garum; titmuck. It is hard to find anything good to say about the legendary Roman sauce garum, but the ancient Romans loved it. Their garum was made from the putrified guts of fish, blended with fish blood and gills in an open tub, salted heavily, then exposed to the sun, where they were stirred occasionally until the whole mess fermented and herbs were added. At the legendary banquet of the Roman merchant Trimalchio, statues of four satyrs in the corners of the room poured vile-smelling garum sauce over fish molded to appear almost alive, to make it seem as if they were swimming in a jelly sea. The only thing comparable to it available today is titmuck, an Eskimo salmon delicacy that ripens in a hole filled with dirt and grass until it decays.

gas; gasoline. Though it is also the abbreviation of *gasoline*, *gas* is the older of the two words. *Gasoline* made its debut in the late 19th century when scientists coined it (from *gas* plus the Latin *oleum*, "oil," and *ine*) to describe the colorless liquid obtained by the fractional distillation of petroleum. *Gas* itself was coined nearly three centuries earlier by Dutch physician and chemist Jean Baptiste van Helmont (1577–1644). Van Helmont thought that he had discovered an occult principle contained in all bodies and named his discovery *gas* from the German *chaos*, "chaos." He had little understanding of the nature of gases, and no one knows exactly what sense of the word *chaos* he had in mind when he coined *gas* from it. But despite all this chaos, he was *cooking with gas*, for his invention has become part of almost every language.

gasconade. The Gascon inhabitants of Gascony, France, a region and former province near the Spanish border, have traditionally been regarded by other Frenchmen as flamboyantly boastful, a poor people except in bravery and bragging. This tradition can be seen in Dumas's *The Three Musketeers*, where brave, boastful d'Artagnan is the model of a Gascon. Many old French *contes* illustrated Gascon braggadocio. One tells of a Gascon being asked how he liked the great Louvre in Paris. "Pretty well," the braggart replies, "It reminds me of the back part of my father's stables." Such stories and the sentiments that inspire them led to the coining of *gasconade*, "extravagant boasting or swashbuckling braggadocio," a word that became universal because it described so many people other than Gascons.

gasper. *Gasper* is British slang for a cigarette, for obvious reasons. Although the term isn't common in the U.S., an excellent novel by Frank Freudberg about the cigarette industry is entitled *Gasp!*

gat. See GATLING GUN.

Gate City. A nickname now or in the past for several cities, including Atlanta and Louisville, because they are each situated

at the entrance to a region. Atlanta is also called the Gate City of the South.

gate crashing. See CRASH.

Gateway to the West. An old nickname for Pittsburgh, Pennsylvania; also called Gate City of the West.

gathering nuts in May. Since there are no nuts to be gathered in May, the old children's song that goes, "Here we go gathering nuts in May" seems to make no sense—and indeed, it may have been intended as a nonsense song. But the *nuts* in the phrase has been explained as being *knots* of May, that is, bunches of flowers. In Elizabethan England Elizabeth herself gathered knots of May in the meadows, one author tells us, and this is a plausible explanation, even though there are no recorded quotations supporting the use of *knots* for flowers, except possibly the English knot gardens of herbs.

Gatling gun. The Gatling gun won fame as the best of the 11 mostly eponymous Civil War machine guns (including the Ripley; the Ager "Coffee Mill"; the Claxon; the Gorgas; and the Williams, which, when used by the Confederates on May 3, 1862, became the first machine gun to be fired in warfare). Designed by Doctor Richard Jordan Gatling (1818–1903), a North Carolina physician and inventor, the Gatling was perfected by 1862 but adopted by Union forces too late to be used in more than a few battles. Mounted on wheels, it had a cluster of 5 to 10 barrels that revolved around a central shaft. The gunner, by turning a hand crank, controlled the rate of fire, up to 350 rounds per minute. Despite the weapon's late introduction, the Gatling's effective range of 2,000 yards had a strong psychological effect on the Confederacy; adopted by many nations after the Civil War, it remained in use until about 1900. Although the weapon is of only historical importance today, as the precursor of the modern machine gun, another word deriving from it has wide currency. *Gat*, a slang term for a small gun, apparently arose as a humorous exaggeration. By 1880, however, fictional characters were talking of having gatlings under their coats and it wasn't long before *gatlin*, or *gatling*, was shortened to *gat*.

gaucho. Since the early 18th century *gaucho* has meant a cowboy of the South American pampas, often a *mestizo* of mixed Spanish and Indian ancestry and always a skilled horseman and soldier with an independent spirit and a wanderlust. The gauchos have been in decline for over a century and so have the *payadors*, the singing minstrels of the plains, much of the plains now being farmed. Gauchos may take their name from Quechua Indian *wahcha*, "a vagabond or poor person," but Arawak *cachu*, "comrade," is a possibility, too.

Gaullist. A Frenchman practicing right-wing nationalistic politics in France is often called a Gaullist, the term known in France and throughout the world. The word of course honors Charles André Joseph Marie de Gaulle (1890–1970), the tall, imposing first president of France from 1958–69. General de Gaulle, a great patriot who had led the Free French during World War II, did not become active in French politics until he was almost 70. He once remarked while in office, "I myself have become a Gaullist only little by little."

gauntlet. See THROW DOWN THE GAUNTLET.

gauss. Known as “the prince of mathematicians,” and possibly the greatest mathematical genius of all time, Karl Friedrich Gauss (1777–1855) was a German prodigy who when only 10 discovered independently how to sum up complex arithmetic series. He did much important work in his field before turning 21, including a proof of the fundamental theorem of algebra, but did not confine himself to mathematics. Of his many important contributions in topology, physics, and astronomy—he headed the Göttingen Observatory—one of the most valuable is his founding of the mathematical theory of electricity. Thus the gauss, a unit of intensity of the magnetic field, pays honor to his name.

gauze. *Eyeless in Gaza* and the *Gaza Strip* are phrases well known to readers of the Bible and history, but few people know that the city of Gaza on the Mediterranean Sea gives its name to the light filmy fabric called *gauze*, which was first manufactured there.

gay. Some commentators have argued that *gay*, used to describe a homosexual, makes obsolete older, more traditional uses of the word, and that, besides, homosexuals are as morose as anybody else. But no one can legislate word usage, and what the language at the time needs, it takes. *Gay* came into use in the 1950s, possibly originating from the older (ca. 1935) term *gaycat*, for “a homosexual boy.” In addition to suggesting gaiety, *gay* has also had strong links with “affectation, dissipation, and immoral life” for over three centuries.

gay Lothario. Lothario’s boastful speech from Nicholas Rowe’s tragedy in blank verse *The Fair Penitent* (1703) explains why his name became a synonym for a libertine or seducer. Lothario isn’t by any means a model lover, for Calista, the fair penitent, stabs herself after being seduced by him. Wounded in a duel, he dies claiming: “In Love I Triumphed: Those joys are lodg’d beyond the reach of Fate . . .” Rowe apparently stole the plot for his play from Massinger and Field’s *Fatal Dowry* (1632), shortening it and modifying the ending, and borrowed Lothario’s name and character from William D’Avenant’s tragedy *The Cruel Brothers* (1630), though Lothario is also the name of characters in Cervantes’s *Don Quixote* and Goethe’s *Wilhelm Meister*. Rowe’s play, a favorite of Dr. Johnson’s, was extremely popular for over a century, the legendary David Garrick playing the lead for a time, and made “the haughty, gallant, gay Lothario” proverbial. Lothario’s philosophy might be summed up in his lines: “The driving storm of Passion will have way, and I must yield before it.”

Gay Nineties. See NAUGHTY NINETIES.

gazebo. A gazebo is a garden structure of Dutch origin that was originally built of stone or brick. It is now a small, wooden-roofed building that is screened on all sides and set apart from the house to provide an attractive view of the garden. The word’s origin is uncertain. One unproved theory holds that this word for a garden lookout or belvedere is a humorous invention of some 18th-century wit, who modeled it

on the word *gaze*, pretending that gaze was a Latin word (it is of unknown origin), which would make gazebo the future form “I shall see” of that hypothetical verb. Nor has anyone proved that the word is from some obscure Chinese source, as its brief first-recorded use in 1752 in an architectural book suggests to some etymologists: “The Elevation of a Chinese tower of Gazebo.”

gazette. Newspapers were first called *gazettas* in 16th-century Venice, where they were so named because one could be bought with a Venetian coin of small value called a *gazeta*. By 1605 we find Ben Jonson using the word in English, though it wasn’t spelled in its present form for another 75 years or so.

gazillion. A recent word for a large number of people or things: “He’s got a gazillion of those baseball cards.”

gazumping. A term coined in Britain that is often heard in the U.S. and Australia as well. The word, when used in relation to real estate transactions, refers to the practice of a seller refusing to honor an agreement with a buyer and selling his property to someone else for more money. No one knows with certainty the origin of *gazumping*, which was first recorded in 1928, referring to swindling in general.

g’day. An exclusively Australian greeting meaning good day, hello: “G’day, mate.”

gear. 1980s slang for clothes, replacing “threads,” “vines,” etc., in the inner city, the word *gear* derives from the common term for military or outdoor equipment, including clothing, and was either introduced by Vietnam veterans or associated with the Army-Navy “surplus stores” where the young often buy clothing that sets styles. French designer Jean-Charles de Castelbajac had even introduced the *Gear Look* for the not so young with money, “rough-hewn outdoorsy materials translated into high fashion.” *Gear* was standard English for the female and male sexual organs from the 16th to the 19th century.

gee! An American euphemism for “Jesus!” *gee!* dates back to only 1895. Its antecedents are *jewillikin* (1851); *gee whillikins!* (1857); *gee whiz!* (1895); *gee whitaker!* (1895); and *holy gee!* Since then we have had *jeez!* (1900); *jeepers!* (1920s); and *jeepers creepers!* (1934). See also JIMINY CRICKET.

gee and haw. Cries meaning “turn right” and “turn left” respectively, used when working mules, horses, and oxen. These old terms date back to 17th-century England, and their derivations are unknown.

Geechee. An old Creole language spoken by blacks in Georgia and South Carolina, which takes its name from Georgia’s Ogeechee River and which contains brilliant, beautiful language. A fairly recent story about Geechee tells of a racetrack groom who so loved the unbeatable racehorse Secretariat, one of the greatest horses of all time, that he spoke to him in Creole to calm him down before big races.

gee-gee. This term for a poor or mediocre racehorse isn't an Americanism. It can be traced back to England over 150 years ago and derives from the turning command *gee* given to a workhorse pulling a wagon. A racehorse called a *gee-gee* is thus compared to a common workhorse. *Gee* alone was also English slang for a horse.

geek. The carnival "wild man," usually an alcoholic, who bit off the heads of chickens; any person who has sunk to the lowest depths of degradation, or who is odd and ridiculous. The word is a variation on the English word *geck* for a fool, which dates back to the 16th century and was used by Shakespeare among other great writers.

geep. A "new animal" that is a cross between a goat and a sheep. This cross produced by genetic engineering was made in the United States in 1971 and has held its own, even though geep has also been slang for an offensive, unpleasant person since about 1940.

gee whittakers! An old-fashioned exclamation still heard infrequently.

geezer. See OLD GEEZER.

gefilte fish. Hot or cold it is delicious, but the Jewish delicacy, made with many ingredients and traditionally served on Friday nights, is *not* a separate species of fish. Gefilte fish is a kind of fish loaf made of various ground fish, eggs, onions, pepper, salt, and sometimes sugar—every good cook having her or his secret recipe. The "stuffed fish" is more properly called *gefilte fisch* in Yiddish. See SLEEPS AT THE BOTTOM OF THE OCEAN.

Geiger counter. The Geiger counter is sometimes called the Geiger-Muller counter, for both German physicist Hans Geiger (1882–1945) and the scientist who helped him improve upon it in 1927. Actually it might better be named the *Geiger-Rutherford-Muller counter*, because the New Zealand-born British physicist Ernest Rutherford had invented the device, with Geiger, 15 years earlier. The clicking electronic counter, which measures nuclear radiation, is owned by many hopeful prospectors today and widely used as a safety device; it is also employed in medicine to locate malignancies. Geiger designed other types of counters as well.

gelati. Italian *gelati* have become more popular in America over the past 10 years. *Gelato* is the Italian for ice cream, and the delicacy, which is folded rather than churned when made, has a much higher butter-fat content than any other kind of ice cream.

gelt; mazuma; shekels. The first slang term for money given here owes its currency to Yiddish. *Gelt* derives from the German *Geld*, "money," and has been common here since the mid 19th century, in England since 1698. *Mazuma*, usually a more humorous term, possibly derives from the Hebrew *mezumman* "the ready necessary," or money. For some strange reason *mazuma* was first recorded (1907) in a book about Kansas, of all places. The *shekel*, the first money mentioned in the Bible (Gen.

33:12–16), was a silver coin weighing about two-thirds of an ounce, common in ancient times. In the plural it has come to mean money in general, since at least the mid-19th century.

Gem of the Mountains. A nickname for Idaho, often erroneously said to be a translation of the state's name (see IDAHO). Idaho has also been called the Gem State and Little Ida. Residents of Idaho are called Idahoans or Idahovans.

Gene Autry. Gene Autry, Oklahoma; is named after the popular singer and film star of the 1940s and 1950s. It is perhaps the only American city named after a movie star, unless one counts Tarzan, Texas.

General Grant tree. One of the largest redwoods in California, named after American general and president Ulysses S. Grant. The General Grant National Park was created around it, later becoming the Kings Canyon National Park.

generation. *Generation* derives ultimately from Latin *genus*, birth. There is no definite period of years for a generation; it is the average interval of time between the birth of parents and the birth of their children. A generation is a period of more than 50 years in the Old Testament. Today a generation is generally considered to be 30 to 33 years in length, about three generations to a century.

Generation X. The generation born roughly between 1960 and 1975, one which has often been described as another directionless, disaffected LOST GENERATION. The term became popular with the publication of Douglas Coupland's novel *Generation X: Tales for an Accelerated Culture* in 1991, but had actually been coined 27 years earlier as the title of a book by Charles Hamblett and Jane Deverson entitled *Generation X*. Generation Xers are often called "Xers" and "slackers," the latter from a 1991 film of that name. See BABY BOOM.

genius award. A name invented by the media for the MacArthur Fellowships, which are grants given annually by the MacArthur Foundation. The awards are given in many disciplines, from astrophysics to writing, valued at about \$500,000, distributed over five years. Some 25 "geniuses" are chosen each year from candidates nominated by various authorities, whose identity is kept secret.

genius does what it must. See TALENT DOES WHAT IT CAN.

Genius of the Divide. See quote from Willa Cather, *O Pioneers*, 1913: "For the first time, perhaps, since the land emerged from the waters of geologic ages, a human face was set toward it with love and yearning . . . Then the Genius of the Divide, the great, free spirit which breathes across it, must have bent lower than it ever bent to a human will before. The history of every country begins in the heart of a man or a woman."

genocide. Acts intended to destroy national, ethnic, racial, or religious groups are called *genocide*, the word based on the Greek *genos*, "race," and the Latin *cadere*, "to kill." The word was invented by Professor Raphael Lemkin of Duke University

and used in the official indictment of Nazi criminals in 1945; three years later the United Nations made genocide a crime against international law.

gentian. Among the loveliest wild flowers, the fringed gentian, has been immortalized by Bryant and other poets, and the large *Gentiana* genus to which it belongs, containing some 400 species, provides us with many valued alpine plants for the rock garden. *Gentians* take their name from the powerful monarch Gentius, who reigned as king of Illyria about 180–167 B.C. and who was first to experience the medicinal value of gentians, according to Pliny and Dioscorides. Since early times the roots and rhizome of the European yellow gentian (*Gentiana lutea*) have been used to dilate wounds, as a bitter tonic and counterpoison, and in curing diseases. Certain alcoholic beverages are made from the plant, too. The beautiful flowers, predominantly blue, despite *Gentians lutea*, are generally found at high altitudes. Difficult to cultivate, they are nevertheless extensively grown in the home garden. *Gentianaceae*, the *Gentian* family, consisting of 800 species and 30 genera, also bears the Illyrian king's name.

Gentlemen, get in your cars. Words traditionally said to drivers at the start of the Indianapolis 500, America's premier race-car event. An extremely dangerous race, it inspired one sportswriter to change the words to "Gentlemen, get in your coffins." (I am unsure of the identity of the writer [the *New York Times's* Ira Berkow?]. Perhaps some reader could be of help). Another famous phrase from Indianapolis is "Gentlemen, start your engines."

Gentlemen prefer blondes. *Gentlemen Prefer Blondes* (1925) was the title of the Anita Loos (1893–1981) novel, but the words in the text were, "Gentlemen always seem to remember blondes." Her famous book, made into a play and movie, had such diverse admirers as James Joyce, George Santayana, Mussolini, and Churchill, and was written as a spoof of her good friend Mencken's taste for "dumb blondes." Loos herself was a brunette and wrote a sequel to her book, *But Gentlemen Marry Brunettes* (1926), among over a hundred books and screenplays, including her script for D. W. Griffith's masterpiece *Intolerance*. She considered Hollywood a "mink-lined rut," and, as for men, "always believed in the old adage, 'Leave them while you're looking good.'"

gentoo. *Gentoo*, for prostitute, is a South African word that may come from a disparaging Hindi term for a Hindu who speaks Teluga rather than Hindi. But it possibly derives from the name of the *Gentoo*, a ship transporting female servants to Africa that was wrecked on the South African coast. The women were saved but lost all their belongings and were forced to work as prostitutes in gentoo houses to support themselves. *Gentoo*, first recorded in 1638, also means a heathen.

geoduck. The geoduck clam (*Panope generosa*) of the Pacific Coast and elsewhere is pronounced "qweduc" by *Webster's* and "goeeyduck" by its diggers. This enormous intertidal clam takes its name from the Nisqualli *geoduck*, "dig deep." The clam indolently suns itself on warm days, its huge neck so prominent

emerging from the sand, the *West Coast Cookbook* (1952) tells us, "that ladies of an earlier day stayed at a discreet distance when their men went hunting them . . . the hunt of the reclining geoduck, it was hinted, not being quite nice." The geoduck is hard to catch. As soon as the huge clam senses danger, it begins digging furiously into the sand and one has to dig all the faster; two people are usually required to beat the clam at its game.

geography. *Ge*, the Greek word for earth, is the basis for many words, including *geography*, *geology*, *geometry*, *geocentric*, *geodetic*, and even *Gaea*, the Greek goddess of the earth, who sprang from primordial Chaos, produced Uranus, and then married him and was the mother of Cronus, the Titans, the Cyclopes, and the Hundred-headed Giants, who gave us such words as *chronology* and *titanic*.

Geordie. A dialect spoken in northeastern England. Some authorities say it derives from the regional pronunciation of the name George (Geordie), but others give an assist to the name of George Stephanson, the famous local resident who constructed the world's first practical steam engine in 1814 and has ever since been associated with the area. The region is often called "Geordieland." See COCKNEY.

George. Though it may have originated 30 years or so earlier, *George* for anything good, O.K., or excellent ("that's real George") was most popular during the 1950s. No one knows if there was a real George behind the expression (certainly not George Washington, whose first name is slang for a dollar bill because of his picture on it, and surely not either of the two other U.S. presidents named George). Perhaps *George* here derives from the name of the French cardinal Georges d'Amboise of LET GEORGE DO IT.

the George. A very recent slang name for the glorious George Washington Bridge, a suspension bridge over the Hudson River between Manhattan and Fort Lee, New Jersey.

George Spelvin; Harry Selby; Walter Plinge. Playwright Winchell Smith's 1906 dramatization of George Barr McCutcheon's *Brewster's Millions*, a perennial favorite, included among its cast members a "George Spelvin." This was a second fictitious name given in the playbill to a member of the cast who played two parts. Since that day "George Spelvin" has had the same theatrical use. Though Smith's play widely popularized the name, it had been used in this way as early as 1886 in Charles A. Gardiner's *Karl the Peddler*. It has since been given to dolls substituted for infants, to animals, and even to dead bodies in movies and play credits, having been used well over 10,000 times in Broadway productions alone. At one time, a club of Broadway actors was called the Spelvin Club. "Harry Selby" is another fictitious name used in the same way but far less frequently. In England "Walter Plinge" is similarly employed. One version of this story claims that the fictitious Walter Plinge was a genial bartender working at a pub near the Lyceum Theatre about 1900. His policy of easy credit endeared him to the players, who immortalized his name in print. See ALAN SMITHEE.

georgette. Whether she invented it or not isn't known, but the finespun fabric *georgette* honors Madame Georgette de la Planche, a celebrated Parisian dressmaker and modiste of the late 19th century. The formerly trademarked sheer silk crepe is used primarily for blouses and gowns. It is sometimes called *crêpe georgette*.

Georgia. Georgia is named for George II of England (1683–1760). Discovered by Hernando de Soto in 1540, it became the last of the 13 original colonies in 1732 when a British charter was granted for the establishment of “the Colony of Georgia in America.” George II, a methodical man who “took the greatest pleasure in counting his money piece by piece, and . . . never forgot a date,” wasn't a particularly popular monarch. Historians straining for something interesting to say about him seem only to be able to tell us that he was the last British sovereign to command an army in the field—at the battle of Dettingen (June 27, 1743) in the War of the Austrian Succession.

Georgian. Anything to do with the reign of the British monarch George III (1738–1820), who was king for 60 years, from 1760 until his death. This would include Georgian poetry, Georgian architecture, Georgian literature, Georgian furniture, etc. George III was not a popular king and was more than a bit unbalanced (it was said that he “lost America and then lost his wits.”). Wrote Edmund Clerihew Bentley in a CLERIHEW about the monarch: “George the Third / Ought never to have occurred / One can only wonder / At so grotesque a blunder.” See PEACOCK.

geranium. The beaked seed pods of these flowers resembled the head and beak of a crane, the Greeks thought, and so they named the plant for the crane, *geranos* in Greek. This family of flowers, containing about 250 species, does not include the very popular common garden geranium (*Pelargonium*) so widely grown today, which was mistaken for it over the years and so shares its name. *Pelargonium*, however, is from the Greek for “stork,” an allusion to the shape of its fruit.

germ. The Latin word *germen*, “sprout,” is the ultimate root of *germ*. Long before it meant the seed of a disease, a usage first recorded in 1803, *germ* meant “any portion of a living thing, animal or vegetable, that is capable of development into a likeness of that from which it sprang.” Hence the name *wheat germ* for the tiny living protoplasm in the wheat kernel.

German measles; German shepherd; etc. During both World Wars anything *German* was anathema to her enemies. As Mencken points out, Bismarck herring became *Eisenhower herring*, sauerkraut, *liberty cabbage*, and German measles even became *liberty measles*. *German measles*, or rubella, is a milder virus disease than measles, though particularly dangerous to the offspring of pregnant women who are exposed to it; the *German* may be spurious in that sense, but the disease could be so named because it was first identified by Dr. Friedrich Hoffmann, a German physician, in 1740. Similarly, *German silver* was initially made at Hildburghausen, Germany, although the fact that it is a silvery alloy, a fake silver compound of copper, nickel, and zinc, may have influenced its name. Typical of words using the national adjective is the now ubiquitous

German shepherd guard dog. See ALSATIAN; MEASLY; ROTTWEILER.

German words in English. English is of course structurally Germanic and is considered a Germanic language because of its Anglo-Saxon roots, but many words from Germanic languages have come into English at a later time in history, from the Middle Ages up until the present. A brief sample of these include: junker, lobby, carouse, plunder, saber, zinc, hamster, cobalt, shale, quartz, feldspar, gneiss, nickel, meerscham, waltz, zigzag, iceberg, poodle, spitz, dachshund, zither, leitmotiv, yodel, protein, paraffin, ohm, poltergeist, rucksack, semester, kindergarten, seminar, poker, and bum. Words in American English of German origin include the following: fresh (impudent), bub, hex, hausfrau, loafer, nix, ouch, phooey, wunderkind, spiel, Kris Kringle, Christmas tree, semester, seminar, noodle, sauerkraut, pretzel, lager beer, bock beer, frankfurter, hamburger, liverwurst, sauerbraten, pumpernickel, schnitzel, delicatessen, snits, wienerwurst, zweiback, stollen, dunk, bake oven, and how!, cookbook, ecology, gabfest, check (restaurant tab), hold on, hoodlum, klutz, loafer, rifle, scam, slim chance, shyster, gesundheit, schnapps, standpoint, wisenheimer, wanderlust.

Geronimo! Chiricahua Apache leader Geronimo is said to have made a daring leap on horseback to escape U.S. cavalry pursuers at Medicine Bluffs, Oklahoma. As he leaped to freedom down a steep cliff and into a river below he supposedly cried out his name in defiance of the troopers. There is no mention of this incident in the great warrior and prophet's autobiography, which he dictated to a white writer before his death under military confinement at Fort Sill, Oklahoma, in 1909. But by that time Geronimo was an old man, well over 70, and had converted to the Dutch Reformed Church; little remained of the brave leader who in protecting his people's land against white settlers had terrorized the American Southwest and northern Mexico with cunning, brutal raids and whose actions became western legend. The cry *Geronimo!* is part of that legend and was adopted as the battle cry of American paratroopers leaping from their planes in World War II. The 82nd Airborne at Fort Bragg, North Carolina first used it, taking it either from the oral legend about Geronimo or from the popular movie featuring the Indian warrior, showing near the paratrooper training center at the time.

gerrymander. Above editor Benjamin Russell's desk in the offices of the *Centinel*, a Massachusetts Federalist newspaper, hung the serpentine-shaped map of a new Essex County senatorial district that began at Salisbury and included Amesbury, Haverhill, Methuen, Andover, Middleton, Danvers, Lynnfield, Salem, Marblehead, Lynn, and Chelsea. This political monster was part of a general reshaping of voting districts that the Democratic-Republican-controlled state legislature had enacted with the approval of incumbent Governor Elbridge Gerry. The arbitrary redistricting would have happily enabled the Jeffersonians to concentrate Federalist power in a few districts and remain in the majority after the then yearly gubernatorial elections of 1812, and was of course opposed by the Federalists. So when the celebrated painter Gilbert Stuart visited the *Centinel* offices one day before the elections, editor Russell indignantly pointed to the monstrous map on the wall, inspiring

Stuart to take a crayon and add head, wings, and claws to the already lizard-shaped district. “That will do for a salamander,” the artist said when he had finished. “A *Gerry-mander*, you mean,” Russell replied, and a name for the political creature was born, *gerrymander* coming into use as a verb within a year.

Gestapo. *Gestapo* is a contraction formed from *Geheime Staats Polizei*, the NAZI secret state police agency that was formally declared a criminal organization at the Nuremberg trials. Founded in 1933 by Hermann Göring, it came under Heinrich Himmler’s control as part of the S.S. the following year. The group’s ruthless methods of capture, torture, and extermination, the fact that it was responsible for all concentration camps, and its exemption from any control by the courts made it the symbol for brutal, sadistic repression that it is today.

get (catch) the gold ring. To win a big prize of some kind. Though the phrase has been reinforced by the gold ring of merry-go-rounds in modern times, it dates back to the days when knighthood was in flower. At the time tournament joust-ers vied to pick up a small ring with their lances, trying to win the ring.

get a break. There are several explanations for this expression meaning “to have some good luck,” but no one is certain of its origins. It has been suggested that *to get a break* might come from a *break* in pool. When a player breaks the racked balls in a pool game a good number may be pocketed, putting that player in a good position to make a long, successful run.

get a bum on. To get very drunk. The expression has been common for over a century, but its etymology is unknown.

get a horse! A phrase from the early age of the automobile in the U.S. when motor cars were often mired in ditches or chugged slowly down the street, and people, especially children, would shout “get a horse!” to the motorists manning them. The phrase is not obsolete as some writers have it. I have heard it directed at runners or joggers several times in the last few years—mostly by children.

get a hunch, bet a bunch. A saying said to derive from the game of faro, in which a daring player or a confident high roller would bet both win and lose at the same turn. The practice gave rise to the saying “get a hunch, bet a bunch.”

get a rise out of someone. These words first applied to fish rising to the bait. Writers on the art of angling popularized the word *rise* in this sense 300 years ago, and the metaphor from fly-fishing became standard English. Just as the fish rises to the bait and is caught, the person who *rises* to the lure of a practical joke becomes the butt of it. From its original meaning of raising a laugh at someone’s expense, the expression has been extended to include the idea of attracting attention in general—getting a rise out of a sales prospect, etc.

get brain. A hip-hop term for oral sex that found its way as an ad slogan to 118 billboards on buses and several subway

trains before being removed by New York’s Metropolitan Transportation Authority. The ad was conceived and paid for in 2004 by Akademiks, a hip-hop clothing designer, and featured a comely young woman kneeling among books scattered on the floor, and the words “Read Books. Get Brain.” Get Brain’s origin? According to the company, “It’s a phrase that’s been floating around in songs for a long, long time.” See *New York Times*, November 6, 2004.

get by the short hairs. It is widely assumed that the *short hairs* here are the pubic hairs, and *short hairs* is, in fact, slang for the hair around the genitals. George P. Burnham first used the expression in the form “get where the hair is short” in his *Memoirs of the United States Secret Service* (1872), and some department of dirty tricks no doubt invented it. But to get complete mastery over a person by grabbing his or her pubic hair would be difficult, to say the least, even if he were naked. So would holding someone by the short hairs at the nape of the neck, another explanation. Maybe the relatively short hairs of the beard provide a logical answer, and there is a much earlier expression *to take by the beard* that means about the same thing.

get down off your high horse. Originally, these were words directed at affected “important people,” who always rode the tallest horses in parades and pageants. Today the horses aren’t usually present but there’s no shortage of riders.

get in (into) the weeds. A recent phrase meaning to get down close to something if you want to solve or understand it: “You’ve really got to get into the weeds on that story, not the orchids or roses.” Heard from two reporters on TV evening news programs (May 18, 2006).

get in one’s hair. Shakespeare wrote “Thou art ever in my beard,” but it took almost another three centuries before someone invented “You get in my hair.” That someone is anonymous, but the expression describing somebody or something persistently annoying a person is of American origin. The phrase is first recorded in an Oregon newspaper in 1851 and no explanation is given for it. The obvious explanation is that the original comparison was to lice, or “cooties,” getting in the hair and irritating the scalp, but the possibilities are limitless.

get lost. U.S. servicemen brought this native expression with them overseas during World War II. It means “get out of here, get off my back, don’t bother me.”

get more bang for the buck. These words, frequently heard today, have nothing to do with sex and ladies of the night, as has been suggested, although *bang* is slang for copulate. The expression means to get more value for your money and was apparently coined by President Dwight Eisenhower’s defense secretary, Charles E. Wilson, in applauding a policy aiming for “more basic [national] security at less cost.” Wilson’s words were more exactly, “a bigger bang for the buck,” and *bang* here means “firepower,” not sex. More details can be found in William Safire’s *The New Language of Politicians* (1968).

get off the dime. To get started, take some action, as in “You’d better get off the dime while you still have time.” Originally a term used by floor managers in 1930s dance halls, telling dancers to move from an often stationary position. Ten cents was the cost of a dance.

get one’s ashes hauled. To be sexually satisfied, as in the old black folk blues, “Well, you see that spider climbin’ up the wall,/ Goin’ up there to get her ashes hauled.”

get one’s back up. Once upon a Tom someone noticed the hair standing up on a cat’s humped back and coined this expression. No one knows exactly when the aggressive arching of an angry cat’s back suggested this phrase for humans aroused into anger, but it’s surprising that the phrase seems no more than two centuries old, for an angry cat with its back arched high is an impressive sight, and a common one wherever there are felines wild or domestic. Cats were introduced to Europe long before the Crusades and became valued pets, despite their aloofness, when they demonstrated a proficiency at rat killing at least equal to the ferret’s, and they proved far more prolific and easier to keep.

get one’s dander up. Many of the early Yankee humorists—Seba Smith, Charles Davis, Thomas Haliburton—used this Americanism for “to get angry,” and it is found in the *Life of Davy Crockett*. It is one of those expressions with a handful of plausible explanations. The most amusing is that the *dander* in the phrase is an English dialect form of *dandruff* that was used in the Victorian era; someone with his dander up, according to this theory, would be wrathfully tearing up his hair by the fistful, dandruff flying in the process. Another likely source is the West Indian *dander*, for a ferment used in the preparation of molasses, which would suggest a rising ferment of anger. The Dutch *donder*, “thunder,” has also been nominated, for it is used in the Dutch phrase *op donderon*, “to burst into a sudden rage.” And then there is the farfetched theory that *dander* is a telescoped form of “damned anger.” And if these aren’t enough, we have the possibilities that *dander* comes from an English dialect word for “anger”; from the Scots *danders*, for “hot embers”; and from the Romany *dander*, “to bite.”

get one’s ducks in a row. American bowling alleys were the first to introduce duck pins, short slender bowling pins unlike the rotund pins that the English used. Pin boys who set up these pins (before the advent of automatic bowling machines) had the job of getting their ducks in a row. Soon the expression *I’ve got my ducks in a row* was being used by anyone who had completed any arrangements.

get one’s Ebenezer up. See THAT GETS ME.

get one’s goat. High-strung racehorses often have goats as stablemates, on the theory that the goats have a calming effect on the thoroughbreds. But the horses grow attached to their companions and become upset if they are removed, throwing off their performance on the track. It is said that 19th-century gamblers capitalized on that fact by stealing on the preceding day the goat of a horse they wanted to lose a race and that this

practice gave us the phrase *to get one’s goat*—they got the horse’s goat and he became upset or angry. It’s as good an explanation as any, but isn’t supported by much evidence. Jack London was the first to record the expression, in his novel *Smoke Bellew* (1912), though its usage there has nothing to do with racing. Attempts have also been made to connect the goat in the phrase with the *scapegoat* of Hebrew tradition; with the word *goad*, “to anger, irritate”; and to an old French phrase *prendre la chèvre*, literally meaning “to take the goat,” which dates back to the 16th century and certainly took a long time making the journey to America if it is the source of our expression.

get one’s Indian up. See THAT GETS ME.

get one’s Irish up. See THAT GETS ME.

get one’s monkey up. Monkeys have quick tempers, though they calm down sooner than humans, which suggested the phrase *to get one’s monkey up*, “to become angry,” an expression that is British in origin, and is first recorded in a popular 1853 song.

get outta here!; get outta town! Both expressions are common replies to an absurd claim or the like. “I’m making 20,000 a week,” someone might say, and the reply would be, “Get outta here!” or “Get the hell outta here!” or “Get up outta here!” or “Get outta town!” or just “Get out!”

get out the crying towel. Originally a military expression, probably dating back to about the beginning of World War II, *get out the crying towel* is a sarcastic reply to a chronic complainer who consistently bemoans his often minor misfortunes, meaning that he is complaining too much and should desist.

get thee to a nunnery. Shakespeare gives these words to Hamlet, when he spurns Ophelia’s advances. The prince is telling her to go to a whorehouse, for which *nunnery* was Elizabethan slang.

get the hook. A defunct journal named *The Actor’s Fan Bulletin* (1931) gave the first use of the phrase: “At Miner’s Bowery Theatre in New York were presented the first amateur nights in burlesque. Here the aspirants for footlight fame were given the opportunity to show their goods. The audience was at liberty to give full expression to their approval or dislike to the offerings of the contestants for the prizes. One Friday night, in October 1903, at Miner’s Bowery, a particularly bad amateur was inflicting upon a patient audience an impossible tenor solo. Despite howls, groans and cat-calls, the artist persisted in staying on, when Tom Miner, who was running the show, chanced to see a large old-fashioned crook-handled cane which had been used by one of the Negro impersonators. Quickly, he had Charles Guthinger, the stage manager, lash it to a long pole. With this, he stepped to the wings without getting into sight of the audience, deftly slipped the hook around the neck of the singer and yanked him off the stage before he knew what happened. The next amateur was giving an imitation when a small boy yelled, ‘Get the hook!’ The audience roared and the actor fled in dis-

may." Many later stars including Fanny Brice, Joe Cook, and George White endured the ordeal of the hook. *See* GIVE THE HOOK.

get the lead out of your pants. Originally a military saying that goes back to World War I. Also get the lead out of your ass.

get the man, not the ball! A recent ugly expression urging football players to rough up a quarterback or anyone else involved in a play. Used not only by spectators at pro games but by the parents of Little Leaguers or the like as they cheer their sons on to glory.

get the sun of them. Get the best position on the battlefield, not one where the Sun is in your eyes. Shakespeare used the term as far back as *Love's Labour's Lost* (1595).

getting a handsome husband. A phrase with a little game attached to it. A handsome husband is the last piece of food left on a serving plate. You'll get a handsome husband if you take this last piece. This seems to be a New England custom, mainly among women who were considered to be old maids.

getting the sugar. A recent expression for diabetes, which is also called the sweet blood.

getting the upper hand. It would seem on first thought that this expression derives from the way kids choose sides with a bat in sandlot baseball. Two players, usually the best two by general agreement, participate in the choosing. One puts a hand around the bat near the fat end, then the other puts a hand around the bat just above his hand. This goes on, hand over hand, until the bottom of the bat is reached and there is no room for another hand. The last hand on the bat wins the contest (although the loser does have the chance to delicately grasp with his fingertips whatever little wood is left and twist it around his head, winning if he can hold on to the bat while doing this three times). The winner, in any case, gets to choose first for the first player on his team and the picks are made in rotation thereafter. Perhaps this sandlot choosing popularized the expression getting the upper hand, "getting the best of someone," but the phrase apparently was used long before the age of sandlot baseball. It probably derives from an English game of chance that has been traced back to the 15th century and was played in the same way as the sandlot choosing contest.

get to first base. To make love that progresses no further than innocent kissing, or not to progress very far in any endeavor, as in "He couldn't get to first base learning Greek." The allusion is to baseball, and the expression dates back to the early 20th century.

getty. Pronounced JET-ee. An old term for a streetcorner organ grinder, usually one with a monkey trained to collect coins thrown by the audience. Sometimes the getty's monkey would climb up the apartment windows to get the coins. Today the

term is mainly remembered in an old song "The Sidewalks of New York": "And the getty plays the organ on the sidewalks of New York."

Gettysburg Address. *See* FOURSORE AND SEVEN.

get up on the wrong side of the bed. The wrong side of the bed is the left side, according to a superstition that goes back to the time of the Romans. People have been saying other people got up on the wrong side of the bed, "awoke surly or grouchy," for well over three centuries now, usually not knowing the real meaning of what they are saying, but the equally old expression got up left foot forward tells the story. The supposedly sinister nature of the left is reflected in many English superstitions and expressions, such as the belief that it is unlucky to put on your left shoe first, or to walk into a house left foot first. The Romans, especially Augustus Caesar, were very careful that they got up on the *right* side of the bed, but there is no evidence that they were less grouchy than anyone else.

geyser. All spouting hot springs called *geysers* take their name from the Geysir, a particular hot spring in Iceland that the English learned about in the mid-18th century. *Geysir* itself derives from the Old Norse *geysa*, "to gush."

ghetto. Ghettos are now generally areas in which racial minorities are forced to live through economic necessity, though the word has been applied loosely to areas where higher-income groups live as well, even in such terms as middle-class ghetto. But originally a ghetto was an area where Jews in western Europe were cruelly forced to live by law. The practice dates much earlier, but the word derives from the Venetian Jewish quarter in Italy.

ghost dance. An Indian ceremonial religious dance. Writes Grand Forman in *The Last Trek of the Indians* (1946): "The Ghost dance was a ceremonial religious dance connected with the Messiah doctrine which originated among the Paviotso in Nevada in 1888 and spread rapidly among other tribes until it numbered among its adherents nearly all the Indians of the interior basin from the Missouri River to beyond the Rockies."

ghost-drivers. *See* WRONG-WAY DRIVERS.

ghost town. Though there have been abandoned towns and deserted villages since the earliest days of civilization, the term *ghost town* describing them did not come into use until the settlement of the American West. Such towns, empty or in ruins, suggesting places where only ghosts could live, were usually in regions where gold or silver deposits were mined out or that the railroad passed by, causing people to move off to more prosperous places. The term appears to have been first recorded around 1870.

the ghost walks. It's payday and all the salaries will be paid; said to have originally been a 19th-century British theatrical expression. A company doing *Hamlet* hadn't been paid for a

month or so. When during a performance Hamlet exclaimed “Perchance ’twill walk again,” the actor playing the ghost answered from the wings, “No, I’ll be damned if the ghost walks any more until our salaries are paid.” That night the salaries were finally paid.

ghost word. Ghost words are words that never existed until someone mistook an error for a word or invented a word for a special occasion. An example of the latter, also called a nonce word, is Lewis Carroll’s *jabberwocky*, invented for the nonce (for a single use in his book *Through the Looking Glass*). Many nonce words have become full members of the language. Ghost words—the term was invented by etymologist Walter William Skeat—are usually spurious terms, the result of errors made by authors, typists, editors, and printers, and they hardly ever become part of the language. An example of a lasting ghost word is *dord* (meaning density) which can be found in the 1934 *Merriam-Webster Dictionary*, second edition. *Dord* began life as an error made in transcribing a card that read: “D or d, meaning a capital D or small d—for ‘density.’” Eliminated from future Merriam-Webster dictionaries, this ghost word lives on in the 1934 edition.

ghost writer. This term for someone who writes a book, article, etc. for another person who is named as the author of it, only dates back to the late 1890s. However, the practice dates back much earlier. Caesar’s secretary, for example, may have coined the immortal *VENI, VIDI, VICI* (“I came, I saw, I conquered;”) and Seneca may well have written the Emperor Nero’s speeches. Mark Twain wrote most of Ulysses S. Grant’s autobiography and Archibald MacLeish and Robert Sherwood wrote speeches for Franklin Delano Roosevelt. Alexander Dumas *père* kept a stable of ghost writers to churn out formula novels, paying them with little more than food and wine. There is even a story about a ghost writer who ghosted a novel and later was hired to ghost a review of the book he had ghosted. He reviewed it glowingly, of course.

giants in the earth. See *THERE WERE GIANTS IN THE EARTH IN THOSE DAYS*.

gibberish. Geber, or, more properly, Jabir ibn Hazyan (*Jabir* is the Arabic for *Geber*) was an eighth-century Arabian alchemist who wrote his formulas in seemingly unintelligible jargon and anagrams in order to avoid the death penalty for sorcery. For this reason Dr. Johnson, Grose, and other prominent word detectives believed that *gibberish*, “nonsense or words without meaning,” derives from his name. Geber could not have written all the 2,000 books attributed to him, but he was a prolific writer, respected enough for many medieval scientists to cite him as an authority, and for one 14th-century Spanish alchemist to go so far as to adopt his name. Today many authorities speculate that *gibberish* is imitative of the sound of nonsense, an echoic word like “jabber,” “gabble,” “giggle,” and “gurgle,” and at most was only influenced by Geber’s name. *Gibberish* does not derive from the verb *gibber*, which it preceded in use, and has no roots in “gypsy jabber,” as has been claimed.

gibbon. Is this long-armed ape really named after a man? Possibly, if it’s true that the naming was the practical joke of an

eminent naturalist. Several respected etymologists believe that this is the case. Apparently the French naturalist Buffon first named the Indian ape in his *Natural History* (1749–1804). The witty Buffon may have been aware that the tombs of the English Gybbon family in Kent, “dating from about 1700, are surmounted by an ape’s head, the family crest.” A less inspired derivation suggests that *gibbon* comes from an Indian dialect, but there is no abundant evidence for either theory.

Gibraltar. *Rock of Gibraltar* signifies any impregnable stronghold. Gibraltar was called Calpe in ancient times, and forms the renowned Pillars of Hercules with Abyla on the opposite coast; but when the Saracen conqueror Tarik captured it from the Visigoths and built a castle there in A.D. 710, it was named Jebel el Tarik, “the mountain of Tarik,” in his honor. *Gibraltar* is simply an English corruption of the longer name. The island, a rocky promontory on Spain’s southern coast, acquired a further reputation for impregnability when the British captured it in 1704, made the island a fort and naval base, and successfully repelled several attempted invasions in future years. Gibraltar remains in British hands today, despite recent demonstrations for its return to Spain. Strategically important because it commands the only entrance to the Mediterranean from the west, the island is honeycombed with natural and man-made caves used by the military. It is also an important tourist center, a major attraction being the Barbary apes that live there.

Gibson cocktail; Gibson girl. A bartender at the New York Players Club is supposed to have run out of olives and garnished artist Charles Dana Gibson’s martini with a pearl onion instead, giving us the *Gibson cocktail*. Gibson was no stranger to such honors. The popular American artist’s Gibson girls appeared on the covers of national magazines in the period 1896 to about 1920 as frequently as Norman Rockwell’s work has in more recent times. His pen-and-ink drawings typically depicted slender, wasp-waisted beauties clad in sweeping skirts, shirtwaists, and large hats. The well-bred Gibson girls, widely imitated, were the ideals of young men and women alike until about the end of World War I, when their vogue ended, but their creator remained active until his death in 1944.

Gibson desert. Add the Gibson to the list of great deserts around the world, this one in western Australia. The Gibson is one of the few deserts named for a person, honoring Alfred Gibson, great friend of Ernest Giles, who was the first to cross it in 1876. Gibson was lost on another desert expedition.

gibus. A gibus is the folding opera hat invented by Paris hat-maker Antoine Gibus in 1837. This cloth top hat with collapsible crown proved ideal for gentlemen attending the opera, who could fold it flat and put it out of the way, the patented gimmick making a considerable fortune for its inventor and his heirs. By now almost a relic of the past, the gibus is rarely used today.

giddy. The Greek word that gives us *giddy*, first recorded in about 1000, translates as “possessed by a god.” *Giddy*, however, started off meaning mad, insane, and foolish, in English, and today generally means frivolous and lighthearted, flighty, though it sometimes means to be dizzy or affected with vertigo.

Gideon Bible. In 1910 one very proper Bostonian sought an injunction to prevent the Gideon Society from distributing the Bible—"on the ground that it is an obscene and immoral publication." But not even crackpots have deterred the organization of traveling salesmen from their goal of placing a Gideon Bible in every hotel room and Pullman car in America. The Gideon Society, formally the Christian Commercial Young Men's Association of America, was founded in Boscobel, Wisconsin in 1899 and is now based in Chicago. Its name derives from that of the biblical Gideon, a judge of Israel who became a warrior and ingeniously delivered Israel from the Midianites, giving his country 40 years of peace (Judg. 6:11–7:25).

gift horse. See DON'T LOOK A GIFT HORSE IN THE MOUTH.

gift of gab. Someone with the gift of gab is a very good talker or speaker, though sometimes a braggart, too. This common expression would best be given as "the gift of the gab," for the word *gab* was originally Gaelic *gab*, meaning "mouth," the expression originally "the gift of the gab," the gift of the mouth.

gigantism. There are said to be some 100 documented cases of gigantism in all history (a number of these giant basketball players measuring 6-foot-9-inches and more). *Gigantism* is caused by a tumor on the pituitary gland, causing individuals to reach exceptional size. The word derives from the Greek *gigantikos*.

gigaton. A word born with the hydrogen bomb, a gigaton is a measure of energy equal to 1 billion tons of T.N.T. *Giga* means "1 billion times," deriving from the Greek *gigas*, "giant." A kiloton, from the Greek for "1,000," is a measure of energy equal to 1,000 tons of T.N.T.

GIGO (garbage in, garbage out). This U.S. catchphrase was coined back in the 1960s when computers were first widely used for data processing. The phrase is now common among computer people wherever English is spoken and is, in fact, so well known that it is pronounced "GIGO" (with a long *i*).

Gila. A name, from the Gila River in Arizona, attached to a number of animals, including the Gila bat, Gila chipmunk, Gila monster, Gila trout, and Gila woodpecker.

gilbert. Physician to Queen Elizabeth I, and author of the first scientific book published in England, William Gilbert, or Gylberde, (ca. 1544–1603) was the most distinguished scientist of his day. His work on magnetism—he was the first European to accurately describe the behavior of magnets and the earth's magnetism—led to the gilbert, a unit of magnetic force, being named in his honor. Gilbert first used the terms *electricity*, *electrical force*, and *magnetic pole* in English, and introduced the Copernican theory to his countrymen.

Gilbert and Sullivan; Gilbertian. These two terms are used to describe light-hearted, fanciful wit similar to that of the many comic operas by Sir William Schwenck Gilbert (1836–1911) and Sir Arthur Seymour Sullivan (1842–1900). Notable examples are *The Mikado* (1885), *The Pirates of Penzance*

(1879), and *H.M.S. Pinafore* (1878). Gilbert, the librettist, and Sullivan, the composer, collaborated for 25 years before a quarrel ended a perfect partnership peerlessly combining social satire with grand opera. Sullivan is also known as the author of many songs and hymns, including "Onward, Christian Soldiers." Gilbert died a hero's death, of heart failure, while trying to save a drowning girl. He was 75 years old at the time.

Gilbert filbert. See FILBERT.

Gilderoy's kite. See HUNG HIGHER THAN GILDEROY'S KITE.

gild the lily. Everybody knows that this expression is wrong and hackneyed as well, but it is still used to describe something superfluous, and I'd bet that it comes to mind first as *gild the lily* even to most of those fastidious few who correctly say *paint the lily*. The fault lies, of course, in confusing what Shakespeare really wrote in *King John*, when the Earl of Salisbury makes his protest against the king's second coronation.

Therefore, to be possessed with double pomp,
To guard a title that was rich before,
To gild refined gold, to paint the lily,
To throw a perfume on the violet,
To smooth the ice, or add another hue
Unto the rainbow, or with taper-light
To seek the beauteous eye of heaven to garnish
Is wasteful, and ridiculous excess.

Since *to gild* comes first in the pertinent line and it is just as ridiculous to gild a lily as to paint one, the phrase was often remembered as *to gild the lily*. Perhaps the old phrase *to gild the pill* also helped create the confusion. It meant to coat a bitter pill with sugar and gave *gild* wide currency as a word meaning "to cover over, to paint" (*not* to paint with gold necessarily). As for King John, he was far from "ridiculous." The unscrupulous king, who had unjustly seized the throne after the death of his brother Richard in 1199, wanted a second coronation because like any shrewd politician he knew that the awe-inspiring spectacle would win him more support among his subjects.

gillie suit. A camouflage uniform made by attaching dry grass and other vegetation to one's clothing, allowing a soldier or a hunter to blend in with the environment. Sometimes used by snipers today, gillie suits were first worn by Scottish shepherds to surprise thieves stealing from their flocks. These shepherds were often young lads, "gillies" or "gillys" in Scotch Gaelic.

gimlet. A "healthy" cocktail invented by a naval officer. Anyway, it was a lot healthier than drinking gin neat, which is exactly why Sir. T. O. Gimlette devised the *gimlet* that commemorates him. Gimlette, a British naval surgeon from 1879 to 1917, believed that drinking straight gin harmed the health and impaired the efficiency of naval officers, so he introduced a cocktail that diluted the gin with lime juice. Today the gimlet is made with gin or vodka, sweetened lime juice, and sometimes soda water.

gimme a dope. *Gimme a dope* still means "give me a Coca-Cola" in the southern U.S., especially among teenagers. This

isn't recent slang, but dates back to the late 19th century, when the fabled soft drink was touted as a tonic and contained a minute amount of cocaine. See COKE.

gimmie. A slang pronunciation of “give it to me,” *gimmie* describes a putt of less than 18 inches or so that is so easy that it is conceded to a player in a friendly amateur game of golf. The expression is a recent one, probably only dating back 50 years or so. See DIMPLES; SMILEY.

gin and it. A term more familiar with the British than Americans, the gin and it is a type of martini, a drink made of gin and vermouth. The *it* is short for *Italian* vermouth. The drink seems to have been invented in the last 35 years.

gin and tonic. *Tonic*, deriving from the Latin *tonicus*, had only the meaning of “pertaining to tension” when first used in the 17th century. But the word took on the meaning of a medicine that restored the tension or tone of the body, and the first tonic drinks weren't far behind. When people began adding alcohol to such drinks in the 19th century or thereabouts, tonics became the mixers that are today used in concoctions like gin and tonic, enough of which can destroy the tone of the body.

gingham. Originally all gingham cloth may have been striped, for the origin of this word, which came into English from French in the 18th century, is probably the Malay *gingam*, “striped.”

Ginnie Mae. Despite talk of an eponym behind this term, this is really simply a nickname for the Government National Mortgage Association, fashioned from its initials, GNMA. There are a number of similar nicknames, such as the *Fannie Mae*, for the Federal National Mortgage Association, and *Sally Mae*, for the Savings and Loan Mortgage Association.

gin rickey. Rickeys can be made of any liquor, carbonated water, and lime juice, but the most famous drink in the family is the gin rickey, invented in about 1895 and named after “a distinguished Washington guzzler of the period,” according to H. L. Mencken. Just which Washington Colonel Rickey was so honored is a matter of dispute, however. Several theories have been recorded by Mencken in his *American Language*, *Supplement 1*, and other sources, but none is generally accepted.

ginseng. Ginseng, which can cost up to \$32 an ounce or \$512 a pound for a piece of “heaven grade root,” has surpassed the cost of even the truffle as a reputed aphrodisiac. In the past it has been sold at \$300 an ounce or \$4,800 a pound, which is probably the all-time record for a food. One Chinese emperor reputedly paid \$10,000 for a perfect man-figure ginseng root, or at least so the story goes. Similarly, it's said that Chairman Mao drank a ginseng tea made from \$100-an-ounce ginseng root at least three times a week. At any rate, the herb still sells briskly in Asian markets for \$200 a pound and despite the protests of modern pharmacologists, lovers throughout the world cling to the mystique of its so-called super powers. Lovers have been fascinated by the “Man Plant” for more than 5,500 years. The most potent ginseng roots are said to be shaped like a

man's body (in fact, the plant takes its name from the Chinese *jen shen*, “man herb”) and supposedly even better results are obtained when the root is dug up at midnight during a full moon. The Chinese call ginseng, or *goo-lai-san*, the “elixir of life,” “the herb that fills the heart with hilarity,” and the “medicine of medicines.” An American species of ginseng (*Panax quinquefolium*) is grown and gathered in this country, especially in the Ozarks and Appalachia. Diggers can earn \$33 to \$44 per pound of dried root, and our largest domestic dealer exports some 70,000 pounds of the herb annually. Such profits are nothing new, however; it is a matter of record that the first American ship to reach China in 1784, Major Samuel Shaw's *Emperor of China*, carried a cargo of the ginseng so dear to Chinese lovers. See MANDRAKE.

Giotto's O. Tradition holds that the great Italian artist Giotto di Bondone was a shepherd boy when discovered by the Florentine painter Giovanni Cimabue. While serving his apprenticeship to Cimabue, he was approached by a messenger of the pope, who had been sent all over Italy to find artists to work on a new church. Giotto was asked to submit a drawing that could be shown to the pope as evidence of his talent and with a single flourish of his brush he drew a perfect circle on a panel, Giotto's O being proof enough for the pope.

G.I. party. No celebration at all, but since World War II the name for a compulsory cleaning of a barracks by its G.I. residents. The complete cleaning includes floors, walls, ceilings, and latrines and in basic training generally takes place every week before Saturday inspection. Often the inspections are white-glove inspections, during which any dust that shows up on the inspecting officer's white gloves is cause for the G.I.s to be punished with loss of weekend passes.

gippy tummy. The word *gippy* in this British euphemism for diarrhea is a corruption of *Egyptian*, and the complaint was probably so named by visitors to the Middle East, where the drinking water can be treacherous. See AZTEC TWO-STEP.

giraffe. The camelopard is not a mythical monster, but a very real animal, though you might not have believed it existed if you hadn't seen it in a jungle or zoo. The ancient Greeks came across the beast on the African plain and called it *kamelopardalis*, believing it to be a cross between the camel—because of its height—and the leopard—because of its spots. It was called the camelopard in English for many years, beginning in at least 1398, until its present designation began to be used in the late 16th century: *giraffe* (from the Arabic word for the animal). The giraffe, the world's tallest quadruped, at up to 20 feet (so tall that newborn calves come to life with a jolt, falling six feet to the ground), also has the highest blood pressure of any animal (an average 260/160, as opposed to 120/80 in humans) to compensate for the pull of gravity while it is supplying blood to a brain 10 feet above the heart. Jeffrey Kacirk includes *camelopardal* or *camelopard* in his fascinating *The Word Museum* (2000), crediting its description to naturalist Edward Topsell in *The Historie of Four-Footed Beastes* (1607). Topsell probably never saw neither camelopard or giraffe: “This beast is engendered of a camel and a female libbard [leopard]. The head of the camelopard is like a camel's, his neck like a horse's, and his

body like a hart's. The color of the beast is for the most part red and white mixed together, therefore very beautiful . . . His neck is diversely colored and is fifteen feet long . . . They are very tractable and easy to be handled, so that a child may lead them with a small cord about their head and, when they come to see them, they willingly . . . turn themselves round . . . to show their soft hairs and beautiful colore, being, as it were, proud to ravish the eyes of the beholder."

gird one's loins. A good wife, says the Bible (Prov. 31:17), "girds her loins with strength and makes her arms strong." That is, she prepares for action, usually hard physical work. The expression *gird one's loins* came into the language directly from this biblical phrase, though today it can refer to mental as well as physical labor. Workers preparing for strenuous jobs used to tuck or gird the skirts of their long garments into the girdles or belts about their loins so that they could move more freely and not worry about soiling their clothes—much as men roll up their sleeves today. *Gird*, incidentally, is either *girded* or *girt* in the past or past participle, so "He girt up his loins" is correct. Today the expression is usually the shorter *gird one's loins*.

girl. The origin of *girl*, first recorded in 1290, is obscure. Among many suggestions as to its ancestor are the Anglo-Saxon *gyrlgyden*, "virgin goddess"; the Anglo-Irish *girlun*; and the Irish *cailin* or *colleen*. It may also come from the Low German *göre*, "a young person" and, indeed, in some Scottish dialects *girl* means either a young male or female. A synonym probably just as old as *girl* is *gay girl* (*gaye girle*) for a young woman. See **BOY**.

girl Friday. See **MAN FRIDAY**.

gismo. Did this word come from the Arabic *shu ismo*, meaning a gadget, as at least one philologist suggests? The theory is that American soldiers were introduced to the expression in Morocco during World War II, and the theory has not been proved or disproved. A *gismo*, or *gizmo*, of course, is a thingamajig.

give a damn. The above was originally "I don't give a *dam*," the expression probably brought back to England from India by military men in the mid 18th century. A *dam* was an Indian coin of little value. *I don't give a damn* is first recorded in America in the 1890s. Its most famous use was in *Gone with the Wind* (1939), when Rhett Butler tells Scarlett O'Hara: "Frankly, my dear, I don't give a damn."

give a deaf ear. See **TURN A DEAF EAR**.

give a leg up. To give a leg up is to help someone climb up, as in mounting a horse, or, figuratively, to help someone over any difficulty. "The wall is very low, sir," Dickens wrote in *Pickwick Papers* (1837), the first recorded use of the phrase, "and your servant will give you a leg up."

give a little sugar. To give a hug or kiss; said especially to a child. "Come over here and give me a little sugar."

give a man luck and throw him in the sea. A man with luck will survive anything says this old saying, which brings to mind Jonah, who was thrown into the sea and swallowed by a whale, only to escape, and Arion, who was thrown into the sea and brought to shore by a dolphin.

give and take. The expression *give and take* is first recorded (1769) in British horse racing as "a prize for a race in which the horses which exceed a standard height carry more, and those which fall short of it less, than the standard weight." By 1816 we find the phrase being used on and off the track for making allowances or concessions, the practice of compromise. In an interesting study of the words *give* and *take*, researchers found that over a given period among an observed group *give* was used 2,184 times, while *take* was used 7,008 times.

give a sop to Cerberus. The sibyl who conducted Aeneas through the Inferno in Greek mythology lulled Cerberus, the watchdog of Hell, into a deep sleep with a drugged cake seasoned with poppies and honey. Over the centuries this story gave rise to the saying *give a sop to Cerberus*, to give a bribe to somebody, especially a troublesome or formidable person, such as a politician. The sop that came to replace the drugged cake in the legend is a piece of bread or any tasty morsel, and, indeed, *sop* itself is a synonym for a bribe today. Brewer tells us that "when persons died the Greeks and Romans used to put a cake in their hands as a sop to Cerberus, to allow them to pass without molestation." See **CERBERUS**.

give a whaling to. Many etymologists believe this phrase should be *give a waling to*, as a wale is a mark raised on the flesh by the blow of a stick or whip. But the key word in the phrase has been spelled with an *h* ever since it first appeared, two centuries ago. This suggests that a whaling, "a terrible beating," was one given with a whalebone whip, though the wales it raised may have contributed to the phrase, making it more vivid. Riding whips were commonly made of whalebone in the 18th and 19th centuries and were used to beat more than horses. Whalebone, incidentally, is a misnomer: It's not made from the bones of a whale but from a substance found in the whale's upper jaw.

give a wide berth to. Berth, its origin unknown, has since the 17th century meant working or operating room for a ship. *Giving good berth* to a ship, the earliest version of this nautical expression, meant to avoid or keep far away from her, which is what *give a wide berth to* means today, in reference to ships or anything else.

give a wiggling. Mark the origin uncertain for this expression, meaning to "give a severe rebuke, reprimand, or angry tongue lashing to someone." But the term, first recorded in 1813, may derive from the wigs that British justices wear, or there may be a connection with the **BIGWIGS** of the day.

give 'em hell. Harry Truman and his supporters didn't originate this Americanism during the Presidential election of 1948. The expression has been traced back to the early 19th century and has military origins. In 1851 it was recorded in *Harper's Magazine*: "At daybreak old Rily shouted, 'Forward and give

them h-ll!” Four years earlier, during the Battle of Buena Vista in the Mexican War, General Zachary Taylor had exhorted his men to “Give ‘em hell!” after the enemy launched a fierce attack. *See also* HARRY S TRUMAN.

give her the gun; jump the gun. *Give her the gun* means to accelerate a car, plane, boat, or any machine. Originally it was an RAF term for “open the throttle wide,” dating to about 1920 and referring to the noise generated by a wide-open airplane motor. *Jump the gun*, on the other hand, is an expression about 50 years old that derives from both foot racing and hunting. An anxious runner often jumps the gun, that is, starts before the starter fires his pistol in a track event, and a startled pheasant will frequently take flight before a hunter can fire his gun, both situations responsible for our figurative use of the phrase—to begin something before preparations for it are complete.

give him an inch and he’ll take a mile. The expression may someday become “give him a millimeter and he’ll take a meter,” or something similar. It has already been put this way humorously and might someday be standard English. This shouldn’t be surprising, since the expression was originally *give him an inch and he’ll take an ell*, a very old proverb that goes back before the 16th century. An *ell*, the word deriving from the Anglo-Saxon *eln*, “the forearm to the tip of the middle finger,” varied in length from 27 to 48 inches, depending on in which country you were measuring forearms (the English had it at 45 inches). No matter what the measurement, past or present, the expression means the same—give him a small concession and he’ll take great liberties.

give him enough rope to hang himself. Originally *give him enough rope to hang himself* took the form of *give him enough of rope*, recorded in about 1659 and meaning to allow someone free scope or action enough to embarrass himself. The image behind this is an animal tied up on a long rope, but within another 30 years we have the crude beginnings of *give him enough rope to hang himself*, when a critic of poet John Dryden said, “Give our Commentator but Rope and he hangs himself.” Executions by hanging no doubt suggested the stronger version.

give him Jesse. Still heard infrequently, *give him Jesse* means “give him hell.” A 19th-century expression of obscure origins, it has been credited to the 1856 presidential campaign slogan of General John C. Frémont, “Give them Jessie!”, which referred to his wife Jessie. But *Jesse* was used earlier than this and probably stems from the biblical “rod out of the stem of Jesse” mentioned in *Isaiah*.

give it up. In the last few years *give it up!* has become a common synonym for soliciting applause for a performer, as in “Come on, give it up! Give it up for Britney Spears!” The expression is equivalent to “Let’s hear it for . . . !” or “A big round of applause for . . . !” In street language the phrase also means “Give me all your money, all your valuables—or else!” It is most often said during a holdup, at the same time a gun or knife is pressed against one’s back. Neither term is recorded in any slang dictionary. In recent Black English *give it up!* urges a woman to have sex.

give me liberty or give me death. The full quotation from Patrick Henry in the 1775 Virginia provincial convention was supposedly, “Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death.” The last seven words constitute the first quotation millions of American schoolchildren have learned over the past two centuries, but there is no record that Patrick Henry ever spoke them, and they may have been invented by Henry’s biographer William Wirt 41 years later. The whole matter is discussed in Bill Bryson’s *Made In America* (1994), which makes reference to learned papers on the subject.

give my regards to Broadway. This catchphrase comes from George M. Cohan’s song “Give My Regards to Broadway,” which was first performed in Cohan’s play *Little Johnny Jones*.

given name. *See* SURNAME.

give short shrift to someone. To treat someone curtly, swiftly, and unsympathetically. *Short shrift* was originally, in the 16th century, the few minutes given a condemned man to make his confession to a priest before he was executed, *shrift* meaning “a confession.”

give someone a cold deck. When a crooked gambler substitutes a new or “cold” deck for the used “warm” pack in a card game, the new deck is often stacked to his advantage. This practice led to the century-old expression *to give someone a cold deck* or to shamelessly swindle a person.

give someone the bird. To hiss or boo someone, especially an actor; to ridicule; to give the raspberry, the Bronx cheer, the finger (meaning “fuck you”); to fire an employee. The first definition goes back to the early 19th century, and *bird* refers to the goose, which hisses a lot. In fact, *to give the goose*, meaning the same, is the ancestor of *to give the bird*. The first published American use of the phrase is credited to Eugene O’Neill, who wrote in *The Hairy Ape* (1921): “Give him the boid, fellers—the raspberry.” *See* BIRD; THE BRONX

give someone the gate. *Giving someone the gate*, “firing him, showing him the door,” has been American slang since at least 1921, when it first appeared in print. There is some precedent for it, however, in the old English phrase *to give or grant the gate to*, that is, to let someone pass through the castle gate and out to the road, which the *O.E.D.* traces back to 1440. The American term is of course negative, but ironic use of the earlier *give the gate to* could have inspired it.

give the hook. Amateurs competing in early vaudeville talent nights were sometimes difficult to coax off the stage no matter how unfavorably the audience reacted to their performances. In order to prevent egg and tomato damage to the theater, all obstinate hams were yanked offstage and into the wings before the audience got violent. The instrument used was a long pole with a hook on the end, which inspired the expression *to give the hook*. Today the phrase is used to describe anyone fired for incompetence. *See* GET THE HOOK.

give the slip. Probably originally an expression used at sea in the 17th century or earlier, describing an anchored ship quickly getting out of trouble by slipping her cable or anchor line. The expression came ashore soon after and has since been associated with criminals giving the police the slip.

give up the ghost. The belief that the ghost, or soul, is an alter ego independent of the body, a spirit that departs the body when we die, is behind this phrase. The words are recorded in the Bible (Job 14:10): “Man dieth, and wasteth away; yea, man giveth up the ghost, and where is he?” That is the majestic King James Version speaking. The Revised Standard Version of the Bible cuts out the words as if they had no history, substituting: “But man dies, and is laid low; man breathes his last, and where is he?” *Ghost* comes from the Old Teutonic root *gaistjam*, “to terrify,” and so was always associated with something frightening. English printer William Caxton was the first to add the *h* to *ghost*, in error, and this spelling didn’t become standard English until about 1600.

give up the ship. See DON’T GIVE UP THE SHIP.

gladhandler. Indiana humorist George Ade is supposed to have invented *gladhandler*, for a demonstrative, even overfriendly person in his *Artie* (1896): “She meets me at the door, puts out the glad hand and . . .” See PANHANDLER; TIGHTWAD.

gladiator. These were originally prisoners of war, condemned criminals, slaves, and even volunteers who fought each other at public shows in ancient Rome. Sometimes women were among the combatants and, indeed, fought each other in the arena. Gladiators take their name from the Latin *gladius*, sword, which many of them used as weapons. Today their name is given to anyone, including a boxer, who engages in a fight or controversy.

gladiolus. Gladiolus used to be called sword lilies. Long before this the Romans named the flower *gladiolus*, “little sword,” from the Latin *gladius*, “sword,” because their long brilliant spikes of flowers, or the shapes of their leaves, resembled the swords Roman gladiators used in the arena. The Chinese call the gladiolus the “sword orchid.”

Gladstone bag; Gladstone wines. At least one writer claims that English statesman and orator William Ewart Gladstone (1809–98) never carried the Gladstone bag named after him. Neither did the four-time prime minister *invent* the light, hinged leather bag, but he did do much traveling in his long public career and the flexible bag was made with the convenience of travelers in mind. Gladstone’s name was given to certain cheap clarets—*Gladstone wines*—because he lowered the customs duty on French wines while chancellor of the exchequer in 1860. A two-seated, four-wheeled carriage also paid him honor. Gladstone has been rated as the most inspiring and among the five greatest of British prime ministers, but his private life sometimes provoked comment. Until he was well past 75, for example, he made it his habit to walk the streets of London at night trying to persuade prostitutes to convert to a different way of life. When the prime minister left office for the last time, he was 85 years old.

glare ice. A term used mostly in the northeastern U.S. for a sheet of smooth, very slippery ice, which is also called “a glare of ice.” It is probably called “glare” because of its intense shining.

glasnost; perestroika. Glasnost was the official policy of the former Soviet Union, calling for openness regarding the publication of news, freedom of speech, economic problems, food shortages, etc. It is a Russian word strictly meaning public information, publicity, dating back to the 18th century, but came to be associated with the policies of Soviet leader Mikhail Gorbachev in the mid-1980s. Perestroika was the organizational restructuring of the Soviet economy and bureaucracy, also beginning in the mid-1980s and associated with Gorbachev. Today the Russian word is used to describe any economic and bureaucracy restructuring anywhere.

glass of wine with the Borgias. It was rumored that Lucretia and Cesare Borgia, the children of Pope Alexander VI, used some secret deadly poison to eliminate their enemies. One never knew whether he was an enemy of the Borgias, so *to have a glass of wine with the Borgias*, or *to dine with the Borgias* has been proverbial for a great but risky honor since the 16th century. Historians haven’t been able to substantiate whether any Borgia was a poisoner, but there is no doubt that some of the Borgias were murderers, the family being a pretty unsavory lot. Sir Max Beerbohm gave the proverb his attention in his *Hosts and Guests*: “I maintain that though you would often in the 15th century have heard the snobbish Roman say, in a would-be off-hand tone, ‘I am dining with the Borgias tonight,’ no Roman was ever able to say, ‘I dined last night with the Borgias.’”

glass slippers. There is no record of anyone really wearing glass slippers, though millions of readers and viewers of *Cinderella* over four centuries have believed otherwise. Some scholars believe that when French poet Charles Perrault wrote his collection of eight fairy tales *Histoires ou contes de temps passé, avec des moralités* (stories or tales of olden times, with morals) in 1697, giving classic form to folktales like *Cinderella*, *Puss in Boots*, and *Little Red Ridinghood*, he misread *pantoufles en vair*, or squirrel-fur slippers, in the Cinderella tale for *pantoufles en verre*, glass slippers—making a charming slip, or slipper.

