures” to mean horses or cattle, *critters* has been used in this sense by Americans since at least 1782, when the term is first recorded.

Croatan. A person of mixed Indian, white, and black ancestry living mainly in North Carolina. The name is objectionable to many of these people, who, however, at first asked to be called Croatan Indians after Sir Walter Raleigh’s lost colony of Croatan off North Carolina. They consider the name “Cro” given to them by blacks and whites in the area even more offensive.

crocodile tears. Crocodiles can’t shed real tears, but the myth arose in early times that the creature moaned and cried to attract the sympathetic and helpful, and then snatched and ate its saviors while “wepyng” (“weeping”), as British adventurer and nature faker Sir John Maundeville, the first to record the legend, put it in about 1400. The story was repeated in *Hakluyt’s Voyages* (1600) and by many other writers including Shakespeare, and these hypocritical *crocodile’s tears* became a term for any feigned sorrow. The crocodile takes its name from the Greek *kroke*, “gravel,” and *crilos*, “worm,” the newly hatched animal resembling to early observers an oversized worm emerging from gravel on the banks of the Nile. In Africa the crocodile is sometimes called “the animal that kills while it is smiling.”

crocus. The showy solitary flower known as the crocus, one of the first flowers of spring, takes its name from the Greek word for saffron. The stamens of *Crocus sativus*, the autumn crocus, one of the 80 or so species of crocus, have indeed been used to make saffron since prehistoric times. It takes some 225,000 hand-picked stamens to produce just one pound of saffron, making it one of the world’s costliest spices. A crocus sack or gunnysack, a sack made of coarse material such as burlap, is so named because crocuses, or saffron, was first shipped in sacks made of this material. Hall of Fame sportscaster Red Barber (1907–92) sometimes used the Americanism *tied up in a crocus sack* for a game that was sewed up, a sure win for one team. See SAFFRON.

Croesus. When we say, as the ancient Greeks did, that a man is as rich as Croesus, we are invoking the name of the last king of Lydia (560–546 B.C.). As a result of his conquests and trade, King Croesus was regarded by the Greeks as the wealthiest man on earth, his riches proverbial even at that time. Croesus probably minted the first gold and silver coins. Although he had subjugated the Ionian cities of Asia Minor, he was friendly to the Greeks, making spectacular offerings to their oracles. According to a legendary story told by Herodotus, the Athenian Solon once advised Croesus that no man could be deemed happy, despite his riches, until he finished his life happily. Later, after Croesus had been defeated by Cyrus the Great and condemned to be burned alive, he supposedly cried out Solon’s name three times from the pyre. Cyrus, moved by his explanation and perhaps reflecting on his own fate, is said to have spared his captive’s life and they became great friends. The tale, however, is chronologically impossible and only one of a number of legends concerning this very real MIDAS.

croissant. Croissants were first made by the Viennese in 1689 to celebrate the lifting of the siege of Vienna by the Turks. The Viennese called the rich crescent-shaped rolls *Hornchen*, “a crescent-shaped object,” but today the French *croissant*, a translation of *Hornchen*, is their most common name throughout the world.

Cromwell; a Cromwellian. His name was once pronounced “Crumwell,” hence the historic Royalist toast, “God send this crumb well down!” Royalists had every reason to wish no good to this brilliant military leader and forceful statesman. A devout Puritan and member of Parliament who vigorously supported the Roundheads, Oliver Cromwell (1599–1658) eventually led his new model army to victory over Charles I’s forces in battle, had the king executed in 1649, and abolished the monarchy. In 1653 he became England’s Lord Protector, rejecting the offer of the crown but accepting what was an undisguised dictatorship. He who had established the Commonwealth and began his career as an opponent of absolutism had become an absolutist himself. To this day, his name is a synonym for *dictator*. Cromwell died a natural death, naming his ineffectual son, Richard, as Lord Protector on his deathbed. He was buried in Westminster Abbey, but when the Royalists regained power in 1660, his body was exhumed, hanged from a gallows, and beheaded. Such was their revenge on the man who had said of Charles I, “I tell you we will cut off his head with the crown upon it.” See also OLIVER; REGICIDE.

crony. *Crony* began its life as college slang for a long-time “chum.” That college wits at Cambridge coined it from the Greek *chronios*, “long-standing,” is evidenced by its spelling in the first recorded use of the term, which we find in Samuel Pepys’s *Diary* in 1665: “Jack Coles, my old schoolfellow . . . who was a great *chrony* of mine.”

crooked as a barrel of snakes; crooked as a dog’s hind leg; crooked as a barrel of fishhooks. Someone very dishonest or sly is *crooked as a barrel of snakes*, this Americanism dates back to the 19th century. The Americanism *crooked as a dog’s hind leg* means the same and was first recorded at about the same time, as does the reference to fishhooks. “He was the mayor but crooked as a barrel of fishhooks.”

crooked as a bull’s pizzle. An old American expression from pioneer days in the 1800s. *Pizzle* means, of course, a penis.

crooked as Crawley. Crawley Brook in England’s Bedfordshire runs into the Ouse River. It runs so crookedly, however, that it takes a boat 80 miles to go a straight distance of 18 miles, which led to the old saying *as crooked as Crawley*—very crooked indeed.

croon. A popular singer who croons doesn’t need much vocal equipment; he or she sings softly, sadly, uses the voice as little as possible. So *croon* has come to mean “to sing in a melancholy way,” a meaning far removed from its original one. Croon first meant “to utter a continued, loud, deep sound; to bellow as a bull, roar; to boom as a bell.” Bulls crooned to the hills in old poems by Burns and other poets, and crooning was associated

with hearty, virile singers. It was only by misuse through the years that the word changed in meaning from a roar to a lamentation and then to the singing we call crooning today, which approaches the bellowing of a bull only when the amplifiers are turned way up.

crop. A crop was originally the top or head of a plant; these were gathered during the harvest, of course, and came to be the general name for what was collected, the crop.

crops. See ROUNDHEADS.

croquet. Croquet was made famous on expansive, immaculate English estate lawns in the mid-19th century, but the sport's origins go back to France. There it was first played with a crooked stick called a *croche* (similar to a hockey stick) which eventually gave its name to the English game.

cross. See EXCRUCIATING.

cross-acrostic. Edgar Allan Poe's poem "A Valentine" is an example of the rare "cross-acrostic." The first letter of the first line, the second of the second, and so on, add up to the name of the woman to whom he sent the poem.

cross as a bear. "Major Smalleye war as made as a beaten b'ar," wrote Robert Bird in *Nick of the Woods* (1837). The still common Americanism for "quite cross or mad" goes back at least a decade earlier and is probably even older. See a BEAR FOR WORK.

crossing the bar. To *cross the bar* can mean to die or to cross from one side to another, over a bar or sandbar that separates the two. In this sense the phrase may derive from Lord Tennyson's poem "Crossing the Bar," which he wished to be published as the last poem in any collection of his work. The four-stanza poem—with the last lines "I hope to see my Pilot face to face / When I have crost the bar"—was written in October 1889, three years before the poet's death, as he crossed the Solent, the channel between the Isle of Wight and England's mainland. The celebrated poem took only a few moments to write, Tennyson jotting down the 16 lines (almost unchanged in the final version) on an old envelope.

crossing the line. Anyone who crosses the line has sailed across the international date line, an occasion that in days past was celebrated with an initiation ceremony for those who were crossing for the first time. The custom, still practiced to a limited extent, called for a sailor, dressed as King Neptune, and his court to seize novices and lather and shave them, among other antics.

crossing the Rubicon. The Rubicon, a river in Italy, marked the boundary between Roman Italy and Gaul, which was governed by Julius Caesar. When Caesar crossed the Rubicon in 49 B.C. he had invaded the Roman Republic and there was no going back. Thus the expression *crossing the Rubicon* became synonymous over the years with "taking an irreversible step."

cross of gold. It was the gold standard, "the standard of monetary value solely in terms of gold, the single standard," that William Jennings Bryan, an advocate of the silver standard, referred to when he made his famous Cross of Gold speech at the National Democratic Convention in Chicago in 1896: "You [the rich and powerful] shall not crucify mankind upon a cross of gold." On the gold standard since 1834, the U.S. legally adopted it in 1900, then abandoned it in 1933.

crowbait. This term for an old, decrepit horse is an Americanism first recorded out West in 1884. But it has its ancestor in the English *crow meat*, applied to both humans and horses, which was used back in the 16th century.

crowbar. This iron or steel bar used for prying is named for the resemblance of its forked end to either a crow's foot, beak, or tail—no one seems to be sure which. The term dates back to about 1825, but for four centuries before this, *crow* had been used for the tool, Shakespeare so calling it in his *Comedy of Errors*. See AS THE CROW FLIES.

crowder. A variety of black-eyed pea that grows crowded together in the pod; in his diary, George Washington records growing them, and they are widely grown today.

Crow-French, Nightingale-French. Founding the Dupont Company wasn't enough for Pierre-Samuel Du Pont de Nemours (1739–1817), the eccentric French aristocrat who had immigrated to the United States. An avid naturalist and bird-watcher he also compiled two dictionaries in 1807, entitling them *Crow-French* and *Nightingale-French*. In them he gave what he called the French translations of the various calls of the crow and nightingale. See CAT AND DOG TALK.

crowherd; crow-keeper; scarecrow. We've heard of sheepherds (shepherds) and cow-herds, but *crow-herds*? Crowherds, it seems, were boys or old men equipped with makeshift bows and employed to keep crows off planted fields. They were apparently first called crow-keepers, this term mentioned in Shakespeare's *King Lear*: "That fellow handles his bow like a crow-keeper . . ." A crow-keeper could also be called a scarecrow, a word first recorded as applying to humans hired to scare off crows (1553) and applied to "a straw dummy dressed like a man" about a half century later.

crown of thorns. To wear a crown of thorns means to suffer from a terrible burden, such as pain, anxiety, or guilt. The reference is to the crown of thorns placed on Christ's head to mock him before his crucifixion (Matt. 27:29). There are also two creatures, a prickly spurge plant and a spiny starfish, called the "crown of thorns." Dorothy Parker, summoned to appear before the House Un-American Activities Committee in 1952, had her own crown of thorns. She spent the evening before the dread day in a Washington, D.C., bar. There a loudmouth annoyed her, voicing his disapproval. Miss Parker rose and stared at him icily. "With the crown of thorns I'm wearing," she said as she turned and left, "why should I be bothered by a prick like you?"

crown vetch. A sturdy much-used weed to hold up embankments, preventing them from being rained out. They are also

beautiful en masse, coming in several colors, including purple and yellow.

Crows. The name, bestowed by themselves, of a tribe of Sioux Indians; they were known to dance a “crow dance” wearing a “crow belt,” which was a long bustle or tail made of crow feathers.

crow’s-feet. There is nothing new about this expression meaning “the wrinkles formed by age or anxiety about the corners of the eyes,” according to the *Oxford English Dictionary*. These wrinkles have been thought to resemble imprints of the feet of crows at least since Chaucer’s time. See AS THE CROW FLIES.

crow’s nest. Now a word for any lookout station, this was of course first a naval term referring to the highest lookout point aloft. It is said to have originated with the ravens carried in cages aboard Norse vessels; the cages were hoisted aloft when land was thought to be nearby and the birds were released, the ship following their direction to shore. In any case, crow’s nest is first attested in 1604, as a fort built high on a hill. It wasn’t recorded in its present nautical sense until the early 19th century.

crow tracks. See CHICKEN SCRATCH.

cru. A cru, its plural crus, is a vineyard or a region producing wine in France and also means a grade of wine, such as premier cru. The term, heard increasingly in the U.S. today, derives from the French *croitre*, to grow.

crucial. In the sense of decisive, or of supreme importance, *crucial* comes from Francis Bacon’s phrase *instantia crucis*, Latin for being present at the cross, which he used metaphorically for coming to a crossroads signpost or guidepost where a traveler has to continue one way or another. Isaac Newton and Robert Boyle later patterned their *experimentum crucis*, crucial experiment, on Bacon’s phrase.

crucifixion. See EXCRUCIATING.

crud. An Americanism dating back to the early 1920s in army use, *crud* doesn’t come directly from the Middle English *crudd*, for “coagulated solids of milk, or curds,” even though Shakespeare used the word *crudy* in this sense. It probably derives from the mispronunciation of the word *curdled* as *cruddled*, anything curdled or cruddled being undesirable crud. The word first described semen sticking to the body or clothes after sexual intercourse, and was probably so named for this, but is now used mainly as a synonym for feces, or, even more commonly, for “anything dirty, inferior, worthless, ugly, or disgusting.”

cruise. *Cruise* is from the Dutch *kruisen*, to cross or traverse. Today it mainly means to sail about on a pleasure trip, but since 1674 it has also meant to look in a public place for a sexual partner, which is mostly said of a prostitute.

crummy. Hoboes begging for food on the road often received bread and other baked goods that were so stale they were liter-

ally crummy, had begun to turn to crumbs. *Crummy* is recorded in this sense in the early 1900s and within 25 years or so meant “anything cheap or inferior.”

cry all the way to the bank. Usually said by or of someone who may not be a critical or professional success but nevertheless makes lots of money. The origin of the saying is unknown, but it is often attributed to the popular American pianist Liberace, who frequently used it.

crying bird. Limpkins (*Aramus guarauna*) are often called crying birds in America because the usual cry of this noisy bird “possesses a quality of unutterable sadness,” according to one ornithologist.

crying out loud. Probably coined in the 1920s, *for crying out loud* is a still common American euphemism that backs away from *for Christ’s sake* just when it seems you are going to say it.

crying towel. See GET OUT THE CRYING TOWEL.

cry one’s eyes out. To cry long and uncontrollably, as if one’s eyes would flood out of their sockets. Cervantes may have coined this expression, which is first recorded in *Don Quixote* (1604). There Sancho begs his master not to make him witness the Don’s acts of penance: “Good sir, as you love me, don’t let me stay to see you naked; ‘twill grieve me so to the heart that I shall cry my eyes out.”

cry over spilt milk. Canadian humorist Thomas C. Haliburton, whose Down East humor strongly influenced American literature, had a friend say this to his famous character Sam Slick, a shrewd Yankee peddler, in *The Clockmaker; or the Sayings and Doings of Samuel Slick of Slickville* (1836). “What’s done, Sam, can’t be helped, there is no use cryin’ over spilt milk” were the exact words. This is the first use of the expression in print, though to *cry over spilt milk* seems homely enough to be of much older origin. It expresses, of course, the folly of vain regret, meaning “to grieve over something beyond saving,” something you can’t do anything about. Haliburton, a Canadian jurist, later returned to England and became a member of Parliament.

crystal. *Crystal* derives from the Greek word for ice and, indeed, was an early English synonym for ice. When the first quartz crystals were observed by the ancients, they were thought to be merely ice crystals petrified by some natural process over the ages and were thus given the same name. We still retain the old meaning of crystal as “ice” in the fortune-teller’s *crystal ball*, which isn’t at all like crystal as we know it but does resemble a ball of ice.

cry uncle. See UNCLE!

Cuba libre. During the Cuban War of Independence in 1896 rebels drank a refreshing energizing drink of sugar and cold water that they called a *Cuba libre*, or “free Cuba.” Later some anonymous bartender added rum to the drink, which is now made of rum, cola, and lime juice.

cubane; basketane; squaric acid. Whimsical scientists named these molecules because of their shapes. In cubane the six carbon atoms are arranged in the form of a cube; basketane's molecular shape suggests a basket; and in squaric acid the atoms are arranged in a square.

Cuban sandwich. A name, generally confined to Florida, for a submarine or hero sandwich. The sandwich, often grilled, seems to have been introduced in the early 1970s.

cubbyhole. The *cube* or *cubby* in this term has nothing to do with bear cubs who live in a hole or den. *Cub* is a word still used in rural England for any small shelter, from a rabbit hutch to a chicken coop. Possibly first altered to *cubbyhole* by children in reference to a small hiding place, it came to mean "any small, snug place."

cuckold. Instead of building its own nest, the cuckoo eats other birds' eggs and lays its eggs in their place. The cuckoo eggs are then hatched by the sparrow, wagtail, yellowhammer, or whatever. For this reason the bird's name became the basis for the derisive word *cuckold*, "a husband whose wife has been unfaithful," a term that dates back more than a century before Chaucer's time. How cuckold came to be applied to the husband instead of the adulterer isn't clear, though Dr. Johnson believed that "it was usual to alarm the husband at the approach of an adulteress by calling out 'cuckoo,' which by mistake was applied in time to the person warned." See CUCKOO.

cuckold hazel. See WITCH HAZEL.

cuckold song. In *Love's Labour's Lost* (1595) Shakespeare writes:

The cuckoo then, on every tree,
Mocks married men; for thus sings he,
Cuckoo, cuckoo; o word of fear,
Unpleasing to a married ear.

See CUCKOLD.

cuckoo. The cuckoo was so named for the one-note song it repeats over and over. Why it became a symbol for stupidity in the 16th century isn't really known. Perhaps it got this reputation because it lays its eggs in other birds' nests, though many would consider this clever. Or we may owe this meaning of *cuckoo* to the folktale "Wise Men of Gotham," in which the villagers tried to prolong summer by fencing in the cuckoo so that it wouldn't fly off. See CUCKOLD; ONOMATOPOEIA.

cuckoo nest. See SNAKE PIT.

cucumber. See COOL AS A CUCUMBER.

cue. In the 16th century the Latin *quando*, "when," was abbreviated as *Q* on actors' copies of play scripts as a direction telling an actor when to begin speaking his part. *Q* was read and pronounced *cue*, the abbreviation becoming a word when it was finally written *cue* as well. No play manuscripts with *Q*'s

on them survive, but several 16th- and 17th-century writers tell this story and it seems likely, especially since *cue* is first recorded as *q*, in 1553: ". . . a man's *q* in a play."

cueball. A bald man, usually completely bald, is called a *cueball* after the round white cue ball used in the game of pool. This unflattering term is an American one dating back to World War II. See CUE STICK.

cue stick. The long, tapering pool and billiard cue stick or cue ultimately derives from the Latin *cauda* for "tail," which went through many changes in many languages before becoming *coe* and then our *cue*. See BILLIARDS.

cul-de-sac. In French *cul-de-sac* (from *cul*, "bottom or anus," and *sac*, "bag") means the bottom of the bag or sack. First used as an anatomical term, *cul-de-sac* was by the early 19th century a military term for the position of an army hemmed in on all sides with no chance of escape, and then came to mean "a dead-end street," one from which there is no exit save the entrance.

Cullinan diamond. Most famous of the precious stones bearing someone's name is the 3,106 metric carat (over 11/4 lbs.) diamond found in South Africa's Premier Mine in 1905. The stone, the largest diamond ever unearthed, was named after the mine's discoverer-director, Sir Thomas Major Cullinan. Presented to England's King Edward VII in 1907, it was cut into a number of specimens worth collectively over a million pounds. The Star of Africa made from it is, at 530.2 metric carats, the largest cut diamond in the world.

cumshaw. *Cumshaw*, for "a tip or gratuity," came into the language early in the 19th century from the Chinese Amoy dialect. The Chinese words it derives from were a traditional beggar's phrase that has a literal meaning of "grateful thanks."

cunt. *Cunt*, for the female sexual organ or vagina, dates back (as *cunte*) to Middle English, deriving from a Teutonic word corresponding to the Latin *cunnius*, which is related to the Latin *cuneus*, "a wedge." While the *O.E.D.* records *cock* and *prick*, it doesn't include *cunt*. Partridge calling this "an injustice to women." The word has been avoided in public speech since the 15th century and considered obscene since about the 17th century, though it has recently been included in dictionaries and is commonly printed in other works.

cupcake. Damon Runyon coined this word for a pretty young girl from "cake." It first appeared in a short story he wrote for *Collier's Magazine* (May 6, 1939). Other words he coined for a pretty young thing are *honeysuckle*, *nasturtium*, *pancake*, and *gorgeous*.

Cupid; cupidity. *Cupidity* doesn't derive from the name of Cupid, the Roman god of love and the son of Venus, the goddess of love. Rather both terms derive from the Latin *cupere*, to desire. Cupidity is eager or excessive desire to possess something.

cuppa. A cup of tea or coffee. Originally British slang, but now also used in the United States. First recorded in a 1925 P. G. Wodehouse story.

cuppa char. See TEA.

cur. This word, for a mean mongrel or worthless dog, is associated with the growling of such dogs. Used by Spenser in the *The Faerie Queene* (1589), *cur* is an old word that derives from the Scandinavian *kurra*, “to snarl or grumble.”

curare. This well-known deadly poison, with which South American natives sometimes tipped their arrows, takes its name from the *wrari* of the Brazilian Tupi Indians. In Tupi it translates as the poetically apt “he to whom it comes always falls.”

curate’s egg. See LIKE THE CURATE’S EGG.

curbstone broker. See NYSE.

curfew. Domestic fires left unextinguished at night caused many devastating fires in medieval times. Therefore laws made it mandatory to cover fires at night, church bells ringing at the hour (usually 8 or 9 o’clock) that this was to be done. The French for “cover fire,” *couvre feu* passed into English as *curfew* and the word later was applied to all regulations banning people from the streets at certain hours.

curie. Several words honor the husband and wife co-discoverers of radium, whose work laid the foundation for much later research in nuclear physics. The Curie point—the temperature at which the magnetic properties of a substance change—had been named for Pierre Curie (1859–1906) before he married Manya Skłodowska in 1895. He and Madame Curie, who came from Poland to study at the Sorbonne, worked together to extract from pitchblende the twin radioactive elements polonium and radium in 1898, the former being named for Mme. Curie’s native country. Marie Curie’s name has become more widely known than her husband’s; it was she who first suspected the presence of new elements in pitchblende, and she was a pioneer woman scientist as well. But the curie or curiegram—a unit of measurement for radioactivity—was named for *both* scientists in 1910, as was the radioactive element curium when discovered by Glenn Seaborg and his co-workers at the University of California in 1945. Both Curies shared a NOBEL PRIZE in 1903 for their discovery of radioactivity; Madame Curie received a second Nobel Prize, in 1911, for the discovery of radium. Their daughter, Irène Joliot-Curie, shared a Nobel Prize in chemistry with her husband in 1935. See POLONIUM.

curiosity killed the cat. A very familiar proverb that seems to have been recorded only as far back as the early 1900s. Perhaps it derived somehow from the much older (late 16th century) *care killed the cat*, but there is no proof of this thus far.

curiouser and curiouser. “Curiouser and curiouser!” Alice cried in Lewis Carroll’s *Alice’s Adventures in Wonderland* (1865)

and ever since the phrase has meant more and more curious, stranger every moment.

curlicism. John Arbuthnot remarked that English publisher Edmund Curll’s inaccurate biographies were “one of the new terrors of death,” but Curll was more notorious for the obscene books he published, these including *The Memories of John Ker of Kersland* (1728), *The Nun in Her Smock*, a book on flagellation, and other inspirational works. Today “the unspeakable Curll” might be a rich man, but in his time he was fined, put in the pillory, and imprisoned for his efforts. Among the greats who lampooned him were Jonathan Swift and Alexander Pope, who described him as “a fly in amber.” No one has identified the anonymous wit who coined the word *curlicism*, “literary indecency,” from his name.

curmudgeon. A resentful, bad-tempered person. To his embarrassment, Dr. Johnson in his great dictionary defined *curmudgeon* as “a vicious manner of pronouncing *coeur mechant*,” these last words being French for “heart” and “evil.” The truth is that no one knows the origin of *curmudgeon*, just that the word is first recorded in 1577. See PASTERNAK.

currants. Currants may taste nothing like them, but they take their name indirectly from grapes. In the early 14th century the chief place of export for the small seedless raisins made from grapes was Corinth, Greece. As Corinth was pronounced *Corauntz* in Anglo-French at the time, these dried raisins were called “raisins of Corauntz.” Later, the tart berries of the genus *Ribes* were given the same appellation because their plant clusters looked like the dried grapes or raisins of Corauntz. *Corauntz* was eventually corrupted to *currants* and this became the tasty fruit’s name. Wrote early-17th-century poet Richard Hughes:

Puddings should be
Full of currants for me:
Boiled in a pail
Tied in the tail
Of an old bleached shirt;
So hot that they hurt.

The most famous dish made from red and white currants has to be the seedless *currant jelly* once laboriously made by professional “seeders,” who used goose feathers to delicately pick out the currant seeds without damaging the berries. A currant preserve used to be a gourmet delicacy made only in Bar-le-Duc, France, on the banks of the Meuse. Ever since 1559, when Mary Stuart, later Mary Queen of Scots, was given a jar of the rare substance, it was presented to every visiting chief of state. But a decade ago its last manufacturer went out of business, and the gastronomical rarity apparently is no more.

currency; coins named after people. *Currency*, a synonym for paper money, applied to coins when the term was first used in late 17th-century England, there being no paper money at the time. It was so named because it was the current medium of exchange. The first European to sight the Pacific Ocean, Vasco Núñez de Balboa (1475–1519), has the balboa, Panama’s main monetary unit, named after him. Similarly,

the cordoba, Nicaragua's principal monetary unit, honors Francisco de Córdoba (1475–1526), who explored Nicaragua for Spain. The most renowned explorer of all, Christopher Columbus (1451–1506), who is called Cristóbal Colón in Spanish, has the colón, the basic monetary unit of Costa Rica and El Salvador, named in his honor. Two other heroes who have money named after them are the Honduran Indian chief Lempira, who valiantly resisted the Spanish conquest and is honored by Honduras's principal monetary unit, the lempiro, and Simon Bolívar, the Liberator, for whom both the country of Bolivia and its main monetary unit, the bolivar, were named. Up until the 1978 Iranian revolution, a gold coin called the pahlavi honored Reza Shah Pahlavi (1877–1944), longtime ruler of Iran. Similarly, the albertin of the Austrian Netherlands honored Archduke Albert, and the alfonso of Spain, Spanish king Alfonso.

current. In the sense of a large body of water moving in a certain direction, *current* derives from a Latin word meaning “running.” There are some 30 major currents. The world's greatest current is the West Wind Drift Current, which flows at one point at the rate of 95 billion cubic feet per second and ranges from 185 to 1,240 miles. The strongest current is in British Columbia's Nokwakto Rapids, which travel up to 18.4 mph. An unlikely story says Aristotle drowned himself because he could not explain the current off the island of Euboea in the Aegean. Scientists are still mystified by the current and can't explain why it reverses its direction some 14 times a day. See GULF STREAM.

curry favor. These words are literally meaningless. What does currying, or brushing, favor have to do with bootlicking, or ingratiating oneself by flattery? The expression shows that a mistake repeated often enough can become standard usage. *Favor* here is a corruption of *Fauvel*. Fauvel was a fallow-colored or chestnut horse in the early 14th-century satirical poem *Roman de Fauvel*. The equine hero of this popular French allegory symbolized cunning duplicity; thus cunning people who resorted to insincere flattery in order to gain someone's favor were said to curry Fauvel, to groom or brush the rascally fallow-colored horse so that he would look kindly on them and perhaps impart to them his powers of duplicity. *Fauvel* came to be spelled *favel* in English. But because *favel* sounded like *favor* to Englishmen and because the idea of gaining someone's favor is the essence of the phrase, the proverbial expression became *curry favor*.

curse. The word *curse* goes back to the Old English *curs* for the same, while the expression *curse word* for a profane or obscene word is first recorded in about 1870. Though it hasn't made the *Guinness Book of World Records*, the oldest curse yet found is: “If you do not obey this decree, may a donkey copulate with you!” According to Reinheld Aman, editor of *Maledicta*, this is found in documents of the Egyptian 23rd Dynasty (749–21 B.C.). “The curse” is still used for “menstruation” among a large number of American women. How old the expression is hasn't been established, but it is first recorded in John Dos Passos's *42nd Parallel* (1930): “She was afraid her period was coming on. She'd only had the curse a few times yet.” Variations are Eve's curse and the curse of Eve.

curse of Adam. The book of Genesis tells the story of God driving a disobedient Adam and Eve from the Garden of Eden and cursing the Earth with troublesome thorns and thistles as well as plants that produced good and plentiful food. This and “In the sweat of thy face shalt thou eat bread,” the need to work hard for a living, constitute the “curse of Adam.” God's judgment on Cain after he killed his brother, Abel, is the “curse of Cain,” that he always be on the move, “a fugitive and a vagabond . . . upon the earth.”

curse of Scotland. The nine of diamonds playing card. The name may have been suggested by the card's resemblance to the coat of arms of the Earl of Stair, who was hated in Scotland as a Judas for helping bring about the union with England in 1707. However, there are many other possible derivations for this expression first recorded in the early 18th century.

curse of the Bambino. A curse against the Boston Red Sox's winning baseball's World Series said to be in effect since Red Sox owner Harry Frazee sold Ruth to the New York Yankees in 1920.

curtain lecture. This is a reproof or lecture given in private or secret. *Curtain lectures* date back to the 18th century, when beds were often curtained and within the privacy of them wives often scolded or lectured their husbands, or vice versa.

curtain speech; curtain call. *Curtain speech* refers to the final speech of an act or scene or at the end of a play. It is also a brief speech by an actor, author, or producer, etc., after the end of a play in front of the closed curtain. *Curtain call* refers to the appearance of the performers or a single performer at the close of a play or opera in response to audience applause, as in “She took three curtain calls.”

curveball. The word *curveball* has been traced to William Arthur “Candy” Cummings (1848–1924), a Brooklyn Hall of Famer, who is credited with inventing baseball's curveball in 1867. Cummings's curve was inspired by the shells that he skimmed across a Brooklyn beach as a youngster, but he perfected it by experimenting with a baseball that he bought for a nickel.

Curzon line. The Curzon line separating Russia and Poland was suggested in 1919 by the British Conservative politician, statesman, and writer George Nathaniel Curzon, first marquess of Kedleston (1859–1925). Lord Curzon, secretary of foreign affairs at the time, served in many capacities for the British government. As viceroy of India from 1899 to 1905 and chancellor of Oxford University from 1907 to 1915, he became noted for his aloof regal manner, which was the butt of many jokes. Behind the facade was a witty, modest, friendly man whose sheer willpower overcame serious physical weakness (a curvature of the spine). Curzon failed in his ambition to become the British prime minister in 1923, when Stanley Baldwin was chosen over him. It is said that he died of overwork. The Curzon line was adopted as Poland's eastern frontier after World War

II, having been confirmed at Yalta in 1945. By the way, the diplomat wasn't at all like the rhyme composed about him at Balliol College in the late 1870s: "My name is George Nathaniel Curzon, I am a most superior person."

cush-cush. This South American relative of the yam is also called the yampee. *Dioscorea trifida*, which grows in the wild, is valued for its edible orange-colored tubers, but no one seems to know how it got the unusual name *cush-cush*.

Cushing's syndrome. A disease caused by the malfunction of the adrenal glands; its symptoms include obesity and high blood pressure. It was named after American brain surgeon Harvey Williams Cushing (1869–1939). Cushing, a leading medical writer as well, was also honored with a Pulitzer Prize in 1925 for his biography of Sir William Osler. See OSLERIZE.

cushlamachree. *Cushlamachree* is one of the few native locutions that Irish immigrants retained after being in America awhile. The expression is a corruption of the Gaelic *cuisle me chroidhe*, "vein of my heart."

cushy. Comfortable, undemanding, as in "She's got a cushy job." Here we have two good choices, neither of them certain. One theory says the word is simply a shortening of *cushion* with a *y* attached. Another traces the word, first recorded in 1916, to the Hindi *khuush*, pleasant, which British soldiers in India heard and added a *y* to.

cuspidor. James Joyce felt that *cuspidor* was the most euphonic word in English. The large receptacle for spit (especially from chewing tobacco) certainly doesn't inspire any pretty pictures to complement its sound, but it was commonly used wherever tobacco was chewed in the 18th and 19th centuries. The word derives from the Portuguese *cuspidor*, spitter, which comes from the Latin *conspuere*, to spit upon. It is also called a "spittoon." See HEMORRHOIDS.

Custer's Last Stand; Custer Battle; Custer Tragedy. Names for the battle of Little Bighorn in Montana on June 26, 1876, when a large force of Sioux wiped out U.S. forces serving under General George Armstrong Custer (1839–76).

customer. *Customer* first meant one who acquired ownership of a house after long use or possession, the word deriving from the Latin *custodia*, "guarding or keeping." *Customer* also meant a common prostitute in the early 17th century and was used by Shakespeare twice in this sense. By the end of the 15th century it took on its meaning of "one who frequents any place for the sake of purchasing." In this sense, it probably derived from the long-standing satisfied tenant who became an owner, the first customers giving all their business and allegiance to one merchant in early times.

the customer is always right. American retailer H. Gordon Selfridge (1856–1947) coined this slogan when he opened his huge department store, Selfridge's, in London. Before this,

while working for Marshall Field & Co. in Chicago, he coined the expression "——shopping days until Christmas."

cut. To cut someone, "to refuse to recognize someone socially, to shun him," was originally Cambridge slang, dating back to the 18th century. As one contemporary observer put it: "There are several species of the *cut* . . . The *cut direct* is to start across the street at the approach of the obnoxious person in order to avoid him. The *cut indirect* is to look the other way and pass without appearing to observe him. The *cut sublime* is to admire the top of King's College Chapel, or the beauty of the passing clouds, till he is out of sight. The *cut infernal* is to analyze the arrangement of your shoe-strings, for the same purpose."

cut a Dido. See CUTTING UP.

cut and dried. The allusion is probably not to ready-cut timber, as *Brewer* says, but to the cut-and-dried herbs that were sold in the herbalists' shops of 17th-century England. Used as remedies, herbs were more effective cut and dried than they were fresh picked, and herbalists stocked great quantities of them. The phrase came to mean "far from fresh, hackneyed," its first recorded use in this sense being in a 1710 letter to a preacher whose sermon was described as "cut and dry'd." The words also came to mean "clear cut." By the time Swift used the phrase for hackneyed literary style in his poem "Betty the Grizette" (1730), it was already fairly hackneyed itself:

Sets of phrases, cut and dry,
Ever more thy tongue supply.

cut a rug. To dance, usually to swing music. The first recorded use of the expression is 1941, during World War II, in a film.

cut a wide (big) swath. This Americanism, meaning "to make a big pompous show, to appear important," dates back to the early 19th century or before. "Gracious me! How he was strutting up the sidewalk—didn't he cut a swath!" exclaimed one writer in 1843. The term is a farming one, a *swath* being "the amount of grass or any crop cut down with one sweep of a scythe."

cute. First recorded in 1731 as a shortening of *acute*, in its sense of "keenly discerning or shrewd," *cute* over the next century somehow acquired its present meaning of attractive or pretty. Today the word is also used to mean contrived or overly precious.

cut it. See CAN'T CUT THE MUSTARD.

cut neither nails nor hair at sea. An old superstition, which goes back at least to the ancient Romans, has it that the cuttings of nails and hair were votive offerings to Persephone, queen of Hades. Therefore, Neptune, ruler of the sea, would be jealous and show his displeasure if sailors cut their nails or hair because he would believe his subjects were making offerings to another god and wreck their ship or drown them.

cut-nose woman. American Indian women of certain tribes whose noses were cut off because of their adultery. “He reckoned he . . . would . . . never have to cut Teal Eye’s nose off . . . the way a Piegan did when he found his woman had lain in secret with another man. It was a sight, the squaws you saw with no end to their noses. Cut-nose women, they were called,” wrote A. B. Guthrie Jr. in *The Big Sky* (1947).

cut off your nose to spite your face. “Henry IV well knew that to destroy Paris would be, as they say, to cut off his own nose in taking spite on his own face,” Gédéon Tallemant des Réaux wrote this in his *Historiettes* (ca. 1658), and the fact that he wrote “as they say” indicates that the expression is even more venerable. There may have been an old story about someone angrily cutting off a portion of the long, unattractive nose nature had cursed him with and succeeding only in spiting his face, but, if so, it is lost in time. The expression has survived so long and is still so frequently used simply because it is the most graphic, homeliest, and most grimly humorous of all sayings describing someone injuring himself through pique or anger.

cut of his jib. The cut of a jib, or foresail, of a ship indicates her character to a sailor and *jib* means “face” in sailor’s slang. Thus *don’t like the cut of his jib*, which probably dates to a century ago, translates as “I’m suspicious of him; I don’t like the expression on his face.”

cut one’s eyeteeth; wisdom teeth. The eyeteeth are those directly under the eye, the long, pointed canines that are cut at 14 to 20 months for the first set and at 11 to 12 years of age for the second set. To *cut one’s eyeteeth* means “to acquire wisdom and become worldly,” because the permanent set is acquired when a child is passing into young adulthood. It is usually said in the negative, as in *he hasn’t cut his eyeteeth yet*. The expression was used by Haliburton’s Sam Slick in 1837 and Emerson after him, but is British in origin, dating back to the early 1700s, when it was *to have one’s eyeteeth*. *Eyeteeth* commonly referred to the canine teeth of dogs and other animals long before this, so the phrase may have been suggested by the fact that fighting dogs were considered dangerous to handle when they developed their eyeteeth. Actually, the words better describe the emergence from infancy or childhood than they do the acquiring of wisdom. If wisdom does come with age, *to cut one’s wisdom teeth* is more appropriate, for these are cut at the ages of 17 to 25 and up to age 50! These molars have been known as *dentes sapientiae*, “teeth of wisdom,” since the time of Hippocrates.

cut one’s foot. *To cut one’s foot* means to step in cow dung. The euphemism, traced back to the Appalachians, was first recorded in 1899 and still has some currency in rural areas today. A variation is *to cut one’s foot on a Chinese razor*.

cut the Gordian knot. The workman Gordius of old was chosen king of Phrygia when he fulfilled an oracle’s prophecy that the first man to approach the temple of Jupiter driving a wagon would rule the land. King Gordius dedicated his wagon to the god and tied it to a temple beam with a knot of cornel bark so baffling that another oracle declared that the man who untied it would become lord of all Asia. Enter Alexander the

Great, whose hopes lie in that direction. “Well then it is thus I perform the task,” says the Conqueror, drawing his sword, and he simply cuts the knot in two. The whole tale is improbable, scholars say, although Gordium, ancient Phrygia’s capital, had been named for Gordius, the father of King Midas. But a Gordian knot remains an intricate problem and *to cut the Gordian knot* still means “to solve a baffling problem by a single bold and incisive act.”

cut the mustard. See CAN’T CUT THE MUSTARD.

cut the painter. A painter is the rope by which a ship’s boat can be tied to the vessel, a buoy, or a dock, and the word ultimately derives from the Latin *pendere*, “to hang.” Thus *to cut the painter*, a phrase much used in the 19th century, came to mean “to sever all connection with something.”

cut the tail off the dog. To make a long story short, to cut to the chase, as in “Well, to cut the tail off the dog, she finally divorced him.”

cutting horses. Edna Ferber described the breed in *Giant* (1952): “They’re what we call cutting horses. They’re used to cut out certain animals from the herd . . . You don’t have to touch the reins half the time. Just sway your body and your horse will turn your weight this way or that.”

cutting up; cut a Dido. *To cut a Dido*, or play a prank, though an almost obsolete expression, may be the origin of the more common phrase *cutting up*. The original cutup could be Dido, the legendary princess who founded and became queen of Carthage. The daughter of a Tyrian king, Dido married her uncle and upon his murder by her brother Pygmalion sailed to the African coast with his treasure. There she purchased land from a native chieftain, with the provision that all the ground she could cover with an oxhide would be hers. She then cut the hide into thin strips long enough to enclose a space that became the fort of Carthage. In a later myth, Virgil’s *Aeneid*, Dido is the lover of Aeneas and commits suicide upon her own funeral pyre when he abandons her at the command of Jupiter. It’s a shame to spoil a good story, but the legend of Dido probably arose because the fortress protecting Carthage was named *Bozra*. *Bozra* meant “fortress” in Phoenician but sounded like the Greek *byrsa* (oxhide) and most likely the tale was fabricated by some ancient Greek seeking to explain a fort named Oxhide.

cut to the quick. The QUICK in this sense is the most sensitive or tender flesh in the body, such as the flesh under the fingernails. The word derives from the Anglo-Saxon *cwicu*, “alive or living,” as do the adverb and adjective *quick*. *Cut to the quick* means to cut through the skin to sensitive, tender living tissue and, figuratively, to hurt someone deeply. It has been used both ways (by Shakespeare, Dryden, Swift, Defoe) since the early 16th century, sometimes in the form of *galled*, *touched*, or *stung to the quick*. Other instances of *quick* used in the sense of “living” are the biblical phrase *the quick and the dead* (“the living and the dead”), the phrase *quick with child* (“pregnant with living child”), and QUICKSILVER.

cutty; Cutty Sark. *Cutty* means anything short in Scottish English, a short person, a short-tempered person, etc. *Cutty Sark* is the name of a famous 19th century British tea clipper that took its name from Robert Burns's poem "Tam O'Shanter," in which a young witch wearing only a "cutty sark" (a short shift or nightgown) chases a Scottish farmer.

cut up (or split) the melon. This means to divide the spoils or profits of any kind, each person getting a slice of the tasty melon, or profits. Surprisingly, it is a relatively recent term, dating back only to 1906 or so, when it arose as Wall Street jargon for the distribution of extra, unexpected dividends to stockholders.

cut-ups. Works created by avant-garde American author William S. Burroughs (1914–97) "by slicing typewritten text into fragments and rearranging it to create a new narrative."

c.v. Short for *curriculum vitae*, generally called a résumé. "He asked me to send my c.v." The term *c.v.* has currency in the U.S. chiefly among academics.

cyberspace. American author William Gibson coined this word in a 1982 short story, popularizing it in his novel *Neuromancer* (1984). Based on *cybernetics*, first recorded in 1948, *cyberspace* is the space of virtual reality. Published in 20 languages, his novel earned Gibson the title "Father of Cyberspace." But the derivation goes back to the ancient Greeks, who coined it from their word *cyber*, meaning navigator.

cyclamen; sowbread. Here is a plant named for the shape of its bulbous roots, *cyclamen* deriving from the Greek *kyklos*, "circle." *Sowbread*, the plant's common name, referred to the fact that its fleshy roots were once fed to pigs.

cyclone. In December 1789 great storm waves claimed 20,000 lives in Coringa, India. Writing about the disaster 49 years later, British East India company official Henry Piddington coined the word *cyclone* for such a storm. Piddington thought he was using the Greek word for "the coil of a snake" in his coinage, "this expressing sufficiently the tendency to circular motion in these meteors," but he actually used the Greek for "circle," or "moving in a wide, whirling manner."

cymling. A stupid person is called a cymling head after the small, round variety of melon or squash called the cymling (*Cucurbita pepo melopepo*). In the U.S. the melon is often called a "simling," which better shows its origins—its name derives from its shape resembling the fruitcake called a simnel cake. Other names for the cymling are the scallop squash and the patty cake squash.

Cymru. The Welsh name for Wales, pronounced Kim-rue. The Cymry (pronounced Kim-ree) are the Welsh people.

cynic. Disciples of the Greek philosopher Antisthenes (born ca. 440 B.C.), especially his later followers such as Diogenes, were nicknamed *kunikos* (*cynikos*), "doglike" or "snarlers," for

their insolent, currish manners. Antisthenes and his pupils believed that independent virtue formed the sole basis for happiness, scorning freedom, honor, art, learning, health, riches—life itself. Insolently self-righteous, this small but influential band of ascetics derided all social customs, even sleeping in kennel-like quarters. From their churlishness and rude manners we probably have our word *cynic*, meaning "a surly, sarcastic person who believes that only selfishness motivates human behavior." It is possible, however, that this nickname is only a coincidence and that *cynic* derives from *Cynosarges* ("white dog"), the Greek gymnasium outside Athens where Antisthenes taught; or perhaps each word contributed to the other. (The gymnasium was supposedly named for a white dog that carried off part of a victim being offered to the gods.)

cynosure. Someone or something at the center of attention, such as a beautiful woman ("She was the cynosure of all eyes"). *Cynosure* derives from *kunosoura*, "dog's tail," the name the ancient Greeks gave to the constellation Ursa Minor, whose tail contains the North Star. Since navigators from earliest times used the North Star to guide them and were constantly observing it, *cynosure* came to mean anything that attracts attention.

cypress. An old legend tells of Cyparissus, a young friend of Apollo who died of grief because he killed Apollo's favorite stag. Cyparissus was transformed by the god into a cypress tree. Once cut, the cypress never grows again, which probably led to its being dedicated to Pluto, the king of the infernal regions in Roman mythology. For this reason the beautiful *Cupressus funebris* was often planted in cemeteries along the Mediterranean, and its wood was used to make coffins. The Romans placed a branch of cypress in front of their houses when a friend died, and the Turks customarily plant a cypress on the graves of loved ones. Cypress wood can last for hundreds of years. According to one story, the cypress gates of St. Peter's Church in Rome lasted from the time of Constantine to that of Pope Eugene III—more than 1,110 years—with no decay.

Cyprus. *Cyprus* was an important source of copper in ancient times, so much so that the country takes its name from the Greek word for copper.

Cyrano de Bergerac. The most famous proboscis in history. Anyone with a prodigious nose is likely to be called a Cyrano de Bergerac after the eponymous hero of Edmond Rostand's play of the same name (1897). Rostand's hero was based on the very real Savinien Cyrano de Bergerac (1619–55), who had a nose as long as his fictional counterpart's and whose exploits were even more remarkable. The historical Cyrano was a brave soldier, great lover, and eloquent, influential writer of comedies and tragedies. This swaggering swordsman fought countless duels with those foolish enough to insult or even mention his nose, and his duel single-handedly against 100 enemies while serving as an officer in the Guards is a well-documented fact. Cyrano's exploits became legend long before Rostand fictionalized him. Surprisingly, he did not perish on the wrong end of a sword. Cyrano died as a result of a wound caused by a falling beam or stone while staying at the home of a friend.

czar; tsar; tsarina; etc. When Julius Caesar died, his proper name was adopted by the Roman emperors, beginning with Augustus, and retained until the fall of the Holy Roman Empire. The title later came to be adopted by various European countries with minor changes in spelling. *Czar* or *tsar* can be traced to the old Slavic word *cesare*, deriving from “Caesar” and introduced into Russia in the 15th century as a title. The word, first spelled *tsear*, was applied to all Russian rulers after Ivan the Terrible assumed it officially to describe his rule as

king of Poland. The Russian tsar was considered to be appointed by God as head of church and state, his authority unlimited by laws of any kind; his wife was called the tsarina, his son the tsarevitch, and his daughter the tsarevna. Today *czar* is often used for “any tyrannical despot with absolute power,” a czarist being anyone who believes in such a system of government. Spelling of the word varies in both British and American dictionaries—neither form is accepted by all authorities in either country.

D

D. The letter *D* can be traced back to the ancient Phoenician and Hebrew alphabets, where it also had the shape of a rude archway or door (in Hebrew it is called *daleth*, “a door”). See DELTA.

d (for pence). Why is the British written abbreviation for pence or pennies *d* and for the pound *L*? The abbreviations actually go back to Roman times in Britain when the Latin *denarius*, “penny,” was shortened to *d* and *libra*, “pound,” was shortened to *l*.

D (River). This river, usually called the D, flowing into the Pacific Ocean from Devil’s Lake in Lincoln City, Oregon, is the shortest-named body of water anywhere. For the longest-named body of water see LAKE WEBSTER.

Da. A widely used Irish term meaning a father, grandfather, or any respected elderly man. *Da* is the title of an award-winning play later made into a motion picture.

Da Brooklyn National Antem. Written years ago by Orter Anonamus when Brooklynites all spoke Brooklynese:

Da Spring is sprung
Da grass is riz
I wunnah weah da boidies is?
Da boid is on da wing?—dat’s absoid!
From what I hoid da wing is on da boid.

Dachau. The first of the Nazi death camps, opened in 1933. By the time it was liberated 12 years later, over 200,000 inmates had been detained there, more than 35,000 of them killed or starved to death.

dachshund. This low-to-the-ground, sausage-shaped dog dates back at least to the early Egyptians, but it took its name from the German *Dachs*, “badger,” plus *Hund*, “hound,” “badger hound.” The breed was originally used in Germany for hunting badgers.

Dada. An artistic and literary movement founded in Switzerland in 1916 that flouted conventional values and advocated works marked by nonsense and incongruity. The child’s word *dada* for a plaything admirably suited the group’s purpose and was adopted, according to the old story, by one member randomly opening a dictionary and pointing randomly to the word. According to the tale, artist Tristan Tzara made the selection and (surely one of the most exact descriptions of the coining of a word) he made it at 6:00 P.M., February 8, 1916, at the Terrace Cafe in Zurich.

Daedal, Daedalist. See LABYRINTH.

daffodil. No one knows why people began to call the flower asphodel, which carpeted Elysium, an affodill, in the 15th century. But the mispronunciation stuck and eventually *affodill* was corrupted further to *daffodil*, which remains the flower’s name today. The best explanation, according to the *O.E.D.*, is that the change was “due to childish or playful distortions, as in *Ted* for *Edward* or *tante* for *aunt* . . .” *Daffodil* and *narcissus*, though there are differences between them, are often used interchangeably for *daffodil*. The narcissus takes its name from the mythological youth who was so enamored of his own reflection that after long gazing at it he was changed into the flower. The “dainty daffodil,” the “lamp of beauty,” is perhaps English lyric poetry’s favorite flower next to roses and rosebuds, from Herrick’s “Fair daffodils, we weep to see/You haste away so soon”; to Wordsworth’s host “of golden daffodils;/Beside the lake, beneath the trees,/Fluttering and dancing in the breeze . . . /Continuous as the stars that shine . . . /Tossing their heads in sprightly dance . . .” See also NARCISSUS.

dago; wop; guinea. *Dago* is an offensive word that may derive from the name of a saint. Mencken traces this disparaging term to 1832, when it was used in Louisiana to describe a Spaniard, not an Italian. But *dago* is a corruption of the very common Spanish name Diego, or alludes to St. Diego, Spain’s patron saint, or both. *Diego* was used in Elizabethan times for a “swarthy” Spanish or Portuguese seaman. As recently as the

beginning of this century the word also meant the Italian language, as well as a professor or student of Italian. The pejorative term is not heard as often today as its derivative, *dago red*, “any cheap wine.” *Dago* may also come from “day come, day go,” a term reputedly used by early Italian laborers in expressing their patient philosophy. Far more offensive is *wop*, which arose toward the end of the 19th century. This ugly word comes from a relatively innocuous one, the Neapolitan *guappo*, a term used by immigrant laborers signifying a showy, pretentious person. Similarly, the offensive *guinea* may have originally referred to Italian laborers working for the equivalent of a guinea a day.

daguerreotype. See DIORAMA.

dahlia. Over 14,000 named varieties of dahlias have been cultivated and crossed from the single plant that the German naturalist, Baron Alexander von Humboldt, discovered in Mexico in 1789. Sent to Spain in that year, the specimen was named there by the head of Madrid’s Botanic Garden, Professor Cavanilles. But Cavanilles named the plant for a fellow professor, ignoring Humboldt. Thus the entire *Dahlia* genus honors the Swedish botanist and pupil of Linnaeus, Anders Dahl (1751–89), who had died at about the time the flower was discovered. The first single-flowered dahlia bore little resemblance to the giant, colorful, double-flowered species so important in gardens today. There was, incidentally, a time in the 19th century when dahlia roots were touted as an excellent substitute for potatoes. They were easy to grow and unsusceptible to blight, said their advocates, but unfortunately no one seemed to like the way they tasted.

daily bread. The essentials, the food or money needed in order to live. The common term is from the Lord’s Prayer (Matt. 6:9): “. . . Give us this day our daily bread.”

daisy; fresh as a daisy; up-see-daisy. *Daisy* still sounds like the Old English word for the flower, “day’s eye,” or “eye of the day.” *Bellis perennis* was so named in allusion to its appearance and because it closes its ray in the evening to conceal the flower’s yellow disk, and opens it again in the morning. *Fresh as a daisy* is first recorded in Captain Frederick Marryat’s *Peter Simple* (1833), but there is no telling if he coined the phrase. The daisy takes its scientific name *Bellis* from a Roman legend about Belides, one of the Dryads. Vortumnus, the god of orchards, beheld and admired Belides dancing in the fields and pursued her. Wishing to escape him, she was changed into the little flower called *bellis* by the Romans. *Up-see-daisy*, a variation on the earlier *up-a-daisy*, is a playful term said when lifting a small child up into the air, often by the arms. The “daisy” could refer to the little child, pretty or delicate as a flower plucked from the earth, although the *Oxford English Dictionary* prosaically suggests that the word is patterned on “lack-a-daisy” and “lack-a-day.” In any case, the term is first recorded in Jonathan Swift’s *Journal to Stella* (1721): “Come stand away, let me rise . . . So-up-a-dazy.” Other variations include “oop-a-daisy,” “up-see-day,” “up-see-daddy” and “up-a-deedies.”

daisy cutter. A 15,000-pound U.S. bomb that explodes just above the ground. The euphemistic name was first heard during the war on terrorism in 2001.

Dakota. The largest tribe of Siouan Indians, their name deriving from an American Indian word meaning “allies.”

Dalai Lama. See LAMA.

Dallia blackfish. A tasty fish named in honor of William Healey Dall (1845–1927), an authority on marine life for the Smithsonian Institution. Dall wrote one of the first books on Alaska’s immense resources, and the edible blackfish of Alaska called the Dallia, a species of the genus *Dalliidae*, does honor to his pioneer work in the territory.

dalmatian. A distinctive spotted dog with an affinity for horses that made it the ideal coaching dog.

daltonism. So determined was British scientist John Dalton (1766–1844) to solve the mystery of color blindness that he willed his eyes for study after his death. His pioneering paper, “Extraordinary Facts Relating to the Vision of Colours” (1794), is the earliest account of the problem, based on observations of himself, his brother, and other similarly afflicted persons. As a result of his descriptions, *daltonism* became a synonym for color blindness, especially the inability to distinguish between the colors red and green. One of the great pioneers in science, the industrious Dalton also kept a meteorological diary in which he entered 200,000 observations over 57 years. This diary both resulted in a remarkable book on weather conditions (*Meteorological Observations and Essays*, 1793) and contained the germs of his atomic theory, Dalton’s major scientific contribution and the basis of modern chemistry.

dam. *Dam* for the female or mother of a horse, sheep, or other animals is simply a shortening of the word *dame*. It is first recorded in 1330.

damask rose. Brought to England as a present for Henry VIII by his physician in about 1540, the famous damask rose is named for the Syrian city of Damascus. Long used in making attar of roses, *Rosa damascena* was then only pink in color, which led poets to write of fair ladies with damask complexions. See ROSE. It is generally thought that Damascus is the oldest city in the world, dating back more than 2,000 years before Christ. It was while traveling to Damascus that Saul (St. Paul) became a convert to Christianity, giving us the expression *the road to Damascus* for any sudden personal conversion.

Dame Partington. English politician and author Sydney Smith alluded to the legendary Dame Partington in an 1831 speech condemning the opposition of the House of Lords to reform measures. Dame Partington had tried to mop up the Atlantic Ocean, which was flooding her cottage in Devon. Thanks to Smith, her name became synonymous for “anyone futilely trying to hold back progress or natural forces.”

Damien’s bed of steel. “Such was the end,” wrote an eyewitness, “of that poor unfortunate who it may well be believed suffered the greatest tortures that a human being has ever been called on to endure.” He was referring to the public execution of Robert-François Damien (1715–57), the madman who tried

to assassinate France's Louis XV and inflicted a slight knife wound on the monarch. Early that morning Damien had been racked and wounded deeply with glowing forceps, his torturers pouring molten lead, boiling oil, pitch, and sulphur into his open wounds. His screams never ceased and the stench pervaded the entire court, but many of the thousands who turned out to witness the "spectacle" applauded the prisoner's agonies. Damien's limbs were finally ripped off one by one in the Place de Greve, the man suffering longer because four wild horses couldn't pull him apart and two more had to found. Until nine o'clock at night the pathetic creature stayed alive, and it is said that his black hair turned completely white, that his rump still twitched up until the moment what was left of him was burned at the stake. Damien's bed of steel has become a symbol for the barbaric, sadistic cruelty he suffered.

damn. Though it is first recorded in the 16th century *damn* is a much older oath than that. It derives ultimately from the Latin *damnare*, to condemn. As mild an oath and commonly used as it is, *damn* is still often considered an objectionable word in many quarters.

damn, damn, damn, damn. The high-powered salesman Rowland Hussey Macy failed in at least a dozen ventures before he became arguably the most successful merchant in the world. He did so badly in 1845, in fact, that he had to abandon his dry goods shop, writing on the last page of his account book:

I have worked Two Years for Nothing.

Damn.

Damn.

Damn.

Damn.

See also DRY GOODS STORE.

Damnation Alley. An alley in Boston so named because it was wide enough for only one oxcart, so that whenever two teamsters met going in opposite directions the air was blue with *damns* and much stronger curses.

damned if you do, damned if you don't. Early American evangelist Lorenzo Dow (d. 1834) coined these words while condemning other preachers who "make the Bible clash and contradict itself, by preaching somewhat like this: 'You can and you can't—You shall and you shan't—You will and you won't—And you will be damned if you do—And you will be damned if you don't.'"

Damn the torpedoes! Full speed ahead! See TORPEDO.

damn with faint praise. Alexander Pope invented this phrase when satirizing the scholar and author Joseph Addison as Atticus in 1723. The full paradox is seldom quoted anymore but Pope wrote that "Atticus" would:

Damn with faint praise, assent with civil leer,

And, without sneering, teach the rest to sneer.

Damn Yankee. See PEDDLER.

Damon and Pythias (Phinotias). Two ancient Greeks of the early fourth century whose names became proverbial for devoted friends. In the Greek version of the legend, Phinotias (Pythias) was condemned to death by the tyrant Dionysus. Damon offered himself as a hostage so that his friend could make a last visit home. True to his word, Phinotias returned, but Damon insisted that his own head be put on the block, so impressing the monarch that he freed both the philosophers and begged to be allowed to join their brotherhood. The phrase should therefore be Phinotias and Damon, but when Richard Edwards wrote his play *Damon and Pythias* in 1564, he turned the tale around, using the corruption *Pythias* instead of *Phinotias*, and it was from this source that the story became popular.

damsel in distress. A damsel is a young unmarried woman of good birth. This dated term thrived in old Hollywood films, in which gallant knights in shining armor invariably rescued damsels in distress. *Damsel* comes from the Latin *domina*, "mistress."

Damson plum. See PLUM.

dance hall hostess. Western dance halls like Dodge City's *Variety* were often combined saloons, gambling houses, and brothels. By the 1870s, *dance hall hostess* became a euphemism for prostitutes like the Variety's Squirrel-Tooth Colie, Big Nose Kate, and Hambone Jane.

dandelion. "Lion's tooth"—referring to the plant's indented leaf—was the old English name for this flower, but apparently some language snob gave it the French name *dent de lion* in the 16th century. Since the French *dent de* was pronounced *dan de*, the word soon became *dandelion*. Another theory is that the dandelion's name derives not from its indented leaves, but from its huge, white, toothlike root. In modern French the dandelion is called *pissenlit*, or "wet-the-bed," from the belief that eating dandelion greens at dinner results in nocturnal bedwetting. "If you can't beat 'em, eat 'em" is a phrase that has been applied over the years to the gardener's perennial battle against weeds, most recently by Dr. James Duke, a botanist at the U.S. Department of Agriculture. Dr. Duke, quoted in Anne Raver's gardening column in the *New York Times*, made the remark specifically in reference to dandelions, which make a dandy salad and wine, among other comestibles. But the words have been applied to garden insects as well. The best example is a little book by English farmer V. M. Holt entitled *Why Not Eat Insects* (1885). "The insects eat up every blessed green thing that do grow and us farmers starve," Holt reasoned. "Well, eat *them* and grow fat." He then proceeded to give a series of appropriate recipes, including "Fried soles with woodlouse sauce," "curried cockchafers," "fricasse of chicken with chrysalids," "boiled neck of mutton with wireworm sauce," "cauliflowers garnished with caterpillars," and "moths on toast." Nutritionists today say that insects could be a useful protein supplement to the human diet. Locusts, for example, are said to be about 75 percent protein and 20 percent fat, as well as being rich in some vitamins.

dander. See GET ONE'S DANDER UP.

Dandie Dinmont. This small terrier, bred on the borders of Scotland and England has short legs and a long body. The dog

is named for the owner of two such terriers in Sir Walter Scott's novel *Guy Mannering* (1815).

danegeld. Originally a tax levied in medieval England to raise money to repel Danish invaders, *danegeld* has come to mean any business blackmail anywhere.

Daniel Boone. “A good gun, a good horse, and a good wife,” in that order, were the ingredients for Daniel Boone's prescription for happiness. The American pioneer's name has long been synonymous with a frontiersman, an intrepid explorer or hunter, and a resourceful backwoodsman. Boone's accomplishments have been exaggerated in popular accounts, but there is no doubt that his explorations opened the way for millions. Born near Reading, Pennsylvania, the great folk hero moved to North Carolina with his Quaker family in his early years. After serving under British General Braddock as a wagoner, he explored Florida, and fought as a lieutenant colonel of militia during the American Revolution, among many other activities. But his major contribution was the blazing of the famous Wilderness Road, which he and a band of 30 men forged in March, 1775, to found Boonesboro on the Kentucky River. Daniel and his wife, Rebecca, figure in more frontier lore than any other pioneers, and he has been commemorated in numerous place names. Boone was 86 when he died in 1820, a legend in his own time.

a Daniel in the lion's den. Someone who braves great danger out of faith and courage. The Old Testament prophet Daniel, of the Book of Daniel, prayed to God in violation of King Darius's order and was sealed in a den of lions. When the king went to the door the next morning, he found the seals unbroken and Daniel very much alive. “O king live for ever,” Daniel told him. “My God hath sent his angel, and hath shut the lions' mouths, and they have not hurt me. . . .”

Danish pastry. Often shortened to *Danish*, this sweet buttery pastry made with raised dough was named not after a country but for the Danish baker, who made them at Gertner's restaurant in Manhattan a century ago. The Danes in Denmark used the expression *Vienna bread* at the time, as they still do.

D'Annunzio. A synonym for a great lover and adventurer. Gabriele D'Annunzio's prose style was admired by James Joyce, and his play *Le Martyre de Saint Sebastien* was set to music by Claude Debussy, but the Italian poet, playwright, and novelist, who died in 1938, age 75, is better remembered today for his sexual and military adventures than for his lyric writings. D'Annunzio's whole life was onstage. His spectacular exploits by sea and air were widely reported in the press when he fought for the Allies during World War I. He is the only playwright (if not director) ever to become an actual dictator—for two years beginning in 1919, when he and his small volunteer force occupied the city of Fiume. His sexual adventures were legion, making Casanova look like an amateur. Stating that “a good soldier is prepared for anything,” D'Annunzio carried condoms into battle in Napoleon's snuffbox, which he had won as a prize of war. There are legends that he rode the hounds in the raw with a naked lady at the front of his saddle, nonchalantly strode

nude into the dining room of an illustrious hotel, slept on a pillow filled with locks of hair from his conquests, served wine from a carafe made from the skull of a virgin who had committed suicide because of him, and used strychnine as an aphrodisiac. Once he boasted that he had eaten a roasted baby. D'Annunzio, whose most famous affair was with the great actress Eleonora Duse (about whom he wrote a callous tell-all biography), publicly boasted that he was “hated by a thousand husbands.” It is said that but for his often “swinish behavior,” he would have won the 1926 Nobel Prize in literature. See CASANOVA.

danse macabre. See MACABRE.

Dapper Dan. A nickname for a very well-groomed man; sometimes used ironically. In fact, the local poolroom where I passed too much of my misspent youth was called Dapper Dan's, after the always unironed old Dapper Dan who ran it.

darb. Not much heard anymore, *darb* was common in the 1920s and 1930s for someone or something excellent, superior. It is said to have derived from the name of Ruby Darb, a voluptuous Oklahoma showgirl after whom many oilmen named new gushers.

darbies. *Darbies* is a British expression for handcuffs, but the word, oddly enough, derives from the name of a usurer. It seems that a shrewd 16th-century lawyer and moneylender named Derby drew up an ironclad bond that left no loopholes for debtors to escape through. This contract, used extensively by usurers, came to be called father Derby's bands. Because they were also impossible to “unlock” it wasn't long before all manacles were known as *darbies*, too, the word often pronounced *darbies*. *Darbies* is first recorded in 1576, and no other plausible explanation has been offered for its derivation.

Darby and Joan.

Old Darby, with Joan by his side,
You're often regarded with wonder:
He's dropsical, she is sore-eyed,
Yet they're never happy asunder.

This verse was printed in the *Gentleman's Magazine* in 1735 under the title of “The Joys of Love Never Forgot: a song.” The ballad, whose anonymous author may have been poet Henry Woodfall, praises, in a number of stanzas, Darby and Joan, whose names have come to stand for any mutually affectionate and contented old married couple. The poet, if he did write the verse, probably patterned his pair on John and Joan Darby who lived in Bartholomew Close, London. Woodfall had served an apprenticeship under John Darby, a printer, who, with his wife, was widely known for his good works and faithfulness.

daredevil. One who is recklessly bold; one who fears nothing and will try anything.

dark. Said of any theater that is closed, or in which no performances are being given, as in, “The theaters in the city are dark

on Sundays.” The term apparently dates back to the turn of the 19th century.

the dark and bloody ground. See KENTUCKY.

dark horse. A wonderful story is told about a swift, coal-black horse named Dusky Pete who belonged to Tennessean Sam Flynn. Sam made an easy living riding his horse from town to town and entering him in local races, which Dusky Pete, who looked like a lame plug, always won handily, Sam collecting his bets and going on to his next conquest. But the story is fable as far as scholars are concerned. *Dark horse* was first recorded in England, not America, in about 1830. Benjamin Disraeli used it in his *The Young Duke* (1831) as a racing term indicating more than the color of the horse: “A dark horse, which had never been thought of, rushed past the grand stand in sweeping triumph.” Given Disraeli’s widespread popularity as a novelist and public figure, it wasn’t very long before the term was introduced in American politics to describe a candidate about whom little is known or who wins unexpectedly. The Democratic Convention of 1844 produced the first political *dark horse* in James Polk, who went on to become president, and the term was in wide use by 1865.

dark-house. This old synonym for a madhouse, filled with screams and dark laughter, or a room in such a madhouse, is found in Shakespeare. Surprisingly, it hasn’t been used as the title for a novel. See BEDLAM.

dark meat; white meat. These were originally American euphemisms for the leg and the breast, respectively, of turkey and other fowl, *leg* and *breast* being embarrassing words in Victorian times. The words are still frequently used, but descriptively now and not euphemistically.

dark of the moon. The last quarter of the waning moon; this is the period, according to folklore, when root crops such as potatoes should be planted.

Darley Arabian. See BYERLY TURK.

Darlingtonia. When an insect enters the pitcher-shaped leaves of the curious California pitcher plant, *Darlingtonia*, it is trapped by down-pointing hairs, which allow it to crawl in but not out. Then it is drowned in liquid from the leaves, and, according to some scientists, ultimately is eaten or digested by the plant. Not a particularly wholesome thing to have named after one, but the single species’s scientific name honors William Darlington (1782–1863), an American botanist who wrote several biographies of famous botanists and published *American Weeds and Useful Plants* (1859). The naming was done by a fellow botanist, John Torrey, there being no record of bad feelings between the two men. *Darlingtonia* is sometimes sold as *Chrysamphora californica* and is not the only insectivorous plant. These include the famous Venus’s flytrap, bladderwort, sundew, butterwort, and pitcher plants belonging to the genus *Sarracenia*, all varying in the ways they capture their prey.

darn. *Darnation* is recorded as a euphemism for *damnation* as early as 1798, with *darn* recorded not long after. Some early scholars held that *darn* derived from *derne*, the Middle English word for secret, while others claimed it was an aphetic form of *eternal*, with the *er* pronounced as in the British *clerk* (*clark*).

d’Artagnan. Memoirs attributed to Charles de Batz-Castelmore d’Artagnan (ca. 1623–73) were used by the novelist Alexander Dumas père in his fictional series beginning with *The Three Musketeers*. In real life Gascon d’Artagnan did serve in the king’s musketeers, but he wasn’t a *comte*, as he called himself, claiming the title without right. About all that can be verified about the man is that he captained the contingent that arrested the powerful French superintendent of finances Nicolas Fouquet in 1661, became a brigadier general nine years later, and was fatally wounded at the siege of Maastricht. Yet d’Artagnan will always be remembered for the heroic adventures Dumas and his collaborator Maquet adapted or created from his story.

darts. *Dart* for a pointed missile or spear is first recorded in 1314, deriving from the French *dart* meaning the same. The indoor game called darts, in which small darts are thrown at a target, isn’t recorded in England until 1901, though this game, so popular in British pubs, must be much older.

Darwinian. “A hairy quadruped, furnished with a tail and pointed ears, probably arboreal in habits.” So Charles Robert Darwin (1809–82) described our common ancestor in *The Descent of Man* (1871), which didn’t sound at all like Adam or Eve. The epochal theory of evolution was formulated by Darwin in his *On the Origin of the Species by Means of Natural Selection* (1859), *The Descent of Man*, and other works. Evidence gathered during a five-year cruise to South America and the Galapagos Islands as a naturalist aboard the *Beagle* (1831–36) enabled Darwin to confirm organic evolution, and to propose his theory of natural selection, which he explained 20 years later. Darwin deduced that all species descended from a few primal ancestors and that favorable variations within a species better enabled it to survive—the *survival of the fittest*, as Herbert Spencer called the process. Special development and natural selection, he explained, not special creations, accounted for the diversity of species on earth. The Darwinian theory is widely known and accepted today, but provoked a storm of controversy in the 19th century in both religious and scientific circles.

Darwin’s bulldog. A name given to British biologist Thomas Henry Huxley (1825–95). Huxley fearlessly came to Darwin’s defense whenever the theory of evolution was challenged.

dash; dash it! The dash (—) has probably been used as a euphemism to suggest words not in favor at least since the invention of the printing press. In fact, the euphemistic curse dash it! is a euphemism based on d—m, a printed form of *damn*. Sometimes the dash is used by itself, but it most often is accompanied by a letter or two. D. H. Lawrence, in principle as opposed to the euphemistic use of the dash as any person, used it this way in his satirical poem “My Naughty Book” (1930), which begins:

They say I wrote a naughty book
 With perfectly awful things in it,
 putting in all the impossible words
 like b—and f—and sh—.

The book he refers to is *Lady Chatterley's Lover* (1928), not a dash in it. The dash that ends Laurence Sterne's *A Sentimental Journey* (1768) has the distinction of being the first (and perhaps only) dash to end a novel and the only dash that is listed in a dictionary (Farmer and Henley's *Slang and Its Analogues*, 1890). The novel ends: ". . . so that, when I stretched out my hand, I caught hold of the fille-de-chambre's——."

date. Date palms from the Mediterranean area were introduced to America by Spanish missionaries in the early 1700s. The fruit of this palm takes its name from the Latin *dactylus*, "finger," as people in ancient times believed it resembled the human finger. The date has been called "the candy that grows on trees" because about half its weight is sugar. Thousands of acres of date trees grow in California's Coachella Valley. Their large bunches of fruit are wrapped in heavy paper to protect them from insects and moisture, and helicopters periodically hover over the groves to fan away dampness. A merely "average" date palm produces about 100 pounds of fruit a year. In times past, dates were cheaper than grain in some regions, and the tree was said to have 360 uses, ranging from fermented drinks made from its sap to the "cabbage" consisting of the new foliage sprouting from its crown. See PHOENIX TREE.

Datsun. The Japanese car, first made in 1913 by the forerunner of Nissan Motors, was originally named Dat, after the initials of its three owners, Messrs. Den, Ayoyama, and Takeuchi. Later *Dat* was changed to *Datson*, the *son* meant to suggest "the son of Dat." But the Japanese pronunciation of *son* sounded too much like the Japanese word for "loss," something no business would want to suggest, and in 1932 the name was changed to Datsun.

davenport. In American *davenport* generally means a large, often convertible sofa, while in England it is a small desk or *es-critoire*. The British meaning came first and nobody is sure where the word derives from. *Webster's* attributes it to its original 19th-century manufacturer, another source to "a Captain Davenport who first commissioned it," and a third to "some now forgotten craftsman." The word, for a desk, was first recorded in 1853 and most likely honors an English furniture maker of ca. 1820–40. The sofa may have been devised by another manufacturer of the same name.

David and Goliath. See GOLIATH.

Davis Cup. While still an undergraduate at Harvard in 1900, American statesman and sportsman Dwight Filley Davis (1879–1945) donated a silver cup to be presented as a national trophy to that country winning an international championship contest in lawn tennis. The cup still bears his name.