Glaswegian. An inhabitant of Glasgow, Scotland.

GLE. The late Nigel Dempster, a leading British columnist who called himself *GLE* (for Greatest Living Englishman), claimed there was “a holiday in my heart when I discover another marriage breakup.”

glitch. This scientific word, meaning a sudden change in the rotation period of a neutron star, has its roots in the Yiddish *glitch*, “a slip,” which, in turn, comes from the German *glitschen*, “slip.” Apparently a scientist familiar with Yiddish is responsible for the coining, but he remains nameless. Today the term is most used in computerese for a mechanical malfunction, or for any problem or emergency due to a defective or broken machine.

glitterati. This word isn't as young and glistening as you might think, the term for rich celebrities dating back to before 1940. It is said to be a blend of *glitter* and *literati* and often appears in gossip columns and on TV.

glittering generalities. American attorney Rufus Choate (1799–1859) coined this term for clichés, empty words, and platitudes in a letter to a friend about the Declaration of Independence: “the glittering and sounding generalities of natural rights which make up the Declaration of Independence.” Less well-known, but truer, is Ralph Waldo Emerson's remark when he heard of Choate's coinage: “Glittering generalities! They are blazing ubiquities!”

glitz. A combination of *glitter* and *ritz* that means either ostentatious glitter or sophistication and is first recorded in 1977, according to the *OED*. The word *ritz* comes from the name of restaurateur César Ritz. See RITZY.

gloaming. A poetic word for twilight, the time of day after the sun has set and before it is deeply dark. The word dates back at least to A.D. 1000, but the *OED* states its literary use is “comparatively recent from Scottish writers.” *Glow* is apparently the root of the word.

glogg. A Scandinavian drink brought to America by immigrants in the 19th century. It is a hot punch made with red wine, brandy, and sherry, flavored with cinnamon, raisins, almonds, and orange peels. It is often served at Christmastime.

Gloomy Gus. A person who is always gloomy, sad, pessimistic, as in “He's a real Gloomy Gus.” The expression is still heard today, although it dates back to 1904, when it was introduced as the name of a character in Frank Opper's comic strip *Happy Hooligan*. Gloomy Gus's British counterpart is Dismal Jimmy, whose 19th-century origins are elusive.

glory hole. A large, open surface mining pit; so named either because of a previous 19th-century nautical usage or because such a hole, usually funnel-shaped, resembles in shape a morning glory flower.

glossary; gloss over. The two senses of *gloss* constitute one of the 700 or so sets of homonyms in English, words that are spelled the same but have different meanings. The earlier *gloss*, from the Greek *glossa* which meant “tongue,” then “word,” and finally “explanation of the word,” came to be used in the sense of *language* and gave us both the term *to gloss*, “to explain, or translate a text,” and *glossary*, alphabetical wordbook or “collection of explanations” (*glosses*) sometimes printed in the backs of books to explain difficult words or passages. The Middle High German *glos*, “shun,” had nothing to do with language, but yielded our word *gloss*, for “superficial luster.” However, the words were often confused by early writers and influenced each other, *to gloss over* coming to mean “to excuse or explain something away, to provide a false or superficial appearance or explanation.” Possibly, too, the idea of careless or lazy scholars changing the meaning of difficult passages in classical works by making incorrect, superficial *glosses* or marginal comments reinforced the meaning of *to gloss over*.

glove compartment, glove box. Glove box was first used in the mid-19th century for a box designed to hold long surgical gloves without causing contamination when reaching for them. It wasn't until about 1935 that glove compartment became the name for the dashboard of an automobile used for storing small items, which is also called a glove box today.

Gluckist. Gluckist refers to a supporter of German composer Christoph Willibald Gluck (1714–87), who in the 1770s was feuding with his rival the Italian composer Piccini and his “Piccinists.” The Gluckists can be said to have triumphed in this musical war if one considers that Gluck's operas are still staged today and Piccini's aren't even championed by a few Piccinists.

G-man. In about 1932 the name *G-man* originated in the underworld for special agents of the Department of Justice, Division of Investigation, who had been organized since 1908. Criminals meant government men when they coined *G-men*, which the newspapers and the movies quickly adopted. *Feds*, *Dee Jays* and *Whiskers* (for Uncle Sam's Agents) were other names G-men were called by, the last two designations obsolete today. See F.B.I.

g-note. A thousand-dollar bill, the term first recorded in a 1930 Damon Runyon short story. In *Guys and Dolls* (1932), Runyon wrote: “I am going o stake them to a few G's.” G here is short for a *grand* (qv).

gnu. There are hundreds of thousands of these large antelopes in Africa, where they are also called “horned horses,” but elsewhere they are mainly encountered in crossword puzzles. Their unusual name is a corruption of the even more unusual and difficult to pronounce *ngu* that Bushmen call the animal. They are also called *wildebeests*.

go (drive) round the bend. To lose control of oneself for a short or long time, to go mad, crazy. Originating in Britain during World War II, this phrase may have been suggested by a speeding car taking a sharp turn and going out of control.

go all the way. A euphemism for having sexual intercourse that originated with the FLAPPERS and the sheiks of the Roaring Twenties and is still in use today. See JAZZ AGE.

go around Robin Hood's barn. To go in a circuitous way. The expression originated in England centuries ago. “He liked her way of going round Robin Hood's barn between the beginning of her story and its end.”

G.O.A.T. An acronym for “Greatest of All Time,” a company owned by former heavyweight champion Muhammad Ali. Ali recently sold 80 percent of the marketing rights to his name for \$50 million.

goatee. The style of chin whiskers cut in the form of a tuft like that of a he-goat apparently became popular in mid-19th-century America, when the word *goatee* is first recorded. *Goatee* simply means “little goat” and the Americanism is first re-

corded in 1842 as *goaty*. *Billygoat beard* or *billygoat whiskers* means the same and is first recorded in the mid-1880s.

goat meat. An American euphemism for venison, deer hunted and killed out of the legal hunting season. There are several synonyms, including *goat mutton*.

goatsucker. This nocturnal bird (*Caprimulgus europaeus*), also known as the nightjar because its calls "jar the night," is called the *goatsucker* in Greek, Latin, French, German, Spanish, and several other languages besides English, its name reflecting the widespread belief that it attacks and sucks the udders of goats for food. Aristotle was among the first to note the legend, writing that "flying to the udders of she goats, it sucked them and so it gets its name. They say that the udder withers when it has sucked it and that the goat goes blind." Even this bird's scientific name, *Caprimulgus*, honors the story, deriving from the Latin *caper*, "goat," and *mulgere*, "to milk." The short-billed, wide-mouthed bird actually feeds on insects it captures in the air.

gob. The U.S. Navy banned the use of *gob* for a sailor in the early 1920s, claiming it was undignified. Like most such COM-STOCKERY, the ban on *gob* failed, but the navy might have been right about its lack of dignity, considering the word's possible origins. *Gob*, first recorded in 1909, probably comes either from *gobble*, an allusion to the way many sailors reputedly ate, or from the word *gob*, for "spit," in reference to English coast guardsmen who were called *gobbies* in the past because they were in the habit of expectorating so much. Little better is the suggestion that the word is from the Irish *gob*, "mouth," as in the expression *shut your gob*. Sailors might then have been compared to "big mouths" or something similar.

go bananas. Go crazy, go wild, act unreasonably. The expression is fairly recent, 50 or so years old as far as is known. It may derive from the saying *to go ape*, bananas being associated with apes, or the phrase may have been suggested by an excited troop of apes or monkeys feeding on bananas.

the gobble. Edna Ferber explained this in *Cimarron* (1930): "[Yancy] opened his mouth and there issued from it a sound so dreadful, so unearthly as to freeze the blood . . . It was a sound between the gobble of an angry turkey cock and the howl of a coyote. Throughout the Southwest it was known that this terrible sound, famed as the gobble, was Cherokee in origin and a death cry among the Territory Indians. It was known, too, that when an Indian gobbled it meant sudden destruction to any or all in his path."

gobbledygook. *Gobbledygook* means obscure, verbose, bureaucratic language characterized by circumlocution and jargon, and usually refers to the meaningless officialese turned out by government agencies. The late Representative Maury Maverick coined the word in 1944 when he was chairman of the Smaller War Plant Committee in Congress. Maverick had just attended a meeting of the committee, at which phrases such as "cause an investigation to be made with a view to ascertaining" were rife. He wrote a memo condemning such officialese and labeled it *gobbledygook*, later explaining that he

was thinking of the gobbling of turkeys while they strutted pompously. BAFFLEGAB, JARGANTUAN, PUDDER, and PEN-TAGONESE are all synonyms. George Orwell's "translation" of Lord Nelson's immortal phrase "England expects every man to do his duty" is a good example of gobbledygook: "England anticipates that, as regards the current emergency, personnel will face up to the issues, and exercise appropriately the functions allocated to their respective occupational groups." See also MAVERICK.

Gobi Desert. As Partridge points out, *gobi* means desert in Mongolian. Therefore, "The Gobi" is "the desert." *Sha-mo*, "sea of sand," is the Mandarin Chinese name for the gritty, desolate place, which covers some 500,000 square miles, extending 1,500 miles from Manchuria to China. However, the Sahara in North Africa is the world's largest desert, covering 3,579,000 square miles.

gobshite. To the Irish *gobshite* refers to a worthless contemptible fool, someone not worth a gob of spit or a heap of the word's latter component. In the U.S. *gobshite* has served as the much milder term for a navy seaman and for a wad of chewed tobacco.

to go bush. A phrase that has nothing to do with either U.S. president. To go bush is an Australian expression meaning to escape your troubles by leaving "civilization" (like Huckleberry Finn) and heading out for Australia's remote bush country.

go by the board. This expression, originating in England, literally means to go overboard, to fall down past the board, or side of a ship, into the sea. Since the mid-18th century it has also figuratively meant to be utterly lost, as in the first recorded use of the expression: "Every instinct and feeling of humanity goes by the board."

go-by-the-ground; go-by-the-wall. A little person, man or woman, has been jocularly called a *go-by-the-ground* in England since the 18th century, though today the term is heard only in English dialect. A *go-by-the-wall* meant a creeping, helpless person, or a coward.

God, I wish I'd said that. See TELL YOU WHAT I'M GONNA DO.

"God Bless America." American composer Irving Berlin, who emigrated with his parents from Russia to the U.S. when five years old, wrote the unofficial American national anthem while serving in the army during World War I at Camp Upton in Yaphank, a Long Island, New York, farm town. Berlin wrote the song for the benefit musical revue *Yip, Yip, Yaphank*, which was performed entirely by soldiers, but he felt the lyrics were too solemn for the show and filed it away. In 1938, when singer Kate Smith requested a song for her popular radio program, he suggested "God Bless America," and it became an American classic before World War II to the present-day war on terrorism. Berlin, who died in 1989 at 101, donated all the song's millions in royalties to the Boy Scouts. The seldom sung first verse of the song goes: "While the storm clouds gather, far across the sea/Let us swear allegiance to a land that's free/Let us all be grateful for a land so fair/As we raise our voices in

solemn prayer." See AMERICA THE BEAUTIFUL, AMERICA; STARS AND STRIPES, STAR-SPANGLED BANNER; COLUMBIA THE GEM OF THE OCEAN; BATTLE HYMN OF THE REPUBLIC; AWAY DOWN SOUTH IN DIXIE; YANKEE DOODLE DANDY; OVER THERE; SOUSAPHONE.

God bless you. The custom of saying *God bless you* after someone sneezes supposedly arose with St. Gregory the Great, who said it to people during a plague in which sneezing was often a symptom. The custom has been widespread throughout the world since ancient times, though notably among the Greeks and the Romans, who exclaimed *Absit omen!* Another theory claims that Satan can't enter a sneezer's body when this blessing is offered.

goddam. English-speaking people have been quick on the draw with curses since earliest times. So often did the English in medieval times take the Lord's name in vain, for example, that the French called them *goddams*. Later, in the American Southeast, Indians gave the Anglos the same name for the same reason. Cape Cod fishermen of Portuguese descent often bestowed nicknames on each other and used the nicknames so consistently that they virtually replaced the surnames of the families concerned after several generations. One family, for example, became known as the Codfishes, another as the Rats. The most extreme example recorded is the Goddams. Captain Joseph Captiva explained this oddest of surnames to Alice Douglas Kelly of the Federal Writer's Project and she recorded it in *Living Lore* (1938): "That's cause the old lady she couldn't speak English so good and she'd call the children when they was little: 'You come here, goddam,' 'Don't you do that, goddam.' So they call 'em the 'Goddams.'" Many readers have heard comedian Bill Cosby's routine in which the child thinks his name is "Damnit" because his father so often summons him with a "Commere, damnit!"—there's truth behind every good fiction! See also LES SOMMOBICHES.

goddesses of the Greeks. The goddesses of the Greeks were Aphrodite (goddess of love), Artemis (goddess of the moon), Athena (goddess of wisdom), Demeter (goddess of agriculture), Hera (queen of the gods), Hestia (goddess of the home), Tychea (goddess of fate), Rhea (goddess of harvests and plenty), Eirene (goddess of peace), and Elpis (goddess of hope).

godfather. Since the late 1960s, when Mario Puzo's *The Godfather* (1969) was published, soon to become the basis for one of the most popular movies of all time, *godfather* has meant the don or head of a Mafia family or unit. Wrote Puzo: "Don Vito Corleone was a man to whom everybody came for help, and never were they disappointed. . . His reward? Friendship, the respectful title of 'Don,' and sometimes the more affectionate salutation of 'Godfather.'"

God finally caught his eye. Waiters were American author George S. Kaufman's pet hate; he believed they were actually trained to exasperate him and other customers. His many remarks about the breed culminated with his long-lasting mock epitaph for a dead waiter: "God finally caught his eye."

God heals and the doctor takes the fee. Benjamin Franklin's improved version of the old proverb "God restoreth health and the physician hath the thanks."

Godlike Daniel. Few if any American politicians have been so idolized as bold blackmaned New England statesman Daniel Webster, who was in his lifetime called *Godlike Daniel* or the *Godlike*. Noted the *Whig* magazine back in 1850: "Black Dan, alias the Godlike, as he had been cognomened by his especial admirers, is a sort of intellectual hippopotamus." A century later, Senator Webster even defeated the devil in Stephen Vincent Benét's short story "The Devil and Daniel Webster" (1937), which later became a play and movie. See BLACK DANIEL.

Godolphin Barb. See BYERLY TURK.

go down a hole. An Irish expression meaning to be killed and buried. "Even a few years ago, local I.R.A. rule meant that 'nobody speaks out, because if they speak out, they go down a hole.'" (*New York Times*, March 14, 2005)

go down like a sack of spuds. This recent expression, very common in Australia, means "to lose very badly," especially in a sporting event.

God respects you if you work, but He loves you if you sing. A charming old saying from the Great Smoky Mountains that dates back over a century.

"God save the Queen" (King). The saying is found in the Old Testament, was used in the British navy, and by the 17th century became the basis for what is now the British national anthem (perhaps written by Dr. John Bull). The melody of "God Save the Queen" (King) has been appropriated for patriotic songs by 19 other countries, including Germany and the U.S. No one has used the words more memorably than English author John Stubbs (ca. 1541–90), who attacked Queen Elizabeth in his pamphlet *THE DISCOURSE OF A GAPING GULF WHERE INTO ENGLAND IS LIKELY TO BE SWALLOWED BY ANOTHER FRENCH MARRIAGE*. His pamphlet was burned in a public bonfire, and the author's right hand was hacked off with a meat cleaver at the same time. Stubbs is said to have immediately raised his hat with his left hand and cried, "God save the Queen!"

God should be allowed to just watch the game. The great entertainer Yogi Berra is supposed to have made this remark from behind the plate after watching Chicago White Sox batter Minnie Minoso appeal for divine intervention by drawing a cross in the dust on home plate. The story has become sports legend, but syndicated columnist William Safire recently contacted the former Yankee catcher and Yogi denied he ever said it. Yogiisms Yogi hasn't denied include "I've been playing 18 years and you can observe a lot by watching" (on his managerial abilities); "He can run anytime he wants—I'm giving him the red light" (on giving a player permission to steal a base); and the much-quoted "It ain't over till it's over."

God's little acre. Most readers know this phrase as a title of a novel by Erskine Caldwell published in 1933 to much acclaim, just as his *Tobacco Road* was before it. But "God's acre" had been a synonym for a cemetery or churchyard many years before *God's Little Acre* was made into a play and a movie. It was also one of the first American works to deal with sexual themes.

God's nightgown! Name the heroine of the book that made this little-known southern U.S. expression familiar to millions. The answer is Margaret Mitchell's heroine Scarlett O'Hara, who used the exclamation of exasperation several times in *Gone with the Wind* (1939).

gods of the Greeks. Zeus was king of all the great gods of the Greeks, the nine others of this top ten being Apollo (god of Sun and youth), Ares (god of war), Chronos (god of time), Dionysus (god of wine), Eros (god of love), Hades (god of the underworld), Hephaestus (blacksmith of the gods), Hermes (messenger of the gods), and Poseidon (god of the sea).

God sometimes shows his contempt of wealth by giving it to fools. An old New England saying.

God speed the plough; Plough Monday. *God speed the plough*, "a wish for success or prosperity," was originally a phrase in a 15th-century song sung by ploughmen on Plough Monday, the first Monday after Twelfth Day, which is the end of the Christmas holidays, when farm laborers returned to the plough. On this day ploughmen customarily went from door to door dressed in white and drawing a plough, soliciting "plough money" to spend in celebration. British playwright Thomas Morton wrote a play, *Speed the Plough* (1798), which introduced the character MRS. GRUNDY. American playwright David Mamet wrote a play, *Speed-The-Plow* (1988), excoriating Hollywood.

God's seal pup. Jesus Christ is called not the "lamb of God," but "God's seal pup" in the Eskimo Bible. These are the same doe-eyed harp seal pups that human seal hunters savagely club to death off the coast of Newfoundland so that they can be turned into sealskin coats. The little white seal pups can do nothing to defend themselves against the spiked clubs, and their mothers look on helplessly. Often the pups are skinned before they are dead.

God tempers the wind to the shorn lamb. Since lambs are never shorn, Laurence Sterne's phrase, from his *Sentimental Journey* (1782), seems to make little sense. Sterne coined it from an earlier, less poetic expression—invented some 140 years before—that said *To a close-shorn sheep, God gives wind by measure*. But George Herbert, its author, got it in turn from a French saying in Henri Estienne's *Premices* (1594), which said *God regulates the cold to the shorn lamb*. Poetry usually triumphs.

God wills it! No ancient phrase spilled more blood than *God wills it!* (*Deus volt!*), words uttered by Pope Urban II that launched the Christian Crusades to deliver the Holy Land from the Muslims. The Holy Land, conquered at great cost in human lives, could not be held.

God writes straight with crooked lines. God's ways are mysterious and indecipherable by humankind, we are incapable of understanding his actions. No one seems sure just when this proverb originated, some crediting St. Augustine (A.D. 354–430).

go figure. William Safire calls this expression "a verbal shrug" in his "On Language" column and mentions the theory that it derives from a longer expression such as "go figure it out," or "you go figure it."

go fly a kite. Get out of here, go away, stop bothering me, go to hell, get lost. Still heard, though not so often as it once was. The expression may be older but is first recorded in a 1928 number of the *Saturday Evening Post*.

go for a song. To be sold or bought cheaply, for almost nothing at all. The expression was possibly inspired by the phrase ALL THIS FOR A SONG, in the sense that the song was a mere trifle. More likely, however, the expression refers to the small cost of old ballad sheets, or the small coins thrown to street singers.

go for broke. Make your greatest effort. Now widely used in all the United States, it is a Hawaiian expression that began its English life as the World War II slogan of the 42nd Regimental Combat Team.

go for the jugular. Quickly go for the kill, show no mercy whatsoever. The expression originated with Massachusetts lawyer and U.S. senator Rufus Choate. Remarked Choate in describing President John Quincy Adams: "He has . . . an instinct for the jugular and carotid artery, as unerring as that of any carnivorous animal."

go for the long ball. This contemporary American slang means to take a big risk for a big gain. It does not come from baseball but from football, referring to long desperate passes made in the last minutes of a game.

go from Dan to Beersheba. To go everywhere, from one end to the other. The phrase is recorded in the Bible (Judges 20:1) and refers to Dan, the northernmost city, and Beersheba, the southernmost city of ancient Palestine.

go-go funds. In the late 1960s go-go dancers inspired the name for these "exciting" mutual investment funds, which were "very attractive" to investors. Mutual funds themselves date back to early 19th-century Belgium.

going by shank's mare. This means to go somewhere by walking, to use "Walker's bus," and as far as is known no horseless Mr. Shank is responsible for the 200-year-old phrase, which is probably Scottish in origin. Neither is there any proof that the expression refers to King Edward I, nicknamed "Long Shanks" because whenever he rode a pony his long legs reached to the ground. The *shank* is the leg, or that part of the leg below the knee, and a mare is usually slower than a stallion. Going by *marrow-bone stage*, a play on the once-real

Marylebone (pronounced “Marrybun”) stage in London, means the same.

going fishing. A baseball term, dating back at least to the 1930s, for a batter who swings at bad pitches out of the strike zone that he should take as balls, usually pitches high and outside. *Fishing trip* is a synonym.

going . . . going . . . gone. Any New York Yankee fan of the 1950s will remember this phrase, which became the trademark of Yankee radio announcer Mel Allen (1913–96) in describing a home run or a hit in the process of becoming a home run. Just as well known were the native Alabamian’s words *How ’bout that?*, a comment about how pleasing or depressing or dramatic something was.

going like 60. In 1860 a terrible drought in the Missouri and Arkansas valleys devastated that part of the country, lasting more than a year. Some tracers of lost word origins believe that the memory of the drought was so vivid that people began linking the year 1860 with extremes of any kind. But the drought could only have reinforced and possibly accelerated the meaning of the popular expression *going like 60*, for it was used by James Russell Lowell in his *Biglow Papers* in 1848 (“Though like sixty all along I fumed an’ fussed”) and was recorded in an early 1860 slang dictionary as “[to go] at a good rate, briskly.” Perhaps 60 is used simply to express a large number, as an abbreviation of “like 60 miles an hour,” or something similar. “Forty” was used in this way at least since Shakespeare’s *Coriolanus* (1607), and in *Uncle Tom’s Cabin* (1852) a character says: “I has principles and I stick to them like forty.”

going 19 to the dozen. Still heard occasionally today to describe someone who can’t cease talking, a motormouth. The expression dates back to the early days of steam, when steam engines powered pumps in the mines. A steam engine going 19 to the dozen was pumping 1,900 gallons of water for every 12 bushels of coal it used for fuel.

going postal. Patterned on *going crazy*, *going bonkers*, and, especially, *going ballistic*, this expression has been around since the late 1980s. It first meant the sudden explosive attack by a postal worker on coworkers in the workplace. According to Anne H. Soukhanov in *Word Watch* (1995): “This expression takes its cues from Patrick Henry Sherrill’s attack on an Edmund, Oklahoma, post office in 1986, in which fourteen people were killed and six wounded, followed in subsequent years by several other such incidents.” Today the expression is used much more loosely to mean “totally stressed out,” “almost losing it,” etc.

go in off the deep end. These words suggest someone leaping off a diving board at the deep end of a swimming pool and finding the water was over his or her head. When first used, as military slang in England during World War I, the expression simply meant to get very excited, as if finding yourself in deep water. Then the words came to mean “passionate” as well. A British novelist wrote: “In her set the word adultery was not often mentioned. One went in off the deep end about somebody . . .” U.S. use of the expression is often similar, but Ameri-

cans also apply it to other situations. Someone who displays a terrible temper, or one who is so reckless as to go into a situation over one’s head, or even someone who is crazy is said to have “gone off the deep end.” See IN OVER YOUR HEAD.

go in the water. In boxing, *go in the water* means to *take a dive*, intentionally lose or throw a fight. A fighter who does this is sometimes called *a tank artist*, *a tomato can*, *a palooka*, *a bum*, or a *stiff*, among other names. See HIGH HAT.

to go into an Irish sulk. Few can turn a lively phrase as well as the Irish. But they can be as blue as they are joyful, which explains the Canadian (mostly Newfoundland) expression *to go into an Irish sulk*, to sulk or become morose, usually after exhibiting high spirits. Possibly an Irish resident coined the phrase.

go into extra innings; good innings. A baseball game that goes into extra innings goes beyond the normal time played (nine innings). *Go into extra innings*, a phrase I’ve heard recently but which is recorded nowhere, means to live a long life, as when someone says, “He’s over 80, he’s already gone into extra innings.”

go jump in the lake. I haven’t heard this expression in over half a century and it was not much used then. We’re probably well rid of it.

golconda. Any source of great wealth is a *golconda*. The term owes its life to the town of Golconda in India, which the British in the 16th century thought was the site of extensive diamond mines. Though the area actually was a diamond-cutting center without mines, the term lasted in the language.

gold. Gold is one of the four oldest words in English, deriving from the Indo-European substrate word *gol* (the other three are *apple*, from *apal*; *bad*, *bad*; and *tin*, *tin*). Hundreds of expressions, some of them covered in these pages, are based on *gold*, from *all that glitters is not gold* and *good as gold to heart of gold* and *gold digger*.

goldbacks. See GREENBACKS.

goldbrick. Con men working Western mining properties toward the end of the 19th century sometimes sold gullible investors lead or iron bricks coated with gold paint, representing them as the real thing. One Patrick Burke of St. Louis is recorded as having paid \$3,700 for such a “gold” brick in 1887. This all-too-common confidence scheme gave the name *goldbrick* to any swindle or fakery. Later, soldiers picked up the expression and used the phrase *to goldbrick* in its present meaning of avoiding work or shirking duty. The phrase is first recorded in 1914 in this sense, applied to army lieutenants appointed from civilian life.

gold-bug. In Edgar Allan Poe’s celebrated cryptological tale “The Gold-Bug” (1843), a poor southern gentleman captures a rare “golden scarab beetle” that helps him locate the buried treasure of Captain Kidd. According to several authorities, the

“gold-bug” of the story is based upon the brilliantly colored goldsmith beetle (*Cotalpha lanigere*), also called the “horn beetle.”

gold digger. Long before gold digger meant a mercenary woman, a use first recorded in 1915, it signified a miner in California gold fields such as Jackass Gulf, Puke Ravine, Greenhorn Canyon, and Rattlesnake Bar. In fact, the term *gold digger*, for a miner, is recorded in 1830 during America’s first gold rush, which took place in northern Georgia. It was gold diggers of the most mercenary kind that a humorous Western song referred to in one of its verses:

The miners came in ’49
The whores in ’51
And when they got together
They produced the native son.

Golden Bible. The Book of Mormon, which is said to have been translated by Joseph Smith from an original that was engraved on golden plates; the term is first recorded in 1830, before the Mormons came to Utah and built the temple there.

golden calf. See WORSHIP THE GOLDEN CALF.

golden floor. A Victorian term for the floor of heaven, where all good folk go. When British poet A. E. Housman (1859–1936) lay dying, a friend tried to cheer him up by telling him a risqué tale. “Yes, that’s a good one,” Housman said when he finished, “and tomorrow I’ll be telling it on the Golden Floor.”

Golden Gate. The strait at the entrance to San Francisco Bay from the Pacific Ocean; also a name for the Golden Gate Bridge spanning the strait, a 4,200-foot bridge that connects northern California with the San Francisco Peninsula. The bridge is not golden-colored but named after the Golden Gate Strait, which was discovered by Sir Francis Drake in 1579.

golden handshake. Though frequently used in the U.S., this business term was coined about 1960 by British newspaper editor Frederick Ellis. It is a generous severance payment made to an executive as compensation for dismissal or early retirement. One recent payment was so large that it was called a “24-caret golden handshake.” See GOLDEN PARACHUTE.

golden horde. This was the name given to the Mongolian Tartars who invaded Russia in the 13th century and established an empire there under Bator, a grandson of Genghis Khan, that lasted two centuries. They were so called because the color of their skin appeared golden to their adversaries. *Hordes* has always been a favorite word of Europeans for Asian armies. See ASIATIC HORDES.

golden parachute. A contract guaranteeing a company executive very generous benefits, including severance pay, if one loses a job because the company is sold or merged. The American term is first recorded in 1981 but is actually an offshoot of the earlier British GOLDEN HANDSHAKE, which dates back to 1960 and means essentially the same, except that the golden parachute is contractual.

golden pass. A lifetime pass given to notables (who are usually fans) by a sports team or stadium. George M. Cohan, for example, received one valued at \$15,000, and John L. Sullivan (qv) was given one worth \$20,000. See GRAND OLD FLAG; YAN-KEE DOODLE DANDY.

goldenrod. Homemakers once believed, and perhaps some people still do, that planting goldenrod (*Solidago speciosa*) by the front door will bring a treasure trove of gold to one’s household.

golden rule. Usually phrased “Do unto others as you would have them do unto you,” the *golden rule* is based upon the biblical injunction from the Sermon on the Mount (Matt. 7:12): “whatsoever ye would that men should do to you, do ye even so unto them.” *Golden rule* has also come to mean any guiding principle. The ethical golden rule has many negative variations, from William Blake’s epigram: “He has observed the golden rule,/ Till he’s become the golden fool,” to Edward Noyes Wescott’s: “Do unto the other feller/ the way he’d like to do/ unto you an’ do it first” (*David Harum*, 1898). Wrote George Bernard Shaw in *Maxims for Revolutionists* (1903): “Do not do unto others would they should do unto you. Their tastes may be different”; and “The golden rule is that there is no golden rule.” An anonymous contemporary golden rule advises: “He who has the gold rules.” It should be added that Confucius wrote, “What you do not want done to yourself, do not do to others,” fully five centuries before Jesus gave the Sermon on the Mount. British theologian Isaac Watts (1674–1748) was the first person to directly call this precept the Golden Rule, in an essay he wrote in 1725. See RECIPROCITY.

Golden State. A nickname for California since Gold Rush days a century and a half ago. It has also been called El Dorado and the Bear State, after its grizzly bears.

golden wedding anniversary. The 50th wedding anniversary of two living partners is called the golden anniversary because of the German medieval custom of presenting one’s wife with a wreath of gold. This idea, elaborated upon over the years, led to the giving of anniversary gifts ranging from cotton to gold and diamonds.

gold fever. A term, first recorded in 1847, for the excitement produced by the gold rush to the *Golden Land* (California) when gold was discovered there. Also called the *gold mania*. The lust for gold was of course one of the main reasons for the exploration of the New World, long before the California gold rush. This is reflected in what may be the first American proverb—“gamble the sun before sunrise”—though it isn’t recorded in *Bartlett’s* or any other book of quotations. The expression surely is old enough, dating back to 1533, when Pizarro conquered Cuzco, the capital of the Inca Empire, and stripped the Peruvian metropolis of gold and silver. One cavalryman got as his share of the booty a splendid golden image of the Sun “on a plate of burnished gold spread over the walls in a recess of the great temple” and which was so beautifully crafted that he did not have it melted down into coins, as was the usual practice. But the horseman came to symbolize the vice of gambling. That same night, before the Sun had set on another day,

he lost the fabulous golden image of the sun at cards or dice, and his comrades coined the saying “*Juega el Sol antes que amanezca*” (He gambles [or plays] away the Sun before sunrise), which crossed the ocean from America on Pizarro’s gold-laden galleons and became proverbial in Spain.

gold of Tolosa. Ill-gotten gains that will never leave one prosperous. The Roman consul Caepio looted the temple of Apollo at Tolosa of all the gold and treasure belonging to the Cimbrians. Not only were the gold and treasure stolen from him shortly after, but he was defeated on the battlefield by the Cimbrians, who killed 112,000 of his men.

Goldwynism. “Include me out,” “In two words: impossible,” and “We have passed a lot of water since then” (for “a lot of water has passed under the bridge”) are but three legendary Goldwynisms. An American film pioneer, Samuel Goldwyn has long been considered a modern “Mr. Malaprop,” unrivaled for his fractured English. Goldwyn, born in Warsaw, Poland, on August 27, 1882, founded Goldwyn Pictures Corporation, which became part of Metro-Goldwyn-Mayer in 1924, and later turned independent producer. He died in 1974. No doubt many of the thousands of Goldwynisms attributed to him—word manglings, mixed metaphors, malapropisms, grammatical blunders, and the like—were invented by press agents, writers, friends, and enemies. But genuine or not, they became part of the legend surrounding the man. See MALAPROPISM.

golem. The legendary golem is a huge supernatural creature made of clay who is brought to life by magic and fights against persecution of the Jews. The word ultimately derives from Hebrew *golem* for “a shapeless man.”

golf. One guess is that the name of this sport, first recorded in 1425, comes from the Dutch word *kolf* for the club used in the game. This seems to suggest that the sport had its origins in Holland, but the first records of the game are from Scotland, although early on the Scots did import their best-quality golf balls from Dutch makers. According to another theory *golf* may have come from the Scottish *goulf*, “to strike or cuff.” Games roughly similar to golf were played as far back as Roman times, but modern-day golf can be traced to Scotland’s St. Andrews course, which was built in 1552, where, two centuries later, the Thirteen Articles laying down the rules of the sport were established.

golf links. All golf courses were originally built on ridges of virtually flat land along the seashore. They were called *links* from the Old English *hlinc*, for “ridge of land.”

golf widow. A woman whose husband frequently leaves her alone at home while he plays golf is called a *golf widow*. The game is much older but the term doesn’t seem to have been recorded until around 1915. *Football widow* and *baseball widow* are related terms heard today.

golgotha. A cemetery; a place of martyrdom; a place of torment or anguish. The reference is to the crucifixion of Jesus as told in the Bible (John 19:17–18): “And he bearing His cross

went forth into a place called the place of the skull, which is called in the Hebrew Golgotha: where they crucified him.” Golgotha is located outside Jerusalem and may be the site where the Church of the Holy Sepulchre stands. It may have originally been an execution place for criminals whose bodies were picked bare by animals. The Latin word *Calvaria* is the equivalent of *Golgotha* and gives us the word *Calvary*, meaning the same.

Goliath. The original Goliath stood between 9 feet 9 inches and 11 feet 3 inches tall, depending on how you value the “6 cubits and a span” given as his height in the Bible. Nevertheless, the stripling David slew him with a stone from his sling (I Sam. 17:49–51) and defeated the Philistines. A *David and Goliath* contest is one between a great and a small man. Not to take anything away from David, but Goliath was a stripling compared to the giant Og (16 feet 2½ inches) and other biblical big men. All such claims, however, are most likely based on our ignorance of ancient measurement units.

golly. Today *Oh golly!* is a harmless expression expressing astonishment. But it was originally a profane phrase, a contraction of “God’s body.” One source traces it to London laborers, while Ernest Weekley, in *An Etymological Dictionary of Modern English* (1921), calls it “a Negro perversion of [the word] ‘God.’”

gondolas. The little American gondolas of the Revolutionary War take their name from the Italian double-ended boats used on the Grand Canal in Venice, but there the resemblance ends. The Continental gondolas were rigged with sails and fitted with guns.

gone for a Burton. A euphemism, typically British, for “dead” that was commonly used in the R.A.F. during World War II. Many R.A.F. pilots fell “in the drink” to their deaths and it was easier for fellow pilots to deal with their deaths by saying that they had gone for a drink of the popular Burton’s ale. See *also* GO WEST.

gone goose. No connection has been made between this American expression and the much older phrase COOK HIS GOOSE. Apparently, the Americanism dates only from about 1830, and there is no story about a goose in a helpless, hopeless state to explain it. Probably *a gone goose*, *a gone beaver*, *a gone chick*, and similar expressions all derive from the earlier *a gone coon*, which, according to one of several legends, goes back to the Revolutionary War. It seems that an American had disguised himself in raccoon skins and climbed a tree to spy on the British. But an enemy soldier discovered him that night while coon hunting and took aim, ready to shoot the biggest coon he had ever seen, when the spy cried out, “Don’t shoot—I’ll come down! I know I’m a gone coon!” According to the legend, the British soldier was so terrified to hear an “animal” talk that he dropped his gun and ran. The tale need not be true for it to have popularized the expression *a gone coon*, and other animals could have been substituted for the coon by storytellers in different areas of the country.

gone today, here tomorrow. This twist on the old saw “here today, gone tomorrow” is attributed to the publisher Alfred

Knopf (1892–1984). He was talking about book returns from bookstores.

gone to ground. Someone who has gone to ground has made himself inaccessible, has taken refuge for a long time. The phrase is from hunting, in which a fox is driven to hide in its den.

gone to my uncle's. In dire financial shape, in hock up to the eyes, having pawned everything one has of value. *Uncle* has meant a pawnbroker for at least five centuries. How and why it got this meaning hasn't been established, but is perhaps because once upon a time an early pawnbroker, offered unusual or perhaps "hot" items, advised a prospective patron that he had to discuss the matter with his more expert uncle before loaning money on it. See PAWNBROKER; UNCLE.

gone to pot. Marijuana isn't even a contender here. Neither is there reason to believe that *gone to pot* has its origins in cremation; that is, in the placing of human ashes in an urn or pot. Neither has it any connection with drunkards dissipating in wine pots. Most authorities agree that this expression for being ruined, disintegrated, which dates back before Elizabethan times, was inspired by pieces of meat being chopped up and going into the pot for a stew. They were usually inferior cuts of meat, this stew meat, the kind rich men trimmed off a joint in old England and gave to the servants for their stew pot. "Going to the pot" suggested going down in the world, because a mere stew didn't compare to more savory ways of preparing meat. When you went to the stew pot, like a piece of meat, your identity was destroyed, you literally disintegrated. Nevertheless, the old story persists that a tailor who lived near a cemetery in a small European town dropped a stone in a pot for every funeral that passed by. When he himself died, a wag quipped that he too had *gone to pot*.

gone where the woodbine twineth. Woodbine is a honeysuckle (*Lonicera periclymenum*) that was often planted on graves in years past. An 1870 song written as a tribute to those who died in the bloody Civil War went: "Then go where the woodbine twineth,/ When spring is bright and fair,/ And to the soldier's resting place/ Some little tribute bear." From this song by Septimus Winner the expression *gone where the woodbine twineth* came to mean someone who had died, or even someone who had gone someplace from which he would never return.

gone with the wind. Margaret Mitchell's immensely popular novel *Gone With the Wind* (1936) made this expression popular in our time, but the title comes from English poet Ernest Dowson's love poem "Non Sum Qualis Eram" written in 1896 and containing the line "I have forgot much, Cynara, gone with the wind." Mitchell's novel about the Civil War won a Pulitzer Prize, and in 1939 the film version won the Academy Award for best picture. Dowson also wrote "Vitae Summa Brevis," which gave the language the beautiful line, "They are not long, the days of wine and roses: / out of a misty dream / Our path emerges for a while, then closes / Within a dream."

Gongorism. It is only fair to say that the arrows that were transferred into "flying asps" and the birds that became "feath-

ered zithers" were part of a larger plan. Luis de Gongora y Argote (1561–1627) wrote in a twisted, torturous style in his later years, his syntax deliberately distorted in order to highlight words and create an unreal world. But he inspired many imitators, who inspired many critics and, unfortunately, his name is now a synonym for a deliberately obscure, meaningless, and affected ornamental style. The Spanish poet after whom *Gongorism* is named was essentially a lyric poet in his early years; his work was much admired by Cervantes, though no poem of his was published in his lifetime. Readers have discovered that his baroque Gongorisms, a great influence on modern poetry, are far from meaningless, as difficult as the long poems like *Soledades* are to read. Gongora, who adopted his mother's name, was a priest as well as a poet and dramatist. Toward the end of his life he turned back from cultivated obscurity to a simple, unaffected style.

gonzo. Hunter S. Thompson (1937–2005) introduced this word, meaning wild, eccentric, out of control, in a *Rolling Stone* article (November 11, 1971) that he later expanded into his famous book *Fear and Loathing in Las Vegas*. There are several suggestions for the word's origin, including the Italian *gonzo*, simpleton. But author Rich Cohen writes in the *New York Times Book Review* (April 17, 2005) that Thompson told him a few months before he died that "It's a Portuguese word. It means weird, off the wall, Hell's Angels would say. Out there. Gonzo, learning to fly as you're falling." However, another of Thompson's editors, the late Bill Cardoso, is given full credit for the word's invention in 1968 by the *Oxford English Dictionary*.

goo. *Burgoo* is a New England term for a thick stew that traveled West with the pioneers. It may have suggested the Americanism *goo* for a thick, wet, sticky substance and by extension any sentimental drivel. *Goo* is first recorded, however, in about 1915.

goober. *Goober*, for "peanut," was not coined in the southern U.S. It originated in Africa as the Bantu *nguba*, for "peanut," and was brought to the America South by African slaves in about 1834. Long a southern dialect term, it has achieved wider currency over the past 70 years. *Pindal*, another word for peanut, comes from the Kongo *npinda*.

goober-grabber. (1) A very stingy person. (2) A bold wanton, one who would grab for a man's goobers (testicles). *Goober* is, of course, a synonym for peanut. *Jingleberries* is another similar expression.

good. *Good*, first recorded circa A.D. 800, derives from the Old English *god*, which is akin to earlier words basically meaning "suitable," so that, according to the *O.E.D.* "the original sense of *good* would be 'fitting' . . ." Thus, unlike *BAD*, *good* has its roots in "the suitable, the fitting, the natural."

good-bye. *Good-bye* derives from the words *God be with you*, its first recorded use in a 1573 letter. Earlier forms of *God be with you* were *God be wy you*, *godbwyne*, *god bwy ye* and *good-b'wy*. Why then is *good* instead of *god* in the current expression? Probably because, most etymologists agree, the new word's formation was influenced by the expression *good day*.

good cheer. See BE OF GOOD CHEER.

good egg. See BAD EGG.

good enough Morgan. On September 12, 1826, the day his book revealing secrets of the Masons was to be published, William Morgan disappeared, never to be seen again. It was charged that Masons had kidnapped, killed, and buried him, but that charge was disproved. “Now that we have proven that the body found at Oak Orchard is that of Timothy Monroe, what will you do for a Morgan?” Masons chided their political opposition. “That is a good enough Morgan for us until you bring back the one you carried off,” replied the opposition. After such answers, a *good enough Morgan* became a political expression meaning any political scheme or device that can be temporarily used to influence voters. Morgan was never found, but the expression lived on in America’s political lexicon for at least a century.

good evening, ladies and germs. See I’LL TELL YOU WHAT I’M GONNA DO!

good fences make good neighbors. The proverbial expression originated in the mid-17th century, but in the U.S. it has become associated with poet Robert Frost, who used it in “Mending Wall” (1914), which also gives us, “Something there is that doesn’t love a wall.”

good field, no hit. This baseball catchphrase is sometimes applied jokingly to other things, to anyone who does one thing better than another, who is good in one field and not another. The expression dates back to 1924 when coach Miguel “Mike” Gonzales scouted Dodger player Moe Berg for the St. Louis Cardinals. Observing Berg at Brooklyn’s Clearwater, Florida training camp that spring, Gonzales wired his boss the four-word evaluation: “Good field, no hit.” The Cardinals didn’t offer a contract, but the scholarly Berg, who spoke seven languages, including Chinese and Japanese, became an American spy during World War II, spying on German atomic scientists.

good for you! An American expression of approval or congratulations since at least 1861. It is equivalent to *well done!* or *well said!* Sometimes the variation *good on you!* is used.

Good Gray Poet. We Americans haven’t bestowed affectionate sobriquets on many of our poets, but Walt Whitman (1819–92), surely our greatest poet, is an exception. Whitman was given the name Good Gray Poet by William Douglas O’Connor, who used the words as the title of his 1866 book, which was written in defense of his friend Whitman when the poet was fired from his clerkship in the Indian Bureau of the Department of the Interior on the grounds that his poetry collection *Leaves of Grass* was immoral. Much later, Whitman wrote the preface for his friend’s *Three Tales*, which was published posthumously in 1892 and included a story called “The Carpenter,” a Christ-like portrait of the poet. In his old age, with his full flowing gray beard, Whitman seemed more the Good Gray Poet than ever.

good holding ground. A place where one can stay even when conditions are bad, originally a nautical term referring to a place offshore where an anchor can catch and hold fast even when the sea is rough and the wind is blowing hard.

good honk. Correspondent Madolin Johnson Wells advises that her mother often used this old-fashioned expression when startled or upset, as in “Good honk (pronounced “good haohonk”), Lon, what’ve you done?” In rare cases of extreme emphasis, Mrs. Wells writes, her mother would say, “‘Great honks!’ which conjured images of a strange bird or a mythical god.” American playwright Meredith Willson used the phrase “Great honks!” for the same purpose in his hit play *The Music Man*.

good morning, damn you. Louisa May Alcott related the story of this unlikely phrase in “Transcendental Wild Oats,” a short story based on her father, Bronson Alcott’s, idealistic but short-lived Fruitlands community: “One youth [a member of the community] believing that language was of little consequence if the spirit was only right, startled newcomers by blandly greeting them with ‘Good morning, damn you,’ and other remarks of an equally mixed order.” No one seems to have objected.

good night, sweet prince. The phrase is from *Hamlet*, Horatio speaking it at Hamlet’s death: “Good night, sweet prince, / And flights of angels sing thee to thy rest.” Good night, sweet prince is inscribed on silent film star Douglas Fairbanks’s grave in Hollywood Cemetery.

goodnighting. Students of the old West may be aware that bulls on long cattle drives often suffered from chaffing of the testicles, which frequently swelled so large that the animal sickened and died. The remedy was to cut off the testicle bag, push the testicles up into the body and sew the cut—a process that enabled the bulls to travel well and did not impair their breeding. This remedy was called goodnighting, after cattleman Charles Goodnight, who invented it, and is surely among the most unusual of words named after people.

good ole boy. Though it is used nationally now, a *good ole boy* is still generally a white southern male exemplifying the masculine ideals of the region; any amiable southerner, provided he likes guns, hunting, fishing, drinking, football, and women, in roughly that order; or a loyal southerner, rich or poor, devoted to all things southern. The term had popular use in the mid-1960s. Said the late Billy Carter, President Jimmy Carter’s brother, of the good ole boy: “A good ole boy . . . is somebody that rides around in a pickup truck . . . and drinks beer and throws ‘em out the window.” (*Redneck Power: The Wit and Wisdom of Billy Carter*, 1977.) Perhaps older than *good ole boy* is the little-heard *good ole rebel*, which derives from a song entitled “Good Old Rebel” written by Innes Randolph in the 1870s: “I am a good old rebel—/ Yes, that’s just what I am—/ And for this land of freedom/ I do not give a damn. I’m glad I fit agin ‘em/ And I only wish we’d won;/ And I don’t ax no pardon/ For anything I’ve done.” Hemingway uses *good ole boy* in *A Farewell to Arms* (1929): “You’re a good old boy,” the author says to his friend Captain Rinaldi.

good riddance to bad rubbish. *Riddance* refers to the act of cleaning away something undesirable and *good riddance* signifies a welcome relief from something, this last expression first recorded in 1783 as *a good riddance!*, a saying common in the U.S. today. The much stronger and rarer *good riddance to bad rubbish!* might be said to or of some worthless person who is leaving a place or a group of people, someone everyone is glad to be rid of. This alliterative phrase appears to be an Americanism but apparently hasn't been recorded anywhere, though it has been used in America for at least a century.

good Samaritan. The good Samaritan is nameless in the biblical story (Luke 10:30–85) told by Christ; he is only referred to as “a Samaritan” and Christ tells how he helped a man who had been assaulted and left half dead by robbers, how he cared for the stranger and paid for his room in an inn after two holy men passed him without helping. This anonymous man of Samaria, a district of ancient Palestine, the northern kingdom of the Hebrews, became over the centuries the good Samaritan, lending his name to the countless kind, helpful, philanthropic people who do good for others with no thought of worldly gain. The Samaritans are also a religious community who claim that they are descendants of the 10 tribes of Israel and that their religion contains the true undiluted teachings of Moses. These Samaritans, who broke with the Jews in about 458 B.C. but are said to observe the Torah even more scrupulously than orthodox Jews, are now represented by a few families living in Jordan. There are also 650 Samaritans in Israel, half living on Mount Gerizim, overlooking Nablus, and the others residing in Holon, near Tel Aviv. They all speak an ancient Hebrew dialect.

good scout. A *good scout*, “a regular person, a good fellow,” is probably much older than its first recorded date of 1912. The *scout* here most likely comes from the Dutch *schout*, “a sort of combination town mayor-sheriff”—not the English word *scout*, which derives ultimately from a Latin word for “to listen,” *ascultare*.

good skate. See CHEAPSKATE.

good sport. The expression *good sport*, for one who plays fair and accepts victory or defeat amicably, is something of a redundancy, for *sport* itself has meant such a person since the end of the 19th century, when the expression *be a sport* was popular in England.

good talk. See NHEENGATU.

good-time Charlie; good-time girl. *Good-time Charlie* refers to an affable, sociable, convivial man, the term perhaps coined by that great American word inventor T. A. Dorgan (see HOT DOG), who first used it in 1927, probably before anyone else. Not long after this, in 1928, the term *good-time girl* is first recorded. It usually describes a convivial young woman who is looking to have a good time, to play, anything for a laugh, much the same as a good-time Charlie.

good times. See PLAY THE MARKET.

good to go. A term used mainly in the space program to indicate that a spacecraft is ready to be launched.

good to the last drop. This slogan for Maxwell House coffee, coined in 1960, is a good example of advertising slogans that have come into general use, and means “thoroughly or completely good or enjoyable.” Another example is Ivory soap’s 99 and ⁴⁴/₁₀₀ths % pure, which, though coined in 1925 and no longer used in the company’s ads, still persists in the language. Similar slogans have enjoyed popular use, even if only comic, for over a century, like the old patent medicine *Pink pills for pale people*, coined in the mid-19th century and still used, though rarely, today. Another example is Alka-Seltzer’s more recent *I can’t believe I ate the whole thing . . .*

good wine needs no bush. Dating back some 2,000 years to ancient Rome, this expression refers to the vine leaves or ivy (honoring Bacchus) frequently depicted on signs outside Roman wine shops or taverns. The Romans continued this custom when they occupied England, where the saying arose that *a good wine needs no bush*, that is, it isn’t necessary to advertise a good wine with a bush outside the tavern—its good quality will soon make it known to everyone anyway. Today the words mean generally that “excellent things speak for themselves.”

goody. A historical polite form of address for a “goodwife,” a good woman of humble means in the early American colonies and well before then in England. *Goody* can also refer to a piece of candy or cake, while *goody-goody* refers to a smug, often officious, self-righteous person.

Goody Two Shoes. Once upon a time in about 1765, a girl named Goody lost her shoe, which may not mean much to you. But then you didn’t have to hop around on one foot and hear people laughing at you, and always need a pedicure. So Goody hung in there and was so good that some people thought her part of a moralistic nursery tale. But no matter. Someone who had a spare shoe gave it to Goody and Oliver Goldsmith wrote up her story and Goody lived happily ever after. No one has ever figured out how her name came to mean a quite priggish person. She was a good old girl.

goof off; goofy. Goofing off, “wasting time,” originated in the U.S. armed forces during World War II. It implies shirking like a silly or goofy person, a *goof*, which word derives from the English dialect word *goff*, “a simpleton,” first recorded in 1570.

google. A relatively new word meaning to use the Google search engine to get information on the World Wide Web.

googly. See BOSEY.

googol; googolplex. A nine-year-old child invented *googol*—a word for the number one followed by 100 zeroes, or 10 to the 100th power (10^{100}), which is frequently used in mathematics. Distinguished American mathematician Dr. Edward Kasner asked his nephew to make up a name for the big number and the boy replied *googol*. Possibly the word was suggested by childish sounds like *goo*, *coo*, etc., or possibly the comic strip

Barney Google had something to do with it. A googol can also be called 10 duotrigintillion, if you want to go to the trouble. Dr. Kasner, who died in 1955, is also, along with his nephew, responsible for the term *googolplex*. This is 10 raised to the power of a googol, or one followed by a googol zeroes. Using *googolplex* as shorthand for this finite number certainly saves a lot of time, for as Kasner wrote, “there would not be enough room to write it, if you went to the farthest star, touring all the nebulae, and putting down zeroes every inch of the way.”

gook. *Gook* is among the most universal of derogatory words, in that it has been applied by Americans, Englishmen, Canadians, and Australians to practically every nationality group but Americans, Englishmen, Canadians, and Australians. Most commonly it is used as a nickname for Filipinos, Pacific islanders, Japanese, Chinese, Vietnamese, and Koreans. The word probably derives from *goo-goo* and *gu-gu*, military names for a Filipino during the Spanish-American War. The Korean *kuk* (pronounced *kook*), used to convey the idea of nationality (as in *Chungkuk*: “China”), probably reinforced the word during the Korean War. So did the later slang use of *gook* (pronounced like “book”), which means “slime or dirt” and is a blend word formed from *goo* and *muck*.

goolies. Though rarely heard in America today, *goolies* is fairly common British slang for the testicles. First recorded in 1929, it derives from Hindi *goli*, “ball,” “bullet,” and originally came from Sanskrit. Gershon Legman wrote in *No Laughing Matter* (1969): “Well, pop it again—you’ve got me by the goolies!”

goon. Alice the Goon, a big stupid creature who appeared in E. C. Segar’s comic strip “Popeye, the Thimble Theatre” in the late 1930s, gave her name to both stupid people called goons and the big stupid thugs called goons. Segar (1894–1938) may have fashioned the name from the 1895 slang term *goony*, for “a simpleton,” but he could also have blended gorilla and baboon or even goof and baboon.

goondaism. Pakistan has been much in the news recently, focusing attention on the Pakistani language, which has given the world English hybrids like this synonym for hooliganism. *Goondaism* is from the English word *goon* and a local language word.

gooney bird. See ALBATROSS.

goop. A bad-mannered, inconsiderate person; a sticky, wet substance; something messy and unpleasant to handle. Another of the many words coined by American humorist Gelett Burgess, this one in *Goops and How to Be Them* (1900). Burgess may have used the word *goo*, first printed in the U.S. (ca. 1910) to build *goop*. See BLURB.

to goose. Mencken characterized *to goose* as “one of the most mysterious of American verbs . . .” No other language employs this term for “to jab sharply with the thumb in the anus, with the intention of startling or stimulating,” which is only about 60 years old and has taken on the additional meaning of goading

someone into action. There are many theories about the word’s etymology. Most experts lean to the explanation that pugnacious geese “sometimes attack human beings, and especially children, by biting their fundamentals.” Since they are also said “to attack women by striking at the pudenda,” the sexual associations are obvious. Others say that goose breeders examine their birds’ rear parts for eggs before turning them out from the pens each day, and that thrusts of a similar nature are the only way to distinguish between male and female geese in certain varieties—either practice could have inspired the expression. *To goose* could also be a euphemism for *to roger*, 18th-century British slang for to have sexual intercourse, since Roger, like Dobbin for a horse, was a conventional English folk name for a goose. Finally, there is the suggestion that *to goose* is named from a poolroom receptacle called “the goose” that jokers frequently jabbed into the fundament of a pool player just as he was about to make a shot.

gooseberry. How the *gooseberry* got its name is a puzzle to historians and etymologists. One theory claims that “gooseberry” is a mispronunciation of “gorge berry,” an early name for the fruit; a nice theory, except that *gooseberry* was used before *gorgeberry*, according to what records there are. For similar reasons, most word detectives do not believe that *gooseberry* is a corruption of *groseille*, the French name for the fruit, or the Dutch *kruishes*, which means “cross berry.” Perhaps a better explanation is that *gooseberry* is a corruption of the German *Jansbeeren* (*John’s berry*, so named because it ripens during the feast of St. John), which corrupted into the German *Gansberren* and was translated into English as *gooseberry* because *gans* means “goose” in German. That, in fact, is the only thing linking geese with the berry or plant—the goose doesn’t like berries, isn’t even averse to them, just ignores them entirely. Neither were gooseberries customarily served with roast goose, as is sometimes stated. The consensus is that *gooseberry* does come from some unknown association with the goose, plant names associated with animals often being inexplicable. There is even a theory that holds, simply put, that the goose gave its name to a fool or simpleton (as in *a silly goose*) and that the green berry (suggesting a “greenhorn” or fool) became known as a *goose* (or fool) *berry*.

gooseberry fool. Probably the most famous dish made from gooseberries is *gooseberry fool*, a dessert made of the fruit stewed or scalded, crushed, and mixed with milk, cream, or custard. Some say the *fool* in the dish is a corruption of the French verb *fouler*, “to crush,” but this derivation seems to be inconsistent with the use of the word. More probably the dish is simply named after other, older fruit trifles, the use of *fool* in its name in the sense of “foolish or silly” being suggested by “trifle.” In any case, *gooseberry fool* has been an English favorite since at least 1700. So widely known is the dish that a plant is named after it, the English calling the willow herb *Epilobium hirsutum* *gooseberry fool* because its leaves smell like the dessert!

goose egg. See LAY AN EGG.

goose pimples; horripilation. When geese are plucked, the thousands of tiny muscles that pull their feathers erect to

form a natural insulation system continue to contract in the cold. The contracted muscles look like bumpy, pimply skin on a bare bird and as far back as the 17th century suggested the bumps on human skin caused by cold or fear. At first this condition was called *gooseflesh* or *goose skin*, or “creeping of the flesh.” A fancier name is *horripilation*, “erection of the hair on the skin by contraction of the cutaneous muscles caused by cold, fear, or other emotion.” This word effectively suggests fear and derives from the Latin *horrere*, “to bristle or shudder,” which gives us the word *horror*. It is first recorded in 1623.

goosestep. The military goosestep is in modern times most associated with German troops during World War II and has unpleasant connotations, to say the least. However, the “elementary drill in which the recruit is taught to balance his body on either leg alternately, and swing the other backwards and forwards” dates back to the end of the 18th century. Apparently there were many who didn’t much like it then, hence the contemptuous name *goosestep*. Wrote an observer in 1806: “The balance or goose-step introduced for this practice excites a fever of disgust.” By 1900 *goosestep* came to mean the slow, stiff-legged march step now associated with the Nazis.

go out on a limb. To go out on a limb is to take a chance, to make a chancy prediction, as in “I’ll go out on a limb and say he’ll win in a landslide.” The expression is an Americanism dating back to the later 19th century; the word *limb* is of course a tree limb.

go over big. To become a big success, a great hit. Apparently the expression is from the world of entertainment. Its first mention in print suggests this: “A comedy that ‘goes over big’ and is very funny is often referred to as a ‘wow.’” (*American Speech* 10/21/27).

go over like a lead balloon. To be an absolute or utter failure, to arouse no interest or support. The expression is first recorded in 1950.

go over the top. Millions of men met their death going over the top in World War I. The expression means to climb out “over the top of one’s trench” and attack the enemy over the open ground (top) between the trenches. *Over the top* has been used figuratively since the end of the Great War to mean to do something excessive, or even dangerous, as in “His story is interesting but goes a little over the top near the end.”

G.O.P.; G.O.M. G.O.P stands for Grand Old Party, the official nickname of the U.S. Republican Party. First used in 1887, when it also meant “get out and push” (your own horse or car), it was probably suggested by G.O.M., which the English called their Grand Old Man, Prime Minister Gladstone.

go peddle your papers. Far more common today than 50 years ago, this American expression has a variety of meanings depending on the situation it is used in, including go away, get lost, be a good guy and leave, go away before you get hurt, mind your own business, leave us alone, etc.

gopher. *Gopher* is probably theatrical in origin, dating back to the 1940s. The word is a corruption of the words *go for* and describes an errand runner, hired to do menial chores—to go for coffee and doughnuts or whatever else the boss and other higher-ups can’t acquire from a sedentary position. A *gopher* can also be a zealous salesman, from “go for broke.” The burrowing animal called the gopher has nothing to do with the expression.

Gopher State. The most popular nickname for Minnesota, though it prefers the North Star State and the motto *L’Étoile du Nord* is on its state shield. It has also been called the Bread and Butter State, the Bread Basket of the Nation, the Wheat State, the Cream and Pitcher of the Nation, and the Playground of the Nation.

go quick plant. An old American name for rhubarb, probably because of its laxative effect. Seldom heard anymore, the name dates back to at least the early 19th century.

Gordian knot. See CUT THE GORDIAN KNOT.

Gordon Bennett! James Gordon Bennett (1841–1918), the son of the founder of the *New York Herald*, was an eccentric who ran the paper well but had little or no regard for money. Once he gave a train guard a \$14,000 tip. Another time he threw a batch of money into a roaring fireplace to watch it burn but became angry and flung the bills back into the flames when a young man tried to salvage them. When he found someone seated at his favorite table in a Monte Carlo restaurant, he bought the place for \$40,000, evicted the diners, sat down to eat—and when he left gave the restaurant back to its original owners as a tip. Bennett had a thing for restaurants. As he strolled through them to his reserved table, he liked to yank tablecloths off all the tables in his way. He’d then hand the headwaiter a large wad of cash to distribute to the disturbed and stained diners. He did this so often that the expression *Gordon Bennett!* became (and remains, in England) a cry of anyone soiled by a clumsy waiter.

Gordon setter. In contrast to the red-coated Irish setter, bred at about the same time, the Gordon setter is a brilliant black and tan. The breed originated in Scotland, partially developed by Alexander, the second duke of Gordon (1743–1847), a Scottish breeder and sportsman who also served in the House of Lords and wrote a number of folk ballads. The long-haired Irish and Gordon setters, extensively used by sportsmen for game pointing, both descend from the English setter, developed some three centuries before them.

gorgon. A terribly ugly person, especially a woman. The three snaky-headed Gorgons of classical Greek mythology, the best known of whom is Medusa, were so hideous that they turned to stone all humans who met their gaze.

Gorgonzola cheese. The village of Gorgonzola in northern Italy first made this mottled, strong-flavored, semisoft cow cheese that bears its name. Over the years other places in and out of Italy have copied the Gorgonzola recipe, leaving the lit-

tle village without a monopoly but still with a pride in craftsmanship.

gorilla. Tough, hairy men aren't named after the gorilla, as most people believe. Such men actually gave their name to the ape. Originally, *Gorillai* seems to have been the name of a hairy African tribe known to the Greeks in about 500 B.C. This word came into English as *gorilla*, which first meant a hairy aboriginal person. Then in 1847 the American missionary and naturalist Dr. Thomas S. Savage observed the largest of the anthropoid apes in West Africa, naming them *gorillas* in an article published in the Boston *Journal of Natural History*. For other instances of animals named after men see BOOBY, BRUMBY, CAPUCHIN, CAYUSE, CHOW, FLAMINGO, GIBBON, GUPPY, HALCYON, HUSKY, MAVERICK, MOLLY, PETRELS, SHARK, and SHRIMP.

gorming. Used to describe a stupid, clumsy person or animal, or even an inanimate object that is in one's way: "Move aside, you great gorming lummo." The word, however, can be used in a less offensive way, as in the following quote: "I asked her how her little granddaughter Dorry was. 'Little?' says she . . . 'she's a great big gormin' girl now.'"

go someone one better. A common American expression today, *to go someone one better* means to exceed the performance of someone else. It began life as a poker term (which it still is) in the early 19th century, meaning to raise the bet one more chip over someone who has bet before you.

gospel bird. Southern fried chicken, almost universally known today, is probably an African invention, the chicken fried in deep fat introduced to America by blacks brought here as slaves. Gospel bird is almost certainly a black invention, chicken so called because the bird is so often served at southern Sunday dinners, especially when the preacher is coming. The humorous item is first recorded in 1902, though it must surely be older. *Kentucky fried chicken* is a synonym for *southern fried chicken*, the former term a trademark of the popular chain of restaurants that coined it.

gossamer. See ST. MARTIN'S DAY.

gossip. A *gossip*, the word a corruption of *god-sib*, "related to God," was originally a sponsor of a child at a baptism; Shakespeare used the term in this sense in *Two Gentlemen of Verona*. There was so much chatter at christenings, as at funerals, that the word came to mean "a tattler or newsmonger."

gotch-eared; gotch-eyed. An animal such as a horse or donkey with clipped, drooping ears is called "gotch-eared, *gotch* deriving from the Spanish *gaucho*, "turned downwind." A "gotch-eyed" person is someone with eyes looking in different directions.

Gotham. Washington Irving first called New York Gotham in his *Salmagundi Papers* (1807), because its residents reminded him of the legendary inhabitants of the English town of Gotham. An old tale has it that these villagers had discouraged King

John from building a castle in their town, and taxing them for it, by feigning madness—trying to drown fish, sweep the moon's reflection off the waters, etc. This legend led to more stories about the villagers, collected in a book called *Merrie Tales of the Mad Men of Gotham*, and Irving, reading of these alternately wise and foolish people, thought that they resembled New Yorkers.

go the extra mile. To make a supreme effort, exceed what is asked or expected of one. The phrase probably has its roots in the Bible (Matt. 5:41): "And whosoever shall compel thee to go a mile, go with him twain."

Gothic. After overthrowing Rome in the fifth century, the Gothic tribesmen, an east German people, dominated much of Europe for the next 300 years. Not much is known of them, and their architecture was certainly not Gothic, but Renaissance architects nevertheless bestowed their names on all buildings characteristic of the Middle Ages, considering such structures crude and barbaric, suitable for the Goths. The 12th-to-16th-century building style, characterized by the pointed arch, as well as *Gothic art*, *Gothic type*, and myriad other things, was thereby named for a people who had nothing to do with it.

go to bat for someone. *Going to bat for someone* means to defend, support, or take up the cause of that person. This common American phrase is from baseball and was first recorded in 1916, although it was probably used earlier. The British use bats for cricket, but the phrase is not common in England.

go-to-hell. Said of someone who has no concern for what anyone else thinks of him or her. "He looked like the original go-to-hell dory fisherman—clothes so filthy you could chop them up for chum."

Go to Hell, Babe Ruth—American, you die. A Japanese battle cry heard at the beginning of World War II on the Pacific Islands.

go to hell and fry in your own lard. The expletive is an old one, dating back to the 19th century. "The others knew from the drawl with which he spoke that he was enraged almost beyond control: 'Well, you can go to hell and fry in your own lard.'"

go to hell in a handbasket. A handbasket is a small basket with a handle, which is carried by hand and is often used for shopping, a good example being the plastic handbaskets supplied by some supermarkets. The word *handbasket* (handbasket) is first recorded about 1485, but no one has established when the expression *go to hell in a handbasket* came into the language. It means to degenerate quickly and decisively, as in "This company has gone to hell in a handbasket." Anyone who could fit in a small handbasket for the journey to hell would certainly have deteriorated very rapidly and decisively. A southern U.S. variation on the phrase is *go to hell in a bucket*: "Neither of us could figure it out, all we know for certain was that the marriage of Rose and Dave began to go to hell in a bucket . . ." (Calder Willingham, *Rambling Rose*, 1972).

go to poodic. George Stewart in *Names on the Land* (1945) cites this Indian name for a point of land on the Maine coast. It translates as “Go jump in the bay!”

go to the devil. The Devil Tavern was one of the most famous taverns in London, standing in Fleet Street and taking its name from its sign, which showed the devil tweaking St. Dunstan's nose. The tavern was a favorite hangout for lawyers, and 17th-century wits spread the story that whenever a lawyer was wanted and couldn't be found in his offices, his clerk would tell the client to “go to the Devil.” This has been suggested as the source of the above phrase, but is not to be believed. To *go to the devil*, “to go to ruin or hell,” dates back to at least 1384, and there are many examples of its use through the centuries. William Caxton, for example, wrote: “Let them go to a hundred thousand devils!”

go to the dogs. See DOG'S LIFE.

go to the mat. The mat in wrestling is the padded canvas covering the whole floor of a wrestling ring to protect the athletes from injury. The sight of wrestlers contending on it suggested the general phrase *go to the mat*, “to struggle mightily in a determined, unyielding way,” as in “The President is going to the mat with Congress over that bill.”

go to the wall. A traveler set upon by robbers in medieval times tried to protect his back against the wall of a street or country lane so that he didn't have to worry about anyone running him through from the rear while he defended himself with his sword. But to *go to the wall* nevertheless suggested serious difficulties, for someone in such a position still had to fight off attackers from three sides. So the phrase came to describe anyone in serious straits, anyone up against it, down to his last resources, physical or financial. The expression *driven to the wall* and *up against the wall* derive, just as early, from the same situation.

go troppo. Australians like to use this expression meaning “to go crazy,” “to become mentally disturbed.” *Troppo* may be a shortening of *tropical*, perhaps in reference to someone stranded on a tropical island with no companionship.

got to see a man about a dog. An excuse to use the bathroom. Widely heard today, the expression probably originated in England toward the middle of the 19th century. The man originally referred to in the excuse may have been a bookmarker who took bets on dog races.

gourmet. The first gourmet was a *groumet*, “a horse groom.” The word changed to *gourmet* in French and was applied to grooms and any minor servants in a household. Among these servants were boys who tasted wine, and such wine tasters, or *gourmets*, were given the same name when they worked as assistants in wine shops. Eventually the wine-shop *gourmets* became connoisseurs of fine wines and food in general, giving us the *gourmet* we know today. The word is not recorded in English until 1820.

gout. Regarded today as a form of arthritis, *gout* derives from the Latin *gutta*, “drop,” because it was once believed that drops

of bad blood or acrid matter dropped from the bloodstream into the joints and caused the painful swellings associated with the disease. The word came into English via the French *goutte* in about 1290.

the government is best which governs least. See SUMMER SOLDIER AND SUNSHINE PATRIOT.

government of the people, by the people, for the people. See FOURSORE AND SEVEN.

go west; occident. An unknown poet may have independently coined the phrase *to go west*, “to die,” in the trenches of World War I. The expression was common then, possibly suggested by the setting of the sun in the west. But the phrase is much older. In America, Indian legend had it that a dying man had gone to meet the setting sun, and, later, when explorers and prospectors didn't return from dangerous country west of the Mississippi, they were said to have gone west. In 16th-century England the phrase was used of criminals going to be hung at Tyburn, which is west of London, and an early 14th-century English poem with the refrain “his world is but a vanity” had the lines: “Women and many a willful man,/ As wind and water are gone west.” The idea behind the expression is even older. The Egyptians spoke of the west as the home of departed spirits, and among the Greeks the association of death with the west was proverbial, as in *Ulysses*:

My purpose holds
To sail beyond the sunset, and the paths
Of all the western stars, until I die.