Davisdom. See LINCOLNDOM.

davit. Since the 14th century *davit* has meant a cranelike device used for supporting, raising, and lowering boats and

anchors from a ship. Formerly called a David, the device is thought to take its name from the proper name David. Several tools at the time were called Davids and they may or may not have been named for a specific person or persons.

Davite. See DAVY LAMP.

davy; I'll take my davy of it. In England *davy* has been used for *affidavit* since at least 1764, which gives us the common extension *I'll take my davy of it*: I'll vouch that it's true.

Davy Crockett. David (Davy) Crockett, as the song goes, was "a son of the wild frontier" from his earliest years. Born in 1786 in Limestone, Tennessee, Davy was hired out to a passing cattle driver by his Irish immigrant father when only 12; he wandered the frontier until he turned 15, before finally returning home. He became a colonel in the Tennessee militia under Andrew Jackson during the Creek War, and after serving as a justice of the peace and state legislator, acted on a humorous suggestion that he run for Congress in 1827. Much to his surprise, he won the election. Crockett served two terms in Congress, and was noted in Washington for his backwoods dress and shrewd native humor, though many of the comments often attributed to him are largely apocryphal. His motto was "Be sure you are right, then go ahead." When defeated for reelection in 1835—mainly because he opposed Jacksonian banking and Indian policies—he moved to Texas, where he joined the Texas war for independence from Mexico. On March 6, 1836, Colonel Crockett was killed with the defenders of the Alamo. The folk hero's famous autobiography, *A Narrative of the Life of David Crockett of the State of Tennessee* (1834), was probably dictated, but is written in his robust style, complete with many examples of the tall tale.

Davy Jones's locker. Since at least 1750 *gone to Davy Jones's locker* has been used by sailors to indicate death, especially death by drowning, but no one has yet fathomed the origins of the phrase. In *The Adventures of Peregrine Pickle* (1751) Tobias Smollett wrote: "I'll be damned if it was not Davy Jones himself. I know him by his saucer eyes, his three rows of teeth and tail, and the blue smoke that came out of his nostrils." This same Davy Jones, according to mythology of sailors is the fiend that presides over all the evil spirits of the deep, and is often seen in various shapes, perching among the rigging on the eve of hurricanes, shipwrecks, and other disasters to which seafaring life is exposed, warning the devoted wretch of death and woe. The original Davy Jones may have been the 16th-century owner of an English pub, commemorated in the ballad "Jones Ale is Newe," who stored his ale in a mysterious locker for some reason much feared by seamen. Or *Jones* could be a corruption of *Jonah*, the unlucky biblical character swallowed by a whale, and *Davy* the Anglicization of the West Indian word *duppy*, meaning "a malevolent ghost or devil." A third, more plausible explanation proposes the *Jonah* above for *Jones*, but derives *Davy* from St. David, the patron saint of Wales often invoked by Welsh sailors. *Jonah* was indeed considered bad luck to the sailors aboard the vessel on which he was attempting to flee God's wrath and the phrase was first recorded in Captain Francis Grose's *Classical Dictionary of the Vulgar Tongue* (1785) as *David Jones' Locker*, which lends still more support to the Welsh patron saint theory. The *locker* in the phrase probably refers to

an ordinary seaman's chest, not the old pub owner's mysterious locker.

Davy lamp; Davy Medal; davite. Sir Humphry Davy, who “abominated gravy” (see CLERIHEW), invented the *Davy lamp* and has the mineral ore *davite* named in his honor. The great English chemist (1778–1829) invented the safety lamp for miners in 1816; largely outmoded today, it is a flame enclosed in a fine-meshed wire cage that prevents high heat from escaping and has saved thousands of lives that would have been lost due to the igniting of explosive gases. Like Madame Curie, the largely self-educated genius refused to take out a patent for his discovery. Among his myriad scientific achievements were his electrical theory of chemical affinity, said to be 100 years before its time; the discovery of the anesthetic effect of “laughing gas”; the isolation of the alkali metals potassium and sodium; the isolation of calcium, barium, strontium, magnesium, and boron; and the discovery that chlorine is an element. Davy was presented with an expensive silver dinner service by grateful coal mine owners for his invention of the Davy lamp. In his will he decreed that it be melted down and sold, interest from the proceeds to be used to establish the *Davy Medal* of the Royal Society, “given annually for the most important discovery in chemistry made in Europe or Anglo-America.”

day clean. There are many colorful poetic terms for dawn in English, including daylight, daybreak, and dayspring. One of the most unusual is *day clean*, often heard in the Bahamas: “He start at day clean for the job.”

a day late, a dollar short. An old saying describing someone or something that just misses being successful. The term dates back at least a century.

daymare. On first coming across the word, you might think it a recent coinage by some whimsical writer tuned into the times. But *daymare*, patterned after NIGHTMARE and referring to a similar condition occurring during wakefulness, goes back to at least the early 18th century. It was probably invented by English author Matthew Green in his poem “The Spleen” (1737), which praised the contemplative life as a cure for boredom:

The daymare Spleen,
by whose false pleas
Men prove suicides in ease . . .

Coleridge confessed that he had daymares, an English medical writer called daymares “attacks of imperfect catalepsy,” and James Russell Lowell implored:

Help me to tame these wild day-mares
That sudden on me unawares.

day of infamy. “Yesterday, December 7, 1941, a date which will live in world history, the United States was simultaneously and deliberately attacked by naval and air forces of the Empire of Japan.” So began the first draft of Franklin Delano Roosevelt’s historic Pearl Harbor speech, which he wrote himself. In the second draft FDR substituted the infinitely better “infamy” for “world history” and “suddenly” for “simultaneously,” making a sentence that will live in world history.

days of wine and roses. See GONE WITH THE WIND.

D-day. June 6, 1944, the day Allied forces invaded France during World War II. D-day does not mean Designated Day, as is commonly believed. The *D* in the term is a redundancy, simply standing for “day”; thus *D-day* literally means *Day Day*. According to *Time magazine* (June 12, 1944): “. . . so far as the U.S. Army can determine, the first use of D for Day, H for Hour was in Field Order No. 8, of the first Army A.E.F., issued on Sept. 20, 1918 [during World War I], which read, ‘The First Army will attack at H-Hour on D-Day with the object of forcing the evacuation of the St. Mihiel Salient.’”

Deacon Porter’s hat. A tasty sweet pudding named after Andrew W. Porter, a trustee of Mount Holyoke College in South Hadley, Massachusetts, whose stovepipe hat was similar in shape to the pudding mold. Holyoke students gave the pudding its name in 1837, and it became traditional to serve it every February 28 to honor the birthday of Mary Lyon, the college’s founder.

dead as a dodo; dodo. The hapless dodo left behind as its epithet both its common name, which has become a synonym for stupidity and extinction, and its scientific name *Didus ineptus*, which says about the same for it. Barely a century after it was discovered by man on the islands of Reunion and Mauritius, east of Madagascar, the heavy, flightless bird became extinct. Dodos were not only big (larger than a swan), but they were barely able to run, and the colonists who settled the islands, along with their pigs, found them delicious. By the early 18th century gone was the short-winged bird that seemed “to have been invented for the sole purpose of becoming extinct,” leaving behind only its sad story and a synonym for something utterly gone or a hopelessly dumb person. *Dodo* is a corruption of the Portuguese *dondo*, silly.

dead as a doornail. Since ordinary nails aren’t used in making doors, perhaps the “nail” in this phrase, which can be traced all the way back to 1350, was a small metal plate nailed on a door that visitors pounded with the knockers attached to it when announcing their arrival. Life would eventually be pounded out of the “nail” in that way. Then again the “nail” could be the heavy-handed decorative nails outer doors were studded with, though why these doornails would be regarded as any “deader” than, say, coffin nails is a mystery. It has even been suggested that since nails weren’t ordinarily used for doors, the phrase means “dead as something that never existed.” Anyway, people are still getting good mileage out of the expression, as did Langland in *Piers Plowman*, Shakespeare more than once, and Dickens in *A Christmas Carol*. *Dumb as a doornail* and *deaf as a doornail* are variations on the phrase that appeared after its coining.

deadbeat. Though *deadbeat* meant an exhausted, almost dead person at the beginning of the 19th century, by about 1863 it had become American slang for “a hobo or sponger riding the rails.” The idea of hoboes not paying their way, riding trains free, inspired the present prevailing use of *deadbeat* for “someone who doesn’t pay his debts.”

deadbolt lock. A lock bolt moved into position by the turning of a knob or a key rather than by spring action. The British

use the expression *mortise lock*, which has some currency in America, and *dead lock*.

dead cat on the line. Field workers for the *Dictionary of American Regional English* found 21 people who used this expression, meaning “there’s something suspicious, something wrong”—but not one of them could explain it. When William Safire asked readers of his nationally syndicated word column for help, an old man in Louisiana scrawled a letter explaining that the expression has its roots in fishing for catfish, when trotlines with many hooks on them are set in the water. The lines are checked every day, so if a fisherman checks a neighbor’s line and there’s a dead catfish (cat) on the line he knows there’s something wrong, something suspicious or fishy is going on.

deaden. A method of killing trees by cutting through the bark all around, girdling them, as some plantmen say.

dead-end (street); Dead End Kids. *Dead end* refers to a CUL-DE-SAC, a street with no exit except the way one came in. The term has also come to mean no hope of progress, advancement, etc. The Dead End Kids were a movie gang of young, often lovable hoodlums featured in a series of films beginning with *Dead End* (1937), originally a Broadway play featuring, among others, Leo Gorcey and Huntz Hall. They lived and hung out at the end of a dead-end street on the East Side waterfront, where there were luxury apartments as well as tenements.

deadhead. A spectator who doesn’t pay at the theater or at sports events, or one who rides free in a train or other public conveyance. Formed from the noun *deadhead*, the verb *to deadhead* means to drive an empty train, truck, or the like, one with no passengers or freight, on a return trip to a terminal. Most authorities agree that the term derives from railroad use. Conductors on passenger trains possibly counted heads to be sure every early passenger had paid and deducted from their total passengers, or heads, those who had free passes—the first *deadheads*. The gardening term *to deadhead*, to pull off spent blooms, is unrelated to the above; in this case the dead blooms are the dead “heads.” In recent years the followers of the rock group The Grateful Dead were widely known as *deadheads*.

dead heat. Any contest—from an election to a horse race—that ends in a tie is called a dead heat. The expression was first used in British horseracing in the 1790s. As used here, *heat* means “a single course of a race,” while *dead* suggests that the horses are “dead even,” or completely even. A dead heat is a rarity in this age of electronic timing.

dead letter office. A place where undeliverable letters (no return address, etc.) go. The U.S. Postal Service has long had no office of that name, changing it in 1994 to the Mail Recovery Center. But dead letter office will live on in poem and story, especially in Herman Melville’s “Bartleby the Scrivener” (1856), which suggests that Bartleby was a clerk in the dead letter office, where its strange atmosphere may have affected his strange attitude toward life. Some critics hold that the neglect of Melville’s novels led him to regard his work as “dead letters.”

deadline. This expression has its origin in the infamous Confederate prison camp at Andersonville during the Civil War. There the deadline was a line marked 17 feet from the camp fence. Any prisoner who crossed that line was shot dead by the guards. It seems that newspaper reporters and editors were the first to use the word in its present sense of a time when a task must be finished. They applied it to the time when a story had to be completed; if the story wasn’t in by that time, it was in effect killed or dead for that edition.

deadlock; wedlock. Though it wasn’t applied to stalemates at political conventions until 1888 in America, *deadlock* was first used as a term for a complete standstill in Richard Sheridan’s play *The Critic* (1779), which also gave us the word PUFFERY. *Deadlock*, for “a springless lock that opens with a key” came later. The *O.E.D.* suggests that the expression simply employs the word *dead* in its sense of obsolete, complete. Others have offered, without proof, the theory that *deadlock* comes from the ancient sport of wrestling, where a deadlock hold is one that keeps an opponent immobile indefinitely without forcing him to submit. *Holy deadlock* as a term for marriage comes from the title of A. P. Herbert’s novel *Holy Deadlock* (1934), but the idea is anticipated by Byron’s “A wedlock and a padlock mean the same.” The *lock* in *wedlock*, however, is not a lock, deriving instead from *lac*, “a gift.”

deadly evergreen. *The deadly evergreen* has been a humorous term for the gallows in England since the late 18th century, because the gallows bears no leaves but “bears fruit all the year round.”

deadly nightshade. See BELLADONNA LILY.

dead man’s flower. A name heard in Canada and the U.S. for the beautiful spirea (*Spiraea latifolia*). The name derives from the old folk belief that if a child picked this common white flower his or her father would die.

deadman’s hand. James Butler “Wild Bill” Hickok, only 39, had come to Deadwood, Dakota Territory, in 1876 to make a stake for the bride he had just taken, but lawless elements, fearing his appointment as town marshal, hired gunman Jack McCall to assassinate him, giving McCall 300 dollars and all the cheap whiskey he needed for courage. Wild Bill was playing cards in the No. 10 saloon (his back to the open door for only the second time in his days of gunfighting) when McCall sneaked in and shot him in the back of the head, the bullet passing through his brain and striking the cardplayer across the table from him in the arm. Hickok’s last hand, which he held tight in a death grip, was aces and eights, which has ever since been called the deadman’s hand. McCall, freed by a packed miner’s court, was later convicted by a federal court, his plea of “double jeopardy” disregarded on the ground that the miner’s court had no jurisdiction. He was later hanged for his crime.

deadman’s vine. Deadman’s vine, also called ayahuasco, was used by Columbian Indians in religious rituals. A sip of the brew they made from this vine sends one into a deathlike coma.

The woody vine is scientifically named *Banisteriopsis caapi* and today its bark is the source of the hallucinogenic alkaloid harmine.

dead men. There is nothing new about this term for “empty beer or liquor bottles,” which originated well before 1700, not in World War I, as has been suggested. It referred to the empty pots or bottles on the tables of English taverns when drinking bouts were held. Swift used the expression in his *Polite Conversations* (1738) and may give a clue to the word’s origin: “Let him carry off the dead Men [the empty bottles], as we say in the army.” In the army, where life is cheap, it would be appropriate to call bottles without any spirits dead men, after the spiritless bodies of the battlefield. In fact, the term is sometimes dead marines and dead soldiers today, these phrases dating back to World War I. *Dead soldiers* and *dead men* are also applied to empty beer cans, canned beer having been introduced by Coors in 1935.

dead men don’t talk. A saying common in the Wild West, perhaps from the Spanish saying *los muertos no hablan* with the same meaning.

deadpan. *Pan* has been used since at least the early 19th century to mean “the face,” possibly because the face is “broad, shallow and often open,” as *Webster’s* suggests, but just as likely because *pan* meant “the skull or head” as far back as the early 14th century and was used by Chaucer, among many much-read writers. (The word is still used in *brainpan*.) *Deadpan*, a contemporary expression for an expressionless poker face, especially applied to comedians with a dry delivery, is just a combination of *pan* with *dead*, “unanimated.” It has nothing to do with Elizabeth Barrett Browning’s poem about the “great dead Pan,” the god of Greek mythology who, legend says, died when Christ was crucified.

dead presidents. Slang for paper money of any denomination, as all the presidents pictured on U.S. currency are dead because U.S. law forbids any living person’s likeness on currency. The term was first recorded in New York’s Harlem in 1944 and now is used throughout the country.

dead ringer. See RINGER.

Dead Sea. The Dead Sea, actually a salt lake in Palestine, is 51 miles long and 11 miles wide, falls to a depth of about 1,300 feet and is 26 percent salt, as opposed to about 3 or 4 percent in most oceans. Because its limpid blue-green water supports practically no life, the Romans named it the Mare Mortum, or Dead Sea.

Dead Sea fruit. In days past the apple of Sodom was thought to grow along the Dead Sea, the mythical fruit beautiful to behold but turning to ashes when touched. From this belief arose the expression *Dead Sea fruit* for something promising that turns out to be worthless, the phrase first recorded in 1868 as the title of a novel but probably older.

the dead spit of. When you are called *the dead spit of* someone else, you are thought to greatly resemble that person. The

phrase is usually confined to family and dates back about 400 years.

Deadwood Dick. *Deadwood Dick* became proverbial through many late 19th-century dime novels, especially those written by Edward L. Wheeler, and long stood for a fearless Indian scout and outlaw fighter. The prototype for Wheeler’s westerns was Richard W. Clarke (1845–1930), who had been nicknamed Deadwood Dick long before his fictional exploits. Clarke, an Englishman attracted to the Black Hills by the gold diggings, won fame as both an Indian fighter and an express guard for gold shipped from the mines in and around Deadwood, South Dakota. Many of the Deadwood Dick myths have been debunked, but he was certainly a real character. Clarke lies in a mountain grave near Deadwood.

deaf as an adder. The ancients believed that a serpent could protect itself against the music of snake charmers by holding one ear against the ground and sticking its tail in the other ear. This belief led to the expression *deaf as an adder*, first recorded in the biblical book of Psalms.

deaf ear. See TURN A DEAF EAR.

dealing from the bottom of the deck; deal me out. Both of these expressions passed into general use from the American poker tables of the early 19th century. *Dealing from the bottom of the deck*, like a crooked gambler, means to take unfair or illegal advantage of someone, while *deal me out*, meaning “I don’t want to play this hand,” or “I don’t want to participate this time,” or, as Sam Goldwyn reputedly said, “Include me out.”

dean. Most of us know the word *dean* as the title of a head of a faculty or school in a university. But *dean* can also mean the head of a cathedral chapter and the senior member of any group, as in “He’s the dean of reporters in Washington.” Originally, *dean* (from the Greek *déka*, ten) meant a group of 10, not one person.

dear. In times past a “dear of corn” meant a scarcity of corn, for *dear* is related to the word *dearth* meaning “scarcity” and was once used as its synonym. Over the years *dear* came to mean expensive because something scarce, if needed, is bid for competitively until its price rises.

dear, dear, bread and beer / if I were rich I wouldn’t be here. An old rhyme that possibly originated in the United States.

Dear John letter. No one has identified the original jilted John, if there was one, but this term for a letter to a soldier saying that his wife or sweetheart is leaving him for another dates back to World War II. It is often abbreviated to a *Dear John* and can be used for a similar letter to any man distant from the woman writing it. See THAT’S ALL SHE WROTE.

dear me! This is among the most interesting of interjections, which usually haven’t much of a story behind them. *Dear me!* is thought to derive from the Italian *Dio me salvi!*—“God save, or spare, me!”

death and taxes. See SNUG AS A BUG IN A RUG.

death bones. The sound of bones rattling. Thought to be a foretelling of a sick person's demise. "Her bones were rattling, I heard them death bones, and she was gone before morning."

death camas. The poisonous plant *Zigadenus venenosus*, whose root can be deadly; also called crow poison, poison camas and white camas, among other names.

death he makes no promise. An old Bahamian folk saying meaning death strikes at any time with no warning; you never know when or where it will come and he'll never tell you.

the death of two poets. Russian poet Alexander Pushkin (1799–1837) died in a duel, as did Russian poet Mikhail Lermontov (1814–41), who had been inspired by Pushkin's death to write the poem "On the Death of a Poet."

death's head moth. A hawk moth (*Acherontia atropos*) with markings resembling a skull on the back of the thorax. Its scientific name *Acherontia* means "woeful river of Hell" and *atropos* means "the Fate who cuts the thread of life." The moth is an image in much English verse, including Keats's poem "Ode on Melancholy":

No, no, go not to Lethe, neither twist
Wolf's bane, tight-rooted, for its poisonous wine.
Nor let the beetle, nor the death-moth be
Your mournful Psyche.

See A THING OF BEAUTY.

Death Valley. This Death Valley was in the Bronx, in Yankee Stadium. Deep center field there went by the name before the stadium was renovated and the fences were moved in. In Death Valley a ball hit 400 feet or more could be nothing but a long out.

death warmed over; on death's doorstep. Someone who looks like death warmed over (or *warmed up*) looks like someone exhausted, as pale as a sheet, his eyes almost like cigarette burns on said sheet. To quote another old proverb, he or she appears to be *on death's doorstep*.

deathwatch beetle. When the little beetle *Anobinidae tesellatum* clicked or tapped, according to an old superstition, death would come to someone in the house. The beetle was therefore named the *deathwatch*. The sound of the deathwatch is really the beetle's mating call, which it makes by raising itself on its hind legs and beating its head rapidly against wood.

debauch. To debauch someone was originally to entice him away from duty or the service of his master. According to one theory, corrupt friends persuaded workers in small French shops known as *bauches* to go off on sprees, that is, enticed them from the *bauche*, or *debauched* them. The word passed into English in the early 16th century as *debauch*, coming to mean any excessive indulgence in sensual pleasure.

debonair. In the medieval French sport of falconry, many distinct strains of hawks were developed for hunting. But long-

winged "noble" falcons (usually females, because males were too difficult to train) were the most prized. Such birds were said to be proud and haughty and were called *de bonne air* (of good air). The word was used so often by sportsmen that by the 17th century it came to mean any cultured or well-groomed person and it eventually passed over into English as *debonair*.

Debrett's Peerage. Another guide to the British aristocracy, *Debrett's Peerage* was published in 1802 as a peerage of England, Scotland, and Ireland, making it the first compilation of its kind. Its publisher, John Debrett, who died 20 years later, also published a *Baronetage of England* (1808). In England *to be in Debrett* means "to be of noble birth." See also BURKE'S PEERAGE, a term more familiar to Americans.

debt. *Debt* actually derives from the French *dette*, meaning the same, and should rightly be spelled without a *b*. However, clerical scholars in medieval times assumed that the word derived from the Latin *debita* and changed the spelling accordingly, saddling future generations with their learned error.

debunk. Meaning to strip of false or exaggerated claims, *debunk* was coined from the word BUNK by American novelist William Woodward (1874–1950), who, indeed, wrote a lot of debunking books and introduced *debunk* in one of them entitled *Bunk*.

debut. *Debut*, from the French *début* and meaning "from the mark," was originally a gaming term in French signifying the opening move in a game, similar to the English "your move" in chess, or "your play" in cards. From the old gambling term came the French verb *debute*, "to lead off in a game," which in time was extended into "to make one's first appearance," this last being the word's only meaning ever since *debut* was first recorded in one of Lord Chesterfield's letters in 1752.

Decalogue. See TEN COMMANDMENTS.

decapitation. I've only been able to trace this military term as far back as the beginning of the second Iraq War (Operation Iraqi Freedom) in 2003. It means to kill someone with missiles from a long distance, often by hitting the building or even room in which he is quartered or visiting—sometimes literally blowing his head off.

December. See SEPTEMBER.

December is thirteen months long. A humorous saying originating with Canadians that refers to Canada's long, severe winters, especially in northern Canada.

decent; indecent. Our English word *decent* comes from the Latin *decens*, the present participle of *decere*, to be fitting, which is similar to the word's usual present-day meaning, "to be free from indelicacy, modest, to be respectable." People in the mountain areas of the American South still don't frequently use the word *decent*. H. L. Mencken explained this taboo, regarding the South, in *The American Language* (1919): "Fifty years ago the word *decent* was indecent... no Southern

woman was supposed to have any notion of the difference between *decent* and *indecent*. See COMMON.

decibel. “Watson, come here; I want you.” These were the undramatic words spoken by inventor Alexander Graham Bell to his lab assistant on March 10, 1876, the first complete sentence conveyed over the telephone. Bell was a Scottish immigrant who in 1871 came to the United States, where he lectured to teachers of the deaf on his father’s visible speech method and opened his own school of vocal physiology in Boston. In the course of work on his harmonic telegraph, he invented the first practical telephone, an idea he had conceived as early as 1865. Later inventions included the first practical phonograph record, the audiometer, and a telephonic probe for locating bullets in the human body. The Bell Telephone Company was formed in July, 1877. The inventor died in 1922, aged 75. *Bel*, a unit of measuring the loudness of electrical signals, and *decibel*, $\frac{1}{10}$ of a *bel*, both honor his name.

deciduous; evergreen. Trees that keep their leaves all year long are called evergreen, while those that lose their leaves in fall are called deciduous. *Evergreen* is of course self-explanatory, while *deciduous* derives from the Latin *deciduus*, “falling down.”

decimate. After any mutiny in the Roman army, or any cowardice, the standard punishment was to take one man by lot out of each of the 10-man squads and have his fellow squad members kill him. From this disciplinary measure came the word *decimare* (from the Latin *decem*, 10, meaning “to kill one in 10”) that became the English *decimate*. *Decimate* strictly means to reduce a military force by $\frac{1}{10}$, but through careless usage has come to mean to destroy a large part of any population, even to obliterate it.

decrepit. “Very old, at the pitted (pit’s) brink,” instructs a 16th-century Latin dictionary in defining this word. *Decrepit* means more specifically, “weak, worn out, broken by age, illness or hard use.” It comes from Latin *decrepitus*, meaning the same, which comes ultimately from Latin *crepare*, “to creak,” which those of us decrepit, or on our way there, often do.

deep-six. *Deep-six* is an old nautical term meaning “to drown,” the *six* meaning “six fathoms down.” It has recently taken on the meaning of “to kill a person or thing,” as in “we’re going to deep-six that project.”

Deep Throat. The code name of Mark Felt, former assistant director of the FBI during the Nixon administration, who gave *Washington Post* reporter Robert Woodward information about the 1972 Watergate break-in. *Deep Throat* was borrowed by Woodward and fellow reporter Carl Bernstein from the well-known pornographic film of that name. *Deep Throat* has become a synonym for any secret source, just as *Watergate* (the Watergate office-apartment complex in Washington, D.C., which housed the headquarters of the Democratic National Committee) has for any scandal. *Gemstone*, the secret code name for the Watergate break-in, has been all but forgotten. The pornographic movie *Deep Throat* (1972) made over a half-billion dollars, but Linda Lovelace, the pseudonym of the

woman who starred in it, wasn’t paid a cent. Linda Lovelace claimed that her husband at the time forced her to appear in the film, holding a gun at her back, and that the movie depicted her rape. Her story is told in her autobiography, *Out of Bondage*, published a few years before she died in an auto accident in 2002, age 53. See SMOKING GUN.

deer. In *King Lear* Shakespeare writes of “rats and mice and such small deer.” This reflects the fact that in Old English *deor*, from which *deer* derives, meant any wild animal. Only in relatively modern times has deer come to mean only the species we identify it with today. See also REINDEER.

defalcate. *Defalcate* may have originally been a gardening term, deriving as it does from the Latin *de*, “off,” and *falx*, “sickle.” Translating as “to cut off with a sickle,” the word’s meaning was extended to “take away,” especially in the sense of taking away or embezzling money.

defenestration. Here is a nonce word that lasted. On May 21, 1618 three Catholic members of the Bohemian National Council were thrown out of a window of the castle of Prague by Protestant insurgents. Though the Catholic members landed in the moat and weren’t badly injured, this incident marked the beginning of the Thirty Years’ War that spread throughout Europe. The incident became known as the Defenestration of Prague. The word *defenestration* coined to describe it from the Latin *de*, “from,” and *fenestra*, “window.” *Defenestration* has since meant “the act of throwing a person out a window.”

the definition of a species. As renowned botanist L. H. Bailey wrote in *Hortus*: “[A species] is a kind of plant or animal that is distinct from other kinds in marked or essential features, that has the good characteristics of identification, and that may be assumed to represent in nature a continuing succession of individuals from generation to generation.”

deipnosophist. Anyone seeking a big word meaning “a master of the art of dining” need look no further. The word derives from an early work entitled *Deipnosophistai*, which might be best translated as *Gastronomes at Dinner*, written by the Greek writer Athenaios of Naucratis in about A.D. 200. *Deipnosophist*, first recorded in 1656, is formed from the Greek *deipnon*, “dinner,” plus *sophistes*, “learned person.” The word is first recorded in the late 15th century.

déjà vu. These are the French words for “already seen,” which were adopted by psychologists at the beginning of the 20th century as the name for the illusion of having already experienced something actually being experienced for the first time. Since then this term has come to mean an impression of having experienced or seen something before, as in “Brooklyn fans followed the Yankees wins with a definite sense of déjà vu.”

Delaware. Mencken points out that the map of this country is “besprinkled with place names from at least half a hundred languages, living and dead.” Of the eight classes he lists as their sources, “surnames” comes first. *Delaware* falls into this category, being the first alphabetically of American states that take their names from the names of individuals. The Diamond State

commemorates English soldier Thomas West, Baron De La Warr (1577–1618), who in 1609 was appointed the first governor of Virginia by the Virginia Company. Delaware Bay was named for Lord De La Warr by Sir Samuel Argall, who discovered it when the governor sent him on an expedition to locate supplies for the starving settlers at Jamestown; both Delaware and the Delaware Indians derive their names from this body of water. De La Warr had been appointed governor of Virginia for life, but died on his second trip from England to the colony and was buried at sea.

delft. A style of glazed pottery, generally opaque white and blue, that was originally made in the city of Delft in the western Netherlands. The Delft potters began making tableware, called delftware, in the early 1700s and later shortened its name to delft. Today the pottery is made in Delft and many other places.

delicatessen. A store or department of a store in which many cooked or prepared foods such as cold meats, cheeses, salads, etc., are sold. The word derives directly from the German *delicatessen*, delicacy, which comes ultimately from the Latin *delicatus*, pleasing. Often the short form *deli* is used: “We’re having delicatessen [or deli] for dinner.”

Delilah. A Delilah, from the name of the biblical courtesan, signifies both a temptress and a seductive wife or mistress who turns to treachery. Delilah in the biblical story (Judg. 16:4–20) had been bribed by the Philistines to learn the source of Samson’s strength. Samson lied to her three times, but on her fourth attempt she learned that his power lay in his long hair, had his head shaved while he slept upon her knees, and betrayed him to his enemies. Little is told of Delilah except that she was a “woman in the valley of Sorek.” After she collects “eleven hundred pieces of silver” for her tonsorial treachery, she is heard from no more.

delirium. In Latin *lera* means the ridge left by ploughing, so the verb *de-lerare* means to make an irregular ridge when ploughing. A *delirus* was one who couldn’t make a straight furrow and thus came to mean “a crazy, disoriented person whose mind wandered from the matter at hand.” The state of such a person was called *delirium*, which is still our word for the condition today. *See also* PREVARICATION.

delphinium. The dolphin has a home out of water in our gardens, at least in the form of the perennial *delphinium*, which the Greeks named “little dolphin” (*delfinium*) because they thought the flower’s nectary looked like the marine mammal. There are about 200 species of delphiniums, all of which have a poisonous juice in their foliage. *See* LARKSPUR.

delta. The Greek letter for Δ, *delta* was drawn in the form of a triangle: Δ. *Delta* was thus applied to the area of the mouths of the Nile, which was of a triangular shape. It has since been applied to similar formations of other rivers. The Mississippi Delta, by the way, is not, strictly speaking, a delta. Far from the sea, it is simply a flood plain.

demagogue. In ancient times the word *demagogue*, from the Greek *demagogos*, “popular leader,” simply meant a leader

of the common people or great popular orator. It wasn’t until the 17th century that the word acquired its present pejorative connotation of a popular leader who gains power by means of impassioned pleas to the emotions and prejudices of the people.

dem bums. This nickname for the Brooklyn Dodgers, beloved of memory, was given to them by an irate fan seated behind home plate at a home game in Ebbets Field during the Great Depression. Particularly incensed at one error he shouted, “Ya bum, ya, yez bums, yez!” and his words, reported by a baseball writer, stuck as an endearing nickname for the team. It was in 1900 that the team was named the Dodgers, after all Brooklynites, who were called trolley dodgers by Manhattanites, contemptuous of all the trolleys in the borough. *See* DODGERS.

demijohn. The shape of a portly lady is suggested by the demijohn, which is narrow at the neck and round in the body. For this reason some etymologists trace the word, first recorded in 1769, to the French *Dame Jeanne*, “Lady Jane,” theorizing that the large glass bottle was named for some forgotten French housewife whose bulging figure it resembled, or for such portly women in general. The theory that *demijohn* is a corruption of *Damaghan*, a Persian town where glassware was manufactured, is not generally accepted. A demijohn generally holds five gallons and is usually encased in wickerwork. *See also* BELLARMINE.

democracy. *See* ENCYCLOPEDIA.

demoralize. *Demoralize* has the distinction of being the only word coined by the great American dictionary maker Noah Webster. Webster invented the word in 1794 when writing of the French Revolution and the bad effects such civil wars had on the morals of the people involved. He did not borrow it from the French word *demoraliser*, as many people thought, but made it by simply placing the common prefix *de* on the English word *moralize*.

Demosthenic. There are legends that the great Greek orator Demosthenes was a stammerer, that he could not pronounce the letter *p*, that he overcame his impediment by practicing with pebbles in his mouth against the sound of the surf, or by declaiming as he ran uphill. According to still another tradition, Demosthenes also mastered language by copying Thucydides’ direct and graphic *History of the Peloponnesian War* eight times. Whatever the truth of these stories—and there is little doubt that Demosthenes did have some speech defect as a boy—the Greek statesman ranks as the greatest orator of all time, surpassing even Cicero, who patterned himself on the Athenian. Demosthenes (ca. 383–322 B.C.) is particularly noted for his denunciations of Philip of Macedonia (*see* PHILIPPIC), which roused his countrymen to the danger of the subjugation of Greece. The word *Demosthenic* refers to his oratory and also means eloquent, patriotic speech, for his two most constant themes were the greatness of Athens and the need to preserve her traditions.

Dennis the Menace. A name given to any mischievous but good-hearted overactive, mostly good-intentioned child, after

the freckled-faced cartoon character Dennis the Menace drawn by cartoonist Hank Ketcham (1920–2001). Hank Ketcham drew his creation from 1950 to 1994, when he retired and a team of artists took over his strip, which now appears in over 1,000 newspapers in 48 countries and 19 languages. According to Mr. Ketcham, the cartoon character Dennis was named after the cartoonist's four-year-old son. The real-life Dennis wrecked his bedroom while he was supposed to be napping one afternoon, leading his mother to shout, "Your son is a menace!"

den of thieves. *Den* is recorded as "the lair or habitation of a wild beast" at least as far back as *Beowulf*, written sometime in the 10th century. By the 18th century the word began to be used for a secret hiding place of thieves or the like, Daniel Defoe first recording the expression *den of thieves* in *Robinson Crusoe* (1719).

dénouement. The resolution of a play or any literary work following its climax is called a *dénouement*. The word came into English intact as the French *dénouement*, meaning "untying of the knot," being first recorded by Lord Chesterfield in one of his letters.

dentist. *Dentist* is an elegant borrowing from the French, who formed the word from their word *dent* for tooth. Before the mid-18th century, dentists were often called tooth-drawers in England. Noted the *Edinburgh Chronicle* of September 15, 1759: "*Dentist* figures now in our newspapers, and may do well for a French *puffer* [an advertising writer]; but we fancy Rutter [a local dentist at the time] is content being called a tooth-drawer."

dentition. See LISON'S CASE.

deoch-an-doris. One of the few Gaelic expressions that is widely known today, at least among the Irish, Scottish, and British to a lesser extent. It means a farewell drink. From the Gaelic for "drink at the door," it is also called *doch-an-dorach*. The ancient Roman counterpart to the term is a *parting cup*. See STIRRUP CUP.

deodand. *Deodand* itself derives from the Latin *Deodandum*, something "given to God." Under the law of *deodand* any automobile that hit and killed a pedestrian would be sold and the proceeds given to the church. This custom was abolished in England in 1846, but previously any personal chattel—such as a bull that killed a man—was forfeited by the owner and sold for some pious purpose. It was reasoned that, as a person meeting such an accidental death had died without extreme unction, the money could be used to pay for masses for him.

department store. The term *department store* isn't recorded until 1887, when a New York establishment advertised itself as H.H. Heyn's Department Store, though the idea of separate departments in stores can be found in print at least 40 years earlier, when an article in *Hunt's Merchandising Magazine* told of "tubes connecting with each department of a store, from the garret to the cellar, so that if a person in a department . . . wishes to communicate with the employer, he can

do so without leaving his station." See ONLY—SHOPPING DAYS TO CHRISTMAS.

dephlogisticated air. See PHLOGISTON.

derby. *Derby* is the American name for a version of the dome-shaped felt hat that the English call a bowler. The man it honors also has the English Derby at Epsom Downs and the Kentucky Derby at Churchill Downs named for him. The 12th earl of Derby, Edward Stanley (d. 1834), came from a family that traced its origins to William the Conqueror. He had a great interest in horse racing but little in his wife—a mutual feeling—and so devoted most of his time to the improvement of the breed. Races had long been held at Epsom Downs, but in 1780 the earl started a series of annual contests for three-year-olds, the races named in his honor because he both suggested them and was such a convivial host each season at The Oaks, a house near the course that had belonged to his uncle General "Johnny" Burgoyne. The Derby became so popular that almost a century later, in 1875, the Kentucky Derby adopted part of its name. After the Civil War, American spectators at the "Blue Ribbon of the Turf" noticed that English sportsmen often wore odd-shaped bowler hats. A few were brought back home, where it is said that a Connecticut manufacturer made a stiff felt, narrow-brimmed version that an unknown New York store clerk sold as "hats like the English wear at the Derby." In any event, *derby* became the American term for bowler, the most popular headwear for men up until the 1920s. See CHURCHILL DOWNS.

derelict. Deriving from the Latin *derelictus*, "to forsake wholly, abandon," *derelict* at first meant any piece of property abandoned by its owner, being first recorded in 1649. Within 10 years, however, the word was applied to abandoned ships and it came to be used mainly in this sense over the years.

der Führer. See FÜHRER.

de rigueur. French for "something socially required by current fashion or custom."

derrick. The large crane for lifting heavy objects that we call the *derrick* takes its name from English executioner Godfrey Derrick. Derrick was responsible for some 3,000 hangings and beheadings in his long career as public executioner, which extended into the reign of James I. His name was most likely applied to the gallows itself and then to the crane which resembled the gallows, though the comparison might have been made between his and the crane's great strength or huge stature. Ironically, Derrick, a convicted rapist, had been pardoned by Robert Devereux, earl of Essex, his commander in a military expedition, when he agreed to become executioner at the infamous Tyburn Prison just outside London. The young and handsome Essex, long a favorite of Queen Elizabeth, was later condemned for treason and sentenced to be executed at Tyburn in 1601. By an odd twist of fate, Derrick became his executioner, though as a headsman, for even then nobles were exempt from hanging. See DICK; DIRK.

derringer. This is the small but deadly large-bored gun that in real life has been the choice of a large variety of villains,

including assassin John Wilkes Booth. The pistol is named for Philadelphia gunsmith Henry Deringer, who invented it in 1835. Posterity cheated Deringer a bit, though, for the stubby gun came to be spelled with a double *r*.

Deseret. A place-name used in the Utah Territory by the Mormons in 1850. The word is a coined one from the *Book of Mormon* and means “honeybee,” a symbol of hard work and cooperation. What is now Utah was called the State of Deseret, and Salt Lake City was called Deseret.

Deseret alphabet. Members of the Mormon church from all over the world came to settle in what is now Utah when Brigham Young led the Mormons there across the desert. Many of them spoke no English, and Young and other church leaders felt they needed a better alphabet to teach them the language. Forsaking the standard English alphabet, which has only 26 letters to represent the approximately 43 sounds in English, they developed what they called the Deseret alphabet, which had a letter for each sound. Despite all their efforts, however, the alphabet never became popular and all efforts to promote it were abandoned after Young’s death in 1877. *See* DESERET.

desertification. A condition of the Earth caused by several factors, including the destruction of forests and poor farming and grazing practices. It typically results in dry soil and desert claiming the once fertile land.

desert rat. *Neotoma desertorum*, a rat found in desert areas and often called the desert brush rat. It is one of many animals and plants named for the deserts where they are found, including the desert ant, desert gray fox, desert oak and desert willow. A desert rat is also a person, often a hermit-like prospector, who has lived in the desert for many years.

Desert Rats. The nickname of British soldiers in World War II’s North African campaign; they are said to have been so named by their enemy, the Italian dictator Mussolini. The nickname was especially associated with the 7th Armoured Division, whose division sign was the jerboa. The jerboa, really a jumping or hopping mouse, is well-equipped for the desert, hibernating for five months and getting by without drinking any water all year.

desk. Voltaire is said to have written some of his love poems in bed, using his mistress’s back for a desk. But a more desirable *desk* (which derives from the medieval Latin *desca* meaning the same) is one made by Thomas Chippendale (c. 1718–79) that sold for \$195,000 at last report.

despot. The original Greek *despotes*, the source of *despot*, simply means “master,” not a tyrannical master or ruler. But over the centuries the title was bestowed upon many kings, emperors, and bishops who were tyrannical, and by the time of the French Revolution the word came to mean an absolute, tyrannical ruler.

despotism by dynamite. *See* ABSOLUTISM TEMPERED BY ASSASSINATION.

dessert. *See* JUST DESERTS.

destroyer. This relatively light, fast, naval combat ship was first called the *torpedo boat destroyer* after what was then its primary mission. The first U.S. destroyer was the 273-ton USS *Farragut*, named after U.S. admiral David Farragut, a Civil War hero.

Destroying Angel. A historical term for a member of an alleged secret militant Mormon organization. Also called the Destroying Band and Mormon Destroying Angels. The group was said, in Mark Twain’s words, “to conduct permanent disappearances of obnoxious citizens.”

desultory. Circus riders in ancient Rome jumped from one horse to another during their acts, which led to their being called *desultors*, or leapers, from the Latin *salire*, “to leap.” They were soon compared to people who fitfully jump from one idea to another in conversation, which resulted in the word *desultorious*, “to be inconsistent, beside the point,” the ancestor of our English word *desultory*.

detective. The first detective can be found in any complete edition of Edgar Allan Poe’s short stories, where resides the Poe tale “The Murders in the Rue Morgue” (1841–42), the first of all detective stories, a new genre Poe invented. In Paris lives Poe’s C. Auguste Dupin, a French genius of unsurpassed intellectual prowess. Dupin chances to read an account of the brutal murders of Mme L’Espanaye and her daughter Camille in their fourth-story apartment in the Rue Morgue. The police are unable to solve this bloody crime, but Dupin puts his genius to the task. After considering the murderer’s brutal strength, his unintelligible voice, his great climbing agility, and his lack of motive, Dupin deduces that the murderer must be an ape. Sure enough, a sailor visits Dupin, responding to an advertisement he places in the papers. The sailor had brought an orangutan to Paris, hoping to sell it, and the ape had escaped and committed the murders. The ape is at last captured and the first tale of ratiocination is done.

deuce. *Deuce* for “the devil” may have its origin in the hairy demon of Celtic mythology called the Dus. Other suggestions are the Old German *deurse*, “a giant,” the Latin expletive *Deus!*, “My god!” or the two, or deuce, which is an unlucky throw (snake eyes) in a dice game. Congreve first recorded the expression *the deuce take me!*, in 1694. *Deuce* for the number “two” comes from the Latin *duos*, two.

deus ex machina. Some unlikely event that extricates one from a difficult situation, usually in a play or other work of fiction, is called a *deus ex machina*, which literally means “a god [let down upon the stage] from a machine.” In ancient Greek drama a god was often lowered onto the stage by a pulley system to help the hero out of trouble, this practice giving rise to the expression. Euripides used the device widely, while Sophocles and Aeschylus avoided it—as almost all writers avoid it today. Much later Bertolt Brecht parodied the practice at the end of *The Threepenny Opera* when Mack the Knife is saved from hanging by Queen Victoria’s proclamation.

devil. *Devil* has a more complicated history than the old story that it is a contraction of “do-evil.” It is a translation of the Hebrew “Satan” in the Old Testament, where it meant “adversary.” When the Old Testament was translated into Greek, its translators chose the word *diabolos* to convey the meaning of “adversary,” *diabolos* coming from the Greek verb *diaballian* “to slander or accuse.” *Diabolos* thus meant “accuser,” and the devil, whose name derives from *diabolos* via the Old English *deofol* is “the slanderer or accuser of the soul.”

devil bear. One of several names for the wolverine, which resembles a bear and is the largest member of the weasel family.

devil dances in his pocket. Someone who is broke, penniless. This early 15th- to 19th-century expression derives from an old belief that the cross on ancient coins prevented the devil from entering one’s pockets.

devil dogs. The Germans in World War I called the U.S. Marines of the 4th Brigade *Teufelhunden*, or *devil dogs*, because they were such fierce fighters. The name stuck as a nickname for marines. So did the Marine slogan *Retreat, hell!*, a shortening of the reply Marine captain Lloyd Williams gave a Frenchman when asked to fall back at the Battle of Belleau Wood: *Retreat, hell! We just got here!*

the devil is whipping his wife. Said when it rains while the sun is shining; the rain is supposed to represent the tears of the devil’s wife.

devil’s advocate. Deriving from the Latin *Advocatus Diaboli*, the *devil’s advocate* was first an official appointed by the Roman Catholic church, his job to argue the case against a person’s canonization, or recognition as a holy person. From this the term came to mean anyone who argues against an idea to test it.

devil’s darning needle. Thoreau and other New Englanders called the dragonfly the *devil’s darning needle* and *devil’s needle* because of its big eerie eyes, which are far out of proportion to its long, needlelike body. But the two colorful expressions yielded to the shorter *darning needle* over the years. Another colorful Americanism was *devil’s riding horse* for the praying mantis. It was also called the devil’s horse, *cheval du diable*, devil’s mare, devil’s rear horse, and devil’s war-horse.

Devil’s Island. Devil’s Island, the former French penal colony off the coast of French Guiana, isn’t so named because it was like hell for prisoners sent there, or because the climate was as hot as hell. The island, one of the three Safety Islands, takes its name from the dangerous turbulent waters surrounding it, the major reason why escape from it was so difficult.

Devil’s paintbrush. The strangest but most apt name for a gun ever coined. The MAXIM MACHINE GUN was dubbed the “Devil’s paintbrush” because it spewed out bullets so fast that the earth, grass, trees, and anybody on them were drenched

or touched scarlet red. *Devil’s paintbrush* is also a popular name for hawkweed (*Pilosella aurantiaca*), a troublesome weed that bears brilliantly colored flowers ranging from yellow to orange-red that are exceptionally beautiful in meadow masses.

devil’s picture book. A colorful, little-known term for “playing cards” that was used by the Puritans, who considered it sinful to play cards or even have a deck of cards in the house. In fact, it wasn’t until the mid 19th century that playing cards were deemed permissible in devout New England homes. Long before this, however, 16th-century clergymen issued playing cards bearing scriptural passages and Cardinal Mazarin taught France’s Sun King history, geography, and other subjects by printing instructive text on “educational” playing cards. We take our 52-card deck from the French, but there is a 56-card deck (Italian), a 32-card deck (German) and many others around the world. Playing cards are called pasteboards because they were made of pasteboard for centuries, the paste making them opaque so that they couldn’t be seen through. It was only after 1850 that designs on the backs of cards were used, for early gamblers had felt that plain white backs couldn’t be so easily marked as decorative ones.

devil’s tail tear-thumb. See MILE-A-MINUTE WEED.

dewar flask. The dewar flask, the original thermos bottle, is named for its inventor, Sir James Dewar (1842–1923), a Scottish chemist and physicist who devised the vacuum-jacketed vessel in 1892 for the storage of liquid gases at low temperatures. The thermos takes its name from the company that adapted Dewar’s invention commercially. Originally a trademark, the word is now spelled without a capital in most dictionaries.

dewberry. Dewberries, which are trailing blackberries similar to boysenberries, are a native American fruit, although they are cultivated today by gardeners in other parts of the world. Not that there aren’t native European varieties of dewberries as well. In Europe the dewberry can be traced back to the 16th century, when Shakespeare praised it. Its name, in fact, may be a corruption of “dove berry,” which it has been called for centuries in Germany, but it has long been associated with “dew” in English usage.

Dewey decimal system. The father of American library science, Melvil Dewey (1851–1931), first proposed his famous Dewey decimal system in 1876 while serving as acting librarian at Amherst College. It is now used by some 85 percent of all libraries. The classification scheme, invented when he was in his early twenties, divides the entire field of knowledge into nine main classes (from 000 to 999), a second set of numbers following a decimal point indicating the special subject of a book within its main class. A man of fantastic energy and originality,

Dewey later became chief librarian at Columbia College (1883–88), where he founded, in 1887, the first American school of library science. As director of the New York State Library (1889–1906), he reorganized the state library, making it one of the most efficient in the nation, and originated the system of traveling libraries. Dewey also helped found the American Library Association, the New York State Association, and the *Library Journal*. He crusaded for simplified spelling and use of the metric system, among many other causes.

dewitt. To dewitt, or brutally lynch, is chiefly a historical expression today. The brothers DeWitt—Jan (b. 1625) and Cornelius (b. 1623)—were Dutch statesmen opposed to the war policies of their monarch when the French invaded the Netherlands in 1672. Jan DeWitt, King William III's major opponent and a wise, eloquent statesman, was arrested that same year and tortured in the Gevangenpoort at The Hague. When his brother Cornelius came to visit him in jail, an incensed chauvinistic mob gathered and broke into the prison, hacking the two men to pieces and hanging their limbs and parts on lamp-posts. For many years after, *to dewitt* meant to perform such grisly lynchings or mob murders, one of the few such verbs in English deriving from someone's name.

dewlap. The lap, or fold, of skin hanging loosely from the throat of certain dogs, cattle, and other animals, including humans, may be so named because someone humorously observed that such folds "brushed the dew of the grass." However, no one is sure about the origins of this old word, which is first recorded early in the 14th century.

dextrous. See RIGHT.

dey. Gone are the days of the deys. *Dey* (pronounced day) was up until 1830 the title for a governor of Algiers, as well as a title for rulers of Tunis and Tripoli. The word derives from the Turkish *dayi*, which means a maternal uncle. Caroline of Brunswick, wife of King George IV, enjoyed a notorious affair with the dey of Algiers. Lord Norbury, England's chief justice, remarked, "She was as happy as the dey is long."

D4D. See K-9 CORPS.

dharna. This Indian word means "persistence." Those practicing *dharna* in India have in fact been known to seek justice by sitting at the door of someone who owes them money, and fasting to death.

dialect. *Dialect* is first recorded in 1577, deriving from the Latin *dialectus*, "way of speaking," and is defined as "one of the varieties of a language arising from local peculiarities of vocabulary, pronunciation and idiom." It is often forgotten that dialects sometimes become languages. Italian, Spanish, Portuguese, French, and Rumanian, for example, began life as regional dialects of Latin.

Diamond Jim. The nickname of the legendary James Brady (1856–1917), a millionaire speculator who rose from a bell boy

to one of America's richest men and certainly its greatest eater. The gargantuan Diamond Jim, whose postmortem revealed a stomach six times the size of a normal person, used to eat as a typical dinner: two or three dozen oysters, six or so large crabs, two bowls of turtle soup, seven or eight lobsters, two portions of turtle meat, a huge sirloin steak, assorted vegetables (for a balanced diet), a bulging platter of pastries, and a two-pound box of candy—all washed down with several gallons of orange juice (he abhorred alcohol). It was, in fact, at such a feast in New York City that Brady, bedecked with diamonds, proposed to zaftig Lillian Russell. Diamond Jim supposedly plunked an open valise containing a million dollars on the table, carefully spread out a napkin on the floor, knelt down, and promised the actress, "This is all yours if you'll marry me." Miss Russell simply shook her head and calmly ordered more Beluga caviar.

diamonds of the dustheap. Virginia Woolf (1882–1940) apparently coined this phrase. After reading her previous year's diary she wrote: "I . . . am much struck by the rather haphazard gallop at which it swings along. . . . Still, if it were not written rather faster than the fastest typewriting, if I stopped and took thought, it would never be written at all. The advantage of the method is that it sweeps up accidentally severed stray matters which I should exclude if I hesitated, but which are the diamonds of the dustheap."

Diana's tree. This is not a plant but an amalgam of crystallized silver obtained from mercury in a solution of silver. It is so called because to alchemists silver was represented by Diana, the Roman nature goddess. The substance is also known as philosopher's tree.

diaper. Baby's diaper has no relation to the town of Ypres in France, as has been suggested. The word probably comes from the French *diapre*, "a white cloth variegated with flowers," which, in turn, derives from the Greek *dia*, "through," and *aspros*, "white" or "white in places." First used to mean such a cloth in 1350, *diaper* wasn't used for a baby's "clout" or napkin until the 19th century. In fact, in Britain the term has never been applied in this way.

dicing. An expression from auto racing meaning "to jockey for position on the track." The term originated in England in the 1950s, and has its origins in the old melodramatic expression *dicing with death*, taking great chances.

dick; dirk. Partridge suggests that *dick*, as a common slang synonym for penis, comes indirectly from the English hangman Godfrey Derrick's name (see DERRICK). It seems that among the dreaded hangman's victims were many sneak thieves and picklocks, who often carried short daggers. These came to be called dirks after Derrick (which is a Dutch name identified with Dirk). The dagger called the dirk then gave its name, in the form of *dick*, to the penis.

dickens; Dickensian. The expression *what the dickens* has nothing to do with author Charles Dickens's name, as is often believed, *the dickens* in this case probably being an old euphemism for *devil*. *Dickensian* is another, greater story. As a noun

Dickensian refers to novelist Charles John Huffam Dickens (1812–70) and his works, while as an adjective it describes the energy and living presence of his characters, the tremendous vitality and richness of the world he created. Dickens did exaggerate his characters, but no one before or after has been able to exaggerate just like him. The people he created in his 14 novels and many shorter works are better known worldwide than those of any English author save Shakespeare. Micawber, Pickwick, David Copperfield, Steerforth, Oliver Twist, Scrooge, Tiny Tim, Sarah Gamp, Uriah Heep, Gradgrind, the Artful Dodger, Fagin, Little Nell—and so many others—have become words in themselves as well as names, escaping the books that contained them. Dickens, the son of an improvident government clerk—elements of him are found in both Micawber and Dorrit—had to go to work in a blacking factory at the age of 12 when his father was imprisoned for debt. He had little formal schooling and, after being apprenticed to a lawyer, served as a parliamentary reporter for newspapers. Following the success of *Sketches by Boz* (his pen name) and *Pickwick Papers* in 1836, his fame was assured, and books like *Oliver Twist*, the semiautobiographical *David Copperfield*, and *Hard Times*, with their descriptions of the brutality of industrial society, made him one of the world's most influential novelists. Dickens toured America twice, his unflattering *American Notes* the result of his first visit. His more complex works such as *Bleak House*, *Great Expectations*, *Our Mutual Friend*, *Little Dorrit*, and *Hard Times* have been acclaimed by critics as Dickens's greatest novels, but his early books, *A Tale of Two Cities* and his Christmas stories have remained just as popular over the years. *A Christmas Carol*, as G. K. Chesterton pointed out, did much to revive the true spirit of Christmas throughout the world. Dickens died suddenly and prematurely at the age of 58, probably of overwork, but his wildly comic, grotesque, and tearfully pathetic characters lived on. As Chesterton wrote in his brilliant essay on the novelist, "There can be no question of the importance of Dickens as a human event in history . . . a naked flame of mere natural genius, breaking out in a man without culture, without tradition, without help from historic religions or philosophies or from the great foreign schools; and revealing a light that never was on sea or land, if only in the long fantastic shadows that it threw from common things." Dickens's grave is in the Poets' Corner of Westminster Abbey.

dicker. Deriving from *decem*, "10," *decuria* was the Latin word for the bundle of 10 animal hides that Caesar's legions made a unit of trade in Britain and elsewhere. This word eventually was corrupted to *dicker*. On the frontier in America the haggling and petty bargaining over dickers of pelts became the meaning of the word itself.

Dick Smith. *Dick Smith* or *Dick Smither* refers to a solitary, selfish, cheap man with short arms and deep pockets, who would never order a round for other drinkers at a bar, though he'd always accept a free drink. The eponymous expression, first recorded in 1876 in the *Congressional Record*, may be based on a real Michigan lumberjack of that name. A quiet, unsociable baseball player named Dick Smith is another possibility, as is Richard Penn Smith (1799–1854), a Philadelphia playwright who introduced romantic tragedy in the U.S. and was indebted to the work of several French and English playwrights as models for his own work.

Dick test. Like the more famous CURIES, Drs. George Frederick and Gladys H. Dick form a famous husband and wife scientific team. In 1923 they isolated the streptococcus that causes scarlet fever. The following year the Dicks devised the test used to determine an individual's susceptibility to the disease and developed a serum providing immunity. In the Dick test scarlet fever toxins are injected into the arm; if the individual is not immune, the skin reddens around the injection. George Frederick Dick (b. 1881) was professor of clinical medicine at Rush Memorial College when he and his wife made their discoveries. He served as chairman of the department of medicine at the University of Chicago Medical School from 1933 to 1945.

dictators. Among the best-known dictators of modern times were Adolf Hitler (1889–1945)—Germany; Joseph Stalin (1879–1953)—USSR; Benito Mussolini (1883–1945)—Italy; and General Francisco Franco (1892–1975)—Spain. Ancient dictators include Julius Caesar, Sulla, Cincinnatus, and Quintus Fabius Maximus.

dictionary. So far as is known, the first dictionary was compiled by the Greek scholar Aristophanes of Byzantium, head of the Alexandrian Library, in about 195 B.C.

diddle. In its sense of to cheat or deceive *diddle* derives from the name of the main character in James Kenny's farce *Raising the Wind* (1803). Jeremy Diddler continually borrows small sums from other people and fails to pay them back. Since the late 19th century *diddle* has been slang for to fornicate, making Mr. Diddler perhaps the only eponymous person in literature so honored. *Diddle* can mean "nothing," as in "He doesn't know diddle about it."

diddledees. An unusual Americanism meaning pine needles. It has been suggested that since diddledees are sometimes used as kindling, they take their name from the diddledee tree or shrub of the Falkland Islands, which is also used for fuel. The term could have been brought to America by whalers a century or so ago. In various regions of the U.S., pine needles are also called needles, spills, pins, twinkles, straws, tags, and shats.

diddling. A humorous Pennsylvania Dutch term for sexual intercourse. Heard in other areas as well.

didn't lay a finger on. These words seem so obvious for "didn't touch, didn't harm in the slightest way" that one would think the expression is of ancient origin. But the *O.E.D.* has only traced the first recorded use of the common phrase back to England in 1865.

dieffenbachia. See MOTHER-IN-LAW PLANT.

die for the want of lobster sauce. Vatel, the chef of the French prince de Condé, is said to have killed himself because the lobsters (or fish) he needed for a sauce he was preparing for Louis XIV didn't arrive on time. Thus, *to die for the want of lobster sauce* is said of someone who suffers greatly because of some small disappointment.

diehard. The British won the battle of Albuera on May 16, 1811, and although the battle is generally considered a strategic mistake it provided the *esprit de corps* that aided Wellington in future battles against Napoleon's superior forces. The victory was due in large part to the heroic action of the famous British 57th Foot commanded by Colonel William Inglis. His regiment, part of a thin line of 1,800 redcoats, occupied an important strategic position in the small Spanish village and had been pinned down by deadly French fire. "Die hard, fifty-seventh, die hard!" Inglis cried out from where he lay wounded. His men responded. Of 579 troops, 438 were killed or wounded and the regiment passed into legend as the *Die Hards*. Later their nickname was used to describe ultraconservative political groups or individuals refusing to change with the times, many of them far less honorable than the 57th.

die laughing. Shakespeare, in *The Taming of the Shrew* (ca. 1592), was apparently the originator of this expression, or at least the first to record it: "Went they not quickly, I should die with laughing." Several cases are recorded of people actually dying of laughter while watching a stage comedy. More ironic was the death of the ancient soothsayer Calchas, who died of laughter on learning that he had just outlived the predicted hour of his death. John Gay's *The Beggar's Opera* (1728) is supposed to have made Gay rich and Rich (the producer) gay (though not in today's sexual meaning of the word). Gay's opera is one of the few plays at which someone literally died laughing. Fifty years after Gay's death, at an April 1782 performance, a certain Mrs. Fitzherbert broke into laughter at the sight of a male actor dressed as a girl playing the part of Polly. She laughed so loudly all the way through the second act that she had to be ejected from the Drury Lane Theatre. Mrs. Fitzherbert's laughter never ended, however. Her hysterical laughter lasted all that Wednesday and all of Thursday until she died of laughter early on Friday morning.

to die like a dog. See DOG'S LIFE.

Diervilla. See WEIGELA.

diesel. German mechanical engineer Dr. Rudolph Diesel developed the heavy-duty internal combustion engine bearing his name from 1892–97 at the Krupp factory in Essen and spent the rest of his life perfecting it and manufacturing *diesel engines* at a factory he founded in Augsburg. Today it is employed in locomotives, ships, generators, cars, trucks, submarines, and much heavy equipment. Diesel became rich and famous as a result of his invention, yet he may have ended a suicide in 1913, when he was only 55. It is possible that he fell overboard while crossing the English Channel on a mail steamer on the night of September 30, but his hat and overcoat were found by the rail, suggesting that he had jumped.

different drummer. See HEAR A DIFFERENT DRUMMER.

dig. *Dig*, for "understand," is first recorded in about 1935, which is not to say that it couldn't have been in use much earlier. No one knows how the Americanism came to be, but there are two contending theories: (1) the Celtic *twig*, "to

understand," is the word's ancestor, and (2) the West African *degu* yielded *dig*. *Dig* for an insulting remark, a *dirty dig*, goes back to the turn of the century and may derive from the *dig* meaning a poke or jab.

Digambara. One of the traditions of Jainism, a religion which among other vows requires its monks not to harm any living thing (*ahimsa*). *Digambara* means "sky clad" or "naked," its monks and nuns vowing nudity.

digger. See AUSSIE.

Digger Indian. A small Paiute tribe near St. George, Utah, was apparently the first Indian tribe to be called Diggers, because they practiced agriculture instead of hunting for food. The name is said to be an English translation of their Indian name. Later, *Diggers* was applied to all agricultural tribes and eventually the name became a derogatory one for any Indian.

digging one's grave with a knife and fork. This humorous expression for gluttony was first recorded in England during the late 19th century and is still occasionally heard there and in America in these weight-conscious days.

digging one's grave with one's teeth. Said of someone who eats too much. "She's diggin' her grave with her teeth."

digit. Roman numerals first represented human fingers, so the numbers one to nine were called *digitis* after the Latin *digitus*, "finger."

digital film restoration. By one estimate, almost half the movies made before 1950 have been lost because they were improperly stored, and many more have deteriorated to some degree. Digital film restoration can do nothing about the former films but can vastly improve those that are flawed. The process involves converting each frame of a movie into a digital image, which is then displayed on a computer screen and repaired by an artist using a digital pen and tablet; the repaired frame is finally recorded back onto the film. The process can also be used to correct mistakes made in the original filming; for example, the artists restoring Walt Disney's *Fantasia* added an animal's foot missing in the original, and director George Lucas added new creatures to scenes of the *Star Wars* trilogy. "With digital, if you can think it, you can do it," one restoration expert says. "If you want to take Humphrey Bogart out and put Brad Pitt in you can do it." Entire pictures can be virtually made over. The biggest, if not the only, problem in this complicated process is the \$1 million to \$5 million it costs to digitally restore a film.

digitalis. The flower *digitalis*, long known as a heart stimulant, is so named because a human finger, or *digit*, fits snugly into one of its deep-throated bells.

dilapidated. In a state of ruin, deterioration, disrepair. The word derives from Latin *dilapidare*, to throw or scatter stones, which was what invaders often did to demolish buildings and walls in medieval times.

dildo. Several derivations have been suggested for this instrument of sexual pleasure, which the French call a *consolateur*: 1) a corruption of the Italian *deletto*, “delight”; 2) a corruption of the English *diddle*; 3) the cylindrical dildo tree or bush, which grows 10 feet or so straight up. The *O.E.D.* says only that the word is of obscure origin and offers an earlier date (1610) for its use for a phallus than its use for a plant.

dilly. In its meaning of “some outstanding thing or person,” *dilly* is first recorded in the early 1930s. But it was used as an adjective in America before then and probably has a long history, deriving either from the 17th-century English *dilling*, “darling,” or from the first four letters of *delightful*.

dime. *Dymes*—the word’s origin from the Latin *decema*, “a 10th part”—were originally the tithe, or 10th, of one’s income paid as a tax to the church by temporal rulers. Chaucer so used the word in 1362 and it was not employed in its present sense—for a U.S. coin representing [[TN]] of a dollar—until 1786.

dime novel. American publisher Erastus Flavel Beadle (1821–94) named all such melodramatic, often lurid, romantic or adventure paperbacks in 1860 when he first called books that he published the *Dime Book Series*. The first book issued in his series was *Malaeska, the Indian Wife of the White Hunter*. The “dollar books for a dime,” as it was advertised, sold over 300,000 copies its first year. See PENNY DREADFUL.

dimity. This durable cotton cloth woven with raised patterns isn’t so named after Damietta, Egypt, as is often claimed. It takes its name from the Greek *di-mitos*, “double-thread.”

dimples. Englishman William Taylor is credited with manufacturing the first golf ball with dimples (that is, a meshlike surface made up of small depressions) in 1908. The dimples enable the ball to carry farther and, in case you haven’t counted, there are 360 of them on a modern golf ball. See PAR FOR THE COURSE.

dim sum. A Cantonese appetizer whose name translates as “little heart” or “heart’s delight.”

dine. Meaning to eat, possibly to eat well or to eat “seriously” (not to eat a sandwich, for example), *to dine* originally meant “to eat dinner, the principal meal of the day.” In this respect the word is a contradiction, deriving as it does from the Latin *disj-unare*, “to breakfast, to eat the *first* meal of the day.”

dine with Duke Humphrey. It was popularly believed in days of yore that Humphrey, duke of Gloucester (1391–1447), a man noted for his hospitality, was buried in London’s old St. Paul’s Cathedral. For many years after his death those poor who remained in the cathedral during dinner hours, or those debtors afraid to leave the sanctuary for fear of imprisonment, were said to be dining with Duke Humphrey. Although the good duke had actually been buried at St. Albans, the expression *to dine with Duke Humphrey* remained linked with St. Paul’s and came to mean to go without any dinner at all. It is now solely a literary expression, often found in the novels of Dickens and other great English authors.

dingbat; dingus, etc. *Dingbat*, a favorite expression of Archie Bunker’s, is American in origin, going back to at least 1861, when it meant “anything that can be thrown with force or dashed violently at another object,” according to Farmer’s *Americanisms* (1899). The word possibly derives from *bat*, “a piece of wood or metal,” and *ding*, “to throw.” But *dingbat* came to be used in describing anything of which the proper name is unknown to or forgotten by a speaker, much as we more frequently use such meaningless words as *thingamabob* (an extension of the word *thing* that goes back to the late 17th century), *thingamajig*, *dingus*, *doohickey*, *whatsit*, and other infixes. A father describing how to assemble a complicated piece of equipment, such as a child’s toy, might say: “You put this *thingamajig* into this *doohickey* and tighten this *doodad* and this *thingamabob*; then you take this *dingus* over here near this *gismo* and attach it to this *hickeymadoodle* so that it barely touches the *thingamadoodle* there near the *whatchamacallit*—then you have to grease it up with this *jeesalamsylborax* or the damn *dingbat* won’t work!” *Dingbat* has also served over the years as a slang term for “a gadget, money, buns or biscuits, a woman, and a hobo or bum.” But Archie Bunker’s contemptuous use of the word for a “nut,” an ineffectual, bumbling fool (that is, anyone he doesn’t agree with), may come directly from the Australian *dingbats*, meaning “eccentric or mad.” *Dingbats* are also the small marks and printers’ decorations used in publishing.

dinghy. Small boats carried on larger vessels take the name *dinghy* from the Hindi *dingi*, “little boat.” In the late 18th century British mariners noticed small native rowboats called *dingis* in Indian waters and brought the word for the boat home with them, changing its spelling a bit.

dingo. *Dingo* (*Canis dingo*) refers to an Australian wild dog with a reddish brown or yellowish brown coat. The word was taken into English in the late 18th century from the Aboriginal language of southeast Australia, where it was *dingu*. Since then *dingo* has come to mean an informer or a coward in Australian slang.

dink. A recent term dating back to the 1980s for either the male or female of a married couple with two incomes but no children. The word comes from the first initials of *double income, no kids*. *Dink* is also a derogatory term for a Vietnamese, among other meanings.

dinner on horseback. A famous dinner given by American millionaire C. K. Billings at Louis Sherry’s restaurant in 1903. The guests, all men, lounged in the saddle astride horses that had been brought to the ballroom by elevator. The diners ate pheasant from feed bags and drank champagne from large rubber casks. It was said that Billings spent \$50,000 for the feast, including the planting of sod on the ballroom floor. A couple of years later, in 1905, millionaire Diamond Jim Brady topped Billings with a dinner he gave for his racehorse Gold Heels; it cost over \$100,000, including the \$60,000 he spent for diamond jewelry for each guest.

diners. An old-fashioned expression for a woman’s breasts, heard chiefly in the Ozarks. *Big diners* is sometimes used for very large breasts.

dinosaur. A word coined in 1841 by British scientist Sir Richard Owen (1804–92) long after the great beast roamed the earth, at about the time its fossil bones were beginning to be assembled and studied. Owen made the word from the Greek *deinos*, fearsome, plus *sauros*, lizard.

Diogenes; Diogenes crab; Diogenic. He is said to have walked the streets of Athens with a lantern in broad daylight searching for an honest man, thus expressing his contempt for his generation. His home was a narrow, open earthenware tub or barrel that he trundled about with him. On seeing a child drinking from cupped hands, he threw away his only worldly possession, a wooden bowl. On being asked by Alexander the Great if the emperor could oblige him in any way, he replied, “Yes, by standing out of my sunshine.” More lore surrounds Diogenes of Sinope (ca. 412–322 B.C.), a relatively minor philosopher, than many a more deserving thinker. Diogenes the Cynic held that the virtuous life was the simple life and advocated a return to such ways; he considered self-control, the lack of all pleasure, and even pain and hunger essential to achieving goodness. The Greeks nicknamed him “dog” for what they considered his shameful ways (see CYNIC), but Diogenes considered himself a governor of men; in fact, he once told pirates who had captured him that he would like to be sold to a man who needed a master. Diogenes died on the same day as Alexander the Great, who had said, admiringly, “If I were not Alexander, I would be Diogenes.” Today a Diogenes or a diogenic person is a cynical, churlish, but independent one, while a West Indian hermit crab bears the philosopher’s name because it lives in empty shells reminiscent of his tub.

diorama; photography. Invented in 1822 by Louis Daguerre (1787–1851), who later invented the daguerreotype, the first permanent photographic process that really worked, the diorama is a scene, often in miniature, reproduced in three dimensions. The French inventor probably patterned the word on *panorama*, which comes from the Greek (*h*)*orama*, view. The word photography was coined from Daguerre’s *photogenic* drawing process plus his *heliographic* system.

Dioscorea. While many genera and species of flowers and fruits are named for people, the yam is the only major vegetable, excluding vegetable varieties, to take even its scientific name from a real person. The yam’s botanical name is *Dioscorea batatas*; the genus, containing many species, was named by Linnaeus for Pedanius Dioscorides, or, more correctly, Dioscurides, a first-century physician and an early father of botany. A surgeon in Nero’s Roman army, Dioscorides gathered information about 600 medicinal plants and other remedies of the period, which he recorded in his *De Materia Medica*, translated in 1934 as the *Greek Herbal of Dioscorides*. Dioscorides’ work remained standard for centuries and he is considered to be the first man to establish medical botany as an applied science. *Dioscorea batatas*, the yam, is often incorrectly called a sweet potato, to which it is no relation, despite the similarity in appearance and taste.

dip. A pickpocket. In a pickpocketing operation the *dip* works with an accomplice called a *steerer* who selects the *score*, or victim. The steerer then signals a *stall*, or *stick*, who blocks the score by slowing down or falling in front of him. A *shield*

or *shade* walks on one side of the score, shielding him from witnesses, while the dip, the actual pickpocket, moves in from behind and picks the score’s pocket. Another accomplice called the *dish* takes the wallet or the money from the dip and passes it to a gang member in a nearby car. Sometimes there is even a sixth accomplice called a *tailpipe* who watches well back of all the other players for police surveillance. This is a very common pickpocketing scheme in New York City, where a pickpocket is also called a *mechanic*, an *ocho* (a master pickpocket), a *cannon* (a white pickpocket), a *shot* (a black or Hispanic pickpocket), a *hook*, a *finger*, a *wire*, a *rouster*, and a *spitter* (who “accidentally” hawks phlegm on his victims to distract them).

diploma; diplomat. Diplomas were originally official documents that were folded in two and sealed, taking their name from the Greek *diploma*, “a letter folded double.” Though mainly a document given to graduates today, they were at first government documents and the government officials who carried these diplomas were called diplomats.

diplomacy. British author and politician Edmund Burke introduced this word to English from the French *diplomatie* (pronounced *diplomacy*) in his *Letters on a Regicide Peace* (1795–97). See ELECTIONEERING.

dirge. In medieval times the memorial song at funeral services for the dead was based upon the eighth verse of the fifth Psalm, which in English is “Guide, O Lord, my God, my way in Thy sight.” The song was sung in Latin, however, where the line is “*Dirige, Domine, Deus meus, in conspectu tuo viam meam.*” The first word of the song in Latin was heard so often through the years that it became, slightly altered, *dirge*, the name of such a funeral song.

dirt-eater. One who eats dirt or clay for its nutritional content, especially a southern poor white or black person. Dirt-eating, or clay-eating, is still practiced, especially in South Carolina and Georgia low country among poor farmers and sharecroppers. It has a long history. The German explorer Alexander von Humbolt described geophagists or dirt-eaters called the Ottomaques of the Orinoco, who fed “on a fat, unctuous earth . . . tinged with a little oxide of iron.” Similar practices have flourished in many lands: the Aleppo fed a kind of fuller’s earth called Byloon to pregnant women and sickly girls; the Javanese ate little balls of reddish clay called Ampo if they wished “to become thin and graceful”; the Swedes enjoyed a hearty “mountain meal” called *bergmehl*, sometimes mixed with flour; and workmen in the European Kiffhausen stone quarries spread a very fine clay called “steinbutter” on their bread. Geophagists usually suffer from mineral deficiencies which the soil helps remedy.

dirt farmer. A farmer who works his own farm rather than employing tenants or hired hands. The U.S. term dates back to about 1920.

Dirty Banshee. See CRIBBAGE.

dirty dig. See DIG.

dirty dog. See GO TO THE DOGS.

dirty dozens. See THE DOZENS.

dirty linen; dirty laundry. See DON'T WASH YOUR DIRTY LINEN IN PUBLIC.

dirty little secret. Something embarrassing that must be concealed. The phrase, much used today, was invented by British author D. H. Lawrence (1885–1930) in his essay “Pornography and Obscenity” (1928).

dirty look. A reproving glance of disgust or annoyance: “She threw him a dirty look.” The Americanism is first recorded in 1928.

dirty rat. Jimmy Cagney is supposed to have snarled this epithet in one of his gangster movies, but no one has established which one. The expression, meaning a disgusting, treacherous person, may date back to the late 19th century. In any case, there is really no truth in the saying a *dirty rat*, for the rat is soiled only by human dirt; it is naturally quite a clean animal, loves water, and delights in bathing in it. One researcher meticulously observed the daily ritual of a wild rat rising: “Eyes open. Rises and stretches. Licks hands; washes face; washes behind ears and continues to lick hands at intervals. Licks fur of back, flanks, abdomen. Licks hind toes, scratches with them, licks scratches . . . scratches flank and belly . . . Licks genitals . . . Licks tail while held in hands . . . Licks hind legs while held in hands . . .” Some dirty rat!

Dirty Thirties. The 1930s, when terrible dust storms afflicted the Great Plains of the U.S., causing many deaths and great financial loss. See DUST BOWL.

dirty word. A taboo word, an obscenity. The U.S. term is first recorded in about 1835 and its extended meaning is applied to anything considered unmentionable or reprehensible, as in “His name is a dirty word.” What is a dirty word, of course, depends on the mind or heart of the beholder or listener. A famous *list* of dirty words is American comedian George Carlin’s radio comedy routine about seven dirty words that are prohibited on the air. The FCC banned Carlin’s “Seven Dirty Words” and was upheld by the U.S. Supreme Court, which deemed the words indecent but not obscene. The Indecent Seven are *fuck*, *shit*, *cunt*, *cocksucker*, *piss*, *tits*, and *motherfucker*.

dis. The word *dis*, here, has nothing to do with Dis, the ruler of the Roman Hell. This *dis* (as in “She dissed him,” or “He was dissing her”) means *disrespect*, deriving from its first syllable. Rap performers seem first to have used the word, which was initially recorded as recently as 1982 and is now widely used.

discount. The French practiced discounting as early as 1500, calling the practice *déscompte* because it first involved “selling by the count” rather than knocking down prices. For example, a buyer was charged for only nine items when buying 10, the 10th item set aside from the count and given to him free—a practice that would better be called the premium technique. By

the time *déscompte* spread to England in the early 17th century, however, its name transformed to *discounting*, it meant the reduction in price that discounting is today.

discretion is the better part of valor. Shakespeare probably coined this old saw, in *Henry IV, Part I*. But what he wrote exactly was “The better part of valor is discretion.”

discus. The ancient Greek word *diskos*—which derived from the Greek *dikein*, to throw—meant a flat, round stone or metal object thrown in athletic contests. *Diskos* passed into Latin, and finally into English as *discus*, retaining the same meaning. Because of its round shape, the discus gave us the words DISH, *disk*—as in *floppy disk*—and even *desk*, which originally meant a round table.

dish. The round, flat quoit that the Romans called the *discus* probably gives us the word *dish* for “a plate.” Apparently, German soldiers jokingly called their mess tins *diskaz*, after the *discus* and *diskaz* passed into English as *dish*. *Dish* is not an Americanism for “a pretty or sexy girl,” as many slang dictionaries claim. Shakespeare called Cleopatra Antony’s *dish* in *Antony and Cleopatra* (1606), when Enobarbus remarked of Antony: “He will to his Egyptian dish again.” *Dish* also means gossip, as in “Don’t read Liz Smith’s memoir for dish.” (*Newsweek* 9/25/00) The term is probably from the verb *dish out*, to gossip, or from *dish out the dirt*, both of which are first recorded in 1926.

dismal. Two days of every month on medieval calendars were designated “evil days,” *dies mali* in Latin. These days were thought to be evil and unlucky because Egyptian astronomers had pronounced them so centuries before. We have since learned not to place much stock in Egyptian astronomers or medieval calendars, but *dies mali* is still with us in the form of *dismal*, which has come to mean gloomy, dreary, dull, or lacking in merit.

Dismal Swamp. A large swampy area of about 600 square miles extending from southeastern Virginia into northwestern North Carolina. It is also called “the Dismal,” and its residents are called “Dismalites.” *Dismal* serves, too, as the name of any American swamp, all of which are lonely, forbidding places.

Disneyan. Among Walt Disney’s 39 awards from the Academy of Motion Picture Sciences, and his more than 800 awards and decorations for his work from other sources, there is one that honors him “for creating a new art form in which good was spread throughout the world.” It is on this creation that his fame rests secure. Walter Elias Disney (1901–66) did not invent the animated cartoon but brought it to perfection and created characters that have become a permanent part of American folklore (see MICKEY MOUSE). His many full-length animated motion pictures (*Snow White and the Seven Dwarfs*, *Bambi*, *Fantasia*, *Dumbo*, *Pinocchio*, *Cinderella*, *Alice in Wonderland*, *Robin Hood*, *Peter Pan*, and so on) set a standard for all others. Disney’s Mickey Mouse film *Steamboat Willie* was the first animated sound cartoon and he is credited with the invention of the storyboard and other innovative cartoon techniques. On another less creative level, the artist has been invidiously called

“the Henry Ford of the entertainment industry” for his Disneyland in California and the Disney World in Florida. Like Henry Ford—and Disney films were his favorites—Disney’s was a typical American success story: humble beginnings (although his family traces its origins to England’s noble D’Isney clan), hard work, and hardships of every description. Even the success marred by crass commercialism in later years is not unfamiliar. Yet the genius triumphs in the end. Disney’s characters remain, in the words of British artist David Low, “the most significant figures in graphic art since Leonardo.”

distance lends enhancement to the view. See FEW AND FAR BETWEEN.

district attorney. A cowboy stew containing cheap or unmentionable ingredients, such as sweetbreads, guts, and kidneys. It is so named because of the cowboy’s hatred of legal authorities. Also called county attorney and son-of-a-bitch stew.

District of Maine. Until 1820 the area that is now the state of Maine was a part of Massachusetts known as the District of Maine.

dithyramb. A Greek choral lyric said to have been invented, in literary form, by the semilegendary poet Arion. The poet made a fortune in Italy and was returning to Corinth when he was robbed by sailors and thrown overboard. But his assailants allowed him to sing a song before throwing him to his death, and a dolphin, charmed by the song, carried him safely to land.

ditto; ditto marks. *Ditto* means “the same as above,” “the same as came before.” The word derives from the Latin *dictus*, “having been said,” which is the past participle of the Latin *dicere*, to tell. *Dictus* became *ditto* in the Italian Tuscan dialect and later passed into English in the 17th century. The word can also mean a duplicate or a copy. *Ditto marks* are small marks (") used to indicate that a word written above is to be repeated.

divan. *Divan* has an involved but logical history. Originating as a Persian word meaning “a brochure,” it came to mean, in order: “a collection of poems”; “a register”; “a military pay book”; “an account book”; “a room in which an account book was kept”; “an account office or custom house”; “a court”; “a great hall”; and, finally, by 1597, “the chief piece of furniture in a great hall”!

a Dives. Dives is not named in current versions of the Bible, but he is the rich man mentioned in the parable told by Jesus in Luke 16:19–31, and his name has become proverbial for a wealthy, often insensitive person.

÷ (**division sign**). British mathematician John Pell (1611–85), who taught mathematics at Cambridge and Amsterdam, invented the division sign that we still use today. See AMPERSAND.

Dixie; Dixieland. It sounds incredible, but the first *Dixieland* or *Dixie* may have been in New York City. Some

etymologists lean to the following derivation of the word given by the *Charlestown Courier* of June 11, 1885: “When slavery existed in New York, one Dixie owned a large tract of land on Manhattan Island, and a large number of slaves. The increase of the slaves and of the abolition sentiment caused an emigration of the slaves to more thorough and secure slave sections, and the Negroes who were thus sent off (many being born there) naturally looked back to their old houses, where they had lived in clover, with feelings of regret, as they could not imagine any place like Dixie’s. Hence it became synonymous with an ideal location combining ease, comfort, and material happiness of every description.” Although no slave “lived in clover,” the explanation seems somewhat less doubtful than other theories about Dixie—that it derives from the 18th-century Mason Dixon line, or that the word comes from the French-Creole word *dix*, meaning “10,” which was prominently printed on the back of 10-dollar notes issued by a New Orleans bank before the Civil War. See AWAY DOWN SOUTH IN DIXIE.

Dixie cup. The American Water Supply Company’s vending machines sold a drink of water in a disposable paper cup for one cent beginning in 1906, the cup possibly called a *Dixie cup* because it was so reliable—like the old 10-dollar bills issued in Louisiana prior to the Civil War (see DIXIE). In years to come the Dixie cup was frequently applied to ice cream sold in a small cup as opposed to Popsicles, or ice-cream pops, and cones.

D.I.Y. These initials stand for *do it yourself*, a fixation among American homeowners.

DNA. The DNA we have been hearing so much about as evidence of guilt or innocence in murder trials is (very roughly) a nucleic acid that carries the genetic information in the cell. Its scientific name is the longest word in the English language. According to the *Guinness Book of World Records* the longest of all words is “the systematic name for deoxyribonucleic acid (DNA), which contains 16,569 nucleotide residues and is thus 207,000 letters long.”

do a Brodie. As a result of his famous leap off the Brooklyn Bridge, Steve Brodie’s name became a byword—in the form of to *do (or pull) a Brodie*—for “taking a great chance, even taking a suicidal leap.” Brodie made his jump from the Manhattan side of the Brooklyn Bridge on July 23, 1886, to win a \$200 barroom bet. Eluding guards on the bridge, the 23-year-old daredevil climbed to the lowest cable and plummeted 135 feet into the water below, where friends were waiting to retrieve him in a rowboat. He was arrested for endangering his life and reprimanded by a judge, but that didn’t stop him from making future leaps off other bridges. Some say that Brodie never jumped at all, an unproved theory, and many at the time belittled his claim. It is said that Brodie once angered boxer Jim Corbett’s father by predicting that John L. Sullivan would knock his son out. “So you’re the fellow who jumped over the Brooklyn Bridge,” the elder Corbett said when the two met for the first time. “No, I jumped *off* of it,” Brodie corrected him. “Oh,” replied Corbett, “I thought you jumped *over* it. Any damn fool can jump off it.”

do a Louis. A Greek expression meaning to do something unexpectedly, as the young Greek shepherd Spyridon Louis did when he won the marathon at the 1896 Olympics, held in Greece. Louis is also remembered by the new Olympic stadium at Athens named in his honor.

do a number on. When this voguish slang expression first appeared in the late 1960s, it simply meant “to deceive.” It derives, in this sense, from the old vaudeville days, when acts were called numbers because they were numbered on theater programs. The meaning evolved from an act to a pretense and then to an outright deception. Recently, however, the meaning has been softened and extended and *to do a number on* often means only “to affect,” though still usually in a devious way.

Doberman pinscher. Louis Dobermann, a German breeder, first bred these dogs for strength, loyalty, intelligence, and ferocity. They are short-haired, fearless dogs generally black or rust in color and proud of bearing. The male stands 24 to 27 inches, weighing 60 to 75 pounds. Dobermans are used extensively by the military and as guards for department stores and other commercial establishments. Their ferocity is fabled, and there are tales of them holding onto a gunman’s arm after being shot to death. See ROTTWEILER.

doctor. *Doctor* comes ultimately from the Latin *doctor*, teacher, passing into English from the Old French *docteur* meaning the same. Individual doctors famous in history, besides medical practitioners, include *the Angelic Doctor* (St. Thomas Aquinas); *the Subtle Doctor* (John Duns Scotus, see DUNCE); and *the Admirable Doctor* (Roger Bacon).

Doctor Diet, Doctor Quiet, and Dr. Merryman. According to a 16th-century proverb, these are the best “doctors” of all—to cure an illness or prevent an illness.

Doctor Dryasdust. Usually a fictitious pedantic antiquarian or historian. Sir Walter Scott put Doctor Dryasdust’s name on several prefaces of his novels, which weren’t generally tedious, as some would have it. Scott, incidentally, established the form of both the historical novel and the short story.

Doctor Eliot’s Five-Foot Shelf. A light-hearted name for the Harvard Classics, which are 50 volumes of the world’s greatest literature, philosophy, poetry, science, and drama selected by Charles William Eliot (1834–1926), president of Harvard from 1869 to 1911. The idea for the library came from two *Collier’s* magazine editors and Harvard professor William Allan Neilson assisted Eliot. It was said that reading only 15 minutes a day of the Five-Foot Shelf would eventually earn the reader a liberal education.

Doctor Feelgood. Any doctor who makes a specialty of writing prescriptions for amphetamines and other mind-altering drugs meant to induce euphoria in a patient. The name’s earliest recorded use is 1967. It was popularized by the Aretha Franklin song of that title.

Doctor Fell; Fell types.

I do not love thee, Dr. Fell,
The reason why I cannot tell;
But this alone I know full well,
I do not love thee Dr. Fell.

Dr. John Fell’s classes at Oxford must have been something to see. The English divine (1625–86) was quite a permissive teacher for his day, initiating many educational reforms and even allowing classroom debates, which often ended in fist-fights. Fell, a dean of Christ Church, Oxford, and bishop of Oxford, is also noted for the *Fell* (printing) *types* he collected for the university press and for the extensive building program he began at the university. Yet his name is used to describe someone disliked for no apparent reason. He owes his unjust fate to Thomas Brown (1663–1704), once his student at Christ Church and later an author and translator. Dean Fell had threatened to expel Brown for some offense if he could not translate a Martial couplet. The resulting jingle above bore little resemblance to the 33d epigram, but Dr. Fell, to his credit, good-naturedly accepted the paraphrase. As for Tom Brown, he never wrote anything else that was remembered.

Doctor Jekyll and Mr. Hyde. In Robert Louis Stevenson’s novel *The Strange Case of Dr. Jekyll and Mr. Hyde* (1886), Dr. Jekyll, a physician, discovers a drug that creates in him a personality that absorbs all his evil instincts. This personality, which he calls Mr. Hyde, is repulsive in appearance and gradually gains control of him until he finally commits a horrible murder. Jekyll can rid himself of Hyde only by committing suicide. Stevenson, who wrote the novel in three days locked in his study after he had had a dream about the story, based the main character on an Edinburgh cabinetmaker and deacon named William Brodie (1741–88), who was a “double being,” by day a respected businessman and by night the leader of a gang of burglars. Brodie was finally hanged for his crimes, but Stevenson, who was raised in Edinburgh, knew his story well and in fact wrote a play entitled *Deacon Brodie, or The Double Life* when he was only 15. This was the germ of the idea for the later work.

Doctor Kildare. There have been a good number of fictional “television doctors,” but among the first and most romantic was Dr. Kildare, played by Richard Chamberlain. Dr. Kildare’s name came to mean any doctor in the 1960s. Other favorites over the years included surgeon Hawkeye Pierce of *M*A*S*H* and family doctor Marcus Welby in *Marcus Welby, M.D.*

Doctor Livingstone, I presume! The phrase is still used in a humorous sense, as it was several generations ago. It recalls, of course, the very British greeting of journalist Sir Henry Morton Stanley when after a long, arduous journey—only 700 miles in 236 days—he found the ailing Scottish missionary-explorer David Livingstone on the island of Ujiji in the heart of Africa. The star reporter had completed one of the greatest manhunts of all time. Deserted by his bearers, plagued by disease and warring tribes, he was probably too tired and overwhelmed to think of anything else to say. Stanley (1841–1904) had been sent to Africa by the *New York Herald* to locate the

famous explorer, Livingstone, feared dead or swallowed up by the Dark Continent. Born John Rowlands in Denbigh, Wales, Stanley assumed the name of his adoptive father when he emigrated to America as a youth. He later became a noted explorer in his own right. Dr. Livingstone died, aged 60, a year after the reporter left him in 1873. His body was shipped back to England and buried in Westminster Abbey.

Doctor My-book. British surgeon Dr. John Abernethy (1764–1831) wrote a number of books on medicine, the best known of which was *Surgical observations on the constitutional Origin and Treatment of Local Diseases* (1809). Very popular with his patients, he got the name Dr. My-book because like many an author he invariably told his patients, “Read my book,” whenever a medical question came up.

Doctor Pangloss. Any incurable optimist is called a *Dr. Pangloss* after the pedantic old tutor of the same name in Voltaire’s *Candide, or the Optimist* (1759), which was an attack against Rousseau’s philosophy. Dr. Pangloss remained optimistic to the end, despite all his misfortunes, believing “all is for the best in this best of all possible worlds.”

Doctor’s Mob. “In a spirit of medical humor,” one chronicler of the period wrote, a medical student, John D. Hicks, picked up the arm of a corpse he had just dissected and waved it at several young boys peering in through the window. “This is your mother’s arm!” he shouted. “I just dug it up. Get out of here or I’ll smack you with it.” The children scattered into the dark, but one frightened boy took Hicks at his word. By a strange coincidence his mother *had* died recently. The boy repeated Hicks’s threat to his father, who gathered some friends and hurried to the local cemetery. There, by another strange coincidence, he found his wife’s grave empty. Whoever had robbed it hadn’t even bothered to fill in the hole, the coffin exposed and broken apart. The enraged man vowed to make someone pay for this desecration, leading his friends through the streets of lower Manhattan. Others joined them, and a mob of hundreds soon stormed toward the New York Hospital and its unsuspecting staff. The mob had heard too many stories about young interns stealing bodies from private cemeteries, and now they had “proof.” The Doctor’s Mob of April 13–15, 1788, one of America’s first riots, had begun. Before it was put down at least eight people were killed and scores more were injured.

Doctor Strangelove. The mad main character (played by Peter Sellers) in the movie *Dr. Strangelove* (1964), whose plans in the cold war include the use of nuclear bombs. The name has since been applied to anyone sharing his beliefs. See HAIR ON FIRE.

doctrinaire. This word for a pedantic theorist is taken from the nickname of Pierre Paul Royer-Collard (1763–1845), whose political party, in turn named the “Doctrinaires” in his honor, made it their business “to preach a doctrine and an orthodoxy.” Royer-Collard’s party arose in France in 1815 after the second restoration of Louis XVIII. Moderate royalists, he and his colleagues desired a king who would govern liberally, accepting the results of the French Revolution, and were noted

for the rigidity of their arguments. Unattuned to political realities, the “Doctrinaires” were destroyed by a reactionary Charles X in 1830. Before being applied as a nickname to Royer-Collard the word had been the popular name for a religious order founded in 1592. Today *doctrinaire* is used contemptuously to describe an inflexible theorist, as distinguished from one who tries to accomplish something within the existing political system.

Dodger Dog. A huge hot dog, 10 inches long, which was patterned on the Nathan’s Famous footlong frank. Its inventor was concessionaire Thomas Arthur, who died in 2006, aged 84. Arthur Food Services sold about 50,000 Dodger Dogs every game, probably rivaled only by peanuts and Cracker Jacks. His best customer was Dodger Stadium.

Dodgers. The incomparable Brooklyn Dodgers, who became comparable after their move to Los Angeles, were called the Dodgers because Manhattanites contemptuously referred to all Brooklynites as “trolley dodgers” at the turn of the century, the bustling borough being famed for its numerous trolleys, especially in the central Borough Hall area. Attempts were made to change the name to the Superbas, the Kings, and the Robins, all to no avail. Some baseball team names just seem to catch on while others don’t. The Boston Bees, for example, were named by a distinguished committee of baseball writers from a choice of 1,300 names, but people stubbornly called them the Braves, a name they retained after they moved to Milwaukee. The Cincinnati Reds tried to become known as the Redlegs to avoid identification with communism, but their name remains the Reds. See also DEM BUMS.

dodo. See DEAD AS A DODO.

Does a bear shit in the woods? Absolutely, certainly, as in “Can I do it? Does a bear shit in the woods?” One euphemism for this humorous expression is “Does a bear sneeze in the woods?” Another: “Does a bear crap in the woods?” The expression dates back at least to the 1920s and is widely heard today, especially among men.

Does Macy’s tell Gimbels? Gimbels department store has long gone out of business, but this expression is still commonly heard. The by now proverbial words arose from a friendly, well-publicized, and well-advertised retailing war between the two giant New York department stores. The expression possibly originated as a publicity gag, perhaps as a line in an Eddie Cantor comedy skit when a stooge asked Cantor to reveal some dark secret and the comedian replied, “Does Macy’s tell Gimbels?” Actually, Macy’s often told Gimbels and vice versa. One time Gimbels ran an ad calling attention to Macy’s fabulous annual flower show, heading it: “Does Gimbels tell Macy’s? No, Gimbels tells the world!” On another occasion, in 1955, both stores posted signs on their buildings directing shoppers to the other’s store. The Gimbels-Macy’s rivalry was further publicized in the film *Miracle on 34th Street*, in which Macy’s directs customers to Gimbels when it doesn’t have a particular item in stock.

doesn't hold water. For over 300 years this expression has meant that something doesn't pass a test, fails, is not sound. It possibly derives from a prospective buyer testing a water pitcher by filling it with water. If it leaked, it didn't hold water, it failed the test and wasn't bought.

doesn't know beans. Boston, home of the "bean eaters," "home of the bean and the cod," may be behind the phrase. Walsh, in his *Handy-book of Literary Curiosities* (1892), says that the American expression originated as a sly dig at Boston's pretensions to culture, a hint that Bostonians knew that Boston baked beans were good to eat, that they were made from small white "pea beans"—even if Bostonians knew nothing else. It may also be that the American phrase is a negative rendering of the British saying "he knows how many beans make five"—that is, he is no fool, he's well informed—an expression that probably originated in the days when children learned to count by using beans. But *he doesn't know beans*, "he don't know from nothing," possibly has a much simpler origin that either of these theories. It probably refers to the fact that beans are little things of no great worth, as in the expression "not worth a row (or hill) of beans."

doesn't know enough to come in out of the rain. Said of a stupid person: "He doesn't know enough to come in out of the rain."

doesn't know his ass from his elbow. A common term describing a person completely ignorant of something. In British slang it would be *doesn't know his arse from his elbow*.

(he, or she) doesn't miss much. Said of someone very observant. One wouldn't expect this expression to be so old, but Shakespeare used it in *The Tempest* (1611), in the form of "He misses not much."

dog. First recorded in 1050 but probably born before then, *dog* is an early example of a "native" invented English word not borrowed from any other tongue. Before its introduction, the Teutonic *hund* had been the Old English word for the canine. Then *dog* (*docga*) first appeared in English as the name for a now unknown breed of powerful *hunds*, the word *dog* eventually passing into other Continental languages. Some famous dogs in history include: Argos, the dog of Ulysses; Buddy, President Bill Clinton's dog; CERBERUS, guard of Hades; Checkers, President Richard Nixon's dog, the subject of his famous Checkers speech; Diamond, Isaac Newton's dog; Fala, President Franklin Roosevelt's dog; Flush, Elizabeth Barrett Browning's dog; Lassie, of movie and TV fame; Pete the Pup, a star of the *Our Gang* pix; Pluto, Mickey Mouse's dog; Rin Tin Tin, the first great canine movie star; Rufus, Winston Churchill's dog; Sandy, Little Orphan Annie's dog; Snoopy, Charlie Brown's dog; Toto, Dorothy's dog in *The Wizard of Oz*. *Dog* is commonly heard today, mostly in black English, as a synonym for *man*, as in "Yo, dog, where you goin'?" Before this, again in black English, it meant a brutal or treacherous person, especially a male, while in sports talk it meant an unaggressive, spiritless boxer. Long before, American mountain men used *dog* as an affectionate form of address for one another, much as youngsters do today.

dog days. Mad dogs don't give us this name for the hot, close days of July and August, though perhaps the prevalence of mad dogs at that time of year has kept the phrase *dog days* alive. The expression originated in Roman times as *canicularis dies*, "days of the dog," and was an astronomical expression referring to the dog star Sirius, or possibly Procyon. The Romans linked the rising of the Dog Star, the most brilliant star in the constellation, *Canis Major*, with the sultry summer heat, believing that the star added to the extreme heat of the sun. "Canicular days," of course, have nothing to do with heat from the Dog Star, but the ancient expression remains popular after more than 20 centuries.

dog does not eat dog; dog eat dog. In the 16th century *dog does not eat dog* was a popular saying, but over the years *dog eat dog* (qv), an Americanism, has come to be heard more.

dog eat dog. According to the *Dictionary of Americanisms*, this is a phrase from the American frontier first recorded in 1834. It means ruthless competition with no holds barred; everyone for himself or herself; tit for tat. British poet Thomas Gray in an 1858 letter quoted a saying meaning exactly the opposite: "I cannot promise any special instruction and shall take no fee. 'Dog does not eat dog' is the saying, you know." Whether these two sayings arose independently or have something to do with each other hasn't been firmly established.

dogfight. A term used by cowboys for a fistfight; many cowboys, preferring to fight with weapons, thought dogfights were beneath them, reasoning that if they were intended to fight like dogs they would have been born with longer teeth and claws.

doggerel. See PIG LATIN.

dog gods. When American Indians first saw the great horses of invading Europeans, they called them *dog gods*.

doggone. There are two top choices for the origins of this mild, still popular word. An Americanism first recorded in 1826, it may be simply an alteration of goddamn, a "fantastic perversion" Weekley called it. Or it could come from the Scotch *dagone*, meaning "gone to the dogs." See GADZOOKS.

dog grass. Said to be eaten by dogs when they have lost their appetite, *dog grass* is another name for the very troublesome, weedy "quack grass," "witch grass" or "couch grass" (*Agropyron repens*). The plant acts as an emetic and purgative, illustrating the fact that even the most pernicious garden plants have their uses.

dogie. The American cowboy has been shouting "git along, little dogie" for more than a century, but no one knows where the word *dogie*, for "a motherless calf," comes from. Maybe it derives from "dough-guts," referring to the bloated bellies of such calves, perhaps *dogie* is a clipped form of the Spanish *adobe*, ("mud"), possibly the cows were so small that they were playfully called "doggies" and the pronunciation changed. Since some American cowboys were black there is also the possibility that the Bambara *dogo*, "small, short," is the source, or the

Afro-Creole *dogi*, meaning the same. Your guess is as good as any etymologist's.

dog in the night-time. In Arthur Conan Doyle's short story "Silver Blaze" (1892), Sherlock Holmes advises an inspector that the dog in the night-time did not bark because it knew the person who was stealing the horse from the stables. Since then the phrase has meant any unknowing participant in a crime. The phrase was used in 2003 by British author Mark Haddon as the title of his debut novel.

dog it. To dog it is to loaf on the job, to shirk one's responsibilities and evade work. This common expression goes back to about 1920 and may come from baseball, where it means to play in this lackadaisical manner. One theory suggests it originated when an infielder lifted his leg, as a dog might, as a hard-hit grounder came to him, but the reference may simply be to the expression *a lazy dog* or *lazy as a dog*.

dog latin. See PIG LATIN.

dogmerd. British novelist Anthony Burgess apparently invented this new word in the 1980s, employing the English *dog* and the French *merde* (for "excrement"). It is a word more adult than all other euphemisms we have for good old Anglo-Saxon expressions, and yet it conveys the nose-squinting reaction one has to stepping in the stuff. The word *merd* for excrement has of course been used in English for centuries, first recorded in 1477 and employed by Ben Jonson and Richard Burton, among other great writers.

do-gooder. When this term was first recorded in 1654, it simply meant someone who does good, or a reformer. However, by the 1920s in the U.S. it began to take on the derogatory sense of a bleeding heart or naive idealist, and today it has only that meaning.

dog robber. Sometimes heard as a derogatory term for a baseball umpire, *dog robber* has military origins. It was used in the mid-19th century to describe an Army officer's orderly, who ate in the officers' mess and was contemptuously said to rob the dogs of the table scraps there. Later the contemptuous words were applied to umpires.

dog rose. The wild, hardy dog rose (*Rosa canina*, called *cy-norrodon* by Pliny) is said to have been so named because the Romans thought that eating the flower cured the rabid bites of wild dogs. But then the Romans also believed that shortening a dog's tail was a preventative for rabies, and the Greeks thought that dogs could cure many diseases by licking patients. Today the dog rose is more realistically valued for the high vitamin-C content of its "hips."

dog's life; to go to the dogs; die like a dog; dirty dog. Dogs aren't the prized, often pampered pets in other countries that

they are in America. In the East they are often considered pariahs, scavengers of the streets, and the Chinese, Koreans, and Japanese, among other Asians, commonly eat them. Englishmen of earlier times used dogs primarily for hunting and kept them outside or in a rude shelter, not generally as house pets. The dogs were fed table scraps there wasn't any further use for, and these they had to fight over. It didn't seem ideal, a dog's life, and Englishmen of the 16th century began to compare anyone who had become impoverished, who was going to utter ruin naturally or morally, to their maltreated canines. *To lead a dog's life* was to be bothered every moment, never to be left in peace; *to go to the dogs* was to become just like the helpless animals; and *to die like a dog* was to come to a miserable, shameful end. There were many other similar phrases that arose before the dogs had their day in England and America, including *throw it to the dogs*, "to throw something away that's worthless"; and of course *a dirty dog*, "a morally reprehensible or filthy person."

dogs of war. At least one best-selling novel has used these words for its title. It means all the horrors and havoc of war and was originated by, or at least first recorded by, Shakespeare in *The Tragedy of Julius Caesar* (1599): "Cry, 'Havoc!' and let slip the dogs of war."

dog soldiers. Dog soldiers were originally members of a Cheyenne warrior society, the word often applied loosely to any Cheyenne or Indian warrior. The origin of the name is unknown. Later *dog soldiers* came to mean outlawed members of certain Western Indian tribes who banded together.

Dog Tag Law. In her biography, *Driven Out*, author Jean Pfaelzer tells how the Chinese in the United States were forced to carry identification cards or face deportation. This inspired what was called the 1892 Dog Tag Law, which was "perhaps the largest organized act of civil disobedience in American history."

dog tags. The metal identification tags worn by soldiers were not dubbed dog tags until World War I, when they were so called because they resembled a license tag on a dog's collar. Identification tags became required in the Army in 1906, but men had worn them on their own initiative since the Civil War. Two are worn so that, in the event of death, one can be buried with the body and the other kept as a record. The Army is now experimenting with an embedded microchip dog tag that can hold up to 12,000 characters—an individual's vital medical data and personnel file as well as his service number, blood type, and religion.

dogwatch. The dogwatch at sea is the period between 4:00 and 6:00 P.M. (the first dogwatch) or the period between 6:00 and 8:00 P.M. (the second dogwatch). The other watches aboard ship are:

- 12:00 to 4:00 P.M.—afternoon watch
- 8:00 P.M. to midnight—first night watch
- 12:00 to 4:00 A.M.—middle watch
- 4:00 to 8:00 A.M.—morning watch
- 8:00 A.M. to noon—forenoon watch

The dogwatches are only two hours each, so that the same men aren't always on duty at the same time each afternoon. Some experts say *dogwatch* is a corruption of *dodge watch*, and others associate *dogwatch* with the fitful sleep of sailors called dog sleep, because it is a stressful watch. But no one really knows the origin of this term, which was first recorded in 1700.

dogwood. See ZEP.

dogwood tree. This common tree has a mysterious name. John C. Loudon wrote in *The Hardy Trees and Shrubs of Britain* (1838) that the beautiful tree "is called Dogwood because a decoction of its leaves was used to wash dogs, to free them from vermin." This may be true, but no evidence has been found to support the theory. The popular ornamental (*Cornus florida*) was in early times called the "dogger tree," the "dogge berie tree," the "hounder tree" and the "hounde berie tree" as well as the dogwood, so it surely has some connection with dogs. Another possibility is that it was named the "dogberry tree" because its dark-purple berries resembled the berries of another, unknown tree that was used as a medicine for dogs, and that *dogberry* became *dogwood* in time. No link between the tree's wood and dogs has been found; we only know that in the past its wood was used to make toothpicks and that its crushed bark was thrown into the water to intoxicate fish and make them easy to catch by hand. John Ciardi proposes in *A Second Browser's Dictionary* (1983) that "Dog is a simple corruption of OE *dagge*, spit, skewer, because the wood of the European dogwood, being hard and smooth-grained, was commonly used for spitting meat." See CORNELIAN CHERRY.

dogwood winter. Similar to BLACKBERRY *winter*. In 1907 an issue of *American Folk-lore* reported this explanation by a contributor: "Don't you know what dogwood winter is?" demanded the man from Hickory, North Carolina. "There is always a spell of it in May, when the dogwood tree is in bloom. For several days there is cold, disagreeable, cloudy weather, and often a touch of frost."

doily. It is probable that a London linen draper named Doily, Doiley, Doylet, or Doily sold and perhaps invented the first doily napkins. Eustace Budgell, a cousin of British essayist Joseph Addison, uses the first spelling in the January 24, 1712, number of *The Spectator*, noting, "The famous Doily is still fresh in everyone's memory, who raised a Fortune by finding out Materials for such Stuffs as might at once be cheap and genteel . . . [a] frugal method of gratifying our pride . . ."

doing a land-office business. Before the Civil War, the U.S. government established land offices for the allotment of government-owned land in western territories just opened to settlers. These agencies registered applicants, and the rush of citizens lining up on mornings long before the office opened made the expression *doing a land-office business*, "a tremendous amount of business," part of the language by at least 1853. Adding to the queues were prospectors filing mining claims, which were also handled by land offices. After several decades the phrase was applied figuratively to a great business in something other than land, even, in one case I remember, to a land-office business in fish.

do it while standing on one foot. This Americanism means to do something easily and quickly, to encapsulate or describe it with little effort, as in "She explained her theory to reporters while standing on one foot."

doldrums. The doldrums has come to mean any area where a ship is likely to be becalmed, especially that area near the equator between the northeast and southeast trade winds. *Doldrums*, first recorded in 1811, probably derives from the words *dull* and *tantrum*, as if the dullness of such an area could drive one to tantrums. The phrase *in the doldrums* means "down in the dumps," much like mariners felt when they weren't moving anywhere. See MONSOON.

the dole. Since 1911, when the National Insurance Act became law, the British have used *the dole* (from Old English *dal*, share, and a later meaning of a charitable contribution) to mean a state unemployment benefit: "He lives on the dole." Americans usually call such state payments "unemployment checks," "welfare," or "family assistance," among other things, but *dole* does have limited usage in the U.S., most often in a disparaging way.

Dole's beard. A name in Hawaii for Spanish moss (*Tillandsia usneoides*) that is named after Sanford Dole, "the grand old man of Hawaii." The Pineapple King had a long gray beard that reminded people of Spanish moss hanging from a tree. The moss is also called Mr. Dole.

doll. *Doll* was originally a nickname for Dorothy. In the 16th century it became a popular name for a mistress or loose woman, such as Shakespeare's Doll Tearsheet, and a century later, perhaps because such women were considered "playthings," became the name for a child's toy representing a human being.

dollar. The word *dollar* can be traced to the name of a saint. The most likely candidate is St. Joachim, father of the Blessed Virgin, for whom the small mining town Sankt ("Saint") Joachimsthal in Bohemia had been named. It happened that the town and valley, or *thal*, belonged to a vast estate containing a rich silver mine from which one-ounce coins were minted. These silver coins, with a picture of St. Joachim on the face, were at first called *Joachimsthalers* ("of the valley of Joachim"). But the cumbersome name was soon shortened to *thalers*, pronounced *dahlers* in northern German dialect. The name eventually got to England as *daller* and by the end of the 17th century *dollar* was the accepted term applied to any foreign coin, especially Spanish pieces of eight. When the newly formed United States adopted its monetary system in 1785, it completely broke with England and "resolved that the money unit of the U.S.A. be one dollar (Spanish)." The first silver dollars were coined here in 1792, and greenback dollars as we know them were first printed during the Civil War.

dollar-a-year man. Someone who serves the federal government for patriotic rather than financial reasons is called a *dollar-a-year man*. The term came into use during World War I when such volunteers were paid a dollar a year because one dollar was the "valuable consideration" needed to make their contracts binding.

Dollar Bill. According to Michael Sokolove in the *New York Times Magazine* (February 13, 2005): “Bill Bradley, the dead-eye shooter and future United States senator, was . . . nicknamed Dollar Bill by his New York Knicks teammates for the presumed cost of the bargain-basement suits he wore.”

dollar bugs. A nickname for the whirligig beetle, because an old story holds that if you catch one in your hand you’ll find a dollar in it. The bugs are called lucky bugs for the same reason.

\$ (dollar sign). \$—the dollar sign—probably doesn’t derive from the figure “8” on Spanish “pieces of eight,” the usual explanation. The dollar sign was most likely modified from the twisted Pillars of Hercules stamped with a scroll around them on the pieces of eight. It may, however, result from a combination of the two symbols, or a corruption of the Spanish *Ps*, the contraction for “peso.” Anyway, if George Washington threw a silver dollar across the Potomac or Delaware, it must have been a foreign coin—for, as noted, American silver dollars weren’t minted at the time.

Dolly; cloning. Dolly is the name of the famous sheep (died on February 14, 2003) Scottish scientist Ian Wilmut and his coworkers cloned from another sheep, creating a genetically identical individual from body cells. The word *clone*, first recorded in 1903, derives from the Greek *klon*, twig or slip, and originally referred to plant propagation. William Safire wrote in his *New York Times* op-ed column (7/16/01) that Dr. Wilmut “is an informed opponent of human replication; he knows how many of his attempts to clone a sheep failed, and believes similar attempts with humans would be horrifying.”

dolphin. The *dolphin*, its name derived from the Latin *delphin*, for “the cetaceous mammal,” has long been regarded as “man’s best finned friend.” *Dolphinet* is an old word for a female dolphin. Wrote Spenser: “The Lyon chose his mate, the Turtle Dove Her deare, the Dolphin his own Dolphinet.” In recent experiments dolphins have been taught to understand 25 words arranged in sentences. See CHIMPANZEE; DORADO; PARROT.

domino effect. The domino effect is the political theory holding that if one country or region is taken over by a neighbor, especially a Communist one, the nearby nations will fall one after another. Also called the domino theory, the term was coined in about 1960 and true or not, was especially applied to Vietnam and the rest of Southeast Asia. It is based on the way a row of dominoes falls when stood upright on the board or table in a common entertainment. The game takes its name from a likening of the pieces once used in it—then black backs and ivory faces—to “domino hoods” worn by priests in medieval times. Another possibility would be the likeness of the double-one domino to the *domino*, the small black eye mask with two holes for the eyes.

Dom Pérignon. Dom Pierre Pérignon (1638–1715), the man who put the bubbles into CHAMPAGNE and after whom Moët et Chandon named its most famous vintage some years ago, was a blind man who renounced the world when only 15 and joined the Benedictine order. Cellarmaster of the monastery near Epernay, France, Dom Pérignon eventually found that corks

tightly drawn in his bottles would not be forced out, as would rags, and would retain naturally expanding gases, allowing for the so-called second fermentation in the bottle that is essential for any true sparkling champagne. Although unproved, the old story certainly rates a toast, if only as an excuse for another glass.

donate. The verb *donate* is a back formation from the noun *donation*. An Americanism recorded as early as 1795, it is firmly established today, but at first met with vociferous opposition, having been placed on William Cullen Bryant’s *Index Expurgatorius* and denounced as “pretentious and magniloquent vulgarity” by a British writer as late as 1935.

Don Juan. Of the names most frequently applied to libertines and lovers—Casanova, Don Juan, Cyrano, Valentino, Romeo, and Lothario—only the last is completely fictional. Don Juan, though immortalized in Byron’s incomplete cantos, Mozart’s Don Giovanni, and the myths and literature of many countries, is supposedly based on the 14th-century Spanish nobleman Don Juan Tenorio. That this original Don Juan had 2,594 mistresses, according to the valet’s figures in Mozart’s opera, is doubtful if not impossible, but the aristocratic libertine’s conquests were legion. His last was the daughter of Seville’s commandant. While attempting to ravish young Dona Anna, the legendary lover was surprised by her father, whom he dispatched in a duel. But local Franciscan monks decided that this was one debauchery too many and lured Don Juan to their monastery, where he was killed with his boots on. The monks, to conceal their crime, claimed that he had been carried off to hell by a statue of the commandant on the grounds, and thus the legend of Don Juan had its basis in fact.

donkey meat. It is said that the French highly value, or valued, donkey meat—certainly more so than that of the horse. A dish called *donkey’s brains à la diplomate* was supposed to be served at a luncheon given to Napoleon III. However, the *Larousse Gastronomique* says: “We find it difficult to believe in the veracity of this story.”

donkey’s years. A very long time. The words may be a punning allusion to the long length of a donkey’s ears and the fact that donkeys do often live to a great old age. The expression is first recorded in 1916 but may be older. See YONKS.

Donnelly. A fighter so powerful that any staggering punch came to be named after him. In this case the eponym is Irish boxer Daniel Donnelly (1788–1820), heralded in his time but little known today. See BRODERICK; BELCHER; BENDIGO.

Donner Pass; Donner Lake. The scene of one of the most gruesome tragedies in Western history is named for the two Donner families who were part of a California-bound wagon train of emigrants that set out across the plains from Illinois in 1846. The Donner party, beset by great hardships, paused to recoup their strength at what is now Donner Lake in eastern California’s Sierra Nevada, only to be trapped by early snows that October. All passes were blocked deep with snow and every attempt to get out failed. Forty of the 87 members of the party, which included 39 children, starved to death

during the winter, and the survivors, driven mad by hunger, resorted to cannibalism before expeditions from the Sacramento Valley rescued them in April. The Donner party's gruesome yet heroic adventures have figured in much native literature. California's Donner State Historic Monument commemorates the event; the Donner Pass is traversed by U.S. highway 40 today.

donnybrook. Too much flowing *usquebaugh* and too many flailing shillelaghs made the Donnybrook Fair a dangerous place to visit in old Ireland. The two-week-long fair, held in August every year since King John licensed it in 1204, was the scene of so many wild free-for-alls that the town's name became a synonym for any knock-'em-down-drag-'em-out brawl involving a group of people. By 1885 things had gotten so bad that they were too much for even those legendary Irishmen who love a good fight and the fair was finally closed. Donnybrook is now a relatively peaceful suburb about a mile and a half from Dublin.

donorcycle. A motorcycle. According to Alex Berenson, writing in the *New York Times* (July 6, 2003): "Sport bikes, which emergency doctors call 'donorcycles,' as in organ donation, are more dangerous than their less powerful counterparts."

Do-Nothing Congress. See USELESS PARLIAMENT.

Don't amount to a poot in a windstorm. He or she amounts to next to nothing, *poot* being a word for a fart.

don't blow a gasket. Hold your temper; curb that furious temper. A gasket is a packing or seal around pipe joints to prevent the escape of a gas. If you blow a gasket the motor can blow up, a human likewise.

don't bogart that joint; Bogard. In his films Humphrey Bogart often left cigarettes dangling from his mouth without smoking them. This led to the counterculture expression *Don't bogart that joint*; that is, "don't take so long with, don't hog, that stick of marijuana; smoke and pass it on to the next person." The term became widely used after appearing in a song in the film *Easy Rider*. Among those who practice the long-standing, widespread habit of communally smoking marijuana cigarettes, *bogarting* is considered both selfish and a waste of the expensive weed. Bogart's name, in the form of *Bogard*, also became inner-city slang for "to act tough or in a forceful manner" in the 1950s, deriving from the tough-guy heroes Bogart portrayed.

don't change horses in midstream. The phrase, possibly suggested to Abraham Lincoln by an old Dutch farmer he knew, is recorded almost a quarter of a century before Lincoln said it. But Lincoln immortalized the expression when he accepted his nomination for the presidency in 1864. Waving aside any suggestions that the honor was a personal one, he told the Republicans that he was sure they hadn't decided he was "the greatest or the best man in America, but rather, . . . have concluded it is not best to swap horses while crossing the river, and have further concluded that I am not so poor a horse that they might not make a botch of it in trying to swap." Over the years "the river," which was of course the Civil War, was abbreviated

to "midstream" and the saying *don't change horses in midstream* came to mean "don't change leaders in a crisis."

don't come the acid. Don't play the wise guy, don't give me any of your wise "acid" (vitriolic) answers. The phrase is British in origin with some American use.

don't count on rain [when it's needed] 'til it's floatin' chips up around your belly button. *Chips* in this Texas saying refer to cow manure chips from the pasture.

don't count your chickens before they're hatched. Don't count on profits before you have them in hand. "I would not have him to counte his chickens so soone before they be hatcht," is the first recorded use of this expression, in 1579. Perhaps the idea behind the words goes all the way back to Aesop's fable of the woman who brings eggs to market, announcing that she will buy a goose with the money she gets for her eggs, that with her profits from the goose she will buy a cow, and so on—but in the excitement of all her anticipations kicks over her basket and breaks her eggs. *Don't count your chickens before they're hatched* is also used as the moral of Aesop's tale "The Milkmaid and Her Pail."

don't do anything I wouldn't do. A catchphrase that has been used since about 1910 and is usually meant as good-humored advice.

don't even think about it. A stern warning to someone who might be about to do something, as in "She gave them a look that said, *don't even think about it.*" The expression, widely heard today, possibly originated in the 1980s, as is witnessed in New York City Mayor Ed Koch's "Don't even think about parking here" signs of the day.

don't fence me in. Give me freedom, elbow room—an expression and a song often associated with the American West. Originally *don't fence me in* was a line in a poem written by Bob Fletcher, a westerner. Cole Porter bought the rights to the poem, revised the lyrics, and wrote the music for the song, which wasn't used until a decade later, in the film *Hollywood Canteen* (1944). The next year it was featured in the Roy Rogers's movie *Don't Fence Me In*. "Meanwhile, in a sad irony," Frank Richard Prassel notes in *The Great American Outlaw* (1993), "Porter had been left crippled by a riding accident."

don't get your bowels in an uproar. Calm down, cool it. Said to someone who is acting unreasonably angry or excited. The expression, still commonly heard, isn't a new one, dating back a century or more. It may be a euphemism for the expression *don't get your balls in an uproar*.

don't get your knickers in a twist. A British slang expression first recorded in 1980 that is fairly common in America today. It means "don't get excited, confused, amazed, worried." **KNICKERS**, as many if not most Americans know, are women's underwear in England and Ireland.

don't give a rap. Counterfeiters took advantage of the scarcity of copper coins in the early 18th century and began flooding

Ireland with bogus halfpence. These worthless coins became known as raps and inspired the expression *not worth a rap*, “of no value at all,” and *I don't give a rap*, “don't care in the slightest.”

don't give holy things to hounds. See CAST PEARLS BEFORE SWINE.

Don't give up the ship! A mortally wounded Captain James Laurence, in command of the frigate U.S.S. *Chesapeake*, may really have said, “Tell the men to fire faster and not to give up the ship until she sinks” during the famous sea battle off Boston in the War of 1812—no one is sure of his exact words—but whatever his order, the British won the battle.

don't go shootin' all the dogs 'cause one has fleas. Advice from the film *Hud*.

don't go to the bad for the shadow of an ass. Though little heard today, this expression, meaning “don't fight over foolish things,” has a long history. Demosthenes told the story of a young Athenian traveler who rented an ass or donkey. When he took shelter from the sun at midday under the shadow of the beast its owner appeared and claimed the shadow for his own, saying he had rented the ass to the traveler but not its shadow. The two fought and fought over the shadow, then took the matter to the law courts, where both men were ruined because the suit lasted so long.

don't have a clue. Don't have any idea, don't know the first thing about how something is done, etc., as in “I don't have a clue how she does it.”

don't hurry, Hopkins. A Mr. Hopkins, late of Kentucky, once returned a promissory note to a creditor along with instructions that “The said Hopkins is not to be hurried in paying the above.” Since that day in the middle of the 19th century, it is claimed, said Hopkins has been remembered by the admonition *Don't hurry, Hopkins*, an ironic reproof to deadbeats late in paying their bills or persons slow in anything else. But the phrase was used in England almost a century before with just the opposite humorous meaning, implying “don't be too hasty.” In this sense it derived from a Mr. Hopkins, or Hopkin, “that came to jail over night, and was hanged the next morning.”

don't know him from Adam. Many have observed that only a fool wouldn't know someone from Adam, since Adam had no navel and wore only a fig leaf. But the old proverb persists. *I wouldn't know him from Adam's off ox* is possibly an attempted improvement on the original expression, *off ox* referring to the yoked ox farthest away from the driver—the one even less familiar than the near ox, and surely less distinguishable than old Adam.

don't let money burn a hole in your pocket. Dating back to the early 16th century, this advice has often been given to children in recent times. It means “don't be so eager to spend your money, don't feel like it is burning a hole in your pocket to get out and be spent.”

don't like the cut of his jib. See CUT OF HIS JIB.

don't look a gift horse in the mouth. The age of a horse can be roughly determined by examining its teeth. That people knew this long before A.D. 400 is witnessed by the appearance of the above expression in the writings of St. Jerome, who called it a familiar proverb at the time. *Don't look a gift horse in the mouth*, an injunction to accept presents gracefully without trying to find something wrong with them or determine how much they're worth, is literally reproduced in German, French, and other languages, though its first English use is *don't look a given horse in the mouth*.

don't look back, something might be gaining on you. Sage advice from baseball great Leroy “Satchel” Paige, who would have been one of the greatest pitchers in the major leagues if the color barrier had been broken earlier. Paige's five additional rules were: 1) avoid fried meats which angry up the blood; 2) if your stomach disputes you, lie down and pacify it with cool thoughts; 3) keep your juices flowing by jangling around gently as you move; 4) go very gently on the vices, such as carrying on in society—the social ramble ain't restful; and 5) avoid running at all times.

don't look now. Said Heywood Braun to his friend Tallulah Bankhead on one of her opening nights: “Don't look now, but your show's slipping.”

don't make two bites of a cherry. The expression is an old one warning against dividing things too small to be divided, against prolonging for two days jobs that should take only one. It may have some connection with polite European courtiers three centuries ago who acted so daintily in public that they always took two bites to eat a cherry.

don't play games with me. Don't try to trick me with silly games that are only worthy of a child; don't treat me like a child. Also *don't let's play games*. The phrase probably dates back to World War II.

don't poke one's nose into it. Don't pry into something that is not your concern, as in “Don't poke your nose in my business.” This term has been used for over four centuries, the American version often substituting *stick* for *poke*.

don't put off till tomorrow what you can do today. A late-14th-century saying still widely used in the United States.

don't sell the steak, sell the sizzle. See SALMON.

don't stick your neck out. Chickens, for some reason still known only to chickens, usually stretch out their necks when put on the chopping block, making it all the easier for the butcher to chop their heads off. Probably our expression, a warning to someone not to expose himself to danger or criticism when this can be avoided, which is American slang from the late 19th century, originated from the bloody barnyard image. Lynchings have also been suggested, but lynched men rarely stick their necks out for the noose.

don't take any wooden nickels. First recorded in about 1915, this expression was originally a warning from friends and relatives to rubes leaving the sticks in the great migration from rural areas to the big cities at the turn of the century. It was a humorous adjuration meaning beware of those city slickers, for no real wooden nickels were ever counterfeited—they would have cost more to make than they'd have been worth. Ironically, country boys were the ones who possibly *did* succeed in passing off wooden objects as the real thing. Yankee peddlers as early as 1825 allegedly sold wooden nutmegs, which cost manufacturers a quarter of a cent apiece, mixed in with lots of real nutmegs worth four cents each.

don't that take the rag off the bush! An expression of astonishment similar to *don't that take the cake!* The Americanism may have originally referred only to outrageous behavior as lowdown as stealing the rags [clothing] someone in the old swimmin' hole has left spread out on a bush.

don't want to pick up that snake now. Don't want to deal with that difficult, possibly dangerous matter now. Heard on a political discussion television program from a U.S. southern participant.

don't wash your dirty linen in public. Anthony Trollope didn't coin this phrase in *The Last Chronicle of Barset* (1867). What the hardworking novelist did was turn around the old French proverb *Il faut laver son linge sale en famille*, "One should wash one's dirty linen in private." Both sayings mean the same: don't expose family quarrels or skeletons in public, keep discreditable things within the house where they in all decency belong. The "dirty linen" is considered discreditable to the person who washes it as well as his family and is usually exposed out of anger at a relative.

don't write it if you can say it; don't say it if you can grunt it. Advice TV news commentator Chris Matthews heard an old political pro give to an aspiring politician. Heard on NBC-TV on January 18, 2002.

doodlebug. An American word probably dating back to California at the beginning of the 20th century for any divining rod said to be able to locate oil and other minerals. The term is usually applied to the bogus divining rods of con men. The word was also used during World War II to describe the German flying bomb or V-1, and previously was the name of a tiger beetle or its larva.

doo-doo. A British comedian pointed out the American propensity to use this expression by telling the story of an American friend who while strolling in the park took a misstep. "Oh, shit!" he cried. "I've stepped in dog doo-doo!"

doofus. Originally American slang of the late 1950s meaning "a fool, a dope, a jerk," or any combination of the three. Some writers claim the word is an alteration of *goofus* for the same, while others say it is of Yiddish or German origin. Australians would call a doofus a "donk."

doolally. Nuts, crazy, bonkers. British troops in India during the 19th century waited in the town of Deolali for troopships to

take them home after their enlistments expired. Deolali, which they pronounced Doolally, became the scene of so much aberrant behavior and illness among soldiers with too much time on their hands that the town's name became synonymous with their crazy behavior, which was also called "doolally fever."

dooley. Another name for a sweet potato and yam in the American South, possibly named after someone who developed a superior variety—which makes that individual one of the few people to have a vegetable named after him or her. *Doolley* also refers to an outdoor toilet building in parts of the South, apparently named after a contractor who built such public structures for the federal government during the Great Depression. See CHIC SALES.

Doolittle do'd it! In World War II days Red Skelton's "mean widdle kid" used to say "I do'd it!" on the comic's radio show. A news story borrowed Skelton's words on April 18, 1942, when Lt. Colonel James "Jimmy" Doolittle and his men took off from the carrier *Hornet* and made the first air attack on the Japanese mainland, greatly uplifting American morale in those dark days. "*Doolittle do'd it!*" became a popular catchphrase throughout America.

doorbuster. A *doorbuster* is a discounted bargain often given by stores to customers the day after Thanksgiving, and sometimes even before the Thanksgiving Day feast is finished. A *New York Times* reporter Michael Barbaro has written that doorbusters have "given this day an increasingly sharp-elbowed, close-fisted and purse-swinging edge." Near-riots are part of the history of stores, however, especially department stores. This year, for instance, an estimated one-quarter million shoppers will descend on Macy's in New York's Herald Square. I can't find the expression *doorbuster* listed anywhere, but *buster* is any remarkable person or thing, a *humdinger*. See also BLACK FRIDAY.

doornail. See DEAD AS A DOORNAIL.

doo-wop. A 1950s singing style in which back-up singers of a group chant rhythmically in the background while the lead singer carries the song. This rhythm-and-blues style is named after the nonsense word *doowop* that the backup singers often chant repetitively, though other nonsense words like *sh-boom* and *sh-bop* are also used.

a doozy. Something special, outstanding, as in "That's a doozy of a coat you've got," or, in the negative, "That's a doozy of a cut you've got." An Americanism first recorded in the early 1900s, it may be an alteration of *daisy*, influenced by the last name of the great Italian actress Eleanora Duse (1859–1924), who was indeed a *doozy* of a thespian.

dope; dopey. *Dope* for drugs is an Americanism of Dutch origin, deriving from the Dutch *doop*, "sauce or gravy." It is only since the late 1890s that stupid people have been called dopes, or dopey (like Dopey of *Snow White and the Seven Dwarfs*), as if they were under the influence of dope. The word was first recorded as *doop*, or "gravy," in 1807 by Washington Irving. It then came to mean any preparation containing

unknown substances (1872), and then drugs (1895), possibly because these were mysterious unknown substances to most people. How *dope* came to mean information, or knowledge, a usage first recorded in 1901, is anybody's guess. Maybe knowing the dope, or "inside information," first alluded to knowing what was inside preparations whose constituents were unknown to most people. "Gimme a dope" still means "Give me a Coca-Cola" in the South, especially among teenagers, and dates back to the 19th century when the fabled soft drink was touted as a tonic and contained a minute amount of cocaine. Coca-Cola's inventor, druggist John S. Pemberton, brewed the drink in his backyard and knew it was done when he smelled the cooked cocaine—no reactions in the man or among his neighbors are reported.

doppelganger. German for "a double, someone who looks exactly like another."

dorado. The *dorado* (*Coryphaena hippurus*) is for reasons unknown sometimes called the DOLPHIN, but this game fish is no relation to the friendly mammal. The fabled "dolphin" of sports fishermen has been clocked at 40 miles an hour while chasing flying fishes. Among the most majestic of fish, old male dorados have a high, narrow crest heightening the forehead. All dorados are beautifully colored—marked with blues, purples, golds, and bright yellows. When taken from the water, pink and green flushes run over their sides. Byron and many another poet has celebrated the beauty of the dorado's colors when it is dying. The splendid creature's name appropriately comes from the Latin *deaurare*, to gild.

dorcas. A model housewife, according to the Bible (Acts 9:36 and 39). She was "full of good works" and after her death she was resurrected.

dord. See GHOST WORD.

do, re, mi, fa, so, la, ti, do. The work of Italian musician and singing teacher Guido d'Arezzo, born toward the end of the 10th century, forms the basis of the modern system of musical notation. In about 1040 this inspired genius devised the Guido scale, or Artinian syllables, that still sing his praises. The names he gave to the musical notes of the scale are still used today in modified form (do, re, mi, fa, sol, la). The Benedictine monk based them on six lines of a Latin hymn to St. John the Baptist, which happened to form the scale. Over the years the final syllable *ti* was added to the scale and two centuries ago the syllable *do* joined it in English. *Solfeggio* is the English word, taken from the Italian, to describe the musical exercise sung with Guido's scale.

dormouse. A member of the rodent family that the Romans raised for food, the little, six-inch-long dormouse (*Glis glis*) resembles a small squirrel in looks and habits. Its name—about five centuries old—is something of a mystery, but many etymologists believe the creature is named for its appearance of sleepiness, that dormouse derives from the Swedish *dorsk*, "sleepy," or the Latin *dormire*, "to sleep." In fact, the dormouse, which Alice had such a hard time keeping awake at the Mad

Hatter's tea party, is one of the legendary "seven sleepers" of the animal world, along with the ground squirrel, marmot, hedgehog, badger, bat, and bear. A hibernating dormouse—coiled up with its forefeet tucked under its chin, its hind feet clenched in front of its face, and its tail curled over its face—can be rolled across a table like a wheel and won't come awake. The savage garden dormouse will immediately devour any dormouse that begins its winter sleep before the others, even its own mother.

dornick. An unusual Irish word that came to America with immigrants in the 19th century and is still used by farmers in the lower northern U.S. Deriving ultimately from Irish Gaelic *dornog*, it means a round stone small enough to be thrown from a field in the process of being cleared.

Dorothy Perkins's rose. Ranking with Peace and Crimson Glory as the best known of American roses, the Dorothy Perkins is a pink rambler introduced by the famous Jackson & Perkins Nursery of Newark, New York, in 1901. It is a small, cluster-flowering type, and though ramblers have bowed in popularity to larger-flowered varieties, it remains a sentimental favorite much mentioned in literature. The rose was named for the wife of the firm's co-owner.

Dorr's Rebellion. The 1842 Rhode Island constitution gave suffrage only to landholders or their eldest sons. This inspired Dorris's Rebellion, named after Thomas W. Dorris (1805–54) who led the insurrection. Dorris, however, was later found guilty of his part in the rebellion and sentenced to solitary confinement at hard labor for life. When he finally was released in 1854, his health was so broken that he died several months later.

d'Orsay pump; dossy; Quai d'Orsay. The last of the dandies, count d'Orsay, Alfred-Guillaume Gabriel (1801–52), designed the innovative *d'Orsay pump* that became the model for women's footwear. Like his contemporary Beau Brummel, d'Orsay, the son of a distinguished French general, was an *ar-biter elegantiarum* of English society, and the slang term *dossy*, for "elegant or smart," may also derive from his name. The man's shoe he devised in 1838 fit more snugly than any pump before it, due to its low-cut sides and V-shaped top, and was soon adopted by women. D'Orsay, an ex-soldier who came to London from France in 1821, won fame as a painter, sculptor, diarist, and wit, being "the most perfect gentleman of his day." Named for d'Orsay's famous father is the *Quai d'Orsay*—that quay along the south bank of the Seine in Paris that has become synonymous with the French Foreign Office, Department of Foreign Affairs, and other government offices located there.

do-si-do. The square dance call, sometimes *dozy dozy*, instructs partners to circle back to back and, appropriately, comes from the French *dos-à-dos*, "back to back."

doss. A British word hardly used by Americans in conversation but encountered fairly frequently in literature. It means 1) a bed, 2) to sleep outside as homeless people do, and 3) something that is easy, not very difficult. *Doss house* refers to what

Americans would call a *flop house*, and *to doss about* means “to goof off.”

dot above an i. The famous description of the moon shining above a church steeple. French poet Alfred de Musset (1810–57) wrote the line in his “Ballade à la lune” as a parody of French romantic poetry at the time. But to the 19-year-old’s delight it was taken seriously and hailed as a work of genius.

do the needful. This is an English expression used only in India up to this time. It means “to do what is proper,” “to do what is right,” “to do the right thing,” as the African-American phrase instructs.

do the number on. To kill, assassinate, as in “First you find the money, then you do the number on her.”

do time. To serve a prison sentence. The expression was first recorded in 1865. A cautionary rhyme among criminals goes: “If you can’t do the time, don’t do the crime.”

dot the i’s and cross the t’s. Be meticulous, make sure the smallest details are covered, just as these letters must be dotted and crossed to be correctly written. The expression dates back to the mid-19th century and is still common today.

double cross. *Double cross* came into use only in about 1870, apparently as an English racing term describing the common practice of winning a race after promising to arrange a *cross*, to lose it. *Cross*, for “a prearranged swindle or fix,” dates back to the early 19th century and was used by Thackeray in *Vanity Fair* to describe a fixed horse race. The adjective *double* here is meant in its sense of “duplicitous,” so *double cross* really means “dishonesty about dishonesty”; in fact, the earlier expression “to put on the double double” meant the same as *double-cross*.

double-dealer. Card playing gives us this term for a cheat. The word is hardly a new one, dating back to before 1547, when William Baldwin wrote in *A Treatise of Moral Philosophie*: “God . . . abhorreth . . . hypocrites and double dealers.”

double entendre. *Double entendre*, “double meaning” (one often of doubtful propriety), is a French term that came into English in the 17th century. While the French expression for the same is *double entente* today, it was *double entendre* when the term was adopted.

doubleheader. A railroad train pulled by two locomotives was called a doubleheader in the 1870s. Though there were baseball doubleheaders—two games played in succession on the same day—as early as 1882, the term doesn’t seem to have been used in baseball until the end of the century. It could have derived from the railroad usage but there is no absolute proof of this.

double in brass. To be versatile, to be able to do more than one thing well, or to hold two jobs in order to make more

money. In its earliest recorded use, the American expression meant to play in a circus act and perform in a circus band as well. It was very common for a circus performer in the 1880s to play in the brass band when not performing as a clown, acrobat, or equestrian, and it is still sometimes the practice in small one-ring circuses. So *to double in brass* became circus talk of the day, was adopted by actors to describe an actor playing two parts in the same play, and then passed into general use.

double negatives. Though considered ungrammatical, double negatives such as, “I ain’t seen nobody” are common in both American and British English. Americans in various regions also use triple negatives (“I ain’t got nary none”), quadruple negatives (“That boy ain’t never done nothin’ nohow”), and even quintuple negatives (“I ain’t never seen no men of no kind do no washin’). In fact, there is nothing new about multiple negatives, which were standard in English through the time of Shakespeare.

double play. Baseball’s double play, a play in which two put-outs are made, is recorded as early as 1858, but it was often called a force play up until the 1870s. It has since become a term Americans use when referring to any two accomplishments made at the same time.

double-talk. Purposely confusing talk, sometimes humorous, often meant to cheat a customer or evade a question. *Double-talk* is first recorded in the mid-1930s. For a humorous example, here’s an excerpt from the Federal Writer’s Project *New York Panorama* (1938):

Observe in this sample of Mr. Hymie Caplin’s double talk the creation of gibberish having a distinctly disturbing “sensible sound,” and the ingenuity with which it is woven into the entire melody line: “Well, take now you’re in a restaurant. So you say to the waiter, ‘Gimme the chicken and vegetables but portostat with the chicken with the fustates on it.’ So he says ‘What?’ and you say ‘You know, the portostat, and moonsign the sarina on the top with the vegetables.’”

The same source explains that this “humorously conceived system of language corruption” is meant to seduce or rib the unknowing listener into believing that he is “either deaf, ignorant, or ready for a lifetime run in the part of Napoleon.” Also called *talking on the double*, the “language” hasn’t nearly the number of speakers that it had a half-century ago.

double tap. Recent slang, unrecorded, among detectives for two gunshots to the head, a technique often used by contract killers to make sure their victims are dead.

doublethink. A coinage of British author George Orwell in *Nineteen-Eighty-four* (1949), *doublethink*, as the author explained in his novel, meant “the power of holding two contradictory beliefs in one’s mind simultaneously, and accepting both of them.” Orwell’s book, a warning about the possible coming of the ultimate police state, contributed many words and phrases, including its title, to the language. NEWSPEAK (a language of the dictatorship that narrows the range of free

thought), *Thought Police* and BIG BROTHER IS WATCHING YOU are among them.

doubting Thomas. History's first doubting Thomas was St. Thomas, one of the 12 apostles. Because he doubted the resurrection of Christ (John 20:24–29) and questioned Christ in an earlier passage in the Bible (John 14:5) early readers of the Scriptures gave his name to any faithless doubter. Thomas, however, reformed when the resurrected Christ let him touch the wounds he suffered on the cross and admonished him, "Blessed are those who have not seen and yet believe." Tradition has it that later, when no longer a doubter, Thomas went on a mission to India where a king gave him a large sum to build a magnificent palace. He spent the money on food for the poor instead, "erecting a superb palace in Heaven," and so became the patron saint of masons and architects.

doughboy. This word for a U.S. Army infantryman may have originated from the term *adobe*, which Spaniards in the Southwest called military personnel, though this is only one of several possible explanations for the term. See ADOBE.

doughnuts. American doughnuts go back to the time of the Pilgrims, who learned to make these "nuts" of fried sweet dough in Holland before coming to the New World. It is to the Pennsylvania Dutch that we owe the hole in the middle of the doughnut, or sinker, as the doughnut is sometimes called.

Douglas fir. Only the giant sequoias and redwoods of California among North American trees exceed the Douglas fir in height and massiveness. The coniferous evergreens grow to heights of 300 feet and reach 12 feet in diameter, yielding more lumber than any other American species. The Douglas fir, or Douglas spruce, as it is sometimes called, was named for its discoverer, David Douglas (1798–1834), who came here from Scotland in 1823 to study American plants and to collect specimens for the Royal Horticultural Society. The former gardener at Glasgow's botanical gardens collected more than 200 plants and seeds then unknown in Europe. His 11-year journal became historically valuable because he was one of the first travelers in the Pacific Northwest. The Douglas fir, which he first observed in 1825, is botanically of the pine family, and yields a hard, strong wood of great commercial importance. Douglas died a strange death: In 1834 he extended his travels to the Hawaiian Islands, where he was killed by a wild bull.

Doulton. Like Wedgwood, Doulton is one of the most honored names in art pottery. Invented some time after 1815 by John Doulton, who was influenced by Italian pottery techniques, Doulton is still manufactured today. After John Doulton died, the pottery was made by his descendants, especially Sir Henry Doulton (1820–97). Sir Henry, who first produced stoneware drainpipes, apparently named the decorative pottery after himself. See ODE ON A GRECIAN URN.

Dover's powder. An early pain-relieving medicine containing opium, sugar, milk, and other ingredients that was invented

by and named after English Dr. Thomas Dover (1660–1742), who also won fame as a pirate or privateer. It was the accomplished Dr. Dover who while returning to England on a captured Spanish man-of-war rescued the marooned Alexander Selkirk from the Juan Fernandez Islands, providing novelist Daniel Defoe with the theme of *Robinson Crusoe*. See ROBINSON CRUSOE.

dove's dung. During a famine in Samaria, the Bible tells us (2 Kings 6:25) "an ass's head" was sold for fourscore pieces of silver and a quantity of "dove's dung" for five pieces of silver. This implies that dove's dung was eaten by the Samaritans, surely one of the most disgusting substances ever used as food. It is said that the Hebrew for "lentils" and "locust pods" might easily be mistaken for "ass's head" and "dove's dung" but many modern versions of the Bible still translate the words as the latter. The expression might have been used for dramatic impact, but people have eaten some strange foods throughout history, including rats, cats, dogs, all manner of insects, and other people.

do we eat it, or did we eat it? Probably an army saying when some mysterious dish, such as "mystery meat," appeared on the serving line. *Mystery meat*, however, in the form of *mystery*, is an older term, first recorded in the late 19th century. It is usually a hash or sausage of questionable origins.

Dow Jones. Short for the *Dow Jones Industrial Average*, the Dow Jones is the average daily price of selected industrial stocks. It was first published in 1884, five years before its founders, Charles Henry Dow and Edward D. Jones, began to publish the *Wall Street Journal*. In 1909 their company was acquired by Walker Barron, of *Barron's Financial Weekly*.

down. A completed play has been called a down in football since the late 19th century, *Walter Camp's Book of College Sports* (1893) explaining that it was so named because a tackled ball carrier cried "down" when he was stopped by the opposite side and could go no farther. This got the other side off his back.

down and dirty. In stud poker the last cards are dealt face down, often followed by the dealer's remark "Down and dirty," which the cards are for some of the players. From this practice came the expression *down and dirty*, meaning nasty, low, vicious and deceptive: "These are down and dirty times."

down and out. Another boxing expression which, like *down for the count*, has been used since the turn of the century. Figuratively, it can mean anything from death to abject poverty, as it does in the title of George Orwell's *Down and Out in Paris and London* (1933) as well as the movie *Down and Out in Beverly Hills*. See DOWN FOR THE COUNT.

down at the heels. See WELL-HEELED.

down bucket. An unusual greeting heard in Marblehead, Massachusetts, when one sees a friend. One theory has it that the words originated in the old days as a warning when

chamber pots were being lowered from windows to the street. The reply to the greeting “Down bucket!” is usually “Up for air!”

downeaster. In the late 19th century *downeaster* was used to mean a fast, fully rigged sailing ship built in Maine or New England. Today it is a name for a resident of Maine or New England.

down for the count. A fighter who is “down for the count” is knocked out, unable to get up by the count of 10. In the 1920s these words began to take on the extended use of totally defeated, unable to go on, doomed to fail miserably.