Even our word *Occident*, for “the west,” is associated with death. It comes from the Latin *occidens*, “the place where the sun died at the end of each day,” which is from the verb *occidere*, “to die.”

go west, young man, go west. In America *go west* came to stand for new life and hope instead of death (see GO WEST) with the expansion of the frontier. There is some controversy about who said *go west, young man* first, however. Horace Greeley used the expression in an editorial in his *New York Tribune*: “Go west, young man, and grow with the country.” Later, as the phrase grew in popularity, Greeley said that his inspiration was John Babsone Lane Soule, who wrote “Go West, young man” in an 1851 article in the *Terre Haute Express*. Greeley even reprinted Soule's article from the Indiana newspaper to give credit where it was due, but several writers insisted that Greeley had given them identical advice before Soule had written the piece. William S. Verity said that the great editor had coined the expression a full year before Soule.

go while the going's good. Bogart says this to Hepburn in their film *The African Queen* (1951) while trying to persuade her to leave Africa where World War I German troops are brutally expelling all others. Those infamous leeches that were all over Bogart in their escape were only rubber and were stuck to Bogey with waterproof glue. Each “leech” contained a small “blood sac” that broke when peeled off.

go whistle for it. One story claims that this saying arose as a perversion of the old nautical superstition that one could raise the wind for a becalmed ship by whistling (the basis of the “magic” was that air would come from the sky just as air came from your mouth). But another tale, also unproved, attributes the words to the whistle tankards once used in British pubs, drinkers blowing a whistle on the side of each when they wanted a refill. Thus both possible sources imply the opposite of the phrase’s meaning “You’ll never get it from me, you won’t get it at all.”

go whole hog. Probably the expression *to go the whole hog*, or *to go whole hog*, “to go the limit, all the way,” has its origins in William Cowper’s poem “The Love of the World Reproved; or Hypocrisy Detected” (1779). Cowper told a story about pious but hungry Muhammadans who were ordered by Muhammad not to eat a certain unspecified part of the pig. Unable to determine what part, they began to experiment:

But for one piece they thought it hard
From the whole hog to be debar’d;
And set their wit at work to find
What joint the prophet had in mind . . .
Thus, conscience freed from every clog,
Mohometans eat up the hog . . .
With sophistry their sauce they sweeten,
Til quite from tail to snout ’tis eaten.

go with the flow. Don’t fight anything, be passive, cool it. This counterculture saying was common in the 1960s and is still heard today.

goy. *Goy* is a Yiddish word for a gentile, and can be completely innocent or disparaging, depending on who is using it and how it is used—just as *Jew* can be either, depending on the circumstance. Leo Rosten notes that the word itself is not derogatory and discusses it at length in his *The Joys of Yiddish*, one of the best and brightest word books of this or any other time. *Goy* derives from the Hebrew *goy*, nation, and dates back at least to the 19th century.

Grable-bodied seamen. Movie actress Betty Grable, her “million-dollar legs” insured by Lloyds of London, was the pin-up girl par excellence during World War II. British sailors used the term *Grable-bodied seamen* to describe long-stemmed love-lies in the Wrens (Women’s Royal Naval Service) who fit the description. See FRANKIE BAILEY’S; FANNY; CHARLEY.

grace under pressure. This phrase is often attributed to American president John F. Kennedy, but it was really author Ernest Hemingway’s coinage and credo. JFK borrowed the expression from Hemingway.

graft. This American term for dishonest earnings, usually of politicians, isn’t recorded until 1859. Its origins are unclear, but the word may derive from the British slang *graft*, for “any kind of work, especially illicit work,” which, in turn, may come from the British *graer*, “to dig,” influenced, Partridge says, by the gardening *graft*. The gardening *graft* derives, ultimately, from the Greek word *grapheion*, “a bone or wood pencil-like instrument used for writing on wax tablets.” Someone in early times possibly thought that a *grapheion* resembled a twig for grafting.

Graham crackers, etc. Young Presbyterian minister Sylvester Graham (1794–1851) became so ardent a temperance advocate that he not only traveled far and wide to lecture on the demon rum, but invented a vegetable diet that he was sure would cure those suffering from the evils of drink. Graham soon extended his mission to include changing America’s sinful eating habits. Meats and fats, he said, led to sexual excesses and mustard and catsup could cause insanity, but Graham mainly urged the substitution of homemade unsifted whole wheat flour for white flour. Modern science has affirmed his belief that refining flour robs it of vitamins and minerals, and most of his regimen, including vegetables and fruits in the diet, fresh air while sleeping, moderate eating, and abundant exercise, is now widely accepted. His memorials are the *Graham flour*, *Graham bread*, and *Graham crackers* that his followers ate and dedicated to him.

grain of salt. See TAKE WITH A GRAIN OF SALT.

Gramont’s memory. The name is often spelled *Grammont* due to its misspelling in the *Mémoires du comte de Grammont*. A *Gramont’s memory*, a convenient one, derives from a tale told about the count and Lady Elizabeth Hamilton. While visiting England in 1663, the sharp-tongued Gramont is said to have grossly insulted and refused to apologize to La Belle Hamilton, whose brothers followed him as he prepared to leave the country, drew their swords, and asked if he hadn’t forgotten something. “True, true,” he replied, unruffled. “I promised to marry your sister.” This he did. Only the year before his marriage, Philibert, comte de Gramont, had been exiled from Paris for attempting to rival King Louis XIV in a love affair. The French diplomat’s memoirs, a masterpiece of their kind, vividly describe the licentious court of England’s Charles II. They were written by Gramont’s brother-in-law, Anthony Hamilton, from materials supplied by the count. So sharp-tongued was Philibert that one writer describes the immense feeling of relief expressed by the French court when, in 1707, it was announced that he had died. Even at 87 he was still a threat to anyone who crossed him.

grand. *Grand* for a thousand dollars is American slang that dates back to at least 1900, and is probably so named because it is “a grand sum of money.” *Grand* was abbreviated to a *G* or a *G-note* within 20 years or so. An older term for a thousand dollars is a *thou*, first recorded in 1869 and still used; a newer term meaning the same is a *big one*, which seems to have been coined about 50 years ago, about the time that *large* for a thousand dollars is first recorded.

grandbaby. A common term for a grandchild that dates back to at least 1916; heard recently (1991) from a southern woman in the Empire State Building in New York City, of all places: “I got three grandbabies down home.” *Grand boy* is a male grandbaby.

grand climacteric. As far back as 1653, people have been writing about the grand or great climacteric. This is a superstition involving the age 63 (a number that is the product of the “magic numbers” 7 and 9) and holding that if you survived that dangerous year you would live to a ripe old age. The word *cli-*

macteric itself, which also refers to the female menopause, derives from a Greek word meaning “a critical period.”

grandfather clause. A clause used by some southern states in their constitutions after 1890, in which they disenfranchised blacks by stipulating that new literacy and property qualifications for voting applied only to those whose ancestors did not have the right to vote before 1867. Since no blacks could vote or had ancestors who could vote before that time, this meant that no blacks were permitted to vote.

grandfather clock. A pendulum floor clock with a case as tall as or taller than a person. This is possibly the only English word that came into the language from a song: American songwriter Henry Clay Work’s “Grandfather’s Clock,” written in 1875. Work’s song became so popular that people began calling all such clocks grandfather’s clocks, grandfather clocks, and grandfathers. The first stanza of the song goes:

My grandfather’s clock was too large for the shelf,
So it stood ninety years on the floor;
It was taller by half than the old man himself,
Though it weighed not a pennyweight more.
It was bought on the morn of the day he was born
And was always his treasure and pride.
But it stopped short—never to go again—
When the old man died.

Grand Guignol. Violent, sensational plays were the staple of the Théâtre du Grand Guignol in Paris up until recent times, these short plays giving us the name *Grand Guignol* for such works, or the staging of them. The theater took its name, ultimately, from the French *guignol*, “puppet or marionette,” in relation to the violence and brutality of Punch-and-Judy shows.

grandma. Two humorous stories from the Ozarks: *To grandma* there means “to cut down and steal timber from someone else’s property,” perhaps because an anonymous thief who stole timber explained that he got it from his “grandma’s” place. Another theory has this unusual word deriving from an old story or joke about a man accused of stealing another’s timber and finally admitting that “Grandmaw might have taken a few sticks.”

Grand Marnier. The famous orange liqueur was devised by French industrialist Marnier Lapostolle in the 1890s. According to an old story, Lapostolle asked hotelier Cesar Ritz what he should call his liqueur. “Why Monsieur, call it after yourself, *Le Grand Marnier!*” Ritz replied.

grandmother story. This old American Indian expression is explained in Grant Foreman’s book *The Last Trek of the Indians* (1946): “The absentee Shawnee cherished a prophetic tradition generally known as the ‘grandmother story’ as told by a Shawnee woman, having reference to certain present and eternal judgments that would be visited upon the unfortunate head of any Indian who laid aside the blanket to adopt the white man’s dress.”

Grand Old Flag. The original title of “You’re a Grand Old Flag” (1906) was “You’re a Grand Old Rag.” George M. Cohan

changed it when critics protested that he was profaning the Stars and Stripes. Cohan (he pronounced his name Cohen) wrote his famous song “Harrigan” in honor of his friend, vaudeville performer, Ed Harrigan, of Harrigan and Hart fame.

Grand Old Man of Football. Amos Alonzo Stagg (1862–1965), “the Grand Old Man of Football,” began coaching the University of Chicago football team in 1892 (after two years with the Springfield YMCA), switched over to the College of the Pacific in 1934 when he was 72, and coached there until he was 98! The five-foot-four-inch Stagg was a divinity school graduate and a firm believer that football encouraged clean living and built character. It is unlikely anyone will ever break his record of 75 years of active coaching, and only Walter Camp can match his contributions to football. The coach, who never retired, gave football many things, including the huddle, the single and double wingback, the shift, the man in motion, the end around or end run, the tackling dummy, and letters awarded to athletes. Stagg was 81 when named college coach of the year in 1943, so there really is hope for all coaches. *See FATHER OF AMERICAN FOOTBALL.*

Grand Ole Opry. The Grand Ole Opry is “the oldest continuously live” U.S. radio program. Debuting on Nashville, Tennessee’s, WSM radio on November 28, 1925, it quickly became the most famous of all such country and western formats. Today, the Grand Ole Opry is an entertainment complex, drawing hundreds of thousands of people to see live shows.

grand panjandrum. *See NO SOAP!*

grand slam. In bridge a grand slam is the taking of all 13 tricks in a deal and the phrase dates back to about 1895 in that sense. By 1940 it became baseball’s home run hit with the bases loaded—the sport’s ultimate home run. In tennis a Grand Slam is winning the four major world titles: the Wimbledon (England), the U.S. Open, the Australian Open, and the French Open. In general use, a grand slam is the ultimate of anything.

grandstanding. *See PLAY TO THE GRANDSTAND.*

Grand Tetons. French voyageurs early named these mountains in northwestern Wyoming the Grand Tetons, the “big breasts,” because of their resemblance to a woman’s breasts. For the same reason the rounded hillocks or mounds west of the Mississippi are called *mamelle*, from the French *mamelle*, for “a woman’s breast.”

grangerize. Reverend James Granger (1723–76) himself clipped some 14,000 engraved portraits from other books to use as possible illustrations for his *Biographical History of England*. Some of the books he pillaged were rare ones, and to make matters worse, he suggested in his preface that private collections like his might prove valuable someday. This resulted in a fad called *grangerizing*, or extra-illustration, with thousands of people mutilating fine books and stuffing pictures and other material into Granger’s book. Editions following the 1769 *Biographical History . . . adapted to a Methodical Catalogue of Engraved British Heads* provided blank pages for the insertion

of these extra illustrations; the book eventually increased to six volumes from its original two. Sets of Granger illustrated with up to 3,000 engravings were compiled, and so many early English books were ravaged that *to grangerize* came to mean the mutilation that remains the bane of librarians today.

The Granite State. A nickname for New Hampshire. The state's granite industry, storytellers say, was established as a result of locals drilling for salt. In 1827 citizens drilled hole after hole searching for the precious condiment, only to give it up as a bad job upon striking layer after layer of granite. Soon after, they decided to mine the granite.

granny knot. A poorly tied knot that often comes loose, one that looks like it might have been tied by someone's granny. Though it is a nautical term referring to a landlubber's knot, *granny knot* is heard on land as well today, in every place where seamen have introduced it.

grant (give) no quarter. *To grant (give) no quarter* originally meant to spare no life of an enemy in your power, but it has come to mean "to be unmerciful." The expression has its origin in its opposite, *to grant quarter*, which may derive from an ancient agreement between the warring Spaniards and Dutch that the ransom of a soldier be a quarter of his pay. More likely the words have their origin in the old custom of a victor providing his captives temporary housing. *Quarters* (from the Latin *quadrus*, "square"), for "a residence or a place where an army lodges," is recorded as early as 1591.

Grant's Tomb. Who's buried in Grant's Tomb? The answer isn't as obvious as it seems. Both General Grant and his wife Julia are buried there in New York's Riverside Drive memorial to Ulysses S. Grant (1822–85), Union general in the Civil War and 18th president of the United States. The joking question is often given on history exams and has been missed on TV quiz programs.

grape; grapefruit; wineberry. Grapefruit (*Citrus paradisi*) resemble grapes only in that they grow in clusters on their trees, but that was sufficient reason to bestow the name upon them, early explorers in Barbados thought. *Grapes* themselves look nothing like their namesakes. Grapes were named for the *grape*, or grapple, the small hook that the French used to harvest them. The English called grapes *wineberries* until they imported the French word toward the end of the 11th century.

grapes of wrath; wrath of grapes. The words *grapes of wrath* are from Julia Ward Howe's "Battle Hymn of the Republic" (1862), which was often sung by Union soldiers in the Civil War: "Mine eyes have seen the glory of the coming of the Lord; / He is trampling out the vintage where the grapes of wrath are stored. . . ." The words are also the title of John Steinbeck's novel (1938) and the movie made from it (1939). The term *wrath of grapes* is a recent humorous phrase for a hangover.

the grapevine. Some 15 years after Samuel Morse transmitted his famous "what hath God wrought" message, a long telegraph line was strung from Virginia City to Placerville, California, so crudely strung, it's said, that people jokingly compared the line

with a sagging grapevine. I can find no record of this, but, in any case, grapevines were associated with telegraph lines somewhere along the line, for by the time of the Civil War a report *by grapevine telegraph* was common slang for a rumor. The idea behind the expression is probably not rumors sent over real telegraph lines, but the telegraphic speed with which rumormongers can transmit canards with their own rude mouth-to-mouth telegraph system.

graphite. See LEAD.

grass. All the words in the sentence *Grass grows green* come from one source, the Teutonic *gro*, which in turn derives from the Aryan *ghra*, to grow. Our word *graze* also ultimately comes from this source. Grasses are worldwide in distribution and a listing of them would fill a large book. It has been noted that the grass family supports the temperate and tropical world, containing as it does wheat, corn, rice, rye, barley, oats, and sugarcane. But most people think of lawns or meadows when they think of grass, as is witnessed by common American sayings such as "don't let the grass grow under your feet"—don't be lazy, be active and energetic. Such grass is probably one of the few plants that almost everyone can identify, though not the many varieties of it. Home lawns made of grass covered about 23 million acres across the U.S. in 1995.

grasshopper. The very appropriate name for this common insect is more colorful in other languages. The Italian name for the grasshopper is *cavalletta*, "little mare," while the Spanish call it *saltamontes*, "jump mountains." For some reason the Germans call it *die Heuschrecke*, "the terrible hay-thing." In Greek mythology the sound of the grasshopper is said to be the voice of the handsome Tithonus, who married Aurora, the goddess of dawn. Aurora asked Zeus to grant her husband immortality, which the great god did, but she neglected to ask Zeus to keep him forever young. Time passed and the handsome Tithonus fell victim to its ravages, while Aurora remained young and beautiful. She eventually took pity on her old doddering husband and turned him into a grasshopper, locking him in a palace room. Tithonus has since been heard every evening at his palace window crying for his lost Aurora. *Knee-high to a toad*, first recorded in 1814, was the original of the Americanism *knee-high to a grasshopper*, which came on the scene some 37 years later. *Knee-high to a grasshopper* is generally used in comparisons, emphasizing youth, smallness, or remoteness in time. There are some 120,000 varieties of grasshoppers, and to be literally knee-high, or tibia-high, to a grasshopper a person would have to range from one millimeter tall to little more than an inch tall. See GULL.

grasshopper battle. A historical term for a battle fought in 1873 between the Shawnee and Delaware Indians, supposedly started by an argument among children over the ownership of a pet grasshopper.

grass roots. "A little classic of the poetic imagination," the *New York Times* once called this phrase, but whose "poetic imagination" we don't know. In 1935, when the Republican Party was seeking a broader base of support among the voters, John Hamilton of Topeka, Kansas used the words in describing the "new" G.O.P. No one has traced the phrase back further in

print, but one respected etymologist has testified that he heard the expression back in rural Ohio in about 1885. A term dear to politicians, it simply means to get down to basic facts or underlying principles, its appeal becoming more nostalgic as more concrete replaces grass. *Grass roots* itself, for “basics, fundamentals,” has been traced to 1932 when used, appropriately enough, to describe the candidacy of Oklahoma Governor William H. (“Alfalfa Bill”) Murray for the Democratic presidential nomination. It, too, probably stems from the prairie farms of the West.

grass widow. The old story that this synonym for a divorcée derives from *veuve de grace*, “a divorcée or widow by courtesy or grace of the Pope,” has no basis in fact—for one thing, *grace widow* is nowhere recorded in English. Just as unlikely is the theory that the phrase originated with the custom of British officers in India sending their wives on vacation to the cool grassy hills during intensely hot summers, where, separated from their husbands, they were humorously referred to as *grass widows*. There is also a yarn that “forty-niners” in America “put their wives out to grass,” boarding them with neighbors until they returned from prospecting. The most plausible explanation of this old English expression, which dates back to at least the early 16th century, is that it formerly meant an unmarried mother and just changed in meaning over the years. “Grass” probably referred to the grass in which the grass widow’s child might have been begotten, outside of the proper marriage bed, and “widow” to the woman’s unmarried state. We find the same parallel in many languages, including our current slang *a roll in the hay*; the German *Strohweide*, “straw widow”; and the Middle Low German *graswedeue*, an obsolete word for a woman with an illegitimate child. One joke has it that a *grass widow* is a forlorn middle-class matron whose husband spends all his spare time playing golf.

Grauman’s Chinese Theater. Since 1927 scores of movie stars have left imprints of their feet and hands in cement outside Grauman’s Chinese Theater in Los Angeles; the first was Hollywood actress Norma Talmadge. A good number of stars, however, left more imaginative imprints for posterity. Jimmy “The Schnoz” Durante, for example, impressed his impressive nose in the forecourt sidewalk, and comedian Joe E. Brown left a likeness of his huge mouth, while Betty Grable laid down one of her “million-dollar legs” and Mickey Mouse left his paw prints. The hoofprints of cowboy star Gene Autry’s faithful horse, Champion, and Roy Rogers’s Trigger are also enshrined outside Grauman’s, as is Al Jolson’s right knee, which he knelt on while singing “Mammy.” So are matinee idol John Barrymore’s profile and actor Monty Woolley’s beard. The theater, now owned by the Mann Theaters Corporation, has no plans to discontinue this tradition begun in the first year it was built.

a grave man. Known famously as a pun by Mercutio in Shakespeare’s *Romeo and Juliet*. As Mercutio lies dying he quips: “Ask for me tomorrow and you shall find me a grave man.”

Graves’s disease; Basedow’s disease. These are one and the same disease, an enlargement of the thyroid gland, also called exophthalmic goiter that is visible as a swelling at the front of the throat and is often associated with iodine deficiency. It

bears the name of Irish physician Robert Graves (1796–1853), who first discovered it in 1835, and German physician Karl von Basedow (1799–1854), who discovered it five years later in more detail, unaware that Graves had gotten there before him.

graveyard. See CEMETERY.

graveyard shift. A work shift performed during the early morning hours, often from midnight until 8 A.M. This term is first recorded in the United States in about 1910. Also called *lobster shift* (qv) and *graveyard watch*. See CEMETERY.

graveyard stew. During the Great Depression we ate toasted bread and milk, sweetened with a lot of sugar when no one was looking, for too many meals. There were complaints about this *graveyard stew* or *soup*—so named because it was often fed to old people with no teeth or because a steady diet of it might send you to the grave—but it doesn’t seem that bad anymore.

gravy. While Italian pasta sauce is often called *red sauce* or simply *sauce* by Italian-Americans, most call the tomato and meat sauce *gravy*. Variants are *spaghetti gravy* and *Sunday gravy*.

gravy train. In the 1920s, railroad men invented the expression to *ride the gravy train* to describe a run on which there was good pay and little work. The words were quickly adopted into general speech, meaning to have an easy job that pays well, or, more commonly, to be prosperous. *Gravy*, however, had been slang for easy money since the early 1900s.

grayback. Any huge Atlantic Ocean wave that isn’t breaking is called a *grayback* by Newfoundlanders. See GREENBACKS.

gray eminence. See ÉMINENCE GRISE.

greased. Grunt (infantryman) lingo in Vietnam for being killed. “They used a hard vocabulary to contain the terrible softness,” Tim O’Brien wrote in “The Things They Carried” (1987). “*Offed, lit up, zapped while zipping* [killed by a sniper just after urinating]. It wasn’t cruelty, just stage presence.” See ZAP.

greased lightning. Lightning is fast enough, striking before it can be heard, but *greased lightning!* Why, this is the kind of American exaggeration for emphasis that British grammarians sneered about all through the 19th century. Americans surely are a hyperbolic people, but the trouble here is that *like greased lightning*, “faster than anything,” is a British expression, despite some disclaimers. At least it first appeared in the *Boston, Lincoln, and Louth Herald* of January 15, 1833. The hyperbole is of course not meant to be taken seriously. No more than the everyday expressions *as old as the hills*, *a million thanks*, *I haven’t seen you for ages*, or even Shakespeare’s famous poetic device in *Macbeth*:

No; this my hand will rather
The multitudinous seas incarnadine,
Making the green one red.

grease one's palm. *To grease one's palm* was originally *to grease one's hand*, an expression first recorded by the poet John Skelton in 1526. From such early times, *to grease one's hand*, *palm*, or *fist*, or simply *to grease*, has meant to bribe or tip. There is an identical old expression in French, *graisser la patte*, and the idea behind the expression is the same as that behind greasing the wheels, making things run smoothly—greasing the hand or palm of a person will make his hand work more smoothly for you.

greaser. A derogatory offensive name for Mexicans and Mexican-Americans first recorded in 1836 in what is now Texas. *Greaserdom* is a derogatory historical name for New Mexico. An unlikely explanation says that *greaser* derives from men hired by Mexican freighters to run alongside their wagons and grease the wooden axles.

greasy luck. Whalemen “trying out” oil from whale blubber on the decks of whaleships in the 19th century invented this expression, meaning “good luck.” The decks became very greasy or slippery at such times, and this was considered lucky because it meant a more prosperous voyage. Well-wishers often wished whaleman “greasy luck” when they embarked on a voyage. In Britain today *greasy* is still a synonym for slippery.

Great American Desert. The idea of a Great American Desert in the West discouraged many people from settling in the region, which they thought was uninhabitable. The term *Great American Desert* was used in newspapers and geographies as early as 1834. Before this, the area, which is part of the Great Plains, was called the *Great Desert*, this term recorded 50 years earlier.

The Great American Mudhole; the Capital of Miserable Huts. Humorous nicknames for the U.S. capital, Washington, D.C., in the early years after its founding. *See* WASHINGTON.

The Great American Novel. This term sprang up toward the end of the 19th century. Frank Norris wrote: “The Great American Novel is not extinct like the Dodo, but mythical like the Hippogriff . . . the thing to be looked for is not the Great American Novelist, but the Great Novelist who shall also be American.” Observed Jack London a little later: “I’d rather win a water-fight in a swimming pool, or remain astride a horse that is trying to get out from under me, than write the great American novel.”

great balls of fire! This very popular exclamation was inspired by the legendary rock-and-roll singer Jerry Lee Lewis’s song “Great Balls of Fire!” and the movie suggested by the song. Jerry Lee Lewis (b. 1935) is a U.S. country-western and rock-and-roll singer. The *great balls of fire* exclamation dates, however, to the 19th century.

Great Carbuncle. Nathaniel Hawthorne described the Great Carbuncle in “Sketches From Memory” (1835): “There are few legends more poetical than that of the ‘Great Carbuncle’ of the White Mountains. The belief was communicated to the English settlers, and is hardly yet extinct, that a gem, of such immense size as to be seen shining miles away, hangs from a rock

over a clear, deep lake, high up among the hills. They who had once beheld its splendor, were enthralled with an unutterable yearning to possess it. But a spirit guarded that inestimable jewel, and bewildered the adventurer with a dark mist from the enchanted lake. Thus, life was worn away in the vain search for an unearthly treasure, till at length the deluded one went up the mountain, still sanguine as in youth, but returned no more. On this theme, methinks, I could frame a tale with a deep moral.” Hawthorne did later write “The Great Carbuncle” (1837), noting that the tale was based on an “Indian tradition.”

The great cham of literature. The great cham is Dr. Samuel Johnson, who was so named by Scottish writer Tobias Smollett (1721–71) in a 1759 letter. *Cham* is another form of *khan*, which means a medieval ruler of a Tartar or Turkish tribe, or a present-day Indian ruler. *Khan* comes from the Turkish *khan*, a lord, prince, monarch.

The Great Commoner. This nickname was applied to a number of American political leaders with a populist bent after it was first given to Henry Clay in the early 1840s—among them: Thaddeus Stevens, William Jennings Bryan, and Thomas Jefferson.

Great Communicator. A name in praise of Ronald Wilson Reagan (b. 1911), celebrated for his skills in dealing with people. The former movies and television star served as U.S. president from 1981–89. Reagan died in 2004, age 93, the longest lived U.S. president. He did like the title *The Great Communicator*, yet in his speeches he delivered many memorable lines, including his description of the then Soviet Union as the evil empire. Shortly after being shot by assassin John W. Hinckley Jr. in 1981, he told his wife, in spite of great pain, “Honey, I forgot to duck” (really a Jack Dempsey quip on losing the heavyweight championship), and quipped to surgeons about to operate on him: “Please tell me you’re Republicans [his own party].” In Germany Reagan urged Soviet leader Mikhail Gorbachev to destroy the Berlin Wall between East and West: “Mr. Gorbachev, tear down this wall!” Later, after the Berlin Wall came tumbling down, a 6,000-pound section of it was sent to Reagan for his presidential library, where it can be seen today. *See* GLASNOST; REAGANOMICS; WIN ONE FOR THE GIPPER.

Great Dane. *See* IRISH WOLFHOUND.

Great Depression. The greatest economic depression began with the U.S. stock market collapse in 1929, which dropped the Dow Jones average to its all-time low of 41.22 in 1932. In 1929 the Dow stood at 381.7, while today it is close to 13,000.

Great Dissenter. *See* CLEAR AND PRESENT DANGER.

Great Divide. A name used since about 1860 for the continental divide of North America; the Rocky Mountains.

the Greatest. A nickname of Muhammad Ali, world heavyweight boxing champion in 1964. “I am the greatest!” Ali used to say, “I am the prettiest,” etc., etc. But the champ always ac-

knowledged it was the flamboyant wrestler Gorgeous George who coined the words.

greatest good for the greatest number. A phrase that has been attributed to British author Joseph Priestley and the marchese de Beccaria, among others, but which actually was the invention of British philosopher Francis Hutcheson (1694–1746) in 1720: “That action is best which procures the greatest happiness for the greatest number.”

greatest man that ever touched shoe leather. An extravagant Irish compliment for someone much loved and respected.

greatest of novelists. Honoré Balzac authentically depicted French life from the late 18th through the 19th centuries. Commonly working 18 hours a day from 1827 to 1847, he managed to complete 97 novels, peopled by more than 2,000 characters, before death ended his efforts. At least a dozen of these books are masterpieces and earned Balzac the reputation of the greatest of novelists. Many novels have been written in less time, but Balzac’s masterpiece *Le Père Goriot* (1840) is probably the best of all rapidly written books. Balzac wrote the well-constructed novel in just 40 days, working 24 hours a day most of the time. He was so rundown mentally and physically at the end of his labors, and poisoned by coffee, that his doctor ordered a complete rest. However, he soon went back to his old ways. In fact, his novel *Le Secret des Ruggieri* (1836) is traditionally said to have been written in a single night, though this seems unlikely. See COFFEE AS A SECRET WEAPON.

Greatest Poet. A possibly apocryphal story has the vain Gabriele d’Annunzio (1863–1938) refusing to accept a letter addressed “To Italy’s Greatest Poet.” He explained that *he* was the *world’s* greatest poet.

greatest show on earth. See THERE’S A SUCKER BORN EVERY MINUTE.

greatest thing since sliced bread. Anything very useful. A U. S. expression since about the 1940s.

Great Father. A Native American name for the president of the United States. Dee Brown in *Bury My Heart at Wounded Knee* (1970) quotes Spotted Tail of the Brule Sioux as saying, “This war . . . was brought upon us by the children of the Great Father. . . .” *Great White Father* means the same and is also used as a humorous title today. See GREAT KNIVES.

great filter bat. See SQUISH.

great fleas have lesser fleas. All of us, no matter how great, have our troubles, our enemies who prey on us. The expression has its roots in Jonathan Swift’s volume of satirical advice to a poet, *On Poetry, a Rhapsody* (1733), with its lines: “Hobbes clearly proves that every creature/Lives in a state of war by nature;/ So naturalists observe a flea/ Has smaller fleas that on him prey;/ And these have smaller still to bite ’em/ And so proceed *ad infinitum*.”

The Great Ghostwriter’s Ghostwriter. Probably there are a few ghostwriters who have themselves hired ghostwriters, but I know of only one: sportswriter Tom Meany. When he was a ghostwriter for Christy Walsh, Babe Ruth’s business manager, during the 1936 World Series, Meany was so busy with other assignments that he had to hire a ghost to ghost for himself. “The only ghostwriter I ever employed,” Walsh later wrote (or had still another ghostwriter write) “had a ghostwriter of his own.”

great hulking man. *Hulk* has its origins in the ancient Greek *holkas*, “a trading vessel,” originally a towed ship, the word akin to the Greek *helkein*, “to drag,” because such ships were towed or dragged behind. The English word first meant a large sailing ship, then became the hull of a ship, and today means the body of an abandoned ship. Shakespeare was the first to record *hulk* as the synonym for a big unwieldy person and this comparison to a large unwieldy ship remains in the language today, both in the names of wrestlers (“The Hulk”) and other big people called *hulks* and the expression *a great hulking man*.

Great John L. After well over a century, the name of swash-buckling John Lawrence Sullivan (1858–1918) remains synonymous for a great fighter, up there with Jack Dempsey, Jack Johnson, Joe Louis, Sugar Ray Robinson, and Mohammed Ali. Reigning as the bare-knuckle heavyweight champion of the world from 1882 until he retired in 1896, he lost only to Gentleman Jim Corbett (in an 1892 bout fighting with gloves under the Queensberry rules). Nobody ever beat Sullivan with bare knuckles, although Jack Kilrain once took him 75 rounds. After he retired, Sullivan became, to everyone’s great surprise, a temperance advocate. The Great John L. was also called the Boston Strongboy, the Boston Hercules, Boston’s Pet, Boston’s Pride and Joy, the Boston Miracle, the Young Boston Giant, Boston’s Goliath, and Boston’s Philanthropic Prizefighter, among many more nicknames.

Great Knives; great medicine; Great Spirit. Several Native American terms for great things. *Great Knives* referred to U.S. soldiers, in reference to their bayonettes; *great medicine* meant anything especially effective; explorers Lewis and Clark noted that whatever is mysterious or unintelligible (to the Indians) is called “great medicine”; and *Great Spirit* refers to the chief deity in the religion of many North American Indian tribes. See GREAT FATHER.

the Great Lakes. Lakes Erie, Huron, Michigan, Ontario, and Superior are between the United States and Canada. These connected lakes, containing the world’s largest freshwater area, are joined with the Atlantic Ocean by the St. Lawrence Seaway.

great majority. A humorous British term, with some American use, for the dead, as in “Even there among the great majority you can bet he’s a voice of dissent.” The term was coined by British poet Edward Young, who joined the great majority in 1765, when he was 82, but Young apparently got the idea from the vivacious first-century Roman satirist and *elegantiae arbiter* (arbiter of taste) Petronius, who in his *Satyricon*, among his many great works, wrote *Abiit ad plures*, “he’s gone to join the majority.” Petronius also coined or first recorded the common

expression *ages ago* (*olim oliorum*) and the famous phrase *the studied felicity of Horace*. He took his own life in A.D. 65, when he felt he had fallen out of favor with the emperor Nero.

Great Profile. Sobriquet for actor John Barrymore (1882–1942) of the theater’s “royal family.” Known for his chiseled, matinee-idol good looks, he had great success on stage in such roles as Hamlet, then appeared in many films before declining into alcohol abuse. One of his last movies was *The Great Profile* (1940), in which he parodied his own reputation.

Great Revival. The religious revival begun in Kentucky and Tennessee near the beginning of the 19th century. According to Everett Dick in *The Dixie Frontier* (1948): “The Great Revival of 1800 and its attendant institution, the camp-meeting, were pure products of the frontier of the Old Southwest.”

Great Scott! Old Fuss-and-Feathers, General Winfield Scott, a brigadier general at only 28, was well known for his arrogant swagger, and his opponents may have jeeringly dubbed him “Great Scott” with this in mind. On the other hand, the hero of the Mexican War and the Whig candidate for president in 1852 wasn’t the only Scottophile in the country—his many supporters may have named him “Great Scott” in admiration of his great dignity. At any rate, the exclamation *Great Scott!* hasn’t been traced back before Old Fuss-and-Feathers’ day and he could certainly have been responsible for the expression in one way or another. That the term is just a euphemism for “Great God!,” a play on the German *Gott*, is a simpler but not necessarily truer explanation.

Great Smokies. The Great Smokies area takes its name from the Cherokee name for the mountains, which translates as “The Place of Blue Smoke.” The mountain range, on the North Carolina-Tennessee border, is apparently the only American range with *great* attached to its name. Also called the Great Smoky Mountains, Smoky Mountains, and, most poetically, Land of the Sky.

The Great Unknown; the Great Magician of the North. Few authors would appreciate such a designation, but Sir Walter Scott (1771–1832) was known as “The Great Unknown” because for 13 years, beginning with his first novel, *Waverley* (1814), he published 26 novels anonymously or as “by the author of *Waverley*.” Scott’s publishing partner, James Ballantyne, coined the nickname for him after Scott decided he did not want the novels confused with his well-known poetry. He was also called “The Great Magician (or Wizard) of the North” because of his magical works.

the great unwashed. In 1901 the *Congressional Record* noted that “the Democratic Party has long been known as the ‘great unwashed.’” By then the epithet was at least 50 years old. *The great unwashed* is still heard today occasionally in reference to what the speaker believes are “the lower classes,” but is not applied to the Democrats. In the late 18th century the British had called the rabble of the French Revolution the great unwashed.

The Great War. See WORLD WAR I.

Great White Fleet. The United States decided to show the world its naval power in 1907 and sent 16 battleships and four destroyers on a world cruise. Because all these ships were painted white, they were popularly called the *White Fleet* or *Great White Fleet*.

Great White Hope. See JACK JOHNSON.

Great White North. A nickname for Canada that is known internationally. See DECEMBER IS THIRTEEN MONTHS LONG.

The Great White Way. This nickname for the Manhattan theatrical or entertainment district, a reference to all the lights there, was coined by Albert Bigelow Paine, best known today as Mark Twain’s first biographer, and used as the title of his novel *The Great White Way* (1901), which is about the Antarctic, not Broadway.

Greek. The Greeks are the subject of many proverbs still heard. *Beware of Greeks bearing gifts* dates to a line in Virgil, “I fear the Greeks especially when they bring gifts,” and refers to the fabled wooden horse containing soldiers that the Greeks gave to the Trojans. *Greek trust* was to the Romans no trust at all; and *when Greek meets Greek then comes the tug of war* commemorates the resistance of the ancient Greek cities to the Macedonian kings Philip and Alexander the Great. Putting something off *until the Greek calends* is to never do it, for the Greeks, unlike the Romans, had no term like “calends” for the first days of their months. To *play the Greek* is to live a luxurious life, while the modern expression *when Greek meets Greek, they open a restaurant* at least admits that Greeks are enterprising. Then there’s *it’s all Greek to me*; and the slang term *Grecian bend*, a posture bent forward from the waist much affected in the late 19th century; and the straight-lined *Grecian profile*, among other expressions. To many, *Grecian* itself is the term “for all civilized and subtle thoughts and feelings,” the Grecians “swelling o’er with arts,” as Shakespeare wrote. Lastly, there’s *Greek fire*, the mysterious ancient naval weapon that burned when wet and was so effective against wooden ships from A.D. 700 to 900, which is said to have been invented by the Greek Callimachus. No one knows its constituents, but it is thought to have been composed of sulphur, naphtha, and pitch. Water helped Greek fire spread and it could be extinguished only with wine.

Greek and Roman proverbs. The words of ancient Greek and Roman writers have lasted for thousands of years, many of them becoming proverbial in English and other languages. Here are just a few such proverbs:

“God loves to help him who strives to help himself.”—Aeschylus, *Seven Against Thebes*

“None love the messenger who brings bad news.”—Sophocles, *Antigone*

“Leave no stone unturned.”—Euripides, *Heracleidae*

“I laughed tivl I cried.”—Aristophanes, *The Frogs*

“Old age is but a second childhood.”—Aristophanes, *The Frogs*

“Conscience makes cowards of us all.”—Menander, unidentified fragment

“You knew not how to live in clover.”—Menander, *The Girl From Samos*
 “Whom the gods love, die young.”—Menander, unidentified fragment
 “Nothing in excess.”—Terence, *Andria*
 “In the bloom of youth.”—Terence, *Andria*

Greek words in English. Classical Greek and Latin borrowings possibly account for a majority of English words. Many Greek words have come into English, often through Latin and other languages. These include: ANTHOLOGY, *barometer*, BIBLE, *catastrophe*, *cheer*, CYCLONE, *elastic*, HOI POLLOI, IDIOT, *magic*, *tactics*, and TANTALIZE.

green. The word *green* (deriving from the Old English *grene*) has long signified the color of youth (“ripe in years but green in heart”) and the color of envy or jealousy (the “green-eyed monster” in Shakespeare’s *Othello*). Green is also the color that means to proceed, as in *green light*, and it has been recruited recently as the color of environmentalists and political parties espousing environmentalism. These meanings are not the same in many other languages; in fact, Americans do not use many meanings of *green* found in other languages. In French, for example, *to be green to someone* means “to bear that person a grudge”; *to get a green reply* means a “tart reply”; *green tale* refers to a spicy story; *green language* signifies slang. In Spanish, a *green old man* refers to an old reprobate, and *giving oneself a green* means “to take time off from work.” It should be noted that Germans are not green with envy but “yellow with envy”; they use the expression *beaten green and blue*, not *beaten black and blue*; and when they feel sick or nauseated, they say “get green and yellow before the eyes.”

Greenacre! *Greenacre!*, a word popular in the 19th century, is a good example of true gallows humor. The rope broke when they hanged James Greenacre at Newgate Prison in 1837 and he had to be strung up again. However, little sympathy was shown for the murderer, who had hacked up his victim and buried sections of the body under various London landmarks. Stevedores, in fact, promptly adopted the killer’s name to indicate the falling of cargo. Whenever rope slings broke while goods were being loaded or unloaded, the cry *Greenacre!* went up along the docks.

greenbacks. Union troops in the Civil War named U.S. Treasury legal-tender banknotes *greenbacks* for the obvious reason that the backs of the bills were green. Over a half-billion dollars’ worth of them were issued. The Confederacy issued more than a billion dollars’ worth of “bluebacks” and “graybacks,” which were worthless because they had no gold or silver behind them. “Goldbacks” (1873) and “Yellowbacks” (1902) were other colorful U.S. banknotes.

green bean. See BEAN.

Green Berets. Another name for the U.S. Special Forces, which are the core of the American Special Operations Community. These elite troops are named for the dashing green berets they wear as part of their uniform and are thought to num-

ber over 10,000. They are trained mainly at the U.S. Army John F. Kennedy Special Warfare Center and School at Fort Bragg, North Carolina (“The Schoolhouse”), especially in guerrilla fighting. The first Green Berets were advisers to the South Vietnamese army in the early 1960s. *Green Beanies* is a derogatory or humorous term for the Green Berets.

Green Book. The *Green Book*, with its 6,000 entries, is “The Social List of Washington, D.C.,” encompassing “socially acceptable” Washington and official Washington, there being quite a distinction between the two. It was begun by Helen Ray Hagner in 1930 and is run by her granddaughter today. To get in it one has to be recommended by two people already there and approved by an anonymous board of governors. The book also serves as an arbiter of protocol.

green-eyed monster. Why since the 16th century has the color green been associated with jealousy? It has been suggested that oriental jade ground into powder and used as a love potion by jealous suitors to win their loved ones has something to do with it, but that seems a farfetched explanation. Shakespeare was the first to use the expression *green-eyed monster*, in *Othello*, where Iago says: “O, beware, my lord, of jealousy;/ It is the green-eyed monster which doth mock/ The meat it feeds on.” Clearly the reference here is to cats toying with their victims before killing and eating them, so the first green-eyed monster is a cat. However, before this, in *The Merchant of Venice*, Shakespeare wrote of *green-eyed jealousy* without any reference to a feline. We must mark the ultimate origin “unknown.”

green Friday; green death; green around the gills. The first is a humorous name for the day after Thanksgiving, which always falls on a Thursday, because people who ate too much feel overstuffed and perhaps a bit nauseated. *Green death* is student slang for diarrhea brought on by eating college cafeteria food. Several other “green” expressions, including *green around the gills*, are also associated with nausea.

greenfront. A term heard in Maine for a liquor store, which all have green fronts in that state. See PACKAGE-GOODS STORE.

greengage plum. Greengage plums are actually yellow with a tinge of green. The renowned plum, which has two eponymous names, was brought from Italy to France about 1500, where it was named and is still called the Reine-Claude, after Claudia, *la bonne reine*, queen to Francis I from their marriage in 1514 until his death. In about 1725 Sir William Gage, an amateur botanist, imported a number of plum trees from a monastery in France, all of which were labeled except the Reine-Claude. A gardener at Hengrave Hall in Suffolk named the unknown variety Green Gage in honor of his employer and the Reine-Claude has been the greengage in England ever since. The blue and purple gage were developed from their illustrious ancestor on the fertile grounds of Gage’s estate, probably much to the delight of his eight children.

greenhorn. Authorities reason, without any proof, that *greenhorn* was first the name for a young ox, one with young, or “green,” horns. Because young oxen were inexperienced and

untrained as farm work animals, they were undesirable, and their name became attached to raw army recruits by the 16th century and finally to any raw, inexperienced person. *Greenhorn* is also remembered as a derogatory term for newly arrived immigrants in turn-of-the-century America.

greenhouse effect. Not a new term, *greenhouse effect*, despite its current importance, dates back to 1929, when it was first recorded. It wasn't until the 1980s that the effect began to concern the public, and it has been a common term ever since. The effect occurs in greenhouses when the sun's radiant heat passes through the greenhouse glass and is trapped inside, warming the plants there. The term *greenhouse effect* compares the effect in a greenhouse to the effect on Earth's atmosphere, in which carbon dioxide and other gases—increasing each year by the burning of fossil fuels—trap Earth's surface radiation, causing global warming.

Greenland. See CAPE OF GOOD HOPE.

greenmail. Patterned on *blackmail*, which it strictly is, *greenmail* was coined on Wall Street in 1983, *green* suggested by the color of U.S. currency. When one company buys enough shares in another to threaten a takeover, the “greenmail” company is forced to buy the shares back at a higher price to avoid that possibility. See BLACKMAIL.

Green Mountain State. A nickname for Vermont first recorded in 1838 but suggested by *Green Mountain Boy*, a Vermont inhabitant, which goes back to 1772 when a militia of Green Mountain Boys was organized to protect the state's boundary lines.

Green Revolution. U.S. agronomist Norman E. Borlaug (b. 1914) is widely regarded as the father of the Green Revolution, a 1960s expression meaning increased and diversified crop yields in countries that could barely feed their own.

greenroom. This lounge in the theater where performers rest when they aren't on stage, or where people who are to appear on TV wait before they go on, probably takes its name from such a room in London's Drury Lane Theatre, which just happened to be painted green sometime in the late 17th century. Most authorities reject the old story that the room was painted green to soothe the actors' eyes. The long-lived English actor Charles Macklin, famous for his portrayal of Shylock in *The Merchant of Venice*, killed fellow player Adam Hallam, one of a large family of English actors, in the greenroom at the Drury Lane Theatre in 1735. Macklin, an extremely jealous and quarrelsome man, wanted to wear a wig Hallam had chosen for a play both men were appearing in. The Wild Irishman, as he was called, got away with the murder and went his tempestuous way, celebrated as a great lover, boxer, card player, distance walker, and drinker, expending more energy offstage than on.

green rot. Descriptive American slang from Civil War times that is a synonym for gangrene, as is mortification. Green rot is so-called because the skin is first pale but becomes red or bronze and finally is green in color. It was common on the battlefields.

green thumb. No one, it seemed, knew why the Italian monk Fra Antonio could make plants grow so well in the cloister garden. But one day an elderly monk watching Fra Antonio observed that he had a green thumb on his right hand, which made him an excellent gardener—the green thumb, no doubt, colored by the plants he had been handling. This is a nice little story, but so far as we know the term *green thumb* doesn't go back to medieval times. In fact, it is first recorded in 1925 by Dean Middleton, a BBC broadcaster and garden-book author. It is probable that Middleton merely popularized the phrase, which many people remembered hearing around 1910 and is probably a generation older. See WHITE THUMB.

Greenwich time. A borough of London, at latitude 51 degrees '28 38" No., and longitude 0 degrees 0' 0", Greenwich was long the place where the world's time was officially measured, specifically at the Royal Observatory there. At a meeting in Washington, D.C. in 1884 most nations agreed to the place. In 1985, however, a decision was made to dismantle the historic Greenwich clock.

Greenwich Village. A lower Manhattan district of New York famous as a literary and artistic community since the early 20th century—earlier than that if one considers that Thomas Paine wrote *The Crisis* there and that Edgar Allan Poe lived in the Village for a time. It's called the Village because it was a separate village through the colonial period and into the early 19th century.

Gregg system. *Gregg*, the most widely used shorthand writing in the world and by far the most popular in the United States, was invented by John Robert Gregg (1864–1948), an Irishman who explained Gregg in *The Phonetic Handwriting* (1888) and emigrated to introduce it in America. Once called “Light-Line Phonography,” it is an improvement on the earlier phonetic PITMAN and is much easier to write.

Gregorian calendar. While an improvement on its predecessors, the inaccurate JULIAN CALENDAR resulted in the calendar year gradually losing on the actual solar year, or the time it takes the earth to travel around the sun. By the 16th century, for example, the first day of spring came on March 11, instead of March 21. As this interfered with seasonal church celebrations, Pope Gregory XIII introduced a modified calendar in 1582. He decreed that the day after October 4 in that year would be October 15, making up for the lost days in this way and ensuring that they would not be lost again by ruling that century years would no longer be leap years unless divisible by 400. Pope Gregory himself probably did not devise the “new style” calendar, but it was named in his honor. Immediately accepted in Catholic countries, the Gregorian calendar wasn't adopted in England or America until 1752—when the calendar gained 12 days overnight. Imperfect itself, it is nevertheless used today throughout most of the world.

Gregorian tree. The English so valued one hangman, Gregory Brandon, that they granted him a coat of arms for his gruesomely efficient work on the scaffold. Gregory, whose son succeeded him as public executioner and beheaded Charles I in

1649, lived to see his name become a synonym for the gallows in the form of *Gregorian tree*.

gremlin; goblin. Many would think *gremlin* is an ancient word associated with the making of magic mischief, but it is first recorded in 1929 as the name for junior officers in the RAF. The word was probably invented 12 years or so before in World War I, when the little impish gnomelike creature was blamed for everything that went wrong mechanically on an aircraft, a meaning commonly used today. The etymology of the word is unclear. It may be based on goblin, but many other origins have been suggested, including the Irish *gruaimin*, a bad-tempered little fellow. On the other hand, goblin, meaning about the same, dates back to the early 14th century and apparently derives from the French goblin, the name of a ghost said to have haunted the town of Evreux in the 1100s.

grenade. See POMEGRANATE.

Gresham's Law. Though the tendency of bad money to drive good money out of circulation is known as Gresham's Law, it was formulated as an economic principle long before Sir Thomas Gresham (ca. 1519–79). Gresham, a London merchant and founder of what is now the Royal Exchange, noted that the more valuable of two similar coins would be hoarded, but Copernicus and others had already made similar observations. Unaware that he had not formulated the principle, the economist H. D. MacLeod named the law for Gresham in 1857.

Gretna Green. A place where quick lawful marriages are performed, especially for eloping couples. The village of Gretna Green in Scotland, just across the border from England, was such a place for over a century, before Scotland changed its marriage laws in 1856. Up until then even Gretna Green's village blacksmith could perform marriages.

greyhound. Noted for its great long-legged speed and keen sight, the greyhound breed of dog isn't usually grey. The word *grey* in its name has nothing to do with color, deriving ultimately from Old Norse *grey*, which means "bitch," *hound* coming from Old English *hound*, "dog." The dog's name is first recorded about A.D. 1000. Today its name adorns any swift ocean liner and Greyhound buses. Greyhounds, still used for hunting, are generally used in dog racing.

gribble. *Linnoria lignorum*, better known as the gribble (its name possibly a diminutive of *grub*), is a small crustacean resembling a wood louse that bores its own distinctive holes in ships and piers, though it hasn't done as much damage as the SHIPWORM over the years. The gribble's work, unlike the shipworm's, is visible on the surface of the structure it attacks, because it burrows in the superficial layers of wood. Because its handiwork is visible, gribble damage is usually caught before it goes too far, though this is not always the case. In 1838, for example, the docks at Plymouth, England, were almost completely destroyed by gribbles.

gridiron. *Gridiron* is a football term inspired by Walter Camp, the FATHER OF AMERICAN FOOTBALL, when his rules for

the game made it necessary to mark the football field with horizontal white lines at five-yard intervals. This arrangement suggested to fans that the word *gridiron* derived from *griddle* plus *iron*, for the bars running across the field did make it resemble an iron griddle or grate. But in fact *gridiron* was originally the name for a metal barrel griddle and comes from the Middle English *gredire*, "griddle," which in turn developed from the Old French *gridel*.

griffin. The griffin, half lion and half eagle, was an enormous aerial monster of antiquity that fed living humans to its young. It took its name from the Greek *grypos*, "hooked," because of its large hooked beak. The griffin was known to the Sumerians, under the name *chumbaba*, as early as 3000 B.C.

grigri; grisgris; greegree. A charm or a magical formula used to bring bad luck to a rival; the terms derive from an African word recorded as early as 1557.

Grimm's Law. The brothers Grimm are not only noted for their collected fairy tales, which are known worldwide. Both Jacob Grimm (1785–1863) and William Grimm (1786–1859) were respected philologists. Jacob was one of the great founders of comparative philology, interested mainly in the relationship between the various Germanic languages. He also invented the UMLAUT.

grin and bear it A phrase meaning to put up with things. Once very popular thanks to a U.S. cartoon with the same title. A grin is a broad smile, the word dating back to before 1000.

Grinch. A nasty, miserly, Scrooge-like person. Taken from the name of the character in the popular children's book *How the Grinch Stole Christmas* by Dr. Seuss (Theodor Seuss Geisel, 1904–94).

gringo. Many scholars trace this disparaging term for an American to the Spanish *gringo*, "gibberish," which is a corruption of the Spanish word *Griego*, "a Greek." *Gringo*, by this theory, would be related to the old saying "It's all Greek to me," indicating that the Yankees were strange and unfamiliar in their ways to the Mexicans who so named them. But we haven't exhausted all the conjectures by any means. Another etymologist boldly claims "green coat" as the base for *gringo*, and a second theory says that the first two words of the Robert Burns lyric "Green grow the rushes O," a song sung by American soldiers in the Mexican War, is the origin of the contemptuous word—somehow one can't imagine battle-hardened veterans riding along singing: "Green grow the rushes O/ The happiest hours that ere I spent/ Were spent among the lasses O!" If the "gibberish" theory is to be challenged, the most likely contender is Major Samuel Ringgold, a brilliant strategist dreaded by the Mexicans during the Mexican War until he was killed at the Battle of Palo Alto in 1846. Ringgold's name, pronounced with a trilled *r* and without the last two letters as it normally would be by a Mexican, might yet prove the correct source for the word.

grin like a Cheshire cat. The pseudonymous British satirist Peter Pindar (John Wolcot) first used this expression for a

broad smile in the late 18th century, but Lewis Carroll popularized it in *Alice's Adventures in Wonderland* (1865)—the Cheshire cat in the story gradually faded from Alice's view, its grin the last part of it to vanish. No satisfactory explanation of the allusion has been made. *To grin like a Cheshire cat* probably goes back much further than Pindar, and the source could be Cheshire cheeses that were at one time molded in the form of a cat—supposedly, the cat was grinning because the former palatine of Cheshire once had regal privileges in England, paying no taxes to the crown, etc. Another story relates the expression to the attempts of an ignorant sign painter to represent a lion rampant on the signs of many Cheshire inns—his lions supposedly looked more like grinning cats. The most unlikely yarn credits an eponymous forest warden of Cheshire named Caterling. In the reign of Richard III, it's said, this Cheshire Caterling stamped out poaching, was responsible for over 100 poachers being hanged, and was present “grinning from ear to ear” at each of these executions. *To grin like a Cheshire Catling* became proverbial and was later shortened to *grin like a Cheshire cat*. Another fanciful story makes the same Catling the “cat” of the nursery rhyme “Hi Diddle Diddle, the Cat and the Fiddle.”

grip. A general movie crewman who helps shift scenery, operates cranes and dollies, etc., or a stagehand in the theater who works on the stage floor. *Key grip* refers to the head grip. Grips are probably so named for their strong grips (their strength) in handling the heavy equipment on movie sets. *See* BEST BOY.

grist for the mill. One might think that this 17th-century proverbial saying would be little used today, when many people don't even know that *grist* refers to grain ground to make flour. But *grist for the mill* is commonly heard to denote anything profitable or useful, material that a person can change into something valuable.

grits. Hominy grits. Coarsely ground hominy (made from corn) that is boiled and often then fried, especially as a breakfast dish or as a side dish to serve with meat.

grizzly bear. This fearsome bear has also been called the *silvertop*, because the ends of its hair are silver gray; the *mule bear*, because early prospectors thought it found their mules especially tasty; and *Moccasin Joe*, because its footprints somewhat resemble those of a man wearing moccasins. Indians in California called the bears *Josmites*, “the killers,” a word still preserved in the name of the Yosemite Valley and Yosemite National Park. The great beasts were given the name *grizzly*, however, because of their grayish color, not from the word *grisly* meaning horrible or terrible.

grocer. Grocers in medieval times were so named from the Latin *grossus*, “large,” because they sold only in large quantities. England's Company of Grocers, an association incorporated in 1344, were wholesale dealers in spice and foreign produce.

grog. Mount Vernon was named after Vice Admiral Sir Edward Vernon by George Washington's half-brother Laurence, who served under “Old Grog” when he led six little ships to the West Indies and captured heavily fortified Portobello during the WAR OF JENKINS' EAR (1739). This action made Vernon

England's hero of the hour, Parliament voting him formal thanks and street pageants being held on his birthday to celebrate his humbling of the Spaniards. But the arrogant former war hawk MP never won popularity with his men. Old Grog had been nicknamed for the impressive program cloak he wore on deck in all kinds of weather, the coarse taffeta material symbolizing his tough and irascible nature. Then, in August 1740, the stern disciplinarian issued an order that made his name a malediction. In order to curb drunken brawling aboard ships in his command, and to save money, he declared that all rum rations would henceforth be diluted with water. Incensed old sea dogs cursed Vernon roundly, for half a pint of rum mixed with a quart of water seemed weak stuff indeed to anyone on a raw rum liquid diet. Furthermore, the rationed bilge was divided into two issues, served six hours apart. His men soon defiantly dubbed the adulterated rum Grog, using the nickname they had bestowed upon the admiral. Vernon's order served its purpose and “three water rum” became the official ration for all enlisted personnel in the Royal Navy, but *grog* quickly took on the wider meaning of any cheap, diluted drink. *See* BOOZE.

Grolier binding. Rich, ornate book bindings are called Grolier bindings, after Jean Grolier, vicomte d'Aguisy (1479–1565), who was not a bookbinder or printer but a prominent French bibliophile. Grolier collected books and had them bound by the best artisans of his day, each book bearing the inscription Groliere et Amicorum. All the books in his library, sold in 1675, are world-famous collector's items. The Grolier Club, which has published many books and catalogs of its exhibitions, was founded in New York City (1884) “for the study and promotion of the arts pertaining to the production of books.”

groovy; in the groove. *In the groove* has lasted longer than most slang expressions, possibly because of a popular song of the same name. The phrase, meaning “exciting, satisfying, or functioning smoothly,” isn't heard much anymore, nor is its offspring, *groovy*. But from the '30s to the '50s it was all the rage, was even translated into Latin: *in canaliculo*. The allusion is to the quality of music reproduced when a good phonograph needle traverses the grooves of a record without jumping out. Oddly enough, an older English expression *groovy*, dating back to the late 19th century, means just about the opposite—to be in a rut, like a cart stuck in the grooves of a muddy road.

grotesque. In the 16th century, excavated chambers, or *grotte*, in ancient Roman buildings revealed murals on the walls depicting figures that were unnaturally distorted or comically exaggerated. These figures were called *grotesca*, after the *grotte* they were found in, *grotesca* eventually becoming the English *grotesque*, for any similar figure.

ground floor; first floor; to get in on the ground floor. In Britain and other countries, *ground floor* refers to the street-level floor of a building, while *first floor* refers to the next floor up. In America these would be called the first and second floors, respectively. However, *ground floor* is used in America as a synonym for the lobby of a building. *To get in on the ground floor* means “to be among the first” to invest in a business, stock, etc., that shows promise of being profitable.

groundhog; woodchuck. American settlers named the marmot, or woodchuck (*Arctomys monax*), the groundhog, perhaps because this member of the squirrel family seems hoggish in the way he burrows through the ground. Or, possibly, *groundhog* is a translation of the Dutch *aardvark* made by Dutch settlers in America, even though the South African aardvark, or earth hog, is a larger burrowing animal than the groundhog. The groundhog isn't a hog then, but his other American name, woodchuck, is no more accurate, for he doesn't chuck wood, either, a fact even the old tongue twister implies: "How much wood would a woodchuck chuck if a woodchuck could chuck wood?" "Woodchuck" has no connection with wood at all, simply deriving from the Cree Indian word *wuchuk* or *otchock* for another animal, the fisher, or pekan, which early settlers corrupted finally to "woodchuck" and applied through mistaken identity to the groundhog.

Groundhog Day. February 2, when the groundhog is supposed to come out of his hole to evaluate the weather. If he sees his shadow winter will last six weeks more; if he doesn't, there will be an early spring.

the ground will burn under his feet. A Russian expression that was voiced recently by a Russian official about a terrorist responsible for the death of over 100 people: "He will be captured. The ground will burn under his feet, the animal."

ground zero. Nuclear bombs are detonated before hitting the ground, and *ground zero* (or hypocenter) refers to the area directly below their explosion. The term dates back to the early 1940s and the first A-BOMB tests, but now also applies to the area around any huge explosion, fire, etc., such as the World Trade Center destruction on September 11, 2001. *Ground zero*, loosely used, means the "most elementary or beginning level," as in "Let's start at ground zero."

groupie. Originally describing a very young girl who followed rock 'n' roll groups on concert tours, worshipping them in an idolatrous fashion, this word has since the early 1960s come to mean a young woman who makes herself available for sexual intercourse with a member of a rock group or other celebrity. A groupie can also be a young girl constantly on the make. The groupie's counterpart in sports is sometimes called a BIMBO.

Grover's Corners. A fictional place in New England often cited as a typical rural town. From Thornton Wilder's play *Our Town* (1938). In the play one character refers to a letter addressed to "Jane Crofut; The Crofut Farm; Grover's Corners; Sutton County; New Hampshire; United States of America . . . Continent of North America; Western Hemisphere; the Earth; the Solar System; the Universe; the Mind of God . . ."

groves of academe. According to legend, the Athenian hero Academus helped Castor and Pollux rescue their little sister Helen when she was kidnapped by the Athenian Prince Theseus. Academus revealed Helen's hiding place, and she was spared marriage with Theseus, growing up to become the famous "face that launched a thousand ships," in reference to her later abduction by Paris, which caused the Trojan War. As a re-

ward for his help the Spartans gave an olive grove on the outskirts of Athens to Academus, the place later becoming a public park called the Grove of Academus in his honor. Much later, around 387 B.C., the philosopher Plato had a house and garden adjoining this park and opened a school of philosophy there. He walked and talked with his students in the peaceful olive grove for the rest of his life, was buried near the grove, and his peripatetic successors taught there as well, so his school of philosophy became known as the Academia, after the olive grove honoring the eponymous hero Academus. Renaissance scholars later adopted the name *acadème*, or "academy," for an institution devoted to learning, from the learning of philosophy to the learning of war, and it is from the word *academy* that our word *academic* derives. Possibly the most famous of academies is the French Académie française founded in 1635, but this literary school has its detractors, too, having been called the "*hôtel des invalides de la littérature*." American author Mary McCarthy (1912–89) wrote the satirical novel *The Groves of Academe* (1952).

grow like Topsy. "Never was born, never had no father, nor mother, not nothin' . . . I 'spect I growed," the slave child Topsy replies when Aunt Ophelia, a white woman from the North, questions her about her family. The scene in Harriet Beecher Stowe's antislavery novel *Uncle Tom's Cabin, or Life Among the Lowly* (1852), the most popular book of its day, had great impact, especially in dramatic versions of the novel, and inspired the saying *to grow like Topsy*, describing any unplanned, often sudden growth. Little Eva's companion, like Uncle Tom and the brutal, drunken planter Simon Legree, has become part of the language, and Mrs. Stowe's book, despite its faults, has spawned more new words than any other American novel.

Grrrrreeeat! American actor Thurl Ravenscroft, who died at the age of 91 in 2005, liked to say that he was the only man in the world who had made a career with one word. That word was Grrrrreeeat! and he coined it as the roar of Tony the Tiger, the amiable cartoon character used in ads for Kellogg's Frosted Flakes breakfast cereal. Not only did he create the roar, he acted as Tony's voice for over 50 years, roaring Grrrrreeeat! thousands of times. Additional voices he created included, among many others, those of characters from the Disney movies *The Jungle Book*, *Mary Poppins*, and *Lady and the Tramp*. See WHAT'S UP, DOC?

Grub Street hack.

Here lies poor Ned Purdom, from misery freed,
Who long was a bookseller's hack;
He led such a damnable life in this world,
I don't think he'd wish to come back.

—Oliver Goldsmith

Grub Street in London was known a century before Dr. Johnson's lifetime as the stamping ground of (depending on your perspective) needy writers or literary *hacks* (from *hackney*, "a horse or carriage anyone could hire"). When compiling his famous *Dictionary of the English Language* (1755) the Great Cham defined Grub Street as "much inhabited by writers of small histories, dictionaries and temporary poems, whence any mean production is called grubstreet." The term lasted even after the street name disappeared, probably because it

suggests writers grubbing (from the Middle English *grobben*, “to dig”) for money for grub (as Johnson himself was forced to do) and often producing cheap works in the process. Grub Street has been called Milton Street since 1830—not in honor of the great poet John Milton, but after a landlord who owned most of the houses on the street at the time.

grue. Grues are grisly little comic poems with sadistic content and trick last lines. They are sometimes called Little Willies in honor of the “hero” of so many, but the name *grue*, coined by Robert Louis Stevenson from “gruesome,” is more appropriate. Though their content is never worse than the daily news, most grues are anonymous:

Willie poisoned father’s tea;
Father died in agony.
Mother looked extremely vexed;
“Really, Will,” she said, “what next?”

grueling. No matter how you cook it, *grueling*, meaning exhausting or punishing, has something to do with *gruel*, a light, cooked, thin cereal usually made of oatmeal. There’s no doubt that the word derives from the expression *to get*, or *take*, *one’s gruel*, first recorded in the late 18th century. Why eating oatmeal came to be associated with a punishment is open to question. The traditional story is that *to get one’s gruel* is an allusion to Medici poisonings. The Medici family, which directed the destiny of Florence from the 15th century to 1737 and produced two queens of France, did much good and evil, ranging from patronage of the arts to political tortures and poisonings. In fact, they were so prone to dispose of each other by assassination that their genealogy is highly complicated. Catherine de Médicis (1519–89), queen of France, was particularly infamous for political assassinations, especially for her part in the attempted assassination of Admiral Coligny and the St. Bartholomew’s Day Massacre (1572) in which 30,000 Protestants were killed. She was also rumored to give poisoned drink to her enemies under the guise of friendship, usually serving it in a thin drink of gruel. It wouldn’t be unreasonable to assume that Catherine’s alleged poisonings inspired the expression *to get one’s gruel*, except that the words aren’t recorded until some 200 years after her death. The Medici family is a more likely candidate, but most word sleuths now believe the poisonings have nothing to do with the phrase. Partridge suggests that it comes from an earlier nautical expression, *to serve out the grog*, “to mete out punishment,” making it comparable to humorous expressions such as *settle one’s hash* and *cook one’s goose*.

grunt. *Grunt*, as in “He grunts and groans,” is an onomatopoeic word that imitates the sound of grunting. The use of *grunt* for an American infantryman, who does a lot of grunting and groaning, probably dates back no further than the late 1950s and did not become common for “dogfaces” until the Vietnam War. One story has Marine Corps pilots coining the term.

G-string. Stripteasers, who sometimes call this a “gadget,” aren’t responsible for the word. *G-string* is an Americanism first used to describe an Indian’s loincloth or breechclout in the 19th century. It could be that some fiddler in the West

compared the heaviest of violin strings, the G string, to the length of sinew or gut that Indians tied around their waists to hold up their breechclouts. But even the heaviest of violin strings wouldn’t really do the job. Perhaps the *g* is just a euphemistic shortening of “groin,” an indecent word at the time. The burlesque G-string is of course far smaller than the Indian variety and must have seemed even skimpier a century ago, considering the Brunhildian builds of yesterday’s ecdysiasts. One burlesque company of the day proudly advertised “two tons of women” and had only 20 strippers. See also ECDYSIAST.

G.T.T. A historical term common in the 19th century standing for “Gone to Texas,” apparently derived from *G.T.T.* signs that emigrants hung on the doors of their homes and businesses when they went west. Soon these initials came to be entered by lawmen in their record books when a wanted man couldn’t be located. Finally, they became a designation for any disreputable man.

guano. A rich, natural manure composed mostly of the excrement of seabirds found on small islands near the Peruvian coast, guano takes its name ultimately from the Quechua Indian *wanu*, meaning “dung,” for fertilizer or fuel. Beds of guano on these rocky islands are sometimes as deep as 60 feet. The word *guano* has also come to mean any similar natural fertilizer, and in the southern United States also means commercial chemical fertilizer.

the Guard dies but never surrenders. History courses teach us that General Pierre Cambronne, the commander of Napoleon’s Imperial Guard at Waterloo, made the above reply to a British surrender demand. What Cambronne really said was “Shit! The Guard never surrenders!” The polite French call this episode *le mot de Cambronne*, “the word of Cambronne.”

gubmint catchum fella. An amusing Australian pidgin term for a policeman. “Gubmint catchum fella brother belong me” means “That policeman is my friend.” Other interesting pidgin expressions, from among thousands, include these Melanesian Pidgin terms: *finish altogether* (die) and *long way bit bit* (very far). See BECHE-DE-MER; PIDGIN LANGUAGE.

guerrilla. *Guerrilla* means a “little war” in Spanish, the word first becoming popular when Napoleon Bonaparte invaded Spain in 1808. The Spanish peasants took up arms and Napoleon, used to fighting trained armies, couldn’t cope with these small units of men that seemed to be everywhere and yet could rarely be found. The Spanish peasants, with English help, eventually expelled Napoleon, and ever since then *guerrilla army* has meant small bands of men fighting in unconventional ways.

guess. Think, suppose, calculate, reckon. “The northern word ‘guess’—imported from England, where it used to be common—is little used among southerners. They say ‘reckon,’” wrote Mark Twain in an 1881 letter. Observed James Russell Lowell in *The Biglow Papers* (1867): “I have never seen any passage where *guess* was used as the Yankee uses it.”

Guevarism; euphuism. Spanish writer and moralist Antonio de Guevara (ca. 1480–1545) has been regarded as the father of *euphuism*, for which his name is equivalent. But *euphuism*, an ornate, artificial writing or speaking style characterized by alliteration, eloquence, and high-flown phrases, was coined more than a century after his death. *Euphuism* takes its name from *Euphues: the Anatomy of Wit* (1579) by John Lyly, who displayed such a style in his book in an attempt to “soften” the English language, Euphues being the name of the main character in his romance. Guevara may have been among Lyly’s inspirations, for the Spanish author’s *The Golden Book of Marcus Aurelius* (1535) and other works were translated early into English.

guillotine. Dr. Joseph Ignace Guillotin (1738–1814) did not invent the *guillotine*, did not die by the *guillotine*, and all his life futilely tried to detach his name from the height reducer. The confusion began on October 10, 1789, when the eminent Parisian physician, a member of the National Assembly during the French Revolution, the Revolution, suggested that a “merciful” beheading device replace the clumsy sword and degrading rope then used by French executioners. Dr. Guillotin remained in the public’s mind for his eloquent speech and one of many popular songs about the new machine claimed that he had invented it. Not much time passed before “La Louise” (this name honoring its real inventor, Dr. Antoine Louis) lost out to *La machine Guillotine*, *Madame Guillotine*, and then *guillotine* itself. After his death, Guillotin’s children petitioned the French government to change the name of the *guillotine*, but won only permission to change their own names. See TERRORIST.

Guinea. The area on the African west coast and the countries there called *Guinea* may take their name from a misunderstanding. One story claims that the first Portuguese seafarers to land in the area asked local tribesmen the name of the coast. The residents thought they were pointing at a group of women nearby and answered *guiné*, their word for women, which became the name of the area. In any case, the name of the country first appears in Portuguese as *Guine*. See also DAGO; INDRI; KANGAROO; LLAMA; LUZON; NOME; PAGO PAGO; SIERRA LEONE; WOP; YUCATAN.

guinea hen. The ancestor of today’s tasty *guinea hen* hailed from Guinea in western Africa, unlike the GUINEA, FIG.

guinea pig. The South American rodent isn’t a pig and doesn’t hail from Guinea in West Africa. Native to Brazil, the guinea pig takes its first name from the fact that it was first brought to Europe on the *Guinea-men* slave ships that sailed from Guinea to South America to deliver their human cargo and to fill their holds with whatever cargo was available for the return trip to Europe. How the creature came to be called a pig is anybody’s guess.