Downing Street; Downing College; a George Downing. Like its French counterpart, the Quai d’Orsay, England’s No. 10 Downing Street is another famous diplomatic address deriving from a family name. *Downing Street* is used figuratively to mean the British foreign office or government in power, No. 10 Downing Street having been the official residence of almost all British prime ministers since George II gave the house to Sir Robert Walpole for that purpose in 1735. The street in London, which also contains the British foreign and colonial offices, is named for soldier and diplomat Sir George Downing (ca. 1624–84). Downing, a nephew of Massachusetts’s governor John Winthrop, was graduated in the first class at Harvard, but returned to England, where he performed the difficult trick of serving under both Cromwell and then Charles II. A talented but selfish man, his character is said to have been “marked by treachery, servitude, and ingratitude.” In his own time a *George Downing* was proverbial for “a false man who betrayed his trust.” Downing College, Cambridge, derived its name later from his generous grandson, but Downing Street was on the king’s property and named for the statesman during Charles II’s reign. The facade of No. 10 Downing is the same as it was in 1735. Who’s at No. 11? The Chancellor of the Exchequer. The government whip’s office is No. 12. See D’ORSAY PUMP.

down in the dumps; dump. Someone *down in the dumps* may momentarily feel ready to be hauled off to the *garbage dump*, but the *dumps* in the expression derives from the Dutch *domp*, “mental haze or dullness,” or from the German *dumpf*, “close, heavy, oppressive, gloomy.” The *dump* in *garbage dump* has an entirely different origin and is an old echoic word like *bump* and *thump*, common to many languages—from garbage being thrown down heavily and making this sound. *Garbage dump* gets its name from this, as does *dumping stock* on the market, or *dumping* (“accepting a bribe to lose”) a basketball game. In the 1811 edition of his *Dictionary of the Vulgar Tongue* (edited and revised by someone else) Captain Francis Grose writes that *down in the dumps* is “jocularly said to be derived from Dumpos, a king of Egypt, who died of melancholy.” Note that the key word here is “jocularly,” for despite reputed citations over the centuries, this is not the origin of the old expression.

down my alley. An alley in baseball is the imaginary line between each outfield, between right field and center field and be-

tween left field and center field. The term *right down my alley* refers to any task suitable to one’s talents, and may refer to a baseball player getting easy hits down the alley. It is also possible that the expression derives from the alley that is the center of home plate. When a pitcher throws one right down the alley, a batter considers it an easy pitch to hit.

down on one’s uppers. The *upper* in this phrase, meaning to be in bad financial condition, is the upper part of a shoe. Anyone stepping down on his uppers then would be someone very needy indeed.

Down syndrome. This congenital disorder caused by the presence of an extra 21st chromosome is named after British physician John L. H. Down (1828–96), among the first who studied the condition. Those affected with Down syndrome are mildly to severely mentally retarded, are usually short, and have a flat facial profile. The genetic disorder is also called *Down’s syndrome*, *trisomy-21*, and *mongolism*. The latter term is rarely used anymore; in fact, its hurtful racial connotations were the main reason scientists named the disease after Dr. Down about 1960.

down the creek, boys. A drinking toast. Used in Ernest Hemingway’s short story “Up in Michigan.”

down the hatch! This toast originated in the 18th-century British navy, the mouth compared to the hatches, or openings, leading to various parts of a ship. *Hatch* comes from the Old English *haecc*, grating or hatch. It is unrelated to the verb *hatch*, to incubate, which derives from the Greek *hecken*, meaning the same.

down to a gnat’s eyebrow. Exactly, precisely, as in “He planned it down to a gnat’s eyebrow.” The term *gnat’s eyebrow* is first recorded in 1930; before that *gnat’s heel* was used to mean the same.

down to the wire. For over a century *wire* has been synonymous with the finish line in horse racing, because of the wire stretched across the track that the horses passed under at the end of a race. The *Oxford English Dictionary* records the term from William McPaul’s *Ike Glidden* (1902): “The conquering colt swept under the wire for a nose ahead of the trotter.” But Mitford Mathew’s *A Dictionary of Americanisms* cites an earlier, 1887 U.S. newspaper usage of *wire*, claiming it as an Americanism. *A Dictionary of Americanisms* goes on to date *down to the wire* as an expression first recorded in 1950 in the newspaper account of a baseball game. Widely used as slang now for “to the very last moment or the very end,” it is also heard as *to go to the wire*.

Down Under. See AUSSIE.

downwinder. A term applied to people in the Southwest “who claim they were harmed by wind-carried radioactive fallout resulting from open-air testing of atomic bombs in the 1950s and early 1960s,” according to a *New York Times* article of December 29, 1993.

do you know where I'm coming from? The expression isn't as popular as it was when coined in the 1960s, but is still heard fairly frequently. It means do you know or understand what I'm saying.

do you know where your children are? A catchphrase coined by television broadcaster Tom Gregory and first used in the early 1960s. Gregory was viciously mugged at that time, the violence ending his career.

do your own thing. Follow your own inclination, tendency, belief, aptitude, etc., not someone else's. A famous U.S. hippie slogan of the 1960s that is still heard today.

do you think I was born yesterday? Do you think I'd swallow that nonsense, baloney, etc. The phrase dates back to the 1880s and later appeared as the title of a stageplay and a movie.

the dozens. The art of hurling invective at one's enemies is an ancient one (see LOGOMACHY), and American slaves probably brought the verbal exchange called *the dozens* or *dirty dozens* with them from Africa, basing it on the Tuareg and Galla game of two opponents cursing one another until one man lost his temper and began fighting with his hands instead of his mouth; he was considered the loser. Alive and thriving today among blacks, the game takes its name not from dozen, "12," but probably from the Americanism *bulldoze*, which meant "to bullwhip someone," especially a slave, the insults likened to whiplashes. See BULLDOZER.

Dr. Everybody knows that *Dr.* is an abbreviation for "doctor"—and it has been for about four centuries. Few are aware, though, that *Dr.* is also an abbreviation for "debtor"—in book-keeping jargon.

draconian. "The Draconian Code is written in blood," one Greek orator declared, and Plutarch observed that under Draco's code "for nearly all crimes there is the penalty of death." They referred to the severe laws—now largely lost—codified and promulgated by the Athenian legislator Draco about 621 B.C. Draco was the first to collect Athens's unwritten laws, but his assignment wasn't to modify them and he is therefore not really responsible for their proverbial harshness. The written Draconian Code proved valuable because it substituted public justice for vendettas and made it impossible for magistrates to side openly with the nobility. Its severity may have been exaggerated by future generations. Draco's laws, except for those dealing with homicide, were abolished or ameliorated by the wise Solon 30 years later, but they were so harsh, or thought to be so harsh, that the word *draconian* remains a synonym for "severe" and *draconian laws* still means any code of laws or set of rules calling for ironhanded punishment of violators.

draftee. First recorded in an 1866 Civil War memoir, *draftee* was surely used before this during the war, probably as soon as the Confederate Conscription Act of 1862 and the Union Draft Law of 1863 were passed. In the North single men 20 to 45 and

married men 20 to 35 were drafted, while the South conscripted all men 18 to 35. Most men volunteered, however; only about 2 percent of the Union Army consisting of draftees. During World War II *draftee* and other *ee*-ending words (such as *train-ee*, *enlistee*, *escapee*, and *amputee*) were widely used. *Draft* in the sense of "conscript" comes from the "to draw or pull" meaning of the verb *to draft*.

dragging anchor. Used to describe someone who has no control over him- or herself, who is drifting to disaster like a ship whose anchor isn't holding and is drifting toward rocks or the shore. "He's been dragging anchor for the last year or so."

dragonflies of the deep. See FLYING FISH.

dragon's blood. A colorful name given to the red resinous exudation of certain palm trees that was once used as an astringent in medicines and is now employed as a coloring for varnishes. A cheap Rhine wine is also called dragon's blood, taking its name from the German myth about Siegfried bathing in the blood of a dragon to make himself immune from injury.

dramaticule. A word coined by Irish playwright Samuel Beckett meaning very short dramatic stage pieces. Beckett wrote one of these little plays, entitled *Come and Go*, that had three female characters and a text of just 120 words.

Drambuie. Bonnie Prince Charlie (Charles Edward Stuart, 1720–80), the Young Pretender to the British throne, led the 1745 Jacobite uprising and had to flee Scotland when it was suppressed. The Young Chevalier, as he was also called, made a gift of the secret recipe for his royal liqueur to John Mackinnon, who had helped him escape, as the old story goes. Bonnie Prince Charlie's recipe wasn't made commercially by the Mackinnon clan for nearly another century and a half, but it quickly became popular worldwide when it was. It had been named by the Mackinnons from the Gaelic *dram*, drink, and *buidheach*, pleasing or satisfying.

drat it! Charles Dickens, among other great writers, used the word *drat* as a mild expletive. *Drat* was first recorded in the early 19th century as a contraction of "God rot"; thus *drat it!* means "God rot it!"

draw a blank. To search hard but fail to find out about something. The reference is to the losing ticket in a lottery in which people buy numbered tickets to win prizes; a blank ticket wins nothing. The expression dates back to the late 19th century.

drawers. Drawers, "women's or men's underwear," were originally made something like women's pantyhose, their name bestowed on them back in the 16th century when they were drawn on over the feet and legs.

draw in one's horns. *Horns* here refers to the horns of the land snail, which draws in its horns and remains in its shell

when threatened with danger, or when weather conditions aren't favorable. The snail's actions do suggest someone who draws in his horns, that is, draws away from a situation and takes no action while reconsidering the matter. The expression is first recorded in the early 1300s and clearly indicates that the land snail is its source.

draw lots of water. An old nautical term for a ship in the water loaded down with cargo; on land the expression came to mean an important person, one who carries a lot of weight, as in "He draws lots of water up in Albany."

drawn and quartered. See HANGED, DRAWN, AND QUARTERED.

drawn teeth. See PULLED TEETH.

draw the line. When we say "This is where I draw the line," we are of course laying down a definite limit beyond which we refuse to go. Several attempts have been made to trace actual sources of the figurative "line" in the phrase. One says that it referred to tennis, a sport almost as popular as cricket in England by the 18th century. When tennis was introduced from France four centuries before, according to this story, there were no exact dimensions for the court and players drew lines beyond which they agreed the ball couldn't be hit. Another explanation says that the line was cut by a plowhorse across a field to indicate the boundary of a farmer's holding in 16th-century England. No examples of the figurative expression *to draw the line* have been found recorded before 1793, but either theory could be right. The phrase could also derive from early prizefights, where a line was drawn in the ring that neither fighter could cross. For a famous American use of *drawing the line*, see TEDDY BEAR.

draw to an inside straight. An inside straight is a very difficult straight to draw for in poker, so difficult, in fact, that the expression *draw to an inside straight* has become American slang for building up hope for something that has little chance of happening.

dray; drey. *Dray*, sometimes still spelled in its obsolete form *drey*, refers to a squirrel's nest, but I have also seen the word used as a collective noun for squirrels ("A dray of bushy-tails darted across the lawn."). More specifically, according to Richard E. Mallery's estimable *Nuts About Squirrels* (2000), a "dray" is a squirrel's nest of "bundled leaf structures that protect them from weather conditions." First recorded in 1607, the word *dray*'s origin is unknown, and it is not included in any of the major dictionaries, nor any reference book I checked excepting Mallery's fine work. See SQUIRREL.

dreadnought. With her 10 12-inch guns, 11-inch armor belt, and 21.6-knot speed, the 17,940-ton British battleship *Dreadnought* outclassed any battleship on the seas and made all others virtually obsolete. Before *Dreadnought*'s 1906 debut, battleships commonly had four 12-inch guns and a number of smaller ones. The British built the *Dreadnought* in just four months, but it was three years before Germany could produce a comparable ship. The *Dreadnought* marked a turning point in naval military history, and her name became synonymous for any big ship of

comparable size. By 1916 Britain had 29 dreadnoughts, enabling her to defeat Germany in the Battle of Jutland. Indeed, by that time Britain had super-dreadnoughts like the 27,000-ton *Warspite* with her eight 15-inch guns and 13-inch armor belt, and the original *Dreadnought* did not even see service at Jutland.

dress down. To severely reprimand or censure someone, as in "He gave him a good dressing down." This was probably originally a mining term describing the breaking and crushing of various ores into a powdery form.

Dreyfusard. Any defender of French army officer Major Alfred Dreyfus (1859–1935), convicted of treason in 1894 and acquitted in 1905 after serving time on hellish Devil's Island. Dreyfus's greatest defender was author Émile Zola, who in 1898 wrote the famous article "J'accuse." Dreyfus was eventually cleared by the supreme court of appeals, was decorated with the Legion of Honor, and promoted to general.

Dr. Feelgood. A term dating back to at least the early 1960s for an unprincipled physician who injects any paying patients with drugs such as amphetamines (speed) to give them a high. Dr. Feelgoods also prescribe pills containing amphetamines to people addicted to them—again, if they can pay the price. *Feelgood* can also be used singly today, as in "They dropped a few feelgood bombs, but really accomplished nothing."

drips and drabs. Small, irregular amounts, as in "He was paid in dribs and drabs." The expression isn't recorded earlier than 1942, but it clearly derives from *drib*, a back formation from *dribble* that is first recorded in 1862 and means "a drop, a small amount."

drinking club. A Greek lyric poet, Anacreon (6th century B.C.), wrote light poems praising wine and love that were imitated by Jonson, Herrick, and other early English bards. A drinking club in London used his name, and its club song, "Anacreon in Heaven," provided the music for Francis Scott Key's "Star-Spangled Banner," the American national anthem.

drinking mash and talking trash. Said of someone drunk for whom liquor is doing the talking, who isn't reasoning properly. "You're drinkin' mash and talkin' trash, man."

drink like a fish. Fish don't intentionally drink water. Most of the water they appear to be drinking while swimming along is actually passing through their gills to supply them with oxygen. But they certainly do *seem* to be drinking continually, many swimming with their mouths open. That is why what has been called an "idiotism" (like "cold as hell") has been a common synonym for drinking excessively, especially alcohol, since at least the early 17th century.

drink off dead Nelson. To drink alcohol copiously and indiscriminately. Lord Horatio Nelson, England's greatest naval hero, was killed at the battle of Trafalgar in 1805, and his

body was brought back to England for burial. The fabled hero became the subject of many legends, including one claiming that his body was brought home preserved in rum. This led to the British slang expression *Nelson's blood* for rum and the Canadian expression recorded here, used mainly in Newfoundland.

drive-in. The first U.S. drive-in movie opened in Camden, New Jersey, on June 6, 1933, admission to this 400-car site costing 25 cents for the double feature. Richard M. Hollingshead, Jr., had used the term *drive-in* a month earlier when he patented the system. Within about 25 years there were more than 4,000 U.S. drive-ins. Very few are left today.

drive one's ducks to a poor market. To manage something poorly, or to associate with the wrong people, associates, or friends who lead you in the wrong direction. Also *drive one's goose to a poor market*.

drive round the bend. See GO ROUND THE BEND.

droit du seigneur. *Droit du seigneur*, French for "the lord's right," is also called "the right of the first night" in English. It is said to have been a custom in medieval Europe, permitting the lord of a manor to have sexual relations with all brides of his vassals on their wedding nights. The story is part of folklore and literature in many countries and often finds its way into history books, but there is little evidence that such a custom really existed. A suspect 1392 French document mentions such a law and that is the only "proof" we have of it in history.

drongo. The racehorse Drongo, which had been named after an Australian bird, is said rarely to have won a race. This caused Australians at the track to curse him roundly and use his name to describe a fool or any lazy, stupid, useless person.

drop a dime. To make a phone call to police detectives informing on someone. *Dime dropper* refers to a *rat*, a *snitch*, a *stool pigeon*, among other choice terms. The term, still in use, dates back to the 1960s, when a phone call cost a dime.

drop dead; drop-dead beautiful. As an insult roughly meaning go to hell! this expression dates back to the early 1930s when it was originally *why don't you drop dead!* The expression has its equivalents in several languages. *Drop dead* has achieved some respectability today in its meaning of "unusually striking," as in "That's a drop-dead dress."

Drop dead as a curse isn't recorded until its mention in a 1908 book about baseball, but it is probably 10 years or so older. *Drop-dead beautiful*, awesomely beautiful, gorgeous, etc. seems to have been coined by a magazine editor or writer about 1970. It has since been appended to gowns and a multitude of things. It was reported recently that someone involved in an argument told his opponent to drop dead and that person did so—that instant.

drop in the bucket. Another biblical phrase, meaning very little compared with the whole. It is from Isa. 40:15: "Behold,

the nations are as a drop in the bucket, and are counted as the small dust of the balance."

drop of a hat. No one has offered a convincing explanation for this very common American expression, and both *Webster's* and the *O.E.D.* ignore it entirely. It has been suggested that it is Irish in origin and that since the words are most often heard in the form of "he's ready to fight at the drop of a hat" the phrase parallels challenges like "roll up your sleeves," "take off your coat," and other expressions used at the start of a fistfight. Another possible explanation lies in the duels with guns, knives, whips, or fists so common in the 19th century. The referee who judged these duels usually dropped a handkerchief or hat as a signal for the fight to begin. The expression seems to have originated in the West and was first recorded in 1887.

drop the ball. To fail to take advantage of a situation that should have been easy to handle. The phrase could derive from a receiver in football dropping a pass or from a number of situations in baseball, including a dropped third strike or a ball dropped by a fielder. "The president clearly dropped the ball on that one."

drop the other shoe. To complete any action already begun: "When are you going to drop the other shoe?" *Drop the first shoe* means when one is going to begin an action.

drowner. One of the few, if not the only user of this word, was the renowned comedian W. C. Fields. As a young man, Fields was hired by concessionaires as a drowner, to pretend that he was drowning so that crowds would gather and they would sell more food.

drowning. An early English naval punishment enacted by King Richard I, ordering that "whoever killed a man on shipboard, he should be bound to the corpse, and thrown into the sea."

drown the shamrock. See SHAMROCK.

Dr. Pepper. The popular soft drink was so named by Texas druggist Wade Morrison in 1885 after a certain Miss Pepper, a Virginia belle whose father ended their courtship. The "tonic, brain food and exhilarant" (as it was called then) was invented by Charles Alderton, a clerk in Morrison's store.

drug on the market. We use this expression for "something not in demand, something unsalable because the market is glutted or the woods are full of them." But since the phrase's first appearance in 1661 no one has figured out just what it means. What drug is referred to? Is it possibly items of trade like the tea and spices that were sometimes called drugs in the past, and, if so, when in early times were markets ever glutted with such rare commodities? Or is *drug* here just a pronunciation of *dreg* in certain English dialects? Take your choice, but the theory that apparently has the most supporters claims that the drug here is from the French word *drogue*, meaning "rubbish." The word *drug* has been used in this sense, as when Rob-

inson Crusoe, discovering coins in a wreck, cried out: "O Drug! what art thou good for?"

drugstore. *Drugstore* is an Americanism for the appellations "chemist's shop," "apothecary," and "pharmacy," used in England. But before they were called drugstores here, pharmacies were called druggist shops (1786) and druggist stores (1817). *Drugstore* is first recorded in 1818 and *drugstore cowboy* in 1925, the latter being a man who lounges around public places trying to impress young women by showing off.

drumhead court-martial. In days past, battlefield courts-martial trying soldiers for desertion, cowardice, and similar offenses, were held around a large drumhead (animal skin stretched upon a drum) that served as a table. The brief courts-martial, which usually resulted in immediate death sentences, were thus called drumhead courts-martial, this term first recorded in 1835.

Drummond light. See LIMELIGHT.

drumstick. The drumstick of a turkey or other fowl is so called because it resembles a drumstick in shape. But the word is a euphemism of British origin, invented as a substitute for "leg," which the Victorians found offensive enough to call a "limb."

drunk as a lord. Both *drunk as a lord* and *drunk as a beggar* were coined in the mid 17th century, but only the former expression survives today—perhaps because most drunks like to consider themselves lords rather than beggars. Three hundred years ago there were no class restrictions on drinking in England and anyone could buy enough gin to get drunk on for a penny.

drunk as a skunk. Very drunk. Why a skunk should be especially drunk is unknown to me, but several writers have recorded the definition. It may have something to do with the smell of a human drunk's clothing after a binge, but that is just a guess of my own. The animal does leave a foul odor when it sprays, however, and leaves the victim stinko. Then again maybe it was just the rhyming words *drunk-skunk* that caused all the trouble. See SKUNK.

as drunk as David's sow. Very drunk, "beastly drunk." The wife of David Lloyd, "a Welchman who kept an alehouse at Hereford" became known to history as David's sow early in the 17th century. "David," according to one old story, "had a living sow, which was greatly resorted to by the curious; he had also a wife much addicted to drink . . . One day David's wife having taken a cup too much, and being fearful of the consequences [David's wrath], turned out the six-legged sow and lay down to sleep herself sober in the sty. A company coming to see the sow, David ushered them into the sty, exclaiming, 'There is a sow for you! Did any of you ever see such another?,' all the while supposing that the sow had really been there. To which some of the company, seeing the state the woman was in, replied, it was the drunkenest sow they had ever beheld; whence the woman was ever after called *David's sow*."

drunken forest. An expression used to describe a full-grown forest in which many trees are as twisted as miniature bonsai and others tilt in different directions, the scene suggesting drunken people. The condition is often caused by landslides.

drunkometer. See BREATHALYZER.

Drury Lane Theatre. This long-famous street and theatre in London get their name from the Drury House, which once stood just south of the present lane. The house was built by English statesman and soldier Sir William Drury (1527–79) during the reign of Henry VIII. There have been four Drury Lane Theatres, including the present one; the first was originally a cockpit that was converted into a theater under James I. All the great English actors, from Booth and Garrick on, have performed at one or another Drury Lane.

druthers. *If I had my druthers* means "if I were free to choose." It is based whimsically on *I'd ruther*, an American dialect form of *I'd rather*, which dates back to the 19th century.

dryasdust. Anyone termed a *dryasdust*, or a Dr. Dryasdust, is being called a very dry, pedantic person, the word usually applied to tedious professors, historians, and authors, and always in an uncomplimentary way. The full name of this fictitious character is the Rev. Dr. Jonas Dryasdust, and Sir Walter Scott invented him to write the prefaces to some of his far from dry novels.

dry goods. *Dry goods stores* ("drapists' shops" in England) may take their name from stores run by New England merchants, many of whom were shipowners and direct importers in Colonial times. Two chief imports were rum and bolts of calico, which were traditionally carried on opposite sides of the store—a wet-goods side containing the rum and a dry-goods side holding the calico. "Wet goods" disappeared from the language, but stores that sell fabric are still called *dry goods stores*.

the dry salvages. A small but well-known group of rocks, with a beacon, off the coast of Cape Ann, Massachusetts, *Salvages* here rhymes with *assuages*, perhaps because "the dry salvages" is a corruption of *les trios sauvages*. "The Dry Salvages" is the title of a poem by T. S. Eliot.

dubok. Fans of espionage novels will recognize this word as the synonym for a drop, or a safe place where other espionage activities can be carried out. It comes from the Russian word for oak tree.

Dubuque, Iowa. See OLD LADY IN DUBUQUE.

duck and cover. An exercise used in schools during the early years of the cold war, when students were taught to protect themselves from a nuclear attack by ducking under their desks and covering their heads with their hands.

duck in a noose. A phrase that figured as a sidelight in the sniper killings case that terrified the Washington, D.C., area for

three weeks in the fall of 2002. The sniper wanted the chief of police of Montgomery County to repeat this phrase, which he had mentioned in a phone call, and Chief Moose did as he requested at a late-night news conference. What the sniper meant by the phrase was revealed in a Cherokee folk tale, “The Rabbit, the Otter and Duck Hunting.” In the tale, according to Celestine Bohlin writing in the *New York Times* (10/24/02), “a boastful rabbit is challenged by an otter to capture a duck. The rabbit manages to slip a noose around the neck of a duck, which then takes off, with the rabbit hanging on for dear life. The duck flies higher and higher, and finally the rabbit loses its grip and falls into an old sycamore tree where it is trapped . . .” Obviously, the sniper regarded himself as the escaping duck who couldn’t be caught, and the police as the hapless rabbit that would never catch him.

duct tape. Duct tape was developed for the army during World War II as a seal for the cracks in ammunition boxes. It was first called *duck tape* because water rolled off it like water off a duck’s back. After the war, the tape, which has many applications, was used by plumbers to seal ducts and came to be known as *duct tape*. In early 2003, the government recommended the tape as an aid against terrorist bomb attacks, to prevent shattering of windows, etc. Critics said the tape was of little or no help.

dude ranch. At first a term for tourist ranches in the West but now used to describe such places everywhere, from the Catskills to the Texas Panhandle.

duff. Depending on where one is in the U.S., *duff* can mean the buttocks; the decaying leaves on a forest floor; to work hard; and a New England pudding made from flour, water, and raisins or other fruit. In Australia the word means to steal cattle by changing their brand.

duffel bag. A duffel bag is a large canvas bag for carrying clothes or gear. Originally it was made of a woolen fabric called duffel, which was so named because it came from Duffel, Belgium.

duffer. A *duffer*, for “a bad golf player” is a British expression that dates back to the early 1840s. It probably comes from the Scottish *duffar*, for “a dull or stupid person.”

duh. An exclamation now widely used in the U.S. to make fun of someone after that person has spoken, indicating that he or she has said or done something stupid or obvious. The expression dates back to the early 1940s and may have been introduced or popularized by ventriloquist Edgar Bergen’s dummy Mortimer Snerd, a rustic moron who constantly had the word put in his mouth.

dukes. See PUT UP YOUR DUKES.

dull as ditchwater. Uninteresting people and tedious undertakings have been called *dull as ditchwater* for over two centuries. The allusion is to the dull muddy color of water in ditches,

which were much commoner in days past. *Dull as dishwater* is a later variant.

dumbcane. See MOTHER-IN-LAW PLANT.

Dumb Dora. U.S. cartoonist T. A. (“TAD”) Dorgan (1877–1929) contributed this term for “a scatterbrained young woman” to the language. *Dumb Dora* was originally the name of a dizzy cartoon character he invented.

dumb down. Though it has become more popular recently, the verb *dumb down* dates back to the early 1930s, when it was used to describe radio or motion picture scripts that are oversimplified, dumbed down so that they will be understood by a large number of listeners. Today the practice and the word isn’t applied only to radio, covering everything from textbooks to television.

dumb ox. When he was a young monk in Germany (ca. 1250) other members of his Dominican order thought St. Thomas Aquinas was stupid—perhaps because they weren’t intelligent enough to understand what he said. They dubbed him the *Dumb Ox*, which has become synonymous for “a stupid person.” *Lummox*, an Americanism first recorded in 1825, apparently derives from *dumb ox*, perhaps combined with *lumbering* or another word suggesting clumsiness. See DUNCE.

dumb ship; lightship. Lightships are simply floating lighthouses that warn other ships of danger and serve as aids in navigation, usually in places too distant from shore to erect a permanent structure. Almost all are dumb ships, unable to navigate themselves, and the first of them seems to have been anchored near the Thames estuary in 1732. The best-known American lightship is probably the dumb ship situated off Nantucket, which sank in 1935 after the liner *Olympic* rammed it. Today lighted buoys, which provide the same service, are more commonly used than lightships.

dumbwaiter. In America the term *dumbwaiter* is used to describe a small, usually hand-operated elevator used to carry food and drink. The British, however, use the word to mean what Americans call a LAZY SUSAN.

dumdum bullet. This particularly hideous bullet—it expands on impact, creating an ugly wound—is named for the Dum-Dum arsenal in Bengal, India, where the British made it to stop the charges of “fanatical tribesmen.” *Dumdum*, or softnose, bullets were outlawed by many world powers under an international declaration made in 1899, but that has not entirely stopped them from being used since.

dummy’s plant. The common name for the *planta del mudo*, dummy’s plant is a Venezuelan herb that when chewed supposedly renders its user totally unable to speak for two days. See MOTHER-IN-LAW PLANT.

dump. See DOWN IN THE DUMPS.

dumpy. *Dumpy*, for “a short fat person,” is thought to be related to *dump* in its sense of melancholy (see DOWN IN THE

DUMPS), but no one knows exactly how. Perhaps because such people appeared melancholy, perhaps from the German adjective *dumpf*, which means “heavy” in another sense.

dun. “Send Dun after him,” creditors would say when a person was slow to pay his debts. According to the old story, they referred to Joe Dun, a London bailiff during the reign of Henry VIII who had proved himself particularly efficient in collecting from defrauding debtors. But most authorities trace *dun* to various words meaning din or thundering noise, sometimes connecting this with the drum that town criers pounded when they shouted out the names of debtors. Though only a few Celtic words survive in English, and most of these must be marked “doubtful,” philologists do think that a word similar to *dun*, for the dull brown color, was spoken by the Celts 2,000 years ago.

Duncan Phyfe. Duncan Phyfe’s furniture workshop stood on the site of the present Hudson Terminal Building in New York City. The Scottish-born master craftsman had arrived in New York in 1783 at the age of 15 and later opened his own shop, changing his name from Fife to Phyfe. Duncan Phyfe and Sons employed more than 100 artisans at its height of popularity, but the master craftsman’s best work was done in the early period up until 1820, when he evolved his own style, using the creations of Sheraton, Hepplewhite, and the Adam brothers as models. This work has become known as the Duncan Phyfe style, characterized by excellent proportions, graceful, curving lines, and beautifully carved ornamentation.

dunce. Ironically, one of the most brilliant scholars and philosophers of the Middle Ages is the source for the word *dunce*. Little is known about John Duns Scotus outside of his new theology. He was probably born in 1265 in Scotland, most likely died while still a young man, aged 43 or so, and his middle name is presumably a place name, either from the village of Duns, Scotland, Dunse in Berwickshire, or Dunston in Northumberland. The “Subtle Doctor,” as he was called, apparently taught at Oxford and the University of Paris, but again there is no hard evidence available. Duns Scotus did found a school of philosophy that attracted numerous followers. A Franciscan, he successfully opposed the teachings of St. Thomas Aquinas and the Dominicans, challenging the harmony of faith and reason, and insisted on the doctrine of the Immaculate Conception, for which he was known as the Marian Doctor. After his death—tradition has it that he died in Cologne, buried alive—Duns Scotus remained a great influence on scholastic thought. His works were studied in all the great universities throughout Europe and his followers, called Scotists, reigned supreme. However, these same Dunsmen sabotaged his reputation some 200 years later. During the Renaissance, blindly resistant to change, “the old barking curs” raged from the pulpit against the new learning, being scorned and ridiculed as hairsplitters and stupid obstructionists. *Dunsmen* became *dunses* and finally *dunces*, “blockheads incapable of learning or scholarship.” Exactly the opposite of the precise, learned mind of the man who started it all. See DUMB OX.

dunderhead. *Dunderhead* for a dunce or blockhead, may come from the Dutch *donderbol*, cannonball, the head of a

dunce thus compared to a thick iron ball. However, the origin of the word, first recorded in 1625, is obscure.

dundrearies. Long silky whiskers drooping in strands from both cheeks were high fashion during the 1860s and after. They are named for Lord Dundreary, the witless indolent chief character who sported such whiskers in English dramatist Tom Taylor’s play *Our American Cousin* (1858). Abraham Lincoln was watching the play at Ford’s Theatre on the night he was assassinated.

dungarees. *Dungarees* isn’t used as much as *jeans* or *Levi’s* for these coarse blue cloth pants today, but the word is still frequently heard. The name derives from what Partridge calls the “disreputable Bombay suburb” where the cloth used for the pants was first made and exported to England early in the 1830s.

dungeon. *Dungeon* apparently derives from the Latin *domnio*, “the lord’s tower,” and was used to mean “castle” in 14th-century England. But the word also meant “the keep of a castle” and “a prison cell under the castle” at the time. Over the course of a few more centuries, however, *dungeon* came to retain only this last meaning, having changed from a high tower to a room beneath the ground.

duodenum. This word for the first part of the small intestine is the Latin for “12 fingerbreadths [inches] long,” the measurement early physicians and anatomists gave the organ. The term is recorded as early as 1398.

duotrigintillion. See GOOGOL.

dupe. Because its cry sounds like “up up,” the south European bird *Upupa epops* was called the *upup* or *upupa* by the Romans. The bird, about the size of a large thrush and noted for its long, curved beak, variegated plumage, and beautiful orange erectile crest in the male, became known in French as the *huppe* and in English as the *hoopoe*, or *hoop*. The French considered it to be an especially stupid bird because it laid its eggs most anywhere without a nest (in a hole in a wall, tree, or bank, etc.). They commonly said that any fool had the head of a *huppe*, *tête d’huppe*. *D’huppe* in the expression eventually became *duppe* and passed into English in the late 17th century as *dupe*, a person who is easily fooled or deceived.

the duration. *For the duration* means without a fixed time limit for as long as is necessary or may be. The phrase originally referred to the duration of World War II.

durian. The durian fruit takes its name from the Malasian *duri*, thorn. This lopsided, hard-shelled green fruit of the *Durio zibethinus* tree, volleyball-sized and covered with spines on its outer pod, is widely believed to be an aphrodisiac in Malaya, Thailand, Indonesia, and the Philippines. An old Malay saying has it that “When the durians fall, the sarongs rise.” The *emperor fruit* or *king fruit* or *queen fruit* is thought to be so rich in protein that pregnant women are advised to eat it only in moderate amounts for fear that they might produce a child “too large to

come out.” The durian, which comes in over 100 varieties, is so well regarded in Asia that the ownership of just one tree (they often reach 80 feet high) can make a person prosperous. One 16th-century traveler claimed that the durian “surpasses in flavor all the fruits of the world.” The only trouble with the durian is that it literally stinks. Addicts say that it is no more objectionable than Gorgonzola or Camembert cheese, but most non-Asians consider it among the foulest-smelling foods in the world; one gourmet wrote, “to say it smells like rotten garlicky cheese is generous.” British author Anthony Burgess has compared eating durian to eating vanilla custard in a latrine. Airlines refuse to carry durians even in sealed containers, and Asian hotel rooms literally have to be fumigated after durian feasts. One husband is reported to have chased his wife out of bed, making her eat her prize specimen on their hotel fire escape.

dust bowl. Severe dust storms beginning in 1934 destroyed crops and dried the soil in the southern High Plains of the United States, largely because this land in Kansas, Colorado, Oklahoma, New Mexico, and Texas had been poorly farmed for years. The Great Depression, drought, and the dust forced large numbers of people to migrate from the area, which was first called the *dust bowl* in a story written by Associated Press reporter Robert Geiger in April 1935. The dust storms lasted almost a decade and dust from them blew as far as 300 miles out into the Atlantic, where it coated ships. See also OKIES, DIRTY THIRTIES.

dust bunny; slut’s wool. The term *dust bunny* for any ball of dust found under the bed and in other places difficult to reach is only about 50 years old. The British, passing judgment in this case, would call a dust bunny “slut’s wool,” condemning the person who let such dust accumulate. Synonyms are HOUSE WOOL and HOUSE MOSS.

dust devil. A dust devil is a small whirlwind common in dry regions and made visible by the dust it picks up from the ground. The term originated in the American West in about 1890. F. M. Parker described desert dust devils in his novel *Skinner* (1981): “The strong wind blew out of the northwest, sweeping the hotter air of the desert toward the mountain. Heated unevenly by the baking sunlight on the white earth of the bottom of the long-gone lake, the wind in places lost its smooth southeast flow and began to eddy and swirl. The swirls grew and pirouetted like invisible dancers and then, as their strength grew, birthed giant dust devils that dizzily spun white dust around and upward in vortices of counter clockwise-whirling turbulent pools of air four to five hundred feet deep. The ghostly columns, like giant dancing worms, wiggled and zig-zagged along to the southwest with the wind.”

dust pneumonia. A pneumonia caused by breathing dust-laden air; it took a heavy toll of human life and livestock in eastern Colorado and western Kansas in the 1930s.

Dutch; Dutch courage, etc. The Dutch people have been so offended by the English language over the past three

centuries that in 1934 their government decided to drop the word *Dutch* and use *Netherlands* whenever possible. But the stratagem didn’t succeed in stopping up the dike. *Dutch* remains what one dictionary calls “an epithet of inferiority.” In both England and America a torrent of verbal abuse has descended upon the Dutch. It all began with the bitter hostilities between England and Holland in the 17th century, when the Dutch colonial empire threatened to usurp Britain’s own. Two major wars were fought over this naval and trade rivalry and a flood of invective was loosed upon the Dutch that has barely subsided over the years. To complicate matters, the name *Dutchman*, from the German *Deutsch*, has been applied to Germanic peoples (for instance the Pennsylvania Dutch), such contacts and two world wars adding still more derogatory expressions to the list. Below is a short dictionary of abusive terms using the word. Though it runs to some 60 expressions, surely a complete list would more than triple this amount. All of these terms but a few are derogatory. If only in the subtlest way, each makes the Dutch either cheap, cowardly, stubborn, deceitful, or worse, all a far cry from the traditional picture of Hans Brinker, bright tulips, and gently turning windmills:

double-Dutch—double talk; gibberish; also an American play-language and a jump-rope game.

Dutch act—suicide, probably referring to a supposed German morbidity, rather than a cheap Dutch way to end it all.

Dutch auction—an auction starting off with inflated prices.

Dutch bargain—one clinched over liquor; a one-sided bargain.

Dutch bond—an economical brickwork bond of alternate courses of stretchers and headers.

Dutch brig—cells on board a ship.

Dutch build—a thickly built person.

Dutch by injection—describing an Englishman living with a Dutch woman.

Dutch cap—a prophylactic or pessary.

Dutch cheese—cottage cheese; a bald-headed person.

Dutch clinker—a long, narrow, hard yellowish brick made in Holland.

Dutch clover—white clover, *Trifolium repens*.

Dutch comfort—consolation (“Thank God it wasn’t any worse”).

Dutch concert—a great uproar; everyone playing a different tune.

Dutch courage—courage inspired by booze, the Dutch once said to be heavy drinkers. “The Dutch their wine and all their brandy lose, / Disarmed of that from which their courage flows . . .” (Edmund Waller, 1665).

Dutch cupboard—a buffet with open upper shelves.

Dutch defense—a surrender, no defense at all.

Dutch door—a two-section door that opens at the top or bottom.

Dutch foot—a furniture foot.

Dutch gold—an originally Dutch alloy of copper and zinc used for cheap imitation gold leaf.

Dutch kiss—sexually intimate kissing.

Dutch lap—an economical shingling method.

Dutch luck—undeserved luck.

Dutch lunch—an individual portion of cold cuts; probably an American expression referring to the Pennsylvania Dutch.

Dutchman—a hard lump in brown sugar.

Dutchman's anchor—a nautical expression that derives from an old tale of a Dutch sea captain who lost his ship because he forgot to bring along his anchor. The story gives us this term, meaning anything important that has been forgotten.

Dutchman's breeches—the popular plant *Dicentra cucullaria*, the flowers resembling baggy breeches; patches of blue in a stormy sky, in allusion to patches on a Dutchman's trousers, or because there is just enough blue to make a cheap pair of pants for a Dutchman.

Dutchman's drink—the last one in the bottle.

Dutchman's headache—drunkenness.

Dutchman's land or *cape*—illusory land on the horizon.

Dutchman's log—a piece of wood used in an economical navigation method, the practical method itself.

Dutchman's pipe—a climbing vine, *Aristolochia dorioides*, whose calyx resembles a tobacco pipe.

Dutch medley—everyone playing a different tune.

Dutch nightingale—a frog.

Dutch oven—economical heavy kettle or brick oven.

Dutch palate—a coarse, unrefined palate.

Dutch pennants—untidy ropes hanging from aloft on a ship.

Dutch pink—blood.

Dutch praise—condemnation.

Dutch pump—a nautical punishment.

Dutch reckoning—pure guesswork, or a lump account that would be cheaper if itemized.

Dutch red—a highly smoked herring.

Dutch route—American slang for *Dutch act* above.

Dutch straight—a poker hand.

Dutch treat—a meal or entertainment where each pays his own way. Pennsylvania Dutch.

Dutch two hundred—a bowling score of 200 made with alternate strikes and spares.

Dutch uncle—an unsparingly frank and critical person, an Americanism probably referring to the Germans.

Dutch wife—the pillow of an Englishman in the tropics who takes no native mistress; or a framework used in beds to support the legs.

High Dutch—High German.

His Dutch is up—he's angry.

I'm a Dutchman if I do—Never! From the days when "Dutchman" was synonymous with everything false.

in Dutch—in trouble; in jail; this may refer to the early New York Dutch but probably refers to the Germans.

it's all Dutch to me—it's all Greek to me, an American expression.

Low Dutch—Low German.

my old Dutch—my wife, but possibly from the word *duchess*.

Pennsylvania Dutch—German emigrants in Pennsylvania; their language.

that beats the Dutch—that beats the devil, deriving from an American song of the Revolution.

to Dutch—to harden or clean by placing in hot sand; to run away, desert.

The Netherlands has in its long history been known as *Belgica* (to the Romans), *Holland*, *The Seven Provinces*, and *The Low Countries*. In 1999 Jon Spruijt wrote a book, *Total Dutch*, listing more than a thousand Dutch words and expressions used in various languages. Some are far from being exclusively Dutch. A *Dutch treat*, for instance, is *going Catalan* in Spain; *going Rome* in Italy; and *going Swiss* in France.

Dutch words in English. Dutch and other Low German languages (Frisian, Flemish, and Plattdeutsch) have contributed a great many words to English. These include: date, do-tard, bowsprit, golf, gin, uproar, wagon, bounce, snatch, huckster, tackle (fishing), boy, booze, wainscot, hobble, splint, kit, mart, hop (plant), spool, rack, sled, excise, buoy, hoist, hose (stockings), bulwark, boor, loiter, snap, groove, luck, placard, brandy, stoker, smuggle, sloop, cruise, walrus, jib, yawl, knapsack, furlough, blunderbuss, sketch, stipple, decoy, slur, hanger, snort, snuff, hustle, snow, and mangle. Many Dutch words became part of American English. These include: bush, hook (of land), boss, patroon, Yankee, sawbuck, stoop (porch), hay, barrack, boodle, dingus, dope, dumb, logy, poppycock, Santa Claus, snoop, spook, skate, coleslaw, cruller, cookie, pit (of fruit), pot cheese, waffle span (of horses), sleigh, caboose, scow, bedspan, bedspread, cuspidor, keelboat, landscape, and a good scout.

duxelles sauce. A *duxelles* today is a purée of mushrooms and onions, the tasty sauce once made from a much more elaborate recipe. It was named for the marquis d'Uxelles, employer of the too often ignored chef François Pierre de la Varenne. Varenne's *Le Cuisinier Français* (1651) is a landmark of French cuisine, and his rare pastry book *Le Pâtissier Français* has been called the most expensive cookbook in the world. The chef is said to have been trained by those Florentine cooks brought to France by Marie de' Medici, second wife of Henry IV. It is often claimed that these Italians taught the French the art of cooking, but Varenne's cuisine was much more delicate and imaginative than that of his masters; and if anyone can be called the founder of classical French cuisine he deserves the honor. Varenne did not name the *duxelles* after his employer; this was done at a later date when it became customary to honor a man's name in a recipe.

D.V. When someone writes or says, "I'll be home next week, D.V.," he is saying "I'll be home next week, God willing," *D.V.* being an abbreviation of the Latin *deo volente*. First recorded in 1873, the term appeared in church publications before that, and is still heard occasionally.

dwarf. See LITTLE PEOPLE.

dyed in the wool. See SPOILS SYSTEM.

dynamite. Swedish inventor Alfred Nobel invented this explosive and the word for it. Nobel constructed *dynamite* from

the Greek *dunamis*, “power,” and the Swedish suffix *it*. His *dynamit* almost immediately came into English as *dynamite*. See NOBEL PRIZE.

dyno gyno. A name given to Dr. Niels H. Lauersen, a fertility specialist who was convicted of insurance fraud in 2001. The

name, coined by a friend of Dr. Lauersen, derives from *dynamo* and *gynecologist*, meaning an extremely energetic gynecologist.

dyvour. This synonym for “a bankrupt” is an old Scottish term. Dyvours were once compelled by law to wear a half-yellow, half-brown shirt along with a particolored cap and hose.

E

E. *E* is the most commonly used letter in English. It is followed in order of use by: *t, a, i, s, o, n, h, r, d, l, u, c, m, f, w, y, p, g, b, v, k, j, q, x,* and *z*. The most common initial letter is *t*. Called *he* in Hebrew, the letter *E* was representative of the Phoenician and Hebrew sign for “a window.”

eager beaver. Referring, of course, to the industrious beaver, this near-rhyming expression is a Canadian Army one that isn't recorded before 1940, although it obviously derives from such phrases as “as busy as a beaver,” which dates back to the early 18th century. Unlike the early expression, however, *eager beaver* is usually applied derisively to someone who is overly industrious, zealous, gung ho in his work, one who tries to impress his superiors by his diligence and becomes obnoxious to his associates as a result. *See* BEAVER.

Eagle of Toledo. *See* ANGEL OF THE MOUNTAIN.

eagle shits on Friday. At least since the years of the Great Depression, U.S. workingmen have used this phrase meaning “payday is Friday,” and the term may date back to the Spanish-American War. The eagle, of course, is the one on the U.S. dollar. A euphemism for the expression is *the eagle screams on Friday*.

eaglestones. These lumps of ironstone, often the size of small eggs, are so called because the ancient Greeks believed that an eagle's eggs wouldn't hatch unless the bird deposited an eaglestone in her nest. Nobody knows how the myth originated, but the Greeks called the ironstones *aetites*, which translates into the English *eaglestone*.

ear. Though ears of corn grow on the side of the corn plant and might suggest the ears that are organs of hearing, the two words are historically unrelated. The *ear* used for hearing comes to us from the Latin *aurus*, meaning the same, while the *ear* of corn comes from the Latin *aucus*, husk. Even traced back to their ultimate roots, the two words have different etymological origins. Their similarity is purely coincidental.

ear biter. Government jobs weren't always so safe, secure, and uneventful, as this obsolete term shows. In 1845 a special agent of the U.S. Post Office bit off the ear of an opponent in a fight. For some time afterward all post office special agents were facetiously called *ear biters* as a result.

ear down. To hold a horse still by biting its ear.

earl. Any *earl*, third in rank among the British peerage, below a duke and a marquess, takes his name from the Old English *eorl*, “a man of position,” as opposed to a *ceorl*, or *churl*, “a free-man of the lowest rank.” A *churl* is today a peasant, a rude, surly person, and a miser.

the early bird catches the worm. A proverb dating back to the middle 1600s, the common term *early bird* deriving from it.

early to bed, early to rise . . . *See* SNUG AS A BUG IN A RUG.

earmark. Back in the 16th century English farmers began to notch their own identifying marks in the ears of their sheep and cattle to prevent them from being stolen. This practice didn't always work, for many thieves were adept at altering earmarks, but the animal earmark was so common that it soon gave its name to any kind of identifying mark and, figuratively, to something, such as money, marked or set aside for some special purpose. Incidentally, thieves who altered an *earmark* ran the risk of being sent to prison where *they* would be earmarked—slitting the ears of pilloried criminals, earmarking them, was as common as nose-slitting or earmarking animals in those days.

ears. The small boxed or unboxed information (weather, paper's motto, etc.) on the upper side of a newspaper's front page. So called because of their positioning like the ears on a human face. The term was first recorded in 1901, according to Partridge, and is sometimes given as *ear-tabs*.

ears have walls. See WALLS HAVE EARS.

Earth Day. A celebration of the environment started by former senator Gaylord A. Nelson (1916–2005). Earth Day falls on April 22nd of every year and is celebrated by millions. Said President Bill Clinton in presenting the Presidential Medal of Freedom to Nelson: “As the father of Earth Day, he is the grandfather of all that grew out of the earth. He inspired us to remember that the stewardship of our natural resources is the stewardship of the American dream.”

earthlight. *Earthlight* is not light on the earth; it is light reflected from the earth to the moon and back that is visible on the dark side of the moon. British astronomer John Herschel seems to have coined the word in 1833. See ASTEROID, for a word his father coined.

the earth moved. “Did the earth move for you?” These joking words said to one’s lover after sex were apparently invented or popularized by Ernest Hemingway in *For Whom The Bell Tolls* (1940) when he has Maria say to Robert Jordan, “‘Did the earth never move for thee before?’ ‘Never,’ he said truly.” *For Whom The Bell Tolls* itself comes from a sermon by John Donne: “No man is an *Iland* intire of it selfe; every man is a peece of the *Continent* . . . And therefore never send to know for whom the *bell* tolls; It tolls for *thee*.”

ear to the ground. Ramón Adams wrote in *Western Words* (1944) that old plainsmen often placed a silk neckerchief on the ground and thus could hear the sounds of men and horses miles away. Even if plainsmen and American Indians didn’t hear distant hoofbeats by putting their ears to the ground, so many writers of Westerns have attributed this skill to them that the practice has become well known. The phrase is first recorded in 1900 in the *Congressional Record*, meaning to use caution, to go slowly and listen frequently. Since then someone with *an ear to the ground* has become someone trying to determine signs of the future, trying to find out what’s coming.

earwig. The nocturnal earwig (*Forficula auricularia*) is a common garden pest, but it won’t wiggle or wriggle into people’s ears and then drill its way into the brain with the aid of its large pincers. Yet it was exactly this popular superstition that gave the *earwig*, or *ear-wiggle*, its name over a thousand years ago. One English writer even instructed: “If an earwig begotten into your eare . . . spit into the same, and it will come forth anon. . . .” Good trick if you can do it. To *earwig* someone is to fill his mind with prejudices by insinuations, by whispering into his ear and wriggling into his confidence.

easel. The three-legged frame used to hold a painting while the artist works on it suggested a donkey to 17th-century Dutch painters because it somewhat resembled one and because it carried a burden. So they named this piece of equipment an *ezel*, Dutch for “donkey,” the word becoming *easel* in English, as use of the device increased. The idea seems to be a widespread one, however, as the French call an *easel* a *chevalet*, a wooden “horse.”

Easter. The pagan festival held at the vernal equinox to honor Eastre, the goddess of dawn, was called Eastre in Old English. Since the Christian festival celebrating Christ’s resurrection fell at about the same time, the pagan name was borrowed for it when Christianity was introduced to England, the name later being changed slightly to *Easter*.

Easter Island. Dutch admiral Jacob Roggeveen so named Easter Island in honor of his landing there on Easter Sunday in 1722. The Polynesian islanders call the 63-square-mile island in the South Pacific Rapa Nui. The hundreds of huge statues on Easter Island are called *moai*, the largest of which measure about 65 feet high and weigh some 270 tons.

Easter Rising. See A TERRIBLE BEAUTY IS BORN.

easy as rolling off a log; logrolling. No one seems to know the origin of the first expression, which dates back to Colonial times. One ingenious theory suggests that colonists searching for home sites in the wilderness would leave their toddlers seated on dry logs temporarily while they explored the area and that the round-bottomed children often rolled off the logs, not knowing how to keep their balance. The metaphor could just as likely have derived from colonists rolling logs off toward a building site, across a meadow or down a hill. Logs can be quite heavy, though, and difficult to move, which explains the origins of *logrolling*. When an early settler in the West was building a log cabin, his neighbors helped him roll the heavy logs to the home site, or helped him clear the land of felled trees, with the understanding that he would do the same for them if need be. Eventually the frontier expression *logrolling* came to describe this mutual “backscratching,” passing into politics by 1838 as the practice of one lawmaker voting for a bill sponsored by another if his colleague reciprocates and votes for a bill sponsored by him—the political deal, “help me roll this one, I’ll help you roll that one past the opposition.”

easy as silk. Everyone is familiar with the phrase *smooth as silk*, suggested by the touch of the soft, lustrous cloth made from the fiber obtained from the cocoon of the silkworm. *Easy as silk* is not so well known. An old-fashioned phrase used by our grandparents, it is synonymous with *smooth as silk* but possibly also suggests how easy silk is to use in making clothing. I have heard the expression, once in an old movie, but can’t find it recorded anywhere.

easy as taking candy from a baby. An expression meaning “anything very easy to do,” which probably doesn’t date back much before the 1930s. Neither does *easy as ABC* or *easy as shooting fish in a barrel*, among other similar sayings, all of which seem to have been inspired by the old Americanism EASY AS ROLLING OFF A LOG.

easy come, easy go. A saying meaning that what is easily gained can be just as easily lost. The proverbial saying dates back to the 17th century, perhaps even before then.

easy does it. See TAKE IT EASY.

easy rider. Popularized by the film *Easy Rider*, this term for a sexually satisfying male lover originated among southern blacks. William Faulkner in *Soldier's Pay* (1926) quotes a line from an old blues song: "Oh, oh, I wonder where my easy rider's gone."

easy street; to live on easy street. To be well-off financially or to be rich, to live in comfortable circumstances. The earliest known reference to this expression is in 1897. A little later in 1901 it was used by American author George V. Hobart in his novel *It's Up To You*, where he describes a prosperous young man who had it made and could "walk up and down Easy Street." *On easy street* could, however, have some relation to the old English expression an *easy road*, "a road that can be traveled without discomfort or difficulty," an expression that was used figuratively by Shakespeare.

eat crow. During an armistice toward the end of the War of 1812, an American soldier out hunting crossed the Niagara River past British lines. Finding no better game, he shot a crow, but a British officer heard the shot and surprised him. The Britisher tricked the Yankee out of the rifle with which he shot so well. He then turned the gun on the American, demanding that he take a bite out of the crow he had shot as a punishment for violating British territory. The American complied, but when the officer returned his weapon and told him to leave, he covered the Englishman and forced him to eat the rest of the crow. That is the origin of the expression *to eat crow*, "to be forced to do something extremely disagreeable," as related in an 1888 issue of the *Atlanta Constitution*. Although *to eat crow* is possibly a much older expression, the saying first appeared in print in 1877 and the story may well be true—nothing better has been suggested. The concept behind *to eat crow* is that crows are not good eating, but the flesh of young ones was once esteemed and I have it on the authority of the Remington Arms Co. that even old crows aren't so bad if you simply "skin the bird, salt and cut it into pieces, parboil till tender and then fry with butter and onions." I'll eat crow if someone conclusively proves that the recipe isn't authentic.

eat dog for another. Various American Indian tribes ate dog meat, and at least one was called *the Dogeaters* by their enemies. When white men sat at Indian councils where dog meat was served, those who didn't relish the comestible could, without offending their host, put a silver dollar on the dish and pass it along, the next man taking the dollar and eating the dog. From this practice arose the American political expression *to eat dog for another*.

eat, drink, and be merry, for tomorrow we die. Brewer tells us that this was "a traditional saying of the Egyptians, who, at their banquets, exhibited a skeleton to the guests to remind them of the brevity of life." *Eat, drink, and be merry* itself, however, appears in Eccles. 8:15: "A man hath no better thing under the sun than to eat, drink and be merry."

eat humble pie. Here is an expression probably born as a pun. The *humble* in this pie has nothing to do etymologically

with the word *humble*, "lowly," which is from the Latin *humilis*, "low or slight." Umbles or numbles (from the Latin *lumbulus*, "little loin") were the innards—the heart, liver, and entrails—of deer and were often made into a pie. Sir Walter Scott called this dish "the best," and an old recipe for it (1475) instructed "For to serve a Lord"—but some thought it fit only for servants. When the lord of a manor and his guests dined on venison, the menials ate umble pie made from the innards of the deer. Anyone who ate umble pie was therefore in a position of inferiority—he or she was humbled—and some anonymous punster in the time of William the Conqueror, realizing this, changed *umble pie* to *humble pie*, the pun all the more effective because in several British dialects, especially the Cockney, the *h* is silent and *humble* is pronounced *umble* anyway. So the play upon words gave us the common expression *to eat humble pie*, meaning to suffer humiliation, to apologize, or to abase oneself.

eatin' a green 'simmon. The 'simmon in this 19th-century Americanism is a persimmon, which takes its name from the Cree *pasiminan* (dried fruit). Although the fruit is delicious when thoroughly ripe, a green unripe persimmon is so sour it could make you whistle, which led to the expression *he looks like he's been eatin' a green 'simmon*. On the other hand, ripe persimmons suggested *walking off with the persimmons* (walking off with the prize), which also dates back to the 1850s.

eating rat. During the siege of Paris in 1871, when Prussian troops besieged the city for 135 days, Frenchmen ate labeled rat meat sold at the rat market in the Place de l'Hotel, the rodents costing three francs apiece (as compared to 10 francs for cats). To Parisians who survived the terrible siege, having "eaten rat" became the symbol of their greatest humiliation.

eat'm and beat'm. A humorous name for cafeterias where the food (generally sandwiches and drinks) was left out on tables for customers to choose from, each customer trusted to add up his or her bill honestly from the prices listed. Owners of these places generally agreed that people were quite honest about doing so, despite the cynical name given to such establishments. Nevertheless, few such places were left by the 1980s.

eat me out of house and home. "Stay out of that refrigerator—you'll eat me out of house and home!" An old phrase that may have been coined by Shakespeare in *Henry IV, Part 2*.

eat one's hat. This is an asseveration, as the *O.E.D.* so neatly puts it, "stating one's readiness to do this if an event of which one is certain should not occur." A woman named Miss E. E. Money first recorded the phrase, in 1887, and it is sometimes given as *I'll eat Rowley's hat*. One persistent folk etymology has the *hat* here being "a food made of eggs, veal, dates, saffron, salt, and spices" that no one else seems to have heard of.

eat one's words. "God eateth not his word when he hath once spoken" is the first recorded use of this expression meaning "to retreat in a humiliating way"—in a 1571 religious work. There are several instances of people literally eating their words, the earliest occurring in 1370 when the pope sent two delegates to

Bernabo Visconti bearing a rolled parchment, informing him that he had been excommunicated. Infuriated, Visconti arrested the delegates and made them eat the parchment, words, leaden seal, and all. I doubt that this suggested *to eat one's own's words*, but it is a good story.

eat something with one toe in the fire. A colorful backwoods expression meaning that something tastes so good one could enjoy eating it even while in extreme pain. “Mmmmmm, this is so good I could eat it with one toe in the fire.”

eat the Yank way. To Brits, who have long called Americans Yanks, this phrase means to hold the fork in the right hand, as Americans generally do.

eavesdropper. The eaves of a house is simply the edge of the roof that overhangs the side. (*Eaves* is both singular and plural, there being no word *eave*.) In ancient times, English law forbade the building of a house less than two feet from another person's property, because rainwater dropping off the eaves might injure a neighbor's land. So the space beneath the eaves of a house and about two feet out came to be called the *eavesdrip* or *eavesdrop*. Later, in the 15th century, persons standing in this space near a window trying to overhear conversations inside a house were called *eavesdroppers*, and it was from their name that the verb *to eavesdrop* was formed. One 16th-century English writer warned of “eavesdroppers with pen and ink outside the walls,” and the great jurist Sir William Blackstone called “eavesdroppers” a “common nuisance.”

eavestrough. What are usually called gutters in America are for the most part called *eavestroughs* in Canada, though younger Canadians are increasingly using the American term. Both are the names for a trough fixed on the eaves for draining rainwater from a roof. *Rainspout* and *spouting* are still other names for the same thing.

ebb tide. See TIDE.

Ecce Homo. In Latin *Ecce Homo* means “Behold the man.” The words were said by Pontius Pilate to the people after he brought forth Jesus wearing the crown of thorns and purple robe, as told in John 19:5. *Ecce Homo* is also the name of the many paintings of Christ crowned with thorns and bound by ropes, some of them masterpieces by the likes of Titian, Van Dyck, and Rembrandt.

eccentric. *Eccentric* derives from the Latin *ex centrum*, “out of center, deviating from the center,” the word originally an astronomical term and used this way early in the 16th century. Not for almost another 200 years was *eccentric* applied to odd, whimsical people who deviated from the center. (The eccentricity of the earth's orbit is 0.017, should anyone have need to know.)

ecdysiast; stripteaser. Stripteaser Georgia Sothern, or her press agent, wrote H. L. Mencken in 1940 asking him to coin a “more palatable word” to describe her profession. The Sage of Baltimore, who had hatched other neologisms (*i.e.*, “bootician”

for a bootlegger), gallantly responded, suggesting that “strip-teasing be related in some way or other to the zoological phenomenon of molting.” Among his specific recommendations were lizards, called the Geckonidae (not very appetizing, either), and *ecdysiast*, which comes from *ecdysis*, the scientific term for “molting.” Miss Sothern adopted the last, and it was publicized universally; born to the world was a new word and a new union called the Society of Ecdysiasts, Parade, and Specialty Dancers. But not every artfully unclad body was happy with Mencken's invention. Said the Queen of Strippers, Gypsy Rose Lee: “‘Ecdysiast,’ he calls me! Why the man is an intellectual slob. He has been reading *books*. *Dictionaries*. We don't wear feathers and molt them off. . . . What does he know about stripping?” Most would agree that *stripteaser* is far more revealing. *Striptease*, first recorded in 1938, and *stripping* seem to have been coined within the last 65 years or so, but the word *stripping* for a woman removing her clothes to sexually stimulate men goes back at least 400 years. “Be sure that they be lewd, drunken, stripping whores,” says a character in Thomas Otway's comedy, *The Soldier's Fortune* (1581). Joseph Addison wrote in *The Guardian* (1713): “At a late meeting of the stripping ladies . . . it was resolved for the future to lay the modesty price aside.” Synonymous for *stripteaser* are *peeler* and *shucker*. See G-STRING; BURLESQUE.

echelon. A word often heard in phrases such as “the highest echelons of government,” *echelon* in this sense means a level of authority or responsibility. It derives from the French *eschelon*, rung of ladder, which comes from the Latin *scala*, steps.

echo. The Greek nymph Echo chattered with Hera in order to distract her from the pursuit of Zeus. Hera punished her by depriving her of all speech save the ability to repeat the words of others, giving her heartache—she lost her love, Narcissus—but giving us the word *echo*. Over time Echo died of grief, withering away, with only her voice, the echo, remaining. The Roman poet Ovid probably invented this tale for his *Metamorphoses*, Book III.

economist. *Economist* is a lofty occupational title but has its roots in a very common calling—housekeeping—deriving from the Greek *oikonomia*, meaning “house management.” An economist was a household manager in England at least after 1580, when we find the first known use of the word; the term did not acquire its present meaning until the 18th century. The old meaning of the word is retained in the home economics courses still taught in schools.

Ecuador. The Spanish named this South American country after the equator, which passes through it.

Eddie. Coined after the common nickname Eddie and probably the word “editor,” this is the annual award made since 1951 by the American Cinema Editors for the best editing of films.

Eddyism. *Eddyism*, a synonym for Christian Science, honors its founder, Mary Baker Eddy (1821–1910). Though she lived to be nearly 90, Mrs. Eddy was plagued all her life by illness and unhappiness. Married three times, her first marriage was ended

by her husband's death and the second by divorce. A serious accident in 1866 turned her to the Bible. The story in Matthew of Jesus healing the paralyzed man brought her the spiritual enlightenment she attributed to her discovery of Christian Science. "The Bible was my textbook," she once wrote. "It answered my questions as to how I was healed, but the Scriptures had to me a new meaning. . . I apprehended for the first time. . . Jesus' teaching and demonstration, and the Principle and rule of spiritual Science and metaphysical healing—in a word, Christian Science." Before this, however, Mrs. Eddy had been treated by Phineas P. Quimby, a faith healer of Portland, Maine, and his influence may be reflected in her work. An indefatigable worker, she remained the leader of the movement until her death. In 1908 she established the famous international newspaper, *The Christian Science Monitor*.

edelweiss. The edelweiss (*Leontopodium alpinum*), well known in song and picture (the little Alpine flower is featured in many Swiss designs), takes its name from the German *edel*, "noble," and *weiss*, "white," or "pure." An Italian liqueur named edelweiss is flavored with extracts of this Alpine flower.

Eden. See *ABYSS*.

Edgar. The Edgar is a small bust of Edgar Allan Poe presented annually to the best writers of detective stories by the Mystery Writers of America. Edgars are awarded in several categories, such as best novel and best short story. Poe himself once won a prize for his "Gold Bug" (1843), the code in the story developing from his interest in cryptography. Though he did invent the detective story in his "Murders in the Rue Morgue," "The Purloined Letter," and "The Mystery of Marie Roget," the writer is best remembered for his poetry and horror tales. Among his greatest stories are "The Fall of the House of Usher," "The Black Cat," "The Pit and the Pendulum," and "The Tell-Tale Heart." He died at 40, perhaps addicted to drugs, having spent his last days stumbling into Baltimore polling places and casting ballots in exchange for drinks. "Three-fifths genius and two-fifths sheer fudge," was James Russell Lowell's facile opinion of Poe, but Yeats declared him "always and for all lands a great lyric poet." See *BALTIMORE RAVENS*; *MAD POET OF BROADWAY*; *POES OF PRINCETON*; *POET OF THE D.T.'S*; *RAVEN*.

Edgar Allan Poe cottage. Often called "New York's chief literary shrine," this little cottage at Fordham in the Bronx is the place where Poe's wife, Virginia, died of tuberculosis during the terrible winter of 1846–47 when she and Poe were desperately poor and close to starving. Poe wrote "The Raven" and "The Pit and the Pendulum," among other great works. He was paid \$10 for "The Raven," immediately recognized as a work of genius when it appeared, and it was a year and a half before he pried loose his money from the *New York Mirror*.

edgy. *Edgy* for nervous or irritable is an Americanism first recorded as late as 1931. However, it derives from the expression *on edge*, which has been common since the beginning of the century. No doubt the latter is patterned on someone on the edge of a precipice, close to falling. The *mulligrubs*, *jimjams*, *shakes*, *fantods*, and *willies* are all earlier synonyms.

Edison; Edison effect. When Thomas Alva Edison died in 1931, aged 84, the *New York Times* devoted four and a half full pages to his obituary, calling him the greatest benefactor of humanity in modern times. His name is a synonym for inventor and his more than 1,300 United States and foreign patents establish him as probably the world's greatest genius in the practical application of scientific principles. Born in Milan, Ohio, reared in Port Huron, Michigan, Edison had been interested in science since childhood—so curious in fact, that he once fed another boy a large dose of Seidlitz powders to see if the gas generated would enable him to fly. He had less than three months of formal schooling, was educated by his schoolteacher mother, and at 12 became a newspaper boy on the Grand Trunk Railway—his hearing became impaired at that time by a cuff on the ear from a railroad conductor. Edison's first successful invention was an improved stock ticker, which he proceeded to manufacture. He then devoted his full time to the "invention business." The Wizard of Menlo Park—where one of his first shops was located—soon had a new laboratory in West Orange, New Jersey, where he could "build anything from a lady's watch to a locomotive." A list of only his most noted inventions is still almost unbelievable. These included assisting in the invention of the typewriter; invention of the carbon telephone transmitter; the first commercially practical electric light; an entire complex system, complete with many inventions, for the distribution of electricity for light and power, which resulted in the first central electric light power plant in the world in New York City; an electric automobile; the first full-sized electric motor; electric railway signals; station-to-station wireless telegraphy; an efficient alkaline storage battery; the magnetic ore separator; paraffin paper; an improved Portland cement; the Dictaphone; a mimeograph machine; the phonograph; the fluoroscope; and a motion-picture machine called the kinetoscope, from which developed the modern motion picture. Many of his inventions spawned giant modern industries—the electric light, his telephone transmitter, the phonograph, and the motion-picture camera being only four such discoveries. Ironically, the Edison effect, one of the few discoveries named for him, was not exploited by the inventor. It is the principle of the radio vacuum tube that made radio and television possible. The Edison base of light sockets also bears the immortal inventor's name, as does a town in central New Jersey. One of his five children, Charles Edison, served as that state's governor.

editorial. *Editorial* is an Americanism for what the British call a *leader* or *lead article*, that is, an article expressing the views of the editor or publisher of a periodical. The word is first recorded in 1830 and still hasn't caught on in England.

Edna St. Vincent Millay. Here is a great poet who took her name from a hospital, in part. Edna St. Vincent Millay (1872–1950) was named after New York's St. Vincent's Hospital by her mother, who was grateful to the hospital for saving her brother's life. Mrs. Millay's brother, Charles Buzzell, had been trapped in a cargo ship's hold without food and water for nine days on a voyage from New Orleans to New York. Doctors at St. Vincent's said he couldn't live but pulled him through, and when her daughter was born, Mrs. Millay named Edna after the famous hospital, or after the saint for whom the hospital was named.

The story was confirmed recently in a letter to the *New York Times* by Edna St. Vincent Millay's daughter, who observed, "Had it been Doctor's Hospital or Lenox Hill she [her grandmother] would have reconsidered—they wouldn't scan."

Edsel. Named in 1957 for Edsel Ford, founder Henry's son, the Ford Motor Company's Edsel was, and is still, so ridiculed, unjustly, for its defects that its name became almost a synonym for a car that doesn't work. But the car failed because of the 1957 recession, not because of its poor design or quality. Edsel Ford, to his greater and probably longer-lasting fame, also has the Edsel Ford Range in Antarctica named for him. See UTOPIAN TURTLETOP.

education. See ENCYCLOPEDIA.

Edwardian. See TEDDY BOYS.

eelgrass. A word common used in the eastern U.S. for the marine grass *Zostera marina*, where eels are found. Eelgrass is called "grass-wrack" in Europe.

eena, meena, mina, mo; eeny, meeny, miny, mo. Look in the *O.E.D.*, *Webster's Second*, *Mathews's Dictionary of Americanisms*, *Partridge's Dictionary of Slang*, *Brewer's Dictionary of Phrase and Fable*—look anywhere, in any etymological reference work—and still you will not find the "counting out" expression *eena, meena, mina, mo*, or *eeny, meeny, miny, mo*, as it is perhaps more often said. Yet this is a very familiar phrase in both the United States and Britain, used at one time or another by almost all children and frequently employed by adults. It is, of course, part of a counting-out expression used in children's games to determine who will be "it" among a group of players. The full rhyme, probably dating back to the 19th century, was originally the insensitive (at best): "Eena, meena, mina, mo,/ Catch a nigger by the toe,/ If he hollers, let him go,/ Eena meena, mina, mo." Sometimes the fourth line is "My mother says I should pick this here one," and, happily, the second line is much more frequently today "Catch a tiger by the toe." The rhyme is said, of course, with the counter pointing at each player in rotation with each word, the player who is last pointed at being "it." One tradition has it that counting-out rhymes are relics of formulas Druid priests used to choose human sacrifices. Another source says these are old Welsh words for one, two, three, four.

effigy. See BURN OR HANG IN EFFIGY.

effing. *Effing* or *effen* has been a euphemism for *fucking* in America since at least the early 1960s, though it is first recorded in a *New York Times Magazine* article by Anthony Burgess in 1972: "I have already had several abusive phone calls, telling me to eff-off back to effing Russia, you effing, corksacking limey effer."