Gulf Stream. An old yarn has it that the redoubtable Benjamin Franklin—who discovered so many other things—introduced sailors to the use of the Gulf Stream in the westward crossing of the Atlantic. This familiar story claims that when Franklin was deputy postmaster for the colonies in 1770 the British treasury asked him why British postal packets took two

weeks or so longer to reach New York than merchantmen did in sailing from London to Boston and to Providence, Rhode Island. Franklin, so the tale goes, consulted his cousin, Captain Timothy Folger, a Nantucket whaler of long experience, who quickly told him of the influence of the Gulf Stream, advising him that the postal packets commanded by Britishers always bucked the Gulf Stream, whereas the merchantmen, commanded by Rhode Islanders, had long since been taught by American whalers that one did not resist the Gulf Stream in its eastward flow. Actually, British explorer William Dampier had written about the Gulf Stream in his *Discoveries on the Trade Winds* a century earlier, and British mariners were quite familiar with it. The real explanation for the delay of the mail packets was their notoriously laggard captains, who took their own sweet time—there being no bonus for speed—and often trusted their ships to inexperienced mates. Franklin did talk to his cousin and had him draw a crude chart of the Gulf Stream, which Franklin later published. He and his cousin probably were responsible for speeding up the mail service back in 1770—if only by embarrassing the British captains—but they certainly didn’t *discover* the Gulf Stream. See CURRENT; FRANKLIN.

Gulf War syndrome. The major U.S. and Allied casualties in the Gulf War of 1991 were those who fell victim to this nerve disorder, which resulted in symptoms such as hair loss, fatigue, and dizzy spells. The cause may have been nerve gas, pesticides, or other chemical agents. The syndrome, which has affected hundreds of veterans, is also called “Desert Storm syndrome,” after the Gulf War land campaign.

gul-gul. Admiral W. H. Smyth, in *The Sailor’s Lexicon* (2005), calls this a kind of cement made of pounded seashells mixed with oil, which hardens like stone, and is put over a ship’s bottom in India, so that shipworms cannot penetrate even when the copper is off.

gull. The *gull*, the only bird ever to have a monument erected to it, is intimately connected with American agricultural history. All gulls take their name from the Breton *guylan*, for the bird, which derives from the Breton *gwela*, “to weep,” in reference to the bird’s cry. In 1848 an invasion of grasshoppers threatened starvation for the Mormon settlers near the Great Salt Lake and it was checked only by the appearance of flocks of gulls, which devoured the crickets and saved the crops after all other means had failed. The Sea Gull Monument on Temple Square in Salt Lake City is dedicated to the species, “in grateful remembrance of the mercy of God to the Mormon pioneers.” In a similar 1947 incident, gulls destroyed a plague of caterpillars in Scotland. See also BOLL WEEVIL.

Gullah. The American dialect called Gullah, with some 5,000 African terms in it, takes its name either from *Ngola* (“Angola”) or from the West African Gola tribe. It is spoken on the Sea Islands and along the South Carolina-Georgia coast. See BONAC.

gully-washer. An Americanism meaning a heavy rain. One old story has it that in the Ashland *Virginia Herald-Progress* someone advertised: “Wanted: One good rain. No 10-minute gully-washers need apply.”

gumbo filé. William Read, in *Louisiana-French Cooking* (1931), explains the origins of this term: “Gumbo [is now] applied to other kinds of gumbo thickened with a powder prepared from sassafras leaves. This powder goes by the name of *filé*, the past participle of French *filer*, ‘to twist’; hence *gumbo filé* signifies properly, ‘ropy or stringy gumbo.’”

the Gum Nebula. The name of this star, which may have shone as bright as the full moon 11,000 years ago, has nothing whatever to do with chewing gum. It is named for Australian astronomer Colin Gum, its discoverer in 1950.

Gump. This word meaning a fool, a stupid person is recorded in James Russell Lowell’s *The Biglow Papers* (1866), and accounts for the last name of the early comic strip character Andy Gump, as well as the last name of the eponymous hero of the 1994 film *Forrest Gump*.

gumption. Born as a Scottish word, first recorded in 1719 and meaning “common sense, mother wit, shrewdness,” *gumption*, changed in meaning after emigrating to America, coming to mean determination, spirit, courage. Perhaps the hard cider called *gumption*, known here during the early 19th century, and possibly before, gave the word this sense because of the spirit and courage it gave to those who drank it.

gumshoe. *Gumshoe* refers to a private investigator or private eye, this expression dating back to the early 20th century. The American-English term can also mean a police detective or plainclothes officer and derives from “gumshoes,” rubber-soled shoes or sneakers, which one can walk stealthily on. See PLIMSOLLS.

gum up the works. The expression *gum up the works* possibly derives from our national gum-chewing habit. The phrase became popular at the turn of the century and may refer to youngsters who went into the woods on gumming expeditions and got covered hair to foot with tree resin, which their parents had to work for hours to remove. But clogged machines in factories were referred to as *gummed up* as early as 1889, in reference to gummy substances such as inspissated oil clogging or stiffening them. It seems more likely that our expression for throwing a project into confusion derives from clogged machines (or works) than from youngsters daubed with gum.

gun. *Gun* doesn’t derive from the echo of its sound, as has been suggested. *Gunnr* and *hildr* meant “war” and “battle” in Icelandic, so the Scandinavian female name *Gunhildr* was a favorite among missile-throwers in the Middle Ages as a pet name for their ballistic devices. It is also possible that some anonymous soldier named a specific ballista *Gunhildr* for his sweetheart, the name gaining currency in this way. Whatever the case, we find *Gundhildr* recorded before 1309 in England, where it was shortened to *gunne*, and then *gun*, the last designation transferred to firearms after the cannon was invented. A “large ballista called Lady *Gunhilda*,” a mechanized catapult used to hurl huge stones and balls of fire at troops, is listed in a weapons inventory made at Windsor Castle in 1330. This particular ballista, its name derived from the Scandinavian, must

have been around for a number of years and may even have been the particular *Gunhilda* abbreviated to *gunne* some years before.

gunboat diplomacy. Not until 1927 is there a printed reference to *gunboat diplomacy*, which might translate as “getting one’s way by force,” but the expression may date back to 1841, when American ships exacted trade concessions from the Chinese by sending gunboats to Canton, after the British had done the same in the First Opium War. *Gunboat* itself dates back to 1793. The expression has, however, long been associated with President Theodore Roosevelt’s Latin American policy.

gunch. There are words for everything if you look hard enough. A *gunch* is an attempt to influence the roll of the ball in a pinball machine game by jostling the machine. *Gunching* and *nudging* have long been common among pinball players and pinball games have been around since the 1880s.

gung ho. *Gung ho* means “work together” in Chinese, but after Carlson’s Raiders, the 2nd Marine Raider Division commanded by Lt. Colonel Evans F. Carlson, a veteran of the China campaign, adopted the expression as their slogan in World War II, it took on a different meaning. Carlson’s Raiders were a remarkably brave, loyal, and enthusiastic band, so *gung ho* came to describe these qualities. Yet when noncombat marines and soldiers displayed the same enthusiasm in picayune matters such as white-glove inspections, *gung ho* was disparagingly applied to them, resulting in its present meaning of overzealousness.

gunkhole; gunk. A gunkhole is a deep mudhole. One theory has it that the word *gunk* here is old Scottish meaning “to hoax or fool” and that *gunkhole* is used to mean a mudhole because “some fool once thought he could walk in mud and it let him down.” But one guess is as good as another for the origins of these early Americanisms. *Gunk* refers to any thick or sticky substance (“He cleaned the gunk off it”). Originally the word was the trademark of a degreasing solvent, patented by a U.S. company in 1932.

gun moll. This term arose from the mistaken belief that the female accomplices of criminals carried their guns for them. The *gun* in the term does not refer to a firearm but derives from the Yiddish *goniff*, “a thief,” and *moll* is 18th-century slang for a woman. A gun moll in the 1920s was originally a female pick-pocket, before newspaper reporters mistakenly took to calling any racketeer’s girl a gun moll.

gunnysack. Still another word that was brought back from India by the British, *gunnysack* derives from the Hindi *goni*, for the coarse hemp fabric from which the sacks are fashioned.

guns before butter. Nazi propaganda minister Dr. Josef Goebbels (1897–1945) coined this famous phrase in 1942, when the Nazis still believed they would win World War II.

gonsel. *Gonsel*, for “a cheap thief or criminal,” is another word reinforced by “gun” in the mind but which really has

nothing to do with any weapon. *Gunsel* derives from either the German *ganzel* or the Yiddish *gantzel*, both meaning a gosling. At the beginning of this century prisoners and hoboes called young, inexperienced boys, especially homosexuals, *gunsels*. From constant underworld use, where it later meant a sly, sneaky person, it was adopted generally as a term for a “run-of-the-mob,” usually second-rate criminal. *Cannon*, for a male pickpocket, has a similar roundabout derivation. As far back as 1840 a pickpocket was called a *gun*, from the Yiddish *goniff*, “thief”; *cannon* was simply an elegant variation on this word adopted by criminals in about 1910. Thus the popular belief that a male pickpocket is so named because he carries a gun or cannon is all wrong—in fact, pickpockets don’t usually carry guns.

Gunter’s chain. See ACCORDING TO GUNTER.

gun-toter. This isn’t a true historical term for a gunfighter, having been first recorded in a western movie in 1925.

guppy. The guppy, or “rainbow fish” (*Lebistes reticulatus*), is also called the millions fish. It takes its name from R. J. Lechmere Guppy, once president of the Scientific Association of Trinidad, who presented the British Museum with specimens of the species in the late 19th century. A namesake of the guppy is the little guppy submarine, developed toward the end of World War II, but the sub’s name is also an acronym, the first four letters standing for “greater underwater propulsion power.”

guru. The word is used lightly today, but it comes from Sanskrit meaning “weighty,” someone with gravitas, an elder, a respected teacher. From meaning strictly a Hindu spiritual teacher, *guru* has “progressed” to “guru of wrestling,” “stockmarket guru,” “plumbing guru,” etc.

gusset. See ALL GUSSIED UP.

gussuk. *Gussuk* is an Inuit word for a white man, heard in Alaska. It is said to have been patterned on the Russian word COSSACK back in the days when the Russians ruled “SEWARD’S FOLLY”

Gutenberg Bible. The first printed Bible, long erroneously thought to be the first book to be printed from movable type in the Western world, is named for Johannes Gutenberg (ca. 1398–1468), the German printer generally believed to be the inventor of movable type. Few great men of relatively modern times have left such meager records of their lives as Gutenberg. No likeness exists of him, and his life is veiled in obscurity. Gutenberg may have adopted his mother’s maiden name, for his father’s surname appears to have been Gensfleisch. It is known that the goldsmith Johann Fust loaned the printer money to establish his press in Mainz, which Gutenberg lost to him in 1455 when he failed to repay the loan. But no book extant bears Gutenberg’s name as its printer and though he is still regarded as a likely candidate, he may not have invented

printing in the West or even printed the *Gutenberg Bible* (1450).

guts. *Guts* has been an Americanism for courage since about 1880 and is still much heard, though *balls* is used more among men. *Grit*, *spunk*, and *gumption* are early synonyms rarely heard today.

gutter. See EAVESTROUGH.

guv. The British once commonly used *governor* (pronounced “guv’nor”), as in “Need a lift, guv?” which one might hear from a cab driver. *Sir* is more usual today.

guy. American expressions often vary greatly in meaning from their identical British cousins. A *regular guy* to many Englishmen means “a thoroughly grotesque person,” not “a decent chap” at all. The difference is not as pronounced as in the past, but the American meaning still has a strange ring to British ears. For the English, *guy* owes its origin to the grotesque effigies of Guy Fawkes, a leader of the infamous Gunpowder Plot, which are carried through the streets of England and burnt in bonfires on November 5, Guy Fawkes Day. All of the festivities through the years probably mellowed the meaning of the word to include both good and bad guys. But only in America, far removed from the Gunpowder Plot in distance as well as time, is *guy* widely used for any “chap” or “fellow,” no ridicule intended. In England to this day a *guy* remains a ridiculous-looking person. Since the 1970s *guys* in America has been used in referring to women as well as men, especially in mixed groups of men and women (i.e., “Do you guys want to come over?”). American playwright Eugene O’Neill was the first person to record this last use of *guy*, in a 1927 letter to a friend; it became widely used by both men and women within the next 10 years or so.

guyascutus. Early Americans invented this humorous historical term, which describes a cow with short legs on one side so that it could better walk around the steep Vermont hills. The pronunciation is generally “guy-as-cut-as.”

guyot. A *guyot* is a flat-topped submarine mountain or seamount rising above the deep-sea floor. It is named after American geologist Arnold Guyot (1807–84).

gwine. Going, going to, as in “I’m gwine call them boys.” The word is actually a pronunciation the American South’s early aristocrats borrowed from upper-class British speech. Also heard as “guyne,” “gine,” “guin.”

gymnast; gymnasium; gymnite. Greek athletes were required to train in the nude to allow their bodies maximum freedom of movement. The famous Olympic track meets were run in the nude, wrestlers competed naked, and all exercises were performed without clothes. Thus the Greek word *gymnazo*, “to train naked,” gives us the words *gymnast* (literally someone in the nude exercising), and *gymnasium*, a place where naked exercises are done. The ancient Greeks considered the

physical training of boys and young men as essential as mental training, and one of the best gymnasiums in Athens was in Plato's Academy. An amusing sidelight on all this nudity is the mineral *gymnite*, a hydrated silicate of magnesium, so named because it is found at Bare Hills, Maryland.

gyp. According to the popular etymology, *to gyp*, "to cheat," derives from the name of the much maligned gypsies, who got their name because 16th-century Englishmen erroneously assumed that they hailed from Egypt. The *O.E.D.*, however, doesn't dishonor the Romany people, deriving *gyp* from *gee-up*, which meant "to treat roughly" in some localities of En-

gland. The *gippo* theory also saves face for the gypsies. A *gippo*, later shortened to *gyp*, was a short jacket worn by the valets of Oxford undergraduates in the 17th century. The word *gyp* this theory holds, was eventually applied to the servants themselves, who were often cheats and thieves.

gypwater. Water highly saturated with gypsum and other alkaline salts, which causes a severe upset stomach when drunk in large quantities. Also called gypsum water and *gyp*.

gyro ball. In baseball, a new name for a screwball, made famous by pitcher Dizzy Dean.

H

H. *H* can be traced back, through the Roman and Greek alphabets, to the Phoenician alphabet, where the letter was called Heth and represented a fence, having two crossbars instead of one: The reason Dr. Johnson made his famous remark “I’d rather dine with Jack Ketch [the public hangman] than Jack Wilkes” is seldom told. John Wilkes had written a comic review of Johnson’s *Dictionary* in which he addressed the great man’s pronouncement that “The letter ’h’ seldom, perhaps never, begins any but the first syllable.” Wilkes wrote: “The author of this observation must be a man of quick apprehension and of a most comprehensive genius,” going on in the same fashion for several paragraphs. Johnson never forgave him.

Häagen-Dazs. A rich U.S. ice-cream brand created in 1961. The brand name was coined by Reuben Mattus to create an aura of old-world traditions. According to the *New York Times* (December 1, 2006), they “fabricated the foreign-sounding Danish name . . . putting an umlaut over the first ‘a’ in Häagen, even though no umlaut is used in Danish.”

habanero pepper. The hottest of hot peppers by scientific measurement. They originated in Mexico and are now widely grown in the Southwest, especially in New Mexico, the largest chili-growing state in the United States.

haberdasher. A 17th-century source derives *haberdasher*, a dealer in men’s furnishings such as shirts and ties, from the German *Hab’ Ihr das?*, “Have you that?,” which such shopkeepers asked when waiting on a customer. Another possibility is the Old French *hapirtus*, “a fur dealer,” for haberdashers did originally carry fur hats along with other small wares and notions. We only know surely that *haberdasher* has been part of the language for almost seven centuries.

hack. See GRUB STREET HACK.

hack it. See CAN’T CUT THE MUSTARD.

hackle. A hackle was originally an instrument used to work flax. Then the word was applied to the raised feathers of angry cock-fighting fowls, which looked like they had been rumped with a hackle, this usage dating back to at least 1450. Some two centuries later (no one is sure exactly when), the first artificial fishing lures used two bright hackles from a gamecock as the legs of the artificial flies to be tied to the hook. Soon after *hackle* became the name of the artificial lure itself.

hadal. Coined as recently as 1959, hadal means the deepest part of the ocean, below about 20,000 feet. It derives from the French *hades*, hell, which comes from the Greek *haidēs*, god of the nether world.

Hadassah. The benevolent Jewish women’s organization takes its name from the Hebrew name of Queen Esther, mentioned in the Old Testament, Esther 2:7.

the Hadza; Piraha. There are abundant lists of people who have accumulated great fortunes, but what of their opposites, people often called “primitives” who don’t want much of anything? Linguist Peter Ladefoged (1925–2006) did find at least a few of them in his travels to catalog the world’s 6,000 languages. “The Piraha,” he wrote, “live with little thought for the morrow; [and] the Hadza have fewer possessions than anyone I know.”

haggard. Here is a word that comes from the 3,000-year-old sport of falconry. A *haggard* bird is one trapped as an adult and very difficult to train, unlike a bird captured when a nestling. By the 14th century the word came to mean a wild, intractable person. Then it took on the meaning of a terrified, anxious, or exhausted, expression on a human face. This finally resulted in the meaning of *haggard* we use today, gaunt, drawn, wasted, or exhausted.

ha-ha. Here is an exclamation that became a word, one of the most peculiar of derivations. A *ha-ha* is “an obstacle interrupting one’s way sharply and disagreeably, a ditch behind an opening in a wall at the bottom of an alley or walk.” It is used in

English gardens as a boundary that doesn't interrupt the view from inside, and can't be seen from the outside until you come very close to it; it is in effect a sunken fence, the inner side of the ditch perpendicular and faced with stone, while the outer side is turfed and sloping. When these ditches, or fosses, were first used extensively in the 17th century, etymologists tell us, people out for a stroll in the country were frequently surprised to find a sudden check to their walk. Their exclamations of "haha!" "ah-hah!" or "hah-hah!" in expressing their surprise became the name of the ditch or sunken fence.

Haigspeak. The press coined this eponymous word after Secretary of State Alexander Haig (who served 1981–82). In his conferences with the press Haig used such complicated confusing terms as "a comprehensive pressurized capability."

"Hail Columbia." In 1798, when war with France threatened, this song by Joseph Hopkinson was introduced by the American actor Gilbert Fox as an appeal to patriotism. Hopkinson was later to serve in Congress. "Hail Columbia" became very popular and even served as a euphemistic curse (*hail* substituting for *hell*) over a period of time.

Hail fellow well met. The exclamation of welcome or greeting, *hail*, goes back over a thousand years, as in the Anglo-Saxon expression *wes hal*, "may you be in good health." *Hail fellow well met*, for "a jovial, convivial person, a good mixer," is one of the longest phrases treated as a descriptive word in English and is recorded in print as early as 1550. No doubt it is older still and it possibly originated as a greeting: "Hail, fellow! Well met!" Today the exclamation *Well met!* is sometimes, though rarely, used to mean "Glad I met you!" English satirist Jonathan Swift used the expression in his poem "My Lady's Lamentation" (1765):

Hail fellow, well met,
All dirty and wet;
Find out if you can
Who's master, who's man.

"Hail to the Chief." Verses from Sir Walter Scott's poem "Lady of the Lake" (1810), including "Hail to the Chief who in triumph advances!" were put to music in about 1820 by composer James Sanderson (1769–1841) and became the march traditionally played to honor the president of the United States, especially at official events.

hairball. Cats often choke on and throw up balls of hair called hairballs. These hairballs give their name to any disgusting or stupid person, the usage dating back to the 1980s.

hairbreadth escape. A very narrow escape; just how narrow is shown by the old English formal unit of measurement called the hairbreadth, the 48th part of an inch, or 12th part of a line. The measurement is said to have been used by the Jews in ancient times. *Hairbreadth*, the breadth or diameter of a hair, is recorded as early as the 15th century, but Shakespeare appears to have coined the phrase *hairbreadth escape* in *Othello*, where his leading character speaks of the "hair-breadth 'scapes" he

has experienced throughout his life. *Hairbreadth* is often corrupted to *hair'sbreadth* in everyday speech and has indeed been said this way since the 16th century. Every *hair'sbreadth* Harry, anyone who is always having narrow escapes, honors an old comic strip hero of that name.

hair care. Whatever one concludes about a Roman emperor who packed his brother in snow to hasten his end, there is no doubt that Domitian (510–1596 A.D.) was a great patron of the arts. To inspire the writing of poetry, for example, he began the Capitalines, a literary competition. Domitian was an author himself. Besides writing poetry, he authored a book entitled *On the Care of Hair*. His expertise, however, did him no good, for he became totally bald several years later.

hair in the butter. A very delicate or sensitive situation. This Americanism dating from the early 20th century refers to the difficulty of removing a single hair from a piece of butter. Wrote Molly Ivins in *Molly Ivins Can't Say That, Can She?* (1991): "The Great Iranian Arms Caper is not only hair in the butter, I'd say someone's thrown a skunk in the churchhouse as well."

hair of the dog that bit you. Like cures like, *similia similibus curantur*, the Romans believed, like many ancient peoples before them, and they commonly bound hairs of a dog that had bitten someone to that person's wound in order to make it heal better—even if the dog was rabid. The treatment was recommended for centuries by serious medical books, about the only change until medieval times being that *burnt* hair of the dog that bit you was prescribed. By then it was also believed that the best cure for a hangover was a drink of the same poison that "stifflicated" you the night before, and the old proverb *a hair of the dog that bit you* applied to this practice. The first mention of the phrase in reference to hangovers is in John Heywood's *Proverbs* (1546): "I pray thee leat me and my fellow have a heare of the dog that bote us last night—and bitten were we both to the braine aright."

hair-raising. This Americanism came into the language too late, about 1910, for it to be associated with Indians or Indian hunters taking scalps. There is no evidence that horrible accounts of Indians or whites "lifting or raising hair" inspired the synonym for "frightening." Most likely the term is a streamlining of the old expression *to make one's hair stand on end*.

hairy. *Hairy*, as slang for unpleasant or rough, seems to be of Army origin, from about 1935, when a *hairy patrol* was an unpleasant one that met with resistance. Its origin is unknown, but the word may have something to do with *to make one's hair stand on end* and "scary." Another possibility, a longshot, is the English expression *hairy at the heel*, common in the late 19th century. A horse with hair about the heels or fetlocks was an underbred one, so the expression was used figuratively for an ill-bred, bad-mannered, thoroughly unpleasant person, as was *hairy*.

hairy money. Hairy money—money with hair on it? Yes. Hairy money was a term for beaver pelts in the American fur

trade. The skins were worth a lot of money and even used as a medium of exchange.

hairy quadruped. There have been many variations on Charles Darwin's description of humankind's common ancestor in *The Descent of Man* (1871), but his words were: "A hairy quadruped, furnished with a tail and pointed ears, probably arboreal in habits."

halcyon days. A storm killed her mortal husband and the heartbroken goddess Alcyone, daughter of Aeolus, the wind god of Greek legend, drowned herself in the sea. Punishing the suicide, the angry gods turned both Alcyone and her husband Ceyx into birds later known as *halcyons*, or kingfishers as we call them today. Yet the goddess' father took pity on the couple and decreed that during the halcyon's breeding season, the seven days before and the seven days after the shortest day of the year, the sea would always be perfectly calm and unruffled. Thus, during the 14 days, at about the time of the winter solstice, the halcyons could sit on their nests, which floated securely on the tranquil water, borne by currents across the world, hatching their eggs. This legend was widely believed through Roman times, when Alcyone's name became Halcyone, and well into the 15th century. The halcyon days had an actual place on ancient calendars, and the legend inspired much poetry. Eventually, the legend turned the phrase *halcyon days* into not only windless days of peace and calm but any time of peace, serenity, and rejoicing.

haler. This small Czechoslovakian coin was first minted in the German town of Hall, Swabia, West Germany, from which it takes its name.

half a bubble off; half a bubble off plumb. Someone who is mildly eccentric, in reference to the bubble in a carpenter's level. Also a *bubble off plumb*.

half-back. A new term, rarely recorded, for northern Americans, usually retired, who relocate in Florida, find it too hot in the summer but don't want to return to northern winters and so go halfway back, to settle in North Carolina.

half-baked. Anything or anyone raw, incomplete, or not thoroughgoing has been called *half-baked* since at least the early 17th century, the allusion being to undercooked baked goods. Some say, however, that the expression *half-baked* as applied to half-witted, uncultured persons is of American origin. This seems unlikely, for although the term is first recorded here in the mid-19th century, an old Cornish proverb cited in 1868 defines a fool as "only half-baked; put in with the bread and taken out with the cakes."

half-breed. An offensive term for the offspring of an American Indian and a white person; first recorded in 1760, though later much used in the West. It is now used as offensive slang for the offspring of parents of different racial origin.

half-seas over. *Half-seas over* indicates a person quite drunk but not yet under the table. British in origin and dating back to the late 17th century, the phrase probably originated in the resemblance of a drunk's stagger to that of a man walking on the deck of a storm-battered ship, one side heeled over in the sea. Or perhaps the expression is a corruption of *op-zee-zober* ("oversea beer"), a strong, heady beer imported from Holland in the 17th century. The earlier phrase *halfway across the sea* for a drunk suggests the former theory, however.

half-wit. Humorists take note that *half-wit* was first used in English to mean an ineffectual writer of humor, "a dealer in poor witicisms," someone who wasn't funny half the time. Wrote John Dryden in *All For Love* (1678), the first recorded use of the term: "Halfwits are fleas;/ so little and so light,/ We scarce could know they live,/ but that they bite." It wasn't until nearly a century had passed (1755) that *half-wit* was applied to anyone who hasn't all his wits.

half woman and half rainwater. An old American saying descriptive of someone, usually a man, who is soft or effete; unlike a "macho man," rainwater is soft, not hard.

halibut. Five hundred years ago every flatfish from the flounder to the skate was called a butt, even the largest of the flounders, *Hippoglossus hippoglossus*. The most esteemed was *Hippoglossus*, which was only eaten on Church holy days and became known as the holy butt. This fish is no longer reserved for holy days, of course, but it is still known as the halibut, or "holy flounder."

hallelujah. According to an Italian folktale the word *hallelujah* was born when three Roman legionnaires—a Roman, a Piedmontese from northern Italy, and a German—were guarding Christ's body in the sepulchre after His crucifixion. When Christ rose from the dead the Roman exclaimed *Ha!*, the Piedmont man cried *Le lii!* ("It's him!"), and the German shouted *Ja!*—which gave us *Hallelujah*. But, as good as the story is, *hallelujah* derives from the Hebrew *hallelu-yah*, "praise ye Yahweh."

Halley's comet. Halley's comet, the first comet whose return was accurately predicted, was observed by English astronomer Edmund Halley in 1692, when he correctly estimated its reappearance in 1758, 16 years after his death, as it turned out. Halley based his calculations on Newton's theory; a long-time friend of the great scientist, he had paid for the initial printing of Newton's *Principia*, collaborating on the section dealing with comets. Over his 86-year lifetime Halley made a number of important discoveries, which resulted in his appointment as astronomer royal in 1720. The comet that blazes his name across the sky last appeared in 1986. Mark Twain was born when Halley's Comet appeared in 1835 and died—as he had predicted—when it appeared again in 1910. "It will be the greatest disappointment of my life if I don't go out with Halley's Comet," he had written. "The Almighty has said, no doubt: 'Now here are two unaccountable freaks; they came in together, they must go out together.'"

hallmark. Hallmarks, “marks of excellence on products,” owe their origin to the official stamp of the Goldsmiths’ Company of London, which in 1300 was ordered by Edward I to stamp all gold and silver with such a mark to indicate its purity. They were called hallmarks because the stamping was done at Goldsmith’s Hall in London.

the hallway smells different. A brand new catchphrase heard in the Capitol on November 8, 2006. The controversial secretary of defense Donald Rumsfeld had just resigned his post in the Bush cabinet.

Halstead-Reitan Neuropsychological Battery. A group of tests administered to assess cognitive functions such as memory and the ability to make abstractions. It was developed by and named after neuropsychologists Ward C. Halstead (1908–69) and Ralph M. Reitan (b. 1922).

ham. Actors prefer to think that this word derives from the old theatrical use of ham fat to remove blackface makeup—actors were thus called hamfatters, or hams. Many scholars lean to this theory, but *ham* in the sense of an amateur actor or a 10th-rate actor who outrageously overplays his scenes has enough folk etymologies to make a one-act play. Since none really seems capable of absolute proof, I’ll simply list three: 1) Ham derives from the Cockney slang *hamateur*, for “amateur actor.” (Unlikely, as the term *ham* in this sense is American from about 1880.) 2) The word structure of *amateur* itself suggested *ham*. (A good possibility, but why did it wait so long to suggest itself?) 3) It comes from the role of *Hamlet*, which actors frequently misperformed. (Another good possibility, but, if so, *ham* should have been with us since Shakespeare’s time.) *Ham* for one of the rear quarters of a hog, or its meat, derives from Old English *hamm* for the bend of the knee.

Hamal. The name of the star *Hamal* in the constellation *Aries* (the ram) is an example of a word that comes to us from ancient Sumerian, which flourished over 5,000 years ago and dates back even further than that. *Hamal* derives from the Arabic *al-Hamal*, “the full-grown lamb,” which is a modified form of the Sumerian *mul LULIM*, which means “the constellation of the lamb.” Thus fragments of the Sumerian survive, as they do in the names of a few other stars.

Hamas. An acronym for the Islamic Resistance Movement, founded by Sheik Ahmed Yassin (d. 2004) in 1987. Hamas, which opposes any negotiations with Israel, is responsible for many Palestinian suicide bombings in the last several years.

hamburger. Most authorities say that the hamburger first appeared in the U.S. in 1884 under the name of *Hamburg steak*, after the place of its origin, Hamburg, Germany. But the town of Hamburg, New York persistently claims that America’s favorite quick food was invented there in the summer of 1885 and named for the burger’s birthplace. According to this tale, its inventors were Charles and Frank Menches from Ohio, vendors who ran out of pork at their concession at the Erie County Fair. Since the first recorded use of *hamburger* seems to have been in 1902, according to the *O.E.D.*, Hamburg, New York

could be the source. *White Castles*, *McDonalds* and *Wimpey-burgers* (for the Popeye comic-strip character who ate prodigious amounts of them) are synonyms for hamburgers. See FRNAKFURTER.

Hamiltonianism. U.S. founding father and statesman Alexander Hamilton (1757–1804), in his essentially conservative political philosophy, advocated a strong central government and protective tariffs. A *Hamiltonian* is one who supports this doctrine of *Hamiltonianism*, the word loosely describing a level-headed political conservative.

hamlet. The English term *ham*, for “a small village,” survives in place names like *Shoreham*, *Oakham*, and *Hamton*. *Hamlet*, for a small village, is simply a diminutive of *ham*, and has been part of the language since medieval times.

Hamlet-like. Someone who cannot make up his mind is often called Hamlet-like, after Shakespeare’s tragic character. The expression is used too loosely, however, and should be reserved for those indecisive because—like Hamlet—they are faced with impossibly difficult choices.

hammer and tongs. “To go at it *hammer and tongs*” means to literally or figuratively fight with all one’s resources with no hold barred, with might and main. The blacksmith has become a rarity and a curiosity, but this 17th-century expression alluding to his art lives on. It refers of course to the brawny smitty taking red-hot metal from the forge with his long-handled pincers, or tongs, and vigorously beating it into shape on the anvil with his hammer.

hammock. Columbus is said to have been introduced to the hammock by American Indians, who also gave him its name, *hamaca*, from the Taino language. The suspended bed, usually made of canvas, was in turn introduced to Europeans by the great explorer. It has long been used by sailors in naval vessels.

hamster. The name for this little seven-inch-long rodent (*Cricetus cricetus*) derives ultimately from Middle High German or possibly from Old Saxon *hamstra*. Hamsters are today even more popular than guinea pigs as pets. Of the several hamster species common to Europe and Asia, the best known is the golden hamster, a gentle, docile rodent that is much valued for laboratory research work. The golden hamster, with its deep golden color, has the shortest gestation period of any non-marsupial mammal, females giving birth in an incredible 16 days. Just how widely this hamster has been studied by scientists is attested to by the 3,000 articles about it cited in the *Bibliography of the Golden Hamster* by R. Kittel (1966). The millions of golden hamsters being bred today all descend from one hamster male and three females found by a scholar, I. Aharoni, in 1930. Professor Aharoni came across a brief reference in ancient Hebrew writings to a special kind of “Syrian mouse” appearing “in Chaleb which was brought into Assyria and into the land of the Hittites.” Determining that Chaleb is today Aleppo in northern Syria, the professor traveled there from his home in what was then called Palestine and found the “Syrian

mice” that have since become known to millions as golden hamsters.

hamstring. The part of the leg behind the knee was once called the ham in English and the tendons there were given the name *ham string*, a designation still used today. To cut the hamstrings was to cripple or disable someone, which gives us the expression *to hamstring* “to cripple, or destroy the activity or efficiency of,” an expression first recorded by John Milton in 1641.

to handbag. An interesting recent expression meaning “to treat a person or idea ruthlessly or insensitively,” especially for a woman politician to do so. The term, recorded in the *OED*, refers to former British prime minister Margaret Thatcher (who held office 1977–90) and the handbag she carried, which became “an often-noted symbol of her swaggering power when she was prime minister,” according to one news article. The word, first recorded in 1982, also suggests the handbag being used as a weapon against opponents.

handball. The name of this popular sport can be traced back to 15th-century England, but it originated in Ireland over four centuries earlier and was known as the game of fives for the five fingers of the hands used in it. Handball became popular in America in about 1882, when it is said to have been introduced by Irish immigrant Phil Casey in Brooklyn, New York.

handbook. Dr. Richard French, the philologist who first suggested the great *Oxford English Dictionary* in 1857, called *handbook* “an ugly unnecessary word . . . scarcely . . . ten or fifteen years old,” a very poor substitute for the Latin “manual.” Actually, the handy *handbook* had reentered the language after a long absence. It dated back to the Anglo-Saxon *hand-boc*, used before Alfred the Great. Besides its standard English meaning, a *handbook* is American slang for a place where bets are made away from the racetrack, which gives us the terms *bookie* and *bookmaker*, both first recorded in the 1880s. *Handbook* was suggested by the small concealable notebooks that bookies carry for secrecy and convenience. In England, a bookmaker is called a turf accountant or commission agent.

handicap. A word first used in horse racing (1754) and then in golf (since the 1870s), *handicap* may derive from an old English game called “hand in cap,” which was a drawing before a horse race. According to this theory, “hand in cap” was shortened to *handicap* in speech and came to mean an attempt to predict the winner of a horse race or other contest by comparing the past performances of all the contestants.

hand in glove. To be hand-in glove with someone is to be very close indeed, as close or intimate as a glove is to a hand. We know the expression dates back to at least the late 17th century, when it was *hand and glove*. It wasn’t until 1891, however, that *hand in glove* is recorded. Jonathan Swift called *hand and glove* a cliché in *Polite Conversation* (1738).

Handkerchief Moody. The nickname of eccentric Maine pastor Joseph Moody (1700–53), who for 20 years preached with his back to his congregation. Moody wore a crepe mask when in public. Upon his death it was revealed that he had once accidentally killed a man and was ashamed to be seen. Nathaniel Hawthorne based his short story “The Minister’s Black Veil” (1836) on Moody.

handle with kid gloves. To handle gently, with great care, not just ordinary care. Kid gloves, made from the skin of young goats (kids), are very soft and delicate. France was once noted for its kid glove industry, centered in Paris. See *KID*.

hand of glory. This is an example of a new custom or superstition created by an etymological error. A *hand of glory* was originally a charm made of a mandrake root, which was believed, among other things, to double one’s money when put beside it overnight. *Hand of glory* was a translation of the French *main de gloire*, meaning exactly the same, but the French expression was a corruption “by popular etymology” of what had originally been the Old French for *mandragore*, “mandrake.” Thus, when the term came into English early in the 18th century, people couldn’t help but think that the charm consisted of a human hand. This led to a completely new superstition due to the deformation of the word. By 1816 we find a writer explaining that *the hand of glory* “is a hand cut off from a dead man, as has been hanged for murder, and dried very nice in the smoke of juniper wood.” Such charms made from the hands of executed criminals were said to help one sleep, that is, lull one into a dead sleep, among other things.

hand over fist. Seamen reached the rigging on old sailing ships by climbing hand over hand up a thick rope—a skill sailors prided themselves on—and when sails were hoisted, the same hand over hand technique prevailed, just as it did when ropes or even fish were hauled in. American seamen in the 19th century changed this expression to the more descriptive *hand over fist*, which shows one fist clenching a rope and a loose hand passing over it to make another fist on the rope, etc. The rapid ascent on the ropes and the act of hauling in nets soon suggested someone rising rapidly in the business world and hauling in money, which is what we still mean when we say someone is making money *hand over fist*.

hands-in-the-pocket weather. A colorful Pennsylvania Dutch idiom meaning very cold weather.

Handsome Frank. The nickname of Franklin Pierce (1804–69), the 14th president, who was a friend of Nathaniel Hawthorne and appointed him to the consulship at Liverpool, England. As vain as he was handsome, the genial Pierce was rumored to be an alcoholic in his late years. His friend, the dignified Millard Fillmore, America’s 13th president, rivaled Pierce in looks, as did 29th president Warren Harding, who carried on several affairs during his blessedly short term in office and had the looks of a matinee idol. Other good-looking presidents include James Garfield, Chester Arthur, Ronald Reagan, and Gerald Ford (who once worked as a male model). JFK was (or could be) charming rather than handsome. The most foppish of presidents was Martin Van Buren, who was called Petticoat

Pet, among about a dozen insulting nicknames. See OK; PRESIDENTIAL NICKNAMES.

handsome Harry. An attractive, useful meadow plant, handsome Harry (*Rhexia virginica*) was said by botanist Carleton Coon in his *Useful Plants* (1974), to have “pretty purple flowers and leaves of a sweetish acid taste which may be eaten by man.”

handsome is as handsome does. Perhaps this is an old proverb that Chaucer suggested in “The Wife of Bath’s Tale,” part of *The Canterbury Tales* (ca. 1387). There Chaucer wrote: “. . . he is gentil that dooth gentil dedis [deeds].” Anyway, some four centuries later, in *The Vicar of Wakefield* (1766), Oliver Goldsmith first used the expression in close to its modern form: “She would answer, ‘They are as heaven made them—handsome enough, if they be good enough; for handsome is that handsome does.’” By the early 20th century the phrase had become *handsome is as handsome does* in American English and was often used as a motto under pictures of male graduates in college yearbooks. The words aren’t often heard today and when they are, they are always applied to men. Originally, the expression was said of both men and women. The cynical Frances Grose, for example, wrote in *A Dictionary of the Vulgar Tongue* (1796) that it was “A proverb cited by ugly women.” A recent variation on the saying is the famous line from the film *Forest Gump* (1994), “Stupid is as stupid does.”

hands up! Nathaniel Hawthorne’s son, Julian, seems to be the first writer to record the expression *hands up!*, in an 1887 novel, but he meant the words for schoolchildren, not outlaws: “Hands up—every soul of you. Hands up, those who have the right answer!” There appears to be no certainty as to who first used the words to mean “a robber’s, policeman’s, etc., order to preclude resistance,” as the *OED* states. The *OED* dates the first use of *hands-upper* (“one who surrenders with his hands held up”) to 1902, giving a number of references. However, the surrender order itself isn’t dealt with. Because the Americanism *holdup*, “robbery,” is recorded in 1878, someone must have said “hold your hands up” or “hands up” before then.

hand to mouth. One of the earliest uses of this phrase best explains it: “Hungry folkes that are fed from hand to mouth.” The expression arose in the 16th century, when famines in which thousands of people starved to death were frequent for the first time in England, usually occurring with the failure of grain crops. People living under such conditions had no choice but to cram a piece of bread into their mouths as soon as they got it in their hands, so great was their hunger; there was no thought or possibility of saving for the future. Later, a *hand to mouth existence* came to describe a life of poverty in general, and even a thrifless, improvident life.

handy-andy. A handyman, named after the eponymous hero of *Handy Andy* (1842), a humorous novel by the Irish painter, novelist, and songwriter Samuel Lover (1797–1868).

handyman. *Handy*, “ready or clever with the hands, dextrous,” dates back to the early 17th century, but the term *handyman*, for a person useful for all kinds of odd jobs, doesn’t ap-

pear in print for almost 200 years more. *Handywright* is an older synonym rarely, if ever, used today.

hang by a thin thread. The flatterer Damocles annoyed Dionysus the Elder of Syracuse with his constant references to the ruler’s great power and consequent happiness. Deciding to teach the sycophant the real perils of power, he invited Damocles to a magnificent banquet, surrounding him with luxuries only a king could afford. Damocles enjoyed the feast until he happened to glance up and see a sharp sword suspended by a single thin thread pointing directly at his head, after which he lay there afraid to eat, speak, or move. The moral was “Uneasy lies the head that wears a crown”—that there are always threats of danger, fears, and worries that prevent the powerful from fully enjoying their power, the sword of Damocles symbolizing these fears. From this fifth-century story, recounted by both Cicero and Horace, comes our expression *to hang by a thin thread*, to be subject to imminent danger.

hangdog look. It’s said that hunting dogs living in the great English country houses of the past, eating scraps tossed from the table and sleeping as close to the fire as they could get, were kept orderly by special handlers who broke up dogfights, whipped their charges, and even hanged incorrigible dogs. Shakespeare, no dog lover, does refer to the hanging of dogs five times in his plays, but I’ve been unable to find any reliable record of actual cases of a dog hanging, though there are other cases of animals tried and executed by law (see E. P. Evans, *The Criminal Prosecution and Capital Punishment of Animals*, 1906). Nevertheless, since the late 17th century anyone with a cringing, abject appearance, or a base, sneaky demeanor has been said to have a hangdog look. Whether real or the product of someone’s imagination, the allusion was originally to a despicable, degraded person fit only to hang a dog, or to be hanged like a dog. Nowadays a *hangdog look* has almost entirely lost its meaning of contemptible and sneaky and generally describes someone browbeaten, defeated, intimidated, or abject—someone who looks a little like a bloodhound.

hanged, drawn, and quartered. At first this punishment for high treason and other crimes in England was called drawn, hanged, and quartered—that is, the criminal sentenced to death was drawn (dragged) through the streets behind a horse to the gallows, hanged, and then his head was cut off and his body torn into four pieces, often by horses. In the 15th century a further barbaric penalty was added and drawn, hanged, and quartered became hanged, drawn, and quartered. In this case the victim was hanged and drawn (eviscerated) before he was torn to pieces. Often he was only partially hanged, his body cut down, and his “bowels burnt before his face.” There was even a legal term in Latin for the perversion: *detratur* (“drawn, dragged”), *suspendatur* (“hanged”), *devellatur* (“disemboweled”), *decolletur et decapitetur* (“beheaded and quartered”).

hanged high as Haman. The biblical Haman, King Ahasuerus’s counselor, built a “fifty cubits high” gallows on which he planned to hang Mordecai and other Jews. But Esther turned the king against him and he was hanged on his own gallows, giving Ahasuerus pleasure, Mordecai great relief, and posterity

the expression *hanged high as Haman*, “destroyed by one’s own machinations.”

hanging around. This expression meaning to idle or loiter about is possibly the ancestor of *hangout*, a place for hanging around, and today’s popular phrase *hanging out*, idling about. *The Dictionary of American Slang* gives its origin as the late 19th century, but it is definitely older than this, since Oliver Wendell Holmes uses it as an Americanism in his novel *Elsie Venner* (1861), putting it in quotes.

hanging breathless on. A very common phrase that comes from Henry Wadsworth Longfellow’s poem “The Building of the Ship” (1849):

Sail on, O Ship of State!
Sail on, O Union, strong and great!
Humanity with all its fears
With all the hopes of future years,
Is hanging breathless on thy fate!

Hanging Garden of Babylon. There are, of course, thousands of outstanding gardens throughout the world. Among the most famous was the Hanging Gardens of Babylon, one of the Seven Wonders of the World. The Hanging Gardens were supposedly built by the biblical King Nebuchadnezzar to please his wife, Amytis, who had grown tired of northern Babylon’s flat plains and longed for scenery that would remind her of her native home in the Median hills. Should you want to cultivate the same, build a square garden, 400 feet each way, rising in a series of terraces from an adequate river and provide it with enough fertile soil to hold even great trees. Vague directions, but the plans have been lost over the years.

hanging out. See HANGING AROUND.

hang in there. This common Americanism, meaning “to refuse to give up” and “to stick with it,” originally hails from the world of boxing, where managers exhorted exhausted fighters to finish a round or a bout, even to hang on to the ropes. In recent years the expression has come to be used as common parting words to someone in trouble, or in fact to anyone, since everyone in this life is usually up against the ropes in one way or another. Similarly, a frequent answer from anyone asked how he or she is: “I’m hanging in there.”

hang it up. American slang since about the 1920s for “to quit work or retire,” *hang it up* is a shortened term for the baseball expression *to hang up one’s spikes* (“One more season and I’ll hang up my spikes”) meaning the same. A less frequent variation among men is *hang up one’s jockstrap*, a phrase of more recent vintage. See also JOCK.

hangman’s wages.

For half of thirteen-pence ha’ penny wages
I would have cleared all the town wages . . .
—The Hangman’s Last Will and Testament

This term is referred to occasionally in English literature from the late 17th to early 19th century. It means 13 pence and a halfpenny, which was the execution fee (a Scottish mark) set by

James I—one shilling for the work and three halfpence for the rope. The nobility were expected to give the executioner up to 10 pounds for beheading them. As time went on, of course, hangmen and headsmen raised their prices like everyone else.

hangnail. The Anglo-Saxon word *angnaegl* meant “a painful corn on the foot,” deriving from *ang*, “pain,” and *naegel*, “nail,” a hard corn resembling the head of a nail. Later, its meaning was extended to include a painful corn on the finger as well, or anywhere on the skin for that matter. This word, eventually pronounced *angnail*, appropriately defined a painful corn, but through mispronunciation an “h” was added to it. *Hangnail* served only as the term for a painful corn or swelling until someone in the early 17th century realized that it perfectly described the small strip of skin that sometimes tears away and hangs down from the fingernail, causing considerable pain. The mispronunciation that was superfluous in the old meaning of the word has become essential to the new meaning.

hang on by the eyelashes. As late as this expression came into the language—it is traced by Partridge to 1860—we still don’t know who or what is responsible for it. Two centuries earlier something hung by the eyelids was something in a state of suspense, but the other phrase, used literally or figuratively, means to hang on precariously, to be barely able to hang on to the most meager of holds. As with the much older expression *hang on by the skin of one’s teeth*, no real situation inspired the imaginative description.

hang one’s head. See SWORD OF DAMOCLES.

hang out your shingle. To become a doctor or lawyer, among other professions. The Americanism comes from pioneer days, when doctors did use shingles for their signs.

Hangtown fry. Placerville, California, used to be nicknamed Hangtown because a good number of men were hanged there—or so the story goes. *Hangtown fry* refers to an omelet made of eggs, fried oysters, bacon, and onions that was invented during the gold rush in Placerville, or Hangtown.

hang up one’s spikes; hang up the gloves. Strictly speaking, the phrase *hang up one’s spikes* means “to retire” from professional baseball, football, or any sport in which spiked shoes are worn, as in “Slugger Mark McGwire has decided to hang up his spikes.” However, the expression is used lightly for to retire from anything. The term was first recorded in 1942, the same year boxing’s *hang up the gloves* made its initial appearance.

hanky-panky. A synonym for trickery, *hanky-panky* may have been coined, with the help of reduplication, from the magician’s handkerchief, or *hanky*, under which so many things have mysteriously appeared and disappeared through clever sleight of hand. Probably related to *hocus pocus*, it is first recorded in *Punch* (1841).

Hannibal. For any great general. Hannibal (247–182? B.C.) was the greatest adversary the Romans ever fought and his

crossing of the Alps with elephants is one of the remarkable feats of military history. After his fighting days were over he became Carthage's chief minister of state. Later, when he discovered he was about to be delivered to the Romans, he poisoned himself. See BARCELONA.

Hansard. What the *Congressional Record* is to the United States Congress, the *Hansard* is to the British Houses of Parliament. The *Hansard* is the official printed report of proceedings in Parliament, named in honor of Luke Hansard (1752–1828) and his family after him, private printers who published the reports from 1774 until 1889. Today the proceedings are recorded by the government, but the reports still bear the printing firm's name.

Hansen's disease. The scientific name, sometimes used euphemistically, often given to leprosy. Norwegian doctor Armauer Gerhard Henrik Hansen (1841–1912) discovered the bacillus (*Hansen's bacillus*) that causes leprosy and his name soon came to be used as a synonym for the disease itself.

hansom. If Joseph Aloysius Hansom invented the hansom cab, once the most popular of horse-drawn carriages—"the gondolas of London," as Disraeli called them—he certainly gained nothing from his invention. Most word authorities vouch for Hansom, but one source claims that Edward Bird invented the vehicle, presenting the idea gratis to his brother-in-law, Edward Welch, a partner in Hansom's Birmingham architectural firm. Hansom (1803–82) was an English architect specializing in churches and public buildings. He did patent the cab—possibly as Bird's Patent Safety Cab—but the financial arrangement he made upon selling his patent rights proved disastrous. Promised 10,000 pounds, Hansom received, according to conflicting accounts, either nothing or a mere 300 pounds for his patent. *Hansom cabs*, however, made millions for their manufacturers. The low, two-wheeled covered carriage, with the driver's seat above it in the back, was noted for its maneuverability and safety features as well as its privacy and unobstructed view for passengers. Soon after its appearance in 1834, it became the most popular cab in London and around the world. The last hansom disappeared from London in 1944, but a few are still available for hire in New York's Central Park.

hapa haoli. In Hawaii this term means a person who is half white. *Hapa* here is the English word *half* assimilated phonologically into Hawaiian, with *l* dropped, *f* replaced by *p*, and the first vowel added. *Haoli* (pronounced HOW-lee) means white.

happening. Artist Allan Kaprow, who called himself an "un-artist," coined the term *happening* in the late 1950s, its first printed appearance in *The Nation* of November 1959. A *happening* is an improvised performance or spectacle, often involving group or audience participation. Kaprow (1927–2006) was strongly influenced by Jackson Pollack and John Cage, among others.

happi awaa. The Japanese borrowing and alteration of the English words *happy hour*, a time that is now known around the

world. It means, just as it does in the U.S., the late afternoon or early evening time when bars offer drinks at reduced prices.

happy as a clam at high tide. Clams are usually dug at low tide, so a clam might be happy indeed at high tide. This expression is an Americanism, first noted in 1834.

happy as a colt in clover. Novelist and historian Shelby Foote (b. 1916) says he first heard this expression when he was a boy some 80 years ago. It means to be very content and happy and seems to be one of those phrases that hasn't been recorded up until now.

happy as Larry. Australians who use this phrase often say it originated with famous fighter Larry Foley (d. 1917), who was happy in and out of the ring, a kind of clown prince of boxing—a nice thing to be remembered for.

"Happy Birthday to You." Most people are surprised to learn that "Happy Birthday to You" is still (until the year 2010) a copyrighted song that earns over \$1.2 million dollars a year. Ranked as the world's most frequently sung song in the *Guinness Book of World Records*, it was written in 1893 by Patty Smith Hill (d. 1946) and Mildred J. Hill (d. 1916) as part of their *Song Stories for the Kindergarten*. Originally entitled "Good Morning to All," it took its present name from the first line of its second stanza.

happy hunting grounds. Perhaps American Indians invented this synonym for heaven, but it seems more like the work of an author like Washington Irving, who first recorded it in one of his books (1837).

happy landin' with Landon. The Republicans coined this campaign slogan for Alfred M. Landon in 1936, when he ran against Franklin D. Roosevelt for president. It was more like a crash landing than a "happy landin'," Landon suffering one of the most devastating defeats in American political history.

happy pills. A term from the late 1950s for tranquilizers and stimulants, uppers and downers, some of which are dispensed by DR. FEELGOODS. Recently I heard the words *happy pills* described as painkillers by a patient in a doctor's office: "I just want him to give me some happy pills for the pain."

happy trails. This farewell has been popular for many years, thanks in part to the song "Happy Trails" sung by many country singers, including Roy Rogers. "Happy trails, Hans," the hero (Bruce Willis) says to the villain in the movie *Diehard 2* (1991) as he dispatches him.

happy warrior. Since the beginning of the 19th century *happy warrior* has meant someone cheerfully undeterred by opposition of any kind. Capitalized, it was a nickname for Alfred (Al) E. Smith, governor of New York and an unsuccessful presidential candidate in 1928.

hara-kiri. The word isn't spelled *harikiri* or *hari kari* and doesn't mean "happy dispatch," as many people believe. Formed

from the Japanese *hara*, “belly,” and *kiri*, “to cut,” *hara-kiri* literally means “belly cutting.” It is, of course, the Japanese method of suicide by disemboweling, practiced especially when honor is lost, and is said to have been first turned to by Tametomo, brother of ex-Emperor Sutoku, in the 12th century, after he suffered a devastating military defeat. *Hara kiri*, which Mencken also gives as the name of a cocktail, was one of the first Japanese words to come into English, introduced shortly after *tycoon* in 1856. *Hara-kiri* is seldom used by the Japanese, who find it vulgar and offensive, the proper term is *seppuku*.

harass. Though it means inflicting any kind of unpleasantness today, to *harass* originally had a much stronger meaning, as its derivation shows. *Harass* derives from the Old French verb *harer*, meaning “to set a dog on,” and came into English early in the 17th century.

harbinger of spring. The robins flying north or the swallows returning to Capistrano are harbingers: messengers who announce that spring is coming. It's hard to imagine this expression having its roots in war, but it does. *Harbinger* derives from the Old High German *hari*, “an army,” and *bergan*, “to lodge.” In English it was first spelt *herbergeour* and meant one who provides or obtains lodgings for the military. Later the word changed in meaning, describing someone sent ahead to obtain lodging for a party of travelers, and finally it came to mean someone who goes forth in advance to announce the coming of travelers or things—like the swallow, robin, and other harbingers of spring.

hardanger. Elaborate embroidery work that is named after the area in Norway where it was originally made by Norwegian craftsmen and craftswomen.

hardball. See PLAY HARDBALL.

hard-boiled. Tough, strict, unsentimental. The comparison is to a hard-boiled egg, a term that dates back to early 18th-century England. The American tough-guy use of the word dates from the late 19th or early 20th century. American writers seem to like the expression; Mark Twain, Eugene O'Neill, Theodore Dreiser, Maxwell Anderson, Raymond Chandler, and Ernest Hemingway are among the many writers who have used it. Wrote Hemingway, a tough guy who knew the score, in *The Sun Also Rises* (1926): “It's awfully easy to be hard-boiled about everything in the daytime, but at night it is another thing.”

Hard-Core State. See BEAVER STATE.

a hard day's work makes a soft bed. An old New England proverb rarely heard anymore.

harder'n climb'n a peeled saplin' heels upward. An old expression from frontier days describing something very difficult.

hard fight with a big stick. A difficult task or job to perform: “Don't know if I should take it on or not. It's a hard fight with a big stick.”

hard hat. *Hard hat* used to be a designation for a man who wore a derby hat, especially Eastern bankers and businessmen during the 1880s. A century later, in the late 1960s, it came to mean a construction worker, because of the metal or plastic safety helmets such workers wear. Because these hard hats often clashed with antiwar demonstrators during the early 1970s and supported the war in Vietnam, the term *hard hat* also came to mean a political conservative.

hard-on; heart-on; horny. The taboo slang term for an erection is often slurred in speech out of embarrassment, so that it is difficult to tell if the first word is pronounced *hard* or *heart*. Both words are actually used interchangeably in the expression, *hard* obviously referring to the erect penis and *heart* perhaps referring to the shape of the glans of the *membrum virile*. The term goes back only to about 1860 and was preceded in use by the expression *to have the horn*, which gives us the slang *horny*: lustful, sexually aroused.

hard-shelled Baptist. Often called simply a “hardshell,” but in both cases a strict Baptist who proclaims hellfire. Such a Baptist can be a member of the Primitive Baptist Church or an Old-School (Antimissionary) Baptist, a Baptist who judges everyone very strictly by his beliefs and rules, even himself in many cases. “What I don't like about hardshells, they think everybody but them is goin' t' hell—even the dead little babies,” wrote Carl Carmer in *Stars Fell on Alabama* (1934).

hardtack. A century ago, *tack* meant food of any kind. Sailors took to calling hard biscuit—biscuit that was hard and lasted through long voyages in rough weather—*hard tack*, or what we'd more often call *dog biscuits* today.

hard up. When the weather was bad at sea *Hard up the helm!* was the order given and the tiller had to be put up as far as possible to the windward in order to turn the ship's head into the wind. These words came to mean “to weather the storm as best you can” and then took on the meaning of being short of money or some other necessity—that is, the condition of someone weathering a “storm.”

hard wood. In days past, woods that decayed relatively quickly, such as beech, birch, and maple, were called *hard wood* in Maine, while they were called *light wood* in other places. Oak, generally considered a hard wood today, wasn't so regarded at the time.

Hardy's heart. Thomas Hardy died on January 11, 1928. On Monday, January 16, his heart was buried at Stinsford church graveyard in the grave of his first wife among the Hardy tombs. At the same hour, his ashes were laid in Poet's Corner of Westminster Abbey.

Hardy's last book. Thomas Hardy was proud of his many years, and when preparing his *Winter Words* for publication in 1928, he wrote in the preface, “So far as I am aware, I happen to be the only English poet who has brought out a new volume of verse on his—birthday . . .” He had intended to write “eighty-

ninth” in the blank space, but didn’t quite make another birthday—the book appeared posthumously.

harebrained scheme. A foolish or stupid plan made by a foolish or stupid person. The hare is traditionally regarded as a foolish animal, especially the one who lost the race to the tortoise.

harem. Used by the Greeks before any Arabian, and called a *gynaecium* by them, *harem* does take its name from the Arabian *harim*, “sacred or forbidden place.” *Harem* first meant the section of a house in which the wives and concubines of a Muslim lived and then was applied to the women themselves.

hark! Be still, keep quiet, listen. “Hark, hark, the dogs do bark!” they used to say in my grandmother’s day.

harlot. William the Conqueror, known in history as the Bastard, was the result of a union between Arlette or Herleva, the attractive daughter of the tanner Falbert of Falaise, and Robert le Diable, duke of Normandy—perhaps even, as the old tale says, when Robert the Devil came cantering by, saw Arlette kneeling naked washing her clothes and dismounted from his horse. But Arlette’s name doesn’t give us the word *harlot*, which was born long before her illegitimate son and most probably derives from the old German *hari*, “army,” and *lot*, “loiterer,” meaning “an army camp follower.” *Harlot* first signified a person of low birth and applied to both men and women before taking on its present meaning of a female prostitute.

harmattan. See MONSOON; WINDS.

harmonica. See STORMONTER.

harp. Long synonymous with an Irishman, this derogatory expression stems from the use of the harp as the national symbol of Ireland. One of many legends about the word’s origin says that an early King David of Ireland took the harp of the psalmist as his badge. Another story says the Irish were so called because in days past they were often gamblers who flipped coins, calling “harp!” for tails because the shilling had a harp engraved on one side. The musical instrument called a harp takes its name from the Old English *hearpe* meaning the same. See also DAGO; KIKE; WASP; WELSH.

Harper’s Ferry, West Virginia. This beautiful little town in easternmost West Virginia on the bluffs at the confluence of the Potomac and Shenandoah Rivers is famous in American history because the old fanatic abolitionist John Brown was captured and hanged there just before the Civil War. The town takes its name from one Robert Harper, who established a ferry at the site in 1747.

harridan. The French *haridelle* means a worn-out wreck of a horse. From this word comes the English harridan, “a haggard, disreputable old woman, a vicious or violent old hag.”

harrier. Harriers were a breed of small hounds developed to hunt hares long before the word was used as a synonym for cross-country runners. The application of the word to human runners arose out of a game called “hounds and hares” or the “paper chase,” in which one team of runners (the hares) would run through the woods leaving a trail of paper scraps that the other team (the hounds) would follow, trying to catch the hares before they reached the finish line. The name *harrier* was soon given to the “hounds” and finally it became a synonym for all cross-country runners. See PAPER CHASE.

Harriet Lane. *Harriet Lane* is a merchant-marine term for Australian canned meat, because it supposedly resembled the chopped-up body of the girl murdered by a man named Wainwright in about 1875.

Harry S. Truman. The S in the American president’s name has been the subject of stories for over half a century now. According to an April 12, 1945 Associated Press dispatch, “[It] is just an initial—it has no name significance. It represents a compromise by his parents. One of his grandfathers had the first name of Solomon; the other Shippe. Not wanting to play favorites, the President’s parents decided on the S.”

Hart Island. Named for Peter Hart, a New York City policeman and hero of the Civil War, this East River island, off City Island in the Bronx, has been the home since 1869 of New York City’s Potter’s Field, or city cemetery, where the city’s unknown and unwanted poor are buried. The dead are taken to the potter’s field from City Island by the “Last Ferry” and buried in mass graves containing hundreds of cheap pine coffins. Few New Yorkers have been to Hart Island, and few would want to go there, before or after death. It is a dreary, barren place where little respect is shown for the dead, and where their bones, called *leather* by the Riker’s Island prisoners who do the burying, are frequently washed to the surface of the graves after heavy rains.

Hart Schaffner Marx. An anonymous poker player, perhaps someone dressed in one of this American clothing manufacturer’s suits (jacket off, shirtsleeves rolled up), probably coined this term for a hand containing three jacks. In any case, the term has become an amusing, little-known part of the game’s vocabulary.

Harvard beets. Harvard beets, often called pickled beets, are made from sliced beets cooked in sugar, cornstarch, vinegar, and water. There is no record that the dish was invented at Harvard University, but it is said that the unknown chef noticed the resemblance in the color of the deep red beets to the crimson jerseys of the then vaunted Harvard football team. Harvard, the first institution of higher learning in North America, bears the name of John Harvard (1607–38), an English minister who lived for a time in Charlestown, Massachusetts, and later willed the fledgling university half his estate and his library of over 400 books. Cambridge, Massachusetts, where Harvard is located, was named for England’s Cambridge University.

harvest; aftermath; defalcation; threshold; tribulation. The harvest was so important in ancient times that the word *haer-*

fest, or *harvest*, became the Old English term for autumn as well as for the gathering in of crops. This usage prevailed well into the 10th century, when *harvest* began to be used exclusively to mean the gathering in of wheat (called “corn” in England) and finally crops in general. The German word for autumn is still *Herbst*, which is related to the English *harvest*. *Harvest* is cognate with the Latin *carpere*, to pick. A number of English words have their roots in the harvest, words that most people would not expect to have a botanical heritage. In Roman times, for example, harvested grain was ground with a heavy roller called the *tribulum*. Being ground under and pressed out by this machine soon suggested the word *tribulation* to those who felt that they were under similar pressure. The Anglo-Saxons had a harvest ceremony called the threscan in which people stamped on piles of dry wheat, separating the grain from the stalks. This action resembled the stamping of feet when people cleaned their shoes against the sills of wood or stone that marked the doorways of houses and soon the sill came to be called the threshold of a house. Misappropriation of money or funds by an official trustee or fiduciary is called defalcation. This word has its roots in the Latin *falculus*, sickle, which yielded the verb *falcare*, to cut. The Latin *de*, down, plus *falcare*, means to cut down. Someone guilty of defalcation thus cuts down someone else’s possessions as a farmer might cut down grain with a sickle when he harvests it. The after mowth, which later came to be pronounced *aftermath*, is the second or later mowing, the harvest of grass that springs up after the first hay mowing in early summer when the grass is best for hay.

Harvey Smith. Here is a man whose name means “the finger,” or, anyway, two fingers, meaning the same. Harvey Smith, a well-known British show-jumper, saw his name become better known after he “was alleged to have raised two fingers” at the judge of a 1971 competition. A *Harvey Smith* came to mean “the obscene gesture” in English, and still does, though, of course, the gesture dates back much further than Mr. Smith, and will almost certainly last longer than this probably apocryphal eponymous word. Harvey Smith, for his part, claimed that he simply made a V for victory sign.

has a screw loose. Is crazy, eccentric; apparently this common saying had its origins in America, as perhaps did the similar expressions following: cracked, a little off, ain’t all there, and so on.

hash. Horne Tooke’s *Diversions of Purley* (1786) derived *hash* from the Persian *ash*, or stew. An ingenious derivation, but completely wrong, as *hash* comes from the French *hacher*, “to cut up,” which also gives us the word *hatchet*. As a noun meaning the common meat dish, *hash* is first recorded in Samuel Pepys’s *Diary* (13 Jan. 1663): “I had . . . at first course a hash of rabbits, a lamb.”

has more wrinkles on his horns. Said of someone who has become older and wiser with experience, like wild cattle whose horns wrinkle with age. “He’s smarter now, has more wrinkles on his horns.”

hassayampa. *DARE* traces this Western word for someone given to exaggeration, or a liar, back to 1901 and says it de-

rives from the name of the Hassayampa River in Arizona, the river’s name in turn, probably coming from a Yuma Indian word. The term was first applied to old prospectors with wondrous but untruthful stories. Why was the river associated with liars and lying? According to the *Dictionary of American Folklore*: “There was a popular legend that anyone who drank of the Hassayampa River . . . would never again tell the truth.”

hassle. Some etymologists believe *hassle*—a fight, or trouble—is a blend of *harass* and *hustle*; others say *haggle* and *tussle*; while still others opt for *haggle* and *wrestle*. On the other hand, *hassle* may derive from the southern American dialect word *hassle*, meaning “to breathe heavily.” All that is certain is that the word is first recorded in 1945. The hassle about *hassle*’s origins goes on.

hasta la vista, baby. This phrase has become a well-known U.S. cliché since Arnold Schwarzenegger uttered it in his film *Terminator 2* (1980). It means “goodbye,” *adios* in Spanish, Schwarzenegger uttering it as he dispatched a victim. Other less hackneyed Spanish terms for goodbye include *hasta luego* and *hasta mañana* (see you tomorrow).

haste makes waste. A saying recorded in John Heywood’s *The Proverbes of John Heywood* (1546), the earliest collection of English colloquial phrases, containing scores of them.

hasten forward quickly then. A phrase invented by the dynamic Theodore Roosevelt when he operated a ranch in the late 19th century. The phrase, instructing a cowboy to get busy during a roundup, became popular throughout the country.

hasty pudding. John Bartlett in his *Dictionary of Americanisms* (1850) defines this as “Indian meal stirred into boiling water until it becomes a thick batter or pudding . . . eaten with milk, butter, and sugar or molasses.” It is mentioned in a verse of the Revolutionary War song *Yankee Doodle*: “Father and I went down to camp,/ Along wi’ Captain Goodin,/ And there we see the men and boys,/ As thick as hasty puddin’.” But its most famous mention is in Joel Barlow’s mock-epic *The Hasty Pudding* (1793), which the poet wrote in a Savoyard inn in France when he was served a dish of boiled Indian meal that reminded him of Connecticut. Part of it goes:

Thy name is Hasty Pudding! thus our sires
Were wont to greet thee fuming from their fires;
And while they argued in thy just defence,
With logic clear they thus explain’d the sense:
“In *haste* the boiling caldron o’er the blaze
Receives and cooks the ready-powder’d maize;
In *haste* ’tis serv’d; and then in equal *haste*,
With cooling milk, we make the sweet repast.”
Such is thy name, significant and clear,
A name, a sound to every Yankee dear.

Hasty Pudding Club. The oldest American theatrical social club and perhaps the best-known is Harvard’s Hasty Pudding Club, founded in 1795 and named after Joel Barlow’s mock-epic poem “The Hasty Pudding.” Over the years its theatricals

have featured as performers and writers such notables as Oliver Wendell Holmes, William Randolph Hearst, Franklin Delano Roosevelt, and Robert Sherwood.

hat city of the world. An old name for Danbury, Connecticut, where numerous hat factories were located and many “mad hatters” suffered from the tremor known as the hatter’s shakes, caused by the mercury used in the making of felt hats. *See* MAD AS A HATTER.

hate someone’s guts; have his guts for garters. The former phrase is first recorded in a 1901 letter to Teddy Roosevelt from William Allen White, famous independent publisher and editor of the (Kansas) *Emporia Gazette*. White, however, used the euphemism *intestines* in his letter: “I hate his intestines. It seems to me that there is no man in American politics that I have such an utter loathing and contempt for.” The latter *guts* phrase sounds as if it might be from Texas, but I cannot find it recorded anywhere. I’ve heard it two or three times, as in “He’d better be on time or I’ll have his guts for garters!”

Hatfield-McCoy feud. *See* RAZORBACK.

hat trick. British cricket bowlers in the 19th century were awarded a new hat, or the proceeds of a collection made by passing a hat, when they bowled down three wickets with three successful balls. This practice is the origin of the American phrase *hat trick*, used for a jockey who has three consecutive winners, a hockey or soccer player who scores three goals in one game and, less often, a baseball player who hits for the cycle (that is, a batter who hits a single, double, triple, and home run in one game).

haul ass. To leave with haste, depart quickly. “Let’s haul ass out of here.” The term originated in the South but has some national use today.

haul over the coals. Heresy in medieval times was determined not by a jury trial but by ordeal by fire. Accused persons were hauled or dragged over the coals of a slow fire and those who burned to death were considered guilty of departing from the teachings of the church; those who survived were pronounced innocent. From this and similar barbarous practices in 15th- and 16th-century England, comes the expression *to haul over the coals*, for “a severe reprimand or censure.”