The Effluent Society. According to Nigel Rus's fascinating *Mark My Words* (1997), the punning *effluent society* appears in Stan Gooch's poem "Never So Good" (1964). It is a pun on *The*

Affluent Society (qv). One definition of *effluent* is "a discharge of liquid waste, as from a factory, a nuclear plant, or a sewer."

egg. Said Dorothy Parker of her mother-in-law, Hortense Campbell, a woman she considered something of a poseur: "Hortense is the only woman I know who pronounces the word 'egg' with three syllables."

egg cream. No one has identified the genius who first concocted the egg cream, but this New York favorite was invented in the 1920s at a New York soda fountain. There are no eggs and no cream in an egg cream, so it is something of a misnomer. While no exact recipe for one can be given and egg cream lovers all seem to have their own methods and proportions for making one, it is generally agreed that its ingredients must be milk, seltzer from a seltzer bottle, and Fox's U-Bet Chocolate Flavor Syrup.

egghead. Usually a term of mild contempt or derision applied to intellectuals, *egghead* was first used in its present sense to describe candidate Adlai Stevenson and his advisers during the 1952 presidential campaign. Though the physical description better fit Stevenson's opponent, General Dwight D. Eisenhower, the term echoed the popular misconception that all intellectuals have high brows and heads shaped like eggs, the same kind of heads cartoonists give to "superior beings" from outer space. The continued popularity of the expression seems to suggest, sadly enough, that though these heads be admittedly full of brains, they are alien to the "common person." But *egghead* is often used humorously, even endearingly, and may yet become a word with no stigma attached to it. See HIGHBROW.

eggnog. Eggnog is an American invention, the word first recorded at the time of the Revolutionary War. Made of eggs, milk, sugar, spices, and rum or other spirits, it takes its name from the eggs in it and *nog* for "strong ale."

egg on. The expression *to egg on* has nothing to do with hen's eggs or any kind of eggs. Neither does it derive from Norman invaders pricking Anglo-Saxon prisoners in the buttocks with their *ecgs* ("the points of their spears") when urging them to move faster, as one old story claims. *To egg on* is just a form of the obsolete English verb "to edge": to incite, provoke, encourage, urge on, push someone nearer to the edge. *To egg* someone meant the same as *to edge* someone and was used that way until about 1566, when the expression was first lengthened and became *to egg on*.

egg phrases (a dozen more, ungraded).

as alike as eggs—"We are almost as like as eggs"—

Shakespeare, *The Winter's Tale*, 1611.

break an egg in someone's pocket—to spoil someone's plan, 1734.

crush in the egg—to crush at the very beginning, as in crushing rebellion, 1689.

eggshell blond—a bald man—Australian slang, 1945.

find a hair upon an egg—to make a picky criticism—"Critics that spend their eyes to find a hair upon an egg" (1606).

have eggs on the spit—to have business in hand, 1598.

in egg and bird—in youth and maturity, 1711.

put all your eggs in one basket—to risk all on a single venture—“’Tis the part of a wise man to keep himself today for tomorrow, and not venture all his eggs in one basket,” Cervantes, *Don Quixote*, 1605. “Put all your eggs in one basket and WATCH THAT BASKET,” Mark Twain, *Pudd’nhead Wilson*, 1894.

take eggs for money—to be fooled with something worthless, 1611.

teach one’s grandmother to suck eggs—to lecture one’s elders or betters—dates from about 1700 and was originally *to teach one’s dame to grope* (handle) *ducks* (1590).

turn up the eggs of the eyes—the whites of the eyes—“The eggs of their eyes were at their highest elevation” (1635).

walk on eggs—to walk warily, 1734.

eggplant. Eggplant of course, takes its common name from its supposed resemblance to a large egg in shape. The vegetable is generally known as the aubergine to the English. Its early reputation varied in Europe, where it was thought to induce insanity and was called the “mad apple,” but where it was also considered to be an aphrodisiac and, like the tomato, was dubbed the “apple of love.” Native to India, the fruits range in size and in color from purple-black to white. The name *eggplant* is first recorded in 1767 in England, where the first cultivated eggplants were indeed white and shaped like eggs. An earlier folk name for the fruit was “Guinea squash.” Vineland, New Jersey, advertises itself as the “Eggplant Capital of the World,” and at its annual *Eggplant Festival* serves many eggplant dishes, including an eggplant wine. See AUBERGINE.

eggplant Imam Baildi. A favorite Turkish dish featured in several cookbooks which translates as “the eggplant the imam (a Moslem priest or leader) fainted over.” According to the old story, an elderly imam married the daughter of a wealthy oil merchant, who brought as her dowry 12 huge man-sized jars of the world’s finest olive oil. A famed cook, his bride prepared him a delicious eggplant dish a few days after the wedding. So pleased was he that he ordered her to prepare the dish every day for dinner. For 12 days all went well, but on the 13th day no eggplant graced the table. When the furious imam demanded to know why, his bride explained: “Dear husband, you shall have to purchase me more oil, as I have used all that I brought with me from my father.” This financial shock proved too much for the elderly imam who straightaway fainted.

eggs benedict. Oscar of the Waldorf once confirmed the story that *eggs benedict* was invented by a man suffering from a hangover. It seems that early one morning in 1894, Samuel Benedict, a prominent New York socialite, tread softly into the old Waldorf-Astoria Hotel after a night of partying—his head hurt that much. But he had what he thought was the perfect cure for his splitting headache—a breakfast of poached eggs served on buttered toast and topped with bacon and hollandaise sauce. Oscar, the maitre d’hotel, thought this combination excellent, but substituted an English muffin for the toast and ham for the

bacon, naming the dish in Benedict’s honor. Whether the cure worked or not isn’t recorded, and another version of the tale claims that the dish was created between Oscar and New Yorker Mrs. Le Grand Benedict.

egregious. This word, deriving from the Latin *ex gregis*, “out of the flock,” originally meant outstandingly good or outstandingly bad. It was used this way for 300 years, until about the mid 19th century, but for the last hundred years it has meant only “outstandingly bad.” No one knows the reason for the change.

egri bikaver. This distinctive red wine of Hungary takes its first name from Eger, a leading Hungarian wine center. Its second name, *bikaver*, means “bull’s blood,” so it is literally the “bull’s blood of Eger.”

Egypt of the West. President Lincoln coined this term in an 1862 message to Congress. It was a name for the interior area of the United States between the Alleghenies and the Rocky Mountains.

eh? This expression is considered typical of Canadian speech and is often noted by U.S. visitors to Canada. It means approximately “Isn’t it?” and is used at the end of a sentence, as in “Nice day we have, eh?”

Eiffel Tower. At the time it was erected in the Champ-de-Mars for the Paris Universal Exposition of 1889, the Eiffel Tower, standing 984.25 feet high, ranked as the world’s tallest structure. The structural iron tower had been designed by French engineer Alexandre Gustave Eiffel (1832–1923), the earliest and foremost builder of iron structures in France and a pioneer in the science of aerodynamics with his *Resistance of Air* (1913). The tower, with three platforms at different heights, reached by stairs and elevators, has since become as much a symbol of France as the fleur-de-lis. The interior structure of the Statue of Liberty, presented to the United States by France in 1884 and a symbol of America, was also designed by Eiffel, although the statue itself was created by F. A. Bartholdi.

eight ball. In a version of rotation sometimes called Kelly pool, players must sink all 15 balls in numerical order, except for the black eight ball, which must be pocketed last. Furthermore, if a player hits the eight ball with the cue ball prematurely, he loses points. Thus anyone who makes a shot and finds the cue ball behind or very close to the eight ball is in a difficult position, for unless he makes a difficult cushion shot, he’ll probably hit the eight ball when he shoots and be penalized. From this hazardous position in Kelly pool came the expression meaning to be “in an unfortunate position with little or no hope of winning, to be up the creek, out of luck.” It seems to be black poolroom slang from about 1920. The later *eight ball* for a maladjusted or inefficient person derives from the phrase (such a person is always *behind the eight ball*), with some help from the armed services “Section 8” discharge for mental instability in World War II.

Eighteen-hundred-and-freeze to death. A humorous name for the year of 1817, when an unusually cold winter in New England was followed by a cold spring, and the weather continued to be so unseasonable that many crops failed. Some sources put the years as 1816–17 and include the summer of 1816 as a very cold one when crops failed.

Eighth Commandment. Eighth of the Ten Commandments: “Thou shalt not steal.” See TEN COMMANDMENTS.

eight-hour day; five-day week. Henry Ford brought attention to the *eight-hour day* and *five-day week* for workers in 1926 when he instituted them at the Ford Motor Company plant in Detroit. However, a small number of workers had worked such hours before this, and the former term is recorded a quarter-century earlier.

eighty-six. To murder someone or put an end to something, as in “Eighty-six him, I don’t want to see him again.” The expression derives from restaurant waiter slang term *eighty-six*, which, among other things, means to “deny an unwelcome customer service” or to “cancel an order” (“Eighty-six the eggs!”), or which directs the cashier’s attention to a customer trying to leave a lunchroom without paying his check. The code word has been used in restaurants and bars since the 1920s, but the extended uses of *eighty-six* have only been around for half as long. Its origin is unknown. *Eighty-seven and a half* is slang used by waiters to indicate that an attractive woman is approaching.

Einstein; einsteinium. Albert Einstein (1879–1955) was unquestionably one of the greatest thinkers of all time, and *Einstein* is still widely used as a synonym for a genius. *Einsteinium*, a man-made radioactive element, was named for the physicist in 1953 by its American discoverer, Albert Ghiorso, who formed it in the laboratory after it had been detected among the debris of the first H-bomb explosion the year before. Einstein’s genius wasn’t apparent in his early years. Born in Ulm, Germany, he had been regarded as a dullard and even “slow, perhaps retarded” in his first years at school there. The same opinion may have been shared by his parents, for he did not learn to walk until a relatively late age, nor begin to talk until he was past three. Einstein was graduated from the Polytechnic Institute of Zurich and took employment with the Swiss Patent Office, devoting all his spare time to pure science. In 1905, at 26, his genius suddenly, inexplicably, burst into full bloom with three discoveries in theoretical physics that included his revolutionary theory of relativity, which reshaped the modern world. He was awarded the Nobel Prize in 1921—but not specifically for his theory, which few understood at the time.

Einstein’s theory of relativity. Albert Einstein published his theory of relativity, which reshaped the modern world, in a 1905 issue of *Annalen der Physik*. After he finished the 30-page article, “On the Electrodynamics of Bodies in Motion,” he was so physically and mentally exhausted that he had to go to bed for a full two weeks. See EINSTEIN; TWO PERCENT TO GLORY.

Eisenhower jacket; I like Ike. One of the most popular presidents in American history, Dwight David Eisenhower (1890–1969) was elected to a second term of office in 1956 by a landslide.

Graduated from West Point in 1915, the Texas-born soldier later became General Douglas MacArthur’s aide in the Philippines. “General Ike,” or “Ike,” as he was known to G.I.s, was appointed commander of the Allied armies in World War II, and was noted for his success as both a strategist and a diplomat who fashioned his command into a smoothly functioning machine. At this time the *Eisenhower jacket*, a waistlength woolen jacket once worn as part of the service uniform, was named in his honor. He is also remembered by his presidential campaign slogan *I like Ike*.

the Eisner. Comic-book artist Will Eisner (1917–2005), author of what is widely regarded as the first modern graphic novel (*A Contract with God*), has the annual Eisner award named in his honor. Eisner coined the term *graphic novel* in 1978. *Eisner spritz*, a “moody rain,” also honors him.

Elberta peach. See PEACH.

elbow; elbow bender; elbow grease; elbowroom, etc. *Elbow grease* has been a term of “hard manual labor” since before 1639, *B.E.’s Dictionary of the Canting Crew* (ca. 1698) calling it “A derisory term for Sweat.” The old joke that *elbow grease* is the best brand of furniture polish was probably common centuries ago, too, in some form. The phrase was known in France from early times as well (*huile de bras*). *Elbowroom*, for plenty of room to move around so that people are not rubbing elbows, dates back to early-16th-century England, but it didn’t become popular here until British General John Burgoyne boasted in the 1770s that he’d find plenty of elbow room in America. *Elbow bender*, for “a habitual drinker,” someone who does little more than bend the elbow to lift a glass to his mouth, is also of ancient vintage in both languages. *Out at the elbows*, shabby, “down at the heels,” has aged equally well, Shakespeare using it in *Measure For Measure*: “He cannot [speak], Sir; he’s out at Elbows.” *Elbowing*, “jostling,” is another elbow term going back to Shakespeare’s time, and the Elizabethans used the term *elbonic* for “a rude, awkward verse or sentence that seemed to be pushing with the elbow.” *Elbow* is from the Anglo-Saxon *el*, “length of arm,” plus *bow*, “bend.”

elbow bump. A new (March 30, 2007) term that shows to what lengths people will go to avoid shaking hands with anyone of their species.

El Cid. The Arabs of Spain gave the title *El Cid*, meaning “hero,” to the count of Bivar (c. 1043–99), a Spanish champion against the Moors. *El Cid* comes from the Arab *sayyid*, lord. His exploits have been recorded through the centuries in many poems, books, plays, and movies.

elderberry. He who cultivates the elderberry, says an old proverb, will live until an old age and die in his own bed. Amazing properties have long been attributed to the wine and other products made from *Sambucus nigra*. Said 17th-century English herbalist John Evelyn: “If the medicinal properties of the [elderberry] leaves, bark, berries, etc., were thoroughly known I cannot tell what our countrymen could ail for what he would not find a remedy, from every hedge, either for sickness or wounds.”

elderspeak. A term used mainly by researchers, who have found that many people speak louder and use simpler words

and sentences when talking to older people. *See* SENIOR MOMENT.

elder tree. *See* JUDAS.

El Dorado. A mythical land filled with gold, jewels, and other great riches. El Dorado, “the gilded one,” was in the original 16th-century story an Indian chieftain in what is now Colombia, who was coated with gold dust during festivals and thought so little of it that he washed it off in a lake. Explorers from many European countries tried to find him, to no avail, and the yarn grew more fantastic with each telling, El Dorado becoming a country filled with riches, often spelled as one word—*Eldorado*.

Eleanor blue. Like ALICE BLUE, this color is named for a Roosevelt, in this case, Anna Eleanor Roosevelt (1884–1962), whose dresses popularized the dark blue shade while she was “first lady of the world.” Eleanor Roosevelt married her distant cousin Franklin Delano Roosevelt in 1905, two weeks after her uncle, Theodore Roosevelt, had been inaugurated as president. When F.D.R. was stricken with polio, she encouraged him to overcome his handicap and return to politics. He became the only man ever to be elected to the presidency four times, breaking the two-term tradition, and from 1933 to 1945, when he died, Eleanor was by far the most active first lady in American history. Among many activities, she wrote the syndicated newspaper column “My Day” and traveled extensively abroad on good-will missions. Outspoken on all important issues, she remained active even after her husband’s death, serving as a delegate to the U.N. general assembly and chairman of the U.S. Commission on Human Rights. Orphaned at 10 and starved for love and affection in her childhood, Mrs. Roosevelt nevertheless became one of the most compassionate human beings of modern times, always an enemy of prejudice and poverty despite her aristocratic origins.

electioneering. The art or practice of managing elections. The term appears to have been invented and first used by the great British author and politician Edmund Burke in 1790 in his *Reflections on the Revolution in France*. *See* DIPLOMACY.

electricity. English scientist William Gilbert published his researches on magnetism in 1600, writing in Latin and using the Latinized word for amber, *electricus*, because he had rubbed amber in his experiments to attract light substances. Gilbert himself later translated *electricus* into English as *electric* and gave the name *electricity* to the entity through which he had effected magnetism.

electrocute; electric chair. There was no need for a word meaning “put to death by electricity” before Thomas Edison began using electricity to light cities beginning about 1875. But many workers lost their lives in Edison’s great endeavor, and such a word did become necessary. From numerous new coinages Americans came to prefer *electrocute*, an invented word (source unknown) formed from the Greek *electro* and the *cute* in the word *execute*. *Electrocute* also came to mean “to execute a criminal with electricity,” after the electric chair was invented in 1889 and murderer William Kemmler was put to death in one at New York’s Auburn State Prison. *See* ELECTRICITY.

electronic highway. The avant-garde composer Nam June Paik (1932–2006) coined this phrase in 1974. In his *New York Times* obituary, Roberta Smith wrote: “He presciently coined the term . . . grasping the essence of global communications and seeing the possibilities of technologies that were barely born.”

elegantiae arbiter. *See* GREAT MAJORITY.

elementary, my dear Watson. *See* SHERLOCK HOLMES.

elephant. When the Romans first encountered the elephant, they called it the *Lucamian ox*, never having seen the great beast before. Another story, however, holds that *elephant* is a corruption of *Infanta de Castile*. The largest living land mammal, the elephant is of the Indian or African genera. African bulls are often more than 11 feet tall and Indian bulls about nine feet. African elephants also have huge flapping ears. First trained by Ptolemy II for war, the beasts were used by Alexander the Great and Hannibal when he crossed the Alps. In one bloody battle at Ipsus over 480 elephants were used. *See* JUMBO.

elephant bird. You won’t find *elephant bird* in any dictionary, but there is such a term. *Elephant bird* refers to what Afghans call a turkey, because of its great size. Afghan Zahir Shah told the *New York Times* (11/25/01): “This is my bird. When I run out of money I take one and come to the city and sell it at the bazaar. I heard last night . . . that in America there is a harvest festival and they eat this bird. We call it elephant bird.” *See* TURKEY.

the elephant in the room. The obstacle. “The elephant in the room is the threatened cuts to the budget.” I’ve heard this phrase recently, but cannot find its origins recorded anywhere.

elevesens. The British term for what Americans would call a “coffee break,” the British traditionally enjoying their late-morning tea or coffee and snack at about 11 o’clock. *Elevesens* dates back to the 18th century, while *coffee break* has been around only since about 1940. Each usually takes about 10 to 20 minutes. *See* COFFEE; TEA.

11th Commandment. All sorts of commandments have been added to the original 10 by cynics, including “Thou shall not be found out.” However, the practice seems to have started with Cervantes when he wrote in *Don Quixote* (1605) that the 11th commandment was, “Mind your own business.”

11th hour. This expression, meaning “the latest possible time, with not a moment to spare,” comes from the Bible, where Jesus used it in the parable of the laborers (Matt. 20:1–16). *The 11th hour*, as the parable shows, referred not to the hour before midnight but to the last hour of sunlight, for in Jesus’ day hours were counted from dawn to dusk, with the 12th hour bringing darkness. The parable says that it is never too late to earn the right to enter the kingdom of heaven: “For the kingdom of heaven is like unto a householder, which went out early in the morning to hire laborers into his vineyard. And when he had

agreed with the laborers for a penny a day, he sent them into his vineyard . . . And about the eleventh hour he went out and found others standing idle, and saith unto them, Why stand ye here all the day idle. They say unto him, Because no man hath hired us. He saith unto them, Go ye also into the vineyard; and whatsoever is right, that shall ye receive." And when evening came, all the laborers, those who arrived both early and at the 11th hour, received the same penny for their wages.

eleveltrich. See HUNT ELEVELTRICH.

elfin. The English poet Edmund Spenser invented *elfin*, "of an elfish nature, like an elf," in *The Faerie Queene* (1589), where he writes about an "elfin knight." Some say the word was suggested to Spenser by the phrase *elvene land*, "land of elves," or the proper name Elphin in the Arthurian romances.

Elizabethan Age. The era when Queen Elizabeth of England reigned (1558–1603) was a vital one of great accomplishments in literature, poetry, drama, architecture, exploration, commerce, and many other areas. *Elizabethan* is used as an adjective to describe both the Elizabethan spirit—adventurous, vivid, eloquent, artistically brilliant, and generous, among numerous admirable qualities—and its counterparts today. Shakespeare, Edmund Spenser, Francis Bacon, Francis Drake, and Walter Raleigh were only a few of the giant figures produced in the 45-year period that Elizabeth ruled. Though "Good Queen Bess" was certainly vain, capricious, and jealous—for example, she had put to death her cousin Mary Queen of Scots and their favorite, the earl of Essex—her personal courage and sense of responsibility made the last of the Tudors one of England's greatest rulers and probably the greatest queen in history. The only daughter of Henry VIII and his second wife, Anne Boleyn, who was beheaded for alleged adultery, Elizabeth was an intelligent, well-educated woman whose court became the center of England's cultural life as it had never been before and has never been since. "There will never be a queen," she once told Parliament, "sit in my seat with more zeal to my country and care to my subjects. And though you have had and may have princes more mighty and wise sitting in this seat, yet you never had or shall have any that will be more careful and loving." She died in 1603, having lived a biblical three score and 10.

elk. See LAMB.

Ellis Island; Castle Garden. Ellis Island was the United States's chief immigration station from 1892 until 1943. Previously Castle Garden, an old Dutch fort that had been converted into a noted opera house and amusement hall, had processed immigrants from 1855 to 1892 in Battery Park at the southern tip of Manhattan. Located in upper New York Bay, Ellis Island originally occupied three acres but was built up with landfill to 27.5 acres to accommodate the millions of people arriving there. During its use as an immigration center from 1892 to 1943, the Ellis Island facilities processed 16 million immigrants, roughly 70 percent of all immigrants to the United States in that period. People arriving there were screened for various undesirable factors such as contagious illnesses or mental deficiency before being granted entry to the United States. When the government began screening prospective immigrants in

their native countries, Ellis Island fell into disuse. The government offered it for sale in the 1950s but could not find an adequate buyer, and the island eventually became a national monument under the care of the National Park Service. In 1998, most of Ellis Island officially became part of New Jersey after many years of legal debate over whether it actually belonged to that state or New York. Ellis Island was once called "Oyster Island" because of the abundant oysters in its waters. It was also called the "Isle of Tears," after the many people who were rejected at the center. See STEERAGE.

Elm City. "New Haven in Connecticut is known as . . . Elm City from the number and magnificent size of the elm trees that adorn its public squares," wrote one writer a century ago. Since then disease has destroyed the trees.

Elmer. Many given names derive from the last names of famous persons. *Elmer*, which has come upon bad times recently, is the most surprising of them. *Elmer* was even more popular than Washington as a given name during the Revolution. Its origins have long been forgotten by most, but *Elmer* may have originally honored the brothers Ebenezer and Jonathan Elmer, Revolutionary War patriots from New Jersey—"pamphleteers, organizers of Revolutionary militia, surgeons, and officers in command of troops throughout the Revolution, members of Congress and fierce debaters of a hundred stirring issues of their times." Some experts disagree with the derivation, but no better explanation has been given. Said a *New York Herald Tribune* editorial on January 18, 1935: "The name Elmer . . . has such an honorable genealogy that it is time for America's countless Elmers to stand up for it."

Elmira, New York. A local legend tells us that Elmira, New York, was named for a little girl whose mother called her home so frequently and stridently ("Elmira! Elmira!") that people in the neighborhood named the town after the child.

El Niño. Warming of the ocean off South America's west coast that occurs every four to 12 years and affects weather over the Pacific Ocean. It was observed by Peruvian fishermen 300 years ago and named in honor of the Christ child, (*niño* meaning boy in Spanish) because it first occurs around Christmastime.

Elysian Fields; Elysium. Greek mythology has the Elysian Fields or Elysium as the place where those favored by the gods will blissfully enjoy their life after death. It was also called the "Islands (or Fields) of the Blessed" and may have been suggested by tales ancient Greek mariners told of reaching islands off Africa's west coast. In later years heroes and patriots were said to occupy the Elysian Fields. The Champs Élysées (Elysian Fields) is Paris's wide main boulevard.

e-mail. A relatively new expression that is an American abbreviation of *electronic mail*, coined in the early 1980s. Making fun of the traditional, much slower ordinary postal system is the expression *snail mail*.

Emancipation Proclamation. All slaves in those territories still in rebellion against the Union were freed by President Abraham Lincoln's Emancipation Proclamation on January 1,

1863: "All persons held as slaves within said designated States, and parts of States, are, and henceforward shall be free." The provisions for the freed slaves permitted all former slaves to serve in the Union armed services. The proclamation did not affect slaves in slave states loyal to the Union or conquered states, but future legislation and, finally, the Thirteenth Amendment to the Constitution ended all slavery everywhere in the U.S. See JUNETEENTH.

embarrassment of riches. A great amount of wealth, or anything, almost too much to have and certainly too much to conveniently use. The expression apparently came into English from the French *embarras de richesse*, meaning the same, which seems to have originated as the title of a 1753 play by the Abbé d'Allainval. *Embarras de richesse* is also much used in English.

embedding. A U.S. policy permitting accredited war correspondents to live and travel with the military, often in combat situations. Embedded reporters have been permitted since the beginning of the second Iraq War (Operation Iraqi Freedom) in 2003.

embezzler. *Embezzle* derives from the French word *embe-seiller*, meaning "to make away with, cause to disappear, fraudulently destroy." One theory has it that this word was formed from the French *bezel*, "a chisel," and referred to the practice of con men shaving small bits off gold and silver coins, passing off the shaved coins at face value, and melting down the shavings into bullion. *Bezelers*, who used the *bezel*, were these first embezzlers, according to this theory.

E=mc². Albert Einstein first wrote this immortal formula in a paper in 1905, his so-called "miracle year." See EINSTEIN.

emcee. See M.C.

Emerald Isle. Doctor William Drennan claimed that in 1795 he invented the term *Emerald Isle* for Ireland, obviously because the island is so brilliantly green. The expression is first recorded in Drennan's poem *Erin*, which contains the lines:

Arm of Erin! Prove strong, but be gentle as brave,
And, uplifted to strike, still be ready to save,
Nor one feeling of vengeance presume to defile
The cause or the men of the Emerald Isle.

Emigration Road. A nickname for the Oregon Trail, which brought so many settlers West and was called by a traveler in 1862 "the best and longest natural highway in the world."

éminence grise. Père Joseph (François Le Clerc du Tremblay, b. 1577) was a Capuchin monk who became French cardinal Richelieu's personal secretary in 1612. Richelieu was the chief minister of France's Louis XIII and both men were powers behind the throne. Père Joseph came to be called *l'éminence grise*, the gray eminence, not because of his gray hair but because of his gray Capuchin habit, which distinguished him from the red-robed Cardinal Richelieu, who was called *l'éminence rouge*, the red eminence. These names were

used derisively by their opponents but with the passage of time—not until the 1920s, so far as is known—Père Joseph's nickname came to mean any eminent old person, such as an elder statesman, probably because the *gray* in *gray eminence* was associated with gray hair. It also means a person who wields unofficial power, often surreptitiously through another person.

Emma Chisit? How much is it? An example of *Strine*, a comic Australian pronunciation whose name (Strine) is a joke made by collapsing the four syllables of the word *Australian* into one.

Emmanuel. The name of Jesus Christ, especially as the Messiah, as given in Matt. 1:23: "Behold, a virgin shall be with child, and shall bring forth a son, and they shall call his name Emmanuel, which being interpreted is, God with us." This had also been prophesied earlier in the Old Testament Isaiah: 7:14: "Behold, a virgin shall conceive, and bear a son, and shall call his name Emmanuel."

Emmenthaler. The classic "Swiss" cheese laced with holes, *Emmenthal*, or *Emmenthaler*, is formed in huge wheels weighing up to 145 pounds. It is named for Switzerland's Emma Valley, where it is made.

emmis. Confidential information known by insiders: "It was very much on the emmis that he was still in the rackets."

Emmys. *Emmys* refer to any of several statuettes awarded annually for excellence in television programming, productions, or performance. No one is sure of the origin of the name, which may be an alteration (influenced by the name "Emmy") of *immy*, which, in turn, could be an alteration of *image orthicon*. An image orthicon is a sensitive television camera pickup tube. On the other hand, it could have been named for some now unknown Emmy. The Emmy Awards were instituted in 1948 by the Academy of Television Arts and Sciences. All in all there are some 40 categories in which Emmys are given. See OBIE.

emolument. This fancy word for salary or reward comes from Latin *molere*, to grind, the *emolument* (in the form of the Latin *emolumentum*) originally being the payment a miller got for grinding corn. *Molere* also gives us the word for grinding our molar teeth.

emperor fruit. See DURIAN.

emperor's new clothes. One of the few stories whose title has become a popular expression, in this case a byword for human vanity. The masterpiece is "The Emperor's New Clothes," a well-known fairy tale Hans Christian Andersen wrote in 1837. Andersen submitted his immortal *Fairy Tales* to every publisher in Copenhagen. All of them turned him down, and he was forced to publish the book himself.

Empire State. A nickname for New York State, possibly because George Washington called New York "the seat of Empire"

in 1784. The EMPIRE STATE BUILDING, formerly the tallest building on earth, is named for it. New York was also once called “The Gateway to the West.”

Empire State Building. It isn’t widely known that the Empire State Building was jokingly called the “Empty State Building” because many of its floors were not rented for some 15 years after its completion in 1931. It takes its official name from New York State’s sobriquet, the Empire State, which George Washington inspired when in discussing the 13 original states he referred to New York State as “the seat of the Empire.” Until 1972 the Empire State Building was the tallest building in the world at 1,250 feet. It was surpassed as New York’s tallest building by the TWIN TOWERS of the World Trade Center at 1,350 feet, until those great buildings were destroyed by terrorists in 2001. Today the Empire State Building is the second tallest building in the U.S., bested by Chicago’s Sears Tower at 1,454 feet. The tallest building in the world is the Petronas Towers (1,483 feet) in Kuala Lumpur, Malaysia. The Empire State Building was featured unforgettably in the movie classic *King Kong* (1933), and in 1945 a B-25 crashed into its side in an accident similar to the terrorist act that destroyed the Twin Towers, though with much less loss of life.

Empire style. Whenever you hear the term *Empire style* for furniture or fashions of any kind, the term doesn’t refer to the Roman Empire or the British Empire. *Empire style* takes its name from Napoleon’s first empire of France and refers to fashions inspired by styles developed there in the early 19th century.

emporium. Since the 16th century, *emporium* has been used to describe principal centers of trade, the word deriving from the Greek *emporion*, a place where merchants come together, the Greek for merchant being *emporos*, which was formed from the prefix *em*, “in,” and *poros*, “travel”—the first merchants being traveling salesmen. Early on we had the words *emporial*, pertaining to an emporium, and *emporentic*, of or pertaining to trade, both now obsolete, but *emporium* wasn’t applied to a single store until well into the 19th century. Today the latter meaning has almost entirely replaced the former, and though it is considered grandiloquent by some, *emporium* is frequently used for a large store selling a great variety of articles and having a luxurious air.

Empress Eugénie hat. A number of fashions that held sway in the 19th century commemorate the French Empress Eugénie, wife of Napoleon III. This beautiful, elegant, and charming woman, the undisputed leader of French fashion, which led the world then as now, was especially celebrated for her smart hats. She sometimes wore five different specimens in a day, one of her favorites being a small model with the brim turned up on the side and often decorated with ostrich plumes, named the *Empress Eugénie* in her honor. Born Eugénia Maria de Montijo de Guzmán, the empress was the daughter of a Spanish grandee and a Scottish noblewoman. Prince Louis Napoleon at first offered to make her his mistress, but she intrigued to become his wife and prevailed. Their marriage was celebrated in 1853 at Notre Dame. “The Spanish Woman” seemed too conservative in politics to be popular with the French at the time, but

strongly influenced Napoleon, often efficiently governing the empire as regent in his absence. When the Second Empire fell in 1871, she fled to England with her husband, where she died almost half a century later in 1920, 94 years old and a legend in her time.

Empress of Desserts. A nickname for the French apple properly called the Calville. This difficult-to-grow apple is so delicious that in the days of the Sun King it was believed to be the tempting apple that grew in the Garden of Eden.

empty suit. A thoroughly ineffectual executive of a large corporation.

Emu War. See WAR OF THE STRAY DOG.

-en. Only a few words retain the ancient Anglo-Saxon plural ending -en. They include *children*, *brethren*, and *oxen*.

encomium. High praise or a eulogy is called an *encomium*, from the Greek *enkomion*, meaning a eulogy or a panegyric honoring a victor in the Bacchic games, which was sung in a procession moving from *kome* to *kome* (“village to village”).

encore. *Encore* is not what the French call out in the concert hall for “repeat it, do it again,” as many people believe; the French use *bis bis* for this. But since the early 18th century the word has been used in this sense in English, possibly because *encore* does mean “another” (*encore une tasse*, “another cup”) and “once again” (*encore une fois*) in some French phrases.

encyclopedia. Statesman-scholar Sir Thomas Elyot (1499?–1546), whose translations helped popularize the Greek classics in England, coined the word *encyclopedia* from the Greek *en kyklos*, “in a circle,” and *paedia*, “teaching of children,” the two words possibly suggesting to him “some kind of universal classroom or round table,” as someone has suggested. Elyot also naturalized the Greek *democratia* into *democracy* and was the first to use *education* (Latin *educare*, “to raise a child”) in its modern sense.

end of his rope. An executed murderer dangling at the end of a rope didn’t inspire this old saying for someone who has outrun fortune, exhausted all his resources. It derives from an earlier phrase *at the end of his tether*, which refers to an animal who has come to the end of the rope he is tied to and can graze no more. The exact words aren’t recorded in English until 1809, but similar expressions are recorded as early as the 16th century, and Locke used something similar in *Human Understanding*. The expression GIVE HIM ENOUGH ROPE TO HANG HIMSELF probably did reinforce the stronger meaning of the phrase.

end up as a yard sale. A very recent expression largely confined to skiers but which may find more general usage. The phrase is explained in a *New York Times* story (1/6/02): “After about three days, most reasonably athletic people can learn to [snow] board without winding up as a yard sale—the term for skiers who wipe out in operatic fashion.”

the enemy of my enemy is my friend. A proverb, no one knows how old, from the Middle East.

enfant terrible. In French, literally, a terrifying child. Meaning a child whose conversation causes embarrassment; alternatively, a person known for shocking behavior. Also a successful person (usually young) who is unorthodox.

engine; engineer. The *gin* in Eli Whitney's *cotton gin* is no more than another word for *engine*, an old word that dates back to the 13th century as the synonym for a mechanical contrivance or device. *Engine* itself has a more interesting history. It is from the Latin *ingenium*, "the powers inborn," the same word that gives us *ingenious*. In English it first meant "native talent, mother wit, genius," Chaucer noting three qualities of the mind: "Memorie, engin and intellect." By extension *engine* came to mean "trickery or device," and Shakespeare used it this way when he wrote in *Othello* that men's lures and promises are "engines of lust." But as more complicated machines were developed the word came to mean the "products of engine or wit," the name for the power transferred to its product, and it is only in this sense that it is used today. An *engineer* was first a wit, one who might have invented a phrase, or even a tricky political plot. Only later was the name applied to constructors of military engines (Shakespeare writing in *Hamlet*, "For 'tis sport to have the enginer hoist with his own peartard") and in this sense applied to anyone who operated an engine, like a railroad engineer. The only engineers to whom the title applied in early times, however, were military engineers, who constructed military engines and works intended to serve military purposes. It wasn't until the mid-18th century that the title was used for those who designed and constructed public works such as roads, bridges, and tunnels—these men called *civil engineers* to distinguish them from their military counterparts.

England. The four tribes that invaded Britain from western Germany and the Jutland (Danish) peninsula after the Romans left in 410 A.D. were called the Saxons, the Frisians, the Jutes, and the Angles. The Angles, last to arrive, in A.D. 547, eventually acquired dominance and by the year 1000 the country as a whole became known as *Englaland*, land of the Angles (the shift of the *A* in *Angle* to the *E* in *England* known technically as a front mutation). The land's language, however, was known as *Englisc* 300 years earlier. See ENGLISH.

England expects every man will do his duty. These were Lord Nelson's famous words to his men at Trafalgar on October 21, 1805. A British member of Parliament has written that the officialese or gobbledegook so common in government services everywhere today would express the same sentiment this way: "England anticipates that, as regards the current emergency, personnel will face up to the issues and exercise appropriately the functions allocated to their respective occupational groups." It should be noted that Nelson's famous sentence was first reported as "Say to the fleet, England expects that every man will do his duty." Nelson's flag lieutenant, Captain Pasco, suggested that it be changed to the above.

English. As the designation for a language *English* is first recorded in about A.D. 1000. At the time English contained per-

haps 30,000 words. Today the most complete dictionary (*Webster's Second International*) contains some 650,000 words, but there are probably 5 million to 10 million English words if all scientific and technical terms were included. (We should also remember that there are a vast number of personal names in English. In *The Mountain of Names* (1985), Alex Shoumatoff reports that an estimated 69–110 billion names have been bestowed since humans first made their appearance in the world and that 6–7 billion names of the dead are believed to be extinct!). In any case, the average English-speaking person has a vocabulary of about 3,000 words, while a very well-educated or well-read person might have a vocabulary of 60,000 words. Shakespeare used 19,000 to 25,000 different words to write his plays. *English* for, roughly, the spin on a ball in billiards or baseball, doesn't stem from any derogatory American reference to the affectedness or tricky ways of Englishmen, as has often been proposed. It was probably suggested by *body English*, the way the body gestures or "speaks" when words cannot be found to express an action. The English call this spin "side," the term used in billiards long before its use in baseball.

the English language. English is spoken, fluently or haltingly, over one-fifth of the world's surface. Anywhere from 800 million to 1.5 billion people speak the language today with some degree of proficiency, including at least 400 million native speakers, leading one writer to note that "the sun never sets on English-speaking countries." British scholar Tom McArthur in *The English Language* (1998), lists 113 of what he terms "territories" (nations, national possessions, colonies, etc.) where English is either an official language or a lingua franca (i.e., a language used for communication between groups of people who speak different languages). This is more than twice as many territories as the English language's nearest rival, French. McArthur goes on to give a list of 232 "territories, including the initial 113, where English is spoken to some extent, often as a global lingua franca. Even China, North Korea, Vietnam, Cuba, Iran, and Iraq are on this last list. To keep these figures in perspective, however, remember that there are some 6,700 languages spoken in the world today. See THE SUN NEVER SETS ON THE BRITISH EMPIRE.

English letters. See CONDOM.

English sparrow. People have compared the destructive English sparrow to the rat because of the damage it does in eating tree buds and grain. The bird is so named because eight pairs of them were brought from England to Brooklyn in 1850 and freed in an attempt to rid the area of a caterpillar pest called the inchworm. The birds thrived, ultimately proved more of a liability than an asset, and are now ubiquitous pests throughout the country.

enjoy! A common expression meaning have a good time, enjoy yourself, be happy. Often heard as *enjoy, enjoy!* The term was influenced by Yiddish syntax.

enjoy every sandwich. According to the *New York Times* (January 30, 2006), this phrase was coined by singer-songwriter Warren Zevon (d. 2003) "and is well on its way to becoming the baby-boom mortality mantra."

enlightenment. See AGE OF REASON.

Enoch Arden. Enoch Arden, Philip Ray, and Annie Lee grow up together in a little seaport town. Though both boys love Annie, Enoch wins her hand and they live together happily until Enoch sails aboard the merchantman *Good Fortune* to make his fortune. Shipwrecked for 10 years on a deserted island, Enoch is finally rescued. Annie, meanwhile has been reduced to poverty and Philip asks her to marry him, certain that Enoch is dead. Enoch is brokenhearted when he returns after the 10 years and witnesses, unknown to them, Annie and Philip's happiness, but he vows never to let them know of his return until after his death, sacrificing his happiness for theirs. Such is the plot of Alfred, Lord Tennyson's long poem "Enoch Arden," which he based on the true story of a sailor thought drowned at sea who returned home after several years to find that his wife had remarried. A similar case was reported after the *Arctic* went down in 1854; a New Orleans merchant named Fleury was believed drowned and his young widow remarried. The "widow" had three children by her new marriage and lived happily until a letter arrived from Fleury six years later. A whaler just setting out on a long voyage had rescued him and when the whaler was also wrecked, Fleury was rescued by still another whaler starting out on a long voyage, thus accounting for the many years he had spent at sea. An *Enoch Arden* has come to mean that rare creature who truly loves someone better than himself.

Enough already! A widespread expression, influenced by Yiddish, meaning "stop doing that, that's enough, stop talking," etc. *All right already* is a variation, both terms first recorded in the early 20th century.

enough to make the angels weep. Something so foolish that it causes one to lose all hope. Shakespeare appears to have invented the expression in *Measure for Measure* (1604): "... man,/ Drest in a little brief authority,/ ... Plays such fantastic tricks before high heaven/ As make the angels weep."

ensign. No ensigns served in the early American navy, for ensign only became the lowest commissioned rank in 1862. *Ensign* simply means "banner," and the first ensigns were British army officers who led a group of men under a flag.

entangling alliances. George Washington didn't invent this political expression often attributed to him, even if he was against alliances with other countries that could entangle or ensnare the U.S. The words are Thomas Jefferson's, from his inaugural address in 1801: "...honest friendship with all nations—entangling alliances with none. ..."

entertain. The word's meaning "to hold the attention of, to divert, amuse" reflects its Latin origins, from Latin *inter* and *tenere*, to hold. Possibly the most embarrassing modern-day typographical error came in 1915 when an unknown *Washington Post* editor or typesetter somehow dropped *tain* from the word 'entertaining.' In the resulting news story it was noted that President Wilson had taken his fiancée Edith Galt to the theater the previous night and, rather than watching the play, "spent most of his time 'entering' [instead of 'entertaining'] Mrs. Galt."

This error forced the publisher to destroy that day's entire edition of the *Post*. See also TYPO.

enter the lists. This phrase means "to compete or join in the game." *Lists* in the old expression is not a listing of names, but the borders of a field in medieval times when armed horsemen fought each other for the sport of it.

entire horse. *Entire* is used to indicate any ungelded animal, including uncastrated stallions. The expression seems to be a Victorian one first recorded in 1881, when a sportsman wrote. "He bought two young bay entires . . ."

entre nous. French for "between you and me," confidentially.

entropy. This term in thermodynamics is generally used today to express the doctrine of inevitable social decline and degeneration. It is said to have been coined about 1865 by the German scientist Rudolf Clausius from the Greek prefix *en*, in, into, within; and the Greek *trope*, transformation.

environment. Thomas Carlyle invented the word *environment* (from the English *environ*) in its modern meaning of "the aggregate of external circumstances, conditions, and things that affect the existence and development of an individual, organism, or group." The word, first recorded in 1827, is his rendering of the German *Umgebung*, meaning the same, which had apparently been coined by Goethe.

eon. See AEON.

eospermatopteris. The oldest known tree, dating to the late Devonian period (the age of greening of the Earth) some 385 million years ago. It was discovered by quarry workers in upstate New York 130 years ago and is better known as *Gilboa stumps*.

epicure. "The fountain and root of every good is the pleasure of the stomach," is a quotation attributed to Epicurus by the Greek writer Athenaeus five centuries after the philosopher's death. Nothing could be further from the spirit of Epicurus. The Greek philosopher (341–270 B.C.) did not teach that mere sensual pleasure is man's reason for being. He argued, rather, that while pleasure constitutes the happiness of life, pleasure means peace of mind and freedom from want and pain, which can be achieved only through noble thoughts, self-control, and moderation. Though this generous, brave man regarded virtue as having no value in itself, the real harm in his philosophy lay in the fact that it was an escapist one—permitting, for example, no marriage, children, or participation in public life. Later students of his garden school in Athens—which lasted over 200 years—distorted his teachings completely, using them as an excuse for selfish hedonism and heedless indulgence. Seizing upon his idea of pleasure, they magnified it so that epicure became one entirely devoted to gluttony, debauchery, and every wanton sensual pleasure imaginable. It took centuries before the word acquired its present meaning of "gourmet or connoisseur," one with refined tastes and knowledge of food and drink, and even today's epicure is still far removed from the simple serene philosophy of Epicurus.

epiphany. Epiphany is the Christian “Little Christmas,” January 6, commemorating the manifestation or appearance of Christ to the gentiles, as represented by the Magi. The word, first recorded as far back as 1310, comes to us from a Greek word meaning “to manifest or appear” and originally referred to the gods of the Greeks making sudden appearances. Today *epiphany* can mean a sudden insight into the reality or meaning of something as well as an appearance.

epitaph. The earliest epitaphs—the word is from the Greek term for “writing on a tomb”—are found on Egyptian sarcophagi. One of the best-known of early valedictions is that of the Assyrian king Ashurbanipal, a poem said to have been left beside his burial mound at Nineveh in the seventh century B.C. (see *SARDANAPALIAN*). The famous epitaph on Shakespeare’s tomb is doggerel and may be unworthy of the Bard, but he could well have written it:

Good friend, for Jesus’ sake forbear
To dig the dust enclosed here,
Blest be the man that spares these stones,
And curst be he that moves my bones.

There have been many bitter epitaphs by and about wives and husbands. English poet John Donne’s famous lines on his wife are often cited as a mock epitaph but they are not. According to the story, which is often distorted, Donne’s father-in-law, Sir George More, was so enraged when his daughter married without his consent that he turned the couple out of his house and caused Donne to lose his position as secretary to the lord keeper of the great seal. While considering all that had happened when he moved into his new house, Donne scratched on a pane of glass:

John Donne.
Anne Donne.
Undone.

A famous epitaph written by Bob Thaves in his comic strip *Frank and Ernest* goes:

“What would you like your epitaph to say?”
“... to be continued.”

epithalamium. Deriving from Greek for “at the bridal chamber,” *epithalamium* refers to a love song or poem in honor of a bride and bridegroom sung outside the bride’s room on her wedding night. The word is first recorded about 1580. “The Song of Solomon” or “Song of Songs” is said to be an epithalamium, and memorable epithalamia were also written by Spenser, Donne, Ben Jonson, Herrick, Marvell, and Dryden, among other poets.

epizootic. Deriving from the Greek *epi*, “upon or among,” and *zoo*, “animal,” epizootic diseases include rabies and hoof-and-mouth disease. The Great Epizootic (the word can be either a noun or adjective) of 1872 claimed almost a quarter of America’s horses (some 4 million) and left the nation’s business without the power it needed to function for three months—most power at the time being horsepower. Scientists never isolated the virus that caused the epizootic, and it ended its ravages only when cold weather killed the mosquitoes that transmitted the deadly virus. By that time the financial losses suffered had helped bring on the Panic of 1873. To a nation wholly depend-

ent on horsepower, the epizootic was indeed a tragedy. In cities across the country homes went without heat, fires blazed unfought, garbage wasn’t collected, deliveries halted, public transportation ceased, stores closed, and unemployment soared. Racetracks closed their gates, and at least one great American thoroughbred, Pocohontas, fell to the disease. In several cities unemployed men were even harnessed to carts and trolleys in place of horses.

E Pluribus Unum. The motto on the obverse side of the Great Seal of the United States may come from an expression found on the title page of the British *Gentlemen’s Magazine*, widely circulated in America for several decades after 1731. The title page of the magazine’s first volume shows a hand holding a bouquet over the epigraph *E Pluribus Unum*. The Latin words mean, in this case, “From many, one,” and are as fitting for a bouquet of flowers as they are for a nation composed of many former colonies. Other possibilities, however, include a line in Virgil’s poem “*Moretum*,” which deals with the making of a salad and reads *color est e pluribus unus*, probably the first use of the phrase in any form, and an essay by Richard Steele in *The Spectator* (August 20, 1711), which opens with the Latin phrase *Exempta juvat spiris e pluribus unus* (“Better one thorn plucked than all remain”). The Continental Congress ordered the President of Congress to have a seal in 1776 and *E Pluribus Unum* appeared on the first seal, as well as on many early coins. Congress adopted the motto in 1781 and it still appears on U.S. coins as well as on the Great Seal.

Epsom salts. Epsom salts, whose composition is essentially the same as that of seawater, derive their name from the mineral springs in Epsom, England, where the natural hydrated magnesium sulphate baths attracted many people searching for good health.

Equality State. Wyoming is called the Equality State because its Territorial Legislature was the first to grant women the vote, in 1863. For the same reason it is called the Suffrage State.

equalizer. Inventors Daniel B. Wesson and Horace Smith founded the Smith & Wesson Arms Company at Springfield, Massachusetts, three years after they published the first fire-arms magazine in 1854. Their Smith & Wesson pistols replaced the Colt to a large extent and have been famous ever since. It is said that the term *equalizer* derives from a remark made by Chicago gangster Tim Smith, who died in a gangland killing on June 26, 1928. “Smith and Wesson made all men equal,” this non-related Smith is supposed to have said.

era. See AEON.

ergonomics. Said to have been coined about 1950 by Englishman K. F. H. Murrell from Greek *ergon*, work, to describe the science of equipment design, especially for the workplace, to increase worker efficiency and maximize production. The field is also called “human engineering.” Engineer Alphonse Chapanis (1917–2002) was a leading American exponent of the science and examined it at length in his autobiography, *The Chapanis Chronicles* (1999). One story described his meeting in a showroom with Chrysler chairman Lyman A. Townsend:

“I was looking at a sporty model that had a steering column with a sharply pointed tip extending an inch or two beyond the steering wheel. Townsend asked me what I thought about it. My exact, or very nearly exact, words were: ‘Mr. Townsend, do you know what you’ve designed here? You’ve designed a spear aimed at the driver’s heart.’ I also remember distinctly his cynical reply, ‘Doc, it’ll sell.’”

Erlenmeyer flask. Emil Erlenmeyer put his name in mothballs for posterity when he devised the first formula for naphthalene, used in making them. The German organic chemist also invented the cone-shaped, flat-bottomed *Erlenmeyer flask* made from thin glass and commonly used in chemistry laboratories. Erlenmeyer, who taught at Heidelberg, conducted many important experiments in his long, fruitful career. He died in 1909, aged 84.

ermine. The lovely fur takes its name from a rat, *ermine* deriving from the Latin for the Old World weasel, *Armenius mus*, “the Armenian rat”—so called because it was thought to come from Armenia.

erosion. *Rodere*, the Latin for “to gnaw,” gives us both the *rodent* and the word *erosion*, which is common to most languages today. *Erosion* was first used in medieval times to describe acid eating through metals, and in the 19th century was applied to the gnawing action of water upon land.

erotic. Of or concerning sexual love. The word comes from the name of Eros, the young, handsome Greek god of love, whose mother is Aphrodite and who carries a golden bow and arrows that stir up sensual passion whenever he shoots someone with them. The Romans called Eros Cupid and his mother Venus. Not even the mighty god Zeus could survive Eros’s shafts, though some stories say his golden arrows awakened the highest virtuous love and his lead arrows inspired sex. See VENUS DE MILO; APHRODISIAC.

erotolabia. Words such as *cherry*, *nuts*, *tart*, *dish*, et al., used alternatively to express gastronomical or sexual meanings. The language is rich with gastronomical metaphors and allusions such as *cheek*, TOMATO, *piece*, CHEESECAKE, *beefcake*, *dumpling*, *tidbit*, *delicious morsel*, *feast your eyes upon her*, etc.—there are enough for their own book.

to err is human. The old proverb dates back to at least the 14th century in its Latin form: *humanum et errare*. Long before this, the Greek dramatist Sophocles wrote in his tragedy *Antigone* (?441 B.C.) “To err from the right path is common to mankind.” Sometimes the proverb is heard as “to err is human, to forgive divine,” which seems to have been coined by English poet Alexander Pope in his “Essay on Criticism” (1711).

ersatz. Something ersatz is an imitation or a substitute. A German word that came into English in about 1870, *ersatz* derives from the German *ersetzen*, to replace.

Esau’s mess of pottage. There are two versions of the proverbial story in the Bible. In one (Gen. 25:27–34) Esau sells his

birthright to his twin brother Jacob for a mess of red pottage, while in the other (Gen. 27) Jacob conspires with his mother Rebekah to cheat his older twin out of his paternal blessing. Historians believe that the stories symbolize conflicts between the Edomites, led by the eponymous Edom or Esau, and the Israeli tribe headed by Jacob. The Edomites were probably wandering hunters, as represented by Esau in both stories, and the Israelites more civilized pastoral nomads. The phrase is generally used today without Esau’s name (*mess of pottage*). Incidentally, the “mess” was most likely tempting. Arabians still prepare lentils in what is thought to be a similar way, blending onions and rice with them and simmering the concoction in sesame seed oil—a delectable dish, it is said.

escalator. *Escalator* does not derive from the (imaginary) French word *escalateur*, as an old persistent story has it. Though it is no longer a trademark, *escalator* was coined as such by the Otis Elevator Company in 1900, but lost its exclusivity over the years. The moving stairway was first exhibited by the New York City company at the Paris exposition in 1900, which may account for the erroneous *escalateur* theory.

escape. The Latin word *excappare* (from *ex*, “out of,” and *cap-pa*, “cloak”) means “to slip out of one’s cloak,” and is the ancestor of our word *escape*, although the Greeks had a similar word meaning literally “to get out of one’s clothes.” The idea behind these words is probably someone slipping out of a cloak or coat held by a robber or jailer, and escaping, leaving the villain or keeper with the cloak in his hands. An *escape* in gardening terminology is any cultivated plant, such as phlox, daylily or lily of the valley, that runs wild and propagates itself without further cultivation.

eschscholtzia. A very popular American plant that is almost always more likely to be called the “California poppy” or the “yellow poppy” by gardeners than its forbiddingly long proper name. The species was named after German botanist J. F. von Eschscholtz in 1816, after he found it while hunting for plants in California.

Escoffier sauce; Escoffier garnish. If one man had to be chosen to epitomize modern gastronomy it would have to be Auguste Escoffier (1847–1935). Escoffier, made a member of the French Legion of Honor in 1920, was renowned as a chef and restaurateur, operating, with César Ritz, the Ritz in Paris, London’s Savoy, and the Grand Hotel in Monte Carlo. Author of a number of books on the art of cooking, Escoffier invented both the basic sauce and the chopped, caramelized almond topping for peach melba that bear his name.

Es de Lope. Perhaps only Ernest Hemingway and William Faulkner of today’s writers could claim styles so unique that their work is easily recognized without being identified. Neither of them, however, had a style so recognizable and beloved that a popular expression was dedicated to it. Only the Spanish playwright Félix Lope de Vega y Carpio (1563–1635) can claim this honor. The prolific author, who penned some 2,000 dramas, wrote in a graceful, flowing style at once so elegant, earthy, and effortless—so perfect, most people thought—that it gave rise to the common expression *Es de Lope* (“It is Lope’s”), said whenever a line or two of his was heard. Lope de Vega’s bril-

liant, prodigious output inspired Cervantes to call him the *monstruo de la naturaleza* (the “monster of nature”).

Eskimo. *Eskimo* is an Algonquian word meaning “eaters of raw flesh.” The Eskimos do not recognize it. They proudly call themselves Inuit, “the People,” or “the human beings.” *Bantu*, *Navaho*, and *Ainu* also translate as “the People” or “all the People,” as do the names of many indigenous groups.

Eskimo Pie. Invented in 1919 and originally called an “I Scream Bar,” this still-popular chocolate-covered ice-cream bar was manufactured in 1921 by Russell Stover (for whom the well-known chocolate-covered candies are named) and given the trade name Eskimo Pie.

Esperanto. Over the past seven centuries scores of artificial universal languages have been invented. The French philosopher Descartes devised one in 1629; there is another called Sobresol, based on the notes of the musical scale; and a third, Timerio, is written solely in numerals (*i.e.*, 1–80–17—“I love you”). Esperanto is far better known than any other such invention. It takes its name from the pseudonym chosen by its inventor, Lazarus Zamenhof, when he wrote his first book on the subject, *Linguo Internacia de la Doktoro Esperanto*. Dr. Lazarus Ludwig Zamenhof (1859–1917), the “Doctor Hopeful” of the title, was a Warsaw oculist who believed that a world language would promote peace and understanding. He launched his system in 1887, and today the movement has some 8 million supporters, with from half a million to a million people capable of speaking Esperanto fluently. Advocates claim that the language—based primarily on words common to the major tongues, with a Latin-type grammar—is much easier to learn than any other and can be mastered in a relatively short time. Esperanto is now taught in over 750 schools in 40 countries around the world, has textbooks for study in 54 languages, has been used in more than 8,600 books, and is the subject of some 145 periodicals.

Esperanto II and others. *Esperanto II*, *Ido*, and *Nov Esperanto* are simpler offshoots of Esperanto—indeed, the word *Ido* is the Esperanto word for “offspring.” All in all, some 700 artificial languages have been invented. Notable ones besides those already mentioned include Basic English, invented by linguists I. A. Richards and C. K. Ogden, which has a vocabulary of only 850 words but is rather unwieldy (“winged machine for flight” is the phrase for “airplane”); Novial, invented in 1928 by Danish philologist Otto Jespersen; Latino Sine Flexions, which derives from classical Latin; Interlingua, developed over a period of 25 years by the International Auxiliary Language Association; the Gibson Code, another language that uses numbers instead of words; Monling, which employs only monosyllabic words; and Lincos, a truly universal language composed of scientific symbols that is translatable into the binary code and could be transmitted to any place in the universe! Still other artificial languages, should you want to find out more about them, are Mandolingo, Volapuk, Idiom Neutral (simplified Volapuk), Veriparl, Bopal, Dil, Balta, Ro, Neo, Loglan, Arulo, Suma, Latinesce, Gloro, Universal, Interglossa, Nordlinn, Lanque Bleue, and Romanal.

espionage is the highest form of gossip. Heard in the World War II movie *Cicero*.

esquire. Esquire is mainly used in American English today as a title of respect after an attorney’s name, a usage applied to both male and female lawyers in recent times. In British English, however, the title is commonly used after the name of any man. *Esquire* began life as the title given to a knight’s personal attendant, one training to be a knight himself. Such attendants carried the knight’s shield, hence their name, from the Old French *esquier*, shield bearer.

-ess (feminine termination). Unlike most feminists today Mrs. Sara Josepha Hale thought that the *-ess* or feminine termination in words, declining steadily since Chaucer’s day, should be revived in many cases or carried much further. So in 1867 the editor of *Godey’s Lady’s Book* recommended the following words: actress, adventuress, arbitress, authoress, citizeness, doctress, governess, huntress, instructress, monitress, murderess, negress, paintress, poetress, postmistress, preceptress, professoress, sculptress, shepherdess, songstress, sorceress, stewardess, tailoress, teacheress, tormentress, traitress, victress, waitress. Of these only *actress*, *waitress*, and *governess* are commonly used today. *Songstress*, *sorceress* (historical), and *stewardess* (despite *flight attendant*) still have some currency, but the rest are rarely, if ever, heard. I have never heard anyone called a *teacheress* or a *victress*, a female victor—and many feminists today would feel that a woman called any of these terms would qualify as a *victress*.

essay. Montaigne’s *Essais*, published in France in 1580, were the first in history to bear the name *essay* for a literary composition, while Bacon’s *Essays Dedicated to Prince Henry* (1597) were the first in English to use the name. “To write treatises,” Bacon explained, “requireth leisure in the writer and leisure in the reader . . . which is the cause which hath made me choose to write certain brief notes . . . which I have called essays. The word is late, but the thing is ancient.” There are three words for short essays, none of which is used very much, if at all, anymore: “essaykin,” “essaylet,” and “essayette.”

essence. *Essence* derives from the Latin word *essentia*, thought to be a translation of the Greek phrase for “What is it?” It means what a thing basically is, its primary kind of being, the word first recorded in 1576.

Essenes; Essenian; Essenic. According to unsubstantiated traditions, both Jesus and John the Baptist were originally Essenes, a sect of pre-Christian Jews that emphasized ascetic self-discipline, communal property, ceremonial purity, and baptism. The Essenes dressed in white, strictly obeyed the Sabbath, ate no meat, and drank only water. They led a monastic life, shunning marriage and wealth, and similarly ascetic persons are sometimes called Essenes or Essenic today. Little accurate historical information is available about the Essenes, but since the discovery of the Dead Sea Scrolls in Qumràn, thought to be the Essenian homeland, there has been renewed interest in the group.

Esso; Exxon. The Esso Oil Co. coined its name from the first letters (*SO*) of the Standard Oil Co., the trust formed by John D. Rockefeller in 1888. The name *Exxon* was born when the courts in 1973 ordered Standard Oil to use a name other than

Esso in several states. Employing computer technology, the company chose *Exxon* from out of 10,000 other choices, essentially because it was easily recognized and remembered. Today Exxon Mobil is the world's largest oil company.

E.T. See EXTRATERRESTRIAL.

et. When American hillfolks say *et* for *ate*, they are following a precedent that goes back to the 1300s (when English author Richard Rolle wrote that “men and wimmen et and drank”) and are pronouncing the word close to its accepted British pronunciation.

etaoin shrldu. I've never heard anyone say this (it's pronounced *et i oy-in shurdloo*), but it is sometimes used by writers to indicate confusion or mistakes. It is a printer's mark, dating back to the late 1950s. *Etaoin shrldu* are the letters on the first two vertical rows of keys at the left of the keyboard of a Linotype machine. Those letters are used as a temporary marking slug or to indicate that an earlier mistake in the line necessitates resetting. Sometimes, however, *etaoin shrldu* is inadvertently cast and printed.

eternal Quiz Kid. A name *Time* magazine bestowed upon U.S. historian Arthur M. Schlesinger Jr. (1917–2007), somewhat sarcastically.

ethnic cleansing. The most terrible euphemism coined since the Final Solution of the Nazis, *ethnic cleansing*, first recorded in 1991, less than 50 years after Hitler, refers to genocide or mass murder of one religious or ethnic group by another. It is a translation of the Serbo-Croat word meaning the same. Under a policy of ethnic cleansing, in the fighting between Bosnian Serbs and Bosnian Muslims, thousands were killed or expelled from scores of towns and villages. See LINGUISTIC CLEANSING; HOLOCAUST.

ethnophaulism. A term for ethnic slurs, *ethnophaulism* was coined (from the Greek *phaulos*, “ugly”) by A. A. Rodack in the subtitle of his authoritative *Dictionary of International Slurs* (1944). Such insults—usually cheap humor—have been known since the earliest times and still prevail. The Irish call the English names, the English insult the French, the French defame the Germans, and so on ad infinitum, or ad nauseam.

et tu Brute. See BRUTUS.

euchre. *Euchre*, to cheat or to swindle, comes from the American card game of euchre, which was very popular in the West in the early 19th century. Gamblers cheated at the game so frequently that its name became synonymous with their chicanery.

Euclidian. The Greek mathematician Euclid's *Elements*, written in the third century B.C., was a collection of theorems and problems that formed the basis for geometry. So famous were Euclid's mathematical works—the *Elements* alone consisted of 13 “books”—that they completely overshadowed his life; almost nothing is known about the man himself. The mathema-

tician probably received his training from pupils of Plato in Athens, and it is certain that he founded a school in Alexandria about 306 B.C. Euclid is said to have told Ptolemy that “there is no royal road to geometry” when the ruler asked if there wasn't an easier way to learn it. Much of his *Elements* owes a great debt to the work of earlier mathematicians.

eudaemonia. *The Eudaemonic Pie*, a recent book by Thomas A. Bass, brings this rare but useful word to mind. It means, according to one dictionary definition, “a state of felicity or bliss obtained by a life lived in accordance with reason,” and was apparently coined by Aristotle in that sense, deriving from the Greek word for happiness. *Eudaemonia* also means, quite simply, plain old uncomplicated “happiness.”

eugenics. The British polymath Sir Francis Galton (1822–1911), a cousin of Charles Darwin, coined the word, which is “the study of hereditary improvement of the human race by controlled selective breeding,” according to the *Random House Dictionary* (1897). *Better for All the World* by Harry Bruinius is an excellent recent book on the controversial subject.

euhemeristic. *Euhemeristic* is an adjective applied to attempts to interpret myths, especially primitive religious myths, on a historical basis. The Greek writer Euhemerus is responsible for the word, it being this mythmaker's theory that the gods popularly worshipped in the fourth century B.C. had all originally been kings and heroes. In his philosophical romance *Sacred History* Euhemerus depicted the gods thus, insisting that they had merely been deified by their subjects or admirers. The writer claimed that he had discovered an inscribed gold pillar confirming his theory in a temple on an island in the Indian Ocean.

eunuch. A little consciousness-raising for eunuchs! At one time eunuchs were “keepers or guardians of the bed,” hence their name, which derives from the Greek *eune*, “bed,” and *echo*, “keep.” Today the term refers to any castrated human male and is used figuratively to describe a man with no courage, strength, or backbone, a weak, powerless, spineless person. Strictly speaking, however, all of our uses of *eunuch* are wrong, for eunuchs were never what most people still think them to be. Eunuchs were *not* deficient in courage and intellect. From earliest times throughout the world they took charge of harems or were the chamberlains of royal households and their confidential position often enabled them to rise to stations of great power. Neither were eunuchs always castrated. And even when they were castrated, in certain cases—if the castration took place after puberty and only the testicles were removed—they were still capable of sexual intercourse, some ladies of ancient Rome preferring them as both natural birth control devices and lovers best at prolonging the sex act. Among famous eunuchs in history were the Italian *castrati*, young boys who were castrated so that they could be trained as adult soprano singers, and the *Skopski*, a Russian religious sect whose members castrated themselves as an act of salvation and numbered over 5,000 before the Russian government prosecuted them in 1874.

euphemism. See GUEVARISM.

euphonious. Greek *euphonos*, sweet-voiced, gives us this word for pleasing to the ear or an agreeable sound, especially in a word's phonetic quality. *Euphonious* dates back to about 1765, and since then many authors have nominated their choice for the most beautiful (euphonious) English word, even when realizing that such a choice is so subjective as to mean nothing. Carl Sandburg, I believe, chose *Monongahela*, which rolls like a long river off the tongue, while James Joyce felt that *cuspidor* was the most euphonious word in the language. *M* words such as *melody* and *murmuring* are great favorites among many people, as are *lullaby*, *golden*, *silver moon*, *cellar door*, and *dawn*. As his favorite French word Baudelaire chose *hemorroides* (hemorrhoids). A poll taken by the National Association of Teachers of Speech gave the ten worst-sounding English words as *cacophony*, *crunch*, *flatulent*, *gripe*, *jazz*, *phlegmatic*, *plump*, *plutocrat*, *sap*, and *treachery*. Another favorite is *diarrhea*.

euphuism. See GUEVARISM.

eureka. When Archimedes discovered the principle of buoyancy in his bathtub while determining by specific gravity the proportion of base metal in Hiero's golden crown, he supposedly ran naked through the streets of Syracuse shouting "*Eureka, Eureka!*" ("I have found it! I have found it!") Since the 16th century the term has been used allusively as an exulting cry of discovery. Plutarch tells the story about Archimedes, and it could be true, for the Greeks commonly exercised in the nude, though a naked man running through the streets would probably have been considered immoral.

euro. The single currency of the European Union that in 2002 replaced the national currencies of 12 countries in the union, all but Britain and Sweden. The introduction of euro notes of various value has been so smooth that the old currencies have already been vanquished. The word *euro* (from *European*) was coined in 1971, when first recorded in print.

eusystemism. See ABBREVIATIONS.

even a worm will turn. Even the weakest, most groveling person, the lowest of the low, will resist if pushed beyond a certain limit. Cervantes coined the expression in *Don Quixote* (1605–15), the full quotation being: "Even a worm when trod upon, will turn again." See WORM.

even keel. The expression *to get things on an even keel*, "to make things move smoothly," dates back to at least the early 19th century. It, of course, derives from the nautical term *an even keel*, which one early writer defined this way: "A ship is said to swim on an even keel when she draws the same quantity of water abaft as forward."

even steven. Contrary to some accounts, there was never a gentleman named Steven who matched his wife blow for blow. The term apparently stems from a far less equitable character in Jonathan Swift's *Journal to Stella* (1713): "'Now we are even,' quoth Steven, when he gave his wife six blows to one." Stella was Swift's name for Esther Johnson, and his *Journal* letters to her described his daily life in London. Their relationship was a complicated one. Swift, 14 years Stella's senior, taught her to

read and write, loved her all his life, and when he died was buried beside her, but the two lovers probably never married.

Everest. See MOUNT EVEREST.

Everglades. Since the early 19th century this term, apparently an Americanism, has been applied to the low, marshy region overgrown with tall grass in Florida. It has been suggested that the "ever" in the word is used loosely in the sense of "interminable."

evergreen. See DECIDUOUS.

Evergreen State. A nickname for Washington State, after its abundance of evergreen forests. Washington is also called the Chinook State in honor of the Indian tribe once numerous there. See CHINOOK.

everlasting flower. See AGERATUM.

every bean has it black. This old saw means that everyone has faults. It stems from the fact that many varieties of beans have black "eyes."

everybody's doin' it, doin' it. The phrase is from Irving Berlin's hit song (1912), the "it" in the title being the ragtime dance called the Turkey Trot that was all the rage at the time.

every day, in every way, I am getting better and better. See COUÉISM.

every dog has his day. Cervantes apparently deserves credit for this proverb, which is given in *Don Quixote* (1605–15). Two centuries later, English author George Borrow wrote: "Youth will be served, every dog has his day, and mine has been a fine one." No one has been able to trace the proverb to the Himalayan valleys north of India, where all dogs literally do have a day. *Dog's Day* in the region is called *Khich Mavas* by the Kashmiris and *Swana Boli* by the Nepalese. It is a day when humans pay reverence to dogs as their brothers and sisters among living things. Choice food is set out for the dogs; even the mangiest strays get flower garlands hung around their necks and the Nepalese dogs wear the red spot of Hindu holiness imprinted on their foreheads. The following day things get back to normal until the next Dog's Day and the dogs lead a dog's life, 364 days of curses, kicks, and stonings from humans who consider them unclean and contemptible.

every hair a rope yarn. An old nautical term for a rugged seaman. The complete quotation is "Begotten in the galley and born under a gun, every hair a rope yarn, every tooth a marlin-spike, every finger a fishhook, and all his heart's blood good Stockholm tar."

every inch a man, etc. In every way. *Every inch* phrases are nothing new, having been popular ever since Shakespeare used one in *King Lear* (1606):

Gloucester: Is't not the king.
Lear: Ay, every inch a king.

Everyman. The term *Everyman* means “every man and woman.” It derives from the central character of the 15th-century morality play *Everyman*, of unknown origin, which is still read and performed today.

every man has his price. Some cynic other than Sir Robert Walpole coined this phrase. The British prime minister said something entirely different and referred only to corrupt members of Parliament, according to William Coxe in his *Memoirs of Sir Robert Walpole* (1798). Wrote Coxe of Sir Robert: “Flowery oratory he despised. He ascribed to the interested view of themselves or their relatives the declarations of pretended patriots, of whom he said, ‘All those men have their price.’”

every man jack. Everybody without exception, even the most insignificant. This apparently isn’t a nautical phrase; at least it is first recorded by Dickens in *Barnaby Rudge* (1840). Dickens may have coined the precise phrase, but Shakespeare used a similar term in the same sense in *Cymbeline*: “Every Jack-slave hath his belly full of fighting.”

everyone needs an editor. Adolf Hitler’s original title for *Mein Kampf* was *Four-and-a Half Years of Struggle Against Lies, Stupidity, and Cowardice*. Many years later this original title inspired *Time* magazine critic Timothy Foote to observe, “Everyone needs an editor.”

everyone to his own taste. Sometimes this late 16th-century proverbial saying is heard as *everyone to his taste, each to his own taste*, or even *to each his own*. The Latin version translates as *concerning tastes there can be no disputing*. Among other foreign counterparts are *Ten men, ten colors* (Japanese); *Every person is free in his opinions* (Arabic); and *Every baron has his own special fantasy* (Russian).

everyone to their liking, as the old woman said when she kissed her cow. An old saying that dates back to 16th-century England, when it appeared as, “Every man as he loveth, quoth the good man, when he kyst his coowe.”

everything but the kitchen sink. Everything imaginable, available, everything under the Sun: “They fired everything but the kitchen sink at us.” The phrase may derive from World War II, but is often used allusively. *Everything but the kitchen stove* means the same and is about 20 years older.

everything’s all tiggerty-boo. The American *O.K.* is generally replacing *right-o* in England, but *right-o* is still heard, as is its synonym *tiggerty-boo*, especially in the above expression. The *tiggerty* here (sometimes pronounced *tickerty*) is from the Hindustani *teega* and is said to have been introduced to Britain by Lord Mountbatten.

everything’s coming up roses. Any enterprise is going very well, splendidly, profitably. The American expression is first recorded in 1959 as the title of a song in the musical *Gypsy*; the phrase may also have some connection with *come up smelling like a rose*, or *step (fall) in shit and come up smelling like roses*.

everything worthwhile doing is either immoral, illegal, or fattening. A by-now proverbial saying often attributed to New York wit Alexander Woollcott, a member of the Algonquin Round Table.

every which way. In every way, in all directions. The first recorded use of this Americanism, in 1824, says it was originally an “odd phrase” taught by slaves to the children of Virginia gentry.

Eve’s curse. See CURSE.

Eve’s date. Since we have mentioned ADAM’S APPLE, it’s only fair to devote a few lines to *Eve’s date* (*Yucca baccata*). Found in Mexico and the southwestern United States, this little-known fruit can be eaten out of hand. The dark-purple Eve’s date probably takes its name from its shape, like a stubby banana; it is tempting and sweet in taste but leaves a slight bitterness in the mouth.

Eve-teasing. In India, where English is an official language (along with Hindi), *Eve-teaser* refers to someone who teases and harasses young women, an offense that is punishable by a fine and/or jail time.

Evil One; Evil Empire; Evil Man Number One. The first is a term coined by President George W. Bush, or his speechwriter, for the terrorist Osama bin Laden after the destruction of the World Trade Center on September 11, 2001. The younger Bush probably knew that the Iraqis had called his father, President George Bush, “Evil Man Number One.” Previous to this, beginning in 1983, President Ronald Reagan called the Soviet Union “The Evil Empire.” Long before both Bushes and Reagan, poet John Milton used the *Evil One* as a name for the Devil in *Paradise Lost* (1667). See AXIS OF EVIL; THE GREAT COMMUNICATOR.

evil-starred. See MOONLIT.

Excalibur. King Arthur’s famous sword, which Arthur pulled from a stone in which it had been fixed by magic, proving him “the right born king of all England.” Excalibur is so called from the name of a sword famous in Irish legend: *Caledvevlch* or *Caladbolg*, meaning “hardbelly,” that is, voracious, capable of consuming anything.

ex cathedra. Someone speaking *ex cathedra*, especially the pope, speaks with the authority of his or her office, the pope’s pronouncements infallible.

excelsior. *Excelsior*, or “wood shavings,” derives from New York State’s Latin motto *Excelsior*, “Yet higher, ever higher.” The word was originally a trademark of the New York-based Excelsior Mattress Company, which borrowed *Excelsior* for its name from the State’s Great Seal in 1868 and also applied it to the wood shavings used to stuff its mattresses.