Haussmannization. *Haussmannization* is frequently heard today in connection with the blight and plight of cities around the world. To *Haussmannize* means to remodel a city along beautiful lines and celebrates Baron Georges-Eugène Haussman (1809–91), who administered a face-lifting to Paris, starting in the middle of the 19th century. While prefect of Paris, Haussmann completely remodeled the city. He laid out the Bois de Boulogne and other parks; constructed new streets and widened old ones; instituted a new water supply and sewer system; created wide, open spaces and vistas; and built new bridges, railroad stations, and numerous public buildings. These and many other improvements required expenses and loans that resulted in a public debt of hundreds of millions and eventually

led to Haussmann’s dismissal in 1870, 17 years after he had begun his plan. Interestingly, Haussmann was trained not as an architect but as a financier. The Boulevard Haussmann also bears his name.

have a bear by the tail. This is another of those colorful expressions (*see* A BEAR FOR WORK) that arose in America during the first half of the 19th century. *To have a bear by the tail* is to be in a bad situation—you’re in trouble whether you hold on or let go!

have a brick in one’s hat. To be drunk. According to Mainer Timothy W. Robinson (*American Speech*, 1948): “At the time [matches] were made so that one using them had to have a brick to scratch them on, and the saying was that he carried a brick in his hat, so when anyone had been to the store [for liquor] and walked a little crooked, the boys would say ‘he had a brick in his hat.’” This may or may not be the origin of the expression, but it is an old one—Longfellow used it in his poem *Kavanaugh* (1849).

have a burr in (under) his saddle. An old Western expression still said of someone who is extremely irritated or agitated, even impatient.

have a card up one’s sleeve. To have an unexpected hidden advantage. The expression most probably comes from gambling with a cardsharp in a rigged game of cards in the West, but is now mostly used figuratively. *To have an ace up one’s sleeve* (qv) is also often heard but is recorded earlier. One British politician accepted Prime Minister Gladstone always having a card up his sleeve, but did object to his invariably insinuating that “the Almighty had placed it there.”

have a field day. Beginning in the mid-18th century the British army held field days featuring military exercises and display. The term soon was applied to outdoor gatherings such as picnics, and then to field days at schools devoted to outdoor sports and athletic contests in which winning was not as important as having a good time. From these last field days came the expression *to have a field day* meaning to indulge oneself freely and successfully, to go all out, as in “the papers will have a field day with this story.”

have a good (nice) day. As William Safire points out in *On Language* (1980), Chaucer used the expression “Fare well, have a good day” in “The Knight’s Tale” of the *Canterbury Tales* (1387). It is still common today, with the variation *have a nice day* probably even more prevalent since about 1970. Writers have railed against both banal expressions, but they are harmless enough and usually said with good feeling.

have an oar in another’s boat. *See* ALL IN THE SAME BOAT.

to have a screw loose. Said of an eccentric person, someone who isn’t functioning properly. “He’s got a screw loose but he’s harmless.”

have at one's fingertips. To have thorough familiarity or knowledge of a subject. The phrase isn't recorded until 1870 in America, but it is obviously an elaboration of the much earlier *to have at one's fingers' ends*, which is recorded in England in 1553 as a familiar saying.

have fishhooks in one's pocket. To be very cheap. First recorded in 1913, the Americanism may have originated much earlier with Long Island, New York, sea captain Samuel Mulford. Mulford lined his pockets with fishhooks to foil pickpockets when he visited London before the American Revolution. His ploy worked.

havelock. Sir Henry Havelock (1795–1857) was rarely in fashion—it took him 23 years to be promoted to captain, for example—but this most British of British soldiers did eventually do well. Havelock, an evangelist as well as a soldier, served over 34 years with the British Army in India, taking only one leave home in all that time. Known as “the Saint” to his men for his habit of trying to convert everyone under his command to temperance and moderate ways, he was indeed among the fussiest and most tiresome of men. But as to his military ability and bravery there is no doubt. Havelock led his troops to many victories during the Sepoy Rebellion (1857) and is remembered for his recapture of Cawnpore and his stand at Lucknow until reinforcements arrived. The general died of dysentery brought on by the arduous Lucknow defense. The *havelock*, or covering, that he had devised for his “Ironsides” brigade wasn't his invention; similar helmet coverings had been used since the Crusades. This trademark of the French Foreign Legion in films was fashioned of white linen, hanging halfway down the back and protecting the neck from the sun.

have one's game shoes on. A phrase from football that means to be ready to go, to play very well, come prepared.

have one's heart in one's throat. To be very anxious, tense, frightened. Dating back four centuries, the expression was first *have one's heart in one's mouth*, and it is sometimes still heard that way. *My heart was a lump in my throat* is also used today.

have one's innings. *Inning* has its roots in British cricket where *innings* (always spelled with an s but considered singular) means a time at bat for a batsman, because that player is “in” at bat while the opposition team is “out” on the field. It is from the cricket *innings*, not baseball's borrowing of it, that we get the expression *to have one's innings*, one's opportunity or chance or one's time at bat, as it were. Other expressions stemming from cricket include *to keep one's end up*, *to catch up*, and *to bowl over*. See also BOWL OVER; CRICKET.

have one's number on it. The widely accepted belief in the American military that the bullet, grenade, shell, or bomb that kills one is marked by fate with one's number. *Number* could refer to one's serial number; American soldiers all wore identity tags or DOG TAGS at the time the expression was first recorded during World War I.

have other fish to fry. To be busy, usually with something important, so that one can't do anything else at the moment. The old American phrase is still heard today, often with variations, as in this example from the television series *The West Wing* (7/25/01): “I've got a bigger fish to fry.”

haves and have-nots. The *haves* and *have-nots* are the rich and poor of any society. The term is not of recent vintage as one might expect. In fact, Cervantes may have invented it in *Don Quixote* (1605–15) where he has Sancho Panza say: “There are only two families in the world, the *haves* [*el tenor*] and the *have-nots* [*el no tenor*].” See also QUIXOTIC.

have someone's number. To know someone's weaknesses, to have great insight into someone's thoughts and actions. There seems to be no widely accepted explanation of the word *number* in the phrase, the telephone having been invented long after the expression's first recorded use in 1853.

have the edge. A player to the left of the dealer in 19th-century American poker games often had the right to continue in the game or drop out. This was called *to have the age*, and the poker term began to be used outside the game, as when Mark Twain in a 1907 magazine article wrote, “How could I talk when he was talking? He ‘held the age,’ as the poker-clergy say.” Soon the *age* in the expression became *edge*, due to the similarity in pronunciation and the aptness of *edge* in the phrase, and *to have the edge* came to mean to have any advantage.

have the goods on. The goods here are stolen goods, those found by the police on a criminal and almost assuring his conviction. The phrase dates back only to the early 1900s, and “goods” may have referred specifically to bogus money made by counterfeiters before it was applied to stolen goods in general. Soon after its introduction, the expression was being used generally for “to have knowledge giving one a hold over another.”

have the inside track. This phrase means “to have an advantageous position in any competitive situation.” The expression is from American track and field and dates back to the mid-19th century. The inside track or lane on a race course is the shortest and the runner positioned in it has the least distance to run (which is why many races have staggered starts).

have the luck of Hiram Smith. Few, if any, soldiers have been as unlucky as Hiram Smith, who fought in the Aroostook War of 1836–39, a war between New Brunswick and Maine over land near the Aroostook River on the U.S.-Canadian border. When New Brunswick sent loggers into the area, Maine authorities recruited a force to eject them. There were several clashes between 1838 and 1839 before an agreement was reached by General Winfield Scott's troops, the conflict known as the “Bloodless War.” However, one person was killed in the war—luckless Hiram Smith, the only person to die in the entire war, whose luck was at least as bad as any soldier before or since.

have the world by the tail. When they say this in Texas, as they have for a century, it means they have everything going exceedingly well for them. When they have the world by the tail on a downward pull, things are even better.

have to see a man about a dog. A way to excuse oneself on leaving the room to use the bathroom. A common saying since the late 19th century.

have words with someone. These words, denoting a verbal altercation, go back at least five centuries, though in a slightly different form. We find the expression was first *at words* (1462). After that, various phrases such as *to fall at words with*, *to have hard words with*, *high words with*, and *sharp words with* have all served to express the same idea.

haw. The fruit of the Old World or English hawthorn (*Crataegus monogyna*), which can be red or yellow, is called “haw” or “hall.” These names are also used for hawthorns themselves. In the language of flowers, hawthorn is the symbol of “good hope” because it is a spring flowering tree that shows winter is over. Commonly called the “thornapple” for its thorny trucks, which make impenetrable barriers, the hawthorn’s lovely flowers were used to crown Athenian girls at weddings, and the Romans placed leaves of the hawthorn on the cradles of newborn infants to ward off evil spirits. In China, the fruit or haws of the Asiatic hawthorn is considered a delicacy.

Hawaii. Hawaii is from *Owykee* or *Hawaeki*, which means “homeland” in the native language. Our 50th state, admitted to the Union in 1959, was previously known as the Sandwich Islands (see SANDWICH) and is nicknamed “the Aloha State” (see ALOHA).

Hawaiian words in English. Hawaiian and South Sea Island languages such as Tongan and Tahitian have contributed a number of words to English, including tattoo, taboo, lei, atoll, muumuu, poi, ukelele, and sarong (a borrowing from the Malay language).

hawk. *Hawk* for an eager advocate of war didn’t come into the language during the Vietnam War, as is often believed. Thomas Jefferson coined the term *war hawks* in 1798 to describe Federalists crying for war with France, and the modern term *hawk* was first given to those of John F. Kennedy’s advisers who during the Cuban Missile Crisis of 1962 wanted the president to get tougher with Cuba and the Soviet Union.

Hawkeye State. A nickname for Iowa dating back to at least 1839, when *Hawkeye* described an Iowan. Candidates for the original Hawkeye after whom Iowans were named include a great Indian chief; newspaper editor James Gardiner Edwards, known as “Old Hawkeye”; and Natty Bumppo, hero of James Fenimore Cooper’s *The Last of the Mohicans* (1826), whose nickname was Hawkeye.

hawkweed. See KING DEVIL WEEDS.

hay is for horses. One of the earliest and most enduring of catchphrases, *hay is for horses* is a retort to someone who cries out *hey!* It is first recorded in Jonathan Swift’s *Polite Conversations* (1738):

Neverout: Hay, Madam did you call me?

Miss: Hay! Why; hay is for horses.

Hayism. “Acidosis,” Dr. William Howard Hay advised in his book *Health Via Food* (1933), causes almost all bodily ills. Therefore, since proteins need acid for their digesting and carbohydrates require alkaline conditions, such foods should not be eaten in combination—no milk with your potatoes or vice versa—for “no human stomach can be expected to be acid and alkaline at the same time.” Hays ignored the fact that most foods contain mixtures of proteins and carbohydrates. Like most food fads his regimen had its loyal, even fanatical followers. Hayism, incidentally, recommended frequent fasting—which is said to cause acidity or acidosis.

haymaker. “Gentleman Jim” Corbett used this colorful expression for a heavy, swinging blow, usually a knockout, in his autobiography *The Roar of the Crowd* (1925). It originated a decade or so earlier, in about 1910, and was popularized by radio boxing announcers. The term probably derives from the slang expression *to make hay*, “to take full advantage of one’s opportunities,” and *the hay*, “sleep or unconsciousness.” The idea of a worker swinging a scythe while haymaking is also suggested.

Hays Code. Long the moral code of the American film industry, the *Hays Code* commemorates Will Harrison Hays (1879–1954). “Czar” of the movies, Hays served as first president of the Motion Picture Producers and Distributors of America from 1922 to 1945. A former chairman of the Republican National Committee and postmaster general under Harding, he helped formulate the so-called *Hays Code* in 1934 and zealously administered it from what was dubbed the Hays Office.

hayseed. See CLODHOPPER.

haywire. A fairly recent autobiography entitled *Haywire* shows that this Americanism still has a long life ahead of it, even though its rural origins are remote from most Americans now. Someone or something gone haywire is confused, out of order, deranged, crazy. The expression is first recorded toward the beginning of the century and was suggested by the baling wire, or haywire, that farmers and ranchers used to tie bales of hay. When a bale of hay was opened with a hatchet to feed livestock this thin sharpened wire would spring out and whirl about a farmer, the sharp ends frequently cutting him or snagging in his clothing. Old haywire lying around—and there was of course much of it—also wound about the legs of horses and other livestock, hopelessly tangling them up. Finally, farmers used old haywire to make temporary repairs on everything from machinery to fences and houses—temporary repairs that were often never made permanent and gave their places a disorderly look. All of these associations, from the crazy leaping of the wire to the tangling up of livestock and the disorder created

by haywire, contributed to the coining of the colorful expression, which probably dates back to the 19th century, though first recorded in 1910.

hazard. *Hazard* has come to mean “random chance,” or “an unavoidable danger or risk, or something causing danger, peril or risk.” But the word originally meant a dice game, a usage it still has today. This is clearly seen in the word’s ancient ancestor, the Arabic *al*, “the,” and *zahr*, “die.” Because the cast of the dice is uncertain or risky, the word came into Spanish as *azar*, “an unexpected accident,” this becoming the French *hasard*, which became the English *hazard*.

H-bomb. See A-BOMB.

H.D. See IMAGIST.

he. See SHE.

he (she) found the hole. Said of someone very unlucky or stupid. The expression is a shortening of an old one-line joke: “He’s a guy that drowned in a river that was only six inches deep on the average—he found the hole.”

head. Heads, “latrines,” are so called because they were originally in the bow, or head, of a ship. Our word *head* for the upper part of the body joined to the trunk by the neck comes from the Old English for the same.

headache! A warning to “watch it!,” “heads up!” used by loggers, oilmen, and other workers in the U.S. over the past 70 years or so because a heavy object is overhead or coming down: “Be careful or you’ll get a headache,” that is, get hit on the head.

headline. Newspaper headlines are an American invention that came into frequent use during the Civil War, but the earliest known example blared forth from the front page of the Tory *New York Gazette* and the *Weekly Mercury* on October 20, 1777. Fortunately for the United States the headline was all wrong:

Glorious News from the Southward. Washington
Knocked up—The Bloodiest Battle in America—
6,000 of his Men Gone—100 Wagons to Carry
the Wounded—General Howe is at present in
Germantown—Washington 30 Miles Back in a
Shattered Condition—Their Stoutest Frigate
Taken and One Deserted—They are Tired—And
Talk of Finishing the Campaigne.

head nor tail. See CAN’T MAKE HEAD NOR RAIL OF IT.

head over heels. As you might suspect, *head over heels*, for “a state of helplessness” (“He’s head over heels in love with her”) was originally *heels over head*. For nearly 500 years it was used that way, until in the late 18th century it was popularly corrupted to its present topsy-turvy form. The allusion is probably to a somersault. There is no proof that the phrase is a translation of

Catullus’s *per caputque pedesque*, “over head and heels,” or that it alludes to the practice of hanging criminals by the heels as a warning in medieval times—though anyone so hanged would certainly have been helpless.

head peace. A colorful expression heard in Ireland for quiet, rest, as in “Play outside and give me some head peace.”

head ransom. The greatest poem of Icelandic author Egill Skall-Grimson (c. 910–980). He wrote it in 948 after being captured by his enemy Eirik Bloodaxe, ruler of York. Old Bloodaxe told him he would spare his life if he wrote in one night a magnificent poem honoring him. This proved just the inspiration Egill needed.

heads I win, tails you lose. Partridge calls this “a mock bet,” also meaning “I can’t lose,” and dates it back to 1846, although he claims it was anticipated by the phrase “Cross I win, Pils you lose” quoted in G. L. Apperson’s *English Proverbs and Proverbial Phrases*, 1926.

He ain’t heavy, Father, he’s my brother. The famous inscription, said to a priest, that appears on a statue at Omaha Boys Town. The statue shows an older boy helping a younger boy by lifting him up.

heap. Very, a lot; said to be a feature of American Indian speech in early times. According to *Blackwood’s Magazine* (LX-iii, 1848): “An Indian is always a ‘heap’ hungry or thirsty—loves a ‘heap’—is a ‘heap’ brave—in fact, ‘heap’ is tantamount to very much.”

hear, hear! The well-known British cry of affirmation or support often heard in Parliament. It was originally “Hear him! Hear him!,” a cry directed at the opposition when they tried to drown out a speaker by humming in unison. The “him” in the phrase was eventually dropped for the sake of brevity.

Hear, O Israel, the Lord our God, the Lord is One. The first line of the most common of Jewish prayers, the *Shema*, whose origin is Deut. 6:4–7. The prayer is recited several times daily and as a final affirmation of faith when a person is dying.

hear a different drummer. The expression is from Henry David Thoreau’s *Walden* (1850): “If a man does not keep pace with his companions, perhaps it is because he hears a different drummer. Let him step to the music which he hears, however measured or far away.” A variation is *march to a different drummer*.

heart-burial. Up until relatively recent times, heart-burial, the burial of the heart apart from the rest of the body, was commonly practiced. The heart of British poet Thomas Hardy, for example, was buried in Stinsford, England, while his ashes were laid in Poet’s Corner of Westminster Abbey.

hearth languages. Dying languages, usually European, that are spoken only by elders in one or another’s homes. These un-

scripted languages include *Vatian* in Russia, which has only a dozen or so speakers.

The Heart Is a Lonely Hunter. Though this is a title of a 1940 book by American novelist Carson McCullers (1917–67), it wasn't coined by her. Scottish poet William Sharp (1855–1905) is credited with the phrase, from his line in *The Lonely Hunter*: “My heart is a lonely hunter that hunts on a lonely hill.”

heart of oak. The solid inner part of an oak tree, which was traditionally used as the timber to build sailing ships. A popular British sea song called “Heart of Oak” (1757) had the lyrics “Heart of oak are our ships, / Heart of oak are our men. . . .”

heart of stone. English scholar John Wyclif was the first to use the term *herte of stoon*, recorded from his writings four years after his death in 1388. Since then the words have been used by many writers, including Dickens, so many, in fact, that they have become a cliché.

heart on one's sleeve. See WEAR ONE'S HEART ON ONE'S SLEEVE.

hearts-a-bustin'-with-love. A colorful old American name for the burning bush (*Euonymus americanus*), which has seed pods that burst open to reveal many scarlet seeds. It also goes by the names hearts-a-bustin', strawberry bush, swamp dogwood, arrowwood, and spindle bush.

hearts and flowers. A synonym for sentimentality that was first the title of a popular 1910 American song. Overuse of the song as background music played by violinists in sentimental dramas led to its title becoming synonymous with the overly sentimental. People began playing imaginary violins while humming “Hearts and Flowers” whenever they heard a sad story. Soon the song itself was forgotten and only the phrase and the mock playing of violins remained.

Heath Robinson contraption. William Heath Robinson (1872–1944) drew cartoons of complicated and impractical but clever and humorous machines or devices like Rube Goldberg contraptions. These were featured in *Punch* and other prominent British publications, his name becoming attached to the devices just as Rube Goldberg's did.

Heaven. See NEVAEH.

heavens to Betsy! No one has been able to uncover the origins of this old common exclamation of surprise, joy, or even annoyance. Etymologist Charles Earle Funk tried hardest, devoting several pages to the expression in his 1955 book of the same name. “Possibly the phrase was known in Revolutionary War days,” he writes, “but I doubt it. Nor do I think, as some friends have suggested, that it pertained in any way to the maker of the first American flag, Betsy Ross. It is much more likely to have been derived in some way from the frontiersman's rifle or gun which, for unknown reasons, he always fondly called Betsy. However, despite

exhaustive search, I am reluctantly forced to resort to the familiar lexicographical locution, “Source unknown.”

Heaving Day. See LIFTING MONDAY.

Heaviside layer. Increasing deafness forced Oliver Heaviside (1850–1925) to retire from his post with the British Great Northern Telegraph Company when he was only 24. The mathematical physicist and electrician devoted the remainder of his long life to theoretical investigations into electricity. In 1902 he suggested that a conducting layer of ionized gas exists in the upper atmosphere that conducts, reflects, and refracts radio waves. This Heaviside layer, about 60 miles above us, reflects radio waves back to earth, and enables reception around the globe. Because Edison's former assistant Arthur Edwin Kennelly (1861–1939) postulated the same theory shortly before the British scientist, the stratum is also called the *Kennelly-Heaviside layer*. Today it is more generally known as the ionosphere. See APPLETON LAYER.

heavy brass. See BRASS.

heavy dictionary. Used to describe a big or unabridged dictionary. “He opened the heavy dictionary and finally found the phrase.”

heavy hitter. A batter who consistently hits the ball hard, a power hitter, has been called a heavy hitter in baseball since at least the first recording of the term in 1887. By extension the term has come to apply to anyone powerful in any profession or undertaking, giving us *political heavy hitters*, *literary heavy hitters*, etc.

heavyweight. A boxer who is a heavyweight fights in the heaviest competitive class, which is now over 175 pounds. The term has been applied to fighters in that approximate division since about 1850 although formal weight classes in boxing weren't instituted until the Queensberry rules in 1872. In the United States the boxing use of *heavyweight*, combined with an earlier (1840s) use of *heavy* for wealthy or important, led to the expression *heavyweight* for any person, company, or other entity that is very powerful, influential, or important. See also LIGHTWEIGHT.

Hebrew words in English. Among the many Hebrew words that came into English, sometimes through other languages, are: amen, hosanna, manna, rabbi, Sabbath, Satan, seraphim, cherubim, sapphire, babble, behemoth, leviathan, cabal, shibboleth, jubilee, kosher, shekel, Torah, kibbutz, and hallelujah. See also YIDDISH.

he can run, but he can't hide. American fighter Joe Louis (1914–1981) said this before his bout with challenger Billy Conn in 1946 for the heavyweight title. Conn had a reputation for fancy footwork, but Louis caught up with him and knocked him out.

heck. Contrary to popular legend, Mark Twain didn't invent *heck* as a euphemism for “hell” to please his prudish wife. The

word goes back to Lancashire dialect several centuries ago, deriving from (*h*)eck!, an expression of surprise, or possibly from the Lancashire oath *go to ecky* meaning “go to hell.”

heckle. To *heckle* recorded as early as the 13th century, originally meant to disentangle and straighten flax fibers by drawing them through an iron comb. Since the fibers were disturbed by the comb, *heckle* also came to mean to annoy or harass someone, especially a public speaker.

hectic. *Hectic*, which derives ultimately from the Greek *hektikos*, meaning habitual, was first used in English in medicine, to describe a fluctuating fever. By the late 19th century it took on the meaning of intense or feverish activity, or confusion that it mainly conveys today.

hector. Why did Hector, Troy’s mightiest, bravest defender in Homer’s *Iliad*, become a blustering, domineering bully? His name, symbolic for a gallant warrior in early English literature, today means not only a bully, but to bully, torment, or treat insolently. The change seems to have taken place toward the end of the 17th century when a gang of young bullies, who considered themselves paragons of valiant courage, adopted the honorable name “Hectors.” This ruffian band insulted passers-by, broke windows, and became notorious for their bullying, terrorizing the streets of London. It is probably from their name that *hector* and *to hector* derive, rather than from that of the exalted magnanimous Hector, noble in victory and in defeat. Some scholars point out, however, that Hector was represented in medieval drama as boastful and domineering, possibly from the notion that any hero is swashbuckling and blustering. See SINCE HECTOR WAS A PUP.

hedge. *Hedge*, in the form of *hegge*, is recorded in English as early as 785, referring to rows of bushes or trees, such as privet or hawthorn, planted in a line to form a boundary. In time the word *hedge* came to mean a safeguard and by the 16th century writers were using the word as a verb, meaning to protect oneself with qualifications, to avoid committing oneself. Shakespeare was the first to record the expression, in *The Merry Wives of Windsor*.

hedge word. A good story about these common disclaimers of responsibility concerns Mark Twain and his first job as a reporter. Twain was told by his editor never to state anything he couldn’t verify by personal knowledge. After covering a gala social event, he hedged his bets by turning in the following story: “A woman giving the name of Mrs. James Jones, who is reported to be one of the society leaders of the city, is said to have given what purported to be a party yesterday to a number of alleged ladies. The hostess claims to be the wife of a reputed attorney.” The use of such disclaimers does *not* automatically confer immunity from prosecution for libel, as the law punishes *publication* of a libel, which, legally, means “making public.”

he doesn’t know where he lives. Someone extremely dumb. Originally a British catchphrase dating back to the early 1920s.

he’d steal the butter off a blind man’s bread, and put him on the wrong road home. Said of a no-good person, someone with no scruples at all; quoted in Frank O’Rourke’s *Last Ride* (1958).

heebie jeebies. Cartoonist Billie DeBeck (1890–1942), who invented “hotsy tots,” “hot mama,” and other slang expressions, is credited by Mencken with this coinage, for “a feeling of nervousness, fright, or worry”—the willies or jitters. What he based the rhyming compound on, outside of a sheer joy of sound, is hard to say. One guess is that it is a “reduplicated perversion” of “creepy” or “the creeps.” More likely DeBeck took the expression from the name of a dance called the Heebie-Jeebies popular in the 1920s, a dance that inspired a popular song titled “Heebie Jeebies” (1926). The dance, of American Indian ancestry, is said “to represent the incantations made by Red Indian witch doctors before a sacrifice.”

heeler. In the early days of Texas dogs were trained to catch and herd cattle. Often of the bulldog breed, they were called *heelers* because they typically caught the heel of the cow in their jaws.

heffalump. This animal, better known as an elephant, was so named by British author A. A. Milne in his abiding children’s book *Winnie-the-Pooh* (1926). A *heffalump trap*, another enduring Milne creation, was, of course, a trap in which one might catch a heffalump. Children naturally pronounce *elephant heffalump*; adults have fun doing so.

he gets the nut who has no teeth. A proverbial phrase coined by the Moorish scholar and author Al-Hadram (c. 1000). Al-Hadram found himself outbid for a rare book he needed by an old rich bidder who explained that he only wanted the volume because it was the exact size he needed to fit a vacant niche in his library. “I was so vexed,” Al-Hadram recalled later, “that I could not help saying to him, ‘He gets the nut who has no teeth.’”

hegira. Any flight, often a political one, to a more desirable place than where one is, is called a hegira. It is so called from the flight of Muhammad from Mecca to Medina in A.D. 622 to escape persecution by wealthy traders, a date regarded as the beginning of the religion of Islam.

He has a leak that will send him to hell. A nineteenth-century American expression, nautical in origin, describing someone or something with a fatal flaw.

he hath slept in a bed of saffron. This old Latin expression refers to the supposed exhilarating effects of saffron, meaning “he has a very light heart.” As an old poem puts it:

With genial joy to warm his soul,
Helen mixed saffron in the bowl.

One of the most expensive spices, saffron is made from the dried stigmas of crocuses.

Heimlich maneuver. U.S. physician Henry J. Heimlich (b. 1920) will be long remembered for this emergency rescue pro-

cedure used on someone choking on a foreign object. Dr. Heimlich invented the procedure in 1970, and it has since saved thousands of lives.

heinie. Our word for the buttocks has nothing to do with the offensive slang word for a World War I German soldier, which derives from the common German name Heinrich (Henry). *Heinie* here is an alteration of *hinder*, which comes from *hind*, the back or rear, the posterior. See HINEY.

Heinz hound. A humorous name for a mongrel dog. From the name of the Heinz Company, which long advertised HEINZ'S 57 VARIETIES of canned food (see below). Also called a "Heinz dog" and a "Heinz."

Heinz's 57 varieties. The original Mr. John Heinz, forebear of the late millionaire U.S. senator, adapted his company's famous slogan from a New York City billboard ad he saw featuring "21 Styles of Shoes." Heinz actually had 60 varieties at the time he coined the slogan in 1892, but he thought an odd number sounded better. The company used its "57" slogan until 1969.

Heisman Trophy. The Heisman Memorial Trophy has been called the ultima Thule for undergraduate football players, being awarded annually since 1935 to the best of their breed in the country. It is named for John W. Heisman, former Georgia Tech coach. Called "Shut the Gates of Mercy" Heisman, the coach was a great mentor, though not noted for being a gentleman on the playing field. On one occasion he allowed his team to rack up an incredible 222 points against an opponent. Notable Heisman Trophy winners include Tom Harmon of Michigan (1940), Paul Hornung of Notre Dame (1956), and O. J. Simpson of Southern California (1968). Jay Berwanger of the University of Chicago won the initial award in 1935.

he is not being executed, he is being shot. The death penalty had been abolished in Soviet Russia when Admiral Aleksie Shchastny was sentenced to be shot. Spectators in the court that day in 1918 began to stir when the state prosecutor explained: "What are you worrying about? Executions have been abolished. But he is not being executed; he is being shot." This most extreme of euphemisms is recorded in Aleksandr I. Solzhenitsyn's *Gulag Archipelago* (1974).

he kept us out of war. The political slogan *he kept us out of war* has been used in two American presidential campaigns. The Democrats used it in 1916 to help return Woodrow Wilson to the White House, only to have Wilson ask Congress to declare war on Germany a year later, "to make the world safe for democracy." In 1956 the Republicans used it to sell Dwight D. Eisenhower as a peacemaker in Korea, though it took a backseat to the very popular "I like Ike." See EISENHOWER JACKET.

helicopter; whirlybird; chopper. The helicopter was named before it was invented. *Helicopter* came into the language about 1885 from the French *hélicoptère* as the name of a purely theoretical heavier than air craft capable of horizontal and vertical

flight. Such an aircraft, like the airplane itself, had been sketched by Leonardo da Vinci four centuries earlier. After many experiments by many inventors, Russian-born U.S. aeronautical engineer Igor I. Sikorsky (1889–1972) and Germany's Heinrich K. I. Focke designed the first successful modern helicopters in 1937–41. By the time of the Korean conflict (1950) helicopters were called "whirlybirds" and, more commonly, "choppers," even though the slang word *chopper* also means a tommy gun, a motorcycle, the penis, and even death itself, "to get the big chopper." A rare humorous synonym for the helicopter is *heli-goflipter*, while the earliest name (1926) for a helicopter pilot, *helicopterist*, is almost never heard anymore, *jockey* or *chopper jockey* often being the terms for the people who fly the choppers. See JOLLY.

heliotrope. Many plant leaves and flowers turn toward the sun. The ancient Greeks noticed that this fragrant vanilla-scented perennial flower (*Heliotropium arborescens*), often called "cherry pie," did so and called it the *heliotrope*, from the Greek *heleo*, "sun," and *trepo*, "turning to go into it." Another fragrant flower sometimes called heliotrope, and also called "cherry pie" for its blossoms, is common valerian (*Valeriana officinalis*), probably named for the Roman Emperor Valerianus. A Greek legend says the god Apollo loved the ocean nymph Clytie but abandoned her for her sister, whereafter she died of sorrow. A remorseful Apollo changed the dead Clytie into a living flower that always turns toward the sun.

Helius. See ISLAND OF THE SUN.

hell. *Hell* is a colorful name for thick tangles of rhododendron or laurel so vast that people become lost in them. These huge thickets are also called "laurel hells," and they are most common in southern mountain areas, where this term seems to have been coined.

hell afloat. Usually old hulks no good for sailing anymore, British prison ships were the concentration camps of the Revolutionary War. It has been estimated that they took the lives of more American fighting men (11,000 to 15,000) during the Revolution than enemy rifles did. Such ships were often dubbed *hell afloat* by the prisoners, whatever the ship's real name.

Hell and Texas. Civil War general Phil Sheridan said that if he owned both Hell and Texas, he'd "rent out Texas and live in Hell."

hellatious. Excellent, terrific. "She's one hellatious bird-dog. Never seen one like her before."

hell for leather. After pondering various theories about the origin of *hell for leather*, several scholars have determined that it is a British expression first recorded by Rudolph Kipling in *The Story of the Gadsbys* and used again by him in *Many Inventions* and *Barrack Room Ballads*. Kipling may have invented this phrase meaning "to travel at great breakneck speed" by horse or by vehicle, or it may have been an army expression he adopted. It clearly suggests a rider (trooper or civilian) riding at full speed and beating against the leather saddle he rides on. However, the great scholar Ernest Weekley in his *Etymological*

Dictionary of Modern English (1921) throws doubt upon this derivation. "My memory of it [the phrase *hell for leather*] goes back nearly fifty years," he writes. "Can it [hell for leather] be for *all of a lather* [the foam in a racing horse's mouth] with secondary allusion to *leather* in [the] sporting sense of skin as affected by riding?" This may true be, and I would certainly trust Weekley's memory of the expression first being used about 1870, some 20 years before Kipling employed it. A variation in the U.S. is *hell-bent for leather*, the word *leather* suggested by the hard use of a leather whip while riding a horse at a very fast pace.

Hell Gate. Before this famous narrow passage in New York's East River was blasted, thousands of vessels were wrecked against the rocks in its strong conflicting currents. Dutch mariners in early New York probably named it so, calling it Hel Gat, though some etymologists have suggested that the name derives from Dutch for "whirling gut."

hello. *Hello*, one of the most frequently used words in everyday speech, isn't recorded until 1883 or thereabouts. But in the form of *hallow*, its earliest ancestor, the word dates back to at least 1340 and was used by Chaucer. *Hallow* probably derives from the Old French *hallo-er* "to pursue crying or shouting." *Hello* came into fashion with the invention of the telephone late in the 19th century, replacing the earlier variant *hullo*. *Hello girl*, once used for a telephone operator, is an Americanism first recorded by Mark Twain in *A Connecticut Yankee in King Arthur's Court*.

hello? Over the past 20 years or so HELLO has taken on the additional meaning of a kind of derisive question inquiring whether someone is at home upstairs (in his or her head) for proposing a silly or dumb idea, often in conversation. Pronounced *hel-lo*, the new expression is frequently written with a question mark. *Duh* is similarly used.

hell on wheels. Union Pacific Railroad construction gangs in the 1860s lived in boxcars that were pulled along as the line progressed. Traveling and living with these hard-drinking, often violent men were gamblers, prostitutes, and other unsavory characters. The wild congregation assembled in the boxcars suggested the population of hell to settlers, and the transient town was called *hell-on-wheels*, a colorful term soon applied to any violent, vicious person or lawless place.

to hell or Connaught. During the Commonwealth, under Oliver Cromwell, the native Irish were dispossessed of their land in the other provinces and ordered to settle in Connaught or be put to death. This led to the phrase common throughout Ireland, or wherever Irishmen emigrated, of *to hell or Connaught*.

hell or high water. See COME HELL OR HIGH WATER.

hello the house. For over a century this has been a common greeting upon approaching a house in the American West. A variation is *hello in the house*. The expression probably has British roots.

Hell's Angels. The best-known, if not the first, of the motorcycle gangs came into prominence in the 1950s in the San Francisco Bay area. *Hell's Angels* founders were descendants of the OKIES of the Great Depression.

Hell's bells! The more colorful curse *hell's bells and buckets of blood!* was the original of the imprecation, which probably originated at sea during the late 19th century, under what circumstances no one knows.

hell's half acre. A 19th-century term for a low saloon, a dive, or for a small or distant place, especially one that is disreputable or crime-ridden.

hell's kitchen. As that part of hell where the fires are hottest, hell's kitchen would be unpleasant indeed, which is why it came to mean any very unpleasant, disreputable place. The expression is first recorded in Davy Crockett's *An Account of Col. Crockett's Tour to the North and Down East* (1834). By 1879 it was being used as a name for an infamous district on New York City's West Side, which Mitford Mathews tells us was "once regarded as the home of thieves and gunmen." The Stovepipe was part of it, and nearby were the tenements of Poverty Gap.

hell with the fires out. An old colorful expression describing the southwestern desert in the U.S. especially in the hottest months.

helot. The original helots, slaves or serfs, were inhabitants of the town of Helos in Laconia, enslaved by the Spartans in ancient times. The Spartans actually ranked their helots midway between citizens and slaves, but certainly treated them like flunkies. As an object lesson to Spartan youth that drunkenness is evil, helots were often forced to drink more than they could handle and then exhibited in the public square.

helpmeet. Helpmeet, "a companion or helper, a wife or husband," is the source of the more familiar helpmate, meaning the same. Helpmeet is a misreading of the biblical Gen. 2:18, which refers to "a help meet for him," meet in this sense actually meaning "suitable" (a "suitable help").

hem and haw. As an expression for hesitancy, *to hem and haw* isn't recorded until 1786. But it is found centuries earlier in similar expressions such as *to hem and hawk*, *hem and ha*, and *hum and ha*, which Shakespeare used. These are all sounds made in clearing the throat when we are about to speak. When a speaker constantly makes them without speaking he is usually hesitating out of uncertainty, which suggested the phrase. Said the first writer to record the idea in 1469: "He wold have gotyn it awaye by humys and by hays but I would not so be answered."

hemorrhoids; cuspidor. As his favorite French word the avant-garde poet Charles Baudelaire chose *hemorrhoids*, whereas James Joyce felt that *cuspidor* was the most euphonic word in the English language.

hemp. Hearing the prophecy “When hemp is spun, England’s done,” Francis Bacon, despite his scientific training, gave the following interpretation of it, which he had heard as a child. *Hempe*, he explained, is an acrostic, a word formed from the first letters of the name of five of England’s rulers: Henry, Edward, Mary with Philip, and Elizabeth. When the last one of them, Elizabeth, died in 1603—when Hempe was spun or finished—England was done, for the new king James was not called king of England, but the king of Great Britain and Ireland. In truth hemp, the fiber of the cannabis plant, derives from the Old English name for the plant.

henchman. A ruthless supporter of a political figure, or gang, who hopes to gain by his close association. Hitler had his henchmen, as did Saddam Hussein. Chemical Ali, Saddam’s henchman, was sentenced to death for the killing of 180,000 Kurds in the early 1980s, mostly by the gassing of entire Kurdish villages. The term *henchman* dates back to the early 14th century.

henpecked. The pecking order among hens, according to the famous study made by biologist W. C. Allee, has a definite prestige pattern: Hens, like many humans, male and female, freely peck at other hens below their rank and submit to pecking from those above them. Although hens rarely peck at roosters in the barnyard, where the rooster is the cock of the walk, it was widely believed in the 17th century that they often pulled feathers from young roosters below them in the pecking order. This led to the comparison of domineering wives to aggressive hens. Samuel Butler defined the term first, Dryden complained that he was henpecked, and Steele called Socrates “the undoubted head of the Sect of the Hen-pecked.” There was even a noun *henpeck*, for a wife who domineered her husband, and Byron, in *Don Juan*, wrote his celebrated couplet: “But—oh! ye lords of ladies intellectual, / Inform us truly, have they not hen-peck’d you all.” See SOCRATIC IRONY; XANTHIPPE.

henry. Scientist Joseph Henry’s career constitutes a series of famous firsts and foremost. The U.S. Weather Bureau was created as a result of his meteorological work while first director of the Smithsonian Institution, and Henry was the first “weatherman” to make forecasts from collected scientific data. Not only a brilliant administrator who initially planned the Smithsonian’s scope and activities, Henry has been acknowledged as the leading physicist of his day. His researches on sound gave America the best fog signaling service among maritime nations, he stimulated geologic and geographical exploration, and his influence on the character of science, especially concerning the free publication of scientific results, was exceeded by no contemporary. Before becoming secretary of the Smithsonian in 1846, Henry taught physics at Princeton, where he built the first electromagnetic motor (1829) and devised the first practical telegraph (1830–31). It is not for the theory of electromagnetic induction that the henry, the measurement unit of induction, is named in his honor. This theory is credited to the English scientist Faraday, although Henry’s experiments may have preceded his, and it is for his theory of producing induced current (1832) that the International Congress of Electricians gave the celebrated American’s name to the standard electrical unit in 1893. He died in 1876 at the age of 81.

Henry Higgins. Henry Higgins, the professor-phonetician who teaches Cockney flower-seller Eliza Doolittle standard English in George Bernard Shaw’s *Pygmalion* (1913), has become the name for any knowing, exacting, sometimes dictatorial and thoughtless teacher of speech. Shaw took the title of his play, one of his most popular, from the Greek legend of Pygmalion, a sculptor and king who fell in love with the statue he carved of his ideal woman. Aphrodite granted his prayer that it come to life so he could marry it. In 1957 the long-running musical *My Fair Lady* was made from the play. David Jones (1881–1967), head of the phonetics department at University College, London, always insisted that he was the prototype for Shaw’s Henry Higgins. Jones claimed that Shaw in gratitude had a free box reserved for him for any production of the play as long as the author lived. He said Shaw chose the name Higgins after glimpsing a sign reading Jones and Higgins over a London shop, Shaw calling the character Higgins because he obviously couldn’t use Jones. More likely, according to most writers, Shaw based Higgins on the pioneering scholar Henry Sweet (1845–1912).

Henry rifle. The Henry rifle has been called the grandfather of repeating arms. Invented by Benjamin Tyler Henry (1821–98), one of the Henry family of gunsmiths, the weapon was tested under fire by Union forces in the Civil War. The breech-loading, lever-action rifle never became popular as a military weapon but saw some use on the frontier and is featured in many a western. Henry may also have worked on the Martini-Henry rifle adopted by the British army in 1889. This was basically an improvement on the Martini, invented by Swiss mechanical engineer Frederic de Martini (1832–97), but another Henry, a Scottish gunsmith, possibly deserves the credit for it.

hepatica. These charming little wildflowers have three-lobed leaves that resemble the human liver. Noticing this, someone in medieval times named them from the Greek *hepatikos*, “of the liver.”

Hepplewhite style. Nothing is known about the British furniture designer George Hepplewhite except that he operated a fashionable cabinetmaking shop in the parish of St. Giles, Cripplegate, London, died in 1786, and willed his business to his wife, Alice. But his furniture was widely imitated in England and the United States, resulting in a style often eloquent and graceful. It has been assumed that the original Hepplewhite styles were delicate and soundly constructed. The cabinetmaker invented or popularized the shield-back chair and the “spider leg” for chairs, tables, and sideboards, and was among the first to inlay much of his furniture with exotic woods. Hepplewhite’s small pieces, such as inlaid knife boxes, fire screens, and tea caddies, are highly valued by collectors. His *The Cabinet-Maker and Upholsterer’s Guide*, published by his wife in 1788, inspired a host of imitators at home and abroad.

herba sacra. Vervain (*Verbena officinalis*), the *herba sacra* or “divine weed” of the Romans, who believed that, among other things, it cured the bites of rabid animals, arrested the progress of snakebite, cured the plague and scrofula, reconciled enemies, and warded off witches. The Romans so esteemed vervain that

they held annual feasts called Verbenalia in its honor. Ambassadors in ancient times wore vervain as a badge of good faith.

herb of grace. Rue is called the herb of grace because it is the symbol of repentance, owing to its extreme bitterness. Shakespeare used the expression in *Richard II*, and there are many old records telling of the use of rue in ceremonies of exorcism.

herb Robert. A common herb (*Geranium robertianum*) said to be named after Robert, duke of Normandy, or Saint Robert, and first recorded in the 14th century. It has fernlike, strong-scented leaves and pink to reddish purple flowers. Also called *red shanks* for its red stems, its plural is *herbs Robert*.

herculean task. A herculean task may not require great strength, even though the expression derives from the name of the mythical Greek superman, Hercules. Such a task is a difficult or dangerous one and refers to the fabled 12 labors of Hercules that he performed while overcoming great difficulties.

Hercules' club. The club carried by the mythological strongman Hercules was hewn from a thick wild olive branch, but somehow *Aralia spinosa*, a small, spring-trunked ornamental tree of the ginseng family, came to be known as Hercules' club. The prickly plant, which also goes by the names *angelica tree* and *devil's walkingstick*, has a medicinal bark and root, and hedges of Hercules' club form a strong impenetrable barrier. Creating some confusion, however, is the fact that *Zanthoxylum clava-herculis*, commonly known as the "prickly ash" and the "toothache tree," is also called Hercules' club. See APPLE.

to herd. See LIKE HERDING CATS.

herd's grass. See TIMOTHY GRASS.

here lies one whose name was writ in water. English poet John Keats (1795–1821) did not invent his own epitaph (above) as is often said. While he lay dying in Rome, listening to the falling water in a fountain outside his room, he remembered words from the play *Philastes, or Love Lies A-bleeding*, written by Beaumont and Fletcher in 1611. "All your better deeds / Shall be in water writ," one of the characters says. Keats mused upon this sentiment, and a week or so before he died told his friend the painter Joseph Severn that he wanted no epitaph or even name upon his grave, just this line, "Here lies one whose name was writ in water." On a lighter note, Robert Ross (1869–1918), remembered today as one of Oscar Wilde's most loyal friends, led a short, stormy life filled with trouble. Toward the end, he was asked what he would have as the words on his gravestone, and Ross, quickly adapting Keat's famous epitaph, replied "Here lies one whose name is writ in hot water."

here's lookin' at you, kid. This has become a toast from a man to a woman the whole world over. It was first made by Humphrey Bogart to Ingrid Bergman in the movie *Casablanca*, which has given us at least a dozen more great lines.

here's mud in your eye. This toast was originally made in the muddy trenches of World War I, or in the cafes where English and American soldiers spent their leaves trying to forget them.

here's to swimmin' with bowlegged wimmin. Is this a humorous nautical toast? Possibly. It is given by old salt Captain Quint in the movie version of Peter Benchley's *Jaws* (1974).

here today, gone tomorrow. Something or someone passing with time, transient. Often said humorously and sometimes shortened to *here today*. The phrase dates back to the late 19th century. American publisher Alfred Knopf (1892–1984) turned the words around. He was talking about book returns from bookstores one day when he observed, "GONE TODAY, HERE TOMORROW."

Hermannia. See MAHERNIA.

hermaphrodite. One who has the reproductive organs and many of the secondary sex characteristics of both sexes; and by extension, anything that is a combination of disparate elements. The word derives from Hermaphroditus of Greek mythology, the son of Hermes (a personification of the male principle) and Aphrodite (Hermes' female counterpart). In the Greek myth Hermaphroditus became united in one body with the young and beautiful nymph Salmacis, the nymph of the fountain in which he bathed.

Hermes. The Greek god of good luck and wealth, Hermes was also the god of merchants and thieves, a god of fertility, god of the roads, and god of sleep and dreams. When an infant he is said to have invented the lyre, climbing out of his cradle, killing a tortoise and making the instrument from its shell before returning to his bed.

hermetically sealed. Mystic philosophers in the third century claimed that their magical secrets had been dictated to them by Hermes Trismegistus, his name meaning "Hermes thrice greatest [three times as great as the original Greek god Hermes]," and that this Hermes was really the Egyptian god of wisdom, Thoth. The wisdom of Hermes Trismegistus became the basis for the 42 *Hermetic Books* containing secrets for alchemists, and one formula in these books told how to seal a container so that no air could get in. Today we don't claim to seal bottles, cans, and jars by any "magical" method, but all such airtight containers are called *hermetic* or *hermetically sealed* in Hermes' honor.

Hermia. See HERNIA.

hermit's derby. This is an interesting British expression, with limited American use, for "an upset victory." Hermit was the long shot that won the English derby at Epsom Downs in 1868, his victory all the more memorable because the marquis of Hastings lost his entire fortune betting on the favorite—to the great pleasure of Hermit's owner, Henry Chaplin, whose fiancée had eloped with Lord Hastings not long before the race. See *also* LONG SHOT.

hernia. The protrusion of an organ through an opening in its surrounding walls, especially the abdominal walls. The word comes ultimately from Latin for a rupture, which is akin to Latin *hira*, gut. In writing an article about Shakespeare's *Midsummer Night's Dream*, British author J. C. Squire (1884–1958) found that Hermia (the name of the young heroine in the play) was spelled Hernia in the proofs of the article. He let the mistake stand, inserting an asterisk and the note: "I cannot bring myself to interfere with my printer's first fine careless rupture."

hero. The *New York Times* (October 15, 2003) says that "in 1936, Clementine Paddleford, the legendary food writer on the *New York Herald Tribune*, unwittingly named the sandwich, saying, 'You'd have to be a hero to finish one.' The same source quotes Howard Robboy, a sociologist who is an authority on the subject, as saying the hero (then called the Italian sandwich) "was first made in New York in the late 19th century on the premises of Petrucci's Wines and Brandies at 488 Ninth Avenue near 37th St. The site is now Manganaro Foods. . . ."

heroin. Formerly a trade name, heroin was discovered around 1897 by Professor Paul Dresser, chief of the research department of Germany's Elberfeld Farben Fabriken. It was named from the Greek *heros*, "hero," apparently "because of the inflation of the personality consequent on taking the drug," because it made a user feel like a hero, for a short while.

Hero of New Orleans; Old Hickory. Hero of New Orleans was the nickname of General Andrew Jackson, referring to his victory over the British at New Orleans in 1815. He was also called Old Hickory because of his toughness (as tough as hickory wood) during the war, and Old Mad Jackson by his political enemies after he became president. See JACKSONIAN.

hero sandwich; poor boy. New York City's Italian hero sandwiches, the term first recorded in the 1920s, are named for their heroic size, not for Charles Lindbergh or any specific hero of the Roaring Twenties. Hero sandwiches are surely among the most numerous-named things in English. Synonyms include such terms as *hoagies* (in Philadelphia), *submarines* or *subs* (in Pittsburgh and elsewhere), *torpedos* (Los Angeles), *wedgies* (Rhode Island), *wedges* (New York State), *bombers* (New York State), *Garibaldis* (Wisconsin), *Cuban sandwiches* (Miami), *Italian sandwiches* (Maine), *Italians* (Midwest), *grinders* (New England), *spuckies* (pronounced "spookies"; Boston), *rockets* (New York State), *zeps* or *zappelins* (several states), and *poor boys* (New Orleans), though this last one is made with French instead of Italian bread and can feature oysters. *Blimpie* is a trade name for a similar sandwich, and *Dagwood* refers to any huge sandwich—after "Blondie" comic strip character Dagwood Bumstead's midnight snack creations. That's 20 in all—and there must be more!

herring-choker. A name applied to Prince Edward Islanders in Maine and New Hampshire, and a derogatory term for Scandinavians in other regions. Also applied to French Canadians and to those from the Maritime provinces. The name was given

to these people because they were said to eat so many herring that they choked on the bones.

herself. See YOURSELF.

herstory. A term dating back to only 1970 that interprets history from a female perspective. No one knows for sure who coined this alteration of *history*.

hertz. Radio waves take their scientific name, *hertzian waves*, from German scientist Heinrich Hertz (1857–94), whose interest in electromagnetic theory led to the discovery of the electromagnetic waves. Hertz also has the unit of frequency called the "hertz" named after him.

he's a poet but don't know it. The rhyme in this expression has kept it alive for nearly three centuries. The catchphrase dates back to at least 1700, when it was first directed at people who rhyme words accidentally in conversation.

he's gone, and with him what a world is dead. See TONGUE.

he's got short arms and long pockets. Heard by the author on one occasion in Connecticut as a description of someone very cheap, whose arms don't reach the deep pockets where he keeps his money.

he sold his saddle. A phrase from the American West meaning a cowboy has retired from the cowboy life.

he spake three thousand proverbs . . . Praise for a prolific writer. It was said of Solomon in I Kings 4:32. The full quotation is "He [Solomon] spake three thousand proverbs: and his songs were a thousand and five."

Hessian. As an American epithet *Hessian* can be traced back to the Revolutionary War, when the British employed 30,000 Hessian mercenaries and their name, justly or not, came to mean any boorish, uncouth person of low moral character. The Hessians came from the former Grand Duchy of Hesse in Germany. Their name is also found in the high-tasseled Hessian boots fashionable in early 19th-century England; Hessian cloth, a strong, coarse jute or hemp cloth originally made in Hesse; Hessian, for any mercenary; and the Hessian fly so destructive to wheat, which was erroneously believed to have been brought to America by the Hessian soldiers.

heterochromia. Having two different-colored eyes. Alexander the Great is only one of the famous people who have this trait, which can be genetic or the result of trauma. The children's storybook *The Incredible Peepers of Penelope Budd* by Marie Karns (2005) treats this subject. Penelope's eyes are "one the color of hot chocolate and one the color of a forget-me-not." More common are medleys of colors:

Oriana's eyes were a medley of blue
at night one eye was green,
omnivorous greeneye filled with spices,
seasoning what we thought were vices!

heterosexual. See HOMOSEXUAL.

Hetty Green. One of America's most outrageous misers was the notorious Henrietta ("Hetty") Green, who had a balance of over \$31 million in the bank yet was so cheap that her son had to have his leg amputated because he received no medical treatment while she shopped around for a free medical clinic. Hetty, who left an estate of \$94 million, was famous for not spending a cent if she didn't have to.

he was born with a silver foot in his mouth. Texas governor Ann Richards (1933–2006) on George H. W. Bush.

he wears a two-inch belt and Big Jim suspenders. Said in Texas of someone who is very cautious.

hewers of wood and drawers of water. This expression describes people who aren't particularly clever, those who depend more on physical labor for their livelihood. The old expression is from the Bible (Josh. 9:21).

he who fights and runs away, lives to fight another day. The Athenian orator Demosthenes when a young man fought in the infantry against the Macedonians at the battle of Chaeronea. The Athenians were overwhelmed, losing 3,000 men, and Demosthenes deserted the battlefield. When he was called a coward, however, he replied, "The man who runs away may fight again," which is the original of this saying. See DEMOSTHENIC.

hex. An evil spell, or to create an evil spell. The word is an Americanism from the Pennsylvania Dutch, German immigrants who settled in Pennsylvania in the late 17th century. The first recorded use of *hex*, from the German *hexen*, to practice witchcraft, is in 1830.

hey! The exclamation *hey!*, to attract attention, first attested in about 1225, but probably as old as English, has its counterparts in all languages. In ancient times the Romans used *eho!*, and the Greeks before them cried out *eia!*

hi! Possibly the most common greeting in the U.S. It is a variant of *hey!* and became popular as a greeting about 1880. For five centuries before then, however, the British had used *hi!* as a cry to attract someone's attention, as *hey!* is in America today.

hiccup. No matter how it is spelled, the word is pronounced *hiccup*. Why is hard to say. Only in the 17th century did people begin to use *hiccup*, closely allied to the Danish *hicke* and the Dutch *hikke*. The *hic* in this echoic word is fine, but any connoisseur of hiccups would agree that a *cup* is rarely if ever heard in a hiccup.

hick. See CLODHOPPER.

hickery dickery dock. Some authorities call this familiar phrase an "onomatoplasim," an attempt to capture a sound (in this case that of a ticking clock) in words. However, it has been

argued in the *Oxford Dictionary of Nursery Rhymes* that "the shepherds of Westmorland once used *Hevera* for 'eight,' *Devera* for 'nine' and *Dick* for '10.'"

hickory. *Pawcohiccora* was the name American Indians near Jamestown, Virginia gave to the milky liquor they obtained from nuts from a tree that abounded in the area. Colonists called the milky liquor and nuts *hiccora*, or *hickory*, abandoning the first part of the Indian word, and eventually applied the word *hickory* to the useful tree the nuts came from, which supplied them with a stony, tough wood good for many purposes.

hidebound. Cramped, constricted people, those who are rigidly opinionated, have been called *hidebound* since the 16th century. The word derives from a term applied to emaciated cattle in days before veterinary science had made many advances. Feeding and care of cattle was so poor in England at the time that by winter the animals were often thin and diseased and had lost the fatty tissue under the skin. As a result their skin clung tightly to their bones, they moved stiffly, and their hides couldn't be removed from their backbone or ribs when they died. Their physical condition naturally suggested the inelastic, constipated minds of some people.

hide your light under a bushel. Early translations of the Bible introduced the above phrase from Matt. 5:14–15 into English. Jesus, after urging his disciples to be "the light of the world," added that "A city that is set on a hill cannot be hid. Neither do men light a candle and put it under a bushel, but on a candlestick." The *bushel* in the phrase is a bushelbasket, not today's loosely made type, which lets some light through, but a sturdy earthenware or wood container. Thus *to hide your light under a bushel* was to unduly conceal your abilities so no one could see them, to be excessively modest.

Hi Diddle Diddle. See GRIN LIKE A CHESHIRE CAT.

hieroglyphics. From the Greek words for "sacred pictograph." The limitations of hieroglyphics or "picture writing," the precursor of alphabets, can be seen in the old story about Darius the Great, king of Persia. He received a hieroglyphic message from his enemies the Scythians; they sent him a live mouse, frog, bird, and arrows instead of pictures of these things. Darius interpreted this to mean they would surrender come morning—the arrows, he thought, meant they would give up their arms, mouse and frog represented surrender of the land and water, and the bird meant the Scythians would soon fly away from the field of battle. Accordingly, Darius went to bed without preparing his troops for attack and the Scythians raided his camp that night and overwhelmed his armies. They then explained *their* interpretation of the live hieroglyphics: the bird meant the Persians would never escape the Scythians unless they could literally fly, the mouse and frog meant that the only other way they could escape would be to turn themselves into mice and burrow through the ground or into frogs and hide out in the swamps, and the arrows meant they would never escape the infallible Scythian weapons.

Higgins boat. A naval landing craft greatly responsible for the success of D-Day, the invasion of Nazi-occupied France during World War II. Officially, it was designated the LCVP (landing craft, vehicle, and personnel). Its popular name honors its inventor and manufacturer Andrew Higgins, described by General Eisenhower as “the man who won the war for us.” More Americans were carried ashore in Higgins boats during World War II than in all other landing crafts combined.

higgledy-piggledy. As an adjective *higgledy-piggledy* means “jumbled, topsy turvey,” as in “They were thrown higgledy-piggledy into a large pile.” The word is an old rhyming compound of uncertain origin that dates back to the late 1500s and may possibly have something to do with pigs being herded together.

highball. Long drinks were first called highballs in the 1890s, and were so named because they came in tall glasses and all glasses were called “balls” in bartender’s slang. There is some reason to believe that the common, much older, railroad term *to highball* helped keep the drink *highball* in the public mind. *To highball* means to travel at top speed. In the early days of railroading a large metal ball hanging from two crossarms at the approach to railroad stations signaled locomotive engineers as to how they should proceed. A lowered ball meant come to a full stop and a ball raised to the top of the mast, a high ball, meant to proceed full speed ahead.

highbinder. A highbinder can be a swindler and cheat, especially a confidence man, or a gangster or rowdy. The word, first used in its latter meaning, derives from a gang of ruffians called the *Highbinders* that plagued New York City about 1806. Later their name was applied (in the lower case) to members of American-Chinese secret societies believed to be employed in blackmail and assassination.

highbrow; supercilious. Dr. Franz Joseph Gall (1758–1828), founder of the “science” of phrenology, gave support to the old folk notion that people with big foreheads have more brains. Gall’s lifelong studies purportedly showed that the bigger a person’s forehead was, the higher his brow, the smarter he would be. This theory was widely accepted through the 19th century, until phrenology was discredited by scientists, and the belief led to the expression *highbrow* for an intellectual, which is first recorded in 1875. The term is often used disparagingly and is the source of the similar terms *lowbrow* and *middlebrow*. *Highbrowed* people can be supercilious, meaning disdainful, and this word has a connection with the brow, too. *Supercilious* is from the Latin *supercilium*, “eyebrow,” and the Latin suffix *-osus*, “full of.” Thus a supercilious person is literally one “full of eyebrow,” an etymology that goes well with the image of someone lifting the eyebrow slightly in disdain. *New York Sun* reporter Will Irvin popularized *highbrow*, and its opposite *lowbrow*, in 1902, basing his creation on the wrongful notion that people with high foreheads have bigger brains and are more intelligent and intellectual than those with low foreheads. At first the term was complimentary, but *highbrow* came to be at best a neutral word used to describe such things as *highbrow books*, and at worst sank as low as *lowbrow*, being used by lowbrows and other anti-intellectuals to describe supercilious intellectuals or pseudo-intellectuals. *Life* magazine

coined the term *middlebrow* in the mid-1940s. See also EGGHEAD.

high dudgeon. *Dudgeon* is a feeling of anger, resentment, or offense, so *high dudgeon*, which dates back over a century, means great anger or resentment. S. J. Perelman’s *in a low dudgeon* is a decided improvement on the timeworn phrase. No one seems to know where *dudgeon* itself comes from. An Italian word meaning “to overshadow” has been suggested, implying that someone who cuts off another’s sunlight provokes anger. This is an idea that at least goes back to Diogenes the Cynic, who on being asked by Alexander the Great if the emperor could oblige him in any way, replied: “Yes, by standing out of my sunlight.” But *dudgeon* has also been linked to a much earlier word for “the handle of a dagger.” By this theory, which isn’t documented or widely accepted, an insulted man reached for his dagger handle, or *dudgeon*, in anger. By extension the dagger handle became the dagger, and the dagger, or *dudgeon*, was used to describe the anger that led to its use.

the higher I go, the crookeder it gets. Words spoken by the Godfather (played by Al Pacino) to his sister, Connie, in the movie *Godfather III*. I can find no earlier use of the expression.

higher order. See UPPER CLASS.

highfalutin. Pretentious, pompous. The Americanism, dating back at least to 1839, may be a variation on *high-flown*. Ernest Weekley, in *An Etymological Dictionary of Modern English* (1921), wants to know if “this type of oratory is due to Red Indian influence” on Americans, though he does admit “we [British] can do a little in the same line. . . .” As an example of highfalutin American language he cites one of Dickens’s portrayals of American stereotypes in *Martin Chuzzlewit* (1843–44): “He is a true born child of this free hemisphere! Verdant as the mountains of our country; bright and flowing as our mineral licks; unspoiled by withering conventionalities as air our broad and boundless peregriners! Rough he may be. So air our buffaloes. But he is a child of nature’ and child of freedom; and his boastful answer to the despot and the tyrant is that his bright home is in the settin’ sun.”

high five. *High-fiving* is a celebratory gesture where two participants raise their hands over their heads and slap each other’s hands. The high five is often seen after a good play in sports, and indeed, University of Louisville basketball players Wiley Brown, Daryl Cleveland, and Derek Smith claimed to have invented it in 1979 during preseason practice as an odd, attention-getting gesture of triumph. However, hand slapping is also a way of greeting, especially among African-Americans. *The New Dictionary of American Slang* (1986) says the high five is “Chiefly used by and adopted from athletes, who themselves adopted the style from black colleagues.” See BUMP.

high-handed. In the Bible (Num. 23:3) the direct ancestor of this phrase means “triumphantly.” It is used in describing the departure of the Israelites from Egyptian bondage: “. . . on the morrow after the passover the children of Israel went out *with a high hand* in the sight of all the Egyptians.” The description does suggest a certain amount of arrogance, however, and it is

probably from this passage that *high-handed* came, with the passage of time, to mean arrogant or overbearing.

high hat. Jack Conway, a former baseball player and vaudevillian who became editor of the show business newspaper *Variety*, coined the expression *high hat*, for “a snob,” in 1924. It suggests an affected rich or nouveau riche man in a high silk hat and tails strolling about town with his nose almost as high as his hat, and it gave birth to the expression *to high hat*, to snub or act patronizingly. The prolific Conway—Walter Winchell called him “my tutor of slang”—died in 1928. *Belly laugh*, *pushover*, *to click* (succeed), *baloney* (bunk), *S.A.* (sex appeal), *payoff*, and *palooka* are among his other memorable coinages.

High Hopes. A popular song composed by Sammy Cahn that became the Democratic campaign song in 1960 when John F. Kennedy ran for president.

high horse. In the royal pageants of Medieval England nobles and others of high rank customarily rode “high horses,” great chargers a hand or so taller than the average mount. Riding such a high horse naturally came to be equated with superiority and the arrogance superiority often breeds. *To ride the high horse* came to mean to affect arrogance or superiority, and this phrase gave us the still common *to get up on one's high horse*, to scorn what we consider “beneath us.” See TELL HIM (HER) WHERE TO GET OFF.

high jinks. *High jinks*, a somewhat dated expression for fun and pranks, was originally the name of an ancient drinking game played with dice, and the antics of the players gave birth to the phrase. Sir Walter Scott describes the game in his novel *Guy Mannering* (1815): “Most frequently the dice were thrown by the company, and those upon whom the lot fell were obliged to assume and maintain for a time a certain fictitious character or to repeat a certain number of fescennine [obscene] verses in a particular order. If they departed from the character assigned . . . they incurred forfeits, which were compounded for by swallowing an additional bumper, or by paying a small sum toward the reckoning.”

high jump. The track and field term *high jump* has been used recently as slang meaning death, suggesting someone trying to jump high enough to reach heaven.

highlight; high spot. The *high light* or *high lights* of a painting, the brightest parts of a subject, which are focal points in the composition, was a technical term, well-known to artists in the early 17th century. These focal points of highest light intensity became familiar in photography, too, and by the beginning of this century the expression *high light* began to be used frequently for any bright, prominent, or outstanding feature of any occasion, subject, or situation. The much newer American expression *high spot* (1928), meaning the same and deriving from *spotlight*, doesn't seem to be used as often.

high muckey-muck; mogul. A high muckey-muck, or muck-a-muck, is someone in a position of authority, especially an overbearing person in such a position. *Muckey-muck* may be a childish play on the word *muckle*, “great,” or is possibly a corruption of *Great Mogul*. The Great Mogul (mogul itself being a corruption of *mogol*) was originally the emperor of Delhi, and eventually his title was used to describe any big shot.

high noon. Many people associate this term for a peak or pinnacle, or a crisis or confrontation, with the classic western movie *High Noon*, though it is in fact first recorded in 14th-century England.

high on (off) the hog. Well aware that the best cuts of meat on a hog—the hams, pork chops, bacon, tenderloin, and spare ribs—are high up on a hog's sides, American southerners used the expression *eating high on the hog*, “good eating,” as opposed to *eating low on the hog*—eating the pig's feet, knuckles, jowls, and sow belly, well known today as “soul food.” By extension, *living high on (or off) the hog* came to mean living prosperously.

high plains drifter. A person, often an outlaw, who rode the high plains from place to place in the early West in order to be aware of possible enemies around him.

high seas. *High* in the term *high seas* means “chief” or “principal.” The high seas, or the “main,” are the open seas—those waters beyond any territorial limit that belong to no one nation.

High Street. See MAIN STREET.

hightail it. Mustangs, rabbits, and other animals raise their tails high and flee quickly when they sense danger. Trappers in the American West noticed this, over a century ago, probably while hunting wild horses, and invented the expression *to hightail it*, to make a fast getaway.

high tea. Americans are often curious about the meaning of the British expression *high tea*, having no real equivalent for the phrase. High tea is simply a light evening meal, often served at about six o'clock in place of supper, that includes cooked dishes as well as tea, scones, etc.

the high trees get the wind. People pay the most attention to and criticize most those in positions of power and leadership. When accused of past doping during the 2004 Tour de France, cyclist Lance Armstrong, one of the great athletes of this or any other time, denied the charges and commented: “You know what they say, the high trees get the wind.” Anyone know the source?

hijack. Back in Prohibition days, the story goes, criminals who robbed trucks of their loads of whiskey commanded their drivers to “Stick 'em up high, Jack!” or “Up high, Jack!” From their command they were called *highjackers*, then *hijackers*, and the word *hijack* became part of the language. Another

explanation is that the crooks pretended to be friends of the drivers, calling out “Hi, Jack!”

hillbilly. Despite TV sitcoms like *The Beverly Hillbillies*, the word *hillbilly* is a derogatory name for hill people or highlanders, a designation, insulting at best, that has in the past provoked fights to the death. *Hillbilly* is first recorded in 1900 and usually implies laziness, ignorance, and stupidity. Highlanders don’t mind being called “hillbillies” by other mountain folk, but they do object to flatlanders or “furriners” using the term.

the hills are closing in on him. He’s going mad. This expression, heard in America, England, New Zealand, Australia, and Canada, originated with United Nations troops during the Korean War, or Conflict. Korea of course has many forbidding hills and mountains.

himbo. A recent word coined to get even with the much earlier bimbo (qv), a himbo being a male bimbo. See BIMBO for the whole story.

himself. The Irish frequently use *himself* instead of the personel pronoun *he*, and the word can also mean the master of the house or anybody of importance. Humorously it is used to describe someone who *thinks* he is important, as in “Will himself be wanting his tea served in the silver or gold cup?”

Hindenburg line. A World War I fortification on the French-Belgian border, running from Lens through Saint-Quentin to Rheims. Though credited to Field Marshal Paul von Hindenburg (1847–1934), the strategy and most of his victories have often been considered the work of his chief of staff, General Ludendorff, his assistant throughout the war. Hindenburg’s full name was Paul Ludwig Hans Anton von Beneckendorff und von Hindenburg. After the lost world war, he defeated Adolf Hitler in the 1932 German presidential elections, but soon after, no longer in full possession of his faculties and warned by sinister advisers of a “socialist plot,” he appointed Hitler chancellor. Before reversing himself about Hitler he had quipped: “That man for a chancellor? I’ll make him a postmaster and he can lick the stamps with my head on them.”

Hinduism. The world’s oldest religion, which worships many gods and is the major faith in India.

Hindu Kush. A mountain system that is located between Afghanistan and Pakistan and is the scene of much fighting. The Hindu Kush is a sub-range of the Himalayas.

hiney; Heinie. *Hiney* is a name, deriving from hindparts, that is often but not always used when speaking to a child, as a term for the buttocks, backside, or ass. Sometimes spelled *heinie*, it should not be confused with *Heinie*, the name for a German soldier since World War I that derives from the common German name Heinrich. In 1904 *Heinie* is also recorded in the U.S. for any German, making it an Americanism. Other derogatory names for German soldiers, and sometimes Germans in general, are *Jerry*, *Boche*, *Sauerkraut*, and *Kraut*.

hip. There was supposedly a cool cat named Joe Hep who tended bar in Chicago during the 1890s and it was from this aware, all-knowing, disaffiliated man that we get the word *hep*, of which *hip* is a variant. Most scholars don’t go along with this theory, dividing their loyalties between the opium smoker’s term for smoking opium, *on the hip* (opium smokers often reclined on one side while smoking), or the West African *hipi*, “to be aware,” or the African Walof *hipicat* (hence *hepcat*, too) meaning “one who has his eyes wide open.” All we really know is that *hep* was recorded first in 1903 and has by now been almost totally replaced by its variant *hip*, which gave us the word *hippie* in the 1960s.

hip! hip! hurrah! The old story here can be taken for what it’s worth, which isn’t much. *Hip*, we’re told, derives from the initials of the Latin words *Hiersolyma est perdita*, “Jerusalem is destroyed.” German knights, not a very bright bunch, were supposed to have known this and shouted *hip, hip!* when they hunted Jews in the persecutions of the Middle Ages. *Hurrah!* by the same strained imagining, is said to be a corruption of the Slavonic word for Paradise (*hu-raj*). Therefore, if you ever shout *hip! hip! hurrah!* you are supposedly shouting: “Jerusalem is destroyed [the infidels are destroyed] and we are on the road to Paradise!” There is not the slightest proof for any of this, and the phrase, which doesn’t date back earlier than the late 18th century, almost certainly comes to us from the exclamation *hip, hip, hip!* earlier used in toasts and cheers, and *huzza*, an imitative sound expressing joy and enthusiasm.

hipper-dipper. A *hipper-dipper* is slang for a fixed prizefight, the term dating back to the 1940s. The unusual word is of uncertain origin, but may derive from “hipper,” slang for a small swimming pool, in the sense that someone takes a “dive” in it.

hippie. A young person who rejects the ways of conventional society.

Hippocratic look (face); Hippocratean. Many are familiar with the Hippocratic oath (below), but few know anything about the Hippocratic look or face, which is the look on the face of a dying person as described by the father of medicine Hippocrates.