! (exclamation mark). Like &, ! goes by a number of names. In America it’s usually called an exclamation mark or point,

but the British call it, more simply, an exclamation, and sometime note or point of exclamation. Anyone using the older rhetorical terms *ecphonesis* (“the outcry”) or *epiphonema* for the grammatical interjection rates an ! of surprise, which is called a note of admiration, or, depending on your taste, a note of detestation. Shakespeare used the phrase *note of admiration* (!) effectively in *The Winter’s Tale*: “The changes I perceived in the King and Camillo were very Notes of admiration.” But sometimes writers slashed pages with scores of them following words and phrases intended to be uttered with an intonation of exclamation or surprise, leading Swift to write that a reader should skip over sentences with notes of admiration at the end. For that matter the exclamation has had few friends throughout history. Dr. Johnson defined it as “a note by which a pathetic sentence is marked thus!” While Spenser said, “The lowest form of language is the exclamation, by which an entire idea is vaguely conveyed through a single sound.” But the powerful points do have their uses in small doses—showing strong emotions or emphasizing commands or warnings. They seem to have been invented by the Italians and came into English use about four centuries ago. Tradition says that the mark derives from the Latin *io* (exclamation of joy), written vertically as &phgr\$, which became ! in time.

excruciating. Agonizing, extremely painful, unbearably distressing, exceedingly elaborate. The word comes from the Latin *cruciare*, to crucify or torture, which derives ultimately from the Latin *crux*, cross. *Excruciating* came into the English language in about 1655, while *excruciate* is first recorded about a century earlier. *Crucifixion*, to execute a person by nailing him to the cross, often practiced by the Romans, also derives from the Latin *crux*, cross, and the *Crucifixion*, capitalized, refers to the killing of Jesus in this way. See CRUCIAL.

excuse-me-people. Derogatory black slang in South Africa for educated black professionals or white-collar workers who, despite their fine manners, are contemptuously regarded by some as being aloof and conceited, not in touch with the problems of the people. Also called “uscuse me.”

Exeter’s daughter. See RACK ONE’S BRAINS.

Ex-Lax. Possibly the best-known laxative on the American market, Ex-Lax was originally called “Bo-Bo” (short for bonbon) by its Hungarian inventor, who introduced it in New York in 1905 and so named it after its chocolate composition and flavor (though some would never agree that it tastes like bonbons). No one is sure why its name was changed to Ex-Lax, but *ex* does mean “excellent” and *lax* does suggest “laxative”—excellent laxative.

expedite. An old story that no one has been able to prove or disprove holds that the Latin word *expedire*, the ancestor of *expedite*, derives from the name of St. Expeditus, a soldier in the Roman Army before being martyred at Melitene, Armenia, in the fourth century. St. Expeditus, it seems, was the advocate of *urgent* causes. The *O.E.D.* merely says that the Latin word *expedire* means “to free a person’s feet (ped) from fetters, to help forward, to dispatch, send off.”

expletive deleted. *Expletive deleted* has quickly become a euphemism to use in place of a curse, especially for four-letter words. The phrase originated in the 1970s after Watergate, deriving of course from the transcripts of President Nixon’s White House tapes in which many curses are rendered as “expletive deleted.”

ex post facto. Latin for “retroactively.” Especially used of a law.

extra innings. A baseball game that goes into *extra innings*, a term first recorded in 1885, goes beyond the normal time played (nine innings). To *go into extra innings* is said of any activity that lasts longer than usual or that takes a long time, as in “We went into extra innings on that job.” The British phrase *to have a good innings* means to perform something well, but comes from the game of cricket, where innings (the singular would be *inning* in baseball) is the time during which a team or player is batting.

extras. People who appear in stage and movie crowd scenes or background scenes have been called “extras” since 1772 on the English stage. These actors have no lines as bit players do. As early as 1912 the Italian film *Quo Vadis* had a cast of thousands—most of them extras—for verisimilitude. Extras have been around since the earliest days of movies, but never so many as played in *Gandhi*, which won the Academy Award as best picture in 1982. In the funeral scene of *Gandhi* close to 300,000 extras appeared.

extraterrestrial; E.T. H. G. Wells first recorded, and perhaps invented, *extraterrestrial* as an adjective at the turn of the century. Meaning “outside the limits of the earth,” the word was first used as a noun by American author L. Sprague de Camp in the May 1939 issue of *Astounding Science Fiction*, the author inventing the abbreviation *e.t.* in the same article. *E.T.* has since become the name of the extraterrestrial being in the popular film *E.T.* Wells, or someone before him, may have patterned *extraterrestrial* on *extraterritorial*, which dates back to at least 1665.

extreme remedies are very appropriate for extreme diseases. An aphorism from the Greek physician Hippocrates’ book of *Aphorisms* (ca. 380 B.C.). See HIPPOCRATIC OATH.

extrovert. See JUNGIAN.

exurb. American social historian A. C. Spector sky invented this term in his book *The Exurbanites* (1950). He used it to describe regions beyond the suburbs of a city, semirural areas inhabited mainly by rich people. See SUBURB.

eyeballing. Cutting off the upper eyelids of cattle to prevent them from escaping into the brush, which would cut their unprotected eyes.

eyeballs in, eyeballs out. Test pilots in the 1960s coined this term to describe the physical effect of acceleration on the person being accelerated. For example, the acceleration

experienced by an astronaut at lift-off is *eyeballs in*, while the expression of an astronaut when the retrorockets fire is *eyeballs out*.

eye for an eye. These words did not originate in the Old Testament, as most people believe. They come from the legal code of Hammurabi, the sixth king of the first Babylonian Amorite dynasty, which was found carved upon an eight-foot diorite column dating back to about 1750 B.C. The exact words on the column are “If a man destroy the eye of another man, they shall destroy his eye.” This later became the biblical *an eye for an eye*.

eyeless in Gaza. See GAUZE; SAMSON.

eye rhyme. A word similar in spelling, but not in pronunciation, as in *none/tone*, *lint/pint*, *love/move*, *come/home*, and *forth/worth*. It is so called because it gives to the eye the impression of an exact rhyme. Also called *sight rhyme*.

the eyes are the windows of the soul At least one source calls this a proverb of the mid-16th century. However, John Greenleaf Whittier (1807–92) used it in his poem “My Psalm” and in recent times Cormac McCarthy quotes it in his novel *No Country for Old Men* (2005): “They say the eyes are the windows of the soul. I don’t know what them eyes was the windows to and I guess I’d as soon not know.”

eyeteeth. See CUT ONE’S EYETEETH.

F

F. *F* was the sixth letter in the Phoenician and Latin alphabets, as it is in ours. In both Phoenician and Hebrew its character was a peg. An *F* branded on a person's left cheek in medieval times signified that he was a felon. *F*, following temperatures, has become the shortest and one of the most widely used eponymous symbols. In 1714 Gabriel Daniel Fahrenheit perfected and manufactured the first practical mercury-in-glass thermometer, and invented the scale for measuring temperature that is named after him. Galileo had developed a faulty air-thermoscope long before this, and there were numerous contact thermometers employing alcohol in 1654, but Fahrenheit's was the first fairly precise instrument of its kind. Even at that, his thermometric scale has had to be revised since he invented it—his thermometer being inaccurate enough for him to regard 96 degrees as the temperature of a healthy man. Today only two of his fixed reference points—32 degrees and 212 degrees, the freezing and boiling points of water under standard atmospheric pressure—are still used on the Fahrenheit scale. The inventor, a German born in Danzig, Poland, lived most of his life in Holland and England after being orphaned at 15. He was elected to Britain's Royal Society before his death in 1736 when only 50 years old. See CELSIUS SCALE.

Faber and Faber. The famous British publishing firm of Faber and Faber (T. S. Eliot was an editor there) was established in 1929, and only one Faber owned it: Geoffrey Faber (1887–1961). It is said that the second fictional Faber was something of a joke suggested by British poet Walter de la Mare but was a high compliment to Geoffrey Faber as well. Use another Faber in the firm's name, de la Mare said, "because you can't have too much of a good thing."

Fabergé eggs. The jewel-encrusted eggs were the creation of Peter Carl Fabergé in 1886 and were soon named after him. On that Easter morning Russian czar Alexander III gave the first one to his czarina Maria.

Fabian tactics. Such delaying tactics are named after Quintus Fabius Maximus, the Roman dictator who over a 10-year peri-

od defeated Hannibal's superior Carthaginian army. His strategy was to avoid open engagements and employ his troops only in harassing raids and skirmishes in the hills, where Hannibal's cavalry was ineffective. Marches, countermarches, and other hit-and-run tactics were among the "masterly inactivities" devised by this cool, unemotional man to gradually erode Hannibal's forces, despite the objections of the subjects who had elected him dictator. After his victory in the Second Punic War, in 209 B.C., he earned the agnomen, or official nickname, of "Cunctator," the "slow-goer" or "delayer," for his wariness. England's socialist Fabian Society, founded in 1884, adopted Fabius Cunctator's name upon rejecting Marxist revolutionary theory and decided to accomplish "the reorganization of society" without violence, "by stealing inches, not by grasping leagues," this giving the word a new, political significance. Fabian policy is thus patient, long-range planning.

face. According to one police detective (*New York Times*, 3/15/92) *face* has taken on a new meaning in recent times: "He's a guy who looks like a mobster's supposed to look . . . They [the mob] send him to scare the hell out of someone, like 'Go send a face.'"

a face like a wedding cake left out in the rain. The poet W. H. Auden (1907–73) once described his deeply lined face, wrinkles as if chiseled: "My face looks like a wedding cake left out in the rain." But years before this the critic Maurice Bowra said the same about British author E. M. Forster's.

the face of a robber's horse. To have the *face of a robber's horse* means to be brazen, shameless, as in: "What gall he has. He has the face of a robber's horse to come here after what he did." It is a Canadian expression, mainly heard in Newfoundland.

face-off. In hockey a face-off is initiated when the puck is dropped by the official at the start of a game or period or to resume play. The puck is dropped between the sticks of two players, who stand face to face ready to hit it. Whether this act inspired the general term for any open confrontation (as first

recorded in about 1895) is unknown, but it certainly has given the term wider currency today. See HOCKEY PUCK.

face that launched a thousand ships. See GROVES OF ACADEME.

face the music. Though not listed by Mathews, this appears to be an Americanism first recorded in 1850. Meaning “to face up to the consequences of one’s actions” it may have originally been army slang, alluding to the “Rogue’s March” being played when an offender was drummed out of the service.

faction. A combination of parts of *fact* and *fiction*, this originally U.S. genre is based on real events and/or characters. It was first recorded in 1967.

fad. A persistent old story holds that *fad*, a temporary fashion, derives from the initials of *for a day*, but there is no proof of this. Most authorities believe that the word, first recorded in 1834, comes from the English dialect *fad*, “to busy oneself with trifles,” which may be a contraction of the *faddle* in *fiddle faddle*, “trifling talk or trivial matters”—but there is no real proof of this theory either.

a fade barn. Of all the major American dialects, the southern is the most consistently difficult to translate. Among the most amusing examples is the expression *a fade barn* that the editors of the *Dictionary of American Regional English* tried to track down for a couple of years. The editors knew that the expression existed because field interviews had recorded it in North Carolina without establishing its meaning. When a Raleigh newspaper joined in the search, the answer was quickly apparent. Dozens of correspondents chided the editors for not knowing, in the words of one North Carolinian, that “a fade barn is what you stow fade [feed] for the livestock.”

fade-out; fade-in. These are movie terms that have come to be widely used outside the film industry. *Fade-out* refers to a gradual decrease in the visibility of a scene from full exposure to complete black. *Fade-in* refers to a gradual increase in the visibility of a scene from black to full exposure.

fag. *Fag* is a British slang term for a cigarette that is well known in the U.S. through song and story, but is rarely heard anymore. The word is still used here as an offensive term for a male homosexual. The British uses of *fag* for a young schoolboy forced to work for an older student, or fagged for tired, worn out, are not common in America.

Fahrenheit scale. See F.

fail-safe. The fail-safe system, intended to help prevent nuclear war, was developed by the Strategic Air Command of the U.S. Air Force in the 1950s. Under the fail-safe procedure a bomber had to return home without dropping its bombs if specific orders to drop the bombs weren’t received. Thus a failure to receive such a radio message would be a failure on the safe side that wouldn’t accidentally trigger a nuclear war. The term *fail-safe* is now used to describe any precautionary system.

fairbanks. Movie actor Douglas Fairbanks, Jr., was said to take great pleasure in the company of royalty. Picking up on this, contract bridge players dubbed a hand chock full of kings and queens a *fairbanks*.

fair dinkum; hard dinkum. *Fair dinkum* means “true, real, genuine,” as in “That’s fair dinkum, mate,” the Australian expression probably deriving from an obsolete word meaning the same. *Hard dinkum* means “hard work.” Australian troops used the word *dinkums* so often in World War I that they were nicknamed “Dinkums.”

fairy rings. Fairies dancing on the spot were once thought to cause the dead or withered circles of grass often found on lawns. The fairy rings are, sad to say, caused by more prosaic fungi below the surface that envelop the grass roots and prevent them from obtaining water. The term is first recorded in 1598 when Ben Jonson used it in his satirical play *Every Man in his Humour*, in which Shakespeare acted at its first performance at the Globe Theatre. See also FASCINATE.

fait accompli. French for “an accomplished act,” one that is irreversible.

Faito! This is a Japanese borrowing and alteration of the English word *fight*. The Japanese mostly use it at sporting events, in the sense of “Fight! Go for it! Go! Go! Go!”

falderol. First used as a meaningless refrain in Scottish songs (as in Browning’s line Fol-di-rol-di-rido-liddle-iddle-o!) *falderol* or *folderol*, recorded early in the 18th century, came within a century or so to mean “nonsense, empty talk or ideas.”

fall. See AUTUMN.

fall guy. In American professional wrestling during the 1890s, just like today, many of the bouts were fixed, with a loser picked beforehand. This may have resulted in the term *fall guy* being applied to the loser, the wrestler who took a fall, the words later coming to mean any person who takes the blame for the actions of others. But there is no proof of this theory. The earliest quotation using the term *fall guy*, in 1904, links it to the underworld, and even before that in 1893 *fall* is recorded as a criminal arrest or conviction, making the wrestling connection seem unlikely.

Fall Indians. A group of Indians formerly living in Oregon, also called the *Gros Ventres*, who, according to one writer, “were the most relentlessly hostile tribe ever encountered by the whites in any part of the West, if not in any part of America. The trapper always understood that to meet with one of these Indians meant an instant and deadly fight.”

falling sickness. An old name for epilepsy. Brutus used it of Caesar in Shakespeare’s *The Tragedy of Julius Caesar*.

fall in love. “So fare I—falling into love’s dance;” wrote a man smitten back in 1423, the first recorded use of the expression. It took over a century more for *falling in love* to detach itself from

falling into love's dance, but since then the phrase has been indispensable, suggesting so simply and well the dizzy loss of control of the love-struck.

false front. Gay Nineties merchants often built the facades of their stores in such a way as to give the appearance of greater size, which they thought appropriate in an era of great prosperity. But in time these false fronts became the symbol of pretense or sham that the expression means today.

family hour. In recent times this expression has been used to describe the television time slot between 6:00 P.M. and 7:00 P.M. during which programs are supposed to be free of violence and sex, though this seems at best improbable considering that most news programs are aired at this time.

famine food. Food that people wouldn't normally eat but were forced to consume because nothing else was available. The Irish coined the name during the terrible potato famine of the 19th century, when they ate foods like mussels to ward off hunger and starvation. Mussels, of course, are a gourmet food today. The same could be said of the lobster, which early Americans disdained and called a *bug* (still a term used by Maine lobster fishermen). In fact, our ancestors raked up all the windrows of lobsters storm-swept on our shores and used them for fertilizer. *See* LOBSTER; BUG.

fan. *See* FANS.

fancy footwork. Originally a term from American boxing describing the footwork of a skillful boxer in the ring, fancy footwork has come to mean any clever evasion or maneuver. It probably dates back to the early 1900s, when there were a lot of fast, clever boxers around.

fancy-shmancy. Something so fancy that it is pretentious. A blending of Yiddish and English (Yinglish), the Yiddish in this case being the *shm* that is often prefixed to a word in a funny, mocking way. Other examples are *Santa-Shmanta* and *Oedipus-Schedipus*.

Faneuil Hall. Pronounced FAN-ul or FAN-yul; a historic building in Boston, Massachusetts. An old rhyme instructs how to pronounce this famous landmark:

When you speak of the market
That's known as Faneuil,
Kindly pronounce it
To rhyme with Dan'l.

fanfare; fanfaron. A fanfare, an "ostentatious display or flourish," was originally a flourish or short air played by trumpets when important people, or self-important people, arrived. In this sense it derived from the Spanish *fanfarria*, meaning "bluster, haughtiness," haughty people often demanding that heralding trumpets be played when they came upon the scene. Another word deriving from the Spanish *fanfarria* is *fanfaron*, for a braggart.

Fannie Mae. *See* GINNIE MAE.

fanny. This euphemism may be an unknown personification, the diminutive of the feminine name Frances, or it may have a more objectionable history than the word it replaces. For Partridge suggests that the euphemism for "backside" comes from the eponymous heroine of John Cleland's hardly euphemistic novel *Fanny Hill* (1749). The term in this sense is originally an American one, however, probably deriving from the English slang use of Cleland's *Fanny* for "the female pudenda." Or else Americans were reading *Fanny Hill* long before it was legally permissible to do so. Cleland's classic of brothel life, which he wrote to escape debtor's prison, has already been made into a movie, had had vast sales in paperback and, judging by recent examples, may indeed finally prove euphemistic for its genre. Another etymologist feels that *fanny* may come from the obsolete expression *fancy vulva*; still another source traces the word to a pun on *fundament* (which became *fun*, then *fan*, then *fanny*), and *Webster's* derives it from "the fanciful euphemism 'Aunt Fanny' for the buttocks."

Fanny Heath raspberry; Lloyd George raspberry. Raspberries have not been cultivated for nearly as long as apples, peaches, and pears. Called a brambleberry and considered a nuisance in England, it was not until about 1830 that the delicate, delicious fruit began to be developed in America. The *Fanny Heath* variety is a tribute to a determined pioneer woman who immigrated to North Dakota in 1881. This young bride had been told that she could never grow anything on the barren alkaline soil surrounding her house, but 40 years later her homestead was an Eden of flowers, fruits, and vegetables. After her death in 1931, the black raspberry she developed was named in her honor. A red raspberry variety honoring a famous person is the *Lloyd George*, named after British prime minister David Lloyd George (1863–1945), who led Britain to victory in World War I and dominated British politics in the first quarter of this century.

fans. *Fans* for enthusiasts or devotees, is a shortening of *fanatics*, the Americanism first recorded in 1889. Fans were originally sports enthusiasts, but soon the word was applied to the devoted followers of thespians as well.

farad; faraday. Born into extreme poverty, he had virtually no formal education and is said to have possessed a very poor memory, yet Michael Faraday (1791–1867) became probably the world's greatest experimental genius in the physical sciences. As both a physicist and chemist Faraday became one of the immortals of science—discovering the principle of the electric motor, developing the first dynamo, formulating the laws of electrolysis, producing the first stainless steel, and discovering benzene and butylene, among many other brilliant accomplishments. His discovery of electromagnetic induction alone provided the basis for our modern electrified world and produced his "field concept," which in turn was the basis a century later of Einstein's revolutionary theory of relativity. The *farad* named for the scientist is an electromagnetic unit, while a *faraday* is a unit of electricity used in electrolysis. Faraday invented the electrical terms "anode" and "cathode."

farce. French theatrical programs used to be stuffed, or completed, with brief broad comedies based on swift action and

surprising situations—which gave us the word for such broad comedies, *farce*, from the French *farcir*, “to stuff.” The word is first recorded sometime in the 15th century in connection with religious dramas.

farewell-to-spring. A pretty name for a pretty flower (*Gode-tia amoena*) with satiny petals that blooms in early July. It is named botanically for Swiss botanist Charles H. Godet.

fare-you-well. It seems much older, but this expression is an Americanism that has been traced back to 1775. It means: 1) a state of perfection, to the last point, as in “His book is documented to a fare-you-well”; 2) the maximum effect, as in “She played each scene to a fare-you-well.” Still heard occasionally as *fare-thee-well*.

far from the madding crowd. A common expression meaning to be in a peaceful place. The phrase is often said to come from the title of British novelist and poet Thomas Hardy’s novel *Far from the Madding Crowd* (1874). However, Hardy took the title from a line of Thomas Gray’s poem “Elegy Written in a Country Churchyard” (1750), the full line being, “Far from the madding crowd’s ignoble strife.” Gray’s poem contains several of the best-known phrases in English literature, including “full many a flower is born to blush unseen,” “some mute inglorious Milton,” “the pomp of power,” “the brook that babbles by,” “the peep of dawn,” and “along the cool sequester’d vale of life.” *Madding* in the poem means acting madly, insanely, not acting maddeningly. See PATHS OF GLORY; PEEP OF DAWN.

farm. The Anglo-Saxon *feorm*, which meant both food and hospitality, is the ultimate source of the word *farm*. By the Middle Ages *feorm* had changed to *ferme*, which became the word for the food tenants paid their landlords as rent. Eventually the name for this rent was applied to the land that had produced it, the *ferme* or *farm*, as it was later called.

farm (plant) to the walls of the barn. To plant a crop extensively, using all or almost all available land on a farm. A variant is *farm right up to the walls of the barn*. By extension the old U.S. phrase means to employ all the resources one has at one’s disposal.

farm out. Branch Rickey, then with the St. Louis Cardinals, founded baseball’s first farm system in 1918, buying stock in minor league teams on which he cultivated new players for the Cardinals. These clubs became widely known as farm teams and the major league players sent down to them from the parent club for more seasoning (or forever) were said to be farmed out. (The expression had been used for the sale of a major leaguer to the minors 15 years or so before this.) The term is now also used to mean assigning work to another person by financial agreement.

faro. Faro, which is now a card game principally played in gambling houses, derives its name from *pharaoh*, but so far as we know, from no particular king except the king of spades. The game came to England from France or Italy and little more

is known about it than that. The French version was named *pharaon* (pharaoh), but this was altered to *faro* as it grew popular among the English. It is assumed that at a certain stage in the game’s history, a likeness of an Egyptian pharaoh appeared either on all the cards, or, more likely, on the king of spades. See also IN HOCK.

farrago of nonsense. *Farrago*, from the Latin *farrago*, is “a mixed fodder for cattle,” and figuratively means “a confused mixture, a hodgepodge.” Since the 17th century the word has been used in expressions such as a *farrago of doubts, cant, fears, nonsense*, etc.

Far Rockaway. See XANTHOS.

farting against the wind. Undertaking an exercise in futility.

fartleberry; aarschnoddle. These two words may never be seen together again, unless, perhaps, in some thesaurus of slang. It is remarkable that these are two words with the same meaning: “[Small globules] of excrement stuck on the anal hair,” according to Eric Partridge in his *A Dictionary of Slang and Unconventional English* (1961). Partridge defines *fartleberry*, which he dates to the 18th or 19th century. *Aarschnoddle* is a Pennsylvania Dutch synonym about which I know nothing more, except that Bill Bryson, in his delightful *Made in America* (1994), says in listing the Pennsylvania Dutch term “no, I cannot think why they might need such a word.”

fascinate. Ben Jonson first recorded the word *fascinate* in his play *Every Man in his Humour* (1598), which had in the cast Shakespeare, who would fascinate the world forever. The word derives from the Latin *fascinum*, “a spell,” and meant in Jonson’s time “to literally cast a spell by means of the evil eye,” not taking on its present meaning, “to be irresistibly attractive,” for another half century. See also FAIRY RINGS.

fast as Ladas. This literary reference is rarely heard today but should be remembered, for Alexander the Great’s courier Ladas was said to run so fast that he never left a footprint. Other legendary runners include Queen Camilla of the Volsci, who, according to Virgil in the *Aeneid*, could run over water without getting her feet wet; and the Greek Iphicles, who, the Greek poet Hesiod says, could run over standing corn (wheat) without bending the ears. The Greek god Hermes (Mercury to the Romans) was swifter than all of them and was represented with wings on his sandals.

fastest man alive. See FOUR-MINUTE MILE.

fast food. McDonald’s isn’t responsible for this term, which dates back to the early 1940s, but fast-food chains have popularized the expression throughout the world. It refers of course to quickly prepared and served foods, relatively inexpensive and often relatively tasteless.

fast one. See PULL A FAST ONE.

fast shuffle. A fast shuffle by a crooked cardplayer often results in a deck stacked to that player's advantage. This has happened so often in card games that the expression *a fast shuffle* has come to mean a dishonest dealing in any enterprise.

Fata Morgana. Mirages of houses, ships, and mirror images, often seen in the water as well as in the air, and often doubled—inverted above each other—have frequently been reported in the Strait of Messina and other places. They are named Fata Morgana after Morgan le Fay, a sorceress in Arthurian legend, the words *Fata Morgana* being an Italian translation of Morgan le Fay.

fat cat. *Fat cat* for a rich contributor to political campaign funds was coined by *Baltimore Sun* writer Frank R. Kent in his 1928 book *Political Behavior*. Today it also means any rich, secure person.

fat city. This American slang, first recorded in 1964, means being very well off, sitting pretty, as in “I was nowhere, but I got a break and now I’m in fat city.” Sometimes capitalized.

Father Christmas. The preferred British name for the American name SANTA CLAUS. Americans never use *Father Christmas*, though the British sometimes favor *Santa Claus*. Both figures have white beards and wear red suits trimmed with white fur, but in Britain *Father Christmas* has more cachet.

Father Damien. *Father Damien*, the religious name of Joseph De Veuster (1840–89), is often used to describe “a selfless, heroic man of God.” Damien de Veuster, a Belgian Catholic missionary of the Society of the Sacred Heart of Jesus and Mary, was sent to the Hawaiian Islands in 1863 to replace his ailing brother, and was ordained as a priest the following year. He volunteered to be the first resident chaplain for the leper colony on Molokai 10 years later. For many years the courageous priest labored almost single-handedly to improve the condition of the 700 lepers there, contracting leprosy himself but remaining in the colony among his people until he died.

Father Knickerbocker. A synonym for New York City. The prominent Dutch Knickerbocker family settled near Albany, New York, in about 1674. Among its prosperous descendants was the wealthy Herman Knickerbocker (b. 1779), the great-great-grandson and namesake of the family founder, who became known as “the prince of Schaghticoke” for his great manor along the Schaghticoke River. So when Washington Irving burlesqued a pompous guidebook of the day with his *A History of New York from the Beginning of the World to the End of the Dutch Dynasty* (1809), he decided to capitalize on the old familiar name, choosing the pseudonym Diedrich Knickerbocker. Irving could not have concocted a better name in satirizing the stodgy Dutch burghers than this thinly veiled alias for the well-known Dutch “prince,” although the first great book of comic literature written by an American was also a satire on Jeffersonian democracy, pedantry, and literary classics. Soon his humorous work became known as *Knickerbocker's History of New York*, but it wasn't until English caricaturist George Cruikshank illustrated a later edition in the 1850s that the Knickerbocker family name was bestowed on the loose-

fitting, blousy knee breeches known today as *knickers*. The trouser style is no longer worn by schoolboys but was revived some time ago as a fashion for women. The British still call women's underwear *knickers*. As a result of Irving's work *Father Knickerbocker* became an early synonym for New York City, *Knickerbocker* was adopted by a school of local writers called the *Knickerbocker Group*, and an early New York City literary journal was called *The Knickerbocker Magazine* (1833–65). Much later it became the name of New York's professional basketball team, the New York Knicks.

Father Mathew. A Capuchin priest and Irish social worker, Father Mathew took a pledge of total abstinence from alcohol in 1838 and through his campaigning in Ireland, England, and America, gained a tremendous following, coming to be known as “the Apostle of Temperance.” His name became proverbial for a temperance reformer, his good work rewarded by a pension Queen Victoria bestowed upon him. Father Mathew was 66 when he died in 1856.

Father of American Football. While serving as a member of the Intercollegiate Football Rules Committee for 48 years, Walter Chauncey Camp (1859–1925) was responsible for so many rules governing American football that he can truly be said to have laid the foundations for the modern game. The Yale coach was being called the Father of American Football by 1920, five years before his death at one of the committee meetings.

Father of Angling. English author Izaak Walton (1593–1683) earned this title with his book on the joys of fishing, *The Compleat Angler, or the Contemplative Man's Recreation* (1653). The most quoted advice in his much-quoted work: “Thus use your frog . . . Put your hook through his mouth, and out at his gills . . . and in so doing use him as though you loved him.”

Father of Baseball. This is the name given to 1) Henry Chadwick, a British-born author whose writings strongly influenced the game, though he held that it evolved from the British game of rounders; 2) Abner Doubleday, erroneously thought to have “invented” baseball (an honor even he denied); and 3) to American Alexander Cartwright who may have “invented” the modern game.

Father of Bibliography. The Swiss scholar Konrad von Gesner (1516–1565) wrote important medical, natural history, and philological works. In his *Bibliotheca Universalis* he strove to catalog all known Greek, Hebrew, and Latin writings. He finished all but one volume of a proposed 21 and earned for posterity the title *Father of Bibliography*.

Father of His Country. Every schoolchild knows that George Washington is called the Father of His Country. The title was first bestowed upon Washington in 1779 by Francis Baily, an American soldier of German descent from Pennsylvania. Baily printed a calendar in that year with a picture on the cover of the general above the German words *Des Landes Vater* (Father of His Country). Baily apparently knew that the epithet dated back to about 68 B.C., when Quintus Catullus, in a speech before the Roman senate, called his friend Marcus Tullius Cicero “the father of his country.” Cicero, a Roman

consul, was regarded as a great patriot for putting down the Cataline conspiracy.

Father of Television. A title widely given to Philo T. Farnsworth in about 1935, when the courts ruled on Farnsworth's television patent and upheld the verdict on appeal. According to the book *Philo T. Farnsworth: The Father of Television* by Cliff Gardner, the inventor always gave equal credit to his wife for the invention. He died in 1971.

Father of Waters. A nickname for the Mississippi River that may derive from an Indian name, *Meact-Chassipi* (the ancient father of the rivers), a word the French corrupted into *Mississippi*. For another possible derivation of Mississippi, see the entry *MISSISSIPPI*. The river is also called the father of floods.

Father's Day. *Father's Day* isn't recorded in print until 1943, 35 years after *MOTHER'S DAY*. Celebrated on the third Sunday in June, it was the idea of Mrs. John Bruce Dodd of Spokane, Washington. The day was proclaimed by the governor of Washington in 1910 but wasn't widely observed until about 1935.

fathom. A fathom is now a nautical measure of six feet, but it was once defined by an act of Parliament as "the length of a man's arms around the object of his affections." The word derives from the Old English *faethm*, meaning "the embracing arms."

Fat Man. See *A-BOMB*.

fat pine. A knot, splinter, or thin branch of various pine tree species that is used as kindling. Also called lightwood.

Fatso; Ratso. *Fatso* as the nickname for a fat person is an Americanism dating back to the Great Depression years, which were hardly fat years. The word is first recorded in a Damon Runyon tale and later gained in popularity when it became the name of a button-popping character in the comic strip *Smilin' Jack*. It may have suggested *Ratso* for an unkempt unsavory person, most notably the character Ratso Rizzo in the film *Midnight Cowboy*.

fatted calf. See *KILL THE FATTED CALF*.

fatten the kitty. See *SWEETEN THE KITTY*.

fatwa. An Arabic word meaning an edict given by a Muslim religious authority, the ruling often a death sentence. The word, also spelled *fatwah*, became well-known internationally in 1989 when Iran's religious leader Ayatollah Khomeini called for the death of novelist Salman Rushdie for writing *The Satanic Verses* (1988), a novel many Muslims thought blasphemous. Though this fatwa was cancelled 10 years later, the word is still used, often loosely.

faubourg. A synonym for *suburb*. This French word was borrowed and used in Scotland and England as early as the 15th century. Now, however, *suburb* is the preferred word almost everywhere but in New Orleans, a city whose French heritage has encouraged its use since the early 19th century. Though the

word is obsolete today in the sense of a suburb, it is still heard in the names of New Orleans quarters or districts such as Faubourg Sainte Marie.

Faulknenian. Resembling the writing style of U.S. author William Faulkner (1897–1962), often in reference to Faulkner's long, convoluted, often sparsely punctuated sentences. See *NO ACCOUNT*.

The fault is not in our stars but in ourselves. An often-quoted phrase uttered by Cassius, a conspirator against Caesar in Shakespeare's *The Tragedy of Julius Caesar*. The full phrase is: "Men at some time are masters of their fates: The fault, dear Brutus, is not in our stars, But in ourselves, that we are underlings."

fauna. Linnaeus first used *fauna* as a term for "animals" in his 1746 book *Fauna Suica*, a companion volume to his *Flora Suica* (1745). The great naturalist took fauna from the name of a Roman rural goddess.

faux pas. French for a very obvious social blunder.

fava bean. The fava bean takes its name from *faba*, the Latin word for "bean." It is often called the broad bean, horse bean, or Windsor bean. Since antiquity this widely grown legume has been known to cause favism in people of African and Mediterranean origin with a certain enzyme deficiency, fava-bean poisoning sometimes proving fatal.

F.B.I. Its abbreviation was being used almost as soon as the Federal Bureau of Investigation was named in 1935. The first recorded use of the initials, however, came a year later, in 1936, when it was used in an article describing "Baby Face" Nelson shooting it out with an FBI agent. Today F.B.I. or FBI is usually used instead of the longer name. The bureau is also called the *Feds*, which was the name the *Confeds* (Confederates) used for federal U.S. troops during the Civil War. See *G-MEN*.

feague. In times long past, fortunately, horse trainers would insert ginger or even a live eel, it is said, into a horse's anus to liven him up and make him "carry his tail well" when he was to be shown to prospective buyers. This was called feaguing a horse. The expression, coming to mean "encouraging or spurring him up," was used well into the 19th century. The origin of *feague* is unknown though it may derive from the German *fe-gen*, to polish.

fear. "The only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror . . ." From President Franklin D. Roosevelt's first inaugural address, March 14, 1933.

fearnought. Heavy woolen clothing worn by sailors was called fearnought in the 19th century. Men wearing clothing made of fearnought needed to "fear nought" from the weather.

featherbedding. "What do you want, feather beds?" management supposedly snapped when Rock Island Railroad freight crews complained that their caboose bunks were too

hard. This has been cited as the origin of the term *featherbedding*, for “unions forcing employers to hire more men than necessary for a job.” It is certain, however, only that the expression was first recorded during a labor dispute in 1943.

featherbed lane. Any bad, unpaved, rutted road. According to an old unlikely story, George Washington had housewives pave a road with featherbeds (bedcovers) so that the Redcoats wouldn't hear his troops marching by at night—this giving rise to the term.

feather in his cap. American Indians of various tribes often wore feathers to show their past bravery in wars. This custom led to the Americanism *a feather in his cap*, “an honor or an accomplishment of which a person can be proud.”

feather into. To shoot someone, physically do someone harm, or do something with great vigor. The commonly used Ozarkian term dates back to early England, when it strictly meant to shoot someone with the arrow from a longbow so forcefully that the feather on the end of the arrow entered the person's body. The words can also mean to attack, as in “He feathered into the whole bunch of them.”

feather one's nest. Birds commonly use their breast down to make a soft, comfortable lining for their nests when they will be hatching eggs for a long period. This practice gave rise, in the early 16th century, to the expression *to feather one's nest*, “to accumulate wealth for one's comfort in the future.”

featherweight. See LIGHTWEIGHT.

February. February is named for *Februaria*, the name Juno was given as goddess of fertility. February had been the month when the festival of Lupercalia was held and youths roamed the streets supposedly making barren women fruitful by striking them with magic thongs called *februa*, fashioned from the hides of goats sacrificed to *Februaria*. By the way, February originally had 29 days, but the Romans took one from it to give to July, so that July, named after Julius Caesar, wouldn't be inferior to August, named after Augustus Caesar.

fecalemia. Medical school students in relatively recent times invented this term for “cowardice.” The mocking word was made from *fecal*, “feces,” and *emia*, “of the blood,” literally meaning “shit in the blood.”

feckless. (1) Ineffective, feeble, futile, incompetent. (2) Careless, irresponsible, lazy. From the Scots *feck*, effect (an alteration of effect+less). In *Our Language* (1966) Simeon Potter says that Thomas Carlyle “brought such Scottish words into English as *feckless*, *lilt* (with the meaning of ‘cadence’) and *outcome*, and made them current.” Many of Carlyle's coinages became part of the language.

fedora. This common man's felt hat was named for a Russian princess. Fedora Romanoff was the leading character in Victorien Sardou's 1882 play *Fedora*, the part written for Sarah Bernhardt, the greatest actress of her day. In its American production, how-

ever, Fanny Davenport played the lead role and had a great success. The name of the character she played became known throughout the country and a hat manufacturer cashed in on its popularity by naming one of the soft felt hats he made after it. See also TRILBY HAT.

Feds. See F.B.I.; G-MEN.

fed up. To be disgusted with something, wanting no more of it. The phrase has been attributed to the practice of force-feeding geese for FOIE GRAS, but it isn't found in print until 1882. It more likely is a figurative use of the English term *to feed up*, to fatten cattle for the market, which was first recorded in 1630. *Fed up to the eyeballs* is a variant. A popular army saying is *fed up, fucked up, and far from home*. The phrase *fed up to the back teeth* is a British exaggeration dating back to about 1910.

fee. The Anglo-Saxons used cattle for trading, these cattle called *feoh*, like all farm animals. Eventually *feoh* came to mean “payments of any kind.” Altered to *fee*, the term finally was used for any public or private charges as well.

feed a cold, starve a fever. The great Greek physician Hippocrates, called the father of medicine, is said to have invented this advice. People have in any case been following his words for centuries, although several doctors have recently claimed that there is no scientific truth in his advice.

feeding frenzy. Wild, unseemly attention from the media toward someone in the news has aptly been called a feeding frenzy since the 1980s. Feeding frenzies of sharks, which suggested the expression, were so named 30 years or so before this and describe a pack of sharks surrounding and attacking a large wounded fish or whale.

feed the fishes. This old expression has two meanings. In Sicilian criminal circles it means that someone has been murdered, whether his body has been literally weighted down and thrown into the water or not. The expression was used in Mario Puzo's *The Godfather*, when a large fish is delivered to the Godfather's family and someone explains that this is an old Sicilian message from their enemies meaning one of their henchmen “feeds the fishes.” In a more humorous vein, dating back over a century, *feed the fishes* means that someone has become seasick and vomited over the ship's rail into the water.

fee-faw-fum. The famous words of the giant in the old fairy tales “Jack and the Beanstalk” and “Jack the Giant-Killer” are “Fee-faw-fum, I smell the blood of a British man.” Shakespeare, however, uses *Fie, foh, and fum*, while many Americans remember hearing *Fee-fie-foe-fum* when the story was read to them.

feel one's oats. Someone feeling his oats or full of oats is in high spirits, full of pep, so full of himself that he may even be showing off a bit. The allusion is to lively horses fed on oats and the expression is American, first recorded in 1843 by Canadian

Thomas Haliburton, the humorist whose Sam Slick gave us “cry over spilt milk” and other expressions. Men, women, and children can feel their oats, but only young men are said to sow their wild oats.

feet of clay. The phrase comes from the Old Testament (Dan. 2:31–32). There the Hebrew captain Daniel interprets a dream for Nebuchadnezzar, founder of the new Babylonian Empire. Nebuchadnezzar had dreamed of a giant idol with golden head, silver arms and chest, brass thighs and body, and iron legs. Only the feet of this image, compounded of iron and potter’s clay, weren’t made wholly of metal. Daniel told Nebuchadnezzar that the clay feet of the figure made it vulnerable, that it prophesied the breaking apart of his empire. Over the years readers of the Bible were struck with the phrase *feet of clay* in the story and it was used centuries ago to describe an unexpected flaw or vulnerable point in the character of a hero or any admired person.

feh! A common Yiddish exclamation of disgust similar to *pew!*, *ugh!*, or *yuck!* It is often associated with a terrible smell, but can be used to express any distasteful experience. “Feh! This monkey business I don’t like.”

fejjoa. The delicious guava (*Feijoa sellowiana*) is native to South America and grown in Florida and California for its highly esteemed white-fleshed fruit. The small tree, introduced into southern Europe in 1890, is named Feijoa for Spanish naturalist J. da Silva Feijo. A member of the myrtle family, it is a small genus noted only for the pineapple guava, which is often called “fejjoa.” Closely related to the true guava, its fruit is used widely for jam and jelly. The oblong fruit, about two inches long and a dull green marked with crimson, has a delicate pineapple flavor that literally melts in the mouth.

feisty. Oddly enough, the Old English word *fist*, meaning to break wind, or a foul odor, gave us our word *feisty* for a touchy, quarrelsome person, or someone with a lot of spirit or spunk. By at least the late 1600s *fisting* in the form of a *fisting hound* was used in England as a contemptuous term for a small dog. *Feisting hound*, a variant form of *fisting hound*, came to be the name of any small mongrel dog in the southern U.S., such dogs soon being called *feists*. Because these small dogs were often lively and temperamental, their name suggested the adjective *feisty* and by the end of the 19th century this adjective was applied to people who acted like them.

fella. In Australian pidgin English *fella* can mean a person or any thing. When Australian Aborigines say *big stone fella*, for example, they mean a mountain, while a *big fella water* is a lake.

fellowfeel. As a synonym for empathy, the ability to get inside the other fellow’s skin and feel like him, *fellowfeel* was commonly used from the 17th through the 19th century. The word is a back-formation from *fellowfeeling*, a rendering of the Latin *compassio*.

fellow traveler. Used since the 1930s to describe a sympathizer with a cause, though not one who joins that cause. The

term was used disparagingly in the 1950s about people thought sympathetic to the communist cause.

Fell types. See I DO NOT LOVE THEE, DR. FELL.

fell with a dead thud. See SPALDING.

female. The word *female* is not related to the word *male*, as many people believe. It ultimately derives from the Latin *femella*, which means a girl or young woman. *Male* for a man comes from another Latin word, *mas*, which became *masculus* and then *masculus* in Latin and finally *masle* and then *male* in French, from which it came into English as *male*.

♀ (**female**) and ♂ (**male**). Perhaps you’ve wondered about the derivation of these standard scientific symbols for female and male. The female symbol is the representation of a hand mirror and is associated with Aphrodite, the Greek goddess of beauty; it also serves as the symbol of the planet Venus (the Roman equivalent of Aphrodite). The male symbol represents the shield and spear of Mars, the Roman god of war; it serves also as the symbol of the planet Mars. See also HOMO SAPIENS.

the female of the species. The words are from Rudyard Kipling’s poem “The Female of the Species” (1911), in which he writes: “For the female of the species is more deadly than the male.” This is widely believed of a number of species, but has never generally been proved. The example usually given is the American black widow spider (*Latrodectus mactans*), which eats its mate. This is unfair, however, for the male of *Latrodectus* sometimes eats the female. See BLACK WIDOW SPIDER.

female language. See ARAWAK.

fence-mending. Secretary of the Treasury John Sherman, later to author the Sherman Anti-Trust Act, decided to run for the Senate in 1879, knowing that he would shortly lose his Cabinet post because President Rutherford B. Hayes wouldn’t be running for reelection. When he visited his Ohio farm, he told reporters “I have come back to mend my fences” and reporters assumed he meant political fences, not the ones around the farm. Soon after, *fence-mending* came to mean “trying to gather political support at home by making personal contacts,” and “patching up disagreements,” the last its most common use today.

fender-bender. A minor automobile accident on the road or in a parking lot in which not much damage is done to the cars involved or their passengers. The term was probably coined, author unknown, in the early 1960s or late 1950s.

fennel. *Finocchio* or *fennel* can be traced to the Latin word *feniculum*, meaning “product of the meadow.” “Florence fennel,” a sweet variety, is often called “finocchio.” Anciently held to be an aphrodisiac, fennel was also emblematic of flattery, was thought to clear the eyesight, and was said to be the favorite food of serpents. “To eat conger and fennel” (two supposed aphrodisiacs) was held to be especially stimulating. See MARATHON.

fermium. Fermium, like einsteinium, is an artificially produced radioactive element first detected by American physicist Albert Ghiorso in the debris of the first H-bomb explosion. Element 100 was named for Enrico Fermi (1901–54), “the father of the atomic bomb,” the year after his death. Professor Fermi, Italian born, left Italy in 1936 to receive the Nobel Prize for his theory of radioactive substances known as Fermi statistics. Opposed to Mussolini’s anti-Semitic policies, he did not return, immigrating to America and becoming a citizen of the United States. Fermi directed the scientific team that produced the historic self-sustained nuclear chain reaction at the University of Chicago in 1942, and worked on the development of the atomic bomb at Los Alamos, New Mexico. *See also* EINSTEIN.

ferret. This domesticated polecat has been much used over the centuries to drive rats and rabbits from their burrows, thus giving us expressions like *to ferret out the facts*. The animal, however, takes its name from the Latin *fur*, “thief,” probably because it had a bad reputation for killing and stealing domestic fowl.

Ferris wheel. Not even Little Egypt, the first belly dancer to perform in America, outdrew the Ferris wheel at the World’s Columbian Exposition held in Chicago in 1893. The ride was the work of George Washington Gale Ferris (1859–96), a Galesburg, Illinois, railroad and bridge engineer. A giant steel structure weighing over 1,200 tons, the first Ferris wheel stood 140 feet high and measured 250 feet in diameter, with 36 cars at its rims capable of carrying 1,440 riders. The chief wonder of the “World’s Fair” had been built on the tension spoke principle, the large power-driven vertical wheel revolving on a stationary axis and rotating between two pyramids. So great was the wheel’s success that imitations soon became standard at all amusement parks worthy of the name.

fertilizer. The first recorded mention of the word *fertilizer* came in 1661 when an English writer noted that “Saint-foime [Saint-foin] or Holy-hay [*Onobrychis sativa*, a member of the pea family, also called Holy Clover] . . . [is] a great Fertilizer of Barren-ground.” Fertilizers, however, have been known since time immemorial. The word *fertile*, from which *fertilizer* derives, comes from the Latin *ferre*, “to bear.” While animal and plant fertilizers date far back in history, chemical fertilizers weren’t developed until the first half of the 19th century.

ferule. *Ferula communis*, or the giant fennel, is a plant that became famous as a switch or stick used in classrooms on disobedient students. This member of the fennel family, which takes its name from the Latin for “stick,” grows up to 8 to 12 feet high and was grown by the Romans both for its handsome yellow flowers and for the dried pith of its stems, which provided excellent tinder for starting fires. But by the 16th century the pliable stalks of the plant were being used as schoolroom switches, their name slightly changed to *ferule*. Eventually *ferule* was applied to “a sort of flat ruler, widened at the inflicting end into a shape resembling a pear . . . with a . . . hole in the middle, to raise blisters.”

fescennine. Long ago a school of poets in Fescennia, Etruria, was famous or infamous for a style of scurrilous, obscene poet-

ry. Such poetry anywhere came to be called fescennine verse, and *fescenninity* a word for scurrility in general.

fetus. *Fetus* is the etymologically correct spelling of this word for “the young of viviparous animals,” not *foetus*, as the word derives from the Latin *fetus*, “offspring.” The word is first recorded in English as *fetus*, in 1398.

few and far between. Scottish poet Thomas Campbell’s poem “The Pleasures of Hope” (1799) contains this line, as well as “distance lends enhancement to the view.” *Few and far between* is “Like angel-visits, few and far between” in the poem and is adapted from Robert Blair’s “Like angels’ visits, short and far between.” *See also* IBERIA’S PILOT.

fey. *Fey* usually means “being in unnaturally high spirits, or unreal, enchanted,” as in “elves and other fey creatures.” In times past someone who suddenly acted so lighthearted was thought to be on the point of death, *fey* deriving from the Anglo-Saxon *faege*, “on the verge of death.” *Fey* has recently become a derogatory synonym for effeminate, perhaps from being associated with *fairy*.

Feydeauesque. French playwright Georges Feydeau (1862–1921) was so noted for his bedroom farces that his name, in the form of *Feydeauesque*, has become a synonym for them. It is said that one of Feydeau’s early farces was almost booed off the stage on opening night, and a friend spotted the playwright himself standing in the aisle, joining in the hissing and catcalls. “Have you gone crazy?” his friend asked him. “No, this way I can’t hear them,” Feydeau replied, “and it doesn’t hurt so much.”

Feynman diagram. This physics graph was designed by and named after physicist Richard Phillips Feynman, who shared a Nobel Prize in 1965 for his work in quantum electrodynamics. Feynman helped develop the atom bomb in the early 1940s and wrote several books on his experiences. One time he visited his hometown of Far Rockaway, New York, to take a look at his high school records. Afterward he told his wife that according to his file, his IQ was only 124, “just above average.” His wife later recalled that he was nonetheless delighted with the results of his investigation: “He said to win a Nobel Prize was no big deal. But to win it with an IQ of 124—that was something.” *See* NOBEL PRIZE.

fez. This well-known traditional Arab red hat with a flat top and black tassel was first made in Fes, Morocco (spelled Fez by the Europeans), where the berries yielding the red dye for it grew abundantly. The hat is brimless, so that Muslims wearing it can touch their heads to the ground when praying.

Ff. Personal names beginning with a double *f* in English, such as Ffoulkes or Ffrench, originated as mistakes when the medieval or Old English capital *F*, which in script appears to be two small entwined *f*’s, was transferred to print as two lower-case *f*’s. No word in English should really begin with two *f*’s.

F.F.V. An abbreviation for First Families of (or in) Virginia. The term is an old one, dating back at least to the early 19th century.

fiacre. Fiacres are small horsedrawn cabs that take their name from an old town house called the Hôtel de St. Fiacre in Paris, where they were first rented out from a stand in 1648. The hotel, in turn, took its name from an image of St. Fiacre that hung outside it. St. Fiacre, who can be invoked as the patron saint of both gardeners and cab drivers, was an Irish priest who founded a monastery with a hospital and extensive gardens near Paris in about A.D. 615. Legend has it that his Bishop granted him as much land as he could turn over in a night and that the ground miraculously opened at the touch of his spade. It is also St. Fiacre's fate to be invoked for perhaps the most unpleasant assortment of diseases that any saint is responsible for—including diarrhea, venereal diseases, and even warts on the knees of horses. But this saint was the first man to restore people to mental health by hard work in the garden, by what psychiatrists now call hortotherapy, and he is thus best remembered as the patron saint of gardeners. His monastery eventually grew into the village of St. Fiacre, and his day is August 30, appropriate for the harvest. French gardeners have observed his anniversary for generations, attending services in the flower-decked chapels dedicated to him.

fiasco. Our word for “a total, foolish failure” derives from the Italian *fiasco*, “bottle,” but no one seems to know why. First recorded in England as a theatrical term in the late 19th century, the word may have something to do with a bottle breaking—either accidentally or as part of the plot—in some forgotten Italian play. Perhaps also a brand of wine in some bottles was flat or sour—a complete failure or fiasco—or imperfect bottles made by glassblowers were called *fiascos*. There is no proof for any theory.

fiat money. Fiat money is currency that is convertible into coin or specie. *Fiat* derives from the Latin for “let it be done.”

fiddle. The word fiddle comes from the Anglo-Saxon *fithle*, which may have derived from the Latin *vitula* that gives us violin. In any event, no musical instrument is involved in as many common English expressions as the fiddle, which is usually called the violin today but, surprisingly, still retains its homely name among a number of prominent musicians. With the exception of FIT AS A FIDDLE, a metaphor that goes back at least to the early 17th century and shows the great pride with which the English regarded their well-made fiddles, these expressions generally reflect a Puritanical scorn of fun and gaiety, the notion that hard work is the only important thing in life. They include “fiddlesticks,” “fiddling around,” “to play second fiddle,” “drunk as a fiddle,” “to play the fiddler,” “fiddle-faddle,” and many others.

fiddle-dee-dee! An exclamation indicating that something is nonsense, made famous by Margaret Mitchell's heroine Scarlett O'Hara in *Gone With the Wind* (1936): “She said ‘fiddle-dee-dee!’ many times . . . and vowed that she'd never believe anything any man told her.” *Fiddle-dee-dee* was popular long before Scarlett, being a corruption of the Italian *fedido* (by the faith of God).

fiddlehead ferns. These delicious greens, the young furled heads of various fern species, taste something like a combina-

tion of asparagus, broccoli, and artichokes and are so named because their delicate fronds resemble the head of a fiddle. Legend has it that when Adam and Eve were banished from the Garden of Eden, the Archangel Gabriel guarded the gate through which they left to earn their bread by the sweat of their brows in the wilderness. Stepping aside to let them pass, Gabriel brushed a wing against a boulder and a feather dropped to the ground. The feather took root and grew into the fiddlehead fern, which has ever since been sacred to the archangel.

fiddler crab. The fiddler crab (*Uca pugilator*) takes its American name from the one greatly enlarged claw in the male of the species, which to someone two centuries ago suggested a fiddle. I've found no collective name for a group of these small, aggressive, burrowing crabs, but perhaps an “orchestra of fiddlers” would do.

Fiddler's Green. Since the 19th century, British sailors have called the traditional heaven of mariners Fiddler's Green, “a place of unlimited rum and tobacco.”

fiddlesticks! A once-common exclamation roughly meaning nonsense.

fiddle while Rome burns. The origin of this old expression is an incident described by the Roman historian Suetonius, who said that Nero set fire to Rome in A.D. 64 because he wanted to see what Troy had looked like when it burned centuries before. Suetonius added that Nero regarded the blaze with cynical detachment, singing his own composition “The Sack of Ilium” and playing the harp while flames consumed the city. Tacitus, a more reliable historian and one who, unlike Suetonius, lived in Nero's time, says that the last of the Caesars was at his villa at Antium 50 miles away when Rome burned. However, it could be that Nero climbed the tower of Maecenas on the third day of the fire and recited Priam's lament over the burning of Troy to musical accompaniment, as other accounts say. The tyrant did rebuild Rome in a much improved way, but he blamed the fire on the Christians to save his own skin and persecuted them with such fury that these first martyrs regarded him as an Antichrist (he is possibly the fantastic beast referred to as 666 in Rev. 13:11–18).

Fidelism. The communism of Cuban revolutionary Fidel Castro (b. 1927). Also Castroism. See MAOISM.

a fidus Achates. A faithful friend or squire. Achates was, in Virgil's epic poem *The Aeneid*, the loyal chosen companion who accompanied Aeneas everywhere in his wanderings. The unfinished poem is said to have been ordered destroyed by the poet as he lay dying. But the great Roman national epic survived.

field. The Anglo-Saxons called any place that had been cleared of trees a *feld*, which by the 15th century or so became *field* and meant “open land” as opposed to woodland. *Feld* is probably related to the Old English word *felde*, “earth.”

field corn. Corn that is raised as feed for livestock is called *field corn*, even though all corn is, of course, grown in fields.

Before the 19th century, when *sweet corn* was developed, what is now called field corn served as both fodder for animals and human consumption (when the ears were picked young and tender). As the late John Ciardi pointed out, “fodder corn” would be a less absurd name for field corn, but language is not always a matter of logic.

field day. See HAVE A FIELD DAY.

Fielding guide. See BAEDEKER.

fiend. The Anglo-Saxon ancestor of *fiend*, *feond*, simply meant “enemy.” However, one meaning of *enemy* was “Satan” and *fiend* took on this stronger meaning, too, over the years, finally being used to describe any diabolically cruel or wicked person.

15 minutes of fame. Thirty-five years ago, in 1968, Andy Warhol proclaimed, “In the future everybody will be famous for fifteen minutes.” The leader of the pop art movement died 15 years ago and he is still world famous, as are his words.

fifth column. During the Spanish civil war (1936–39), a group of sympathizers within Madrid worked secretly to help Francisco Franco’s Falangist rebels overthrow the Loyalist Republic and establish his dictatorship. These sympathizers were first called the *fifth column* in 1936 by Lt. General Queipo de Llano, a Falangist propagandist who broadcast the following in an attempt to demoralize Loyalist forces in Madrid: “We have four columns on the battlefield against you and a fifth column inside your ranks.” When a little later that year the Falangist commander General Emilio Mola was leading four columns of Fascist troops on Loyalist Madrid from various directions, he said essentially the same thing, and so the term has often been credited to him. *Fifth column* is a direct translation of the Spanish *quinta columna* and has come to mean “any group of secret agents or traitors at work within a country.” The expression gained wide currency because Ernest Hemingway used it as the title of a 1940 play about espionage in the Spanish civil war.

Fifth Commandment. Fifth of the Ten Commandments: “Honor thy father and thy mother, that thy days may be long upon land which the Lord thy God giveth thee.” See TEN COMMANDMENTS.

fifth wheel. Looking at the fifth wheel of wagons and carriages many people thought it had no function, but this wheel, or circular plate, which was attached to the upper side of the front axle and never touched the ground, supported the vehicle’s body when it made a turn. Ignorance prevailed, however, and the expression *fifth wheel* came to mean “a useless or needless person or thing in any enterprise.”

fifty-fifty. Fifty-fifty—50 percent for one party, 50 percent for the other—is still a common Americanism for “equally divided.” An expression that one would guess is much older, it is first recorded in a 1913 *Saturday Evening Post* article, though it may date back to the late 19th century or earlier.

the 51st state. A name President John F. Kennedy bestowed upon *Meet the Press*, so great has been its influence on American politics. The show first aired in 1947 and has been broadcast every week since then, with a panel of newsmen interviewing guests.

54–40 or fight. James Polk won election to the American presidency in 1844 with this slogan, which referred to the ousting of the British from the whole of the Columbia River country up to latitude 54 degrees 40 minutes N. After his election Polk discarded the slogan and settled the Oregon question without going to war. The sarcastic Whig slogan “Who is James K. Polk?” inspired the myth that Polk was a political nonentity and weak president. In truth, he was one of the hardest-working of all presidents, attained almost all his stated aims, and added more territory to the U.S. than any president except Jefferson.

fig. When someone says “I don’t care a fig,” she isn’t referring to the delicious fruit (whether she knows it or not), but to the ancient “Spanish fig,” a contemptuous gesture made by thrusting the thumb forth from between the first two fingers. The insult is said to be an invitation to “kiss my ass.” The fig takes its English name from the Latin *figus*, “fig,” which became the Provençal *figa*. It figures in a number of phrases of its own. English, for example, features it in various expressions from the euphemistic *fig you* to far worse, and in French *faire la figue* means “to give the obscene finger gesture.” The exclamation, *Frig you* has nothing to do with the “fig you” etymology, however, probably deriving from the Old English *frigan*, to love. The distinguished etymologist Laurence Urdang points out in *The Whole Ball of Wax* (1988) that the natural shape of the fig has much to do with its sexual implications: “When one encounters fresh figs growing or even in a market, it becomes clear why their visual appearance has given rise to so many translinguistic metaphors: Not to mince words, a pair of fresh figs closely resembles in size and configuration, a pair of testicles. Pressed together, they resemble the external parts of the female genitalia.” “Nothing is sweeter than figs,” Aristophanes wrote. Figs are mentioned in the biblical story of the Garden of Eden, and it was under a Nepal species of fig tree called the Bo that Buddha’s revelations came to him. The ancient Egyptians trained apes to gather figs from trees. According to the biblical story (Gen. 3:7), after the Fall, Adam and Eve covered their nakedness with fig leaves (or leaves of the banyan tree). It wasn’t until the era of Victorian prudery, however, that statues in museums were covered with fig leaves. *Fig Sunday* is an old name for Palm Sunday, when figs used to be eaten to commemorate the blasting of the barren fig tree by Jesus when he entered Jerusalem. The Persian king Xerxes boasted that he would invade Greece, thoroughly thrash all the Greek armies, and then feast on the famous fat figs of Attica. Ever since he was soundly defeated by the Greeks in 480 B.C. at the battle of Salamis, *Attic figs* has meant wishful thinking. See JUDAS; SYCOPHANT.

fight fire with fire. An Americanism, possibly deriving from the use of backfires to help extinguish great prairie and forest fires in the early West. Settlers would set fire to a circle or strip of land in the path of a blaze but at a good distance from it,

then extinguish it and leave a barren patch so that the advancing fire would have nothing to feed on and so would burn itself out. Fighting fire with fire could be a dangerous practice, for the backfire might get out of control itself, so the expression came to mean “any desperate measure involving great risk.”

fight like a cornered rat. To fight furiously, as rats do when their lives are in danger and there is no place to run to.

fight like Kilkenny cats. During the Irish rebellion or revolution of 1798, Hessian mercenaries stationed in Kilkenny amused themselves by tying two cats by their tails and throwing them over a clothesline to fight to the death. Just before an officer interrupted their banned “sport” unexpectedly one day, a quick-thinking trooper reportedly cut off the two tails and let the cats escape, telling the colonel that the soldiers had nothing to do with the fight—the two cats had just devoured each other except for the tails. The above tale may have inspired the expression *to fight like Kilkenny cats*, to fight bitterly until the end. But another story has it that two Kilkenny cats fought so ferociously in a sandpit that they devoured each other except for their tails. And still another yarn has a thousand fabled Kilkenny cats fighting an all-night battle with a thousand cats selected by “sportsmen” from all over Ireland, the tough Kilkenny cats killing them all. Most authorities go along with Jonathan Swift, who, more conservatively, prefers the explanation that *cats* in the phrase refers to men. It seems that in the 17th century residents of Englishtown and Irishtown in Kilkenny—which was bisected by a stream—were constantly fighting over boundary lines and were compared to battling cats. But nobody has offered convincing proof for any of these stories.

fight the good fight. See KEEP THE FAITH, BABY!

figurehead. Ship figureheads are carved figures or busts attached below the bowsprit directly over the cutwater. They have great ornamental value, but no function whatsoever and the ships would sail just as well without them. The carvings do inspire pride and confidence among seamen, however, and lend prestige to ships. Thus, *figurehead* has been used for at least a century to describe “a person who normally heads an organization, who lends his good name to it, but has no real duties in it.”

filbert. About the only connection between St. Filbert and filbert nuts is that the saint’s feast day falls on August 22, the height of the nut-harvesting season. This was enough reason, however, for Norman gatherers to name the nuts *philberts* in his honor. St. Philibert, his name *Filuberht* in Old High German, was a Benedictine who founded the Abbey of Jumieges in 684. What Americans call filberts after him are actually hazelnuts. Filberts are confined botanically to two European nut varieties—about 250 million pounds of them bearing the saint’s name each year. *Gilbert Filbert* was British slang for a very fashionable man about town early in this century, deriving from the popular song “Gilbert the Filbert, Colonel of the Nuts.” *Cracked in the filbert* meant “eccentric or crazy.”

filch. Thieves in the 16th century used a rod and line with a hook on it to steal goods from vendors’ stalls. This device,

called a filch, gave rise to our word for “to steal in a furtive manner,” to snatch.

filibuster. Deriving from the Dutch *vribuiter*, “freebooter or pirate,” *filibuster* was originally used in American English to describe gun-runners in Central America, men who engaged in war with a country with whom their own country was at peace. Over the years the word came to mean “obstruction of legislation in the U.S. Senate by prolonged speechmaking,” after a congressman described one such obstruction as “filibustering against the U.S.”

fille de joie. A French phrase that is a euphemism for “prostitute”; literally it means “girl of joy or pleasure.”

fill the bill. Theatrical companies in the 19th century advertised mainly on posters and handbills that were distributed in towns by advance men several weeks before a show came to town. The name of the troupe’s star performer was featured on these bills in large letters, to the exclusion of the rest of the company—he or she *filled the bill*, was the show’s star. Soon the vivid image behind this theatrical expression meaning “to star” came to encompass a more complex, broader thought, and by 1860 *to fill the bill* meant “to be very competent, effective, to do all that is desired, expected, or required.”

film noir. French for “black film,” a reference to the often low-key, black-and-white visual style of such films and to the alienation and morally compromised obsessions of the protagonists of these often crime-based stories. *Double Indemnity* and *The Postman Always Rings Twice* are good examples.

filthy lucre. *Lucre*, in the form of *lucrum*, is a Latin word that means “profit or wager.” The term *filthy lucre* comes to us from the letters of St. Paul to his followers, Timothy and Titus. In these letters the apostle denounced religious leaders who were greedy lovers of money and taught Christianity for dishonorable gain. But when William Tyndale translated the New Testament from Greek to English in 1525, he mistranslated Paul’s figurative expression “dishonorable gain” as “filthy lucre.” Paul’s words didn’t mean “dirty money,” but the phrase was retained by the authors of the great King James Version of the Bible in 1611 and soon entered English as a term for money in general, no matter how honorably earned.

fin. The Yiddish word *finnif* is probably the ancestor of our slang for a five-dollar bill. *Finnif* meant a five-pound note in mid-19th-century England. Shortened to *fin* in England, it became American underworld slang by the 1920s. The Yiddish word, in turn, derives from the German *funf*, or “five.” The *fin* of a fish comes from the Old English *finn* meaning the same.

finagle; finagle factor. A 1939 contribution to *Modern Language Notes* quoted in the *Dictionary of American Regional English* suggests that *finagle*, meaning to get something by guile or trickery, to wangle or scheme, may come from the name of the “German proponent of mnemonics” Gregor von Feinaigle (1765?–1819), “who lectured (and was often ridiculed in England and France. . . .)” Another possible eponym is a Ger-

man mesmerist and whist expert of the Regency (1812–20) named Feinagel, who apparently cheated at cards. Or perhaps Feinaigle and Feinagel are the same man. Most authorities say the origin of *finagle* (rhymes with *bagel* or *Hegel*) is uncertain, or that it is a variant of *fainaigue*, an English dialect word meaning “to shirk work, cheat at cards, to renege on a debt.” The earliest recorded date for *finagle* (in the form of *finagler*) is 1922. *Finagle factor*, according to the *New Dictionary of American Slang*, refers to “the putative mathematical constant by which a wrong answer is multiplied to get a right answer.” It is also called *Fink’s factor*, and no particular Fink seems to be involved.

the final condensation. The founder, publisher, and editor of the *Reader’s Digest*, De Witt Wallace, suggested this mock epithet for himself.

finalize. *Finalize*, despite the objections of many critics, is recognized by most dictionaries and has been current in both American and British English for about half a century in both formal and casual writing. Such formations as *neutralize*, *minimize*, and *generalize* don’t seem to bother people, but *finalize* rankles many, perhaps because most critics believe it is a pretentious bureaucratic synonym for “to complete.” But it has a meaning different from “complete.” It means “to put into a final form a set of conclusions that has been agreed upon roughly through a preceding series of discussions or actions.”

Final Solution. A translation of German *endgultige Losung*, these words were a euphemism for the Nazi program for annihilating all Jews in Europe during the Third Reich. This mass murder policy, the Nazi answer to “the Jewish Question” or “the Jewish Problem,” apparently began in 1941, and the mass extermination, with the introduction of gas chambers and crematoriums, might have succeeded if the war hadn’t ended when it did. See HOLOCAUST; ETHNIC CLEANSING.

find the devil’s golden tooth. A once-common saying that refers to a story about the pirate Captain Kidd, who was believed to have stolen the devil’s eyetooth, which gave one the power of changing all metals into gold.

fine as silk. See QUICKER THAN HELL CAN SCORCH A FEATHER.

fine fettle. The expression *in fine fettle*, “in excellent condition,” isn’t recorded until 1890, but expressions like *in poor fettle*, *in good fettle*, etc., were common long before this. *Fettle* here probably comes from the belts or girdles, called *fettles*, that ancient warriors bound themselves with before going into battle; when their fettles were on they were “in good condition, ready for battle.”

fine-haired sons of bitches. A derogatory term for gentlemanly, “civilized” types in the early West. “I despise all you fine-haired sons of bitches,” he heard someone say.”

fine kettle of fish. A *kiddle* or *kiddle net* is a basket set in the sluice ways of dams to catch fish, a device well known from the time of the Plantagenets. Royal officials had the perquisite to

trap fish in kiddles, but poachers often raided the traps of fish, frequently destroying the kiddles in the process. Possibly an official came upon a destroyed trap and exclaimed, “That’s a pretty kiddle of fish!” or something similar, meaning “a pretty sorry state of affairs!” and the phrase was born. Repeated over the years, *kiddle* was corrupted in everyday speech to *kettle*, giving us the expression as we know it today.

fine words butter no parsnips. See PARSNIP.

f’ing. See EFFING.

finger in the pie. This expression, recorded in 1659, has nothing to do with being meddlesome, as has been suggested. It means simply “to have something to do with, to have a part in something.” “Lusatia . . . must needs, forsooth, have her Finger in the Pye” is the first attested use of the words.

finger man. See POINT THE FINGER.

fingerpointing. In its sense of accusing someone, frequently unfairly, the expression is said to date back to 1941, when *Social Focus* magazine said northern states shouldn’t be *fingerpointing* at lynchings in southern states when they had their own race riots.

fingers were made before forks. An old expression dating back several centuries, *fingers were made before forks* is still used as an excuse when someone is chastised for eating with ones fingers. Forks are a relatively new culinary innovation, dating back to 14th-century Italy.

finishing touch. Since the early 18th century the term *finishing touch* has meant the final details of anything, the last stroke that truly makes something complete. It was first used regarding painting and then referred to writing.

fink. The original *fink* may have been either a Pinkerton man or a cop named Albert Fink, who worked for railroads in the American South. Mencken prefers the former explanation, tracing the term to the 1892 Homestead steel strike when Pinkerton men were hired as strikebreakers, these brutal “Pinks” becoming *finks* in time, the word synonymous with the earlier “scab” or the British “blackleg.” Finks were anathema to the early labor movement, but the word is now used to describe not only “a strikebreaker but any treacherous, contemptible person or a police informer.” Mr. Albert Fink could just as well have inspired the term in similar fashion. The German-born Fink, according to a reliable source, long headed a staff of detectives with the Louisville and Nashville Railroad and then switched to the New York Trunk Line Association in about 1875. He was not involved in railroad labor disputes, but his operatives probably policed rates charged on the lines and some of them were likely planted spies who came to be known as *finks*. This gives the word more a management than a labor flavor, but it is possible that *fink* gained currency in this way before being adopted by union men. It is at least as plausible as the transformation of “Pinks” to finks. *Ratfink* is a stronger

variant of *fink* that originated in the U.S. within the last 30 years or so. See PINKERTON.

finnan haddie. Finnan haddie, or smoked haddock, was originally a Scottish dish. It is named after the haddock cured around Findon or Findhorn, a small fishing village near Aberdeen, Scotland. Today it is also made in the U.S., among other countries.

“Finnegan’s Wake.” A little-known American-Irish song entitled “Finnegans Wake” gave James Joyce the title for his famous novel. It was a song of Irish immigrant laborers in New York City and the lyrics go on to tell how Finnegan falls and is pronounced dead, only to revive when he gets hold of the whiskey bottle passed around at his wake. According to Padraic Colum, “James Joyce found in this song a comic statement of universal mythology—the Fall of Man, the Partaking of the Water of Life, the Renewal of Existence—and used it for the title of his last and enigmatic book.”

Finnish words in English. This remarkably constant language, which has changed little over the centuries and in which letters of the alphabet can be pronounced only one way, has only contributed a few words to English, the best known of these being *sauna*.

fin out. Badly injured, close to dying. The old expression is nautical in origin, first referring to a dying whale that rolls over, showing its fin. “She’s near ninety and just about fin out.”

fire. First recorded in 1871, *fire out* meant “to throw out or eject a person from a place.” Thirteen years later the term, shortened to *fire*, was first recorded as a synonym for “dismissing an employee.” Both terms have their origins in the firing, or discharging, of a gun.

fire away Flanagan. A historical phrase dating back to the Revolutionary War. It means “to keep it up, go on, continue,” according to the *Dictionary of Americanisms* (1951). Whether there was a real Flanagan is unknown, but the expression was first recorded by Philip Freneau in a 1783 poem: “Scarce a broadside was ended ’till another began again—By Jove! It was nothing but Fire away Flanagan!” This poem referenced an attack on the Fraunces Tavern, a restaurant still open today in New York City. It was then known as the Queen’s Head Tavern, owned by Samuel Francis, a fierce anti-Royalist who later changed his name.

fireboy. To call a man a *boy* today is often to insult him, but in the 19th century compound words commonly used *boy*, as in *fireboy* for a fireman, and no one took offense. About the only common such compound still surviving is *cowboy*.

firebug. *Firebug* derives from those bugs who have enthusiasms often amounting to manias. That this is an old American expression is evidenced by the fact that Oliver Wendell Holmes used it figuratively, writing of “political firebugs” in his book *The Poet at the Breakfast Table* (1872). That is the first recorded use of the term, which generally means “a pyromaniac, someone mentally unbalanced who lights fires for his pleasure.” But

people with a mania for anything have been called bugs in America since at least the early 19th century; we have had our slavery bugs, those who wished to see slavery extended into the West, and we still have our money bugs, whose sole interest is money.

firecracker. Firecrackers were called crackers in England, because of the sound they make when ignited, long before they became known as firecrackers here because a distinction had to be made between them and the “crackers” Americans eat, which are called “biscuits” in England.

fire-eater. An often violent, always uncompromising believer. The expression has its roots in the southern cause before and during the Civil War, the term dating back to the 1840s. Anonymous doggerel of the day described the fire-eaters:

Down in a small Palmetto State the curious ones may
find
A ripping, tearing gentleman, of an uncommon kind,
A staggering, swaggering sort of chap who takes his
whisky straight
And frequently condemns his eyes to that ultimate
vengeance which a clergyman of high-standing has
assured must be a sinner’s fate;
This South Carolina gentleman, one of the present time.

fire-fishing. An unusual sport practiced by the voyageurs and others after them, *fire-fishing* consisted of building a platform of fire on the bow of a canoe, the reflection of which would reveal any fish at the bottom of the deepest water. It is also called *torch fishing*. *Fire-hunting* was a method of hunting employed by some Native American tribes whereby the woods were set on fire, usually in autumn, and the animals in it were killed as they tried to escape the flames. Some colonists later adopted this “sport.”