Hippocratic oath. The original version of the *Hippocratic Oath*, which in altered form is still administered to medical school students upon graduation, begins with an invocation to the gods: “I swear by Apollo the physician . . .” All forms of the oath memorialize Hippocrates (ca. 460–377 B.C.), “The Father of Medicine,” but not a line of it was written by the Greek physician and surgeon, it being rather the body of Greek medical thought and practice of his day. The words do, however, embody Hippocrates’ ideals. Believed to have been born on the island of Cos off the coast of Asia Minor, the son of a physician who claimed descent from the Greek god of medicine, Hippocrates apparently studied medicine with his father and philosophy under the famed Democritus. He separated medicine from superstition, and his acute observations have been used in medical teaching for centuries. Hippocrates was at least 85 when he died, and some estimates put his age at 110. See EX-

TREME REMEDIES ARE VERY APPROPRIATE FOR EXTREME DISEASES; LIFE IS SHORT; TIME HEALS ALL WOUNDS.

Hippocrene. See PEGASUS.

hippodrama. A century ago the Hollywood term *horse opera* for a western had another meaning when horses acted in hippodramas on the stage, just as they do in the opera *Aida* and movies today. Some of the most spectacular equestrian performances included:

- Horses that danced on stage in horse ballets (*balletto a cavallo*) or performed in elaborate battle scenes. One critic said they were “trampling Shakespeare” out of existence.
- A sturdy horse that in the German play *Die Rauber in den Abruzzen* (1830) carried the hero up a pile of rocks onstage to the window of a house, while a ferocious dog attacked the villain downstage.
- A talented horse in an 1833 French play that, according to a viewer, “fired a pistol and then walked all about as if it was lame—and at last it lay down . . . and died—with its four legs in the air!”

hippopoetess. Many poked fun at the great girth of American poet Amy Lowell (1874–1925). Some were outright malicious. Ezra Pound, for one, called her the only hippopoetess in the modernist zoo.

hippopotamus. The ancient Greeks thought the *hippopotamus* looked like a horse and, since it spent so much time in the water, called it “river horse,” from the Greek *hippos*, “horse,” and *potamos*, “river.” British historian Thomas Macaulay wrote: “I have seen the Hippo both asleep and awake, and I can assure you that, asleep or awake, he is the ugliest of the Works of God.” In South Africa army vehicles have been named for appropriate animals since about 1977. The *hippo* is a troop carrier and is used against land mines. It is not, however, an amphibious vehicle as the real hippo is.

hippopotomontrosesquipedianism. This word (I won’t repeat it out of pity for the typesetter) is the term for “the practice of using long words.” Composed of 32 letters itself, it is far longer than its synonym *sesquipedian words*, from Horace’s *sesquipedia verba*, words a foot and a half long. The Greeks, too, had a word for mile-long words: *amaxiaia remata*, “words large enough for a wagon.”

hirquitallency. James Crichton, the Admirable Crichton, took a prince’s lady to bed, according to Sir Thomas Urquhart in his *The Discovery of a Most Exquisite Jewel* (1652), the love scene described by Urquhart with majestic euphemisms:

. . . the visuriency of either, by ushering the tacturiency of both, made the attraction of both consequent to the inspection of either: here it was that Passion was active, and Action passive: they both being overcome by each other, and each the conqueror. To speak of her *hirquitallency* at the *elevation* of the *pole* of his Microcosm, or of his luxuriousness to erect a *gnomon* on her *horizontal* dial, will perhaps be held by some to

be expressions full of obscenity, and offensive to the purity of chaste ears.

Not today, Sir Thomas. The italics and spellings are Urquhart’s as is the opinion that the Admirable Crichton was killed *IN MEDIAS RES* by the jealous prince. So is the word *hirquitallency*, which the author apparently coined for the occasion from the Latin *hirquitallire*. The nonce word, meaning to acquire a strong voice (like an infant’s), is apparently found nowhere else in literature. *Visuriency*, another nonce word, means “the desire of seeing.”

his elevenses are up. Canadians are familiar with this expression, which hails from Newfoundland. It means a person is dying, because in some old people the two muscles in the back of the neck protrude like two bones resembling the numeral 11.

hisn.

Him as prigs what isn’t hisn
When he’s cotch’d he goes to prison.

The old proverbial adage is proof that *hisn* isn’t a backwoods Americanism. *Hisn* has a long and respectable lineage, dating back to the early 15th century and used by Richardson in *hisn* novel *Clarissa*. Nowhere, however, is the word properly used in place of *his* today.

his name is Dennis. He is finished, has had it, is fired. The old term, rarely if ever used anymore, derives from the whaling expression Dennis that meant a harpooned whale spouting blood and likely to be taken. Why such whales were named Dennis is not known.

his name is mud. Dr. Samuel Alexander Mudd (1833–83), a Maryland physician and Confederate sympathizer, set the broken left leg of Lincoln’s assassin, John Wilkes Booth, who escaped from Ford’s Theater by leaping to the stage from President Lincoln’s box, breaking his leg when he landed. Dr. Mudd had nothing to do with the assassination or any escape plot, but in the hysteria of the moment he was sentenced to life imprisonment, though President Andrew Johnson pardoned him in 1869. Mudd’s name (robbed of a *d*) has ever since been associated by many with the phrase *his name is mud*, and most undeservedly so. In the first place, this is a British phrase, not an Americanism. Second, according to Eric Partridge’s highly respected *Dictionary of Slang and Unconventional English* (1961 ed.), *his name is mud* is first recorded in 1823 England, 10 years before Mudd was born, and is probably a few years older. The 1823 quotation Partridge gives is: “‘And his name is mud!’ ejaculated upon the conclusion of a silly oration. . . .” Partridge’s definition of the phrase is the same as most American definitions: “one has been badly defeated, one is in utter disgrace.” Rather than being inspired by poor Dr. Mudd, the expression was almost certainly suggested by the universal dislike or even loathing of plain old mud, which has never been exactly popular with humankind.

hiss. We find *hiss* as “a sound uttered in disapproval or scorn” (said to derive from the hissing sound made by geese) first recorded in the *O.E.D.* in the review of a 1602 play. Many years

later, British author Charles Lamb saw his first play hissed off the stage and actually joined in the hissing so that he wouldn't be recognized as the author by the violent audience. Lamb, however, had the last word about the hissing, writing: "Mercy on us, that God should give his favorite children, men, mouths to speak with, discourse rationality, to promise smoothly, to flatter agreeably, to encourage warmly, to counsel wisely; to sing with, drink with, and to kiss with; and that they should turn them into mouths of adders, bears, wolves, hyenas, and whistle like tempests, and emit breath through them like distillations of aspic poison, to asperse and vilify the innocent labour of their fellow creatures who are desirous to please them. God be pleased to make the breath stink and the teeth rot out of them all therefore!" Another time a loud *hiss* came forth from somewhere in the audience while Lamb was delivering a lecture. After a brief silence, Lamb, showing no emotion, simply said: "There are only three things that hiss—a goose, a snake, and a fool. Come forth and be identified."

hissing away a career. English actor William Smith (d. 1696) was arguing with a nobleman behind the scenes of George Etherege's play *The Man of Mode*, in which he was appearing as Sir Fopling Flutter, "the Prince of Fops." The nobleman grew so angry about Smith's characterization (which was said to suggest the peer) that he severely beat the actor. When word got back to Charles II, who admired the handsome Smith's work, the king severely reprimanded the nobleman. But justice was not really served. A large party of the nobleman's gentleman friends formed a club whose sole purpose was to drive Smith from the stage. They followed Smith from theater to theater, their hisses and catcalls ruining his every performance. Smith soon retired, his only consolation the small fortune he had accumulated over the years.

hiss me into madness. Caliban's words in Shakespeare's *The Tempest* (1611): "Sometimes am I all wound with adders, who with cloven tongues do hiss me into madness."

histrionic. Etruscan actors from the Roman province of Etruria, who were called *istri*, give us our word *histrionics*: of or relating to actors and acting or excessively emotional, affected. The Romans called these provincial actors *istriones*, and from this Latin word came the English word *histrionics*.

hit below the belt. An English boxing rule early in the 18th century, to hit below the belt became a general Americanism by 1928, meaning to take unfair advantage.

Hitchcock chairs. Hitchcock chairs were so well made that they have become collector's items even though they were originally mass-produced in 1818. Lambert H. Hitchcock (1795–1852) established a factory in Barkhamsted, Connecticut, where some 100 employees turned out his product. Hitchcock chairs came in a variety of designs and sizes, but were characterized by strong legs, curved-top backs, and seats (initially rush-bottomed) that were wider in front than in the back. The chair maker won such renown that Barkhamsted renamed itself Hitchcocksville in his honor, although the town changed its name again to Riverton in 1866. The sturdy chairs,

all identified by Hitchcock's signature stenciled on the back edge of the seat, include the first rocking chair designed and made as such—i.e., not made by just adding rockers to a regular chair.

Hitchcock ending. An often ironic, surprise ending characteristic of the 53 films, numerous TV plays, short-story anthologies, and magazine stories directed, sponsored, collected, and published by Alfred Joseph Hitchcock. Hitchcock's films have received high critical praise as well as a great popular following. The English director, born in London in 1899, began his career as a scenario writer, becoming an art director and production manager before starting to direct films in 1925. His many suspenseful thrillers, objects of a cult for their brilliant camera technique, include *The Lodger*, *Blackmail*, *The 39 Steps*, *The Lady Vanishes*, *Rebecca*, *Suspicion*, *Foreign Correspondent*, *Shadow of a Doubt*, *Life-boat*, *Spellbound*, *Rope*, *Strangers on a Train*, *North by Northwest*, *Psycho*, and *The Birds*.

hitch your wagon to a star. Set your goals high, aim high. These oft-quoted words were written by American philosopher Ralph Waldo Emerson in his essay "Civilization" in *Society and Solitude* (1810).

hit 'em where they ain't. Wee Willie Keeler, inventor of baseball's hit-and-run play with New York Giants manager John McGraw, contributed this expression to the language in 1897 when asked by a reporter how such a little man could have such a high batting average. "Simple," Keeler advised, "I keep my eyes clear and I *hit 'em where they ain't*." William Henry Keeler had a lifetime average of .345 over a 19-year career and collected 2,962 hits; he was elected to baseball's Hall of Fame in 1939. His *hit 'em where they ain't* is sometimes used outside of baseball for doing something unexpectedly, though I can find no dictionary that records the usage.

Hitler. See FÜHRER.

hit man. Partridge recorded this synonym for a hired killer or assassin in 1963, but it must be older, as *hitter* is recorded four years earlier and *to hit* for "to kill or assassinate" goes back to 1942. At least one source credits mobster Louis "Lepke" Buchalter with coining *hit* "as a euphemism for contract murder." The term *hit woman* seems to have come in with women's lib in about 1974, and *hit list* for a list of people to be assassinated dates back to at least 1976.

hit on all six. In the early days of motor cars this phrase was *hitting on all fours*, referring of course to the four cylinders of automobiles and meaning that all the pistons in the cylinders were hitting, or firing, perfectly. With bigger cars came the expression *hitting on all six*, and though engines got even bigger, the expression never exceeded this number. Most sources have the expression as *hitting on all six* today, but mostly I've heard it as *hitting on all sixes* to describe any good performance.

hitter-ish. A new word from the world of sports—notably baseball. Hitter-ish was invented by San Francisco Giants coach Joe Lefebvre during the 2007 season in an effort to help Giant slugger Barry Bonds hit more home runs and become baseball's all-time home run king. As Lefebvre put it: “He (Bonds) just looked hitter-ish, like the way he is . . . He was trying to hit line drives instead of hitting the ball out of the park.” Barry Bonds broke Hank Aaron's home run record of 755 homeruns on August 7, 2007, although there have been many questions about his accomplishment.

hit the hay. To go to sleep, as in “We all hit the hay early after that first day of climbing.” Obviously, all the hay around suggests a rural origin and the phrase is first recorded in 1880s America. It may even derive from *hit the sack*, the sack in the phrase meaning a sack containing bedding like straw since the 17th century.

hit the jackpot. The “progressive jack pot” in draw poker has been explained as follows: “If a pot is not opened on the first deal, the opening hand for the next deal increases from jacks or better [to open], to queens or better . . . on the second deal . . . from queens, or better, to kings, or better . . .” Since the players bet on each hand until someone can open, the pot can grow larger than usual, which led to large pots in poker being called jackpots. From poker the word passed into general usage, first recorded in a nonpoker use in 1884 and subsequently employed in phrases like *to hit the jackpot*, “to have great luck,” first attested in 1944, but probably older.

hit the nail on the head. Although the allusion is obvious here, no one knows who invented the expression. John Stanbridge's *Vulgaria* (1520) has “Thou hyttest the nayle on the head” and English poet John Skelton used it a little later, but the phrase was probably proverbial before then. One suggestion is that it derives from the Roman saying *acu rem tangere*, “you have touched the thing with a needle,” which refers to the custom of probing sores. To be *off the nail* was slang over a century ago for being slightly drunk.

hit the road, Jack, and don't come back. Get out of here and don't bother us. A U.S. black expression since about 1950, but has become a song lyric as well.

hit the sack. See HIT THE HAY.

hit the wall. Though it is ignored in all dictionaries, so far as I know, this expression was born in the mid-1970s, when marathon running became popular in the United States. The *wall* is a point in a 26-mile 385-yard marathon run (usually at the 18-to-20 mile mark) when a runner seems to lose everything physically, hits up against a wall, so to speak, and can go no farther—at least not at his or her customary pace. It can be a terrible feeling, especially if one hasn't trained properly for the marathon, but most runners pull themselves over the wall and go on to finish. Figuratively, the phrase is now used to describe any situation in life that stops a person's progress and seems to make it impossible to go on.

Hobbesian. English philosopher Thomas Hobbes (1588–1679) wrote in his chief work, *The Leviathan* (1651), that man is a naturally selfish creature whose life is “solitary, poor, nasty, brutish, and short.” Therefore, he argued, an absolute monarchy, a leviathan or strong man is needed to control man's natural “condition of war of everyone against everyone.” This has become generally known as the Hobbesian philosophy, or Hobbesism.

hobby; hobbyhorse. *Hobby* first meant only a small Irish horse, or pony, in English, the word first recorded in 1375. By the late 16th century the toy *hobbyhorse*, also called a *hobby*, had been invented and within another century people were comparing their favorite occupations for amusement to the riding of such toy horses, which they had found so pleasurable in their youth. These favorite pastimes were first called *hobbyhorses*, the word not shortened to *hobby* until the early 19th century. *Hobbyhorse* is sometimes used as a synonym for a rocking horse today.

Hobey Baker Award. The annual award for the best American college hockey player, named in honor of Hobey Baker, a Princeton hockey star who served as a pilot in World War I and was killed shortly after the armistice on a test flight. See HEISMAN TROPHY.

hobnob. To hobnob with someone is to be very close friends with him. The word is formed from *hob*, “give,” and *nob*, “take,” which derive from the Anglo-Saxon *hab* and *nab*, meaning the same. To hobnob involves giving and taking, as has always been the way with true friends.

hobo. True hoboes claim that they will work whereas tramps and bums will not, and, indeed, the first hoboes, in the 1890s and early 1900s, were often migrating workers who carried their IWW union cards. The word *hobo* is of uncertain origin. Perhaps it derives from a once common greeting of vagabonds to each other: “Ho! Bo” (*Ho!* a form of “Hi!” and *Bo* meaning “guy or brother”). This seems to be the most popular explanation, but wandering *homeward bound* Civil War veterans have also been suggested, as have *hoe boys* who left the farm and were on the road. The word is first recorded in the American Pacific Northwest, about 1889.

hobo egg. An egg made by cutting a round center out of a piece of bread, putting the bread in a hot greased pan, dropping the egg into the center without breaking the yolk, and frying the whole until done (sometimes turning it over). Called a “hobo egg” because in the Great Depression era hoboes on the road were said to make it over their fires; called an “Alabama egg” for no reason I've been able to find. Years ago I thought I invented the dish as dinner for my kids, who called it “an egg in the hole in the bread.” Actually, I did invent it, but others did, too. I can only add that it is as delicious as the egg sandwiches Ernest Hemingway describes in his short story “The Battler.” Also called gas house eggs.

Hoboken. For no good reason this New Jersey city across the river from New York (and Frank Sinatra's birthplace) has been the butt of jokes for over a century, just the mention of its name

getting a laugh. Hackensack and Secaucus (once noted for its pig farms) have had much the same trouble.

hobsonize. Lieutenant Richmond Pearson Hobson (1870–1937) won fame during the Spanish-American War, stepping into the national limelight when he tried to sink the collier *Merrimac* and block Santiago harbor. The young naval engineer was honored with parades and dinners wherever he went when he returned to the United States in August 1898. His good looks and popularity led to his name becoming a verb meaning *to kiss*: women often flung their arms around him and showered him with kisses when he appeared in public. Though *hobsonize* is an obsolete expression today, it remains in historical dictionaries as one of the most curious of linguistic curiosities.

Hobson-Jobson. The substitution of native English words, unrelated in meaning, for foreign ones, especially oriental expressions, is called *Hobson-Jobsonism*. Hobson and Jobson were applied to the Muslim processional chant “Ya Hassan! Ya Hussein!” by British soldiers in 19th-century India because these traditional English surnames sounded something like the repeated exclamations of the parading Muhammadans (*Hodge* was the first of the English names, but it became *Hobson* by reduplication). The Hassan and Hussein of the chant are the grandsons of Muhammad, their names still honored at the festival of Murarram. The term *Hobson-Jobson*, for “a kind of pidgin language,” was popularized with the publication of a book of the same name by the English Sanskrit scholar Arthur Coke Burnell in 1886.

Hobson’s choice. This expression has lasted for over three centuries, even though it derived from the name of an obscure English carrier and innkeeper, Tobias or Thomas Hobson. For some 50 years Hobson drove his stage 60 miles from Cambridge to London, often at breakneck speeds, and kept some 40 horses on the side to rent to students at Cambridge University. Hobson, a humane man who realized that “the scholars rid hard,” put his mounts on a strict rotation basis so that the best and most often chosen horses would not be ruined. When you rented a horse from Hobson, you rented the horse nearest the livery stable door, the one best rested, no matter what your preference or how many horses were available. Hence, *Hobson’s choice* is no choice at all.

Ho Chi Minh’s revenge. Another, later variation on MONTEZUMA’S REVENGE. Here diarrhea is named after the Vietnamese leader Ho Chi Minh (1890–1969) by G.I.s serving in the Vietnam War (1954–75). After the war, Saigon, South Vietnam’s capital, was renamed Ho Chi Minh City.

Ho Chi Minh Trail. A jungle war trail from North Vietnam through Laos and Cambodia during the Vietnam War. It was named for North Vietnam leader Ho Chi Minh (d. 1969).

hock. *Hock*, for any white Rhine wine, is simply an abbreviation of *Hockamore*, which is what the English called *Hochheim*, a fine white wine made in Hochheim on the River Main in

Germany. In commerce the name *hock* became extended to all white Rhine wines, fine or not. *See also* IN HOCK.

hockey puck. A hockey puck is a fool, a lamebrain, a block-head, a numskull or any of a hundred similar adjectives—in short, an inert someone who can offer no resistance to the blows of life or someone who is knocked around like a puck by a stick in the game of hockey. The term seems to have been coined by insult comedian Don Rickles in the early 1970s.

hocus-pocus; hoax. “I will speake of one man . . .” wrote Thomas Ady in *A Candle in the Dark* (1656), “that went about in King James his time . . . who called himself, The Kings Majesties most excellent Hocus Pocus, and so was called because that at the playing of every trick, he used to say, *Hocus Pocus, tontus talontus, vade celeriter jubio*, a dark composure of words, to blinde the eyes of the beholders, to master his trick pass the more currantly without discovery.” Whether this juggler’s assumed name became the basis for our *hocus-pocus*, “deception or trickery,” no one really knows. Ochus Bochus, “a wizard and demon of Northern Mythology,” or “a 17th-century magician,” whose identity has been established in neither case, has also been nominated. Neither is there proof positive that *hocus-pocus* is a blasphemous Scandinavian corruption of the first words of the consecration in the Catholic Mass, *Hoc est corpus (filii)*, “This is the body [of the Son of God].” Many scholars lean to this last theory, pointing out that *hokus-pokus-fileokus* is still unwittingly used in Norway and Sweden, just as *hocus-pocus-dominocus* (for *hoc est corpus Domini*, “this is the body of the Lord”), is an expression common in children’s play in America. (I remember the possibly euphemistic *hocus-pocus-minniocus*.) Perhaps the word does originally come from the perversion of the sacramental blessing, reinforced by the nickname that the ancient juggler assumed from his diverting pseudo-Latin patter, and further strengthened by the names of other successful jugglers and magicians named after him. We do know that many Tudor conjurors famous for their legerdemain were called Hocus Pocus or Hokus Pocus after their predecessor and that Master Hocus Pocus became a symbol of illusion and deceit. From *hocus-pocus* came, in all probability, the words *hoax*, “a trick”—*hoax* is merely *hocus* said quickly—and *hokum*, which is a blend of *hocus-pocus* and “bunkum” or “bunk.”

hodgepodge. A mixture of many things, a conglomeration, a confused mess. The word, used since the late 15th century, derives from the French *hocher*, “to shake together,” and *pot*, “pot,” which yielded the French word *hochepot* for a stew made of many ingredients. *Hochepot* became *hotchpotch* and, finally, *hodgepodge* in English.

Hodgkin’s disease. *See* BRIGHT’S DISEASE.

hoecake. It seems unlikely that the cakes of coarse cornmeal called *hoecakes* are so named because they were baked on hoes, for the hoe was a valuable tool on the frontier and baking bread on one would damage and eventually destroy it. More likely the cake takes its name from the Indian *nokehick*, for “coarse cornmeal,” which the earliest settlers pronounced

nocake. These settlers called the cake baked from this meal *nocake*, too, but the name changed to *hoecake* over the years, perhaps because this was close in sound to *nocake* and people thought that *nocake* couldn't possibly be the name for a cake that did exist! All this aside, however, the Japanese *sukiyaki* does mean “shovel-broil,” the dish made by Japanese peasants on their shovels.

hoe one's own row. Unlike LONG ROW TO HOE this expression means to be independent, to paddle one's own canoe. It is also an agricultural phrase, dating back to the 18th century, when farm workers, unaided by machinery, did hoe their own rows. The saying first appeared in print after John Tyler became president on William Henry Harrison's death in 1841, when it became apparent that Tyler wouldn't follow Harrison's policies, but would “hoe his own row.”

hog. Few English words that were used by the Britons remain. *Hog* is such a native word, deriving from the British *hukk*, probably first referring to a pig of a certain age, such as a yearling, and then coming to mean pigs in general. “Crag” and “tor” are other words the Britons used.

hogan; Hogan's goat, etc. Goats don't eat tin cans (they eat the paper labels off them), but they do stink. For this reason, and no other, anything said to be like *Hogan's goat* (a play, a book, or whatever) is something that is very bad, that really stinks. *Hogan* is just a common name affixed to this Americanism that dates back to the turn of the century—no real Hogan has anything to do with it. “Hogan's brickyard,” for a rough-hewn baseball diamond—one usually in a vacant lot—is a similar expression, but *Hogan*, a variety of cotton, is named for its 19th-century developer, William Hogan. The Navaho Indian *hogan* is a dwelling constructed of earth and branches, usually built with the entrance facing east. Wrote Willa Cather in *Death Comes for the Archbishop* (1927): “The Navajo hogans, among the sand and willows. None of the pueblos would at that time admit glass windows into their dwellings. The reflection of the sun on the glazing was to them ugly and unnatural—even dangerous.”

Hog and Hominy State. A old nickname for Tennessee.

Hogarthian. His paintings uncompromisingly realistic in style, his name came to indicate the same, but English painter William Hogarth (1697–1764) wasn't above fantastic flights of the imagination. Once when an ugly client refused to pay for a realistically ugly portrait, Hogarth threatened to add a tail and other appendages to his likeness and dedicate it to “Mr. Hare, the famous wildbeast man.” His client paid on condition that the portrait be destroyed. Hogarth's great ability as a painter was overshadowed by his consummate skill as a caricaturist, which he used in his engravings to expose the hypocrisy and degeneration of English society. Among his numerous satiric works the most celebrated are *The Rake's Progress*, the *Marriage à la Mode* series, *Gin Lane*, and *Four Stages of Cruelty*, all noted for their frank humor and realistic attention to detail. It has been said that Hogarth, despite his great skills, was less a painter than an author, “a humorist and satirist upon canvas.” Yet he was capable of

painting such masterpieces as the *Shrimp Girl* and *Captain Coram*.

hogging moment; sagging moment. Any time a ship is out of the water at both ends and waterborne amidships is known by the term *hogging moment*, an expression dating back two centuries, as does the opposite moment of stress, the “sagging moment.”

hog latin. See PIG LATIN.

hogwash. Anything worthless, nonsensical, or false and insincere. The *wash* in the term refers to garbage or swill, *hogwash* being the swill fed to hogs. The word has been used in its general sense since the 18th century.

hog wild. To become wildly excited or irrational due to excitement, anger, or even happiness. The Americanism probably originated in the mid 19th century, though it isn't recorded until about 50 years later. It obviously refers to the way hogs become wildly excited when aroused and is just as obviously another phrase from the farm, still hanging in there long after most Americans began buying their bacon wrapped in cellophane.

Ho, ho, ho! The booming voice of the Jolly Green Giant in the famous TV commercial for Green Giant foods beginning in the 1950s. The advertising jingle was sung by Elmer Dresslar (1925–2005).

hoi polloi. *Hoi polloi* means the masses, the crowd, deriving from the Greek *hoi polloi* “the many.” It shouldn't be written as *the hoi polloi*, which is equivalent to saying “the the many,” though great writers like Dryden have made this usage acceptable. *Hoi polloi* is often erroneously associated with snobs because of its resemblance to HOITY-TOITY, “haughty or snobbish,” another English word that dates back more than three centuries.

hoist with his own petard. The petard of medieval times wasn't a derrick, but a kind of rude hand grenade or mine that invaders would fasten to castle walls or gates. It took its name, oddly enough, from the French *peter*, “to break wind.” Metal and bell-shaped, it contained an explosive charge that was fired by a slow-burning fuse, but it was often poorly constructed and went off prematurely, blowing up the man who lit it as well as the castle wall. Such a man was said to be *hoist* (lifted or heaved) *by his own petard*. See DERRICK.

hoity-toity. A pretentious upper-class Frenchman a few centuries ago often took the opportunity to literally look down from his *haut toit*, or “high roof,” on the lower classes, his *haut toit* becoming through mispronunciation the English *hoity-toity*, “haughty, pretentious.” Or so goes one theory on *hoity-toity's* origins. The *O.E.D.* claims the word is a rhyming compound based on *hoit*, “to romp,” now obsolete. By this theory *hoity-toity*, first recorded as meaning giddy behavior (1668), came to mean haughty by 1830—possibly because the

same socialites who were *hoity-toity*, “silly,” were haughty as well.

hold a candle to. It was common in the 16th century and later for servants holding candles to guide their masters along the poorly lit streets of English cities. Theaters also employed candle-holders called link-boys in the days before gas lighting. These were among the most menial of jobs, but some poor wights failed at them for not knowing the roads or the layout of a theater, and they were said to be *not worthy to hold a candle to anyone*. This expression soon came to be used in the sense of comparing the abilities of two people, *he can't hold a candle to you*, meaning “he’s greatly inferior to you.”

hold at bay. Surprisingly, scholars haven’t been able to connect this expression with hunting dogs that ran down big game like stags and held them at bay by barking, or baying, until the hunters arrived. Perhaps the baying of big-throated hounds bred for this purpose in medieval times did reinforce the expression; but *hold at bay*, to hold at a standstill, to keep someone on the defensive, derives from the French phrase *tener a bay*, which means “to hold in a state of suspense, to hold in abeyance.” The French expression, in turn, comes from the Italian *tenere a bada*, meaning the same. *Bada* in the latter phrase indicates the state of suspense or expectation, deriving from the Latin *badare*, “to open the mouth.” So although the idea of dogs baying at a trapped stag conveys the idea behind the expression perfectly, it literally means to hold agape, or to hold with mouth open.

Holden Caulfield. The fictional character created by J. D. Salinger in *The Catcher in the Rye* (1951) was named in an unusual way. The author happened to be passing a movie theater and looked up at the marquee to see the names William Holden and Joan Caulfield starring in *Dear Ruth*. He focused on the last names, which were featured in large letters, and the two names seemed a natural for the name of the teenager in the book he was writing.

holding the bag. See LEFT HOLDING THE BAG.

hold one’s feet to the fire. This Americanism dates back to the 19th century and means to force someone to do something. It may have originated somewhere on the frontier, although the form of torture is surely much older.

hold one’s nose to the grindstone. Work hard. This proverbial phrase dates back to at least 1596, when it appeared in John Heywood’s *The Proverbs of John Heywood*.

hold one’s tongue. To keep quiet, keep a secret. According to Matt. 26:23, in one version of the Bible, “Jesus held his tongue.” There is a story about the tongue featuring 18th-century Viennese writer and cleric Zacharias Werner. Werner gave a sermon on “that tiny piece of flesh, the most dangerous appurtenance of a man’s body.” On and on he graphically expounded to a blushed and blanched congregation—including several ladies who fainted in the aisles—about all the evils this tiny piece of

flesh had caused. Finally, Werner concluded, his voice rising to a shout: “Shall I show you that tiny piece of flesh?” Not a breath could be heard until he cried: “Ladies and gentleman, behold the source of our sins!” Smiling at last, he stuck out his tongue.

hold the fort. Union General William Tecumseh Sherman is said to have invented this expression in 1864, when he wired the words to General Corse. Since the Civil War the words have not been used literally and have come to mean to take charge of any post or position, giving the job, temporary as it may be, your best efforts. It is sometimes heard as *hold down the fort*. General Sherman also suggested the phrase *40 acres and a mule* when, in a field order of 1865, he authorized that “Every family shall have a plot of not more than forty acres of tillable ground.” Southern blacks took this to mean that all shareholders’ plantations would at the end of the war be divided up into 40-acre plots that would be distributed to their slaves along with a mule to work them. The mule in the phrase was probably suggested by the old expression *three acres and a cow*, a common promise of British politicians.

hold your horses. Harness racing at American country fairs about a century and a half ago probably inspired the expression *hold your horses*. The amateur drivers, frequently young and inexperienced, often started their charges before a race had begun, leading the starter and the spectators to shout “Hold your horses!” By the 1840s the expression was being used to urge human patience in general.

hole. Often used in place names, such as Jackson Hole, Wyoming, usually to mean a deep valley, a place surrounded by mountains.

holistic. Though the word hardly fits in with that country’s policy of apartheid, South African prime minister General Jan C. Smuts coined this term from the Greek for “whole” in his book *Holism and Evolution* (1926). Smuts wrote that “The whole-making, holistic tendency . . . operating in and through particular wholes, is seen at all stages of existence . . . There is a synthesis which makes the elements or parts act as one, or holistically.” Thus *holism* is defined as “the theory that whole entities, as fundamental components of reality, have an existence other than as the mere sum of their parts.”

Holland Tunnel. The tunnel connecting Manhattan and Jersey City has nothing to do with Holland or the Dutch. It is named for the great chief engineer who designed it, Clifford M. Holland. The tunnel opened in 1927.

holly. The Romans used *holly* as a decoration in their wild festival of Saturnalia before the early Christians in Rome adopted it for Christmas. Related to the word *holy*, *holly* derives ultimately from the Anglo-Saxon *holen*, for the holly tree.

hollyhock. The old favorite garden flower wasn’t introduced to England by the Crusaders and named after the Holy Land as legend has it. *Holly hock* is a corruption of *holy hock*, which the plant was first called. *Hock* is an old name for “mallow,” and the plant probably became *holy* because it had been known as *St.*

Cuthbert's cole at one time. St. Cuthbert, who lived in the seventh century and also has an eider duck named for him, was of course holy and had his retreat on Holy Island (the Isle of Farne) off the English coast as well. He lived in a hermit's cell on the island, where the mallow grew in marshes, and pilgrimages were made there as early as the ninth century.

Hollywood. There is no proof for the tale that the film capital of the world, laid out in 1887, was first called Holywood by its pious founders, this corrupted to Hollywood as the town corrupted. Hollywood may have been named for the native California holly or toyon (*Heteromeles arbutifolia*), a large shrub that isn't a true holly but whose scarlet berries, borne from Christmas to Easter, suggest the holly and are much used for Christmas ornaments. Most probably, however, Tinseltown takes its name from the name of a ranch in the area owned by Mr. and Mrs. Harry Henderson, or from a hamlet named Hollywood in 1887 by the Wilcox family, who farmed in the area. It is hard to find anyone with many kind words for Hollywood. "It's hard to tell where Hollywood ends and the DTs begin," said W. C. Fields. "Hollywood's a trip through a sewer in a glass-bottomed boat," said Wilson Mizner. "Hollywood impresses me as being ten million dollars worth of intricate and highly ingenious machinery functioning elaborately to put skin on baloney," observed drama critic George Jean Nathan. Said comedian Fred Allen: "All the sincerity in Hollywood can be put into a gnat's navel and you'd still have room for three caraway seeds and an agent's heart."

Hollywoodese. A term referring to the hyped-up speech of movie people. "Hollywood talks and thinks in superlatives," Leo Rosten wrote 60 years ago in *The Movie Colony*. "Movie people do not 'like' things; they are 'mad' about them. They do not dislike things; they 'loathe' or 'detest' them. . . . The revealing story is told of two movie producers meeting on the street; 'How's your picture doing?' asked the first. 'Excellent.' 'Only excellent? That's too bad!'"

The Hollywood Golden Rule. "Whoever has the gold makes the rules." See GOLDEN RULE.

Holocaust. *The Holocaust* refers to the slaughter of over 6 million Jews, in Nazi concentration camps, many murdered in cyanide gas showers, their bodies desecrated and burned in bake ovens. The word has been used in the sense of a great slaughter or massacre, usually by fire, for over three centuries, one writer noting that France's Louis XII "made a *holocaust* of 1,300 people in a church." *Holocaust* is also used today to describe a great fire, such as the firebomb raids of World War II, or Hiroshima and Nagasaki. A *holocaust* was originally a sacrifice completely consumed by fire, a burnt offering to the pagan gods, the word deriving from the Greek *holokaustos*, "burnt whole." *Kaustos*, "burnt," is also the basis of the English words *cauterize* and *caustic* (used literally of *caustic lime*, which burns, and figuratively of *caustic words* that "burn" their recipients).

Holofernes. The name of several historical figures real and fictional. The earliest (the book of Judith in the Apocrypha) is the Babylonian general of Nebuchadnezzar who was decapitat-

ed by the comely Judith after he let his guard down and got drunk when she promised to sleep with him. Judith holding Holofernes's head is the subject of a number of gory Renaissance paintings. Her action saved her city. Holofernes is also the name of the great doctor of theology Tubal Holofernes, who taught the young Gargantua in Rabalais's *Gargantua* (1534); it is also the pedantic schoolmaster's name in Shakespeare's *Love's Labour's Lost* (1595). Shakespeare is thought to have ridiculed the learned John Florio (1553–1625), the son of an Italian Protestant refugee and well known as a lexicographer and translator, the Bard inventing Holofernes as an imperfect anagram of Florio's full name.

holy cow! A trademark phrase associated with former Yankee baseball star Phil Rizzuto, who often used it in his baseball commentaries during a ballgame. "Scooter" Rizzuto, who died at age 89 on August 15, 2007, always claimed that his high school baseball coach encouraged him to use *Holy Cow!* instead of any real profanity. Yankee manager Casey Stengel called one of the shortstop's brilliant plays "the greatest play I ever saw." On the other hand, Rizzuto himself for some reason called any fielder who made an error a "huckleberry."

holy deadlock. See DEADPAN.

holy of holies. The words now describe any especially sacred place. Originally, it referred only to the inner chamber of the biblical tabernacle and the temple in Jerusalem. It was God's chamber and could only be entered on the Day of Atonement, by the high priest.

holy poke. Bread dough formed into large, round balls and deep fried. Imogene Wolcott in *The New England Yankee Cookbook* (1939) says that holy pokes are called *huff jiffs* in Maine and *Baptist bread* in other parts of New England.

Holy Rifles. See BEECHER'S BIBLES.

holy roller. A term common in America for a member of any religious sect whose services are often characterized by ecstatic movements that may include rolling on the ground or floor; the word is also applied to any overbearing religious person. A *holy tone* or *holy whine* refers to the speaking of Primitive Baptist preachers, who sound an audible "ah" at the end of each pause for breath. Today *holy roller* is a disparaging term for any zealous, judgmental, opinionated religious person. But originally, in about 1841, the term was coined to describe a New York State sect also called the Sweezites, one of whose practices was to roll upon the floor during religious services. Over the years it became the name of several other sects as well.

holystone. Soft sandstone, often used to scrub the decks of ships, is called *holystone* because it is full of holes. First it was spelled *holeystone*, losing the "e," it's said, because sailors who used it knew no ease ("e's") and had to kneel as if in prayer (a holy attitude) when scrubbing the decks.

homage. When we pay homage to someone we are acknowledging our respect for him. This is what peasants were required by law to do in a medieval ceremony called *homage* (from the French *homme*, “man”), which demanded that a vassal kneel before his lord on the feudal estate and swear allegiance that he would ever be his man. From the ceremony comes our word *homage*, first recorded in 1390 in anything like its modern sense.

homburg. The *homburg* hat, a soft felt TRILBY HAT, was first made at Homburg in Prussia. It was introduced to England by King Edward VII, who often enjoyed the hot springs in Homburg.

home, James, and don't spare the horses. Passengers in autos still use this phrase humorously to friends when given lifts home. *Horses* here has nothing to do with engine horsepower, however. The old expression, dating back perhaps to the 17th century, was once a common command of English nobility to their private coachmen.

home, sweet home. “Home, Sweet Home,” its words written by John Howard Payne in 1823, may have used the melody of an old Italian folk song that Englishman Henry Bishop adapted when he wrote the music. Payne received 250 pounds from an English producer for the words and other material, the song first sung in a popular British opera of the time. Legend says that the author wrote the song while homesick in Paris. The Payne family cottage in East Hampton, Long Island, New York is a national landmark today.

home correction. Wife or child beating. Says a character in Stephen King's *Dolores Claiborne*, 1993: “No one calls it home correction anymore—the term has passed right out of conversation, so far as I can tell, and good riddance—but I grew up in the 1940s with the idea that when women and children step off the straight n' narrow, it's a man's job to herd them back onto it. I ain't tryin' to tell you that just because I grew up with the idea, I thought it was right, though . . .”

home court advantage. An expression from basketball that has become part of the American lexicon, *home court advantage* means the psychological advantage one has in familiar surroundings, where one knows the terrain better and has a sympathetic audience.

Homeric laughter; Homer sometimes nods. *Homeric laughter* is hearty, lusty laughter like that of the Gods in the greatest of epic poems. No one really knows who wrote the *Iliad* and *Odyssey*. Some authorities doubt that there was even a poet Homer, pointing out that the name means “one who puts together”; instead, they ascribe his work to a number of authors. But modern scholars tend to support the traditional story that the author was the blind Greek Homer, who lived in the eighth century B.C., wandered from city to city writing his poems, and whose life remains a blank historically. *Homer sometimes nods* is another expression associated with the author, meaning that the best authors can make mistakes. This phrase comes from Horace's “Ars Poetica”: “Sometimes even good old Homer nods.”

home run. The term *home run* in baseball was first recorded in 1856 and, as Stuart Berg Flexner pointed out in *Listening to America*, it “couldn't have appeared much sooner because it wasn't until the late 1840s and early 50s that *home* was used in games to mean the place one tried to reach in order to win or score . . .” A home run was also called a *home* at the time, but *homer* isn't recorded until 1891. It should be noted that *home run* was a cricket term before it was used in baseball. Because it is the ultimate hit in baseball, a *home run* has come to mean a great accomplishment in any field.

home run hitters drive Cadillacs. A quote always attributed to Pittsburgh Pirate slugger Ralph Kiner, but in his book *Baseball Forever* (2004), written with Danny Peary, Kiner advises that the quotation “actually was first stated by a teammate on the Pittsburgh Pirates, pitcher Fritz Ostermueller.”

Homestead State. An old nickname for Oklahoma because so much of the state was settled by homesteaders under the Congressional Homestead Act of 1862.

homey. Originally black English for a friend or anyone from your hometown or neighborhood. Short for *homeboy*, the term now has some general usage. *Homeboy* is first recorded at the end of the 19th century and *homey* during World War II.

hominy. Hominy isn't a vegetable, as so many believe, but the inner part of corn (maize) that has been soaked to remove the hull. The word derives from the Algonquin Indian *rockhominy* for the dish.

homophobia. An aversion to gay or homosexual people and behavior based on this aversion. Writing in the *New York Times* letters column (January 30, 2005), George Weinberg claimed he invented the word: “As a clinical psychologist, I was struck in the early 1960s by the atrocities committed against gay men and women by psychologists as well as by others. I became a devoted activist for gay rights, which to me are nothing more or less than human rights. I was the first to identify the adverse reaction to gays as phobic, and I coined the word ‘homophobia.’”

homo sapiens. Carolus Linnaeus (1707–78), the great Swedish botanist and methodical classifier of things animal, vegetable, and mineral, gave the name *homo sapiens*, “thinking man,” to the human species. Before this the Latin *homo*, “man,” had been similarly used, Shakespeare writing in *Henry IV, Part II*: “Homo is a common name to all men.” Linnaeus also first used the Mars (&male\$) and Venus (&female\$) symbols as symbols for male and female.

homosexual; heterosexual. *Homosexual* does not derive from the Latin word *homo*, for “man,” as *homo sapiens* does. It comes from the Greek *homos*, meaning “the same,” like many other English words, including *homogenized* and *homonym*. Therefore, contrary to popular belief, it can be applied to females as well as males. Its antonym, *heterosexual*, comes from the Greek *heteros*, “other.” The use of *heterosexual* as a noun, meaning a heterosexual person, not as an adjective, was rare up

until the 1960s, but the term dates back to the late 19th century, when it was first recorded in a paper of Sigmund Freud. *Homosexual* as a noun is first recorded at about the same time (1912).

honcho. This word for boss or big boss is Japanese in origin, deriving from the Japanese army designation *hancho* for a squad leader. American soldiers stationed in Japan and Korea after World War II picked up the word and brought it back home, where it is still widely used.

Honda. The Japanese car, now among the two or three best-selling automobiles in the U.S., bears the name of Soichiro Honda, an engineer who founded the Honda Motor Company in 1948. Honda made motorcycles before it made cars, at first installing surplus World War II engines on bicycles.

Honest Abe. The most common nickname for Abraham Lincoln, inspired by the “every schoolboy knows” stories of his honesty. *The Rail Splitter* is another well-known Lincoln nickname, from his splitting fence rails as a young man in Illinois. Least known is his derogatory nickname *Spot Lincoln*, because as a congressman he had questioned President Polk’s story that Mexico started the Mexican War on U.S. soil, Lincoln demanding that the spot where this had happened be identified. In the South Lincoln was often called *Old Abe* and his enemies also called him the *Ape* (based on Abe and his aspect), as well as the *Baboon*. Blacks often called Lincoln *Uncle Abe* and his White House staff affectionately called him the *Tycoon*, the first use in America of this Japanese term for a military leader. Lincoln, of course, is also known as the *Liberator*, the *Emancipator* and the *Great Emancipator*, for his freeing of 4 million slaves. His wife was known as the *She-Wolf* and, rarely, *Mrs. President*; many of her contemporaries thought her bad-tempered and meddling.

honest Injun. A pledge of faith (meaning “it’s true,” “I swear it”), an American equivalent to the British expression *honor bright*. The first printed reference to this Americanism, which is sometimes considered offensive today, appeared in an 1851 issue of the San Francisco publication *Pioneer*: “Instead of simply asking you if it is true, he will invariably nod his head interrogatively, and almost pathetically address you with the solemn adjuration, ‘Honest Indian?’” Whether the reference to Indian honesty was originally sarcastic or admiring, the phrase is certainly not sarcastic anymore. An expression common in Mark Twain’s stories, *honest Injun* is still heard, if infrequently.

honey. Several dictionaries of slang call *honey*, as a personal term of endearment for a lover, an Americanism originating in the 1880s. But among the Greek betrothal rings in the British Museum’s collection is a gold ring from the fourth century B.C. engraved inside with the Greek word *meli*, “honey.”

honey, I forgot to duck. President Ronald Reagan’s words to his wife, Nancy, after would-be assassin John W. Hinckley, Jr., shot him with a handgun in March 1981, just 70 days into his first term. This has to be the presidential assassination attempt with the most remarkable bon mots. Mr. Reagan joked,

“Who’s minding the store?” to his top aides as he was wheeled into surgery. Nancy Reagan leaned over the gurney and told the president, “I brought your jelly beans, darling,” holding onto a jar of her husband’s favorite candy. Later, she dropped the jelly beans when during a news conference Secretary of State Alexander M. Haig, Jr., presumptuously announced, “I am in control, here at the White House.” See HAIGSPEAK.

honey buckets. A truck used to empty cesspools. In the Far East American G.I.s gave the name to carts that collected wastes from outhouses to spread on the fields as fertilizer.

honeydew melon. *Honeydew* is a popular shortening of “honeydew melon” (*Cucumis Melo inodorus*), a variety developed around 1915 and so named because of its sweetness. Honeydew can also either be the sweet material that exudes from the leaves of certain plants in hot weather or a sugary material secreted by aphids and other insects. In either case, it gets its name from its sweetness coupled with its dewlike appearance. Spenser wrote of it in *The Faerie Queene*:

Some framed faire lookes, glancing like evening lights,
Others sweet words, dropping like honey dew.

honey hole. A huge hole dug outside coal towns to hold the excrement from the town’s privies. During the Great Depression one group of miners held a mock-burial in a “honey hole” of President Herbert Hoover, on whom they blamed the bad times. A wooden slab prominently displayed his mock-epitaph:

HERE LIES HOOVER,
DAMN HIS SOUL,
BURIED IN A HONEY HOLE.
LET HIM LIE HERE TILL THE END,
POOR MAN’S ENEMY,
RICH MAN’S FRIEND.

honeysuckle. This plant was named in error in ancient times, when it was thought erroneously that bees extracted honey from the plant. The name is applied to several other plants but mainly to the more than 180 species of woody vines and shrubs belonging to the *Lonicera* genus, named for 16th-century German botanist Adam Lonitzer.

honey wagons. A truck used to empty cesspools. William Martin wrote in *Cape Cod*, 1991: “[He] leaned against the truck, one of those big red tankers with a shit-covered hose squirming like a tail out the back and a smell that seemed to be rusting the paint from the inside. On Cape Cod they called them honey wagons.”

hong-kong. Another name for horse chestnuts, the fruit of the horse chestnut tree, that look exactly like chestnuts but taste nothing like them. They get the name hong-kong because they were imported to England from Hong Kong in the 16th century. See CONKERS.

honk. The word *honk* is imitative in origin, deriving from the sound Canadian geese make *k-honk*, *k-honk*—when flying in their large V-shaped groups; the Indians, in fact, called these

big birds *cohonks*, and we call them *honkers* today. The word was much later applied to the sound of horns on early automobiles and soon after was being widely used as a verb.

honkie; bohunk. *Bohunk*, a low expression for a Polish- or Hungarian-American, arose at the turn of the century, and is probably a blend of *Bohemian* and *Hungarian* (both Poles and Hungarians were called Bohemians). *Bohunks* were also called *hunkies*, and black workers in the Chicago meat-packing plants probably pronounced this as *honkie*, soon applying it as a derivative term not just for their Polish and Hungarian co-workers but for all whites.

honky-tonk. The first printed use of this word for a cheap dance hall featuring gambling or burlesque shows, in a February 1894 Oklahoma newspaper, described a *honk-a-tonk* “well attended by ball-heads, bachelors and leading citizens.” No one is sure how the word originated. The British attribute it to America, calling *honky-tonk* “Negro slang,” while one American authority claims it is from the English dialect word *bonk*, “to idle about.” Either way *honky-tonk* is a reduplication, with *tonk* repeating the sound of *honk*. “. . . It was nothing for a man to be drug out of them dead,” testified a jazz musician of an early *honky-tonk*.

honorificabilitudinitatibus. The making of long words was a popular game in Elizabethan England and *honorificabilitudinitatibus*, meaning “honorableness,” was one of the most absurd ones made. Shakespeare made fun of this word by stretching it out still longer in *Love’s Labour’s Lost*, using its original Latin ablative plural when he has Costard the clown say to the servant Moth: “I marvel thy master hath not eaten thee for a word, for thou art not so long by the head as *honorificabilitudinitatibus*.” This is the word, incidentally, that to some “proves” Bacon was the author of all plays attributed to Shakespeare. For its rearranged letters form the Latin sentence *Hi ludi F. Baconis nati tuiti orbi*, which says, translated: “These plays born of F. Bacon, are preserved for the world.” The word, however, is found as early as 1460.

Hooah! bar. The back of every Hooah! energy bar supplement issued to U.S. soldiers explains that “the battle cry *Hooah!* is a cornerstone of military culture. Soldiers shout it as they jump out of helicopters, storm beaches, and freefall behind enemy lines. It means everything except *no*.” See the *New York Times* (June 15, 2006) for more about such energy bars.

hooch. The American soldiers who first occupied Alaska in 1867 were forbidden any liquor, but the long Alaskan nights were cold. They apparently made do with crude firewater, a brew made in their own rude stills from yeast, flour, and sugar or molasses. This BOOZE has been blamed on a local Indian tribe called the *Hoochen* by slightly *chauvinistic* (or *groggy*) etymologists, but these Alaskan natives only happened to live nearby—they were in reality the Hutsnuwu, Tlingit Indians, a name easy to mispronounce, and probably had no part in brewing the potent *hoochino* that the soldiers named after them. The brew’s name remained *hoochino* or *hoochinoo* until the Klond-

ike gold rush in 1897, when more of it was needed more often, in a hurry, and it was shortened to *hooch*. Being firewater, *hooch* was splendidly accurate to describe the bathtub concoctions made during Prohibition. The name caught on and is still with us, though more in a comic sense for all liquor. *Hootch* is a variant spelling. A *hooch* to those among U.N. troops in Korea, 1951–54, was a temporary shelter, but there the word derives from the Japanese *uchi*, “house.”

hood. Though its origin is unknown, this word for a cheap crook certainly doesn’t come from Robin Hood’s name. Dating back only to the early 1900s, it is almost surely a contraction of *hoodlum*, which may derive from the Bavarian German *hodalum*, a “scamp.”

hoodlum. A youthful ruffian and a gangster. The word *hoodlum* may derive from the Bavarian *hodalump* meaning the same. But there is no concrete proof of this and there are several other theories, these also unproved. All we really know is that *hoodlum*, first recorded in San Francisco in 1871, is now standard English. One source (Weekley) even calls the word “a perverted backspelling of Muldoon.”

Hoodoo Bar. An 1850 mining site on the Yuba River in California; the name *hoodoo* here is said to be an Indian pronunciation of How do you do?, but it could derive from the hoodoo stick divining rods many miners used in trying to find gold.

hoodwink. Blindman’s buff was known as the “hoodwinke game” in Elizabethan times. Players would *hoodwink*, or blindfold, a player who would then grope around to find the others. From the game came the expression *to hoodwink* someone, “to deceive or trick a person, to leave him groping about for his money.”

hoo-ha! Leo Rosten in *The Joys of Yiddish* gives 13 uses for the expression *hoo-ha!*, popularized by comedian Arnold Stang during radio days. But *hoo-ha!* (rhymes with Poo Bah) is mainly used to express envy, admiration, or scorn, as in (for the latter): “Some friend. Hoo-ha!” *Hoo-ha* means “uproar” or “hullabaloo.”

hooiaioia. *Hooiaioia* is the Hawaiian word for “certified.” It has the distinction of having the most consecutive vowels, eight, of all the words in the world. The English leader is *queueing*, with five.

hooker. *Hooker*, for “a prostitute,” may derive from the name of the small vessels called hookers that traded between British ports and the Hook of Holland in the 19th century. Prostitutes, it was said, would wait at the Hook for sailors from the hookers and lure them to their rooms. Another theory is that U.S. Civil War general Joseph Hooker, a fiery, opinionated man, didn’t believe that his men should dissipate their energies in the Washington, D.C., red-light district, putting the area off-limits. His troops, it seemed, counterattacked by dubbing all prostitutes *hookers*. Still another theory traces *hooker* to the way a prostitute “hooked” prospective customers by linking arms

with them. Finally, a fourth guess holds that the large number of brothels in New York City's Corlear's Hook district in the 1850s gave rise to this name for a prostitute. There is no firm proof for any one of these possible derivations for the origin of *hooker*, first recorded in North Carolina in 1845, but the arm-linking theory seems the best to me. Comedian Bob Hope wrote a humorous book about his "lifelong love affair with golf" entitled *Confessions of a Hooker* (1985). In this case *hooker* refers to a golfer who frequently hits the ball to the left if a right-handed player, or to the right if a left-hander.

Hookey Walker! Dickens used the variation *Walker!* in *A Christmas Carol*, but most Victorian writers wrote *Hookey Walker!* as a synonym for *incredible!* or *Nonsense!* on hearing a tall story. Several writers have suggested a hawk-nosed liar named John Walker as the source, but the origin of the expression is really unknown.

hook, line, and sinker. Any extremely gullible person who swallows a fantastic yarn *hook, line, and sinker* is like a hungry fish who gulps down not only the fisherman's baited hook but the entire tackle. This Americanism has been traced back to the age of Davy Crockett, when tall tales hooked many a fish hungry for belief. But a 16th-century British expression, to *swallow a gudgeon* (a small bait fish), conveyed the same idea.

hookworm. The parasitic hookworm is so called because of its hooked mouthparts, with which they fasten themselves to the intestinal walls of various hosts, including humans. The nematode was also called "the germ of laziness," because it made its victims anemic, lethargic, and dull-witted, afflicting about one-third of people in the American South. Shed in feces, the worm was picked up by bare feet. It diminished greatly when many more people were convinced to stop going barefoot and began to wear shoes.

hooligan. A proper name is the origin for this word for a violent roughneck, a fact conclusively established when British etymologist Eric Partridge brought to light Clarence Rook's *Hooligan Nights* (1899) in his *Dictionary of Slang*. Excerpts from Rook's sociologically valuable work follow: "There was, but a few years ago a man called Patrick Hooligan, who walked to and fro among his fellow men, robbing them and occasionally bashing them . . . It is . . . certain that he lived in Irish Court, that he was employed as a chucker-out [bouncer] at various resorts in the neighborhood. Moreover, he could do more than his share of tea-leafing [stealing] . . . being handy with his fingers . . . Finally, one day he had a difference with a constable, put his light out . . . He was . . . given a lifer. But he had not been in gaol long before he had to go into hospital, where he died . . . The man must have had a forceful personality . . . a fascination, which elevated him into a type. It was doubtless the combination of skill and strength, a certain exuberance of lawlessness, an utter absence of scruple in his dealings, which marked him out as a leader among men . . . He left a great tradition . . . He established a cult." This man called Hooligan made the Lamb and Flag pub in the Southwark section of London his headquarters, attracting a gang of followers around him. The entire rowdy Hooligan family, the nucleus of his gang—their real name was probably Houlihan—"enlivened the

drab monotony of Southwark," as another observer put it. The entry "Hooligan gang" is found on many police blotters in the late 1890s. *Hooligan* has also been used as a synonym for a prison guard, screw, or hack.

hoople. A foolish person, a jerk, an idiot. The word may derive from Major Hoople, a character in the *Our Boarding House* comic strip since 1923.

hoosegow; jug. *Hoosegow* is a western word of the 1860s that derives from Spanish *juzgado*, "a court or tribunal," which to Mexicans means a jail and was borrowed in this sense by American cowboys. Our slang word *jug* for a jail probably also comes from *juzgado* and was recorded a half century or so earlier.

Hoosier. A nickname for a native of Indiana, which is called the Hoosier State. *Hoosier* probably derives from the English dialect word *hoozer* for anything large. In America the altered word *hoosier* came to mean a big person, a burly frontiersman, and the like, until in about 1826 we find it applied to natives of Indiana, once a frontier state. Hoosier humorist James Whitcomb Riley, tongue in cheek, offered the following theory: "The real origin is found in the pugnacious habits of the early Indiana settlers. They were very vicious fighters, and not only gouged and scratched, but frequently bit off noses and ears. This was so ordinary an affair that a settler coming in to a bar on a morning after a fight, and seeing an ear on the floor, would merely push it aside with his foot and carelessly ask, *Who's year?*"

hootchie-kootchie. The Turkish belly dance that many of us "have no stomach for," as Beatrice Lillie once said. This name for the "mildly lascivious" dance—"not as sensuous as actual bumps and grinds since the hips are swayed rather than the pelvis rotated," we're told—has no source in an oriental name, unless it comes from the Bengal state of Cooch Behar. The best guess is that *hootchie-kootchie* derives from the English dialect words *hotch*, "to shake," and *couch* (pronounced *cooch*), "to protrude." But this fails to explain why the dance was first recorded as the *cootchie-coot* in the 1890s. Dancer Little Egypt (Catherine Devienne) made a fortune and got herself arrested several times by dancing the hootchie-kootchie in the nude at the 1893 Chicago World's Fair and a number of private parties. A lowdown *hootchie-kootcher*, like Danny Kaye's Minnie the Moocher, is a *hootchie-kootchie* dancer.

hootenanny. A hootenanny has since the 1950s been best known as a folk song concert or a lively gathering featuring musical entertainment. But the word can also be a derogatory epithet ("You're nothin' but a fat hootenanny") and what is more commonly called a WHATCHAMACALLIT, a THINGAMABOB, or a DINGBAT.

Hooterville. See PODUNK.

hoot-owl trail. The night trail, the trail of crime and wrongdoing; an expression from the American West over a century ago that is a little-used historical curiosity today.

Hoover hog. See ARMADILLO.

Hooverize, etc. Before becoming the 31st president of the United States Herbert Clark Hoover (1874–1964) had a distinguished career as an engineer and administrator, popularizing scientific management among businessmen and inspiring the building on the Colorado River of Boulder (now Hoover) Dam, for example. Hoover first came to national attention as the head of various European relief agencies and as U.S. Food Administrator during World War I. In the latter capacity he met the food crisis by ending farm hoarding of crops, curbing speculation, and urging Americans to live by “the gospel of the clean plate” and to institute “wheatless and meatless” days. It was only a few days after these suggestions that the term *to Hooverize* began to appear in newspapers around the country, and housewives soon adopted the phrase when discussing ways to stretch food. Later, when Hoover was president during the Great Depression, more than a few derogatory terms bearing his name were invented. Shoes with hobs in them were Hoover shoes, and Hoover blankets were newspapers bums slept under. The Hoover cart was a southern mule-drawn wagon made from the rear axle and chassis of a discarded automobile, and a Hooverville was a collection of shacks housing the unemployed at the edges of cities throughout the country. Later Hoover Commissions under both Truman and Eisenhower studied the reorganization of the executive branch of government and suggested many improvements that were adopted. The Hoover vacuum cleaner—*hoover* long a synonym for vacuum cleaner—is named for the man who founded the Hoover company in the 1920s. See also ARMADILLO.

hopeful green stuff. Walt Whitman’s description of grass in America, a land of possibility.

hopeless, hysterical hypochondriacs of history. See NATTERING NABOBS OF NEGATIVISM.

hoper. See quote. “We are not ‘hoppers,’ Irish who go to bed hoping that when they wake up they will be Yankees.” (Alice Hennessy, vice president of the West Roxbury, Massachusetts, Historical Society, as quoted in the *New York Times*, July 22, 1986).

hop on the bandwagon. Barnum and earlier showmen perfected the American bandwagon—a brass band perched atop a brightly decked dray pulled by a team of horses—but politicians quickly adopted it for national and local election campaigns. It wasn’t, however, until the handsome silver-throated champion of silver, William Jennings Bryan, ran for president for a second time in 1901 that the expression *to hop on the bandwagon*, “to rush to join a popular movement,” entered the language. The phrase remembers local politicians and ward heelers hopping up on Bryan’s bandwagons as they banged and rolled through town, to show the support for their candidate and help create enthusiasm for him.

hoppers. Short for grasshoppers. “He turned over a log and just under the shelter of the edge were several hundred hoppers. It was a grasshopper lodging house.”

hopping John. So far as is known, no real John’s name is honored by this old favorite southern American dish. Hopping John is made of black-eyed peas, rice, bacon or ham or pork knuckles, and red pepper or other hot seasoning. It is traditionally served on New Year’s Day because of the superstition that black-eyed peas eaten then bring good luck for the coming year.

hopscotch. The Scots didn’t invent the ancient children’s game, and the *scotch* in its name had nothing to do with them; either, deriving from the lines that are hopped in the game, these being *scotched*, or scored, in the ground. In fact, the game was once called hop-score.

Horatio Alger story. Ironically, none of the heroes Horatio Alger, Jr. (1834–99) created in his novels ever became rich. His poor but honest characters struggled to get ahead against overwhelming odds and always succeeded in improving their lot, even found fame and glory (at least one became a senator), but great monetary rewards never came to Ragged Dick and company. Nevertheless *Horatio Alger story* became synonymous with a rags-to-riches story. Alger’s books, of little interest to anyone but historians and nostalgia buffs today, served a real need in his time. Dull and unimaginative, as filled with preachments as his pages might be, his philosophy of hard work and clean living influenced three generations of Americans. In recent time historians have claimed that this author of moralistic books for children was a pederast obsessed with young boys.

horde. See ASIATIC HORDES.

Hore-Belisha. These black-and-white striped posts topped with yellow globes honor Lord Leslie Hore-Belisha, British minister of transport, 1934–37, who introduced them to indicate pedestrian crossings. A colorful, controversial figure, Hore-Belisha instituted a campaign to halt “mass murder” on the highways, and the beacons were a warning to drivers that pedestrians had the right-of-way at approaching intersections. Not overly modest, Lord Leslie seems to have named the lights after himself. The British statesman, born in 1895, fought in World War I as a major, was a member of Parliament, and served as head of the British War Office at the beginning of World War II. The beacons are often called *Hore-Belishas*.

hormone. British scientist Dr. E. H. Sterling coined the word *hormone* from a Greek root meaning “to set in motion,” in a 1905 article he wrote for the *Lancet* about such “chemical messengers.” A hormone can be defined as “a substance formed in one organ and carried by the blood-stream to another organ, which it stimulates [sets in motion].”

horn book. An implement of primary education consisting of a paper containing the letters of the alphabet, the Lord’s Prayer, etc., fastened to a piece of board and protected by a covering of transparent horn.

horns of a dilemma. *Lemma*, in Greek, means a thing taken for granted, deriving from *lampanien*, “to take.” Affixing the Greek *di*, “two,” we have *dilemma*, two things taken for granted. Therefore, in logic, a dilemma is an argument that forces a person to choose one of two things taken for granted, both of which may be untrue and unacceptable (e.g., “Do you still beat your wife?”). Philosophers in the Middle Ages also called each *lemma* of a *double lemma* a horn, because it was so easy to get caught on the sharp point of each, even coining the Latin expression *argumentum cornutum*, “a horned argument.” Since both terms meant the same, they were eventually wedded in the phrase *to be caught on the horns of a dilemma*, to be unable to make up one’s mind about which course of action to choose.

hornswoggle. *Hornswoggle*, “to bamboozle or cheat,” is one of the few extravagant American phrases of the early 19th century surviving today. It is described as “a fanciful formation” by Mathews and first attested in 1829 in Kentucky, but no one knows who coined it. It may be related to the English dialect word *connyfogle*, “to deceive in order to win a woman’s sexual favors,” which is rooted in the English slang *cunny* for vagina.

horology. The science of measuring time, including the making of time measurement instruments. The word *horology* comes from the Greek *hora*, hour, season. The *sundial* and the shadow clock were probably the first of time-measuring instruments. Then came the hourglass and finally the clock and watch.

horror show. British novelist and critic Anthony Burgess coined *horror show* in his 1962 novel *A Clockwork Orange*. According to William Safire, in his column “On Language” (April 16, 2006), it was introduced “to describe the pleasure taken by cruel men” and “was a sly play on the Russian word *khorocho*, meaning good.”

hors de combat. A French term signifying “so far disabled as to be incapable of taking further share in the battle.”

horsefeathers! As a euphemism for “horseshit!” this word has been around at least since 1925. It may or may not be related to the term *horsefeathers* once used in carpentry, these horsefeathers being the feathering strips used in roofing and siding houses. Because they are big feathering strips, they may have been called horse feathers (like HORSERADISH, etc.), but how these horse feathers came to be a euphemism for “horseshit!” is not clear—unless it came easily to some roofer’s tongue when he had half-said “horseshit!” and a lady abruptly appeared upon the scene. On the other hand, *horse-feathers* may have first been a synonym for “nonsense,” originating with a saying such as, “That’s nonsense, that’s like saying horses have feathers!”

horse latitudes. The horse latitudes, regions of calm found at 30 degrees north and south latitudes, may be so named because sailing ships carrying horses to America became becalmed and had to throw horses overboard in order to lighten the vessels and to take advantage of any slight breeze that did blow up.

However, the name may simply be a translation of *golfo de las yeguas*, “gulf of the mares,” which was the Spanish name for the ocean between Spain and the Canary Islands and compares the supposed fickleness of mares with the fickle winds in these latitudes.

horselaugh. A *horselaugh* is a loud, coarse, vulgar laugh, a guffaw. The word probably alludes to the loud neigh of a lusty horse, but an obscure pun on the word *horse* has also been suggested as a source. The expression has been common since Pope used it in 1710.

horse of a different color. Cut into the chalk downs of Berkshire, England, is the enormous crude outline of a galloping white horse covering some two acres. The figure possibly dates back to Saxon times, when a white horse was the emblem of Saxons invading Britain, and over the ages local residents have kept it clear of overgrowth. It is thought that this might be the source of the expression *a horse of a different color*, something of a different nature from what is under consideration, for the White Horse of Berkshire changes from green to white periodically when the locals clear grass and weeds from its outline. The expression may, however, come from races in medieval tournaments, where armored knights were distinguished by the color of their horses. A favored knight might have lost a race, leading one of his supporters to say “That’s a horse of a different color” as the winner crossed the finish line. But both explanations are conjectures. The phrase is first recorded in Shakespeare’s *Twelfth Night*, Shakespeare using the expression as if it were quite familiar to his audience.

horse opera. Any cheap western movie, dating back to the first motion pictures featuring a lot of horses and gunplay in the early years of the 20 century. See SPAGHETTI WESTERN.

horse potatoes. Said to be “an old word” for yams, much to the surprise of many.

horsepower. A car’s horsepower is actually about one and a half times the power of a horse. Seeking a way to indicate the power exerted by his steam engine, inventor James Watt calculated that a strong dray horse averaged 22,000 foot-pounds per minute working at a gin on an eight-hour-a-day basis. Increasing this by 50 percent, Watt got 33,000 foot-pounds, which has ever since been one horse-power: “The standard theoretical unit of rate of work, equal to the raising of 33,000 pounds one foot high in one minute.”

horseradish. There is apparently no truth to old tales that the fiery horseradish (*Armoracia lapathifolia*) is so named because it was once used to cure horses of colds, or because it made a good seasoning for horse meat. *Horse* is used as an adjective before a number of plants to indicate a large, strong, or coarse kind. Others include the horse-cucumber, horsemint, and horseplum. The horseradish is of course hotter, and has a much larger root and leaves than the ordinary radish. However, many plants are named after the horse because they were used to feed or train horses or because they resemble the animal. The horsebean is used as horse feed; horse-bane was supposed to

cause palsy in horses; the horse-eye bean was thought to resemble a horse's eye; and the pods of horse-vetch are shaped like horseshoes. The horse chestnut, Gerard says in his famous *Herbal* (1597), bears its name because "people of the East countries do with the fruit thereof cure their horses of the cough . . . and such like diseases." But the horse chestnut is big, too, and when a slip is cut off the tree "obliquely close to the joint, it presents a miniature of a horse's hock and foot, shoe and nails." Incidentally, Samuel Pepys in his *Diary* mentions a *horseradish ale*, ale flavored with horseradish, which must have been hot indeed.

horse sense. *Horse sense* for good plain common sense comes from the American West, about 1850, inspired by the cowboys' trusty intelligent little cow ponies, trained even to do a good deal of cattle-herding work without directions from their riders (as noted in *The Nation*, August 18, 1870).

horses famous in history. There are surely hundreds, but I've limited my choices to a dozen: Black Bess—English outlaw Dick Turpin's horse; Black Nell—Wild Bill Hickok; BUCEPHALUS; Copenhagen—duke of Wellington; Incitatus—EMPEROR CALIGULA; Man-O-War—race horse; Pegasus—Perseus; Rosinante—Don Quixote; Silver—Lone Ranger; Traveller—Robert E. Lee; Trigger—Roy Rogers. And finally, the only talking horse in the stable: TV's Mr. Ed, who was watched by tens of millions in a 1960s sitcom, the horse "actor" who portrayed him dying in 1973 and Sherman Allman, his singing voice, dying in 2002. The songs Mr. Allman wrote and sang included "The Pretty Little Filly With the Pony Tail" and "The Empty Feedbag Blues." Mr. Ed's talking voice was provided by Alan Lane.

horses for courses. A mostly British expression urging someone to stick to the thing he knows best, *horses for courses* comes from the horse racing world, where it is widely assumed that some horses race better on certain courses than on others. In 1898 a British writer noted, in the first recorded use of the expression: "A familiar phrase on the turf is 'horses for courses.'"

horseshoe crab. See LIVING FOSSIL OF THE SEA.

horseshoes. A game that can be traced back to the ancient Greeks, horseshoes is said to have originated with soldiers taking old horseshoes they had removed from their horses and tossing them for distance. These contests evolved into the game of horseshoes played by throwing horseshoes as close as possible to a stake driven into the ground 30 or 40 feet away. The name for the game, however, doesn't seem to be recorded until the beginning of the 19th century. See LUCKY HORSESHOES.

horsmandering. This old word would serve well today in describing the efforts of the many public officials, even corrupt ones, who write books about their experiences. Meaning just that, *horsmandering* comes from the name of an 18th-century American judge who was "one of the first public servants to use his records of a public experience as the basis of a full-length book."

horticulture. From the Latin *hortus* (meaning garden) and *cultura* (cultivation). *Pomology* is another branch of horticulture, one that deals with the cultivation of fruit. It is a hybrid word, half from the Greek *logos* (word) and half from the Latin *pomun* (fruit).

Hosackia. Few people know that New York City's Rockefeller Center was once the site of the famous Elgin Gardens, one of the first botanic gardens in America. The Elgin Gardens were established by Dr. David Hosack (1769–1835) who subsequently deeded them to Columbia University, long the landlord of Radio City. Hosack, a professor at Columbia, is remembered as the physician who attended Alexander Hamilton after his fatal duel with Aaron Burr. He served on the first faculty of Columbia's College of Physicians and Surgeons, and helped found Bellevue Hospital as well as founding and serving as first president of the now defunct Rutgers Medical College. Hosack wrote a number of medical and botanical books, including a biography of Casper Wistar (see WISTERIA). *Hosackia*, a genus of over 50 species of perennial herbs of the pea family, is named for him. Its most cultivated species is *H. gracilis*, "witch's teeth," a rock-garden plant about 12 inches high with pretty rose-pink flowers borne in small umbels.

Hoss. A friendly name often used on greeting a big man: "How you been, Hoss, haven't seen you in ages."

hostages to fortune. Francis Bacon (1561–1626) coined this phrase in the first sentence of his essay "Of Marriage and Single Life." "He that hath wife and children hath given hostages to fortune; for they are impediments to great enterprises, either of virtue or of mischief." This simply means that we will behave and hesitate to take risks if we have loved ones, because they will suffer if we don't—they will pay for our sins.

hot as hell. The expression is heard so frequently that it's surprising that a compressed word such as *hotshell* hasn't evolved; it is certainly not slang anymore and is surely colloquial if not standard English by now. *Hot as hell* and *hot as hades* have been traced back only to the 18th century, but the idea is doubtlessly much, much older in one form or another. *Hell* is mentioned 21 times in the New Testament alone under various names (Hades, Gehenna, Hell, and Tartarus), and it was always thought to be hot in the nether regions. Internal heat in the form of hot springs and volcanoes and the fact that the temperature of the earth goes up as one digs deeper, no doubt gave early man the idea of a fiery underground hell. See DRINK LIKE A FISH.

hotbed. *Hotbed*, a gardener's term for a glass-covered bed of soil heated by decaying manure or electrical cables in which seedlings are raised early in spring, has since the 18th century been used to mean a place favoring rapid growth of something disliked or unwanted. At that time one writer called theater "the devil's hotbed." The gardening term "hothouse," an artificially heated greenhouse for the cultivation of tender plants, also does double duty, meaning "overprotected, artificial, or unnaturally delicate," as in "He grew up in a hothouse environment."

hot-blooded; cold-blooded. One would guess such a basic term as hot-blooded, for “passionate or excitable,” would go back to early English. But the term appears to have been coined by Shakespeare. Wrote the Swan of Avon, in *The Merry Wives of Windsor* (1598): “Now the hot-blooded gods assist me.” Shakespeare had earlier coined, or at least first recorded, the antonym *cold-blooded*, in *King John* (1595): “Thou cold-blooded slave, hast thou not spoken like thunder on my side?”

hotcha. The Spanish word *muchacha*, for “a girl,” may be the source of this expression of delight, pleasure, or approval over seeing someone sexually attractive. *Hotcha*, a favorite of Jimmy Durante, isn’t used much anymore and could simply be an elaboration of *Ah-hah!* rather than a corruption of the Spanish exclamation for “What a girl!” It doesn’t have anything to do with *cha*, the Cantonese word for tea that the British occasionally use.

hot cross bun. A sweet bun filled with raisins and marked on the top with a white cross of frosting. Such Lenten buns date back to 16th-century England.

hot dog. According to concessionaire Harry Stevens, who first served grilled franks on a split roll in about 1900, the franks were dubbed hot dogs by that prolific word inventor sports cartoonist T. A. Dorgan after he sampled them. “TAD” possibly had in mind the fact that many people believed frankfurters were made from dog meat at the time, and no doubt heard Stevens’ vendors crying out “Get your red hots!” on cold days. Dorgan even drew the hot dog as a dachshund on a roll, leading the indignant Coney Island Chamber of Commerce to ban the use of the term *hot dog* by concessionaires there (they could be called only *Coney Islands*, *red hots* and *frankfurters*). *Hot dog!* became an ejaculation of approval by 1906, one that is still heard occasionally; *hot diggity dog!* was invented during the Roaring Twenties. Dorgan at least popularized the term *hot dog*, which may have been around since the late 1880s. See FRANKFURTER. In fact, *hot dog* for a frankfurter is recorded in the college newspaper *The Yale Record* in 1895 in a humorous poem about someone who “bites the dog” when it’s placed inside a bun.

hotfoot. U.S. author Damon Runyon was the first to record and define the practical joke called a *hotfoot*, in a 1937 story. Wrote Runyon: “The way you give a hotfoot is to sneak up behind some guy, stick a paper match in his shoe between the sole and the upper . . . and then light the match.” This is usually done while the practical joker’s confederate distracts the victim. The word is not related to *hotfoot* meaning “rapidly, with speed,” as in “Let’s hotfoot it out of here.”

hot pillow joint. See NO-TEL MOTEL.

hot potato. *Hot potato* can mean a “delicate situation,” something to be handled with great care. It is said to derive from the phrase *drop someone (or something) like a hot potato* and was first recorded in 1950. Over 70 years older, however, is *hot potato* for an energetic person or for a sexy woman, the last sometimes called a *hot patootie*, which was apparently an American invention during World War I. See POTATO; MEAT AND POTATOES; ALL THAT MEAT AND NO POTATOES.

hotshot. *Hotshot* refers to an aggressive, often flamboyant or vain, highly successful person, such as a hotshot lawyer or a hotshot athlete. The word was recorded as far back as 1600 in the sense of a reckless, hot-tempered troublemaker, this definition giving rise to the present one. The *OED* states the early “reckless” definition was suggested by a person who “shoots with a firearm ‘hotly’ or eagerly.” Others claim its ancestor was a piece of shot hot from firing, or made hot to spread flames among enemy land or sea forces.

hot slaw. See COLESLAW.

Hotspur. A person with a terrible temper noted for extreme behavior is known as a *Hotspur*. The word remembers Sir Henry Percy (1364–1403), who led a revolt against English king Henry IV, which resulted in Hotspur’s death at the Battle of Shrewsbury. Hotspur’s name, however, would probably have never entered the language if Shakespeare did not immortalize him in *Henry IV, Part I*, two centuries later.

Hottentot. The Khoikhoi were a proud tribe, and their native name meant “men among men,” but they had the misfortune to be the first Africans to come in contact with the Dutch settlers of the Cape of Good Hope, eventually losing most of their land and now numbering less than 20,000. Even their name was taken from them and they became the *Hottentot* tribe, a word that means gibberish in English, describes a stupid, depraved person as well, and is sometimes used as an ugly slang word for a black person. *Hottentot* is the name that Boers gave to this South African tribe closely allied to the Bushmen. The Dutch and other Europeans, imposing their own values on another civilization, had long thought the pastoral people small and stupid; hence Hottentot’s second meaning. As for *Hottentot* meaning “gibberish,” the Khoikhoi dialect is full of harsh, staccato clicks and clacks and kissing sounds, unique in that it is spoken by breathing in rather than out. These noises made by the tongue (similar to the way we say “tsk tsk”) sounded like so much stammering or clucking to Dutch ears. The Boers therefore named the people after what the language sounded like to them, calling them *Hottentots* from the Dutch *hateren en tateren*, to “stammer and stutter,” and it wasn’t long before *hottentot* was applied to any gibberish at all.

hotter than a two-dollar pistol. An old Americanism meaning very hot, an allusion to cheap 19th-century pistols that got hot when fired.

hot time in the old town tonight. “A Hot Time in the Old Town Tonight,” by Theodore Metz, was the rallying song of Teddy Roosevelt’s Rough Riders during the Spanish-American War and was so popular with all the troops that the enemy thought it was our national anthem!

hot toddy. Today this drink, often used as a folk remedy to ward off colds, is made of brandy mixed with hot water, sugar, and spices. Originally, however, it was a drink called *tari*, made from the fermented sap of the palmyra tree, which the British encountered in India and brought home, changed in name and content, and called the *toddy*.

hotto dogu. The Japanese borrowing and alteration of the English term *hot dog*. A hamburger is a *hambaga* in Japan, a Coke is a *koka-cora*.

Hot Water War. The unusually named war is officially called *Fries's Rebellion*. It took place in 1799 in eastern Pennsylvania, when a direct federal property tax on houses was imposed. When federal agents, precursors of the IRS, came to take house measurements for tax purposes, homeowners poured hot water on them. The leader of the rebellion, John Fries (ca. 1750–1818), was captured by federal troops when his hiding place was betrayed by his dog. Sentenced to death, he was later pardoned by President John Adams.

Houdini. Someone who *pulls a Houdini* performs an amazing disappearing act or escape, and a *Houdini* is anyone with seemingly magical powers in any field. The expressions lionize Eric or Ehrich Weiss (1875–1926), an American magician who adopted the stage name Harry Houdini. Houdini named himself after Jean Eugène Robert Houdin (1805–71), a celebrated French magician noted for the fact that he did not attribute his feats to supernatural powers. Harry Houdini became world-famous for his escapes from “impossible traps” such as locks, handcuffs, and straitjackets while suspended high in the air, or chained in chests submerged under water—all tricks, it is said, that can be explained today. A magician’s magician who invented many magic tricks, he exposed numerous spiritualists and other fraudulent performers. Houdini also wrote a number of books and left his extensive magic library to the Library of Congress, where there is now a Houdini Room. The supreme magician has become the object of almost cult-like worship among fellow necromancers. Once he claimed that if anyone could break the shackles of death and contact the living from the grave, he could. Since his death—“He was fifty-two when he died, his life like a deck of cards”—followers have periodically held seances where he is buried in Glendale, New York in Machpelah Cemetery, a granite bust of the magician staring down at them. He has inspired a Houdini Hall of Fame at Niagara Falls, New York, and a worldwide research committee has been formed to determine whether the “Handcuff King” was really born in Budapest, Hungary on March 24, 1874, or in Appleton, Wisconsin on April 6, 1874.

hound dog. *Hound dog* refers to a dog bred for hunting, but it can be a derogatory term for a mongrel or even a person, as in Elvis Presley’s “You Ain’t Nothin’ But a Hound Dog,” which, incidentally, was a remake of an old blues standard. See THAT DOG DON’T HUNT.

hound someone. *Hound* derives from the common Teutonic *hund*, related to “hunt,” and may be related to the Teutonic verb *hinpan*, “to seize,” in reference to big hunting dogs that actually seized their prey. Eventually, however, the designation *hound* was reserved for hunting dogs that followed their quarry by scent. There were many breeds of these from early times, but all were noted for their tenacity as well as for their keen sense of smell. Hounds would follow a trail for hours, doubling back to find a scent if they lost it. By the late 16th century their grim persistence had suggested the expression *to hound someone*, to

relentlessly pursue someone with the determination of a hound.

hourglass figure. A figure shaped like an hourglass, having a notably slim waist and a prominent bust and posterior. The word *hourglass* dates back to the early 16th century, while the figure was probably first so described in the 1890s. See ZAFTIG.

house. Often pronounced *haouse* in Maine, Vermont, and other areas, just as *round* is pronounced *raound* and *down* is pronounced *daown*. “This vowel twisting was a direct inheritance from certain counties in England where it can still be noted, but, as Charles Edward Crane put it, to some extent our twisting has been deliberate—a sort of contemptuous effort of the Yankee to show he was not of the aristocracy, but good common folk.”

household words. Shakespeare may have invented this work-horse phrase, for it is first recorded in his *Henry V*: “. . . then shall our name,/ Familiar in their mouths as household words . . .” More likely, the Bard was repeating an already common expression. Also, the title of a magazine started by Dickens in 1859, which contained much of his later work.

houseleek. An attractive succulent that often grows on the roofs of thatched cottages in England, the houseleek or “roof houseleek” (*Sempervivum tectorum*) was originally planted on house roofs because it was believed to ward off lightning, fever, and evil spirits. The emperor Charlemagne decreed that each of his subjects must grow the houseleek on his roof. Wrote Thomas Hill in the early-16th-century *Natural and Artificial Conclusions*: “If the houseleek or syngreen do grow on the housetop, the same house is never stricken with lightning . . .” The plant is also called “Jove’s beard” and “Juniper’s beard.” It is no relation to the onionlike vegetable called a LEEK.

house names. In *Memories of My Boyhood Days* (1923) New Englander Joseph Farnum writes of the “unique, catchy, original and forcefully cute titles . . .” given to many old houses by “a hardy farmer and fisherman people of days long ago.” He remembers, among many others, house names like *Takitezie, In and Out, Bigenough, Nonetoobig, House of Lords, Seldomin, Thimble Castle, and Waldorf Astoria, Jr.* Today vacation homes often are given such names.

house that Ruth built. A familiar name for Yankee Stadium in the Bronx, New York, the house that Ruth built was constructed in 1923 to hold the huge crowds that came out in large part to see baseball immortal George Herman (“Babe”) Ruth. Previous to this the Yankees played in the nearby Polo Grounds, which remained the home of the National League New York Giants until it was torn down years later. (Yankee Stadium was completely reconstructed in 1976.) See also BRONX.

House with Lungs. Thornton Wilder referred to the Wyckoff House near the ocean in Newport, Rhode Island when he wrote in *Theophilus North* (1937): “There’s a house that the famous Italian architect, Dr. Lorenzo Latta, has called the most beauti-

ful house in New England—and the healthiest. Built in the nineteenth century, too. He called it “The House That Breathes’ ‘The House with Lungs.’”

houstonize. On April 13, 1832, Sam Houston, the soldier and political leader who became president of the Republic of Texas, fought and gave a beating to Congressman William Stanberry. As a result, *houstonize* became a synonym, but now only a historical curiosity, for “to beat someone up, especially a congressman.” Sam Houston’s name is better honored, of course, by the city of Houston, Texas.

houyhnhnms. These are the intelligent breed of horses that Jonathan Swift created in *Gulliver’s Travels* (1726). Swift said he coined their name from the characteristic whinny of a horse as it sounded to him. The talking horses, endowed with reason, ruled over the brutish Yahoos, another word coined by Swift in the book. *Gulliver’s Travels* also gives us *brobdingnagian*, for any immense thing, after the giants Gulliver encounters in the country of Brobdingnag, and *lilliputian*, after Lilliput, a country of tiny people. *Houyhnhnms* is pronounced “whinims.”

how! Some etymologists believe the *how!* used by western Indians as a salutation is an abbreviation of “How do you do?” It could just as well derive from the Sioux *hao* or the Omaha *haw*, these ejaculations used in a variety of ways, signifying “come on” and “let us begin” as well as “hello.”

Howard Beach wait. People speaking on the phone in New York City’s Howard Beach have developed what is known as the Howard Beach wait to let a plane go over the house. The wait is for the jets landing at and taking off from John F. Kennedy International Airport, their flight paths often directly over Howard Beach. The same could be said of all the communities bordering JFK. Some seven miles to the east in Nassau County, the village of Cedarhurst is noted for Cedarhurst Alley, a flight path directly over the residential community.

Howardism; Tiny Thompson. Pithy, witty one-line (sometimes a bit more or a bit less) reviews of movies by *New York Times* film critic Howard Thompson (1919–2002), who likened their composition to writing on the head of a pin. The mini-reviews, written over a 20-year or so period beginning in the mid-1960s, included *The Pride and the Passion* with Cary Grant, Sophia Loren, and Frank Sinatra: “Sophia looks fine, Cary uneasy, Frank starved”; *Paint Your Wagon* starring Clint Eastwood: “Clint sings like a moose”; *Bikini Beach* with Frankie Avalon and Annette Funicello: “You’re only young once. With them, be glad of it.”

Howard Libbey Tree. The redwood, native to the coast of California and a few miles into Oregon, is probably the tallest tree in the world, and towering above all other redwoods is the specimen called the *Howard Libbey* or *Tall Tree* growing along Redwood Creek in California’s Redwood National Park. Standing 367.8 feet tall, the Tall Tree may be the tallest tree of all time, although there are unconfirmed reports that an Australian eucalyptus felled in 1868 reached 464 feet. It was first named the *Howard Libbey* after the president of the Arcata Redwood

Company, on whose land it was located until Congress established the park.

how are they crawlin’? Fish “run” for fishermen, but lobsters “crawl.” A lobsterman wanting to know how good the lobstering is in a certain area will ask, “How are they crawlin’?”

how are you suffering? A common greeting in the English-speaking southern African country of Zambia to anyone who has recently suffered a great loss or misfortune, such as a death in the family.

how come? *Bartlett’s* (1848) says *how come?* is “Doubtless an English phrase, brought over by the original settlers . . . the meaning . . . [being] How did what you tell me happen? How came it?” Others opt for the Dutch *hockum*, “why?,” which the “original settlers” heard in New Amsterdam.

How do I love thee? Let me count the ways. The famous line above, from Elizabeth Barrett Browning’s *Sonnets from the Portuguese*, is one of the best known in English poetry, but up until recently no one thought to actually count the ways Miss Barrett loved Mr. Browning in Sonnet XLIII. Author Randy Cohen did so and published the results in *New York* magazine, finding that she loved him “nine ways—unless ‘with the breath,/ Smiles, tears, of all my life’ is considered to be three separate ways, in which case she loved him a total of eleven ways.” *Sonnets from the Portuguese* was written for Robert Browning and published, reportedly, only because Browning felt: “I dared not keep to myself the finest Sonnets written in any language since Shakespeare’s.” There is, of course, no Portuguese model for the sonnets and they were probably called *Sonnets from the Portuguese* because Browning’s pet name for his wife was “my little Portuguese.”

How do you like them apples? An American expression that means “what do you think of that?” *How do you like them apples?* was first recorded in 1941 and is still heard; “*How do you like them grapes?*” came on the scene 15 years earlier and may be obsolete today.

howdy. Generally regarded as an expression born in the American West, *howdy*, a contraction of “how do you do?,” began life as a southern expression and was taken West by Confederate Civil War veterans. It is first recorded in 1840.

howl. To utter a long mournful sound; to cry or wail loudly, as in pain, sorrow or anger. Howl comes from the Middle English *howlen*. “Howl, howl, howl! O! you are men of stones . . . She’s gone forever!” howls Lear at Cordelia’s death in *King Lear* (1605). A famous modern use of the word is American poet Allen Ginsberg’s poem *Howl* (1956), a Whitmanesque work that begins with the line “I saw the best minds of my generation destroyed by madness, starving hysterical naked . . .”

how’s it goin’? An American greeting since about 1920, meaning simply “how are you?”

how the other half lives. This expression for “how people belonging to another class live” usually refers to the rich today,

but it originally referred to the poor. The words derive from the title of social reformer Jacob Riis's book *How the Other Half Lives* (1890), describing the lives of New York City poor people.

How there, bonnie lass? A common greeting, meaning, "How are you, dear?" used in the working-class dialect called GEORDIE of northern England and Scotland.

Howzit my bru? A common South African English greeting meaning, "How's it going, buddy?"; "What's up, mate?"

hoyden. Most scholars think that this word for a boisterous, bold, carefree girl comes from Dutch *heiden*, meaning "heathen" or "boor." Another theory, however, has the word related to German *Heide* for "heath," suggesting that someone from the wild heath would be a wild person with much vitality but little culture.

Hoyt is hoit! The immortal words of that anonymous Brooklyn Dodger fan who on a linguistically memorable day at Ebbets Field in the 1930s saw the pitcher Waite Hoyt knocked down by a line drive and exclaimed: "Oh no—Hoyt is hoit!"

huah! huah! A kind of cheer chanted in unison by any group of military personnel in response to a speaker saying something they heartily agree with: "Huah! Huah!" Also spelled *hoah!* The origin of the recent expression, which has become the name of a candy bar, is thus far unknown.

the Hub. A nickname for Boston. The name possibly originated from all the roads leading into the city like spokes to the hub of a wheel. However, in *The Autocrat of the Breakfast Table* (1858) Oliver Wendell Homes writes of a young man who told him he had heard that "Boston State-House is the hub of the solar system." Holmes replied that to the residents of every other town or city, "the axis of the earth sticks out visibly through the center of each." He concluded that "Boston is just like other places of its size—only, perhaps, considering its excellent fish market, paid fire-department, superior monthly publications, and correct habit of spelling the English language, it has some right to look down on the mob of cities . . ."

hubba-hubba. "A delirious delight in language making," Mencken calls the coining of *hubba-hubba*. The expression was ubiquitous during World War II, made famous by a leering Bob Hope, the linguistic equivalent of a wolf whistle that was uttered lasciviously when an attractive woman walked past a group of men. Sexual but highly complimentary, it was often *hubba hubba hubba*, the third awesome *hubba* thrown in for added emphasis if body language warranted it. Anyway, we're told that the term originated with "flyboys," U.S. airmen who got it from Chinese airmen being trained at a Florida air base early in World War II. Supposedly it is a corruption of the familiar Chinese greeting *how-pu-how*. A second theory, wholly unpalatable, traces the expression to *Hubba*, "a cry given to warn fishermen of the approach of pilchards."

Hubbard squash. The tasty squash was bred and first grown over a century ago by Mrs. Elyabeth Hubbard, a Massachusetts gardener. Soon after, it was named in her honor.

Hubble Space Telescope. This space observatory, designed for use in orbit around the Earth, was named after U.S. astronomer Edwin Powell Hubble (1889–1953), a pioneer in extragalactic research who discovered in 1929 the expansion of the universe. Hubble also has Hubble's law and Hubble's constant named after him.

hubbub. An ancient Irish war cry may be responsible for this word, meaning an uproar of confused sound from a crowd of voices. The *O.E.D.* suggested as a source the cry of *abu! abu!* repeated again and again by hordes of warriors running into battle. The word has been spelled many ways. In its first recorded use (1555) it was an "yrishe (Irish) whobub." In *The Present State of Ireland* (1596) Edmund Spenser wrote: "They come running with a terrible yell and *hubbabowe*, as if heaven and earth would have gone together, which is the very image of the Irish *hubbabowe*, which they kerne [soldiers] used at their first encounter." Shakespeare called a *hubbub* a *Whoo-bub* in his *The Winter's Tale*.

Hub Fans Bid Kid Adieu. American author John Updike's poetic last farewell headline to the great Boston Red Sox hitter Ted Williams, also known as *the Kid*.

huckleberry. The first American settlers noticed the wild huckleberry, comparing it with the English bilberry, and first calling it a *hurtleberry* or *hirtleberry*, from which its present name derives. Huckleberries were so little, plentiful, and common a fruit that a *huckleberry* became early 19th-century slang for a small amount or a person of no consequence, both of these expressions probably inspiring Mark Twain to name his hero Huckleberry Finn. The berry was also used in the colloquial phrase *as thick as huckleberries*, very thick, and *to get the huckleberry*, to be laughed at or ridiculed, a predecessor of sorts of the raspberry (*razz*), or Bronx Cheer. *To be a huckleberry to someone's persimmon* meant, in 19th-century frontier vernacular, to be nothing in comparison with someone else. Huckleberries, which are not a true berry but a drupe fruit, belong to the *Gaylussacia* genus, which was so named in honor of French chemist Joseph-Louis Gay-Lussac (1778–1850). *See also* BRONX; HOLY COW!

huddle. The football huddle may have been invented and named by Herb McCracken (1900–95) when coach of the Lafayette College football team in 1924. According to Coach McCracken's *New York Times* obituary (3/25/95): "Aware that Penn State had memorized its offensive signals, he ordered his players not to start each down at the line of scrimmage. Instead, he told them to gather behind the line to learn the next play in secret, and the *huddle* was invented." But some sources credit Amos Alonzo Stagg with earlier inventing the huddle while coaching at the University of Chicago. Still others credit coach Bob Zuppke of the University of Illinois in the early 1920s, and Zuppke certainly did make the huddle a standard part of the game. There are other claimants, too,

and there is not sufficient evidence to crown any one of them.

Hudson River. A river originating in New York's Adirondack Mountains and flowing about 315 miles south to New York Bay at New York City. It was first sighted by Giovanni da Verrazano in 1524. The Hudson is named for Henry Hudson, English explorer for hire who in 1609 sailed for the Dutch East India Company on the *Half Moon*, trying to find a new route to the Indies and exploring the river that now bears his name. His name was not Hendrick Hudson as is widely believed. The confusion probably resulted because Dutch explorer Hendrick Christiaensen was the first to sail the river after him and made numerous voyages to the Hudson from 1610 to 1616, when he was killed by an Indian near Albany.

hue and cry. For at least 600 years, up until the 19th century, *hue and cry* was the legal name in England for the outcry of someone who had been robbed, someone calling “with horn and with voice” for others to join in the chase after the thief. *Hue* is from the Old French *huer*, “to shout,” and may have meant in ancient times the sound of a horn as well, while the cry was probably “Stop thief!” or something similar. In any case, the clamor that attended such chases (any man who refused to join in could be punished under the law) led to *hue and cry* becoming a synonym for any public clamor, protest, or alarm.

Huey, Louie, and Dewey. Of the three wild nephews of Donald Duck, only Huey went to war. Huey was in Vietnam the name of the workhorse helicopters officially known as Helicopter Utility.

huh. See UH, OH.

hula hoop. Another of the great toy fads of the 20th century (see FRISBEE), the hula hoop was invented about 1956 by an Australian toymaker, who based the plastic hoop on a wooden exercise hoop of gymnastic classes. Marketed by the U.S. Wham-O toy company, as the Frisbee was, the hula hoop sold up to 40 million in 1958, mostly to teenagers who gyrated them on their hips in and out of school until the fad ended.

hula-hula. The Hawaiian name for this pantomime story-dance is simply *hula*, the dance noted for its highly styled hand imagery, which uses many of the over 700,000 “distinctive movements of the hands, arms, fingers and face by which information can be transferred without speech.” During World War II, Japanese soldiers posing as Filipinos often tried to penetrate Allied lines in the Philippines. Suspects were given *hula-hula* to pronounce and the Japanese infiltrators who, unlike the Filipinos, had trouble with their *l*'s, invariably pronounced it “hura-hura,” sealing their fate. See SHIBBOLETH.

Huli stomach. This Hawaiian term for an upset stomach derives from the name of a jealous, evil-eyed monster called the Huli, who is said to turn the stomachs of babies upside down, causing them to suffer from colic.

hulk. See GREAT HULKING MAN.

the Hulks. Old dismantled vessels anchored and used as prison ships in the 18th and 19th centuries. Charles Dickens mentions them in chapter 2 of *Great Expectations* (1860–61): “People are put in the Hulks because they murder, and because they rob, and forge, and do all sorts of bad . . .” The British used such ships to hold American prisoners during the Revolutionary War.

hullabaloo. Great noise or excitement, an uproar: “Stop making that hullabaloo down there!” The word is probably an alteration of the obsolete word *hallo-ballo*, which comes from *hallo*, hello. See HURLY-BURLY.

hull down over the horizon. Sailors have long—no one knows how long—used this phrase to describe the phenomenon of the masts of an approaching ship appearing before her hull does. The phenomenon itself is one way observant people proved to themselves that the world was round and not flat long before Magellan's men circumnavigated the globe in 1522.

hully-gully. The *New York Times* once described the “dignified” hully-gully disco dance as “like Wyatt Earp drawing his guns, Dean Martin downing drinks . . .” Deriving from the twist in the 1960s, the dance may be so called because some of its gestures are similar to gestures used in the southern children's guessing game hull-gull.

human. See ADAM.

humble pie. See EAT HUMBLE PIE.

humbug. *Humbug*, a fraud or hoax, has long outlived those purists who so vehemently attacked the word when it entered the language from underworld slang in the 1750s. No one is sure just where *humbug* came from. Several authorities suggest the Irish *uim bog*, “soft copper,” referring to the debased money with which James II flooded England from the Dublin mint. But *bug* in its slang sense had meant to cheat or “sting” before *humbug* was coined, and in former times people expressed approbation, perhaps even false encouragement, by humming. Then again, since the original meaning of *bug* is “bogey,” a *humbug* may first have been a really harmless bug that hums and frightens us. Dickens's Scrooge with his “Bah, humbug!” gave the word great popularity worldwide, as did P. T. Barnum, “the Prince of Humbug.”

humdinger. Someone or something excellent, attractive, wonderful, hot-stuff, as in “She's a real humdinger!” The expression, dating back to 1888, is a combination of the earlier *ding*, something excellent, said to be first recorded in 1809, and *hummer*, also meaning the same, which also goes back to 1888.

humdrum. Maybe the *drum* got in the word just because it rhymed with the monotonous *hum*, but *humdrum* does suggest both the monotony of a humming bee or other insect and a

monotonous drumbeat. Anyway, *humdrum* sounds like the boredom it imitates, meaning routine, monotonous, and dull. The term has been around since the early 16th century. Addison in *The Spectator* (1711) told his readers about “The *Hum-Drum Club* . . . made up of very honest Gentlemen of peaceful Despositions, that used to sit together, smoke their pipes and say nothing till Mid-night.” A later writer, fed up with the humdrumishness of the world, said it was made up of “hum-drums and jog-trots.” *Humdudgeon* means an imaginary illness, “nothing . . . but low spirits.”

humility; humility bird. Two birds—the wilet (*Symphemia semipalmata*) and the snipe (*Gallinago gallinago*)—are called the humility bird, both because of their bowing movements. See EAT HUMBLE PIE.

hummingbird. These beautiful little American birds, some of which weigh less than a penny, take their name from the humming sound their wings make when they hover over a flower. The “flying jewels” were so admired in early times that American Indians often dried and pressed them for use as earrings.

hummums. *Hummums* is standard English for a Turkish bath, a corruption of the Arabic *hammam*, meaning the same. The word came into the language in the late 17th century and soon became, in the form of *hummum*, British slang for a brothel, because so many Turkish baths were corrupted into brothels.

humongous. *Humongous* got a lot of play in the 1980s as a term for a huge, monstrous person, often wrestlers weighing about 300 pounds. The word is often used humorously and though its origin is obscure it seems to be based, consciously or subconsciously, on words like huge, monstrous, and mountainous.

Humuhumunukunua-puaa. No true fish can “talk,” so far as is known, but this fish is one of several that does make a grunting sound. In fact, this Hawaiian name of this trigger fish translates as “fish that grunts like a pig.” It may also be the longest-named of any fish.

humus. The word *humus*, the dark organic material in soils familiar to all good gardeners, comes from *humus*, the Latin for “ground” or “soil.” Less apparent is the derivation of the word *humble*, which also comes from *humus*, via the Latin adjective *humilis*, “on the ground.”

Hun. A common name for Germans during World War I, the so-called Great War. It equated the German soldier with the barbaric tribe of Huns led by Attila in the fourth century. Ironically, the Germans themselves created the designation after their emperor Wilhelm II in 1900 urged his soldiers embarking for China to give no quarter, to act “just as the Huns [did] a thousand years ago.” The original Huns were led by the king of Huns, Attila the Hun (406–453) a great savage warrior who might even have taken Rome if Pope Leo hadn’t induced him to withdraw. Many legends surround Attila, especially tales of his

wedding night. The little man, possibly a dwarf, is said to have died on the night of his wedding to the German Ildico, either by poison or from a nasal hemorrhage induced by drunkenness.

a hundred of these days. *A hundred of these days* is a birthday wish commonly expressed by Italians and sometimes by Italian-Americans. Italians, however, attach less attention to birthdays than to a person’s name day, the feast day of the patron saint after whom a person is named.

hundreds and thousands. Very small pieces of confits or candy used as the topping on small cakes. The term was first recorded about 1830.

hundred thousand dollar bill. The \$100,000 gold certificate, bearing President Woodrow Wilson’s likeness, is the highest denomination ever issued in the U.S., or anywhere in the world for that matter. Used for official government transactions and never put into general circulation, \$100,000 bills were issued in 1934. Twelve remain in Federal Reserve Banks. The highest currency in general circulation is the \$10,000 bill, discontinued in 1944, of which perhaps 500 remain in the hands of fortunate people.

Hundred Years’ War; Hundred Hours’ War. The first was a series of wars between England and France over claims to the French Crown beginning in 1337 and ending in 1453, a little more than a century. *Hundred Hours War* is a humorous name for the Gulf War of January and February in 1991 against Iraq. It took just about 100 hours for the U.S. and U.N. allies to win and force the withdrawal of Iraqi troops from Kuwait.

Hungarian. See OGRE.

Hungarian words in English. Hungarian is not an Indo-European language like most European tongues, but it has contributed a few words to the English lexicon, including paprika, goulash, and coach.

hunger. An ancient word deriving from the Old English *hun-gor*. There are few synonyms for hunger in English. By way of contrast, Otto Jespersen tells us in *The Growth and Structure of the English Language* that the Araucanian Indians speak a tongue “that distinguishes nicely between a great many shades of hunger.”

hung higher than Gilderoy’s kite. Patrick Mac Gregor, a handsome highwayman regarded as something of a Robin Hood in folklore, was nicknamed “Gilderoy” for his red hair (from the Scottish dialect words *Gillie roy*, “a red-headed lad”). The daring Gilderoy, who boasted that he had robbed old Cardinal Richelieu in the presence of the king and picked Cromwell’s pocket, made the mistake of hanging a much-hated judge. A bad tactical error, for the judge who sentenced the outlaw after his capture in 1636 was a hanging judge who didn’t want to encourage the hanging of hanging judges. He sentenced Gilderoy to be hanged far higher than his four confederates, “high aboon the rest” as the old ballad goes. Gilderoy’s gallows

stretched 30 feet into the Edinburgh sky, and he was left hanging there for weeks as a warning. No *kite*, or “body,” had ever been hung higher than Gilderoy’s, it was said by the thousands who saw him, and since that sad June day to be *hung higher than Gilderoy’s kite* has signified the most severe punishment possible.

hunk. See PIECE.

hunky-dory. No one is certain about it, but a product called Hunkidori, a breath freshener introduced in 1868, may have given us the American expression *everything is hunky-dory*, or O.K. We do know for sure that *hunky-dory* is first recorded the same year that Hunkidori was introduced. The old tale that the word comes from the name of a pleasure street in Yokohama much frequented by American sailors seems to be spurious. According to Carl Whittke in *Tambo and Bones* (1930): “‘Josiphus Orange Blossom,’ a popular song . . . in reference to Civil War days, contained the phrases ‘red hot hunky dory contraband.’ The Christy’s [a minstrel group] made the song so popular that the American people adopted ‘hunky-dory’ as part of their vocabulary.” Still another theory has the expression deriving in 1866 from *hunk*, a New York dialect word for “home base,” which in turn derives from Dutch *honk*, “good.”

hunt elevetrich. To be led on a fool’s mission. A Pennsylvania Dutch term several centuries old that is equivalent to hunting an imaginary snipe. No such bird as the elevetrich exists, of course, and the naive hunter who is led out in the woods to shoot one is usually abandoned there, left wandering the woods, burlap bag in hand.

hunting pink. The famous English hunting pink jacket is scarlet, not pink. Moreover, it never was pink, taking its name instead from the London tailor named Pink who designed it for fox hunting in the 18th century.

Huntington’s disease. A rare incurable genetic disorder named after U.S. physician George S. Huntington (1850–1916), who described it in 1872. Always fatal, symptoms of Huntington’s usually first appear in the fourth decade of life. It is a hereditary disease of the central nervous system.

hurly-burly; hullabaloo. The famous “When the Hurley-burley’s done, When the Battaile’s lost, and wonne,” of *Macbeth’s* witches seems to support the old story that *hurly-burly*, an uproar or noisy disturbance, derives from the excitement of burly men hurling spears in battle. But no proof of this exists. Neither does *hurly-burly* appear to have derived from *hullabaloo*, the Irish word for wailing at funerals, which now means any loud noise or uproar. The word may just be imitative of the howling of the wind—*burly* chosen to reduplicate *hurly* simply for the rhyme.

hurrah! See HIP! HIP! HURRAH!

Hurrah Henry. A boisterous, foolish, rich, or upper-middle-class society man. U.S. short story writer Damon Runyon first

recorded the term in 1936 as *Hurray Henry*, but since about 15 years later the alteration *Hooray Henry* has been more common in England, where the derogatory expression is heard far more often than in the U.S.

hurricane. A hurricane, the word deriving from the Spanish *huracan*, was first a violent tropical cyclonic storm of the western North Atlantic, but it eventually came to mean a violent storm in general. A hurricane is called a *hurricane* in the Caribbean Sea, but a *cyclone* in the Indian Ocean, and a *typhoon* in the China Sea.

husband. A humorous name for a plump pillow with arm rests that is good for reading in bed. See PLUMP.

hush-hush operation. *Hush!* an exclamatory demand for silence, has been recorded as far back as 1350 and is still heard, especially in libraries and other public places, though somewhat old-fashioned. *Hush-hush* didn’t come into the language until World War I to describe something top secret or confidential, such as a hush-hush operation or a hush-hush investigation. In fact, the first printed reference to the term is found in 1916 when someone wrote of “hush-hush tanks” being developed by the British.

hush money. One would expect this term for a bribe for silence, to keep a person quiet about something, to be a fairly recent term judging by its common media use. But it dates back to the early 1700s. A 1726 quotation from *The Memoirs of Jonathan Wild* told of the eponymous hero, a thief himself, expecting to get a reward from a criminal of a pair of gloves “by way of hush.”

hush puppy. These cakes of deep-fried cornmeal batter, very popular in the South, have been traced back only to the time of World War I; at least the name isn’t recorded before then. The most common explanation for the odd name is that hunters tossed bits of the cakes to their dogs, telling them to “*hush, puppy.*” A perhaps more authentic version notes that the cakes were first made in Florida, where people often fried fish outdoors in large pans, attracting dogs who would whine and bark. To quiet the dogs, the cook would fry up some cornmeal cakes and throw them to the dogs, shouting, “Hush, puppies!” *Hush puppies* for soft shoes or slippers seem to have been so named by the first company to manufacture them, in the 1960s.

husk. An ear of corn wrapped in its husk can be thought of as content and cozy in its little house, for the word *husk* is simply a shortening of the Dutch *huisken*, meaning “little house.” The name was first applied to the shells of various nuts and finally to corn (maize) when it was discovered in America.

husking bee. In a husking bee, the term used in America since at least 1693, neighbors got together to help husk corn. A young man who found an ear of red corn got a kiss from the girl of his choice, a custom originated by the Iroquois Indians, though an Iroquois youth got more than a kiss in the Indian fertility rite. There were also apple bees in the early days of

America. The *bee* in the terms may refer to busy, laboring bees in a hive, but more probably it derives from the Yorkshire dialect, where the word *bean* meant a “day,” similar gatherings having been held on special days in Yorkshire, England. *See also* BEE.

husky. Any man called husky, “stocky and muscular,” is actually being compared to a sled dog—specifically, to a husky, or Eskimo dog, a strong breed capable of pulling great loads and covering 60 miles a day. *Husky* is used loosely for any arctic dog, but the breed is a recognized one. An unusual animal that yelps or howls like a wolf, although not closely related to the wolf, the husky normally feeds on fish and sleeps without shelter in the snow. Its name is a corruption of either the Tinneh Indian *uskimi*, “an Eskimo”; *Esky*, English slang for Eskimo; or the word *Eskimo* itself. Early explorers in the far north named the dog after the natives who bred it, and the dog’s name was later applied to trappers who exhibited the breed’s vigor, endurance, and stocky build.

Hussite. A follower of the reformist religious teachings of John Huss (1369?–1415) also known as Jan Hus, a Czech priest whose ideas strongly influenced Martin Luther. Because he attacked the abuses of the clergy and championed John Wycliffe’s translation of the Bible, Huss was excommunicated and burnt at the stake.

hussy. *Hussy*, a bold or lewd woman, was originally no more than another word for housewife, simply a phonetic reduction of the earlier term, which was first pronounced *hussif*. Justly or not, housewives were associated so often with impudence, boldness, or lewdness that the word *hussy* began to be used as early as the 17th century to describe bold and lewd women, possibly to provide a distinction in the language between most housewives and such women. Over the years *hussy* became more degraded, until we find Henry Fielding writing in *Tom Jones* (1749): “Hussy . . . I will make such a saucy trollop as yourself know that I am not a proper subject of your discourse.”

hustings. *See* TAKE TO THE HUSTINGS.

hyacinth. According to Greek legend, Hyacinthus was a handsome Spartan youth beloved by both the gods Apollo and Zephyrus, the West Wind. Jealous Zephyrus caused Apollo to kill Hyacinthus by making a heavy disc he had thrown while playing quoits go astray and strike the boy on the head. Although grief-stricken Apollo could not restore the youth’s life, he made a beautiful new flower spring from the red earth and named it the hyacinth.

hybrid. The offspring of a tame sow and a wild boar was called a *hybrida* by the Romans, and this Latin word came into English in the early 17th century to describe such animal offspring. *Hybrid* wasn’t applied to plants until almost 200 years later. A hybrid is, strictly speaking, the offspring of a cross-fertilization between parents differing in one or more genes, and a great many, possibly the majority, of cultivated plants have resulted from either natural or artificial hybridization.

Hydra. According to Greek mythology, the Hydra was a huge water snake, a monster with nine heads, which Hercules had to kill as one of the 12 labors he was ordered to perform. The trouble was that every time one head was lopped off two more grew in its place. Hercules solved the problem by burning the neck after each head was severed.

hydrangea. The Greeks of old thought this plant’s seed capsule looked like a “water cup” and named it from the Greek *hydr*, “water,” and *angos*, “seed” or “capsule.” Long one of the most commonly grown shrubs in America, the hydrangea consists of some 80 species, usually with large, showy pink, white or blue blooms.

hydrophobia skunk. An American name for the spotted skunk (*Spilogale putorius*) because of the belief that its bite causes hydrophobia (rabies) in humans.

hydroplane. Almost as soon as the airplane became a reality in the early 20th century, inventors began experimenting with seaplanes with floats that were able to take off from and land on the sea. These were called *hydroplanes*, and some of the first examples were built in France. But the name created some confusion, and still does, for it had, since 1870, also been used for a light, high-powered boat designed to plane over the water at high speeds. Invented by English pastor Charles Meade Ramus in the mid 19th century, the hydroplane boat did not become a reality until about the same time as the seaplane. It is often called the sea sled or hydrofoil today.

hygiene. *Hygiene* derives from the name of *Hygeia*, the Greek goddess of health, who was the daughter of Aesculapius, the god of medicine. Legend has it that Aesculapius once appeared in Rome during a plague in the form of a serpent; thus Hygeia’s symbol is a serpent drinking from a cup in her hand.

hymen; hymn. *Hymen*, for the vaginal membrane, may derive either from the Greek *humen*, “membrane,” or from the name of the Greek *Hyman* (Latin *Hymen*), “the god of marriage.” The god could have taken his name from the membrane or the membrane may have been named for him. Our word *hymn* is related to *hymen*, coming from the related *hymnos*, “wedding song.”

Hypatia. *Hypatia* refers to a woman philosopher, often a beautiful one. The original Hypatia (d. 415) was an Alexandrian Neoplatonic philosopher, an astronomer, and a mathematician, the daughter of famed mathematician Theon. This philosopher of renowned learning, elegance, and beauty drew great crowds at her lectures and wrote an unknown number of books, none of which survive. According to one story, she remained a virgin even after she married. Another tale claims that a young man propositioned her and the beautiful Hypatia hiked up her dress, telling him, “This symbol of unclean generation is what you are in love with, and not anything beautiful.” Her barbarous murder is said to have been encouraged by archbishop St. Cyril of Alexandria, a personal enemy of the prefect, who was believed to be Hypatia’s lover. She met her end when a band of fanatic monks and a murderous crowd of infuriated Christians, hating her philosophy, “pulled her from her carriage, dragged her into a church, stripped her of her garments, battered her to death with tiles,

tore her corpse to pieces, and burned the remains in a savage orgy.” British novelist Charles Kingsley wrote of her life in his historical novel *Hypatia, or New Foes with Old Faces* (1851).

hype; hyperbole. Although there lived in the fourth century B.C. an Athenian demagogue named Hyperbolus given to exaggerated statements, his name does not give us the word *hyperbole*, or *hype*, as it is abbreviated today. *Hyperbole* derives from the Greek *hyper*, “over,” plus *bole*, “throw,” which conveys the idea of excess or exaggeration. Hyperbolus was just appropriately named. Good examples of *hype* are exaggerations like “I could sleep all year.”

hyphen. A short line (-) connecting the parts of a compound word. The term has been used since at least the end of the 16th century and derives ultimately from the Greek word for the same, though the Greeks used a different sign than a short line. In the 1890s a congressional clerk was supposed to write: “All foreign fruit-plants are free from duty” in transcribing a recently passed bill. However, he changed the hyphen to a comma and wrote: “All foreign fruit, plants are free from duty.” Before Congress could correct his error with a new law, the government had lost over \$2 million in taxes. See **COMMA**.

hyphenated Americans. Starting as contemptuous slang in the late 19th century, *hyphenated American* meant any naturalized citizen who regarded himself as both American and of the country from which he came (Irish-American, German-American, etc.). Today, the term is not generally contemptuous and refers to one’s ancestry and to racial and religious groups as well.

hypnotism. The word *hypnotism* was invented by Scottish Dr. James Briad (c. 1795–1860), who experimented with **MESMERISM**. Briad wanted to describe the sleeplike state of his subjects and coined the term *neurohypnotism* from the name of Hypnos, the Greek god of sleep, this unwieldy word soon

shortened to *hypnotism*. Hypnotism was also called *Briadism* in Briad’s time, but that term isn’t often heard today.

hypochondriac. *Hypochondriac*, for a person morbidly anxious about his health, comes from the Greek *hypo*, “below, under,” and *chondros*, “rib cartilages.” This is puzzling until one learns that “under” the “rib cartilages” lies the upper abdomen, once thought to be the seat of melancholy. *Hypochondriac* is first recorded in its modern sense midway through the 17th century. German poet and dramatist Oscar von Redwitz (1823–91) may not have written of suffering as well as Goethe or Rilke, but he certainly suffered more—at least in his mind. Probably history’s greatest hypochondriac, the baron is said to have visited a doctor *every day* of his life from the time he was 40, complaining of fully 10,000 different ailments or symptoms. For all his ailments, he lived until he was 68, a ripe old age for his time.

hypocrite. The Greek *Hypokrites* originally described an actor on the stage, but came to mean any pretender or liar. It is recorded in English late in the 13th century, for a person pretending to beliefs or feelings he doesn’t really have.

hypoglycemia. An abnormally low level of glucose in the blood, the opposite of diabetes. American author O. Henry, a life-long alcoholic, suffered from hypoglycemia, his classic summary of the condition being, “I was born eight drinks below par.” During the long period he lived in his beloved Baghdad on the Hudson, his name for New York City, he claimed he drank an average daily two quarts of whiskey, which never prevented him from writing 50 to 65 stories a year. See **O. HENRY**.

hysteria. Early physicians decided 1) that women are more liable to emotional disturbances than men, and 2) that this was because of the malfunctioning of an organ men didn’t have, the womb. This mistaken notion gave us the word *hysteria*, from the Greek *hysterikós* “of the womb.”

I

I. The letter *I* comes from the stylized drawing of the Phoenician alphabet and is thought to have been based on a picture of the human finger. People at first did not have to remember to dot their *i*'s. The dot on the *i* wasn't added to the letter until the 11th century, when scribes introduced it to distinguish two *i*'s coming together (as in *filii*) from the letter *u*. Up until the 19th century the written and printed *i* and *j* were interchangeable and dictionaries didn't treat them as separate letters. Our word *I* is a shortening of the much older *ik*. The vowel in this word was originally pronounced like the *i* in *his*. See IOTA; TITTLE.

I ain't never done no dirt of no kind to nobody. An example of a quintuple negative from the American mountain region where double negatives, triple negatives, etc., are commonplace.

I am become death. See IT WORKED.

I am going to sleep in their camp tonight or in hell. See SHERIDAN'S RIDE.

I am going to telephone Hitler (Je vais téléphoner à Hitler). A euphemism members of the French Resistance used during World War II when they excused themselves to go to the toilet.

I am the greatest. Pugilist Muhammad Ali said this, but he didn't believe it. The world heavyweight champ admitted that he borrowed the phrase from wrestler Gorgeous George and used it for publicity purposes.

i before e / except after c. An old spelling rule long remembered because it's in rhyme.

Iberia's pilot. Columbus was not called this in his own day. This little-known name for the great navigator is first recorded in the poem "Pleasures of Hope" (1799), by Scottish poet Thomas Campbell. See also FEW AND FAR BETWEEN.

Ibo-shin. Slang for a black person in pre-Civil War days, deriving from the name of the Ibo tribe in the African Niger delta from which many slaves were sent to America.

I bought his thumb. An old-fashioned expression meaning that someone is certain a storekeeper was cheating by pressing his or her thumb on the scales when weighing something.

Ibsenity. A storm of conservative outrage greeted Henrik Ibsen's *Hedda Gabler* (1890) and *The Master Builder* (1892), one critic coining the word *Ibsenity* as a synonym for *obscenity*. But Ibsen remained a contentious man until the end, even on his deathbed. "You seem to be improving," his attending nurse told him that evening. "On the contrary," Ibsen countered. These were his last words, winning him his final argument with the world.

I cannot tell a lie (Pa). The folktale of George Washington cutting down the cherry tree and admitting it to his father ("I cannot tell a lie, Pa") is one of the most persistent in American history. It is first recorded in the Reverend Mason L. Weems's *Life of Washington* (1800), told to him by an old lady who had spent much time with the family. No one has ever *disproved* this story, though there is some evidence that it was current as a country tale before Parson Weems printed it. Weems's book went through over 40 editions, and millions of Americans were raised on the story, including Abraham Lincoln, who borrowed a copy of the book, and when it was damaged by a sudden rain had to work three days to pay its owner for it. All we can say with certainty is that like most folklore the tale was exaggerated over the years: a tree stripped of bark becoming the chopped-down tree, "I can't tell a lie, Pa," becoming "Father, I cannot tell a lie."

I can't believe I ate the whole thing. See GOOD TO THE LAST DROP.

I can't see it from my house. A common cynical answer to any complaint about an unsightly environment, an ugly building being erected, etc. See NIMBY.

I Can't Wait until Tomorrow . . . 'Cause I Get Better Looking Every Day. The title of former quarterback and bon vivant Joe Namath's 1969 autobiography, written with Dick Schaap. Maybe Namath or someone else invented the phrase, but I can trace it back only as far as the book.

ice bear; winter bear. *Ice bear* is a name that Eskimos give to a monstrous grizzly bear they fear even more than the polar bear. In the course of roaming about the country, these grizzlies sometimes take a dip in the water and roll in the snow, their fur becoming thickly coated with ice. From time immemorial the Eskimos have feared this deadly "winter bear," for the thick ice serves as a shield that breaks arrows shot at it and has been known to stop bullets.

Icebergia. See ALASKA.

iceblink. Seamen gave the name *iceblink* to a luminous sky caused by light reflected from ice. The term is first recorded late in the 18th century and was shortly applied as well to the huge ice cliffs of Greenland.

icebound. *Icebound* means to be held "fast by ice," hemmed in, frozen in, as a ship might be. Figuratively, the word has been used to describe a cold, reserved person unable to care or show emotion. *Icebound* is the title of a 1922 Pulitzer Prize-winning play by Owen Davis about the tight-lipped, icebound Jordan family.

ice storm. Anyone who has ever walked in one knows the beauty of this winter storm in which rain freezes on and bejewels all it touches, though often causing trees or limbs to break and fall. Robert P. Tristan Coffin wrote that walking in one is like "living inside a diamond with all the walls cut and polished so they flame."

ice wine. According to the *New York Times*, "ice wine is made by pressing grapes that are left on the vine and plucked at the first significant freeze." British Columbia is the best-known area for ice wine.

Ichabod. A name given to Daniel Webster by John Greenleaf Whittier in his 1850 poem of that title, which expresses the abolitionist's disappointment with Webster's support of the Compromise of 1850. "Ichabod" means inglorious in Hebrew. Webster figures in much New England history, including Stephen Vincent Benét's famous story "The Devil and Daniel Webster."

ichor. *Ichor* (rhyming with "liquor") is in classical mythology "the ethereal fluid that flows in the veins of the gods" in place of blood. From such lofty heights *ichor* fell to become the English name for the blood of animals, little used today, and, finally, the water discharged from a wound or ulcer!

iconoclast. A debunker, one who attacks cherished beliefs, is called an iconoclast. The word dates from the time of Byzantine emperor Leo III, who in 726 began a program of destroying icons, or images, in churches because he believed his people actually worshipped the icons, not the religious figures they represented. The monks fanatically opposed Leo and called him, among other things, an *iconoclast*, "image breaker," the first recorded use of the word.

"I could have been a contender." The well-known words of former boxer Terry Malloy (played by Marlon Brando) in the 1954 Oscar winner *On the Waterfront*. Malloy, disappointed with his life, a small-time hood by now, made the confession to his brother. Other *On the Waterfront* Oscar winners include Budd Schulberg, best original story and screenplay; Elia Kazan, best director; and Brando, best actor.

I could not love thee, Dear, so much, Loved I not Honour more. See STONE WALLS DO NOT A PRISON MAKE.

Idaho. *Idaho* may be the only state name that is a complete fraud—at any rate, its name may mean nothing at all. Many sources derive the word *Idaho* from a Shoshonean Indian word meaning "gem of the mountain," but the Idaho State Historical Society claims that there never was any such Indian word and that *Idaho* and its translation was the phony creation of a mining lobbyist who suggested it to Congress as the name for the territory we now know as Colorado. Congress rejected the name, but it caught on among gold prospectors along the Columbia River, and when it was proposed in 1863 as the name for what we know today as Idaho, Congress approved it and the Idaho Territory was born. The origin of the word may be Shoshonean, however, though it does not mean "gem of the mountain" or "Behold! The sun is coming down the mountain," as another writer suggested. Idaho residents, in fact, ought to forget about the real Shoshone word that *Idaho* may have derived from, for that word would be *Idahi*, a Kiowa curse for the Comanches that translates roughly as "eaters of feces," "performers of unnatural acts," "sources of foul odors," etc.

Idaho baked potato. Very few potatoes are named and known for their place of origin. First known as the Early Rose potato, a variety discovered by the great horticulturist Luther Burbank in his New England garden in 1872, this famed versatile tuber went through some 40 years of breeding before it became known as the Idaho. Strangely enough, this well-known name was made famous by a New York department store "taster." William Titon, better known as Titon the Taster, worked 60 years for Macy's and was the store's final authority on all groceries, wines, and liquors. Among other accomplishments, Titon discovered the Idaho potato in 1926 while buying apples for Macy's and promoted it until the spud's name became synonymous with baked potato, for which Idaho's governor wrote a letter of thanks to the store.

idealogues. One time Napoleon was so rash as to call the regulars at Madame de Staël's salon idealogues. She quickly branded him an ideophobe.

idiolect. See ACROLECT.

idiot. When Horace Walpole dubbed Oliver Goldsmith “The Inspired Idiot,” he wasn’t aware that the ancient Greeks had often termed prose writers idiots. But *idiots*, the Greek word for *idiot* (from *idios*, private), first meant a private person, someone who kept to himself, often not active in the affairs of state; only later did it come to mean uneducated or ignorant. Although the Greek expression *a poet or an idiot* calls a prose writer an “idiot,” it contrasts not the intelligence but the medium of the two callings, the poet a public person who often, in fact, read his or her works at public festivals. In more recent times novelist Georges Simenon said that Count Keyserling once called him an “imbecile de genie.” Today *idiot* usually means a “foolish person” or, scientifically, someone with a mental age no higher than that of a child of three or four years of age. Ambrose Bierce in *The Devil’s Dictionary* (1906) defines an *idiot* as “a member of a large and powerful tribe whose influence in human affairs has always been dominant and controlling.”

I disapprove of what you say, but I will defend to the death your right to say it. Voltaire didn’t say it. In her book *The Friends of Voltaire* (1906), E. Beatrice Hall, using the pen name S. G. Tallentyre, proposed this well-known quotation on freedom of speech as a paraphrase on a thought in Voltaire’s *Essay on Tolerance*: “Think for yourself and let others enjoy the privilege to do so too.”

I do not choose to run. Said to be the words of President Calvin “Silent Cal” Coolidge when reporters were questioning him about whether he would run for re-election. Coolidge, in fact, said nothing at all. He passed out sheets of paper with the words written on them—“I do not choose to run for President in 1928.” See ALICE BLUE; COOLIDGE EFFECT.

I do not love thee, Dr. Fell. See DOCTOR FELL.

I don’t give a damn. See GIVE A DAMN.

I’d rather dine with Jack Ketch. See H.

I’d rather not go there. I’d rather not talk about that or say anything about it. A U.S. phrase dating back 20 years or less.

I’d sooner sleep in the pasture and pick corn out of horsedroppings. I’d rather do almost anything else than what you propose. This little-known humorous Americanism dates back to the early 19th century.

I’d sooner vote for the devil. Among the most famous of political ripostes, this put-down has been attributed to several politicians, but it originated with British MP John Wilkes. “I’d sooner vote for the devil than John Wilkes,” a constituent once told him. “And what if your friend is not running,” Wilkes replied.

IED. An acronym that became all too common during the Iraq War. The letters stand for *improvised explosive device*,

the weapon that has caused hundreds of deaths on Iraqi roads.

If his IQ slips any lower, we’ll have to water him twice a day. Said of someone exceedingly stupid. Columnist and Texan Molly Ivins says it in her *Molly Ivins Can’t Say That, Can She?* (1992) and either invented it or is passing it along. She was referring, of course, to a politician.

If I can’t dance, it’s not my revolution. The expression originated with American anarchist Emma Goldman (1869–1940) in the early 1900s, after her lover and fellow anarchist, Alexander Berkman, berated her one night for dancing wildly in a radical hangout.

If I live to be a hundred, I hope I never see you again. This old cliché was used by Marlene Dietrich in one of her 1930s movies. It is probably much older and is still heard today.

If it bleeds, it leads. Recent instruction for tabloid broadcasting and newspaper journalists, referring to the need for emphasizing bloody sensational stories in their coverage of the news, specifically leading off the first page or the program with such stories. Such coverage is, however, older than the tabloids themselves.

If it is not true, it is well-invented. See BEN TROVATO.

If Jesus were alive today, he would be at the Super Bowl. According to *Time* magazine (January 21, 1982) Protestant clergyman and author Norman Vincent Peale, a football fan, made this remark in referring to the 1981 Super Bowl. It has been much quoted since, though rarely if ever used seriously.

if life spare. A common Jamaican English expression that means “God willing,” “if God spares me,” a promise to do something if one doesn’t die before one can: “I’ll see you tomorrow if life spare.” Also heard as “if life save.”

if the glove doesn’t fit, you must acquit. A little ditty often attributed to Johnny Cochran (1938–2005), one of the lawyers defending O. J. Simpson in his 1994 murder trial. A bloody glove had been found at the Simpson house and the prosecutor asked Simpson to see if it fit him. “If the glove doesn’t fit, you must acquit,” Cochran told the jury as Simpson tried unsuccessfully to pull it on. Though another member of the “Dream Team,” Gerald Uelman, apparently suggested the rhyme, Cochran later wrote: “It’s the line that eventually will be cited by *Barlett’s Familiar Quotations*, the line endlessly quoted to me by people, the line by which I’ll be remembered, and I suspect it will probably be my epitaph.”

If the mountain will not come to Muhammad, Muhammad must go to the mountain. The saying arises from the time when Muhammad, founder of the Muslim religion and prophet of its God Allah, brought his message to the Arabs, and they demanded miraculous proof of his claims. He ordered Mount Safa to move, and when it failed to do so, explained that God had been merciful—for if the mountain

had moved it would have fallen on and destroyed them all. Muhammad then went to the mountain and gave thanks to God. The proverb is used to indicate that it is wise to bow before the inevitable after failing to get one's way. See MUHAMMADANISM.

If you ain't the lead horse, the scenery never changes. A humorous American expression I've only found in Thomas McGuane's *Keep the Change* (1989): "My old man used to say, 'If you ain't the lead horse, the scenery never changes.' Now it looks like I might lose the place. I need to get out front with that lead horse."

if you can make it in New York, you can make it anywhere. Probably coined by a New Yorker, this phrase dates back at least 30 years, possibly more. It was popularized in the song "New York, New York," written by Fred Ebb and John Kander and recorded by Liza Minnelli in 1977 and by Frank Sinatra in 1980.

If you can't lick 'em, join 'em. This Americanism probably dates back to the late 19th or early 20th century. Cynical and pragmatic, it comes from the political precincts, as one would expect.

If you can't say something nice, don't say anything at all. This self-explanatory expression, popularized by the movie *Bambi*, has been in use for at least a century and a half in the U.S. It's good advice as a general rule, but you wouldn't want to apply it to someone like Hitler, Stalin, or Mussolini, who people said made the trains run on time.

If you can't stand the heat, get out of the kitchen. The aphorism is usually attributed to President HARRY S TRUMAN but there is some evidence that he got it from his military adviser General Harry Vaughn, who got it from who knows where. It has also been suggested, with no proof, that what the salty Truman really liked to say was "If you can't stand the stink get out of the shithouse."

if you don't do, you're gonna get done. I first heard this phrase about swindling in the 1934 Loretta Young and Cary Grant movie *Born to Be Bad*, but the idea behind it is much older. For example, the so-called Chicago Golden Rule (Do de other feller before he do you) dates back to about 1902.

If you don't like the weather, just wait a minute. A saying referring to the mercurial nature of New England weather attributed to Mark Twain, who despite his many years in the region, never got used to the weather.

If you need anything, just whistle. When Humphrey Bogart died and was cremated in 1957, his wife, Lauren Bacall, placed a small gold whistle in the urn with his ashes. Inscribed on the whistle is a variation on the famous line she delivered to Bogey in their first film together, *To Have and Have Not*: "If you need anything, just whistle." Her exact words had been, "If you need me, just whistle," but no one remembers it that way.

if you peel that onion a little farther. An American expression, its exact origin unknown, meaning "as you examine something a little closer" it begins to take on a new appearance or meaning, as in. "On its surface the tax bill seems to help the poor, but if you peel that onion a little farther, you begin to find that's not the case at all." An onion, of course, has many layers.

If you've got the money, honey, I've got the time. There is a popular song of this title, but the expression has its roots in the *any day you 'ave the money, I 'ave the time*, an approach said to have been much used by prostitutes and "enthusiastic near-amateurs" in London toward the beginning of the century.

If you want God to laugh, tell him your plans. A Spanish proverb quoted in the Mexican film *Amores Perros* (2001).

If you want peace, prepare for war. Whether this advice remains good in our nuclear age is debatable, but there is no denying that this is an ancient phrase. It is a translation of the Roman proverb: *Si vis pacem, para bellum*.

ignoramus. Up until the 17th century *ignoramus* was just the Latin plural for "We don't know" and was written by grand juries across the backs of indictments if they thought there wasn't enough evidence in a case for the accused to be prosecuted. *Ignoramus* took on its present meaning in 1615, when George Ruggle wrote a play entitled *Ignoramus*, after the name of its main character, a lawyer who didn't know anything about the law. Soon this ignorant fictional lawyer's name was being applied to any ignorant person, lawyer or not. See IGNORE.

ignorance is bliss.

Yet ah! why should they know their fate?
Since sorrow never comes too late,
And happiness too swiftly flies
Thought would destroy their paradise.
No more; where ignorance is bliss,
Tis folly to be wise.

English poet Thomas Gray wrote the above in his *Ode on a Distant Prospect of Eton College* (1742), and unintentionally added a proverb to the language. It has been observed that Gray didn't mean it is better to be ignorant than wise at all times, the popular usage given to his words, for he makes an important qualification by using the word *where*. But a reading of the whole poem shows that he did mean it is better for man to be blissfully ignorant of his fate.

ignore. *Ignore*, in the sense of "pay no attention," was a word scorned by pedants well into the 19th century. It apparently derives from the old law term *ignoramus*. Indictments not to be sent to court were marked *ignoramus*, "not found," on the back by the grand jury. They were thus given no attention by the court, or *ignored*. See IGNORAMUS.

I gotta million of 'em. Often said by a comedian, or any joke-teller, after telling a gag. The words are associated with American comedian Jimmy Durante (1893–1980) and thus may date back to the early 1900s, when the beloved "Schnozzola" appeared

in vaudeville. Durante ended all his radio shows with the still mysterious, raspy words, "Good night, Mrs. Calabash, wherever you are."

I have but one answer, "I don't know." See BOOJUM TREE.

I have found it. The motto of Sacramento, the capital of California; its nickname is the Golden State. The golden poppy, Sacramento's flower, is another gold-related saying adopted after gold was discovered ("I have found it") in 1848 at Sutter's Mill, near Sacramento.

I have lost a day. According to the Roman historian Suetonius in his *Life of Titus*, the Roman emperor uttered these words at the end of a day when he had done no good to anyone. Titus, who reigned from A.D. 79 to 81, is known as the conqueror of Jerusalem and as the lover of Berenice, daughter of the Jewish king Herod, their ill-fated romance the subject of Racine's tragedy *Bérénice*.

I have not yet begun to fight. See SIR, I HAVE NOT YET BEGUN TO FIGHT.

IHS. This well-known abbreviation, used as a symbol or monogram, is simply the first two letters and the last letter of the Greek word for Jesus, capitalized and Romanized. It does not stand for *in hoc signo* ("in this sign") or any other phrase.

I laughed till I cried. See SECOND CHILDHOOD.

an Iliad of woes. This old expression was used in a similar form by the ancient Greeks. It refers, of course, to the myriad human woes mentioned in Homer's *Iliad*, which ignores virtually no calamity that can befall humankind.

I like Ike. See EISENHOWER JACKET; HE KEPT US OUT OF WAR.

ilk. *Of that ilk* means of the same class or kind, *ilk* coming from the Old English *ilca*, meaning "same." The expression has been traced back to about A.D. 800.

I'll be there with bells on. Early-18th-century Conestoga wagons usually arrived at their destination with bronze bells ringing, giving rise to this Americanism. These same Conestogas are responsible for traffic moving on the right side of the road in the U.S. rather than on the left as in Britain. According to one authority, the Conestogas were "best guided from the left and so afforded a clear view ahead only when driven from the right side of the road. Drivers of other vehicles found it not only wise not to argue but convenient to follow in the ruts made by the heavy wagons and habit soon became law." See STOGY.

I'll drink all the blood that is spilled between North and South. A common quip heard among Southern "fireaters" just before the Civil War, a war in which 620,000 men were killed, the casualties exceeding America's losses in all other wars.

illeist. The word for the habit of referring to oneself excessively in the third person singular is *illeism*. A nonce word modeled on the Latin *ille* ("he") and *egoism*, it was apparently invented by Coleridge, or at least he is the first author recorded to have used this coining for "a consummate egoist" (in about 1809). Using *he* does sound better than employing the royal *we*, and even a little better than constantly using *I*, for which Victor Hugo was called "a walking personal pronoun."

I'll gladly trade 11 years of 'then' for seven years of 'now.' A little-known saying of Rudolph Dial, a 62-year-old Oklahoma convict who died recently (of natural causes) who had a long history of various crimes, including fleeing jail with the warden's wife, who at 31 was 18 years younger. They managed to hide for 11 years before being recaptured.

"I'll have a steak and the man on the left." Spoken by actress Jayne Mansfield when she first sighted muscleman and Mr. Universe Mickey Hargitay in a line of body-builders at the Latin Quarter night club. She later married him.

Illinois. This central "Prairie State" is named for the Illinois Indians, as the French called the confederation of six Indian tribes in the area. Frenchmen were the first Europeans to enter Illinois territory, in 1673. They changed the Indian name *Hileni* or *Ileni*, meaning "man," to *Illin*, adding their *ois* plural. Since the Indian plural is *uk*, *Illinois* might be *Illinuk* today if they hadn't done so. The Illinois group is almost extinct today, numbering between 200 and 300, compared to an estimated 8,000 in the 17th century.

Illinois baboon. A derogatory name given to Abraham Lincoln by his detractors, sometimes shortened to the baboon and sometimes changed to Illinois gorilla and Gorilla.

Illinois gorilla. A derogatory nickname for Abraham Lincoln during the Civil War. "He was long detained in Washington, having interviews with Abe, the Gorilla; Seward, the Raven; and Feathers Scott." (*Richmond Dispatch*, November 13, 1861). Lincoln was also called the Illinois gorilla. His own secretary of war, Edwin Stanton, called him the original gorilla. See also ILLINOIS BABOON.

I'll tell you what I'm gonna do! A saying that became famous nationwide after its use by Sid Stone playing a pitchman on comedian Milton Berle's *Texaco Star Theater*. Stone rolled up his sleeves and played a street hustler on a segment of the television show every Tuesday night from 1948 to 1954. However, the very similar *I'll tell you what* goes back to Shakespeare, both phrases meaning roughly, "I'll tell you something, or I'll make a deal with you." Milton Berle (1909–2002), television's first star, introduced a number of popular expressions on his show, including the nonsensical "what the hey!"; "good evening, ladies and germs"; "I swear I'll kwill (kill) you"; and "God, I wish I'd said that, and don't worry, I will." As for jokes, Berle said he knew 200,000. "Uncle Miltie's" program was immensely popular. In his autobiography the comedian wrote: "In Detroit, an investigation took place when the water levels took a drastic drop in the reservoirs on Tuesday nights between 9 and 9:05. It turned out that everybody waited until

the end of the Texaco Star Theater before going to the bathroom.”

I loved the sweat of his body and the dust of his feet more than any other man. The poetic words of an old woman in the Ozarks recalling the extent of her love for her husband, who had died many years before.

I love everything that's old. The expression refers to the preference of Squire Hardcastle in Oliver Goldsmith's *She Stoops to Conquer* (1773), who “loves everything that's old: old friends, old times, old manners, old books, old wine.”

I love my wife, but oh you kid. Usually a humorous expression, or meant to be so, called out to an attractive, sexy woman. Mencken mentioned it in *The American Language* (1919), but it isn't heard much anymore.

I ♥ New York. Mary Wells Lawrence of the Wells Lawrence Green advertising agency coined the ubiquitous tourism slogan for New York City. Ms. Lawrence, the first woman to own a major ad agency, also invented the famous Alka Seltza “Plop Plop” jingle, among many other ads.

“I'm a Cranky Old Yank in a Clanky Old Tank on the Streets of Yokahama with My Honolulu Mama Doin' Those Beat-O, Flat-On-My-Seat-O, Hirohito Blues.” Possibly the world's longest song title, composed by U.S. songwriter Hoagy Carmichael (1899–1981). Another good one, this from *Lissauer's Encyclopedia of Popular Music in America* (Facts On File 1996), is: *Jeremiah Peabody's Polyunsaturated Quick Dissolving Fast Acting Pleasant Tasting Green and Purple Pills.* See HAPPY BIRTHDAY . . . ; WHERE HAVE ALL THE FLOWERS GONE?