Fireside Chats. In order to prevent panic from spreading and to explain his politics to the public during the Great Depression, Franklin Roosevelt, elected president in 1932, gave radio addresses called Fireside Chats.

firewater. A traveler in North America in 1817 reported that “[the Indian chiefs] called the whiskey fire water.” An accurate description of whiskey’s taste going down, especially the whiskey Indians were traded, *firewater* is probably a translation of the Algonquian Indian *scoutiouabou*, meaning the same.

first, one must endure. Ernest Hemingway took this as his lifelong motto, the words a translation of French: *Il faut (d’abord) durer*, meaning one must endure in order to finally win.

first-born infants of spring. Shakespeare used the phrase in *Love’s Labour’s Lost* (1595): “like an envious sneaping [nipping] frost that bites the first-born infants of the spring [buds or flowers].”

first catch your hare. Writers still attribute these humorous directions to a recipe in Mrs. Hannah Glasse’s *Art of*

Cooking Made Plain and Easy (1747). What the lady really wrote was “Take your hare when it is cased and make a pudding . . .” To “case” a hare is to skin it. The joke, which is all the phrase was, is first recorded in Thackeray’s *Rose and Ring* (1855), and he used the words as if his readers would be familiar with them.

First Commandment. First of the Ten Commandments: “Thou shalt have no other gods before me.” See TEN COMMANDMENTS.

first edition. A book’s entire run of copies from the same plates, no matter how many printings, is a first edition. A book’s original press run, or first printing, is a first issue or first impression. The terms go back to 19th-century England.

first fruits. John Wycliffe mentions *first fruits* in the first translation into English of the whole Bible (1382), specifically in Num. 18:12 with reference to the custom of making offerings to the Lord of the first fruits gathered in a season. Over two centuries passed before the expression was used figuratively to mean “the first products of one’s efforts,” as in the *first fruits of our labor*.

the first hundred years are the hardest. Hollywood writer and cynical wit Wilson Mizner and America’s greatest word inventor T. A. Dorgan vie for the authorship of this humorous saying about life in general. Dorgan seems the more likely candidate, considering his creation of such American masterpieces, among many others, as *dumbbell*, *dumbhead*, *Dumb Dora*, *nobody home upstairs* (dumb), *applesauce* (for insincere flattery), *drugstore cowboy*, *lounge lizard*, *chin music* (pointless talk), *the once-over*, *the cat’s meow*, *the cat’s pajamas*, *flat tire*, *you said it*, *for crying out loud*, *see what the boys in the backroom will have*, and *the only place you’ll find sympathy is in the dictionary*. See 23 SKIDDO; HOT DOG.

first in war, first in peace, first in the hearts of his countrymen. A 2002 poll by the American Council of Trustees and Alumni revealed that only 42 percent of all students at America’s top 55 universities could identify George Washington as the man described by this phrase. Its author was intrepid Henry Lee (1756–1818), who included it in *Resolutions Presented to the House of Representatives on the Death of Washington* (December 26, 1799). Lee, called Lighthorse Henry Lee, served as an officer under Washington in the Revolutionary War. Southern Civil War leader Robert E. Lee was his son. See WASHINGTON.

First Lady. The first First Lady of (or in) the land was Dolley Madison, according to one old story, but most writers say the honorary title dates from the mid-19th century, long after Dolley served as Thomas Jefferson’s and later her husband, James Madison’s, official hostess. The first mention of *First Lady* is in British correspondent William Russell’s *My Diary North and South* (1863): “The gentleman . . . has some charming little pieces of gossip about the first Lady in the Land [then Mary Todd Lincoln].” Dolley Madison did, however, die in 1849, so there might be some connection between her and the title. The term is also used, usually uncapitalized, for a prominent woman in any profession, as in “She’s the first lady of the American

theater.” An old joke makes *First Lady* a synonym for spare ribs, because Eve was made from Adam’s spare rib. Jacqueline Kennedy is the only First Lady who didn’t want to be called *First Lady*. She said it sounded like the name of a saddle horse.

the first million is the hardest. The U.S. catchphrase arose in about 1920, when millionaires were far less common, though hardly unheard of.

the first murderer. See IXION.

first name. See SURNAME.

First Nations. Canadians use *First Nations* as a synonym for the U.S. term NATIVE AMERICAN, although they are also partial to *First Canadians*. Both terms were coined in the 1970s.

first rate, etc. From Elizabethan times up until the 19th century, British warships were rated by the number of guns they carried and the weight of those guns, rather than by the weight of the ships themselves. Six rates, or categories, were applied, a mighty first-rate ship being the highest. Before long these technical navy terms were being used to describe degrees of excellence generally.

first string; second string. Archers in medieval times are responsible for these terms, so common on athletic fields today in describing first and second teams. An archer was only as good as the bowstring on the stout, five-foot English longbow, and in competitions a marksman always carried two—a *fyrst-string* to be used as his best and a second to be held in reserve lest the other should break. This led to the popular Elizabethan saying *two strings to his bow*, meaning to carry something in reserve in case of accident, which fathered our *first string* and *second string*.

first water. Arab diamond traders graded gems as first water, second water, and third water—diamonds of the first water being perfect, flawless ones. (“Water” here signified the transparency of a diamond and may be the translation of an Arabic word for luster.) Europeans used the Arab grading system for more than 300 years, and even when it was discarded in the mid-19th century the expression of *the first water* remained in English as a synonym for unsurpassed perfection in anything.

fiscal. In ancient Rome merchants used a small basket called a *fiscus*, so named because it was made of rush or reeds (*fiscus*), to carry money from one place to another. From these little baskets, so common in Rome, the public treasury was named the *fisc*, and over the centuries anything to do with money matters came to be called fiscal.

fish-and-chips. An originally British dish consisting of fish fried in batter and served with French fries (chips). The delectable dish is no longer served wrapped in newspaper, as it was traditionally. Cod used to be the fish most used by the British in their *fish n’ chips*, but haddock and hake are probably more common today. There is now at least one fish n’ chips fast food chain.

fishapod. According to the *New Oxford American Dictionary*, this is a “word of the year” (2006), meaning “a prehistoric fish with legs.”

fisherman farmer. According to the *Dictionary of Americanisms* (1877), this was said of people who alternate fishing and farming at different periods, especially on the seacoast of Massachusetts.

fisherman's joke. *Scherzo del pescatore* means a fisherman's joke. It is a fried Italian dish of small squid, or calamari, which are usually eaten by popping them in the mouth. One of the squid, however, has a sac filled with hot red pepper.

fishfall; frogfall. Fishfalls, or a rain of fish falling from the sky, have occurred fairly often throughout the world, and the word was first recorded over a century ago. They are probably due to high winds or the waterspouts that suck up fish and water and release them miles away. Similarly, frogfalls are also common phenomena, and falls of snails, mussels, shrimp, crabs, and even alligators have been widely reported. See RAINING CATS AND DOGS.

fish in troubled waters. *To fish in troubled waters*, meaning “to take advantage of another's marital troubles and gain something for yourself,” refers to the fact that fish bite best in rough waters, as all good fishermen know. The expression probably dates back to the 19th century, its origin unknown.

fish names from land animals. Many fish are named after land animals, including such terms as *alligator fish*, *bird fish*, *boar fish*, *cat fish*, *dog fish*, *elephant fish*, *frog fish*, *goat fish*, *goose fish*, *hawk fish*, *horse fish*, *leopard fish*, *lizard fish*, *parrot fish*, *porcupine fish*, *rabbit fish*, *robin fish*, *squirrel fish*, *tiger fish*, *toad fish*, *unicorn fish*, *viper fish*, *wolf fish*, and *zebra fish*.

fish or cut bait. These words, associated with politics since the late 19th century, demand that someone “take a definite stand, take action instead of procrastinating, or else stop trying and give somebody else a chance to act.” Someone in a choice fishing spot on land or aboard a ship was possibly told to stop fooling around, to either drop his line in the water and fish, or cut the bait from his line and let another fisherman take his place.

fish out of water. Older by at least several hundred years than the dates cited in the *O.E.D.* and the *Oxford Dictionary of Quotations*, this expression may even have originated with the fourth-century Greek patriarch St. Athanasius. Its earliest recorded use, however, is by English theologian and religious reformer John Wycliffe in his *English Works* (ca. 1380): “And how thei weren out of ther cloistre as fish is withouten water.” The metaphor, as widely used as ever today, describes “anyone floundering in an element or environment to which he is unaccustomed and in which he is practically helpless.”

fish royal. In the United Kingdom the *fish royal* are the sturgeon, whale, dolphin and porpoise, if caught within three miles

of the coast. Only the sturgeon among these is a fish, but ancient law makes them all the property of the Crown.

fishtailing. When a car goes into a skid on an icy road, its rear wheels spinning and tail end often swerving side to side, out of control. This U.S. expression probably dates back to the early 1930s. “He fishtailed on the icy road. It scared the hell out of me.”

fit as a fiddle. Someone or something that is fit as a fiddle is, of course, in great shape. The common expression is about 400 years old, first recorded in 1616 in England, but that is all we know about its etymology. Perhaps a fiddle was considered fit because musicians almost always treated their instruments, the source of their livelihood, with tender, loving care.

fitting. Suitable, proper, appropriate. Abraham Lincoln used the idiom in the Gettysburg Address (1863): “We have come here to dedicate a portion of that field, as a final resting place for those who here gave their lives . . . it is altogether fitting and proper that we should do this.”

fit to be tied. Somebody filled with such great anger, outrage, that one has to tie him up to calm him down. Apparently an American idiom.

five-and-ten. A name still occasionally heard for stores like F. W. Woolworth, long after it was possible to buy anything there for a nickel or a dime. Five-and-tens, or five-and-ten-cent stores, flourished from the mid-19th to the mid-20th century in America, with Woolworth's (founded by Frank Woolworth in 1879 as a five-cent store) being the most notable chain. Such stores are even remembered in popular song lyrics, including “I found my million-dollar baby in a five-and-ten-cent store,” and “and if that diamond ring don't shine, poppa's gonna take you to the five-and-dime.”

Five Civilized Tribes. A collective name given to the Cherokee, Creek, Choctaw, Chickasaw, and Seminole Indian tribes because of their adoption of European culture; in spite of this, they were deported to the Indian Territory from 1830 to 1850. Also called Five Civilized Nations.

five-day week. See EIGHT-HOUR DAY.

five-fingers. A name given to *Asterias* or starfish, found on many shores. See STARFISH.

fix. *Fix*, for the dishonest prearranging of games, races, or other sports events, is an Americanism first recorded in 1881 to describe tampering with a horse to prevent it from winning a race. It may be a shortened version of an earlier term with the same meaning, *fix up*.

fizzle. The first English meaning of the word *fizzle* was, as the *Oxford English Dictionary* put it, “to break wind,” that is, to fart. By the mid-19th century, however, the word took on the meaning of “to hiss,” the word probably first used in this sense to describe the hissing of fireworks. Similarly, *to fizzle out*, “to fail or

die out,” seems to have derived from the sound of fireworks falling to earth.

fjord; fjeld. *Fjord* and the seldom encountered *fjeld* are the only two words in English beginning with *fj*. Both are Norwegian in origin. The latter, pronounced *fyeld*, means an elevated rocky plateau virtually without vegetation, and the former, pronounced (and sometimes spelled) *fiord*, is a long narrow arm of the sea running up between high banks or cliffs, as on Norway’s coast.

flabbergasted. Astounded or utterly confused. A relatively new word, *flabbergast* is first recorded in a British magazine article called “On New Words” in 1772. It is possibly a combination of *flabby* and *aghost*, but neither the source of the word nor its inventor is known.

flack. This term has been used since the mid-1940s for “advertising copy,” ever since the similarity between rapid gunfire and exaggerated advertising copy or publicity writing was first noticed. *Flack* probably derives from the World War II acronym *flak* (from the German *Flieger abwehr Kanonen*, “aircraft defense gun”). A *flack* can also mean a public relations person today.

flagrante delicto. Latin for (catching) in the very act, or (caught) redhanded, “while the crime is blazing.”

flake. *Flake* has meant “a packet of cocaine” since the 1920s, but it first appeared in its meaning of an odd, eccentric person, often a colorful, likable eccentric, in the 1950s, probably in baseball. It possibly referred originally to “offbeat San Francisco outfielder Jackie Brandt, from whose mind, it was said, things seemed to flake off and disappear,” according to Tim Considine, writing in the *New York Times Magazine* and quoted in Paul Dickson’s *The Dickson Baseball Dictionary* (1989). Then again, the *flake* of eccentricity could derive from association with the narcotics sense of the word. Stuart Berg Flexner’s *Listening to America* (1982) says *flake* appeared “in professional football in the early 1970s, especially when referring to John Don Looney (who couldn’t, after all, be called merely a looney . . .), who attacked tackling dummies in anger and seldom heeded signs . . .” In any case, consistent sports use of the word made it common American slang.

flamethrower. During the World War I Battle of Verdun on February 21, 1916, the Germans used flamethrowers for the first time anywhere in actual combat. The word is a translation of the German *flammenwerfer*. Verdun was one of the most critical battles of the war, resulting in more than a quarter million deaths and 1 million wounded.

flamingo. This long-legged pink wading bird is named for the people of Flanders, the *Flemings*, as they were called. Flemings were widely known for their lively personalities, their flushed complexions, and their love of bright, gay clothing. Spaniard explorers in the New World thought it was a great joke naming the bird the *flamingo*, which means “a Fleming” in Spanish and became the English *flamingo* in time.

flamingo swing. The famous batting swing of Japanese player Sadaharu Oh. It is said that Oh overcame a hitch in his swing by standing on one leg for long periods of time and strengthened his wrists by swinging a heavy samurai long sword each night, slicing in half sheets of paper suspended from the ceiling. He went on to become the greatest slugger in the history of Japanese baseball.

Flanders poppies. In England the artificial red flowers sold on Remembrance Day for the benefit of war veterans are called Flanders poppies. A 1915 poem by John McCrae called “In Flanders Fields” seems to have been the first to connect this flower with the dead of World War I:

If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields.

flapper. The word *flapper* didn’t originate in the JAZZ AGE. *Flapper* was originally a British expression meaning a young girl, first recorded in 1888. This word may have derived from the flapping of the pigtailed such young girls often wore, but, on the other hand, it could come from *flap*, a loose woman, which was used as far back as the early 17th century. Another possibility is the late 18th-century British *flapper* meaning a duck too young to fly. By 1915 Americans may have finally adopted one or another of these British words to describe the wild, flighty, unconventional, pleasure-loving young women of the Roaring Twenties who boldly smoked cigarettes; drank from a flask; wore short dresses, no corsets, and stockings rolled beneath the knees; had bobbed hair; loved to dance with their “sheiks”; and were also called *jazz babies*, *hot mamas*, and *whoopie mamas*. Or the scandalous American *flapper* could descend from the British *flapper* that was used in the late 19th century to mean a very young, immoral teenager, especially one who had been trained for vice. “They all want flappers,” a sedate British actress complained in 1927, “and I can’t flap.” Another possible origin of the word is the flapping sound of unbuckled galoshes American girls favored as a fashion fad in the 1920s. The *New Dictionary of American Slang* (1986) suggests “the idea of an unfledged bird *flapping* its wings as dancers did when dancing the Charleston.” Take your choice.

flash in the pan. Old flintlock muskets had a pan, or depression, that held the priming powder. The guns fired after the trigger was pulled and sparks produced by the steel hammer striking a flint ignited the powder, which exploded the main charge. That is, the guns *sometimes* fired. Flintlocks, used since the 17th century, were unreliable weapons and frequently didn’t work. Often the powder just flared or flashed up in the pan, failing to explode the main charge because the charge was wet or because the touchhole linking the two was clogged. Flintlocks “hanging fire” like this were common enough to make the term a *flash in the pan* a natural figure of speech for “any short-lived brilliance yielding no results in the long run” and, long after the old flintlocks were relegated to museums, it is still used to describe a person who fails to live up to his early promise.

flashy. Nineteenth-century Flash men from outside the village of Flash in England’s Derbyshire were squatters, who, like some gypsies, traveled from county fair to county fair in the district

doing no good. Their slang dialect, called Flash talk, and their distinctive clothing, often bright and showy, made them quite conspicuous. The word *flashy*, used to describe conspicuous dressers, among many showy, ostentatious things, could well have been applied to anyone like them, for the word came into use at a time when they were the cause of much trouble. On the other hand, some investigators say the word simply derives from “a sudden flame” or “a lightning flash.”

flat. While many Americans are familiar with the British word *flat* for a suite of rooms, it is seldom used in the U.S. except in the old expression *cold-water flat* (one that has no running hot water). Almost all Americans would call a flat an apartment. Recent British slang for *flat* is *squat*.

flat; leave flat. Flats Made Round, gas station signs used to advertise in the depression days of the 1930s. The expression *leave flat* (as in “I don’t want friends who leave a guy flat”) seems to have been suggested by a lonely dilapidated car stranded somewhere or making its lonely way home wounded and unaided.

flatboats; store boats; keelboats; Kentucky arks. Adam Gimbel, founder of the Gimbels department store chain, among other pioneer American merchants, often fitted out flatboats with shelves and counters, stocked them with goods, and floated downriver to sell his wares on the banks of towns too small to have permanent stores. Such early American store boats stocked everything from groceries to dry goods, liquor, and gun powder. Many flew calico flags, and many at the end of each spring trip were taken apart and sold for lumber. Sometimes the merchants used KEELBOATS instead of flatboats. Intense rivalry between crews of these two types of riverboats led to bitter fights that made the boats unwelcome in some towns, but both were of great importance in developing the American West.

flat daddy; flat soldier. A large cardboard or other material cutout photo of a child’s father made when the father is at war far from home. The first of these often life-size flat daddies seems to have been ordered by military families in about 2003.

flatearthers. Some people still refuse to accept that the Earth is a sphere and rotates around the sun. One such group is the International Flat Earth Research Society in Lancaster, California. Founded in 1888, this society of flatearthers has 1,600 members accepting its tenets: that the Earth is flat, that the Sun and planets revolve around the Earth, and that the theory about the Earth being a sphere is a gigantic hoax. Says the society’s president, Charles J. Johnson: “Ever since Copernicus, the new religion-science, they call it—has been trying to fool the people with their notion that the earth is a ball. . . . They got most people to accept the hoax, but not us.” See COPERNICAN THEORY.

flatfoot. A widely used comic term for a policeman until the last 50 years or so, when it has been heard less frequently. Before policemen were called *flatfoots* they were called *flatties*, a term common in the 19th century.

flat-hatter. A hotshot pilot who flies much too low while showing off. An old story dating back to the 1920s traces the expression to a man wearing a straw hat flattened by a plane flown by such a pilot. But there is no proof of this derivation.

flathead. A name for members of a tribe of Salishan Indians of Montana and members of the Chinook Indian tribe; the name derives from their supposed practice of flattening their children’s heads at birth. The word was extended to mean a simpleton or a fool among settlers.

flatlanders. See HILLBILLY.

flattery will get you nowhere. A common U.S. phrase dating back to about 1945 and meaning don’t bother flattering me, you haven’t got a chance of it working.

flattop. Though the *Langley*, a converted coal ship commissioned in 1922, was America’s first aircraft carrier, no one thought of calling any aircraft carrier a *flattop* until World War II, when the United States built 150 carriers.

flaybottomist; bum brusher. Here is a jocular synonym for a schoolteacher in the days of “spare the rod and spoil the child.” The term for a schoolmaster originated in the mid-18th century and lasted for some 200 years. *Bum brusher* was a synonym.

fleabitten. *Fleabitten* has since the late 16th century been a *color* as well as a condition. It describes a dog, horse, or other animal with a light coat flecked with red, the reddish flecks reminiscent of the bites of fleas on human skin.

flea market. These bargain markets have nothing to do with fleas. *Flea market* has been an American expression as far back as Dutch colonial days when there was a very real Vallie (Valley) Market at the valley, or foot, of Maiden Lane in downtown Manhattan. The Vallie Market came to be abbreviated to *Vlie Market* and this was soon being pronounced *Flea Market*. Today there is a flea market (*marché aux puces*) area in Paris.

fledgling nation. *Fledgling nation* usually means a newly formed, poor nation that the United States has taken under its wing. The euphemism was probably coined by Eleanor Roosevelt after World War II.

Fleet Street. Fleet Street in London has been synonymous with journalism since the end of the 18th century, when the first newspaper was published there. The street takes its name not from fleet reporters writing stories while type is being set, but for the Fleet River that ran alongside it.

Flemish. When rope is flemished it is coiled down concentrically in the direction of the sun, or like the coil of a watch spring, beginning in the center. *Flemish* also once meant “to force or score the planks.” The terms seem to have arisen in the early 19th century and take their name from Flemish sailors, considered to be neat seamen and who may have coiled their rope like this.

flesh and blood. The phrase has two meanings, both dating back a millennium ago. The younger means one's kin: mother, father, children, siblings, etc., while the older means human-kind, any individual, a living, breathing being, not something abstract or robotic.

flesh fly. A fly that lays its eggs in dead flesh. The term is used in Shakespeare's *The Tempest* (1611).

fleshpots. The word is commonly used to mean, metaphorically, luxurious living or places offering unrestrained pleasure. In this sense *fleshpots* goes back to a biblical passage, Exodus 16:3: "And the children of Israel said unto them Would to God we had died by the hand of the Lord in the land of Egypt, when we sat by the flesh pots, and when we did eat bread to the full."

flesh-spades; flesh-tailor. In *Tom Jones* (1749) Fielding writes about "The injury done to the beauty of her husband by the 'flesh-spades' of Mrs. Honour." The humorous term *flesh-spade* for fingernails, those digging tools protruding from our fingers, may have been invented by the British novelist, but there is no proof of this. *Flesh-tailor* was a 17th-century term for a surgeon, used by John Ford in his play *'Tis Pity She's a Whore* (1633).

Fleshy School of Poetry. The poet and painter Dante Gabriel Rossetti was viciously attacked from a moral point of view by the poet Robert Buchanan in an article in the *Contemporary Review* called "The Fleshy School of Poetry." Published in October 1871 under the pseudonym Thomas Maitland, the article accused Rossetti, Swinburne, William Morris, and several others of being decadent, morally irresponsible, and obsessed with the sensual and carnal. The piece created great controversy, Swinburne replying at length to the charges in his *Under the Microscope* (1872), and Rossetti, who got the brunt of the criticism, never really recovering from it. His tendency toward gloomy brooding increased, he avoided people, overused narcotics, and became paranoid enough for friends to fear for his sanity. Rossetti died in 1882 at age 54. See SNARK.

fletcherize. The author of *Glutton or Epicure* (1899) advocated cutting out regular meals and eating only when really hungry, consuming very small amounts of food at one time, and chewing each tiny mouthful vigorously and thoroughly before swallowing. Horace Fletcher (1849–1919), a Lawrence, Massachusetts businessman turned nutritionist, believed that this regimen—which he had followed from the time he went on a diet and lost 65 pounds at age 40—would promote better digestion and health as excellent as his own. *Fletcherism*, described more fully in a later book of that name, swept the country; thousands attended Fletcher's lectures and followed his instructions to the letter. As a result of the health fad, the word *fletcherize*, "to masticate food thoroughly," became a common expression that still remains in the dictionaries. Fletcher had really borrowed his idea of 32 chews to the bite from British prime minister Gladstone, who "made it a rule, to give every tooth of mine a chance," and who claimed he owed much of his success in life to this rule. Slogans like "Nature will castigate those who don't masticate" won Fletcher many famous con-

verts, including John D. Rockefeller, Thomas Edison, William James, and the cadets at West Point.

fleur-de-lis; iris. *Fleur-de-lis*, or lily flower, is the French name for the iris, which is so named because its striking colors reminded the Greeks of Iris, goddess of the rainbow. The French symbol of empire since the 12th century, the *fleur-de-lis* was chosen by the 14th-century Italian navigator Flavio Gioja to mark the north point of the compass in honor of the King of Naples, who was of French descent.

flexitarian. A vegetarian who is flexible—that is, someone who once in a while eats meat.

flibbertigibbety. Silly restless actions are called *flibbertigibbety* after Flibbertigibbet, one of the five fiends who possessed "poor Tom" in Shakespeare's *King Lear*. Shakespeare borrowed the character and his name from an earlier work.

flicker. Any large North American woodpecker of the genus *Colaptes*, especially the species *C. auratus*, the common flicker. Flickers are not named for their "flickering flight," as has often been claimed, but after one of their calls: *flick-a, flick-a, flick-a*.

Flickertail State. An old nickname for North Dakota, because of its many flickertail squirrels.

floater. In medical slang a *floater* can refer to a corpse found floating in water. It is also a speck, dot, or string that seems to be floating across the eye just outside the line of vision that is caused by cell fragments in the vitreous humor registering on the retina. In recent slang a floater can mean an employee of a firm who "floats" from department to department.

float like a butterfly, sting like a bee. Words describing Muhammad Ali's boxing technique. His trainer and friend Bundini Brown coined the phrase when Ali was still Cassius Clay in the 1960s. One of Ali's major opponents in his fights was Joe Frazier, whom he taunted whenever he could, calling him an "ugly old bear," among other choice insults. Today Frazier calls him the Butterfly. See BUTTERFLY.

flog (or beat) a dead horse. Though he supported the measure, British politician and orator John Bright thought the Reform Bill of 1867, which called for more democratic representation, would never be passed by Parliament. Trying to rouse Parliament from its apathy on the issue, he said in a speech, would be like trying to *flog a dead horse* to make it pull a load. This is the first recorded use of the expression, which is still common for "trying to revive interest in an apparently hopeless issue." Bright's silver tongue is also responsible for "England is the mother of Parliament," and "Force is not a remedy," among other memorable quotations. He was wrong about the Reform Bill of 1867, however. Parliament "carried" it, as the British say.

floor broker. Brokers today are associated with stocks or real estate, but all brokers were originally *brocours*, or men

who opened up wine casks (usually to bottle and sell the wine inside). This old French word came to be transferred to wine salesmen, or brokers, and finally to one who sold anything at all. Wall Street brokers who work on the floor (or in the pit) of the exchange are called *floor brokers*; they were once called \$2 *brokers* because they received a fee of \$2 per transaction.

floor-through. An American term, heard in New York City, for an apartment in a small apartment building, such as a brownstone, that takes up an entire floor. “They rented a nice floor-through.”

floorwalker. “Dandified ushers,” the first department store floorwalkers were called, and in the 1890s that was often exactly what they were. Dressed in either a black frock or a cutaway coat, with gray-striped trousers, a very high collar, and a rose in the buttonhole, the floorwalker was usually a spiffy, or smarmy, exceedingly polite living directory, who pompously patrolled the aisles, the arbiter elegantiarum of conduct and store etiquette. Charlie Chaplin knew the type well and portrayed one in his film *The Floorwalker*. Today floorwalkers are more often called *floor managers*, their main job still the supervision of sales personnel and assistance of customers.

floozie. “Flat-Foot Floogy with the Floy Floy,” a popular song in 1945, spelled *floozie* differently, but it meant the same. A floosie, floogy, flugie, or even faloosie is a gaudily dressed, dumb, disrespected, frequently high-spirited woman, often a prostitute. If the word derives from *Flossie*, a nickname for Florence, no one has proved it, and the word was first recorded in the form of *flugie* at the turn of the century. Hollywood’s HAYS CODE banned *floozie*, along with *red-hot mamma* and other words, but the term got a breath of new life with the song mentioned above, which describes a floozie with what it seems is a kind of venereal disease, the floy floy. This American slang, as a British writer observes, is “picturesque” and should be retained for its “blousy flowery atmosphere” suggesting “good spirits, gaudy flowered dresses, and bad but delightful perfume.”

flopper. In American slang for over a century, a *flopper* can be a swindler; a beggar displaying or feigning a disability; or a person who switches political parties for his own benefit. *Flopper* is also another name for a flounder, a fish known for its flopping from one side to the other when caught and landed on the deck of a boat. Unrecorded anywhere I’ve looked, this last term was mentioned in the 1940s film *Man on the Ledge*.

Flora. The ancient Roman goddess of flowers and fertility. Her name was used in the 17th century as a title for botanical works and vastly popularized by Linnaeus in his great works. *SEE FLOUR; FLOWERS.*

floral firecracker. *SEE BREVOORTIA IDA-MAIA.*

Florida. “The Sunshine State” was the Florida Territory before being admitted to the Union as the 27th state in 1845. *Florida* means “land of flowers” in Spanish, Ponce de Leon naming it in 1513 with “flowery Easter” in mind.

Florida room. A term used in Florida and other states for a living room with large windows to catch the sun; also called a sun room.

flotsam and jetsam. *Flotsam*, from the Old French *floter* (Latin *fluere*), “to float,” means the contents or parts of a wreck found floating on the sea, and belonged to the Crown. *Jetsam*, which could be claimed by the lord of the manor, derives from the French *jeter* (Latin *jacere*), “to throw out,” and means cargo or equipment purposely thrown overboard, or jettisoned, in order to lighten a ship in an emergency. Jetsam was considered flotsam only if it was found between the high and low waterlines, because no one could tell whether it had been jettisoned there or had floated there.

flour. *SEE FLOWER.*

flourish. An old euphemism for the sex act used by Virginia tobacco planter, author, and colonial official William Byrd, who kept a secret diary in shorthand as an avocation, never intending for it to be published. He had no inhibitions about married love, judging by his entry for July 30, 1710: “In the afternoon my wife and I had a little quarrel which I reconciled with a flourish. Then she read a sermon in Dr. Tillison to me. It is to be observed that the flourish was performed on the billiard table.”

flower; flour. In Anglo-Saxon times the word for flower was *blossom*; this changed after the Normans conquered England in 1066, and their *fleur* became the English *flower*. However, all three words have the same common ancestor—the ancient Indo-European *blo*, which eventually yielded both *blossom* and *flower*. *Flour*, the finely ground meal of any grain, is just a specialized use of the word *flower*. In fact, *flower* and *flour* were used interchangeably until the 19th century, as in Milton’s *Paradise Lost*, where we find the line “O flours that never will in other climate grow.” In French *fleur de farine* is the flower or finest part of the grain meal. Still used today and one of the longest-lived modern-day slogans, the phrase *say it with flowers* was coined for the Society of American Florists in 1917 by plantsman Patrick F. O’Keefe (1872–1934). *Cut flowers* is an old term for flowers cut from the garden for bouquets or display. A visitor once asked George Bernard Shaw why he kept no vases of cut flowers. “I thought you were so fond of flowers,” he said. “So I am,” Shaw retorted. “I’m very fond of children too. But I don’t cut off their heads and stick them in pots all over the house.” According to tradition, Saint Elizabeth of Hungary gave so much food to the poor that her own household didn’t eat well. Her husband suspected this and when he saw her leaving the house one day with her apron full of something, he demanded to know what she carried. “Only flowers, my lord,” Elizabeth said, and God saved her from her lie by changing the loaves of bread in her apron to flowers. *SEE BLOSSOM.*

flower people. *SEE BEAUTIFUL PEOPLE.*

Flowery Kingdom. The most ancient name of China, a translation of *Hua Kuo*. One theory has it that the Chinese first resided in barren central Asia and named their new country *flowery* in contrast to their grim desert home. But *Hua Kuo*

may have been meant in one of the words other meanings of glorious, distinguished, and polished, with no reference to flowers at all.

floy floy. See FLOOZIE.

fluke. In its meaning of a good or bad chance happening, fluke was originally British slang of obscure origin, perhaps deriving from “an accidentally successful stroke in billiards or pool,” which is first recorded in 1857. Robert L. Chapman, in *New Dictionary of American Slang*, suggests that the term may have come to billiards jargon from the early 1800s British slang of *flat*, “easy dupe, victim.”

flume. (1) A narrow ravine worn or cut out by a stream. (2) Capitalized, the name of a famous flume in New Hampshire’s White Mountains.

flummery. Flattery, meaningless deceptive language. The word, dating back to the 1840s, comes from *flummery*, the name of a soft paplike food fit for infants, which in turn derives from Welsh *llymru* meaning the same.

flunky. *Flunky*, also spelled *flunkey*, was originally a very nice Scots word, probably deriving from *flanker*, “one who stands at a person’s flank or side.” *Flunky* was simply the word for a servant or footman, but by the 19th century it took on its contemptuous meaning of a lackey, a slavish, obedient servant who will always do his master’s bidding.

fly a kite; kiting. *Go fly a kite!* means “get lost, don’t bother me, go do something somewhere else.” *To fly a kite* is another story. This is Irish, not American, slang dating back to the early 19th century and means “to raise money on a fraudulent note or to cash a check without having the funds in the bank to cover it.” The expression possibly derives from an older Irish phrase, *to raise the wind*, “to borrow money,” but in any event it suggests an action far removed from down-to-earth reality and honesty. *To fly a kite* isn’t heard much anymore, the expression *kiting* being used in its place. Someone *kites* a check when he overdraws his account and quickly cashes another check somewhere else, depositing this cash in the bank to cover the original shortage. The *kiting* can go on for sometime, with new obligations incurred again and again to discharge old ones—a kite soaring farther and farther away from firm ground.

fly below the radar. To avoid detection. “He flew below the radar for a long time, but the police finally got him.” The term has its origin among fliers in World War II.

fly-by-night. *Fly-by-night* was originally an ancient term of reproach to an old woman, signifying she is a witch, according to Grose’s *Dictionary of the Vulgar Tongue*. From a witch flying about at night on a broom, the term was applied, at the beginning of the 19th century, to anyone who flies hurriedly from a recent activity, usually a business activity and usually at night—someone who is a swindler and whose activities are fraudulent. The first fly-by-night operator recorded in English makes his appearance in Thomas Love Peacock’s novel *Maid Marian*

(1822), a parody of the Robin Hood legend in which a character refers to Maid Marian and the outlaw: “Would you have her married to an old fly-by-night that accident made an earl and nature a deer-stealer?” *Fly-by-night* has also been, in British slang, a prostitute and a prostitute’s vagina.

fly by the seat of one’s pants. To fly a plane by instinct rather than by instruments. Originally a British Army Air Corps expression from the 1930s, the term was soon applied to any work without formal guidance. *Flier* for an aviator is first recorded in 1934.

flyer. The name Australians use for a female kangaroo. See KANGA.

flying clippers. See CLIPPER SHIP.

Flying Dutchman. The legend of the *Flying Dutchman* trying to round the Cape of Good Hope against strong winds and never succeeding, then trying to make Cape Horn and failing there too, has been the most famous of maritime ghost stories for over 300 years. The cursed spectral ship sailing back and forth on its endless voyage, its ancient white-haired crew crying for help while hauling at her sails, inspired Samuel Taylor Coleridge to write his classic “The Rime of the Ancient Mariner.” The real *Flying Dutchman* is supposed to have set sail in 1660.

flying fish. The name generally given to fishes of the *Exocoetidae* family. These are the fish Kipling wrote about: “On the road to Mandalay / Where the flying fishes play.” However, they aren’t playing in their leaps out of the water; they are trying to escape hunters like the dorados that are pursuing them. Vibrating their tail fins at a rate of 50 beats a second, these “dragonflies of the deep” build up momentum; with both pairs of “wings” spread they soon become airborne and glide over the waves at a speed of up to 40 miles an hour. They can cover the length of three football fields, jumping as high as 45 feet into the air. They hit the water tail first, scull again to regain propulsion, and then fly another 25 feet or so, taking about 45 seconds to cover one-quarter of a mile in the course of 10 or so leaps.

flying machine. The Wright brothers, Orville and Wilbur, liked to call their epochal invention a *flying machine*, never an *airplane*, *aeroplane*, *aerial ship*, or *aerial machine*. The term *flying machine* is recorded as far back as 1730. The name of the Wright’s plane, which on December 17, 1903, near Kitty Hawk, North Carolina, made the first powered flight in a heavier-than-air craft, was the *Wright Flyer*, an appellation they chose in honor of something so down-to-earth as a bicycle brand these bicycle shop owners (and high school dropouts) made and sold back in their Dayton, Ohio, store. A place with a *hawk* in it would be a wonderful location for the world’s first airplane flight, but the Wright flight actually took place not in Kitty Hawk, as is usually said, but on Kill Devil Hill, a place close by.

flying saucer. U.S. pilot Kenneth Arnold is said to have been the first earthling to sight a flying saucer, in June 1947, near Mount Ranier in Washington State. Arnold has also been

credited with naming the dish-shaped object many believed to have come from outer space. But unidentified flying objects have been reported since at least 1878 in America, when a Texas *Daily News* story told of a flying object “about the size of a large saucer” that some pedestrian had spotted directly over and far above his head. In any case, there have been thousands of sightings since Arnold’s, but no landing so far as we know. See U.F.O.

the flying toilet. An expression heard in the huge foul slum called Dharavi in Mumbai, India. Dharavi is just one of many places worldwide where most people haven’t even the simplest sewage systems. For example, in Kibera, a fetid slum, people defecate in plastic bags that they dump in ditches or toss across the street—a practice they call *the flying toilet*.

The Flying Tomato. A nickname of red-headed Shaun White, the world’s best-known snowboarder. His shoulder-length red locks flow behind him as he flies downhill. White began his career when only seven. He often did stunt work for child stars.

fly in the ointment. “Dead flies cause the ointment of the apothecary to send forth a stinking savour; so doth a little folly him that is in reputation for wisdom and honour.” The unknown author of the biblical book of Ecclesiastes (a Greek rendering of the Hebrew word *Kohleth*, “preacher”) wrote this sometime in the third century B.C. Like many other vivid figures of speech in the 21st book of the Old Testament (“Vanity of vanities, saith the preacher; all is vanity . . .” “For everything there is a season . . .” “He who digs a pit will fall into it . . .” etc.), these words from the first verse of the 10th chapter became proverbial when translated into English. For five centuries now a *fly in the ointment* has meant a small defect that spoils something valuable or is a source of annoyance.

fly off the handle. Axes in American pioneer days were frequently handmade, frontiersmen whittling their own handles and attaching axe-heads shipped from back East. Because they were often crudely fitted to the helve, these axe-heads often flew off the handle while woodsmen were chopping down trees or preparing firewood, sometimes injuring the axeman or people nearby. The sudden flying of the head off the axe, and the trouble this caused, naturally suggested a sudden wild outburst of anger, the loss of self-control, or the losing of one’s head that the expression *to fly off the handle* describes. The expression is first recorded in John Neal’s novel *Brother Jonathan; or the New Englanders* (1825) as *off the handle*, but isn’t known in its full form until 1844, when it was used in still another of Thomas Haliburton’s “Sam Slick” tales. See FEEL ONE’S OATS.

a fly on the wall. A relatively new phrase (20th century) alluding to a fly that is on the wall unnoticed in a room and is seeing or hearing everything going on inside, as in “I’d sure like to be a fly on the wall in there.”

fly the flag at half mast. To mourn someone. The naval practice of flying a ship’s flag halfway up the main mast as a sign of respect for a sailor killed in battle dates back at least 400 years. The custom soon spread to military installations, public places, and even homes with flagpoles.

flyting. See LOGOMACHY; RAP MUSIC.

fly-up-the-creek. We don’t hear this expression today, but it is recorded as early as 1845 as the nickname for a resident of Florida. Floridians were so called because *fly-up-the-creek* is a popular name of the small green heron common in the state. Walt Whitman used the expression in this sense and it later meant “a giddy capricious person.”

F.M.C.; F.W.C. There were a good number of freed and escaped slaves in America long before the Civil War. By 1840 the terms *F.M.C.*, for “free man of color,” and *F.W.C.*, for “free woman of color,” are recorded, and blacks for many years proudly affixed the terms after their names.

fo’c’sle. See FORECASTLE.

focus. In Latin the word *focus* means fireplace or hearth. The word was probably first employed outside of its Latin literal use as “the burning point of a lens or mirror,” in optics, and then came to mean any central point. The German astronomer Johannes Kepler first recorded the word in this sense in 1604.

fofarraw. Tawdry baubles and trinkets, or clothes, as in “He traded his furs for all that fofarraw.” The word probably derives from the Spanish *fanfarron* (braggart). It is also spelled foofarar.

Fog City. A local name for San Francisco, named proudly by natives.

Foggy Bottom. This derogatory name for the U.S. State Department in Washington, D.C., is said to have been coined by Washington *Post* columnist Edward Folliard in the early 1940s. Previously *Foggy Bottom* was a marshy area of the Potomac River where the State Department is now located. This (and the foggy GOBBLEDYGOOK of official State Department papers) accounts for the persistence of the disparaging name.

fog’s so thick you kin hardly spit. A Maine saying recorded in John Wallace, *Village Down East* (1943).

fohn. The famous dry spring wind, varying from warm to hot, that blows along and down the valleys on the northern side of the Alps, melting snow in its path. Its name derives from the Latin *Favonius* for the West Wind.

foie gras; stuffed as a goose; fed up. *Foie gras* literally means “fat liver” in French. Despite its unappetizing name, it has been considered a royal dish from earliest times, the most desirable and expensive of all the patés. The making of foie gras is nothing to be talked about while eating it. Traditionally, a goose was tied down firmly so that it could move only its neck, and six times a day “crammers” used their middle fingers to push into the throats of these geese a thick paste made of buckwheat flour, chestnut flour, and stewed maize. Today the process is hardly more humane. When about six months old, those birds fated for foie gras are crammed into wooden cages along with plentiful food and water. There they would eventually eat

themselves to death by suffocation if their keepers did not slaughter them and remove their swollen livers after about six weeks. At that time they're so fat they can barely move, having gorged themselves on over 70 pounds of food. It is said that the term **FED UP** derives from this cruel practice, though there is no hard evidence of the derivation. *Stuffed as a goose* might more likely derive from the sight of a stuffed goose on a Christmas dinner table. English clergyman and wit Sydney Smith (1771–1845), among others, has been credited with the famous bon mot “My idea of heaven is eating paté de foie gras to the sound of trumpets.”

foliation. A beauty cream made from the spikenard plant *Nardostachys jatamansi* and named for the Roman Folia who first prepared it. The spikenard, mentioned in the Bible, was a costly aromatic ointment that Mary Magdalene broke over Jesus' feet. It is also called Indian root and nard.

folio. See **BOOK**.

folklore. British antiquary William John Thoms, the founder of *Notes and Queries*, coined this word in the *Athenaeum* (August 1846). In an article therein entitled “Folk Lore” he wrote: “What we in England designate as Popular Antiquities, or Popular Literature . . . would be more aptly described by a good Saxon compound, Folk-Lore—the Lore of the People . . .”

folk-maal. Norwegian philologist Ivar Andreas Aasen (1813–96) is the only person known to have created a national language. The author had collected all of his country's difficult regional speech for the books he had written on Norwegian dialects. Out of these he fashioned a popular language, or *folk-maal*, which replaced the Dano-Norwegian his countrymen had previously used, to enable all the nation's different dialect users to understand each other. Aasen has been hailed as having “an isolated place in history as the one man who has invented or at least selected and constructed a [national] language.” In order to do this, he not only constructed the new composite language, but also wrote poems and plays in the folk-maal to help popularize it. See **SEQUOIA**.

follow one's nose. To go straight forward, or, figuratively, to be guided by instinct. Shakespeare used the term, first recorded in 1591, in *King Lear* (1605).

follow the tongue. A phrase common among Americans following the rutted Oregon Trail west in the 1840s and 1850s at about three miles an hour. “At night,” writes David Dary in *The Oregon Trail* (2005), “the tongue of the lead wagon was pointed toward the North Star, so that the wagon train could orient itself the next morning.”

fond. If you were fond of someone several centuries ago, you would have been “foolishly affectionate or doting.” In fact, *fond* originally meant “foolish.” But over the years the word has changed in meaning and now to be fond of someone means to have a strong liking for that person.

fontange. Through the ages women's hair has been tortured into shapes of full sails, bird nests with fledglings in them, and

even windmills, but no style has ever topped the fontange created by Louis XIV's beautiful red-haired mistress. In the brief time that they were lovers “The Sun King” made Marie-Angelique de Scorraille de Roussilles, duchesse de Fontanges, a territory in France. She died all too soon in 1681, when only 20, but a year before her death the lovely young woman introduced what was probably the most extravagant, expensive hairdo in the history of coiffures. Called a fontange after her, this pile of style rose to heights of two feet and more above the wearer's head, including feathers, bows, and a large assortment of jeweled ornaments in the gummed-linen circular bands that held them in place. So great a nuisance did fontanges become that Louis XIV had to issue a royal decree abolishing them in 1699. To the duchess's further shame, the hairdo was dubbed a “commode” in England, and *fontange* itself was adopted as a polite word for a commode, the piece of furniture having come into use in the late 17th century and serving as a toilet among other uses.

foodie. A foodie, in recent slang, is a gourmand, someone who is a lover of good food. The new word is not widely recorded, but it certainly is widely used. I've never heard it used in the gourmand sense of “a gluttonous eater.”

fool. The Latin word *follis*, which literally meant “bellows” but came to mean a “windbag,” gives us our word *fool*—foolishness and tongue-wagging being equated early on.

fool killer. A character of folklore who kills fools. Wrote Stephen Vincent Benét in *Tales Before Midnight* (1939): “Whenever he heard of the death of somebody he didn't like, he'd say, ‘Well, the Fool-Killer's come for so-and-so,’ and sort of smack his lips.”

foolscap. A size of drawing or printing paper measuring 13½×17 inches that is so named because the watermark of a fool's or jester's cap was formerly used on such paper. One old story holds that in 1653 Cromwell invented the design to replace the royal crown used on the paper, but the fool's cap design dates back to at least 1540.

fool's gold. A term coined in the American West around 1875 for iron or copper pyrites, which are sometimes mistaken for gold; used figuratively to mean anything that deceives a person. “That's fool's gold. See how green those flakes look in the light? Real gold don't do that,” wrote Anke Kristke in *Women of the West* (1990).

the fool's tax. No reference consulted lists this term, but the *New York Times* cites it in an editorial (8/29/01): “Lotteries have collectively taken the name ‘the fool's tax’ because the odds of winning are so small . . . [Powerball, for example, offers odds of one in 80 million] . . . In New York State, as many as one in every eleven players is a compulsive gambler feeding an addiction.”

football. The American game of football has been traced back to a wild and bloody game related to the Roman game of harpastum, which had been known in England since the Roman conquest of A.D. 43. It was essentially a free-for-all in which a pack of young men (sometimes numbering in the hun-

dreds) would try to kick, push, and butt an air-filled bladder into a rival group's area often a mile or more away. First the game was called kicking the bladder (a leather ball made by the local shoemaker), then during the Danish invasion, kicking the Dane's head, though skulls probably weren't used. The game wasn't played on a field with boundaries until the 12th century, when the name *fut balle* was first given to it. The sport was often banned but never successfully, and it eventually evolved into rugby football, which became the American sport of football. *See also* FOOTBALL PLAYER; RUGBY.

football player. Though Shakespeare did not use the modern spelling, the term *football player* is first recorded in his *King Lear* (1605): "I'll not be stricken, my Lord." "Nor tripped, neither, you base futball player." *See* FOOTBALL.

footnote. Used mostly in scholarly works to list a source or make a minor or related comment on the main text of a work, footnotes are so called because they are usually placed at the bottom of a page. Often called *bottom notes* in the early 19th century, when they were apparently used extensively for the first time, they are indicated in the text by superior numbers. Many readers would agree with John Barrymore, who said: "A footnote is like running downstairs to answer the doorbell on the first night of marriage." When historian Sir John Newle published his excellent biography *Queen Elizabeth* (1975) without footnotes, an Oxford don told historian Eileen Power that this indicated Newle had sold the pass—that is, traded scholarship for popularity. "I don't know about selling the pass," Power rejoined, "but he has sold 20,000 copies."

forbidden fruit. An ancient phrase that has its origins in Gen. 3:3, although the exact words are not found there: "But of the fruit of the tree which is in the midst of the garden, God hath said, Ye shall not eat of it, neither shall ye touch it, lest ye die." Figuratively, *forbidden fruit* is usually used to describe a tempting but forbidden person or thing.

forbidden to enter a woman. An example troubled English in other countries. In this possibly apocryphal case we have a sign on a temple door in Burma reading: *It Is Forbidden to Enter a Woman Even a Foreigner If Dressed as a Man.*

for crying out loud. An Americanism first recorded in 1924, but probably dating back earlier, *for crying out loud* is what is called a "minced oath," a euphemism that may have originated when someone started to say "For Christ's sake!" but got only as far as the first syllable of the second word, realized the curse was inappropriate in the circumstances, and changed the offensive word to "crying." It's hard to believe that this common expression was consciously invented by someone. But it has been traced to American cartoonist and prolific word coiner Thomas Aloysius (TAD) Dorgan (1877–1929).

Ford. John Dillinger, the first "public enemy number one," once wrote Henry Ford extolling the performance of his car as a getaway vehicle. That curious incident shows just how widespread was the Ford's really incalculable influence on society, both good and bad. Henry Ford's motor cars, though not the first invented, put America and the world on wheels, his

assembly-line and mass-production methods marking the beginning of modern industry, and his "Five Dollar Day" heralding a new era for labor. Ford (1863–1947), born on a farm near Detroit, Michigan, founded the Ford Motor Company in 1903. First came his two-cylinder Model A and then in 1909 the immortal Model T, the Tin Lizzie, the flivver, America's monument to love, available in any color so long as it was black. Fifteen million of these cars were built over almost 20 years—a record that lasted until the Volkswagen broke it in 1972—and any cheap, dependable car became known as a Ford. The word is usually capitalized now, but Ford still remains a symbol of American mechanical ingenuity. Though he was often controversial and foolish in his public life, no one has ever doubted the inventor's genius. He is honored today by both the motor company bearing his name and the philanthropic Ford Foundation. *See also* CADILLAC.

Ford's Theatre. The national landmark in Washington, D. C., was a Baptist church before theatrical manager John Thompson Ford converted it to a playhouse in 1861 and named it after himself. Only a year later it burned to the ground in a mysterious fire. Ford rebuilt it in brick the following year, only to see it become the most famous—or infamous—American theater on April 14, 1865, when Abraham Lincoln was assassinated there. The theater was then purchased by the U.S. government and converted into an office building. But the jinx continued in 1890, when part of the building collapsed, killing 22 government workers. Since it reopened as the restored Ford's Theatre in 1965, there have been no further incidents.

FORD TO CITY: DROP DEAD. In a speech on October 29, 1975, President Gerald R. Ford denied ever refusing New York City federal financial assistance. Possibly he merely implied such a rejection. In any event, the headline FORD TO CITY . . . that the *New York Daily News* printed on its front page became a lasting literary piece no matter how short.

fore! This golfing term meaning "watch out" hasn't been with us for much more than a century, being first recorded in 1878, though the game of golf is much older. Deriving from the word *before!*, "in front of," it probably was coined when the harder golf ball came into use at that time.

forecastle (fo'c'sle). By the 14th century the forward part of many large ships had an area that was raised and protected like a castle, from which the captain could overlook the decks of an enemy ship. Today the forecandle is simply "that part of the upper deck forward of the foremast or, in merchant ships, the forward part of the vessel under the deck, where the sailors live." *Forecandle* is almost always spelled and pronounced *fo'c'sle* (fo'ksl).

Forefather's Day. A New England holiday, celebrated mostly in Massachusetts on December 21, that commemorates the Pilgrims' landing at Plymouth in 1620. Traditionally, samp porridge is served on this day, which is not a legal holiday. The annual holiday was first celebrated at Plymouth, Massachusetts, in 1769.

foreigner. A word used in New England meaning someone not born in a town or area, even if he or she has lived there for many years.

Forest City. At least three American cities share this nickname because of the many trees in their vicinity. These include Portland, Maine; Savannah, Georgia; and Cleveland, Ohio.

the forest primeval. A phrase from Henry Wadsworth Longfellow's narrative poem *Evangeline* (1847), once taught in almost every American high school:

This is the forest primeval. The murmuring pines and
the hemlocks . . .
Stand like Druids of old, with voices sad and prophetic.

forget it! As an expression of annoyance or anger meaning "never mind," *forget it!* has been popular since before 1912, when the Americanism, in the form of *aw, forget it*, was discussed in a scholarly work on slang. The term enjoyed a resurgence of popularity in the hippie 1960s.

forget-me-not. We have it on the authority of the little volume *Drops from Flora's Cup* (1845) that this flower (*Myosotis palustris*), also called the "mouse ear" due to the resemblance of its small leaves to the ears of a mouse, received its more popular name in the following way: In an age when ladies were ladies and gentlemen were gentlemen, sometimes to a fault, an engaged lady and gentleman were walking on the banks of the Danube when the lady spied a flower floating on the water. Knowing that she was sad to see the pretty flower lost, the gentleman waded into the water to retrieve it. But he stepped in over his head and couldn't get back to shore. With a last desperate effort he threw the flower at her feet, exclaimed "forget me not," and drowned. The flower's name since that time has been the same. The tale is not recorded elsewhere, so far as I know.

forgotten man. Franklin Roosevelt popularized this phrase when running for president in 1932, applying it to all those suffering during the Great Depression whom government had done little to help. The term was invented, however, by Yale professor William G. Sumner, who in 1883 applied it to the American workingman, the decent, average American citizen.

Forgotten War; police action; conflict; 38th parallel. *Forgotten War* is a tag for the war, or conflict, in Korea, which began on June 25, 1950, and cost 33,629 American lives before the July 1953 cease-fire. Korea is called the "Forgotten War" because it is often ignored, coming as it does after World War II and before Vietnam. It should be added that neither the United States nor its UN allies ever declared war in Korea (President Truman called the fighting a *police action*), and 50 years later, the war still hasn't technically ended, both South Korea and North Korea maintaining troops along the 38th parallel border. According to *Time Goes To War* (2002): "Even this demarcation between the two [sides] had been hastily—almost randomly—selected by two young U.S. officers working with a student atlas late at night in the closing days of World War II." See MANSEI!

for he's a jolly good fellow. Only "Happy Birthday," written in 1893, has been sung more frequently than the popular "For He's a Jolly Good Fellow," according to the *Guinness Book of World Records*. "Jolly Good Fellow," however, is much older. It was originally the French song "Malbrouk," which dates back to at least 1781.

fork. The dinner-table fork takes its name from the farmer's pitchfork. The first such eating instrument was brought to England in the mid-15th century and named for the big fork it resembled in miniature. The pitchfork called a fork is recorded in England more than 400 years earlier.

forlorn hope. This expression is one of the best, or worst, examples of folk etymology recorded anywhere. The Dutch called a small squad of volunteer soldiers assigned to an extremely perilous mission a *verloren hoop*, "a lost troop." Such a squad of doomed death-defiers was called *enfants perdus* ("lost children") by the French, *verloren Kinder* by the Germans, and in modern times might be described as *shock troops* or *point men* in the U.S. Army, or *kamikaze*, "suicide pilots," by the Japanese. Though *verloren* does not mean "forlorn" and *hoop* does not mean "hope," the Dutch words sound like these English words, and *verloren hoop* was spelled *forlorn hope* by the Englishmen. The expression was first applied to similar bands of English soldiers picked to lead attacks, but by 1641 *forlorn hope's* common meaning of any undertaking almost surely doomed to failure, any vain expectation, was established. The poor chances of success and high casualties suffered by forlorn hope squads are mainly responsible for the expression's staying power, but the pathos and word music of "forlorn"—alliterative and suggesting "forgotten," "forsaken"—were helpful, too.

to form a firing squad in a circle. Said of any group that does great harm to itself, shoots itself in its collective foot. I had never heard this expression until the 2001 New York City mayoral election, when former Mayor David Dinkens told an interviewer, "The Democratic party tends to form a firing squad in a circle," that is, often eliminates or badly wounds itself by its infighting. I've been unable to find the expression recorded elsewhere.

for my next trick . . . These words, "followed by a pause," says lexicographer Tom McArthur, "are especially said by someone who has just botched something." The expression derives from the patter of stage magicians in the 1930s and is a good example of a catchphrase that has become a lasting idiom of the language.

fornication. *Fornication* was one of the words Noah Webster tried to BOWDLERIZE from the Bible in 1833. He substituted *lewdness* for it, but *fornication* remained popular in love and language. The word comes from the Latin *fornix*, for "an arch or vault." Since brothels in ancient Rome were often in caves or under arches (not always: they were sometimes even located in baker's ovens), *fornix* became the Latin for a brothel, which eventually gave us the English word *fornicate*. *Fornicate* strictly means "voluntary sexual intercourse between unmarried men and women," but it more generally means the four-letter word nobody wants to print.

for openers. See JUST FOR OPENERS.

for Pete's sake. Stop annoying me, cut it out. The old expression could be a euphemistic variation on *for pity's sake* or it could have something to do with St. Peter. No one knows for sure.

forsythia. These handsome yellow-flowered shrubs, their bloom the first obvious sign of spring in many places, were named for William Forsyth (1737–1804), a Scottish gardener and horticulturist who became superintendent of the royal gardens at St. James and Kensington in London. Forsyth introduced many unusual ornamental plants to England and may have personally brought the forsythia from China. Also the inventor of a plaster that stimulates new growth in dying diseased trees, he received formal thanks from Parliament for this contribution. The *Forsythia* genus is especially valuable to gardeners because it is easy to propagate, is virtually carefree, and does well in partial shade. Incidentally, most people in the U.S. pronounce the plant's name *for-sith-ia*, though it should strictly be pronounced *for-sigh-thia* since Forsyth pronounced his name *For-sigh-th*.

fortnight. See SE'NNIGHT.

fortune cookies. The cookie with a fortune inside was invented in 1918 by David Jung, a contemporary Chinese immigrant who had established Los Angeles's Hong Kong Noodle Company. Jung got the idea after noting how bored customers got while waiting for their orders in Chinese restaurants. He employed a Presbyterian minister (the first fortune cookie author!) to write condensations of biblical messages and later hired Marie Raine, the wife of one of his salesmen, who became the Shakespeare of fortune cookies, writing thousands of classic fortunes such as "Your feet shall walk upon a plush carpet of contentment." The Hong Kong Noodle Company is still in business, as are hundreds of other fortune cookie "publishers." Notable ones include Misfortune Cookies of Los Angeles: "Look forward to love and marriage, but not with the same person." Today fortune cookies are of course served at the end of a meal.

fortunella. *Fortunella*, or the kumquat, is the only genus of well-known fruit trees to be named for a living person, and no more deserving eponym could be found than Robert Fortune (1813–80), Scottish botanist and traveler. Few men have equaled Fortune as a plant hunter. The author of *Three Years' Wanderings in the Northern Provinces of China* (1847) and other botanical books began traveling in the Orient for the Royal Horticultural Society in 1842. A former employee in the Society's English gardens, his express orders were to collect flora and he brought many beautiful plants back to Europe, including the kumquat, tree peonies, the Japanese anemone, and a number of chrysanthemums. Fortune also introduced the tea plant into India for the East India Company, founding its cultivation there. The tallest species of *Fortunella* is only 10 feet high, the smallest a bush of about three feet, and the kumquat fruit is orange-like but smaller, having three to seven cells, or sections, as opposed to eight to 15 in the orange. The kumquat, which is eaten fresh or preserved, has been crossed with other citrus

fruits into a number of strange hybrids, such as the citrange-ququat and limequat.

40 acres and a mule. A promise, with no basis in fact, made by dishonest politicians to newly freed slaves after the Civil War. Each freed slave, they said, would receive 40 acres of land and a mule to work it with. "When we were children we used to ridicule the slogan 'forty acres and a mule' as a stupid deception used by the Yankees to get the black men to vote for the Republicans," wrote Katherine Lumpkin in *The Making of a Southerner* (1947). See also HOLD THE FORT.

forty-gallon Baptists. A humorous historical term for people who believed one must be totally immersed in water to be properly baptized. Those who believed a symbolic sprinkling of water would do were called *half-pint Baptists*.

40 miles of bad road. The old expression from the American West describes any very ugly or unattractive person or place, as in "She looks like 40 miles of bad road and he looks 10 miles longer."

49er. A person who went to California in 1849 during the gold rush, or someone in favor of the use of the 49th parallel of latitude as a compromise boundary line in the Oregon boundary dispute with Great Britain.

40 rod lightning. Whiskey in the early West could literally kill a man and was thus given colorful names, none more vivid than *40 rod lightning*—which likened it to a rifle or shot that could kill a man at 40 yards.

40-shilling word. In days long past, Jamaicans could be fined 40 shillings if they uttered a "dirty word" in public (and a good deal more if they issued a string of obscenities). This led to the term *40-shilling word* for any indecent expression.

Forty Thieves. A common name in the mid-19th century for the Common Council of aldermen that governed New York City. Their name was suggested by a dangerous gang of the time with the same name. The infamous Boss Tweed came from the ranks of the Forty Thieves council.

40 winks. Why 40 winks for a short nap? One story suggests that the Thirty-nine Articles, the articles of faith that Church of England clergy have been required to accept since 1571, are responsible for the phrase. It seems that a writer in *Punch* (November 16, 1872) quipped: "If a . . . man, after reading through the Thirty-nine Articles were to take forty winks . . ." and that his joke about the long and often tedious articles led to the expression for a short nap. But this isn't possible unless the writer was repeating a very old joke indeed, for *40 winks* is recorded in print as early as the middle 1820s, George Eliot using it in 1866. More likely the 40 follows the old tradition of using 40 to designate an indefinite number, as in Shakespeare's "I could beat forty of them," Ali Baba and the Forty Thieves, and many other instances.

for whom the bell tolls. See EARTH MOVED.

Fosbury Flop. American high jumper Dick Fosbury (b. 1947) won a gold medal and broke the world record for the high jump in the Mexico City 1968 Olympics using this unorthodox headfirst-over-the-bar technique. Ira Berkow in the *New York Times* (3/23/02) described a meeting with him many years later: “At first glance, it was remarkable to see Dick Fosbury enter the Manhattan hotel restaurant Friday perpendicular to the ground, rather than horizontal. If you’ve never seen Dick Fosbury before, all you have to go on are the old photos of him soaring over the high-jump bar headfirst, like a falcon in flight except upside down, with that inspired, innovative technique that would be laughed about but widely imitated to this day and that would come to be known as the Fosbury Flop.” Fosbury began working on the technique in high school.

fossick. Nineteenth-century Australian miners apparently coined this word meaning to search for gold by reworking waste piles of rock called *washings*, or to undermine another person’s diggings. The word seems to derive from *fuss*, or a dialect word for a fussy person. Over time it came to mean to rummage or to search around for anything, as in “I was fossicking among some old papers and found a letter from her.” Chiefly heard in Australia, the word has some currency in England and the U.S.

fotch-on. Said of a store-bought product, one that is bought from somewhere else, not in the area. Fotch can also mean “fetch.”

fo-ti-tieng. Legend has it that the Chinese herbalist Li Chung-yun was 256 years old when he died in 1933, just after marrying for the 24th time. Moreover, he had all of his own hair and teeth and looked about 50. Whether the story is true or not is highly debatable (one writer says that “it is a matter of record with the Chinese government that Li was born in 1677”), but there is no doubt that the venerable vegetarian heartily recommended fo-ti-tieng for those who desired a long active life marked with sexual vigor. Several scientists, including the French biochemist Jules Lepine, have found an alkaloid in the leaves and seeds of this low-growing plant of the pennywort family (*Hydrocotyle asiatica minor*) that they claim has a rejuvenating effect on the nerves, brain cells, and endocrine glands. The Indian sage Nanddo Narian, then 107 himself, informed his faithful that fo-ti-tieng (which means “the elixir of long life” in Chinese) contained “a missing ingredient in man’s diet without which we can never control disease and decay.” Others have claimed that one-half teaspoon of the herb in a cup of hot water will remove wrinkles and increase sexual energy, and larger doses will act as an aphrodisiac. So off to the jungle marches of the Asian tropics, where the herb is found! And remember, too, Li Chang-yun’s more general (and better) advice: “Keep a quiet heart, sit calmly like a tortoise, walk sprightly like a pigeon, and sleep soundly like a dog.” Also, said the sage, eat only food that grows above the ground, with the exception of ginseng root. See GINSENG.

foul ball. A ball hit outside of the fair playing area in baseball has been called a foul ball since the 1860s. By the 1920s the term was being used generally for any useless, inadequate or contemptible person, and specifically for an inferior boxer, a

palooka. The great American word inventor and cartoonist T. A. Dorgan is said to be the first person to use the expression in this extended sense. More recently *foul ball* has been used to mean an outsider. See PALOOKA.

foul play. Shakespeare may have invented the term *foul play*. At least he used it first in print, in *King John*, where Salisbury says “It is apparent foul play,” when suspecting (wrongly) that Hubert has killed the young Prince Arthur. *Play* is a strange word to associate with murder, rape, and other crimes, even if the term originated in some gambling den, as has been suggested.

founder. When a ship founders it fills with water and goes to the bottom. And *bottom* is the key to the ancestry of the word *founder*, which comes from the Latin *fundus*, meaning “bottom.”

fountain pen. The first fountain pens weren’t made in late-19th-century America, as many people believe. There is an account of one dating back to 1657 and in 1712 the term *fountain pen* is first recorded in an advertisement in a Welsh almanac.

fourdrinier. The brothers Fourdrinier, Henry and Sealy, invented the fourdrinier machine that makes most of the paper we use. In 1807 they patented the first practical machine for converting wood pulp into paper, but labored 30 years in perfecting it, aided only by a partial grant from Parliament. The English papermakers revolutionized the industry with their fourdrinier, which is today a huge automatic machine working on the same basic principle but bearing little resemblance to the original.

4-F. Since 1940, 4-F has been the U.S. Selective Service classification of someone designated physically, psychologically, or morally unfit to serve in the U.S. armed forces.

fourflusher. A flush in poker is five cards all of the same suit, the hand taking its name either from a flush, or flight, of birds, or more likely, from the Latin *flux*, “a copious flow.” A four-card flush is worthless, but in open-handed poker, if four cards of the same suit are face up on the table a player is in an excellent position to bluff, nobody knowing whether he has a fifth card of the same suit as his concealed “hole” card. Gamblers in the American West at the turn of the century bluffed so often with such four-card or bobtail flushes that the term *fourflusher* spread from the gambling tables into politer society, where it came to signify anyone who bluffs or pretends, especially someone who pretends to be more than he is while living on money borrowed from others.

The Four Freedoms. On January 6, 1941, U.S. President Franklin Delano Roosevelt declared as the goals of the nation’s policy: freedom of speech, freedom of worship, freedom from want, and freedom from fear. These became widely known as the Four Freedoms.

Four Horsemen. “Outlined against a blue-gray October sky, the Four Horsemen rode again. In dramatic lore they are known as Famine, Pestilence, Destruction and Death. These

are only aliases. Their real names are Stuhldreher, Miller, Crowley and Layden.” This was the opening of sportswriter Grantland Rice’s coverage of Notre Dame’s 13–7 defeat of Army at New York City’s Polo Grounds on October 18, 1924, that immortalized the Notre Dame backfield. Notre Dame student publicist George Strickler seems to have suggested the name to Rice after seeing Rudolph Valentino’s movie *The Four Horsemen of the Apocalypse*. *The Seven Mules*, for Notre Dame’s line, was first suggested by Notre Dame center Adam Walsh in 1924, when, piqued by all the attention given to the backfield, he told the press: “We are just the seven mules. We do all the work so that these four fellows can gallop into fame.” The expression *Four Horsemen* is a shortening of *the four horsemen of the apocalypse*, who are mentioned in the biblical book of *Revelation*, the four horsemen there being Conquest, Slaughter, Famine, and Death. Just the day before Notre Dame’s backfield was dubbed *The Four Horsemen*, “Granny” Rice invented the name *The Galloping Ghost* for Illinois star running back Red Grange. See RETIRING A NUMBER.

the Four Hundred. Society columnist Ward McAllister coined this term in 1889, when he claimed only 400 people formed New York City’s high society. The old story says “400” was chosen because Mrs. Astor’s ballroom held only that number, but the truth is that she often invited twice that many people to parties held there. See FOUR MILLION.

Fourierism. Fourierism, or utopian socialism, has inspired at least 41 experimental communities around the world at one time or another, all of them failures. Developed and introduced by François-Marie-Charles Fourier (1772–1837), a French merchant reacting against his commercial background, the system advocates dividing the world into phalanxes of 1,620 people. Each phalanx would live in a common building, or phalanstery, with separate apartments. One common language, a federal world government, and the encouragement of talent and industry were among other features of this very elaborate scheme, its ultimate goal being a systematic agricultural society. Fourier made a number of converts in France and wasn’t dismayed when the only community established in his lifetime failed. His disciples later brought his doctrine to America, where several Fourier communities were established, none of them remaining today.

four-leaf clover. See CLOVER.

four-letter man. *Four-letter man* for “an excellent athlete” originated in college sports and originally meant someone who earned a letter in football, baseball, basketball, and track. Since its first use in early 20th-century America it has also come to be slang for a stupid person, from the four letters of *dumb*, and a contemptible person, from the four letters of *shit*. Amos Alonzo Stagg, longtime football coach at the University of Chicago, was the first to award monograms of the first letter of a school’s name to athletes and these monograms were being called letters by 1916. Stagg himself was called “the grand old man of football.”

four-letter word. *The four-letter word*, as it is called, is *YHWH*, which in the Bible is the name of God. Many pious Jews will neither speak nor write this sacred name. Since this

“ineffable name” was too sacred to use, the scribes added to it the vowels of the word *Adonai* (Hebrew for Lord), indicating that readers should say “*Adonai*,” not “*YHWH*.” *Yahweh* is a form of it that probably is its pronunciation, and *Jehovah* is a modern reconstruction of the name. It is the oldest four-letter word under taboo in history. In Greek it is rendered as *Tetragrammaton*.

Four Million. The title of O. Henry’s (William Sydney Porter) collection of 25 New York short stories, which includes “The Gift of the Magi.” Wrote the author in a preface explaining the title: “Not very long ago some one invented the assertion that there were only ‘Four Hundred’ people in New York City who were really worth noticing. But a wiser man has arisen—the census taker—and his larger estimate of human interest has been preferred.” See FOUR HUNDRED.

four-minute mile. Today high school runners run sub-four-minute miles, but for at least most of the 20th century, such a time was thought by many experts to be an almost impossible barrier to break. Others kept on trying and finally, in 1954 at Oxford, British Dr. Roger Bannister (b. 1929) achieved this holy grail of runners with a time of three minutes 59.4 seconds. Bannister’s record stood for 25 years before Sebastian Coe broke it in 1979. Today Algerian runner Noureddine Morceli holds the record with a 1993 time of three minutes 44.39 seconds. “The fastest man alive,” however, is a title reserved for the 100-meter dash world record holder—today Tim Montgomery of the United States, whose 2002 time is 9.78 seconds (about 27 miles per hour).

fourscore and seven. The words *fourscore and seven* are from American president Abraham Lincoln’s classic Gettysburg Address, delivered on November 19, 1863, dedicating the National Cemetery at Gettysburg, Pennsylvania, where a great and bloody battle of the Civil War had been fought. The two-minute or so speech famously began: “Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty and dedicated to the proposition that men are created equal.” It ended: “We here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.” It is one of the most famous and most quoted speeches, or prose poems, in history and used the words *under God* long before the Pledge of Allegiance to the flag (June 1954). See THREE SCORE AND TEN.

fourteen hundred. This obsolete phrase is a good example of secret language used in a profession. For many years, starting in about 1870, the London Stock Exchange had only 1,399 members. To ensure secrecy in the Exchange, the catchphrase *fourteen hundred!* was cried as a warning whenever a stranger came onto the floor.

Fourth Commandment. Fourth of the Ten Commandments: “Remember the Sabbath day, to keep it holy.” See TEN COMMANDMENTS.

Fourth Estate. This term for the press is said to have been coined by British statesman Edmund Burke (1729–97), who

reputedly said of the Reporters' Gallery in the House of Commons: "Yonder sits the Fourth Estate, more important than them all." The other three estates of the realm are the Crown, the House of Lords, and the House of Commons. Unfortunately, no record exists of the Burke observation, and some historians believe the words should be credited to Lord Macaulay, who wrote in an 1843 essay: "The gallery in which the reporters sit has become a fourth estate of the realm."

four-word epithet. See LES SOMMOBICHES.

fox fire. A fungi-caused phosphorescent glow on decayed wood, often turquoise in color. The term is not an Americanism, as has been claimed, first recorded in England in 1483.

foxglove. "Fairy glove" and "finger-flower" are two other popular names for the handsome foxglove (*Digitalis purpurea*), which takes its scientific name from the Latin *digitus*, "finger." The flower's tubular blossoms resemble a finger or the empty finger of a glove, but no one knows where the *fox* in the popular designation comes from, though it could be a corruption of *folks'* (folks' glove). The ground leaves of the plant are used to make the heart medicine digitalis.

fox grape. *The Theatre of Plants* (1640) by John Parkinson informs us that "The Foxe Grape . . . is white, but smelleth and tasteth like unto a Foxe," which is presumably why the American grape is so named. There are two species of wild fox grapes, the northern (*Vitis labrusca*, which is the source of the cultivated Concord grape and other varieties) and the southern (*Vitis rotundifolia*, which is the source of the scuppernong). The wine term *foxy* refers to the pungent fruity flavor of Concord wine and other wines made from native American grapes, these wines reminiscent of jelly or jam to many people. See NORTHERN FOX GRAPE.

foxhound. The American foxhound (usually a black, white, and tan combination) is a variation of the English foxhound, both of them used in packs for fox hunting. It is one of the few dog breeds developed in the U.S. (another being the Boston terrier). George Washington helped develop and owned a good many foxhounds. See HOUND; IN AT THE KILL; TALLYHO.

fox hunt. British wit Oscar Wilde defined a fox hunt as "The unspeakable in full pursuit of the uneatable." Whenever an Englishman goes after foxes, he goes on a "fox hunt." A hunting expedition on which small game such as birds and rabbits are shot is called a "shoot."

foxtail pine. See BRISTLECONE PINE.

fox-trot. One story has it that actor Harry Fox's original trotting type of dance was a show-stopper in a 1913 Broadway hit musical. The show's producers realized the dance had promotional value and hired the noted social dancing teacher Oscar Duryea to modify it and introduce it as the *Fox Trot* to the public. This he did and the fox-trot has been America's most popular slow dance ever since. The story does jibe with the fact that the term is first recorded as *Fox* (with a capital *F*) *trot* in an RCA Victor Catalog in 1915.

F.P.A. See INFORMATION PLEASE.

fragging. *Fragging* came into the language during the Vietnam War. Meaning the intentional wounding or killing of an officer by his own troops, it takes its name from the fragmentation grenades sometimes used to accomplish this.

fraid hole. A cyclone cellar or any protected cave or hole in the ground where people can take refuge from a tornado and other violent windstorms.

franc. This French unit of currency honors "John the Good" (1319–64), King John II of France. Captured by the British after the battle of Poitiers, John was freed in 1360 so that he could return to France and raise a ransom of 3 million gold crowns. He failed to do this, but in trying he ordered a new gold coin struck that was equivalent in value to the livre. John was pictured on horseback upon the coin's face, the Latin legend beneath his effigy reading, *Johannes Dei gracia Francorum rex*, "John, by the grace of God King of the Franks." It is from this coin, and a similar one honoring his successor Charles V, that the word *franc* derived. John, though he debased the currency, proved to be a man of honor. He returned to England when one of the hostages held for him escaped.

France; frank; etc. Late in the sixth century the warlike Franks conquered Gaul, giving their name to France and the French. The Gauls had named these Germanic tribes after the Latin *Franci*, the name the Romans bestowed upon the fearless warriors for the javelins they carried. Soon *Franc* itself, *Frank* in English, came to mean "free"—for the barbaric tribes reduced the Gauls to virtual slavery and were the only truly free nobles in the land. This meaning eventually led to such English words as *franking privilege*, free use of the public mails, but the Frank influence does not end there. Similarly, our *frank*, for "straightforward, or candid," derives from the Franks' blunt integrity in dealing with others—they were so powerful that there was no need for subterfuge. See also FRANKFURTER.

Francium. A chemical element discovered in 1939 by French scientist Marguerite Perey and named in honor of her country. See AMERICIUM.

frangible booster. This space-age term describes a booster rocket with a casing of material that fragments easily so that there will be no large pieces to create a hazard if the rocket is destroyed in flight. *Frangible*, meaning breakable, comes from the Latin *frangere*, to break.

frangipane. The marquis Muzio Frangipani, a general under Louis XIV, is said to have invented the pastry cake filled with cream, sugar, and almonds called frangipane or frangipani. The name is also applied to the fragrant but ugly *Plumeria rubra* tree or shrub, and to a perfume either originally prepared from or imitating the odor of its flowers. The perfume is usually associated with the name of its otherwise unknown inventor—possibly a Frangipani relative or the marquis himself. An alternate suggestion is that both pastry and perfume may have been introduced by an earlier member of the Italian Frangipani family, a relative who came to France with Catherine de Médicis a

century before the marquis. Considering Catherine's many contributions to French cooking, this is not unlikely.

frankenfood. Genetically engineered fruits and vegetables, such as new strains of corn and tomatoes. The expression takes its name from the idealistic German scientist Baron Frankenstein in Mary Shelley's novel *Frankenstein, or the Modern Prometheus* (1818). Frankenstein, of course, engineered a monster who later turned upon his creator. *Frankenfood* was coined by Paul Lewis, a Boston College English professor, the word first appearing in print in a letter he wrote to the *New York Times* on June 28, 1992. According to Anne H. Soukhanov in *Word Watch* (1995), Lewis "coined *Frankenfood* in the second week of June 1992," a few weeks before his *Times* letter. His letter read in part: "Ever since Mary Shelley's baron rolled his improved human out of the lab, scientists have been bringing such good things to life. If they want to sell us Frankenfood, perhaps it's time to gather the villagers, light some torches, and head to the castle." See FRANKENSTEIN.

Frankenscience. Modeled on Victor Frankenstein, like FRANKENFOOD, *Frankenscience* may be the coinage of William Safire, who used the young word in his *New York Times* July 5, 2001, column: "In a prime-time speech, he [President Bush] should announce his support of embryonic stem cell research and the careful oversight called for by scientists and doctors who are disinclined to play God. At the same time, he should convene a White House conference on bioethics; that would focus world attention on both the opportunities in genetic exploration and America's awareness of the real dangers of the slippery slope to Frankenscience."

Frankenstein. Frankenstein is the name of the young scientist who created a soulless monster out of graveyard corpses in Mary Wollstonecraft Shelley's novel by that title published in 1818. Frankenstein's monster is the proper name of the creature, not Frankenstein. Contrary to popular notion, Dr. Frankenstein's monster does have a name. The good doctor, played by Boris Karloff, named him Adam in the 1931 film *Frankenstein*. Because many other movies about the monster give him no name, the name Adam has been all but forgotten. Dr. Frankenstein's first name, incidentally, was Victor. Frankenstein's monster has been portrayed in 117 movies around the world, making him the second most portrayed horror movie character in film history—Count Dracula is in first place by a large margin.

Frankfort. The capital of Kentucky is not named after Frankfurt, Germany, or frankfurter! It honors a man named Frank who was killed by Indians in 1830 at a fort in the area.

frankfurter; frank. The frankfurter is named after Frankfurt, Germany, where it was first made centuries ago. Frankfurt itself was so named because it was the "ford of the Franks," the place from which the Franks set out on their raids. The frankfurter seems to have been introduced to the U.S. in St. Louis in about 1880 by Antoine Feuchtwanger, an immigrant from Frankfurt. *Frank* for *frankfurter* isn't recorded until the 1920s. Franks are also called HOT DOGS and New York tube steaks. See FRANCE; HAMBURGER.

Frankie Bailey's. Only movie star Betty Grable's "million-dollar legs" can compare with the gams of American performer Frankie Bailey, who was the toast of the town in the Gay Nineties. Miss Bailey's shapely stems were so celebrated that *Frankie Bailey's* became the term for any sexy, pleasing pair of legs. See GRABLE-BODIED SEAMAN.

a Frankie Yale. All but obsolete today, a Frankie Yale means something cheap and useless, after the rotgut liquor and badly made cigars mobster Frankie Yale (1895–1927) forced his speakeasy clients to buy in the 1920s. Yale was killed in New York's first machine-gun assassination.

Franklin conductor; Franklin stove; etc. Benjamin Franklin (1706–90), one of the broadest and most creative minds of his time—statesman, scientist, writer, printer, and inventor—devised the *Franklin stove*, a great improvement over its predecessors, in 1743. This portable, coal-burning iron fireplace had a pipe connecting it to the chimney, producing heat cheaply and relatively efficiently. Franklin's other inventions include *Franklin's bifocals*, and his famous experiment with a kite during a thunderstorm in 1762 led to his development of the *Franklin lightning rod*. Every branch of science held his interest, but Franklin's contributions to mankind did not end here. Among many civic achievements, he founded America's first circulating library, set up Philadelphia's first fire company, established what is now the University of Pennsylvania, organized the American Philosophical Society, wrote and published *Poor Richard's Almanack*—which sold 10,000 copies a year—and published the *Pennsylvania Gazette*, the most widely circulated newspaper in colonial America. The *Franklin tree*, or *Franklinia*, is also named after Benjamin Franklin. This species has an unusual history—introduced into cultivation from the wild in 1770 by America's first botanist, John Bartram, no one has been able to find it in its wild state since.

Franklin's gull. *Franklin's gull*, the only bird ever to have a monument erected to it, is intimately connected with English and American history. The black-headed gull was named in honor of Sir John Franklin (1786–1847), the English explorer who died in discovering the Northwest Passage that so many other mariners had striven to find. The story of his expedition and his wife's later attempts to find him is one of the most interesting in maritime history. *Franklin's gull* (*Laridae pipixcan*) has the same upland-breeding and seashore-wintering habits as the BONAPARTE'S GULL. See also GULL.

Frankly my dear, I don't give a damn. See GIVE A DAMN.

Frauenlob; Frau. A poet named for a word. The German poet Heinrich von Meissen (1250–1318) became known forever by the name Frauenlob because in a famous debate with a rival poet he hotly defended the use of the word *Frau* for "lady" instead of the word *Weile* (woman) that this opponent preferred.

Fred Karno's army; Arnie's army. British music-hall performer Fred Karno (1866–1941) led a troupe of slapstick comedians in the early 1900s, Charlie Chaplin and Stan Laurel often performing with him. So popular was the erratic, disorganized troupe that the term *Fred Karno's army* came to be applied dur-

ing World War I to any company of green, untrained recruits. *Arnie's army* is a name given by sportswriters to the many loyal fans who followed U.S. golfer Arnold Palmer (b. 1939), winner of four Master's championships, as he played his way around the golf course.

Fredonia. In 1827 a group of adventurers tried to set up a Texan republic called Fredonia; the name Fredonia had been invented in about 1800 by Dr. Samuel Latham Mitchell as a term for the United States, "a land where things are freely done," and was borrowed by the unsuccessful adventurers. Fredonia, incidentally, was the name of Groucho Marx's homeland in the film *Duck Soup*.

freelance. A freelance, for a self-employed person, is a term with an unsavory history. The original freelances were medieval Italian (*condottiere*) and French (*compagnies grandes*) knights, free men who would sell their skills with the lance to any master, whether his cause was good or bad. The name *freelance* for these knights was invented by Sir Walter Scott in *Ivanhoe* (1820). Freelance doesn't seem to have been applied to writers until about 60 years later.

freesia. There is some question about the naming of this fragrant and beautiful genus of South African herbs. Comprising three species but scores of horticultural forms, freesias grow from a bulblike corm, belonging to the iris family and bearing typically white or yellow flowers at the end of their stems. They are generally raised in greenhouses and are a popular florist's flower. Some authorities, including *Webster's Biographical Dictionary*, say the genus was named for E. M. Fries (1794–1878), a Swedish botanist; others cite F. H. T. Freese, a pupil of Professor Klatt, the christener of the genus.

free soil, free speech, free labor, free men. This was the slogan of the American Free-soil Party during the election of 1848. The slogan referred to the party's opposition to the extension of slavery into any of the territories newly acquired from Mexico. With former President Martin Van Buren as its candidate, the Free-soilers polled nearly 300,000 votes and were a decisive factor in the victory of the Whigs over the Democrats. In 1854 the Free-soil Party was absorbed into the new Republican Party.

freewheeling. A freewheeling person is one who moves about freely, independently, one who might even be irresponsible, or someone who isn't governed by rules and regulations. The term comes from bicycling in the old days before the coaster brake was invented, when cyclists coasted, freewheeling down the hills. The term *freewheeler* for a bicycle is first recorded in 1889.

freeze-out poker. No limit freeze-out poker was invented and named by legendary Walter Clyde "Puggy" Pearson (1929–2006), a Las Vegas gambler who introduced the tournament of freeze-out, now called the World Series of Poker, in which all players start with the same amount of chips and play until one player wins everything. The colorful Pearson, a member of the Poker Hall of Fame, wrote and often performed an autobiographical song called "The Roving Gambler."

French. The prejudice that anything French is wicked, sexual, and decadent has let Frenchmen in for more than their fair share of abuse in English. Many such expressions date back to 1730–1820, the height of Anglo-French enmity, but some are current and others go back even further. FRENCH LEAVE and FRENCH DISEASE are covered in entries following; for *French letter* or *French cap* see CONDOM. At one time *French by injection*, like its Dutch counterpart, meant any English woman living with a Frenchman. *French kiss* for the lingual "soul kiss"; *French fare*, overelaborate politeness; *French postcards*, "dirty" prints; and *pardon my French* for "excuse my strong language" are all familiar expressions. By no means are such phrases confined to English, either. In Prussia, for example, lice are called *Franzosen*. The French, however, have done their share of international name-calling, too. Their word for a louse is *espagnol* (Spanish), for a flea *espagnole* (Spanish woman), and for a creditor they once said *un anglais* (an Englishman). The French phrase for a dirty trick is a *Chinese trick*, their red tape is *chinoiserie*, their expression for our *that's Greek to me* is *that's Hebrew to me*; our *Dutch courage* is their *German happiness*, and our *Dutch treat* is their *going Swiss*. As recently as the early '60s they introduced *la vice anglaise* as a synonym for homosexuality. On the whole English reflects admiration for the French exceeding any animosity. There are some 100 words prefixed with *French* and most of them recognize French expertise. Among the most common are French cuffs, French heel, French twist, French cleaning, French roof, French doors and windows, French kiss, French telephone, French harp, French horn, French cuisine, French dressing, French endive, French bread, French ice cream, French pancake, French pastry, French toast, French fried and French fries.

the French disease. SYPHILIS has been blamed on nearly every country and continent, always by residents of other countries and continents. For Poles, it was *the German sickness*; the Russians blamed it on the Poles; to the Dutch it was *the Spanish Pox*; and carried to India, China, and Japan it was there branded *the Portuguese disease*. But the French have been blamed far more than most nations, mainly because they have long been widely associated with anything sexual. When in 1496 an Italian wrote that "the French disease is a new plague . . . contracted by lying together," the phrase was quickly adopted throughout Europe. In later years syphilis became *French pox*, *French marbles*, *the French goods*, *the French gout*, *the French sickness*, and *a Frenchman*. Furthermore, *French crown* long meant baldness produced by syphilis, *to be Frenchified* meant to be venereally infected, and *a French pig* was a venereal sore. As for the French, they steadfastly refused to call the disease anything but *the Italian* or *the Naples disease*.

French fried potatoes. Many youngsters think McDonald's invented them, but they were conceived in Belgium toward the middle of the 19th century. From there the Belgian fries spread in popularity to France, and the method of deep frying them soon imported to America, where they are still known under the misnomer *French fries*.

Frenchified. Since the late 16th century *Frenchified* has been a contemptuous term for having French manners or qualities. Ben Jonson, the first to record the word, wrote of "Monsieur Fastidious Brisk, otherwise called the fresh Frenchified courtier." The phrase once also meant "to be infected with the venereal disease," this usage recorded as early as 1655.

French leave. The French are noted for their politeness—witness the expression *French fare* (See FRENCH), overelaborate manners, which makes it all the more clear that the pejorative *French leave* was invidiously coined. In 18th-century French society it was the custom to depart from a dinner or ball without formally bidding the hostess or guests goodbye. Such a surreptitious departure was dubbed a *French leave* by the decorous English, but the voluble French always pinned the custom on their self-conscious cousins, calling it taking *English leave* (*s'en aller* [or *filer*] *à l'anglaise*). *French leave* is also widely used for a soldier who has gone A.W.O.L. or “over the hill.” In all cases it means someone who has slipped out before his absence is noticed.

French toast. In America *French toast* refers to sliced bread soaked in a mixture of eggs and milk before frying the dish golden brown. In England the popular breakfast dish is simply sliced bread fried in bacon fat or butter. The French themselves make it the same way Americans do, calling it *pain perdu* (“lost bread”) since the bread is “lost” in the other ingredients.

French words in English. French words came into English by the thousands after the Norman Conquest in 1066, and many had entered the language long before then. It would take a volume to list these basic contributions, but here is a brief sample of just those words that have come into American English: crappie (fish), gopher, pumpkin, cache, carry-all, pirogue, portage, voyageur, brioche, chowder, jambalaya, [pie] à la mode, praline, cent, dime, mill, bayou, butte, chute, crevasse, flume, levee, prairie, rapids, [Indian] brave, Cajun, calumet, Canuck, lacrosse, lagniappe, parlay, picayune, rotisserie, sashay, bureau, depot, shanty.

fresh as a daisy. See DAISY.

fret. Tracing *fret* back to Middle English we find that the word, related to the German *fressaen*, primarily meant “voracious eating by animals.” Today *fret* means only to worry, its new sense probably arising from the idea that worry eats into one, as in the expression “What’s eating you?”

Freudian. No other contemporary thinker has influenced 20th-century intellectual thought more profoundly than Dr. Sigmund Freud (1856–1939), the founder of psychoanalysis. His Freudian theories, though often modified and even discarded over the years, emphasize the importance of the unconscious, infantile sexuality, and the role of sexuality in the development of neuroses, while Freudian methods, such as free association, are methods for treating mental disorders. A Freudian slip is popularly a slip of the tongue revealing a repressed subconscious thought or desire. The Austrian physician and psychoanalyst met with extreme hostility when he published *The Interpretation of Dreams* in 1900, but his views became increasingly accepted. See SLIP OF THE TONGUE.

Friar’s Club. This theatrical fraternity, founded in 1904, has been headed by such prominent abbots as George M. Cohan, Georgie Jessel, Milton Berle, Joe E. Lewis, and Frank Sinatra. The Friars, based in a clubhouse on East 55th Street in New

York City, is noted for its “roasts” of celebrities—facetious tributes at a banquet in which the celebrity is both praised and good-naturedly insulted in speeches by friends.

Friday. The Scandinavian goddess of love Freya was deserted by her husband Odin, or Wotan, god of war, wisdom, agriculture, and poetry, because she paid too much attention to a life of luxury and not enough to him. Odin may have forgotten her, but history didn’t, the Old English for her name becoming the basis for our *Friday*: *Fria daeg*, or *Freya’s day*. WEDNESDAY is named for Wotan.

Friday’s child. See MONDAY’S CHILD.

Friday the 13th. Friday is considered unlucky by some because it was the day of Christ’s crucifixion, while 13 is so considered because the Last Supper was attended by Christ and his 12 disciples. But these widely believed superstitions actually go back much further in time. Today few if any buildings have a 13th floor, and many sailors object to leaving port on a Friday the 13th. In the theater the widespread Friday the 13th bad luck tradition applies only to opening nights. According to theatrical tradition, a show should never open on Friday the 13th. The reasons behind the tradition, if there are any, are unknown. Lillian Leitzel, a Barnum find, fell to her death in 1931 while performing her aerialist act—on a Friday the 13th.

fried chicken. See SOUTHERN FRIED CHICKEN.

frig. See FIG.

Frisbee. *Frisbee* is the trademarked name for a plastic, concave disk used in catching games between two or more players, who spin the disk off into the air with a flick of the wrist. The disk and name are said to have been inspired by a similar game played by Yale students, who tossed about disposable metal pie tins that came from pies made by the Frisbie Pie Company of Bridgeport, Connecticut. The modern plastic Frisbee, however, is said to have been invented by William Morrison, who sold it to the Wham-O Manufacturing Company in 1955 and whose name is on the patent. Then Ed Headrick (1924–2002), head of research at Wham-O, further improved the product, changing its name from the *Pluto Platter* to *Frisbee*, a name that Wham-O says does not derive from the pie company name, despite the similarity, coming instead from a once-popular comic strip called “Mr. Frisbie.” It is estimated that about 4 million people play Frisbee; no one knows how many dogs play. Just before his death Mr. Headrick told a reporter that “Frisbyterians,” loyal Frisbee enthusiasts, don’t go to purgatory when they die: “We just land up on the roof and lay there.” See HULA-HOOP.

frogfall. See FISHFALL.

frog in the throat. It has been suggested that this term for a hoarse throat has its origins in the medieval practice of inserting a live frog into a patient’s mouth head first, so that the frog could draw the patient’s infection into its own body when it in-

haled. However, the expression isn't recorded until the nineteenth century, which makes such a derivation suspect. *Frog* was once a common name for thrush, the mouth and throat infection, and this may have something to do with a *frog in the throat*.

Frogmore stew. A dish made not of frogs but of seafood; originally made on Frogmore, one of the Sea Islands off South Carolina, which is often pronounced *Frogmow* by Southerners.

from A to izzard. Chiefly British in usage and rare today, *from A to izzard* means *from A to Z*, ALPHA AND OMEGA, from beginning to end. *Izzard* here may be a 1597 dialect variation of *zed* (*z*), according to the *O.E.D.*

from away. Used to describe anyone residing in Maine who doesn't hail from the state. The expression is also heard on the North Fork of Long Island, New York, and can mean a summer visitor as well.

from China to Peru. Throughout the world, this literary phrase still has currency, though seldom in speech. It is from these lines in Samuel Johnson's *On the Vanity of Human Wishes* (1749): "Let observation with extended view/ Survey mankind from China to Peru."

from Dan to Beersheba. The Bible (Judges 20:1) tells of the ancient Israelites assembling from Dan in the north to Beersheba in the south to fight the Benjamites (members of the tribe of Benjamin). This meant all over the world, or everywhere to the Israelites of the day, and so the phrase *from Dan to Beersheba*, mentioned several times in the Old Testament, came to mean the same. See JOHN O'GROAT'S HOUSE.

from Fort Kearney west, he was feared a great, great deal more than the Almighty. A saying about the notorious American desperado "Captain" J. A. Slade. Wrote Mark Twain of these words in *Roughing It* (1872): "For compactness, simplicity and vigor of expression, I will back that sentence against anything in literature."

from hell, Hull, and Halifax, Good Lord deliver us. British vagabonds and beggars often recited this famous prayer in the early 17th century and after. *Hell* was to be avoided for obvious reasons, the town of *Hull* demanded hard labor for any "charity" given, and *Halifax* had a celebrated Gibbet Law that provided for the execution of prisoners *and then* a trial to determine whether they were guilty or not!

from scratch. See START FROM SCRATCH.

from soup to nuts. An American expression for "everything," apparently coined in the late 1920s and obviously based on the menu of a sumptuous meal or banquet at which everything

from a first course of soup to a last course of nuts is served. *In the soup* is an Americanism meaning "in trouble."

from the sublime to the ridiculous. This very common expression most often means from one extreme to the other, or from the noble to the ignoble. Sometimes it is heard, erroneously, as *from the ridiculous to the sublime*. The phrase has been traced to English and American patriot Tom Paine, who wrote in *The Age of Reason* (1794–95): "The sublime and the ridiculous are often so nearly related that it is difficult to class them separately, and one step above the ridiculous makes the sublime again." Paine spent 11 months in prison in between the writing of the first two parts of his great book.

from the word go. From the start, the beginning, the very first. This lasting expression is first recorded in the autobiography *The Life and Adventures of Colonel David Crockett of West Tennessee* (1833): "I was plaguy well pleased with her from the word go."

front runner. *Front runner* appears to be a relatively recent addition to the language, dating back only 60 years or so. It means a person leading in any competition, especially in a political race, and derives from either track and field or horse racing.

frozen words. An old story from the Texas Panhandle tells of a winter so cold that spoken words froze in the air, fell entangled on the ground, and had to be fried up in a skillet before the letters would reform and any sense could be made of them. The idea is an ancient one, used by Rabelais and familiar to the Greek dramatist Antiphanes, who is said to have used it in praising the work of Plato: "As the cold of certain cities is so intense that it freezes the very words we utter, which remain congealed till the heat of summer thaws them, so the mind of youth is so thoughtless that the wisdom of Plato lies there frozen, as it were, till it is thawed by the refined judgement of mature age."

frozen Yankee Doodle. A famous saying from brilliant American conversationalist Thomas Gold Appleton about the Boston Art Museum, torn down in 1908. Appleton said that if architecture was frozen music, this building was "frozen Yankee Doodle." See YANKEE DOODLE; ARCHITECTURE IS FROZEN MUSIC; MUTUAL ADMIRATION SOCIETY.

fruit names. In a delightful *New York Times Magazine* piece (May 30, 2004) Strawberry Saroyan (William Saroyan's granddaughter) tells of four people, including herself, named after fruits: an *Apple*, a *Plum*, and a *Raspberry*. To expand her unique orchard a bit, I would add *Tangerine* (also the title of a pop song), *Cherry*, *Peaches*, and three famous characters of American literature: Popeye's *Olive*, Herman Melville's *Pip* (short for *pippin*, a delicious apple), and Mark Twain's immortal *Huckleberry Finn*. Drop me a line if you know of any others.

fruit parlor. This English-language borrowing, which is widely used in Japan, means "ice cream parlor." The definition

doesn't seem so strange on realizing that the parlors there are named for the fruit used as toppings for ice-cream sundaes, etc.

fry. *Fry* is mostly used today for the spawn of salmon and other fishes, but, as the still common *small fry* shows, it was once a common term for human children as well. In fact, *fry* was used to describe children before it was applied to other species.

fubar. A euphemistic army acronym made up of the initials of “fucked up beyond all recognition”—that is, completely screwed up, botched up, confused. The term, probably suggested by the earlier *snafu* (“situation normal, all fucked up”) arose during World War II.

fuchsia; Fuchsia group; fuchsin. *Fuchsia*, for a vivid bluish or purplish red, takes its name from the ornamental fuchsia shrubs that honor German physician and botanist Leonhard Fuchs (1501–66). These principally Mexican and South American shrubs, which are of the evening primrose family and can have purple, red, yellow, or white flowers, were named for Fuchs in 1703 by the French botanist Charles Plumier. Dr. Fuchs was noted for his treatment of the “English sweating sickness,” a plague that had spread to Europe. He became professor of medicine at the University of Tubingen in 1535, remaining there until his death over three decades later. His herbal *De historia stirpium* (1530) was widely known, this compendium of medicinal and edible plants probably the main reason why the genus *Fuchsia* was named in his honor. The genus contains some 100 species, with *fuchsia* shrubs being only one of its many widely cultivated plants. *Fuchsin*, or *fuchsine*, is a purplish red aniline dye, and *Fuchsia group* is a mathematical term that derives from the name of I. L. Fuchs (1833–1902), an eminent German mathematician.

fuck. Originally a quite acceptable word, *fuck* was recorded in an English dictionary as early as John Florio's *A World of Words* (1598). The word doesn't derive from the police blotter entry “[booked] for unlawful carnal knowledge,” as some people still believe. Our word for the act of sexual connection may remotely come from the Latin for the same, *futuere*, but most probably is from the Old German *ficken/fucken*, “to strike or penetrate,” which had the slang meaning “to copulate.” As *Partridge* points out, the German word is almost certainly related to the Latin words for *pugilist*, *puncture*, and *prick*, through the root *pug*, which goes back to prehistoric times. Before *fuck* came into English in the late 15th century—its first recorded use is in 1503—*swyve* was the verb most commonly used for *fucking*. *Fuck* began to become more rare in print in the 18th century when human experience began to be disguised behind a “veil of decency,” and the last dictionary it was recorded in up until recent times is Francis Grose's *Dictionary of the Vulgar Tongue* (1785), in the form of *f**k*. The great *O.E.D.* banned it, just as it banned *cunt* (but not *prick*, for some reason), and this made the word's acceptance all the harder. Though great writers like D. H. Lawrence, James Joyce, and Henry Miller tried to restore *fuck* to its proper place in print, it wasn't until 1960 that Grove Press in America won a court case that permitted publishers to print *fuck* legally for the first time in centuries. The

book containing the word was D. H. Lawrence's *Lady Chatterley's Lover*, written in 1928.

fuck-you lizard; gecko. FUCK-YOU LIZARD is another designation, decidedly unscientific, for *Gekko gecko*, the tropical tokay gecko lizard that G.I.s encountered in Vietnam. The croaking of this gecko's call resembles the English “Fuck you, fuck you,” hence the name, first recorded in 1933. Green troops in Vietnam were sometimes told that the gecko's call was the enemy taunting them. Strange as it may seem, the word *gecko* itself takes its name from a Malay word imitative of the lizard's call. U.S. prisoners in the Japanese Cabanatum P.O.W. camp in the Philippines during World War II also heard the gecko's peculiar cry. Wrote Hampton Sides in *Ghost Soldiers* (2001): “Geckos were draped all about the barracks, sated from the night's mosquitoes, occasionally calling out in their distinctive two-note chirp that prisoners swore sounded like “Fuck you! Fuck you!” A small annoyance next to all the horrors they experienced but just what the fickle finger of fate had done.

fudge. Isaac D'Israeli, father of the British prime minister, had an interesting story about the word *fudge*, for “lies or nonsense,” in his *Curiosities of Literature* (1791): “There was sir, in our time one Captain Fudge, commander of a merchantman, who upon his return from a voyage, how illfought soever his ship was, always brought home a good cargo of lies, so much that now aboard ship the sailors, when they hear a great lie told, cry out ‘You fudge it!’ A notorious liar named Captain Fudge, called ‘Lying Fudge,’ did live in 17th-century England. His name, possibly in combination with the German word *futch*, “no good,” may well be the source of the word *fudge*. Where the word *fudge* for candy comes from no one seems to know, though it probably dates back to the 19th century.

fugu. The Japanese fugu, also called the puffer fish, hosts a deadly poison in its ovaries and liver if prepared the wrong way and kills an estimated 300 people a year. An ounce of this deadly tetrodotoxin is theoretically enough to fatally poison 56,000 diners. Only a trained fugu chef (who must take a rigid government examination which only 30 percent of all candidates succeed in passing) is permitted by law to prepare fugu. Yet the Japanese continue to consume their national love dish at the rate of about 10,000 tons a year. Since amateur chefs persist in preparing the fish and there is no known antidote for its poison, this amounts to a kind of culinary Russian roulette. One well-known Japanese love poem relates how “Last night he and I ate fugu. / Today I carry his coffin.”

fuhgeddaboutit. The New York pronunciation of the expression *forget about it* has thanks to the movies (see *Mickey Blue Eyes*) and television (see *The Sopranos*) become well known all over the world. It is usually the equivalent of “don't mention it, it's no trouble at all,” “no problem,” etc., in response to a “thank you.” But it can also mean “no way!” “I won't even consider it,” etc.

führer; Hitler; Schicklgruber. Before Adolf Hitler preached his doctrines of the “master race” and The Thousand Year Reich, *Führer* was simply a German word for “leader.” But Nazi blood

purges, millions dead in gas chambers and concentration camps, towns like Lidice wiped off the map, and planned world conquest made both his name and title symbols for terror, horror, and evil, synonyms for a mad tyrant or megalomaniac. *Der Führer* was the title Hitler chose when he combined the offices of president and chancellor in 1934. Hitler is said to have committed suicide in his Berlin bunker in 1945, aged 56, but legends persist that he still lives, which indeed he does, if only symbolically. *Schicklgruber* is another word often used to describe someone like him, but contrary to widespread belief, it was not his legal name—Hitler's father, Alois, an illegitimate child, bore his mother's name, Schicklgruber, for a time, but changed it to Hitler, his father's name, before Adolf was born. A *Hitler* or a *Mr. or Mrs. Hitler* is a blustering, domineering person.

Fulbright scholarship. A Fulbright is a scholarship grant provided under the U.S. Congress Fulbright Act (1946), which was introduced by Senator James William Fulbright (1905–1995) and has been awarded to a large number of now prominent Americans.

full as a tick. Ticks gorge themselves with the blood of humans and animals, often transmitting diseases such as Lyme disease. This bloating suggested a person filling himself with liquor and gave birth to the term *full as a tick* for someone very drunk. The expression is said to have originated in Australia about a century ago, but it has been common in America for many years.

full court press. In basketball a very aggressive, close-guarding defense all over the court is called a full court press. The expression, dating back 50 or so years, is now also used to mean maximum pressure applied in any situation.

Fuller Brush man. Alfred C. Fuller, founder of the Fuller Brush Company, liked to quote the boosterism “‘American’ terminates in ‘I can’ and ‘Dough’ begins with ‘Do,’” which he may have invented. Fuller, who built his door-to-door business into a \$130 million enterprise, died in 1973, aged 88. At one point his ubiquitous Fuller Brush men and Fullernettes (female salesmen) called on 85 of every 100 American homes, even made home deliveries by dog sled in Alaska. These modern-day peddlers weren't welcome everywhere—some communities still have laws against any door-to-door salesmen calling without a specific invitation—but for the most part they were American favorites. Disney's big bad wolf in the *Three Little Pigs* film disguised himself as a Fuller Brush man, Red Skelton played the lead in the movie *The Fuller Brush Man*, and Lucille Ball starred in *The Fuller Brush Girl*. Fuller Brush men were the subject of about as many off-color jokes as the traveling salesman and the farmer's daughter.

full fathom five thy father lies . . . From a song that the “airy spirit” Ariel and Ferdinand sing in Shakespeare's *The Tempest* (1611):

Full fathom five thy father lies;
Of his bones are coral made;
Those are pearls that were his eyes:
Nothing of him that doth fade,
But doth suffer a sea change

Into something rich and strange.
Sea nymphs hourly ring his knell.

full many a flower is born to blush unseen. See FAR FROM THE MADDING CROWD.

full monty. The success of a 1997 British movie of the same name about a group of neophyte male strippers made this expression popular throughout the English-speaking world. It means the full amount expected or possible, the works, everything; unfortunately its origin is unknown. It has been suggested that its eponym was Field Marshal Bernard “Monty” Montgomery (1887–1976), who liked to have a full British breakfast wherever he was soldiering; others cite a three-piece suit sold by early 20th-century tailor Montague Burton; and still others champion the Spanish card game monte.

full nelson. The name for this wrestling hold didn't come into use until the 19th century, when it was named either for some celebrated grappler who excelled at the pressure hold, or for Nelson, a town in Lancashire, England, once famous for its wrestling matches. The town of Nelson changed its name from Marston in the 19th century, calling itself after the popular Lord Nelson Inn there, which in turn honored England's great naval hero.

full of beans, etc. The phrase is used like *full of baloney*, *full of soup*, and worse, but it usually means someone who is full of energy, high-spirited, lively—sometimes in a foolish or silly way. Some say it is a horse expression, like *full of oats*, going back to the days when horses were fed “horse beans” raised for fodder. The saying, however, is a British one from about 1870 and may derive from an earlier phrase, *full of bread*. Beans, a high-protein food, certainly should make one lively; in fact, they have long been regarded as an aphrodisiac. As an old English ballad, “The Love Bean,” put it:

My love hung limp beneath the leaf
(O bitter, bitter shame!)
My heavy heart was full of grief
Until my lady came.
She brought a tasty dish to me,
(O swollen pod and springing seed!)
My love sprang out right eagerly
To serve me in my need.

The gas that beans inspire also has something to do with the expression; as the word *prunes*, substituted in the phrase for *beans* some seventy years later, would indicate, both beans and prunes having a laxative effect. In fact, beans were primarily regarded as an aphrodisiac by the ancients because the eruptions they caused were thought to produce prodigious erections. But the U.S. Department of Agriculture has recently developed a “gas-less variety,” “a clean bean” seed guaranteed not to cause social distress at the dinner table or elsewhere. So bean eaters can now be as full of beans as ever and much less obnoxious, though maybe not as sexy.

full of oats. See FEEL ONE'S OATS.

Fun City. A well-known nickname for New York City said to have originated in 1966 with Mayor John V. Lindsay (1921–2001) on his first day in office when a reporter asked if he was happy he'd been elected. "I still think it's a fun city," Lindsay replied. Author Dick Schapp first capitalized the name in his *Herald Tribune* column "What's New in Fun City." See BIG APPLE.

fungusamongus. A name given by a playful botanist, or several playful botanists, to a newly discovered plant. Certainly the tale is apocryphal.

funk; funky. *Funk*, for "fear of panic," still has its best explanation in the Flemish phrase *in de fonck siin*, "in a state of panic." Yet this literally means "to be in the smoke" and no one has been able to explain the connection between smoke and panic. Possibly smoke was associated with a panic-stricken person trying to find a way out through the smoke of a fire, or with the smoke of hell fire. The word owes part of its long popularity to its similarity to the most famous of four-letter words beginning with *f*. Since its introduction to England in the early 18th century it has also come to mean a dejected mood, especially in the phrase *in a blue funk*, "blue" intensifying the phrase by suggesting "the blues." If there is an eponymous Funk somewhere, he or she would be glad to know that *funky*, which derives from *funk*, means good jazz with an earthy blues-based character. This *funky* is popular recent slang for anything very good or beautiful (clothes, hairstyle, etc.), but it can also mean something cheap or no good, depending on the context.

funkia. This widely cultivated plantain lily or hosta is named after a real person, the German botanist C. H. Funkia. *Funkia* is one of the few plants that is doubly eponymous, for its alternate name, *hosta*, honors Austrian botanists Nicholas and Joseph Host. The plant, valued in the garden for its shade tolerance, is also known as the "niobe." Its genus name is *Hosta*, and there are at least 14 species.

funnies. Another name for the funny papers, comic books, comics, comic strips, etc. The comics is recorded in about 1920, but may be older. Mayor Fiorello LaGuardia used to read the Sunday funnies to youngsters listening to him on the radio. See you in the funny papers used to be a humorous farewell; it even made it to the pages of Faulkner's classic *The Sound and the Fury* (1928–29).

funny bone.

They have pull'd you down flat on your back,
And they smack, and they thwack,
Till your "funny bones" crack,
As if you were stretched on the rack,
At each thwack!
Good lack! what a savage attack!

Reverend Richard Harris Barham, well known for his punning, wrote the above in *The Ingoldsby Legends* (1840) and it is the first mention of the expression *funny bone* in literature. The funny bone—Americans called it the *crazy bone* in the past—is technically the medial condyle of the humerus, that

is, the enlarged knob on the end of the bone of the upper arm, which lies below the ulnar nerve. The unpadded nerve hits the humerus as if against an anvil when we strike it on something, causing sharp, tingling pain. Nothing is very funny about this—it inspires cursing rather than laughter. But Barham or some punster before him probably saw the pun *humorous* in the *humerus* bone and dubbed it the funny bone, adding one of the few puns that have become phrases to the language.

fur-lined purgatory. A phrase coined by American poet Richard P. Blackmur (1904–65) to describe working as an editor for Henry Luce at *Time-Life* publications.

furlong. In medieval times a furlong—from the Old English *furh*, "furrow," and *lang*, "long"—was the length of an ideal furrow in a plowed field, which was one-eighth of a Roman mile. Though the length of furrows and other land measurements changed over the centuries, a furlang, changed slightly to furlong, remained the same eighth of a mile, or 220 yards, and became a measurement used primarily in horse racing.

furnished room. A usually cheap rented room containing meager furniture, a bed, a wooden chair, table and lamp, etc. British author Richard Brinsley Sheridan (1751–1816) was a noted politician as well as a playwright. Sheridan's son Thomas couldn't understand his love of politics, though he later became a politician himself. "If I were in Parliament," Thomas told his father one evening, "I would write on my forehead, 'To Let.'" Sheridan made a point of studying the boy's head for a moment and replied, "Add 'Unfurnished.'" See LAST ROSE OF SUMMER; PRINCIPAL . . . ; ROSES HAVE THORNS.

furphy. Any baseless report, a latrine rumor, is in Australian military slang called a *furphy* and honors, or dishonors, one of two possible candidates: either the firm of Furphy & Co., whose name appeared on World War I latrine buckets supplied to the Australian forces; or a contractor named Furphy who supplied rubbish carts to Melbourne army camps about 1915.

fuss and feathers. Nonsense over nothing at all. The expression dates back to the 19th century, a time when *Old Fuss and Feathers* was the nickname of U.S. general Winfield Scott, a very vain man, all 300 pounds of him. Scott, a genuine American hero and a general from the War of 1812 through the Civil War, was said to love himself, food, and wine—in that order. Dressed to the nines in his splendid self-designed gold-braided uniform and plumed hat, he was "almost a parade by himself" as he waddled down the street. As a contemporary put it: "What a wonderful mixture of gasconade, ostentation, fuss, feathers, bluster and genuine soldierly talent and courage is this same Winfield Scott." See GREAT SCOTT!

fustian. *Fustian* first referred to a coarse cloth material made of cotton and flax in Fostat, a suburb of Cairo. By the 16th century it came to mean inflated, turgid, pompous, or bombastic language. For example, in *Epistle to Arbuthnot* (1735), Alexander Pope wrote: "And he, whose fustian's so sublimely bad, / It is not poetry, but prose run mad."

futz around. To fool around, play around, as in “Don’t futz around with the papers.” *Futz* here may be a euphemism for “fuck,” or could derive from *putz*, or from a Yiddish word. It is first recorded in James T. Farrell’s *Young Lonigan* (1932).

fuzz. Most etymologists have given up as a lost cause the derivation of *fuzz* for the police or a police officer, but here are a few suggestions for the Americanism’s origin. *Fuzz*, which apparently was born in the early 1920s, may contemptuously refer to “fuzzy” lint or hair on the uniforms of police

officers. It may also have originally been black slang for the hairy body of a white person, although no such usage has been documented. The *New Dictionary of American Slang* (1986) says it was first black slang for “man with the fuzzy balls,” meaning a white man. *Fuzz* has to be marked “Origin Unknown.”

fuzzy navel. A peach liqueur and orange juice mixed drink.

F.W.C. See F.M.C.

G

G. According to the old Phoenician alphabet, G represented the outline of a camel's head and neck.

gabfest. *Gabfest* is an Americanism, which like all *fest* words (e.g., talkfest, funfest) half derives from the annual family *fest* (from the German *Fest*, “festival”) held by the German-American Turner family beginning in the mid-19th century. The *Turner fest* was the model for *gabfest*, first recorded in 1897, but *gab* had been used in England for “to talk fluently, very well, or too much.” *Gab* may be an old Norse word, or may be onomatopoeic like *gabble*, and has been used since at least 1670. *Gift of gab* (“He’s got a gift of gab”), the ability to talk well or convincingly, dates back to 1681 in England, while *gabby*, too, is British, first recorded in 1719.

Gabriel Garcia Moreno. As president of Ecuador, Gabriel Garcia Moreno (1821–75) became obsessed with the idea of Roman Catholic supremacy; in fact he dedicated Ecuador to the Sacred Heart of Jesus. A tall, severe man who was an excellent administrator, he was considered a fanatic despot by his liberal opponents. He died on the Capitol steps, killed by Liberal Party assassins who stabbed him and split his skull with a machete.

Gabriel’s hounds. Gabriel’s hounds are wild geese, so called centuries ago because their sound in flight is like a pack of hounds in full cry. Legend has it that they are the souls of unbaptized children wandering in space until the Judgment Day. *Gabriel* here refers to one of the biblical archangels.

gadget. *Gadget*, as it is usually employed, is a relatively new word, dating only to 1886 and possibly deriving from the French *gachette* for “a little mechanical thing.” Its latest and most ironic use (ca. 1970) is a widely used synonym for an atomic bomb, especially among scientists who make the monsters.

gadolinite; gadolinium. In 1794 Finnish chemist Johann Gadolin analyzed a black mineral found in rare-earth elements

at Ytterly, near Stockholm, Sweden. The mineral, from which he extracted the oxide yttria, was named *gadolinite* in his honor eight years later. Gadolin (1760–1852) also has the metallic chemical element *gadolinium* to commemorate him. It was discovered in 1880 by the Swiss chemist J. C. G. de Marignac, being one of several elements extracted from *gadolinite*. Marignac did not name the new element for Gadolin until six years after his discovery.

Gadsden Purchase. The 1853 purchase of a strip of land now in New Mexico for \$10 million from Mexico, the area being 45,535 square miles. The treaty was negotiated by U.S. diplomat and railroad developer James Gadsden (1788–1858).

gadzooks! Ernest Weekley traces this mild oath to *God’s hooks*, that is, the nails used to crucify Christ. Originating in the mid-17th century, the expletive has not been used seriously for a hundred years now, but it is still heard humorously. See **GODDAM**.

Gaelic words in English. Gaelic, still spoken by about 600,000 people in Ireland and Scotland, has contributed a number of words to English, including: bard, bog, glen, slogan, blarney, shillelagh, shamrock, colleen, brogue, galore (all Irish Gaelic); and clan, loch, and ptarmigan (Scots Gaelic).

gaff; stand the gaff. To stand the gaff means to endure goading or kidding by someone, but its roots extend to the Provençal word *gaf*, for “a boathook.” *Gaff*, for “a hoax or trick” possibly derives from the idea of “hooking some poor fish,” from the time when a large fishhook was referred to as a gaff.

gaffer. *Gaffer* means an old man, so *an old gaffer* is somewhat redundant, but that is how the expression is mostly used. *Gaffer* is thought to be a contraction of either *grandfather* or *godfather*, and is believed to be much older than its first recorded use at the end of the 16th century. *An old gammer*, for “an old woman,” derives from either *grandmother* or *godmother* and is rarely

heard outside rural England. A *gaffer* is also the chief lighting technician on a movie or TV set.

gaga. Someone cuckoo, off his rocker, mentally unbalanced. It has been suggested that *gaga* is of French origin, the word deriving from the name of the French artist Paul Gauguin, who gave up banking to become a painter at the age of 35 and experienced considerable mental anguish toward the end of his life. The word seems inappropriate, however, to express Gauguin's tortured genius and would be a cruel and stupid coining if true. Alternatives are the theories that *gaga* derives from the French *gateux*, "an old man feeble-minded and no longer able to control his body," or that it is in imitation of an idiot's laugh. The phrase has been artist's slang, which would support the Gauguin theory, but according to the *gateux* theory, *gaga* originated in the theatrical world about 1875, eight years before Gauguin (1848–1903) became a painter.

gag rules. Gag rules restrict or prevent discussion on a particular subject by a legislative body. The term is an Americanism first recorded in 1810, though gag tactics were used as early as 1798 in Congress to try to restrict freedom of the press.

Gainsborough hat. Paintings have inspired a number of fashions, but no artist has been more influential than English portrait painter and landscapist Thomas Gainsborough in this regard. The Gainsborough is a wide-brimmed, large hat, turned up at the side, similar to those included in many of his portraits. Gainsborough (1727–88) did not invent the plumed velvet or taffeta hat, but painted it so well that it has been revived several times by designers, as have a number of the gracious fashions he depicted.

galah. An Australian Aboriginal language gives us this name for the Australian cockatoo (*Kakatoe roseicapilla*) with its rose-colored underside. Because the bird's incessant raucous call makes it seem foolishly talkative, Australians have made its name a synonym for *fool*, as in "He made a galah of himself."

Galahad. The term is not much used anymore, except in jest, but a true gentleman is still sometimes called a Galahad, after the noble knight Sir Galahad of Arthurian legend. The noblest knight of all, Galahad was the son of Lancelot.

galatea. Here is a cotton fabric named for a ship. *Galatea*, often used to make children's sailor suits in the past, honors H.M.S. *Galatea*, a mighty British warship of the 1860s. The *Galatea*, in turn, took her name from the sea nymph Galatea of Greek mythology.

galaxy. The Greek *galaxis*, "circle of milk," a reference to the Milky Way, gives us our word *galaxy*, first recorded in about 1398.

galenical. A medicinal preparation composed mainly of herbal or vegetable matter is called a galenical. Opium, for example, would be among such drugs. The term honors Claudius Galen (ca. A.D. 129–99), who is known in history as the "prince of physicians." This Greek doctor and philosopher served as

personal physician to Roman emperor Marcus Aurelius, and his writings were the most influential in medicine for a thousand years.

Galilean telescope; Galilean mechanics. Among his many scientific contributions, the great Italian scientist Galileo Galilei (1564–1642) founded experimental physics and astronomy and invented or improved a telescope that enabled him to scan the heavens. Galileo was also a man of great courage. When tried by the Inquisition and told to recant his belief that the Earth moves around the Sun, he complied, but rose from his knees and exclaimed sotto voce, "*e pur si muove*" (nevertheless it does move). Blind in his last days, he still searched for the truth of all things. Another of his famous pronouncements was "The book of nature is a book written by the hand of God in the language of mathematics."

gallium. French chemist Paul-Emil Lecoq de Boisbaudran named this element after *Gallia*, the Latin name for present-day France, on discovering it, in 1874. Some etymologists suspect that the scientist may have been crowing a bit, however, as *le coq* means "rooster" in French and "rooster" is *gallus* in Latin.

galliwapampus. A mythical monster of Texas, once described by O. Henry as "a mammal with fins on its back and 18 toes on its feet."

Gallup Poll. The Gallup Poll is the best known, though not the first, public-opinion poll. It was originated by Dr. George Horace Gallup (b. 1901), a professor of journalism at Northwestern University. Gallup developed his technique about 1933, basing it on carefully phrased questions and scientifically selected samples. He became prominent nationally by predicting the outcome of the 1936 American presidential election, when many other pollsters failed. His poll, operating both at home and abroad, has proved remarkably accurate but is far from infallible. In the 1948 national elections, for example, Gallup chose the late Governor Thomas E. Dewey over incumbent President Truman.

galon. According to Edna Ferber in her book *Giant* (1952): "The Mexicans call a big horse [used for hauling] a galon . . . The [American] teamsters would yell to their big horses, 'G'long! G'long!' Get along, get along, see? So the Mexicans thought a heavy horse was a galon."

galoot. Often used in the form of *big galoot*, this word signifies a clumsy, ignorant, loutish person. Apparently sailor's slang for a soldier or landlubber, *galoot* is first recorded in the early 19th century but little else is known about its derivation.

galore. *Galore*, meaning "abundant," "plenty," "enough," derives from Irish Gaelic *go leor*, which has the same meaning. The British have used *galore* for at least four centuries, while Americans have been quite familiar with the word at least since Ian Fleming's James Bond 007 series, with its enticing character Pussy Galore. *Casino Royale*, Fleming's first Bond book, appeared in 1953.

galumph. See JABBERWOCKY.

galvanic; galvanism, etc. These words enshrine Luigi Galvani (1737–98), a brilliant physiologist at Italy’s University of Bologna—although galvanism originally proved less than brilliant. Galvani’s experiments began in about 1771. No one knows if his observant wife Lucia pointed out the first galvanic reaction, or if the professor had been preparing frog legs for her dinner—the tale has numerous versions—but one evening Galvani did notice that the skinned leg of a frog he was dissecting twitched when he touched it with a scalpel. After experimenting for about 20 years, Galvani wrote a paper concluding that the reaction had been produced by “animal electricity.” Actually, the original frog’s leg had twitched because his scalpel had touched the brass conductor of a nearby electrical machine, the charged knife shocking its muscles involuntarily “into life” with a current of electricity. Alessandro Volta quickly pointed out that the contact of two different metals really produced the electricity, but controversy raged between his and Galvani’s supporters for years. Despite his monumental mistake, Galvani’s name was lionized in numerous scientific terms indicating the use of direct current. Technically, we speak of *galvanizing* as shocking with an electric current, or *galvanizing* metal as giving it a protective zinc coating, while *galvanic* refers to electricity produced by chemical action. Yet the words have much broader nontechnical meanings when they imply arousal or stimulation, as when we say someone is *galvanized* into action by a *galvanic* happening—shocked into an excited response like Galvani’s frog. See VOLT.

gam. No one knows the origins of this word for a sailor’s bull session, or a chat, or conference, although it appears to have been first recorded as a sociable visit between two whaleships at sea. Herman Melville used and defined the word in *Moby Dick* (1850), which owed much to whaling chronicles of the day. Melville defined the word as: “A social gathering of two (or more) whale-ships, generally on a cruising-ground; when, after exchanging hails, they exchange visits by boats’ crews; the two captains remaining for a time on board of one ship, and the two chief mates on the other.” *Gam* was later used ashore, as in “I had a long gam with John yesterday,” and the author a year or so ago heard it employed to describe two police patrol cars in Connecticut “gamming at the side of the road.” Some etymologists suggest that the word *gam* for a pod of whales is the source, while others opt for the obsolete English word *gamon*, animated talk or chatter.

Gamalielese. Not many eponymous words derive from the middle names of people, but H. L. Mencken coined this one from President Warren Harding’s middle name, Gamaliel. The word *Gamalielese* refers to the fractured language of Warren Gamaliel Harding, a man Mencken thought was a serial killer of English.

gamble away the sun before sunrise. This saying about gold and riches might be considered the first American proverb, though it isn’t recorded in *Bartlett’s* or any other book of quotations. The expression surely is old enough, dating back to 1533, when Pizarro conquered Cuzco, the capital of the Inca Empire, and stripped the Peruvian metropolis of gold and silver. One

cavalryman got as his share of the booty a splendid golden image of the sun “which raised on a plate of burnished gold spread over the walls in a recess of the great temple” and which was so beautifully crafted that he did not have it melted down into coins, as was the usual practice. But the horseman came to symbolize the vice of gambling. That same night, before the sun had set on another day, he lost the fabulous golden image of the sun at cards or dice, and his comrades coined the saying *Juega el Sol antes que amanezca*: “He gambles (or plays) away the sun before sunrise,” which crossed the ocean from America on Pizarro’s gold-laden galleons and became proverbial in Spain.

gambrel roof. A type of roof named after a horse’s leg. It is more specifically a ridged roof with two slopes on each side, with the lower side having the steeper pitch. John Bartlett’s *Americanisms* (1848) says the roof is “so called from its resemblance to the hind leg of a horse which by farriers is termed the gambrel.”

game. A game person is one who displays great courage and has the spirit of a gamecock (a cock bred and trained for cockfighting). *Gamecock* is first recorded in 1677 in the saying “Young lovers, like gamecocks, are made bolder by being kept without light,” but cockfighting was brought to England by the Romans centuries before this. In the 12th century it was so popular that English schoolmasters permitted students to stage cockfighting contests, as long as all the birds killed were given to the teacher. The courage of these fighting birds was much admired and it is the likely reason that courageous people were called game long before the expression was first recorded in 1727.

game as Ned Kelly. It cost nearly half a million dollars to finally capture Australia’s Kelly gang, even though the band was only four in number. Ned Kelly (1854–80), the son of a transported Belfast convict and a convicted horse thief himself, took to the hills with his brother Daniel when the latter was charged with horse stealing. Joined by two other desperados, the brothers held up towns and robbed banks for two years until the police finally caught up with them. Ned Kelly became something of a folk hero, and the great deprivations he suffered led to the phrase *as game as Ned Kelly*. When the gang was traced at last to a wooden shanty hideout, police riddled it with bullets, burned the shack down and found Ned Kelly alive and dressed in a suit of armor. He was tried, convicted, and hanged for his crimes, without the iron suit.

the game is not worth the candle. According to William Safire in his “On Language” column (February 27, 2005), this phrase is first recorded by French essayist Michel de Montaigne in 1580. English poet George Herbert (1593–1633) wrote “It is a poor sport that is not worth the candle” in *Jacula Prudentum* (1651), a collection of foreign proverbs in translation; Ernest Weekley in *An Etymological Dictionary of Modern English* tells us “the game is not worth the candle (i.e., the stakes are not high enough to pay for the lights) has parallels in other languages.” Most writers I have read claim the phrase originally referred to gambling done at night, which was not worthwhile unless the stakes were high enough to pay for the lights (the candles). But

others say the original reference is to a poor play not worth lighting the theater for. The words have come to mean any effort that is not worth making.

the game is up. The Roman comic playwright Terence used essentially the same expression over 2,000 years ago, and the words may go back to the Greeks, considering the Romans' assimilative temperament. It means "all is over," "the plot can't succeed," "there's no longer any chance of winning." The expression *the jig is up*, referring always to a dishonest activity being over, is an Americanism first recorded in 1777. No one is sure of the origin of *jig*, though it may be from the dance called a jig or from an obsolete use of *jig* meaning "trick."

game leg. A game leg is a bad leg, the *game* here probably from the English dialect *gam* or *gammy*, both meaning crooked. The expression isn't recorded until late in the 18th century.

the game of the arrow. American artist George Catlin recorded this favorite (though little known) amusement of the Plains Indians: "The young men . . . assemble on the prairie [and] . . . step forward in turn, shooting their arrows into the air, endeavoring to see who can get the greatest number flying in the air at one time, thrown from the same bow."

game plan. Since the late 1950s *game plan* has meant the specific strategy a football team plans to use in a game. The term took on broader usage in politics and business after President Richard Nixon, an avid football fan, adopted it as a favorite expression in the 1970s.

gamesmanship. British author Stephen Potter coined this word in his 1947 book *The Theory and Practice of Gamesmanship, or The Art of Winning Games Without Actually Cheating*. *Gamesmanship* means "the use of dubious or seemingly improper methods that are not strictly illegal" and is almost an antonym of *sportsmanship*, upon which Potter probably based it.

gammer. See GAFFER.

gammon and spinach. The expression *gammon and spinach* for "nonsense, humbug" is not as familiar today as it was in Dickens's time, when he used it in *David Copperfield*: "What a world of gammon and spinnage it is, though, ain't it!" The phrase, most likely an elaboration of the slang word *gammon*, which meant nonsense or a ridiculous story, is probably patterned on the older phrase *gammon and patter*, the language of London underworld thieves. The nonsense part of it was possibly reinforced by the old nursery rhyme "A Frog He Would A-wooing Go" (1600) heard by millions: "With a rowley powley gammon and spinach/ Heigh ho! says Anthony Rowley."

gamp; brolly. *Gamp* is a term for an umbrella, especially an untidy one, in England, but is rarely, if ever, used in the U.S. The word comes to us from Charles Dickens's *The Life and Adventures of Martin Chuzzlewit* (1843–44), in which the garrulous and disreputable nurse Sarah Gamp always carries a bulky

cotton umbrella. Her name is sometimes used for a midwife as well. *Brolly*, first recorded in 1873, is more commonly British slang for an umbrella today.

gams. In the U.S., since about 1900, *gams* has referred only to women's legs. But before then, in England, *gamb* meant any leg, especially a bare leg, and long prior to that *gamb* meant the leg of an animal, deriving from the late Latin *gamba*, "hoof or hock," from the Greek *kampi*, "bend, curve."

Gandhi the Mahatma. Gandhi the Great Soul. The name was coined by Gandhi's longtime friend Rabindranath Tagore, India's Nobel Prize-winning poet. Sometimes it is shortened to Mahatma Gandhi.

gandy dancer. There are several theories about this term for a railroad construction worker, which is immortalized in the song "The Gandy Dancer's Ball." One says *gandy dancer* is an American hobo term for fellow tramps who helped build the transcontinental railroad. Another claims the expression comes from the gander-like movements of these men as they worked, while a third and most probable theory opts for Chicago's Gandy Manufacturing Co., which made prominently marked track-laying tools used by the workers.

gangbuster. H. L. Mencken said, "Gang-buster was launched in 1935 to describe Thomas E. Dewey (a prominent New York district attorney who prosecuted organized crime and later became governor and an unsuccessful Republican candidate for president). The radio program *Gangbusters*, introduced in 1936, popularized the term, and it has since been applied to any law enforcement officer engaged in breaking up gangs. *To do gangbusters* is to be very successful, as in "The show did gangbusters," or "The book sold like gangbusters," while *come on like gangbusters* means to approach something very aggressively and energetically, like the opening of a *Gangbuster* radio program with its machine guns, sirens, etc.

gangplank; gangboard; gangway. Whether it's called a *gangplank* or *gangboard*, the plank connecting a ship to land takes its name from the Old English *gang*, a way of passage, because it was a way of going on or off a ship. In time, *gangway* became a synonym.

Gansevoort Street pier. The pier in New York City where Herman Melville spent the last 20 years of his life as a "most inglorious" inspector of customs, in complete obscurity. Ironically, the name Gansevoort honored his affluent maternal ancestors. A neglected *Moby-Dick* behind him, the writer lived for the evenings during which he could work on *Billy Budd* in his bleak Gramercy Park room. So little known was America's great novelist at his death that the *New York Times* at first failed to print his obituary. Belatedly the *Times* printed a brief item reporting the death of "Hiram" Melville.

gaol. Americans spell the word *jail*, though both words are pronounced the same in the U.S. and Great Britain. Other British spellings include *cheque* (check), *manoeuvre* (maneuver), *tyre* (tire), and *kerb* (curb).

Gaper's Block. A term for a Chicago traffic jam, specifically one caused by rubberneckers.

garage. A garage originally was a place to moor a boat, not park a car. *Garage* is an early-19th-century French word meaning "a place where one docks." The French began to use *garage* for "a place to keep a vehicle in" when the automobile became popular early in the 20th century and the English soon borrowed the word from them.

Garand rifle. In the early 1930s, Canadian-born John Cantius Garand invented the semiautomatic *Garand*, which works on the principle of expanding gas, while employed as a civilian ordnance engineer at the U.S. Armory in Springfield, Massachusetts. The famous M-1 was adopted in 1936 as the official U.S. Army rifle. The .30-caliber, eight-shot, clip-loading weapon proved to be a great improvement on the old standard Springfield, firing up to four times as many shots, or 100 rounds per minute, and contributed greatly to the Allied victory in World War II. Garand was never paid a cent in royalties for his invention, and never earned more than \$12,000 a year in his 34-year service with the U.S. Ordnance Corps.

garbage. There are several possibilities here. Wrong as usual, folk etymology has it that *garbage* derives from the Latin *gerbe*, "green stuff," reflecting the nobility's scorn for vegetables in centuries past. Another possibility is the French *gerbe*, "wheat, hay and other vegetative matter chopped up together for horse fodder." *Garbage* may also derive from the Italian *garbuglio*, for "confused intrigue," hence confusion, a mess—the intrigue part appropriate for our modern-day *garbologists*, people who apparently first appeared in the 1970s to make their living by poking through the garbage of celebrities and others at the top of the heap and learning their deep, dark, dirty secrets.

garbled. The Arabic *gharbala* means to sift something or purify it. The word became *garble* in English and by the 17th century came to mean to sift information selectively so that it is distorted or muddled. Soon the meaning of distorted was discarded and today *garbled* only means muddled, mixed up, unclear. One would suspect that the sound of *garbled* itself contributed to this final transformation.

Garbo speaks. Aside from some Goldwynisms, "I want to be alone" may well be the single most famous quotation to come out of Hollywood, and the most unusual—because it is a sentiment uncharacteristic of most movie stars. "A deep, husky throaty contralto," wrote the *New York Herald Tribune's* critic in describing the sultry Swedish star Greta Garbo's voice when she spoke in a film for the first time in *Anna Christie* (1930). The movie had been widely advertised under the headline "Garbo Talks." Garbo's first film words, spoken in a bar, were "Gif me a viskey . . . and dawn't be stingy, baby." All her acting career, Garbo remained a mystery woman, this image adding to her allure. Never marrying, she carried on long affairs with her frequent costar, John Gilbert, billed as "The World's Greatest Lover"; conductor Leopold Stokowski; and many others. Retiring to her New York apartment, she continued her reclusive ways until her death in 1990, age 85, often traveling under aliases like "Miss Brown" and wearing the big slouch hats that

became her trademark. Her ashes are buried in a secret location.

garden. *Gardins* or *jardins* were originally fruit and vegetable plots that monks in medieval France enclosed, or guarded, to keep cattle and other animals away from their plants. By the early 14th century the word *gardin* was being used in England, but it wasn't spelled *garden* for another 100 years or so.

garden bed; bed of roses. The term *garden bed* probably owes its origin to the beds we sleep in, like the shape or purpose of the garden bed. However, the word *bed* itself may come from a Teutonic word meaning "a dugout place, a lair," and the term *garden bed* could have come directly from there. English-speaking people have been using the expression since at least A.D. 1000. The expression *to bed out* plants is recorded as early as 1671 in a gardening manual but is probably much older. Shakespeare used the old phrase *bed of roses*, and it may have been popular centuries before him. It seems to have first been employed by the poet Robert Herrick and means a situation of luxurious ease, a highly agreeable position of comfort or pleasure. A variant seldom heard anymore is *a bed of flowers*.

gardenia. "Mr. Miller has called it Basteria. But if you will please to follow my advice, I would call it Gardenia, from our worthy friend Dr. Alexander Garden of S. Carolina." "If Dr. Garden will send me a new genus, I shall be truly happy to name it after him, Gardenia." These quotations from an exchange of letters between a friend of Linnaeus and the great botanist himself, 1757–58, reveal the politicking that is sometimes involved even in naming something. Linnaeus did honor his promise to their mutual friend and two years later dedicated a newly discovered tropical shrub to Garden, even though the amateur botanist did not discover the beautiful, sweet-smelling *gardenia*. Dr. Alexander Garden (ca. 1730–91), a Scottish-American physician, resided in Charleston, South Carolina, where he practiced medicine and also devoted much of his time to collecting plant and animal specimens, discovering the Congo eel and a number of snakes and herbs. Garden carried on an extensive correspondence with Linnaeus and many other European naturalists, probably as much out of loneliness as for intellectual stimulation. An ardent Tory, he returned to England during the Revolutionary War, resuming his practice in London and becoming vice-president of the Royal Society. Dr. Garden was by all accounts a difficult, headstrong man. When his granddaughter was named Gardenia Garden in his honor, he still refused to see her. After all, her father had fought against the British!

Garden of Eden. This most famous garden of all. Located, it is said, at El Mezey near Damascus, where the waters of the Tege and Barrady divide into four streams that are said to be the four streams of Moses mentioned in Genesis. But, on second thought, many places have been called the original Garden of Eden, among them Persia (Iran); Armenia; Chaldea; Basra; southern Iraq; Israel; Egypt; East Africa; Java; Ceylon; China; Lemuria; the Seychelles Islands; Sweden; and, yes, Mars, by Brinsley Le Poer Trench in his book *The Sky People*. In the late 19th century, Galesville, Wisconsin, was proposed as the site of

the biblical garden, and in recent times Baptist minister Elvy E. Calloway has claimed the honor for Bristol, Florida, offering as “proof,” among other evidence, the fact that Bristol, on the banks of the Apalachicola River, is the only place in the U.S. where gopher wood (the Torrey tree) grows, Noah having made his ark of gopher wood. In the 17th century a Swedish professor even wrote a book attempting to prove that the fabled garden had been located in the Land of the Midnight Sun. At Al-Qurna in Iraq, the site of so much recent bloodshed, there is a sign that stands outside a little enclosure around a tree, reading: “On this holy spot where the Tigris meets the Euphrates this holy tree of our father Abraham grew symbolizing the Garden of Eden on earth. Abraham prayed here two thousand years B.C.” A Garden of Eden is sometimes termed a “Garden of Paradise,” as it is in Ceylon. There, Ceylonese point to the Adam’s apple tree (*Tabernaemontana coronaria*) when claiming their country as the original Eden. The small tree or shrub bears an attractive fruit with a shape suggesting that a piece has been bitten off, and the Ceylonese say that it was delicious before Eve and Adam ate of it, though it became poisonous after their “fall.” See ADAM’S APPLE TREE.

Garden of the Gods. An area near Colorado Springs, Colorado, noted for over a century for its great natural beauty.

Garden of the Hesperides. In Greek mythology this was a garden where a tree bearing golden apples grew, a tree the Hesperides, or “Daughters of the Evening,” were required to watch over, to guard the precious fruit.

garden of the world. The beautiful garden plants of the eastern Himalaya and western China, of which there are numerous species. It is said that many cultivated plants found in gardens today were developed as a result of the “rhododendron mania” of the late 19th and early 20th centuries.

Garden State. A nickname for New Jersey, which has had an abundance of nicknames, including the Jersey Blue State, New Spain, the Clam State, and even, strangely, the Switzerland of America (which mountainous New Hampshire has also been called). In the late 19th century New Jersey was known as the Mosquito State, though its mosquitos are no match for Alaska’s.

gargantuan. Broad, coarse exuberant humor and sharp satire mark the *Rabelaisian* spirit or style. The word honors the prodigious French humanist and humorist François Rabelais (ca. 1490–1553), who “drank deep as any man,” of life as well as wine. Rabelais, whose voracious appetites would have sufficed for any two ordinary men, started out as a Benedictine monk, later turning physician, but his reputation rests on his ribald writing, a paean to the good life—love, drink, food—a satire on the bigotry and blindness of Church, state, and pedant. Gross and noble at the same time, marked by vast scholarship, his masterpieces are *Pantagruel* (1533) and *Gargantua* (1535). The last book, though Gargantua had been a figure in French folklore, gives us the word *gargantuan*—“enormous, gigantic”—from the giant prince of prodigious appetite, who was 11 months in the womb, as an infant needed the milk of 17,913 cows, combed his hair with a 900-foot-long comb, once ate six pilgrims in a

salad, and lived for several centuries. Pantagruel, Gargantua’s son, is just as famous and classic a character.

Garibaldi shirt; Garibaldi fish. In the crowning achievement of his eventful life, Giuseppe Garibaldi, commanding his 1,000 Redshirt volunteers, conquered Sicily, crossed back to the Italian mainland and expelled King Francis II from Naples. One year later in 1861, Italy was united under King Victor Emmanuel II and Garibaldi became an international hero. Both a woman’s loose, high-necked blouse with full sleeves—similar to those worn by his followers—and a currant biscuit were named for him, as well as an edible, brilliant orange fish (*Hypsypops rubicundus*) discovered off the southern California coast by Italian-American fishermen.

garlic. Owing to its resemblance to the leek, garlic, the herb that “makes men drink and wink and stink,” takes its name from the Old English *garleac*: *gar*, “spear,” and *leac*, “leek.” The Romans believed garlic contained magical powers and hung it over their doors to ward off witches, just as some people wear cloves around their necks to protect themselves against colds, diseases, and even vampires. *Pilgarlic* is an interesting word once used to mean a “baldheaded man.” It takes its name from the early English *pyllyd garleke*, “peeled garlic,” for someone whose head resembles a shiny peeled garlic bulb. Since many bald-headed men were old and pitiful, the word came to take on the meaning of a person regarded with mild contempt or pity, an old fool or someone in a bad way. See ONION.

garnet. See POMEGRANATE.

Garret election. Presumably, there are no more bawdy Garret elections *anywhere*, but such popular ceremonies were held near Wandsworth, London in the 18th century. There in the borough of Garret, a small hamlet consisting of “a few struggling cottages,” the ludicrous “election” was held with the opening of every new parliament, the only voting qualification being “open-air coition in or near Garret.” According to an account of the time: “The ceremony consists of a mock election of two members to represent the borough of Garret. The qualification of a voter is having enjoyed a woman in the open air within that district. The candidates are commonly fellows of low humour who dress themselves up in a ridiculous manner. As this brings a prodigious concourse of people to Wandsworth, the publicans of that place jointly contribute to the expenses, which is sometimes considerable.” Similar elections might prove the answer to voter apathy in the U.S.

Garrison finish. Holding Montana back from the pack until they came into the homestretch, “Snapper” Garrison suddenly stood high in the stirrups, bending low over the horse’s mane in his famous “Yankee seat” and whipped the mount toward the finish line, moving up with a rush and winning the 1882 Suburban Handicap by a nose. This race made jockey Edward H. Garrison an American turf hero. Garrison, who died in 1931, aged 70, used his new technique many times over his long career, winning many of his races in the last furlong, and the Garrison finish became so well-known that it was applied to any close horse race, finally becoming synonymous with all last-minute efforts—in sports, politics, or any other field.

garryowen. In rugby a garryowen is a high punt the offensive team uses to gain ground when the forwards are rushing downfield. It takes its name from the Irish rugby club Garryowen, well known for using the tactic. *Garry Owen* is also the name of a martial song and the name of General George Armstrong Custer's horse.