I'm a curly-tailed wolf with a pink ass and this is my night to howl. A humorous oath heard among drinkers of potent moonshines and recorded by students of American Mountain dialect.

imaginary biographies. This term is used to describe biographies of people who do not exist. In William Beckford's *Biographical Memoirs of Extraordinary Painters* (1824) we find biographies of imaginary artists such as Og of Bason. *Appleton's Cyclopedia of American Biography*, first published in 1886, for many years contained 84 biographies of nonexistent persons sent in by an unknown correspondent; it wasn't until 1936 that they were all weeded out. Noel Coward did a bit of the same in his *Terribly Intimate Portraits* (1922), giving us imaginary biographies of people like Jabey Puffwater and E. Maxwell Snurge. Later, he pulled similar stunts in *Spangled Uniform* and *Chelsea Buns*. Many critics have been fooled by phony books and poems, but the only instance I've come across of a critic writing imaginary book reviews is Gerald Johnson, who, according to Martin Gardner, reviewed “six imaginary books . . . perceptively” in the *New York Times* on January 2, 1949. Gardner adds that many whimsical authors—Rabelais, Huysmans, and James Branch Cabell (with his “distinguished German scholar” Gottfried Johannes Biilg)—liked to “refer to the books of nonexistent authors.” Jorge Luis Borges has done the same in recent times.

imagist. A poet who employs free verse and the patterns and rhythms of common speech; or one of a specific group of such poets in England, France, and America from 1909–17. American poet Ezra Pound is said to have coined the name while reading his friend Hilda Doolittle's poems in the tearoom of the British Museum one day in 1912. According to Robert Wernik's “The Strange and Inscrutable Case of Ezra Pound” (*Smithsonian Magazine*, 12/95), Pound told Doolittle her poems were excellent: “[He] took out one of his sharp red pencils and shortened a few lines, changed a few adjectives and signed at the bottom ‘H.D., Imagiste,’ with one stroke creating a new school of poetry and conferring upon Doolittle the name under which she appears in the anthologies.”

Ima Hogg. Perhaps this is the best known of humorous American names, for Ima Hogg's father was the governor of Texas and she was a prominent socialite. It is not necessarily the best humorous real American name, for we have hundreds of gems like the following to choose from: Virgin Muse, Fairy Guy, Lance Amorous, Etta Turnipseed, Fannie Bottom, Arsie Phalla, and Dill L. Pickle (who was a pickle salesman). There was even someone named La Void.

I'm all right, Jack. First recorded in the late 19th century, I'm all right, Jack was originally British naval slang employing the *Jack* of JACK TAR and a shortening of the lustier “Fuck you, I'm all right, Jack,” common in the military at the time.

I'm as mad as hell and I'm not gonna take this anymore. A celebrated speech by actor Peter Finch in the movie *Network* (1976). He won the Oscar for best actor in the film and became the only actor to win an Oscar posthumously since he died of a heart attack shortly after the film.

I'm from Missouri. During the Civil War, an officer of the Northern army fell upon a body of Confederate troops commanded by a Missourian. The Northerner demanded a surrender, saying he had so many thousand men in his unit. The Confederate commander, game to the core, said he didn't believe the Northerner's boast of numerical superiority and appended the now famous expression, “I'm from Missouri; you'll have to show me.” Dr. Walter B. Stevens recorded this proud derivation of the phrase in *A Colonial History of Missouri* (1921), but other authorities support the following derogatory origin: Miners from the lead district of southwest Missouri had been imported to work the mines in Leadville, Colorado, sometime after the Civil War. They were unfamiliar with the mining procedures in Leadville and fellow workers regarded them as slow to learn, their pit bosses constantly using the expression, “He's from Missouri; you'll have to show him.” Residents of the “Show Me” state obviously favor the former theory, in which “I'm from Mizorra” is a badge of distinction, signifying native skepticism and shrewdness.

Immelmann turn. Sergeant York, Eddie Rickenbacker, Black Jack Pershing, the Red Baron . . . not many men are remembered of the millions who fought and the millions who died in “the war to end all wars.” But World War I German ace Max Immelmann (1890–1916) is one of them, if only because he is

the eponym behind the eponymous term *Immelmann turn*, or *Immelmann*, a maneuver he developed (consisting of a half loop and a roll) that enabled him to take evasive action in such a way that his plane quickly secured an offensive position. Immelmann won many of his 15 victories with his turn, as did other aces of the two world wars. He died at age 26 like the Red Baron, when his plane broke apart in midair, perhaps as a result of his acrobatic tactic. See RED BARON.

immolate. *Immolate* means to sacrifice by fire or other means, but it derives from the Latin *immolare*, “to sprinkle with meal.” This is because the ancient Romans sprinkled wine and pieces of the sacred cake, made from meal, on the heads of humans to be sacrificed to the gods.

the immortal tragedian. “Seeing him act,” the poet Samuel Coleridge wrote about English actor Edmund Kean, was like reading Shakespeare by flashes of lightning. But Kean who had begun his stage career when only 14, was a “magnificent uncut gem” whose eccentricities and hard drinking wasted his talent away and marked him for an early grave. Once he was involved in an adultery suit that almost banished him from the theater. Backstage in his dressing room he kept a pet lion someone had given him; he often rode his horse, Shylock, wildly through the night streets of London. Even the great actor’s last performance was in character. While playing Othello to his son Charles’s Iago at Covent Garden in 1833, Kean broke down and fell into his son’s arms. “O God, I am dying. Speak to them, Charles,” were his last words on the stage and the “immortal tragedian,” or “horrid little man,” died less than two months later, only 44.

imp. A graft or shoot was called an *impian* by the Anglo-Saxons and this word, shortened to *imp*, later came to mean an offspring or a child. At first *imp* meant any child, but the word is now almost always applied to a mischievous child.

impala. The name of this large South African antelope (*Aepyceros melampus*) was taken directly from Zulu *impala* meaning the same. The word was first recorded in English as far back as 1801.

impatiens. See NOLI ME TANGERE.

imperatrice. Roses of Napoleon’s empress Josephine (1765–1814). These roses, planted at Malmaison, are the largest collection of roses ever planted anywhere and are still being added to.

imperial beard. Louis Napoleon (1808–73), nephew of Napoleon Bonaparte, staged a coup d’état in 1851 that made him emperor the following year. As Napoleon III, the despot reigned until his empire was overthrown 20 years later and he retired to England. While emperor, Napoleon sported a small, pointed tuft of hair under the lower lip that was named an imperial beard in his honor.

Imperial Wizard. The highest officer in the Ku Klux Klan. Similarly, the Klan’s headquarters is called the Imperial Palace.

impressionism. A painting by Claude Monet entitled *Impression-Sunset* is responsible for the name of the school of art called impressionism. French critic Louis Leroy coined the term in a review he wrote on April 25, 1874, ridiculing Monet’s painting and others of an experimental nature that he had seen exhibited at a photographer’s studio in Paris. Meaning to be sarcastic, he entitled his review *L’Exposition des Impressionists*. Soon the term caught on, losing its pejorative sense.

improvisator. An improvisator is someone who composes, acts, sings, etc., on the spur of the moment, without preparation. The word derives from the Italian *improvvisatore*, which originally referred only to a person who extemporized verse. Petrarch is supposed to have introduced the game of inventing poems on the spot for a particular occasion and to have received a laurel crown for extemporizing in verse. Others among many famous for this talent were Italian poet Angelo Mazza (1741–1817), reputedly best of all; Francisco Gianni (1759–1822), whom Napoleon made imperial poet to celebrate his victories in verse; English poet Thomas Hood, author of “The Bridge of Sighs”; William Cowper; and Alexandre Dumas père.

I.M.R.T. Intensity modulated radiation therapy, a new therapy for prostate cancer treatment.

in a bad box. *Box* here means “predicament.” The old saying may have been invented by Mason Locke Weems in his *The Drunkard’s Looking Glass* (1818), the same Parson Weems who may have invented the story of George Washington and the cherry tree in a biography of the first U.S. president. Others of what the good parson called his “good books” were *Hymen’s Recruiting Sergeant* and *God’s Revenge Against Adultery*. See I CANNOT TELL A LIE.

in a hole. The expression *in a hole*, “in debt or some other kind of trouble,” can be traced to gambling houses of the mid 19th century where the proprietors took a certain percentage of each hand for the house. This money, according to a gambling book of the time, was put in the “hole,” which was “a slot cut in the middle of the poker table, leading to a locked drawer underneath, and all checks deposited therein are the property of the keeper of the place.” When one had put more money into the poker table hole than was in his pocket, he was *in a hole*.

in a New York minute. A very short time, instantly. “He did it in a New York minute.” A popular expression that was first recorded in print in 1967, though William Safire, in *Coming to Terms* (1980), quotes an informant who says his father, who died in 1929, age 69, often used the expression.

in a nutshell; the Iliad in a nutshell; Iliad. One writer recently called the first expression a cliché that is rarely heard anymore, but the cliché must be a useful one, for in just two weeks since I read his pronouncement I’ve heard the expression five times, once in the title of Stephen Hawking’s book *The Universe in a Nutshell* (2002). *In a nutshell* has a long, distinguished history dating back to Cicero, who claimed in the first century B.C. that someone actually copied all 24 books of Homer’s epic poem *The Iliad* in a handwriting minuscule enough to

fit in a walnut shell (a feat that has since been repeated several times). The phrase *the Iliad in a nutshell* later came to be *in a nutshell*, meaning “very small,” of great brevity, a condensation beyond the wildest dreams of the *Reader’s Digest*. Wrote Shakespeare in *Hamlet* (1601): “Oh God! I could be bounded in a nutshell, and count myself a king of infinite space, were it not that I have had bad dreams.” *The Iliad* takes its name from *Ilion*, another name for the city of Troy, *Ilion* honoring its legendary founder, *Ilus*.

in a pickle. To be in a state of confusion, disorder. The phrase goes at least back to Shakespeare, who writes in *The Tempest* (1611): “I have bin in such a pickle since I saw you last . . .”

in a pig’s ear. A euphemism for the American slang phrase in a pig’s ass, which means *never*, as in “In a pig’s ass I’ll work on Saturday.” In a pig’s eye is also used. See MAKE A PIG’S EAR OF.

in a pig’s eye. A fiery emphatic denial meaning “never,” “not a chance,” “like hell,” as in “In a pig’s eye you could beat me.” Variations on the well-known Americanism include in a pig’s ass and in a pig’s ear.

in a pretty pickle. *In de pikel zitten*, a Dutch phrase going back at least four centuries, literally means to sit in the salt solution used for preserving pickles. This saying apparently suggested the expression to be *in a pretty pickle*, an uncomfortable or sorry plight—like someone sitting in such a bath. Our word *pickle* comes from the Dutch. A sour pickle is perhaps the last thing anyone would expect to be named after a man, but at least one source claims that the word *pickle* derives from the name of William Beukel or Bukelz, a 14th-century Dutchman who supposedly first pickled fish, inventing the process by which we shrink and sour cucumbers. This pickled-herring theory may be a RED HERRING, however. All the big dictionaries follow the *O.E.D.’s* lead in tracing *pickle* to the Medieval Dutch word *pekel*, whose origin is ultimately unknown.

in at the kill. If you consider fox hunting a sport—Oscar Wilde said a fox hunt consisted of “the unspeakable in full pursuit of the inedible”—this expression can be considered a sporting phrase. *In at the kill* means “participating in the finish of something, especially something satisfying and vindictive,” and originated in the upper-crust British world of the hunt sometime during the 1800s. See also TALLYHO.

inaugurate. See AUSPICIOUS.

inauspicious. It has been remarked that “no other word ever had such a premiere as *inauspicious*,” which made its debut in Shakespeare’s *Romeo and Juliet*, Romeo crying:

Here, here, will I remain . . .
And shake the yoke of inauspicious stars
From this world-wearied flesh.

Shakespeare probably invented *inauspicious*, as he did *auspicious* (in *The Tempest*), meaning favorable, conducive to success. Its roots are in the Latin *auspex*, a corruption of *avis* *pex*, for the Roman birdwatcher who deduced omens from the flight of birds.

in a word. Brief, shortly. Shakespeare may have coined this phrase, for he is the first to record it, in *Two Gentlemen of Verona* (1591): “And in a word . . . he is compleat in feature and in mind.”

in cahoots with. *Cahoots* apparently derives from the French *cahute*, cabin, and is first recorded in about 1820. American fur trappers on the frontier probably borrowed the word from French trappers there. Trappers living together in a *cahute* or *cahoot* were often partners, giving rise to the expression *in cahoots with*.

Incas. The Peruvian Indians of South America did not call themselves the Incas, as the Spanish did. Inca in their language meant lord, king, or ruler, a “man of the royal blood” or a king’s relative, not any one of their people. The king himself was sometimes called the *Capa Inca*, or “sole lord.”

incomprehensibility. The French novelist Balzac apparently coined this word to sum up his religious belief. In a letter to his mistress, Madame Hanska, he wrote: “I believe in the incomprehensibility of God.” See THE GREATEST OF NOVELISTS.

incorporated; Inc. No one seems to know what corporation first abbreviated *incorporated* to *Inc.* after its name. *Incorporated* means to be united in one body, *incorporate* and *incorporated* having been used in the sense of legal or formal business corporations since the 15th century.

incubate; incubus. See NIGHTMARE.

incunabula. The word *incunabula* (the singular form is *incunabulum*) is used to signify books produced in the infancy of printing from movable type, usually those printed before 1500. Caxton’s edition of *The Canterbury Tales*, printed in 1478, is a famous incunabulum. The Germans coined the name *incunabula* for these early books in the 19th century, using the Latin word for swaddling clothes and cradle.

indaba. A word used in South African English for a meeting or a conference, as in “The indaba was held in Capetown.” The word, which comes from the Zulu language, also means a problem or a concern, as in “It’s not our indaba.”

indenture. *Indenture* strictly means “a document with serrated edges,” deriving from the Latin *dens*, “tooth,” and referring to the once common practice of cutting a document into halves with serrated edges—one half to each party of agreement—so that the document could be authenticated by fitting the edges together. The word’s legal meaning today is “a contract in which two parties bind themselves to an exchange of services and observances.” *Indentured servitude*, sometimes called “white slavery” and banned under the U.S. Constitution, bound a person to service to another for a period of time, usually seven years, and could amount to virtual slavery. A number of noted early Americans were once indentured servants.

index finger. The second finger of the human hand was called the *towcher* (toucher) in Middle English because it is so fre-

quently used for touching objects. Today it is called the *index finger* because it is the finger used most for pointing. *Index* means “informer” or “that which informs” in Latin. *See also* THUMB.

Index Librorum Prohibitorum. Often abbreviated to the *Index*, this list of books forbidden by the Catholic church is practically a synonym for censorship. Established by the Holy Office in 1559, the *Index* mostly condemned books for doctrinal or moral reasons. Pope Paul VI ended publication of the *Index* in 1966, making a paperback book that had once banned as many as 5,000 books no more than a “moral guide” without force of church law, though the Vatican can still issue warnings about books that might be “dangerous” to the faithful. No American novelist has ever been listed in the *Index*. Among prominent writers who did make the list are: Boccaccio, Galileo, Bacon, Milton, Locke, Gibbon, Defoe, Descartes, Montaigne, Spinoza, Rousseau, Kant, Stendhal, Hugo, Casanova, Balzac, Dumas, Flaubert, Gide, Sartre, and Moravia. *See also* BOWDLERIZE; COMSTOCKERY.

India ink. In France *India ink* is called *China ink* as it rightly should be, for it was invented in China and first traded there. *India ink* it is in America and England, as it has been since 1665, when the dark black ink is mentioned in Samuel Pepys’s famous *Diary*.

Indian. At least one writer has speculated that *Indian* may have been suggested to Columbus as a name for the Taino people he encountered because they were so friendly, peaceful, and gentle, *una gente in Dios*, a people of God. But there is no proof of this, most etymologists believing these people were mistakenly named by Columbus because he thought he had reached the Indies of Asia, the first but not the worst mistake immigrants made regarding the native Americans. *See* CLEVELAND INDIANS.

Indiana. Indiana’s name denotes that it was the domain of Indians. Before it became our 21st state in 1816 the Hoosier State had been called the Indian Territory.

Indiana accolade. The common action of banging the cue on the floor in a vertical position to applaud a good shot in a game of pool is called an Indiana accolade, possibly because an unknown Indiana player first “applauded” the shot of a rival this way.

Indian book. This interesting use of the word *book* is recorded in Carlisle S. Abbott’s *Recollections of a California Pioneer* (1917): “Upon reaching the summit of the mountain we came to an Indian book which must have been hundreds of years old, for it was now thirty feet in diameter and nearly five feet high in the center.” Such “Indian books” were accumulations of natural objects like sticks and stones left on a trail by passing Indians to inform their friends that they had come this way. *See* BOOK.

Indian bread. Pioneers called the strip of fatty meat extending from the shoulder along the backbone of the buffalo Indian

bread because the Indians favored it. As one writer put it: “When scalded in hot grease to seal it, then smoked, it became a ‘tit-bit’ the buffalo hunter used as bread. When eaten with lean or dried meat it made an excellent sandwich.”

Indian corn. *See* CORN.

Indian giver. Tradition holds that American Indians took back their gifts when they didn’t get equally valuable ones in return. Some Indians were no doubt *Indian givers*; others, however, got insulted if they received *more* than they gave. Instances of Indians *Indian-giving* are hard to come by, and even the *Handbook of American Indians* (1901), published by the Smithsonian Institution, defines the practice as an “alleged custom.” Perhaps the expression is explained by the fact that *Indian* was once widely used as a synonym for bogus or false. Many of the nearly 500 terms prefixed with *Indian* unfairly impugn the Indian’s honesty or intelligence—even *honest Injun* was originally meant sarcastically, and *Indian summer* means a false summer.

Indian head penny. A favorite of coin collectors, the Indian head penny was issued by the U.S. Government from 1859 to 1909. The “Indian” depicted on the coin is not really an Indian; the figure was modeled by Sara Longacre, the daughter of a U. S. mint official. Mint officials have on several occasions used relatives and friends to model for figures on coins. The wife of noted American poet Wallace Stevens, for example, posed for the goddess of Liberty on the Liberty half-dollar. *See also* CENT, PENNY.

Indian paintbrush. *Castilleja linariaefolia*, a plant of the figwort family that is the state flower of Wyoming; also a name given to other plants of the genus.

Indian post office. Indians in the American West often piled sticks and stones in a mound to indicate that they had been at a certain point and would return there in a certain number of days, depending on the number of rocks and sticks piled there. Cowboys called such a mound an Indian post office because messages could be left there.

Indians don’t count. An offensive boast of gunmen in the early Southwest, who supposedly kept a count of all but Indians and Mexicans that they killed. Also heard was *Mexicans don’t count*.

Indian whiskey. Cheap rotgut often sold to Indians by cynical traders as good liquor. E. C. Abbott and Helene Huntington Smith in *We Pointed Them North* (1939) tell a story about early western traders making it from the following recipe: “Take one barrel of Missouri River water, and two gallons of alcohol. Then you add two gallons of strychnine to make them crazy—because strychnine is the greatest stimulant in the world+three bars of tobacco to make them sick—because an Indian wouldn’t figure it was whiskey unless it made him sick+ five bars of soap to give it a head, and half pound of red pepper, and then you put in some sage brush and boil it until it’s brown. Strain this into a barrel and you’ve got your Indian whiskey.” Also called Indian liquor.

Indian words in English. It is estimated that nearly a thousand basic English words derive from words in Hindu, Sanskrit, and Romany, all Indian languages. Some of these are: panther, ginger, pepper, sandal, guru, pundit, nabob, punch (drink), chintz, mongoose, dungaree, cot, bungalow, juggernaut, tomtom, mugger, bandana, jute, sari, chit, myna, jingle, shampoo, puttee, cashmere, thus, pajamas, gazelle, dum-dum, loot, dinghy, polo, chutney, zen (through Japan), and loot.

Indian yellow. Courtesy of American author Chuck Palahniuk (*Diary*, 2003), this color is “the urine of cattle fed mango leaves.”

indigo. *Indigo* derives from Greek *indikón*, Indian, because the plant, which produces a blue dye, was an important crop in India. The dye plant was also much valued in the Carolina Low Country. Introduced there in the early 18th century, it did more to enrich the South Carolinian plantocracy than New World gold did for the Spaniards.

indri. The little short-tailed lemur of Madagascar was so named a century ago when a French naturalist and his Madagascan guide were identifying animals in the jungle. The guide saw a lemur and cried “Indry! Indry!” This actually meant “Look! Look!” but the naturalist recorded it as the animal’s native name and the lemur has been called the *indri* (*Indri indri*) ever since. See also KANGAROO.

(the) industry. There are about a thousand kidnappings in Colombia annually, on the order of three a day, the proceeds from ransoms more than some legitimate businesses make. Therefore Colombians have adopted the English word *industry* to mean kidnapping.

I need it like I need a hole in the head. Popularized by comedians, this phrase became common in the late 1940s and is still frequently heard. It means “I don’t need that at all, I’m better off without it.”

I never missed one in my heart. Veteran major-league baseball umpire Bill Klem, who retired in 1941, said this to assure his admirers and detractors that he had never made a call, right or wrong, that he didn’t believe was right. The expression is now used by people in and out of sports as a profession of sincerity.

I never shot a man who didn’t need it. A saying repeated in a number of westerns but actually said first by outlaw Clay Allison, who is also remembered for pulling a dentist’s tooth at gunpoint after the dentist pulled the wrong tooth in his mouth.

infant; infantry. First recorded by John Wycliffe in 1382 *infant* comes from the Latin *infans*, “unable to speak.” It once meant a “childe” or “a young knight, a youth of gentle birth” as well as a baby. Thus we have the word *infantry* for foot soldiers, “soldiers too young and inexperienced to serve in the cavalry.”

inferiority complex. Carl Jung established the psychoanalytical term *complex* in a 1907 work, but it had been coined by his colleague A. L. S. Neisser a year before. *Complex* means in this sense “a system of interrelated, emotion-charged ideas, feelings, memories, and impulses that is usually repressed and that gives rise to abnormal or pathological behavior.” *Inferiority complex* became a psychiatric term at about the same time and came generally to mean “lack of self esteem, lack of confidence.”

infernal machine. President John Tyler once had White House ushers defuse a package that he thought to be “an infernal machine,” or bomb, but that turned out to conceal a mere cake. *Infernal machine* has been synonymous for a bomb concealed as some harmless object since at least 1810, and in the form of *infernal apparatus* is recorded in 1769. The *infernal* in the phrase derives from the Latin *infernalis*, “of the realms below, or hell.”

infighting. Infighting is a style of fighting at close quarters developed by 160-pound British champion David Mendoza; the term was first recorded in 1816. Since about 1848 *infighting* has also meant fighting among rivals within a group, the expression most often heard as *political infighting*.

inflation. The word *inflation*, used in relation to inflated prices and money, is first recorded in 1838, during the Panic of 1837, which actually lasted three years. President Martin Van Buren did nothing to alleviate the panic or the bread riots that it brought, enabling William Henry Harrison to defeat him in his 1840 bid for reelection.

influenza. *Influenza* first entered the language about 1743, when an outbreak of “a contagious distemper” was reported in Rome. This was called “the Influenza” because it was believed to have been evilly “influenced” by the stars, and such occult *influenzas* were said to cause plagues and pestilences as well. The Italian word for influence, anglicized in pronunciation, became the English specific name.

in for a penny, in for a pound; pennywise and pound foolish. Since the British have not adopted the Euro as their currency like most nations in the Common Market, these expressions may be around for centuries to come. Both date back to the mid-17th century and are familiar to Americans as well as to the British. *In for a penny, in for a pound* means “to be committed” to a course once you have embarked upon it. *Pennywise and pound foolish* is obvious. Other expressions that need no explanation in Britain or the U.S. include: *a penny for your thoughts, a bad penny; not have one penny to rub against another; a penny saved is a penny earned; and take care of the pence and the pounds will take care of themselves*. The word *pound* comes from the Latin *pondus*, while *penny* derives from Old English *pening*.

Information Please. One of the first radio or television quiz programs, its panel was composed of wits and savants like Franklin Pierce Adams (who called himself F.P.A.). F.P.A. also edited the influential column “The Conning Tower,” this consisting of verse and humorous content.

infracaninophile. A person who favors the underdog. Coined by American author Christopher Morley (1890–1957) to describe such a person, though the construction of the humorous nonce word from Latin may be slightly wrong. *See* UNDERDOG.

infra dig. This is short for the Latin *infra dignitatem*, “beneath one’s dignity,” and means something not befitting one’s position, station, character, or talent.

in full sail. An admiring term for a remarkably endowed woman that is heard in coastal areas, especially in New England and most commonly in Maine: “There she goes in full sail!”

In German a young lady has no sex, but a turnip has. Mark Twain said this and he was referring to the fact that while vegetable names are given a gender in the German language, the words *Madchen*, for “girl,” and *Weib*, for “wife,” “female,” and “woman,” are not feminine but, curiously, neuter.

ingle; inglebrook. *Ingle* refers to an open fire in a fireplace, or the fireplace itself, the word deriving from Scottish Gaelic *aingeal*, “fire, light,” and first recorded in the early 16th century. *Inglebrook*, recorded about 1765, is a corner or nook beside an open fireplace.

in God we trust. *Mind Your Business* was the first motto used on a U.S. coin. *In God We Trust*, the motto now found on all American coins large enough to hold it, was authorized by two Congressional acts of 1865. It was used on the eagle (the \$10 gold piece), the double eagle (the \$20 gold piece), the half eagle (the \$5 gold piece), the silver dollar, the half dollar, and the quarter—and still appears on those latter three coins. This motto inspired the humorous slogan *In God We Trusted, In Kansas We Busted* that settlers in Kansas, bankrupt by the severe droughts from 1887 to 1891, painted on their old covered wagons when they returned East.

in hock. In the game of faro, much played in 19th-century America, the last card in the box was called the *hocketty card* (from a word of unknown origin), this card later said *to be in hock*, as was any player who bet on the last card. This was a bad bet, most often a losing one, so that *to be in hock* soon meant “to owe money.” Pawnshops were a convenient place to get money to pay debts, so they became known as *hock shops*, and *to be in hock* soon meant to have some or all one’s valuable possessions in a hock shop or, generally, to be in very bad financial shape.

In Hoover we trusted, now we are busted. Herbert Hoover won the U.S. Presidency in 1928 with his party’s slogans A CHICKEN IN EVERY POT and RUM, ROMANISM AND REBELLION, the latter a reference to his opponent Al Smith’s Catholicism. He lost the presidency in 1932, in the midst of the Great Depression, Franklin D. Roosevelt’s supporters calling for “New Deal” and chanting *in Hoover we trusted, now we are busted*. *See* HOOVERIZE.

in hospital. “He’s been in hospital since Sunday last,” the British would say, dropping the article from *in the hospital*. On

the other hand, Americans always say “in the hospital,” retaining the article.

ink; red ink; red numbers. *Ink* itself is from Greek *enkauston*, “burned in,” which the Romans used to describe the royal purple ink used by Roman emperors. *Red ink*, dating back to about 1925, means a business loss (“He went into the red ink”) or a financial deficit, though during Prohibition it meant homebrewed wine. *Red numbers*, on the other hand, is a golf term that means to be under par by one or more strokes, as in “He’s in the red numbers,” something every golfer aspires to.

inkslinger. A writer or editor in the early West. “You scared him off with that editorial . . . He may be gone fer the moment, inkslinger, but he’ll be back.”

in like Flynn. Chicago’s “Boss” Flynn’s machine never lost an election and was always “in office,” inspiring the expression *in like Flynn*, meaning “to have it made.” The popularity of movie actor Errol Flynn and his amorous activities helped popularize the phrase in the early 1940s.

in limbo. Something or someone *in limbo* is in an intermediate state or in oblivion. The term derives from the place called Limbo in Roman Catholic theology that is located on the border of Hell, a place where souls reside that cannot enter into Heaven. The Roman Catholic church no longer teaches this doctrine.

in loco parentis. Latin for “in the place of a parent.” Often used for the guardian a court appoints to care for a child.

in Macy’s window. A synonym for the ultimate in public exposure: “If we do that we might as well be in Macy’s window.” Traditional window displays date back to the early 1880s when the use of plate glass on a wide scale made display windows a standard feature of department stores. Macy’s display windows in New York were long the most prominent among them, especially those in their flagship store on West 34th Street, “The World’s Largest Store” with over 2.2 million square feet of floor space. In fact, Macy’s old 14th Street store in Manhattan was famous for its Christmas displays as far back as the mid-1800s, featuring a collection of toys revolving on a belt.

in medias res. Latin for “in the middle of things,” a term often used as a euphemism for “in the midst of sexual intercourse.” There is an old story, for example, about the poet son of an Arabian prince who was “caught *in medias res* with the wife of a court officer, who skewered them on the same sword.”

in mufti. In civilian clothes, in contrast with military or other uniforms, or as worn by someone who usually wears a uniform. Any military person, priest, judge, etc., can be said to be *in mufti*. The term apparently derives from the title of Arabian legal advisers called mufti, who were often military men acting as judges.

innings. *See* HAVE ONE’S INNINGS.

innocuous desuetude. President Grover Cleveland coined this phrase and first used it in a message to Congress on March 1, 1886. It means “harmless disuse” and describes a law, custom, or anything else long disregarded, something on the junk pile. Said President Cleveland: “After an existence of nearly twenty years of almost innocuous desuetude, these laws are brought forth.” Later, Cleveland explained that he thought such sesquipedalian words (*i.e.*, words a foot-and-a-half long) “would please the Western taxpayer,” give them something for their money.

inoculate. *Inoculate* derives from the Latin *inoculare*, “to graft by budding,” “implant.” The word was first recorded in this sense at the beginning of the 15th century and wasn’t used in the medical sense of inoculation, to plant a disease agent or antigen in a person to stimulate disease resistance, until 1722. See GRAFT.

in one ear and out the other. Only slightly changed over the past four centuries, this expression, said of things that make no impression on the mind, dates back to at least 1583, when an annoyed preacher said that his sermon “goes in one ear and out the other.” Almost two centuries earlier, in about 1400, the expression is used in the poem “Romaunt of the Rose” in the form of “out at oon er / That in at that other.”

in over your head. Another phrase whose origin may be the swimming pool, like go in off the deep end (qv). This American expression means “to be in a situation one can’t control,” as someone who didn’t know how to swim would be if he or she jumped in at the deep end of the pool.

insane asylums. People haven’t usually been kind in naming hospitals for the insane (though there have been several euphemisms such as *insane asylum*, *insane hospital*, *sanitarium*, *mental hospital*, and the names of prominent mental hospitals like *Bedlam* and *Creedmore*). Starting with *madhouse* (1687), the synonyms have been mainly derogatory, including *nut house*, *crazy house*, *booby hatch*, *funny house*, *funny farm*, *snake pit*, *cuckoo-nest*, and *puzzle factory*.

insane root. Banquo says to the witches in *Macbeth*:

Were such things here as we do speak about?
Or have we eaten the insane root
That takes the reason prisoner?

Either henbane (*Hyoscyamus niger*) or poison hemlock (*Conium maculatum*), the hemlock that killed Socrates, is the *insane root* of the ancients that was supposed to deprive anyone who ingested it of his senses.

insect. See BUG.

inseminate. Our word for “to impregnate,” *inseminate* first meant to sow or implant seed into the ground. It was first recorded in English in this sense in 1623, and is derived from the Latin *seminare*, “to sow” or “to plant.”

inside track. See HAVE THE INSIDE TRACK.

in situ. Latin for “in the original or natural position.”

in state. In Nigeria, where English is an official language, *in state* means to be pregnant, as in “She is in state five months now.” There might be confusion with the last two words of the phrase *to lie in state*, to be exhibited with honor before burial, and *to lie in*, to be confined in childbirth.

insult. The Latin *insultare*, to jump or trample upon, yielded the English word *insult*, to disrespect, dishonor, desecrate, in the mid-16th century. It is said that the Latin word originally meant to contemptuously leap on the body of a foe killed or felled in battle.

inteligense. A 1978 newsletter from a branch of Mensa, an organization for people with high IQs, had the spellings “recieved,” “attornies,” and, of course, “inteligense.”

intelligentsia. Another Russian borrowing. The Latin *intelligere* (*inter*, “between” + *legere*, “to choose”), “to perceive or understand,” is the ultimate basis of our word *intelligentsia* for the “intellectual elite,” but the word comes to us through the Russian *intelligentsiya*, taken from the Latin. It came into English in the 1920s.

interloper. The Russia Company, operated by Englishmen, had a virtual monopoly on Russian trade in the late 16th century, but Spanish traders bribed czarist officials in trying to break the monopoly, and the English in propagandizing against them coined the word *interloper* to describe the trespassers, building it from the Latin *inter*, “between,” and the English *lope*, “to run.”

international. Eccentric English philosopher Jeremy Bentham coined the much used word *international* in 1780. He is also responsible for *maximize* and *minimize*, and thus the ancestor of a lot of less desirable advertising words ending in “ize.”

the Internationale. The song of revolutionaries the world over today, the “Internationale” was first sung in France, in 1871. It was not the anthem of the French Revolution, as many people believe. See MARSEILLAISE.

Internet. A huge worldwide series of interconnected computer networks. It expanded into popular use in the 1990s and has had a huge impact on popular culture. Children raised in this time have an entirely new frame of reference than their forebears.

interrobang. This is the very newest of punctuation marks, devised by an American typesetting company in the 1970s. A combination question mark and exclamation point, it is used after an expression that could be both a question and exclamation, such as “Where’s the fire?!” Resembling an exclamation point superimposed on a question mark, it takes its name from the *interro* in *interrogation* and the printers’ slang *bang* for an exclamation point.

interview. Media interviews can be traced back to 1859, at about the time of John Brown's raid on Harper's Ferry. At this time abolitionist Gerrit Smith gave an interview to a *New York Herald* reporter who remained anonymous. Other sources, however, claim that journalist Anne Royall invented the form in an 1825 story about President John Quincy Adams.

intestinal fortitude. The head coach of Ohio State University's football team, Dr. John W. Wilce, is said to have invented this word for "guts" in 1915 as "a protest against the lurid language of the gridiron and locker room," *guts* then being considered "improper for drawing-room conversation." They don't make coaches like Dr. Wilce anymore, nor locker rooms so mild.

In Texas the cattle come first, then the men, then the horses and last the women. An old Texas saying quoted by Edna Ferber in *Giant* (1952).

in the arms of Morpheus. See MORPHINE.

in the bag. It's usually assumed that this metaphor derives from hunting, where it refers to birds and other small game—already safely in the game bag. *Bag* has been used as an abbreviation for *game bag* since at least the 15th century, but the expression *in the bag* is first recorded in 1925. William Bancroft Miller, writing in *Verbatim* (February 1977), offers another explanation, attributing the phrase to cockfighting: "Until comparatively recent years, it was common to transport game chickens to the scene of battle in cloth bags rather than in the comfortable and elaborate carrying cases now in vogue, and the roosters were not removed until the fight was about to begin. A cocker, confident of the prowess of his feathered warrior, would say that victory was *in the bag* for him." Neither theory is supported by quotations and neither explains the sinister implication these words often have, for the expression frequently means "rigged" or "fixed."

in the ballpark. See BALLPARK FIGURE.

in the chips. See CHIP IN.

in the clutch. A baseball player who performs well in a critical moment of a game has been called a clutch player or clutch hitter for over half a century now. The derivation of the term is unclear but the expression is widely used today outside of sports as well. Someone who performs well in any important or crucial situation is said to be dependable or reliable in the clutch.

In the country (land) of the blind, the one-eyed man is king. This old English proverb has been traced back to the early 1500s, and may be older.

in the dark all cats are grey. An old maxim that Benjamin Franklin explained in his 1776 essay "Advice to a Young Man on Choosing a Mistress." Franklin wrote: "As in the Dark all cats are grey, the Pleasure of Corporal Enjoyment with an old woman is at least equal and frequently superior, every Knack

being by practice capable of improvement." ("Old" in Ben's day was probably 35 or so.)

in the doghouse. The expression *in the doghouse*, "out of favor or undergoing punishment," isn't of ancient origin but is an Americanism first recorded toward the end of the 19th century. Possibly the term originated during the African slave trade, when sailors locked the hatches at night, to prevent slaves from escaping, and slept on deck in tiny sleeping cubicles called "dog-houses." There is no evidence, however, to support this theory, or any other for that matter.

in the driver's seat. Figuratively, this means to be in control of a situation; usually it implies complete control, too, although of course, no one in any driver's seat has that, considering the vehicle itself, the road, other drivers, and the power natural or supernatural that propels the vehicle. Surprisingly, the expression isn't a modern one, dating back at least 400 years, when the driver drove horses or oxen rather than an automobile.

in the hole. See ON DECK.

in the ketchup. Meaning the same as *in the red* (qv), the U.S. slang dates from the mid-20th century. See also KETCHUP.

in the land (country) of the blind, the one-eyed man is king. A proverbial phrase from the early 16th century. I know of no one-eyed king in history, but one U.S. president—Theodore Roosevelt (1859–1919)—was blind in one eye.

in the money. Having plenty of money, being rich, making money hand over fist, moneybags.

in the name of the Great Jehovah and the Continental Congress. The traditional words attributed to Ethan Allen when he demanded the surrender of Fort Ticonderoga by the British commander during the Revolutionary War. There is another, better story, however. According to John Pell in *Ethan Allen* (1929): "Professor James D. Butler, of Madison, Wisconsin, has informed me that his grandfather Israel Harris was present and had often told him that Ethan Allen's real language was, 'Come out of here, you damned old rat.'"

in the nick. To Americans *in the nick of time* means "just in time, not a minute too early." One theory holds that the word *nick* here refers to the notches made in a tally, a piece of wood used for reckoning. This doesn't, however, explain other uses of *nick*. In Britain, for example, *in the nick* means to be "in the pink, in good shape," while Australians use *nick* to mean "nude," as in "She posed in the nick."

in the ozone. A phrase probably invented within the last 25 years, *in the ozone* is synonymous with *way out, far out*. The ozonosphere or ozone layer is a region in the upper atmosphere far from Earth.

in the pink. Brewer says *in the pink* for "in the best of health" refers to the flower called the PINK, as in the old saying *the pink of perfection*, which dates back at least to the 18th

century. More likely, *in the pink*, first recorded in 1905 as *in the pink of condition*, refers, to “the healthy pink of firm flesh.” See also HUNTING PINK; NOTHING LIKE IT TO KEEP YOUR EARS PINK.

in the red. An American term that since the early 1900s has meant “to do business at a loss for a certain period.” The term derives from the practice of accountants using red ink to enter debits in a firm’s books. *In the black* means operating at a profit.

in there pitching. People who try hard and keep working are *in there pitching*. The baseball-derived term suggests a work-horse pitcher doing his best, allowing a hit or walk or run here and there but diligently getting the job done. Interestingly, the expression is not recorded until the Great Depression, when everyone had to be *in there pitching* to survive. The word *pitcher* in baseball was first recorded in 1854.

in the tub. See TAKE A BATH.

in the wings; proscenium. The unseen backstage part on both sides of the stage of a proscenium theater is called the wings. The expression *in the wings* has come to mean someone waiting in the wings, like an actor ready to go onstage, someone available on short notice, as in “At least one presidential candidate is waiting in the wings.” *Proscenium* refers to the arch that separates a stage from the auditorium and was once a term for the stage itself.

Into each life some rain must fall. All of us have a little trouble from time to time. The phrase, from Henry Wadsworth Longfellow’s poem “The Rainy Day” (1842), is often heard as “Into each life a little rain must fall.”

intoxicated. There are more synonyms for *intoxicated* in *Webster’s Collegiate Thesaurus* than for any other entry in the book, 46 of them in all. *Intoxicate*, ironically enough, comes from a Greek word meaning poison—*toxikon*, the poison into which war arrows were dipped. Then in the Middle Ages, the Latin *toxicum* became a general term for any poison. This resulted in the English *toxic*, “poisonous,” our *intoxicate*, meaning “to poison,” becoming limited to the temporarily “poisonous” effects of too much liquor. Which is something to remember the next time someone quips, “Name your own poison.”

intransigent. *Los Intransigentes* was the nickname of a Spanish political party that tried to introduce a form of communism into Spain in 1873, five years after Queen Isabella II had been deposed and the country was without a sovereign. This splinter group, the left wing of a party favoring a republic, called themselves “the volunteers of liberty,” but they were dubbed *Intransigentes* (*in*, the Latin for “not,” and *transigo*, Latin for “to come to an agreement”) because they stubbornly refused to compromise in any way with other political viewpoints. A dictator outlawed the party the following year, and in 1875 Isabella’s son Alfonso restored the monarchy, but *Los Intransigentes* lived on. Their name quickly came into English as *Intransigent*, and then *intransigent*, meaning “any unyielding, inflexible person or doctrine.”

introvert. See JUNGIAN.

in 20 words or less. Eugene O’Neill’s response to a request for him to write a screenplay as a vehicle for sex symbol Jean Harlow is perhaps the most unequivocal refusal in the history of the movies. A cable had been sent to him requesting his services and asking for a collect reply in no more than 20 words. The playwright cabled back:

No No No No No No No
No No No No No No No
No No No No No O’Neill

in two shakes of a lamb’s tail. A lamb can shake its tail twice quite rapidly, apparently more quickly than many animals can shake their tails once, which explains this Americanism, meaning “in hardly any time at all.” The expression dates back to the early 1800s and no one knows who coined it. Possibly it is a humorous extension of the older British phrase *in two shakes*, meaning the same, and probably alluding to the quick shaking of a dice box.

Inuit words in English. There are only about 80,000 speakers of Inuit, but even this little-spoken language has contributed words to the English lexicon, including *kayak*, *igloo*, and *makluk* (a large bearded seal).

invented words. When Gelett Burgess published his *Burgess Unabridged: A New Dictionary of Words You Have Always Needed* (1914), he offered scores of new words he had invented, none of which caught on and survive today. In fact, the only two of the hundred or so words Burgess coined over his long writing career that we still use are BROMIDE and BLURB. Hundreds of new words are invented every year, but few last more than months. One good example is Mark Twain, who, besides a number of winners, coined these losers, none of which is widely used today: *disenthusem*, *humanbeingship*, *jumbulacious*, *mental telegraphy*, *perhapser*, *psychologizer*, *Shakesperiod*, *soda sequester*, *type girl*, *uncledom*, and *vinegarishly*.

Inverness. Sherlock Holmes wore one of these warm overcoat-cape combinations, which were named for the Highlands town of Inverness, Scotland, where they were apparently invented one bone-chilling winter in the 1850s. The cape is removable from the coat or cloak.

investigate. *Investigate* comes from the Latin *investigare*, to track, as when a Roman hunter tracked game. By the 16th century Englishmen were using the word in its present sense of to track down anything, to examine systematically, to observe or inquire.

in vino veritas. Latin for “in wine there is truth.” Often refers to someone broadcasting a secret while drunk.

Io; Europa; Ganymede; Callisto. These four objects or satellites that endlessly circle the planet Jupiter (the Roman *Jove*) weren’t named by Galileo, who discovered them, but by a rival astronomer, Simon Marius, who falsely claimed the discovery. Marius named them after the four objects of the god *Jove*’s

sexual desire, even writing a poem to make it easy for all to remember the names: “Io, Europa, the boy Ganymede, and likewise Callisto,/ Aroused to excess the lust of Jove.”

iodine. This common antiseptic is, oddly enough, named after the violet. *Iodine* derives from the Greek word *iodes*, “like a violet,” which in turn comes from the Greek *ion*, “violet.” The iodine we commonly use is rust-colored, but when heated it forms a dense violet-colored vapor.

I only regret that I have but one life to give for my country. Supposedly the last words that American spy Nathan Hale said on the gallows before he was hanged by the British. According to the recently discovered diary of British officer Captain Frederick Mackenzie, what he really said was, “It is the duty of every good officer to obey any orders given him by his commander-in-chief.” Hale was executed on September 22, 1776. British author Joseph Addison’s play *Cato* (1713) has the words “What pity it is that we can die but once to serve our country.”

ionosphere. See HEAVISIDE LAYER.

iota. The *i* or *iota* is the smallest letter in the Greek alphabet, so when we say *not one iota* we are saying “not the smallest amount.” The expression is found in Matt. 5:18, with *jot*, a synonym for *iota*, being used. See TITLE.

IOU. The term *IOU*, for a signed document acknowledging a debt, is an old expression dating back to at least the early 17th century. In 1618 a writer described “fellows” who: “play tricks with their Creditors, who in stead of payments, write I O U, and so scoffe many an honest man out of his goods.” *IOU*, of course, stands for “I Owe You.”

Iowa. Nicknamed the *Hawkeye State* (after a resident sharp-eyed Indian chief), our 29th state, which entered the Union in 1846, is so called from the name of the Sioux *Ioways* or *Aiouez*, meaning “sleepy ones.” The tribe, however, didn’t consider themselves lazy, calling themselves the *Pahoja*, “gray snow.” A rival tribe had named them “the sleepy ones.”

ipecac. Ipecac is a medicine made to induce vomiting that is prepared from the roots of the ipecac shrub of tropical America. It is one of the few English words that come from the Tupi Indian language, deriving from the Tupi *ipeh*, low, *kae*, leaves, and *quene*, vomit.

ipicles. See FAST AS LADAS.

ipso facto. Latin for “by the fact itself, by the very fact.”

IQ. The abbreviation *IQ* for intelligence quotient has become widely known since it was first used about 1920. Loosely speaking, it is an intelligence test score obtained by dividing mental age by chronological age and multiplying by 100. So widely known is the term, in fact, that at least one country, Thailand, had adopted the English *IQ* into its language as a word meaning smart or clever, as in “He’s IQ.”

Iran. See IRELAND.

Ireland. The English, no slouches at ethnic slurs, dubbed the urinary organs *Ireland* as far back as the 16th century, the term recorded in Shakespeare’s *Comedy of Errors*. A writer on British slavery later explained that the denigration was deserved because Ireland’s wet climate made her “The Urinal of the Planets.” (For a similar Irish slur on an Englishman, see TWISS.) *Ireland* is perhaps the only word left in English that derives from the language of the Iberians, the first inhabitants of the British Isles—so the name of the country might well be the earliest surviving word spoken on British shores. The Iberians probably gave their tribal name to the island of *Iveriu*, which over the years was shortened to *Eiri*, this finally anglicized to *Ireland*. The Iberians, however, may also have named Britain itself. One cannot call either of these words “native” words, though, for the Iberians came to the British Isles from somewhere else in Europe. One scholar, taking *Ireland* or *Erin* back to its ultimate ancestor, says the name comes from the Indo-European *ariyan*, “noble.” *Iran* derives from the same source. See DOG.

the Ireland hoax. While working as a clerk in a lawyer’s office, William Henry Ireland (1777–1835) discovered blank Elizabethan parchments and used them and a faded brown ink he concocted to forge a number of documents purporting to be in the handwriting of William Shakespeare. Ireland, only 17 at the time, claimed that he received the documents from an old “gentleman of fortune” who “had many old papers which had descended to him from his ancestors” but wanted to remain anonymous. When Ireland’s father, an engraver and bookseller, pronounced the first documents authentic and notified scholars of the find, his forger-son proceeded to turn out scores of Shakespeare documents, including letters to the Earl of Southampton, a “Profession of Protestant Faith,” and even a love letter to Anne Hathaway enclosing a lock of hair. The young man published his findings in book form and exhibited them, charging admission and gulling people like Pitt, Burke, Bowswell, and the Prince of Wales. Ireland’s masterworks, however, were two new “Shakespeare” plays: *Vortigern and Rowena* and *Henry II*. Playwright Richard Sheridan actually purchased *Vortigern* for £300 and half of any royalties, producing it at Drury Lane on April 2, 1796. By this time many people had sensed that Ireland’s “discoveries” were forgeries, and the play proved it. A complete fiasco, it was treated as a joke by the actors and practically hooted off the stage by the audience, never to be played again. Its failure and an exposé by Shakespearean scholar Edmund Malone at the end of the year prompted Ireland to confess his forgeries in print. The only punishment he received was the condemnation of literary critics, and he went on to write several forgettable novels.

iris. Iris, the Greek goddess of the rainbow, gives her name to the colored portion of the eye called the iris and the iris flower, which has varieties in all the colors of the rainbow. Orrisroot is a powder used in perfumes and other products that is made from the roots of certain irises.

Irish. No one would think that those with “the gift of tongues” could be bested when it came to the English language. But the Irish have been done more harm than ever they inflicted. In

fact, many expressions bearing their name seem too good to have been coined by anyone but an Irishman himself, as indeed some undoubtedly were. The English began this verbal war on the Hibernians with expressions like *Irish mail*, a sack of potatoes; *Irish draperies*, cobwebs; *Irish lantern*, the moon; *Irish wedding*, the emptying of a cesspool; *Irish hurricane*, a flat sea; *Irish battleship*, a barge; *Irish bull*, any obvious contradiction in terms; and *Irish blunder*, which Swift defined as “to take the noise of brass for thunder.” But when the Irish emigrated to America, the other immigrants, old and new, did worse by them, appropriating some ancient expressions and adding some new ones. *Irish evidence* here was perjury; an *Irish beauty*, a girl with two black eyes; an *Irish diamond*, a rock; an *Irish spoon*, a spade; an *Irish apple*, a potato; an *Irish bouquet*, a brickbat; an *Irish promotion*, a demotion; an *Irish dividend*, an assessment; *Irish confetti*, bricks; and an *Irishman’s dinner*, a fast. It all was enough for them to *get their Irish up*, which they occasionally did, though it didn’t hurt as much as the common No Irish Need Apply signs. Somehow all the favorable coinings didn’t help matters much. These include *Irish daisy*, *Irish potato*, *Irish moss*, *Irish setter*, *Irish stew*, *Irish terrier*, *Irish wolfhound* and, of course, *Irish whiskey* and *Irish coffee*. See GAELIC WORDS IN ENGLISH.

Irish pennants. Nautical slang often reflects hostility toward particular groups of people. This is the case with *Irish pennants*, which originated as British naval slang for untidy ropes hanging from the rigging aloft. In another age, when the Dutch were England’s major foes on the high seas, *Dutch pennants* meant the same thing.

Irish wolfhound. The tallest of all dogs is also one of the oldest, having been used by the Celts for hunting wolves at least as early as 273 B.C. These large, powerful dogs have a rough shaggy coat and stand up to 32 inches at the shoulder, more than the heftier Great Dane (which was probably bred from it). The Irish wolfhound is also said to have been bred so tall to enable the dogs to pull invading enemies off their horses. The smallest of dogs is the CHIHUAHUA. See SALUKI.

Iron Chancellor. See BISMARCKIAN.

iron curtain. Winston Churchill did not invent this expression, as is commonly believed. Many pages have been devoted to tracking down its originator, but the first person known to use the phrase in a political sense was Queen Elizabeth of Belgium, who said in 1914: “Between [Germany] and me there is now a bloody iron curtain which has descended forever.” Before this, H. G. Wells referred to a man held incommunicado by the police as “held behind an iron curtain” in his story “The Food of the Gods” (1904). After Belgium’s Queen Elizabeth, several military writers used *iron curtain* with reference to a curtain of artillery fire. Then, in 1945, Nazi propaganda minister Joseph Göbbels employed the phrase in the same sense as Churchill would use it eight months later, with reference to Russia, and so did German statesman Count Schwerin von Krosigk. The expression refers of course to the impenetrable secrecy with which happenings in the Soviet Union and countries occupied by it were concealed from the world, the image that inspired the saying probably being the iron fireproof curtains

long used in European theaters. Five months before Churchill made his famous Iron Curtain speech on March 5, 1946, at Westminster College in Fulton, Missouri (“From Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the continent . . .”), his countryman Sir St. Vincent Troubridge, a former British staff officer of SHAEF, had written an article in the *Sunday Empire News* headed “An Iron Curtain Across Europe.” See BAMBOO CURTAIN.

iron dog. What is an iron dog? To Alaskans it’s a snowmobile. Why? Because it gets people around like the sturdy dogs that once pulled them through the snow.

iron man. See LOU GEHRIG’S DISEASE.

iron men and wooden ships. Old salts used to say this of the old days: “When I went to sea there were iron men and wooden ships; now there are iron ships and wooden men.” The phrase probably dates back to the 18th century.

irons in the fire. See SECOND CHILDHOOD.

Iroquois. These Indians often ended their speeches with “Hi-roquoue!”—meaning “I have spoken with strong emotion!” To the ears of French explorers in North America this sounded like *Iroquois*, the name they gave to the Indian tribe.

Irrepressible Conflict. A name for the American Civil War coined by Secretary of State William Seward in 1858.

Isaac Babel. Russian writer (1894–1941), whose last words when the NKVD (later the KGB, followed by the FSB) came to arrest him were “They didn’t let me finish.”

isabel; isabelline. Traditionally, this lady’s soiled underwear gives her name to the brownish-yellow or grayish color *isabel*. The full story is rarely told. Archduchess Isabella of Austria was the daughter of Spain’s Philip II and his fourth wife, Anne of Austria, daughter of Austrian ruler Maximilian II. In 1598 King Philip married Isabella to Austrian Archduke Albert, and as part of a plan to reconquer the United Provinces, handed over the whole of the Netherlands to the newly married couple as a sovereign state. Philip died that same year, but his war continued, which is where Isabella’s underwear makes its contribution to history. Supposedly, Isabella vowed never to remove her underwear, even for washing, until husband Albert took the city of Ostend by siege. But Ostend’s Flemish defenders had little sympathy for either Isabella or Albert. They held out for three years, playing a glorious role in the Dutch struggle for independence. Ostend was in ruins and 40,000 Spanish lives had been lost before the Belgian port city surrendered in 1604. After three years Isabella’s underwear certainly must have been *isabelline*, and she might have worn it even longer, for we are told that Albert did not win Ostend at all. General Ambrogio Spinola captured the city. Perhaps this led to jokes about why Albert and Isabella had no children, but, at any rate, the couple ruled wisely after a 12-year truce was effected in 1609, the war resuming again at the truce’s expiration. Albert died in 1621 and Isabella 13 years later. Some authorities, such as the *Oxford*

English Dictionary, flatly reject the dirty-underwear hypothesis, while others, like *Webster's*, admit it with a cautious "It is said," and with still others it washes well.

I say! This British exclamation of surprise or astonishment is thought to be typical of Englishmen by most Americans but is considered rather old-fashioned in England, though it is still heard there. The expression probably dates back before the late 18th century.

I say it's spinach and I say the hell with it. E. B. White wrote the caption that became this catchphrase, for a 1928 Carl Rose cartoon in the *New Yorker* showing a spoiled little girl who rejects her mother's offer of broccoli with these words—which have come to mean, "When I'm indulging my prejudices I don't want to be confused with facts." The phrase's abbreviated form, *spinach*, however, means the same as boloney, malarkey, bull, etc.

Is everybody happy? Some will remember this catchphrase as the cry of American song and dance man Ted Lewis working the audience, meaning "Is everybody satisfied with the show?" The words certainly go back long before 1905, when the American song "Is Everybody Happy?" appeared. According to Partridge, "it has been the traditional cry of the red-nosed comedian [bidding for] the raucous chorus [of affirmation] guaranteed to come rolling back at him from the stalls . . ."

"I shall go to Korea . . ." A promise made by Dwight D. Eisenhower during the presidential election of 1952, his words a shortening of his full promise: "I shall go to Korea and try to end the war." He did honor his promise in November 1952, though his visit did little good besides raising the spirits of many GIs. Eventually there were some 18,000 killed and 100,000 wounded in this "Korean Conflict" or "limited war." See also HE KEPT US OUT OF KOREA.

I shall return. General Douglas MacArthur's famous promise on leaving Corregidor in 1942. Two years later he kept his promise, landing on Leyte Island in the Philippines and broadcasting: "This is the voice of freedom speaking. People of the Philippines, I have returned." See also I SHALL GO TO KOREA; OLD SOLDIERS NEVER DIE.

Ishmael. An *Ishmael* is an outcast, which is one reason why Herman Melville gave the name to his narrator in *Moby Dick*. Ishmael was the son of Abraham and Hagar; he and his mother were banished to the wilderness by Sarah, where an angel predicted that he would forever be at odds with society (Gen. 21:9–21). The Muslims, however, do not share this biblical tradition, considering Ishmael their progenitor.

I should have stood in bed. This still-heard expression was coined by fight manager Joe Jacobs after he left his sickbed to watch the 1935 World Series (see WE WUZ ROBBED). *Stood* for stayed is first recorded in a Dorothy Parker short story "Yussel the Muscle" (1939) and dates back farther than that. *I should have stood in bed* was used as the title of a 1941 song and a 1942 play was entitled *They Should Have Stood in Bed*. "I Should Have Stood in My Neighborhood" was a 1943 song.

isinglass. *Isinglass*, derived from the Dutch *huizenblas*, "sturgeon's bladder," is a semitransparent substance made from that fish's bladder. Isinglass is still employed in cooking as a form of gelatin used as a thickening agent, though it was once much more popular.

Island of the Sun. A poetic name for Sicily in ancient mythology. Here Helios the Sun god (the Roman Sol) kept his oxen. In his light-giving chariot pulled by white horses Helios climbed the vault of Heaven, descending every evening in the west. Sicily was also called Trinacria by the ancients.

Islands of the Blessed. See ELYSIAN FIELDS.

Isle of Rhodes; Colossus of Rhodes. The Greek island of Rhodes in the Aegean Sea off the southwest coast of Turkey is called *Rhodos* in Greek. It takes its name from the *erods* (snakes) on the island. The Colossus of Rhodes was one of the SEVEN WONDERS OF THE WORLD. It was a great bronze statue of Apollo that stood at the entrance to the Isle of Rhodes harbor.

Isle of Tears. See ELLIS ISLAND.

islets (islands) of Langerhans. German anatomist Paul Langerhans (1847–88) may be the only person to have a group of small islands named after him. However, these islets are endocrine cells throughout the pancreas that secrete insulin and glucagon, the malfunction of which causes diabetes. Dr. Langerhans was, in 1869, the first to describe the cells.

I smell a rat. No one can say with irrefragable certainty how this expression originated, but the allusion may be to a cat smelling a rat while being unable to see it. Terriers and other rat-hunting dogs could also be the inspiration. The expression dates back to about 1780, but long before that *to smell* was used figuratively for "to suspect or discern intuitively," as when Shakespeare writes "Do you smell a fault?" in *King Lear*. St. Hilarion, the Syrian hermit who died about 371, could allegedly tell a person's vices or virtues simply by smelling his person or clothing. Some people really have been able to smell a rat. One legendary underground worker for the New York City Transit Authority was renowned for smelling out dead rats, the odor of which has ruined many a business. John "Smelly" Kelly, also known as "Sniffy," patrolled the New York City subway system for years, his uncanny sense of smell enabling him to detect everything from gas leaks to the decomposing corpses of poisoned rats that crawled into the walls of stores adjoining the subway. Smelly Kelly was one of those rare people who could say with certainty, "I smell a rat."

I swan. People who say *I swan!* in historical novels are merely saying "I swear!" The old expression derives from British dialect and is a corruption of either "I'se warrant!" or "I'se warn you!"

I swear I'll kwill you. See I'LL TELL YOU WHAT I'M GONNA DO.

it. The little workhorse pronoun *it* derives from the Anglo-Saxon *hit*, neuter gender of "he." Though *it* is used to describe

anything sexless, among other things, *it* also means sex appeal in slang usage. Clara Bow was Hollywood's *It girl*, but the first use of *it* to represent sex appeal was in Rudyard Kipling's *Mrs. Bathurst* (1904) when he writes: "Tisn't beauty, so to speak, nor good talk necessarily. It's just It. Some women'll stay in a man's memory if they once walked down a street." The expression became very popular in the late 1920s when Clara Bow starred in the 1926 movie version of Elinor Glyn's novel *It*. As the *It girl* Miss Bow was one of a long line of types loved by American men, including the *Gibson girl*, the *Ziegfeld girl*, the *Vamp* (Theda Bara), the *FLAPPER*, the *oomph girl*, the *sweater girl*, the *pinup girl*, the *Playmate*, and the *Bunny*. *It* may be somewhat euphemistic as well, as it is used in slang as a synonym for a chamber pot and the male and female sexual organs. Calling the unlucky player who does all the work *you're it* in a game of tag or hide-and-go-seek dates back to about 1888. In modern slang this *it* has also become someone who is appointed to do a certain job, usually an undesirable one, in an office or elsewhere. In Britain and the U.S. it has become shorthand or short tongue for Italian vermouth, as in "I'll have a gin and it." See also *ITS*.

Italian. There has been much controversy recently about the use of the word *Mafia*, which recalls prohibition days in Chicago, when *Italian* was used so frequently in describing gunmen that newspapers bowed to Italian objections and, ironically, began to use *Sicilian* instead. In reality, Italians have been abused as much as any group in the country, but the adjective *Italian* is attached to few derogatory expressions. Aside from the *Italian malady* (see *FRENCH DISEASE*), an ancient synonym for syphilis used no more, it is hard to think of even one popular expression defaming the name. *Italian aster*, *Italian clover*, *Italian honeysuckle*—all innocent terms describing innocuous things. Compared with groups like the Dutch and Irish, the Italians have indeed fared well, linguistically. Sometimes home gardeners curse *Italian ryegrass*, not realizing that it is an annual grass that won't come up the next year, but that's about the extent of *Italian's* infamy. See *DAGO* for a different story.

Italian words in English. The contributions of Italian to English are vast, including three-quarters of our musical terms. Examples are: alarm, million, ducat, florin, brigand, bark (ship), tunny (fish), race, nuncio, artisan, doge, magnifico, mountebank, umbrella, gondola, carnival, mustachio, attack, cavalier, musket, squadron, battalion, citadel, bankrupt, contraband, carat, cornice, pedestal, piazza, stucco, portico, grotto, balcony, corridor, sentinel, catacomb, dado, concert, madrigal, viol da gamba, fugue, pastel, fresco, volcano, sonnet, stanza, canto, caprice, regatta, lagoon, balloon, muslin, mercantile, risk, opera, serenade, sonata, spinet, largo, piano, intaglio, profile, vista, miniature, cartoon, chiaroscuro, burlesque, ghetto, incognito, broccoli, sketch, casino, mafia, vendetta, malaria, influenza, bronze, area, lava, braccia, travertine, mezzanine, figurine, soprano, trombone, viola, cantata, trio, concerto, aria, violin, quartet, finale, andante, adagio, crescendo, tempo, bravo, piccolo, prima donna, sextet, scherzo, contrapuntal, fiasco, imbroglio, tirade. Italian words that have entered American English include: spaghetti, pasta, lasagne, tortoni, spumoni, antipasto, minestrone, Chianti, provolone, and many other food and drink terms. *AMERICA* itself, named after Amerigo Vespucci, could also be said to be an Italian word, as

could the District of Columbia, from Columbus's name. See also *DAGO*; *SPIC*; *WOP*.

italic type. *Italic type*, in which the first two words of this sentence are printed, was invented about 1500 by the noted Italian printer Aldus Manutius, the Latin name of Teobaldo Mannucci. There is a tradition that the printer modeled his invention on the fine Italian hand of the poet Petrarch, but the Italian hand, a beautiful cursive style, had been widely used for copying manuscripts since its development by scholars in the 12th century. In fact, it was so well known that a *fine Italian hand* had already become an ironic synonym for the scheming Machiavellian politics of assassination by stiletto for which Italian nobles were notorious. Manutius, also a classical scholar, had his type cast by Francesco Griffi of Bologna and in 1501 first used it to publish an edition of Virgil, dedicating the book to his native Italy. Because of that Aldine Press dedication, the new slanting style—the first type that wasn't upright—came to be known as *Italicus*, which means "Italian" or "italic." Today words are *italicized* in print mainly to give them emphasis, and to indicate titles and foreign-language words. This is not the case in the King James or Authorized Version of the Bible, however, a fact that creates confusion for many people. Words italicized in the Bible should not be emphasized in reading, for they merely indicate that the original translators, who considered the text sacred, arbitrarily supplied a word not existing in the text in order to make its meaning clearer—similar to the way bracketed words are used within quotes today.

itch. Itching of various bodily parts has been thought to indicate different cravings for centuries. An itching foot, for example, purportedly means a craving for travel, and itching lips mean a craving for a kiss, or that you're about to be kissed. In *Julius Caesar* Shakespeare used an itching palm as a synonym for the readiness to take a bribe, making Brutus say to Cassius "... you yourself/Are much condemned to have an itching palm." Shakespeare was the first to record the words, but long before him an itching palm probably signified a craving for money or was taken as an omen that a person was about to receive money from an unexpected source. An *itch* has been synonymous for sexual desire since 1660. See also *SEVEN-YEAR ITCH*.

itching ears. See *BURNING EARS*.

itchy trigger finger. To have an itchy trigger finger is to be quick on the trigger, to be quick to act, itching to go, impetuous or even alert. The American expression was first recorded in 1903 as *to have trigger itch*. Within 30 years or so it took its present form.

it doesn't go on all fours. Unlike similar Madison Avenue expressions, this saying, meaning "something isn't quite right," goes back to the ancient Latin proverb *Omnis comparatio claudicat*, which literally means "every simile limps," but which British historian Thomas Babington Macaulay translated as "No simile can go on all fours."

I throw a shoe at you! An Iraqi expression that is a sign of extreme disrespect, like throwing dirt at or spitting at someone

might be in another culture. It is similar to the phrase *I spit upon you!* When Iraqi demonstrators pulled down a statue of Saddam Hussein from its plinth on April 9, 2003, with the help of an American tank, several demonstrators threw their shoes at it.

It is harder for a rich man to enter the kingdom of heaven than for a camel to go through the eye of a needle. There may be some sense in this last part of this ancient proverb. In ancient Middle Eastern walled towns the rear gate was called the Needle's Eye, after its narrow rise and pointed top. A camel could pass through this Needle's Eye, though with extreme difficulty, by kneeling down. It has been suggested that this is the source of the expression, an equivalent of which is found in the Koran ("The impious shall find the ages of heaven shut; nor shall he enter till a camel shall pass through the eye of a needle").

it might have been. It is said that American poet John Greenleaf Whittier (1807–92) penned his famous couplet because he never married, having devoted his life to several careers:

Of all sad words of tongue and pen
The saddest are these: It might have been.

it must have been one of the nuts. According to *U.S. News and World Report* (October 16, 2006), this was the first thought that came to Richard Nixon when he learned that President John F. Kennedy had been assassinated.

it rains on the just and unjust alike; scholium. The phrase above can be traced to the biblical (Matt. 5:45): "He . . . sendeth rain on the just and on the unjust . . ." A *scholium* on the verse by Charles, Baron Bowen (1835–94) has it a little differently:

The rain it raineth on the just
And also on the unjust fella:
But chiefly on the just, because
The unjust steals the just's umbrella!

Scholium means "an explanatory note or comment," deriving from the Greek for "school" and first recorded in the early 16th century.

I trust it's nothing trivial. In his *City Editor* (1934), Stanley Walker wrote of another city editor, Charles E. Chapin, who was widely respected for his professionalism but generally hated for his cold-hearted efficient methods. Chapin fired 108 men when city editor of the *Evening World*. When *World* reporter Irvin S. Cobb heard he was ill one day, he remarked, "I trust it's nothing trivial." Chapin died in 1930 in Sing Sing prison, where he was sent after killing his wife.

its. There is a tale of literary ratiocination involving this little word. Before the 17th century *its* wasn't used to indicate the possessive case, *it* and *his* serving this purpose (e.g., "For love and devocion toward God also hath *it* infancie . . ."; "Learning hath his infancy . . ."). When he was only 16, English poet Thomas Chatterton (1752–70) wrote a number of poems purporting to be the work of an imaginary 15th-century monk, Thomas Rowley. These poems were published after the destitute, despairing Chatterton committed suicide by drinking arsenic,

and they were hailed as works of poetic genius. But critic Thomas Tyrwbitt later revealed that the poems were forgeries, finding, among other errors, that one of Chatterton's lines read: "Life and its goods I scorn." See also IT.

It's a great life if you don't weaken. Often said derisively or ironically after something has gone wrong. Probably an Americanism, the phrase dates back to World War I and is commonly heard today.

It's all in a day's work. Usually said by someone ironically, after performing a difficult task. The expression was common back in the 18th century, but no one knows who coined it.

It's all over but the shouting. Victory is certain. The expression seems to have appeared in print for the first time in 1842, when a Welsh sportswriter used it, but it may have its roots in local elections settled by voice vote in rural England. These elections, associated with great noise, came to be called "shoutings." There is no proof of this, but perhaps some candidate or observer of the day was so sure of the outcome of a "shouting," so certain of victory, that he remarked "It's all over but the shouting" and the phrase passed into popular usage.

It's all worth it, including the final crash. According to the film *White Hunter, Black Heart* (1994), this is a mantra among pilots, particularly bush pilots in Africa. It could date back 50 years or more.

it's always the best swimmers that drown. Probably because the best swimmers are often overconfident and take more risks. However, another proverb instructs "Don't go near the water until you learn to swim."

It's a naive domestic burgundy without any breeding but I think you'll be amused by its presumptions. This originated as the caption under a James Thurber drawing of a pretentious oenologist offering a glass to a friend. It is an expression that has been used jokingly by many a host pretending to be a "wine expert" while dispensing a \$3.99 special.

It's a new ball game. Since about 1940 Americans have been using this catchphrase to mean "What's past is past, we start over from here." Though it could have come from several sports, the saying almost certainly has its origins in baseball and sounds like something a baseball announcer may have spontaneously invented. The expression is often "It's a whole new ball game."

It's chess, not checkers. It's complicated, with no easy answer to a question, chess being a much more difficult game than checkers. This relatively recent phrase is an Americanism that has been used by government officials answering the questions of reporters at press conferences.

It's Greek to me. I don't understand any of it; it's totally confusing. The linguist Charles Berlitz, grandson of Maximilian Berlitz, founder of the famed Berlitz language schools,

has noted that the Italians say, “You’re speaking Turkish”; the Polish say, “I’m hearing a Turkish sermon”; the Russians say, “That’s Chinese grammar”; the Spanish say, “That’s Chinese to me”; and the Germans say, “That seems like Spanish to me.” Shakespeare may have coined the expression it’s Greek to me in *Julius Caesar* (1599): “For my own part, it was Greek to me.”

It’s how you played the game. Sportswriter Grantland Rice, who coined the term the FOUR HORSEMEN to describe Notre Dame’s famous backfield in an account of a Notre Dame–Army game (“Outlined against a blue-gray October sky, the Four Horsemen rode again . . .”) is also responsible for *it’s how you played the game*. The much-loved writer, who died in 1954 at the age of 73, first used the expression in a poem he published in one of his “The Sportlight” columns:

When the One Great Scorer comes
To mark against your name,
He writes—not that you won or lost—
But how you played the game.

It smells of the lamp. See BURNING THE MIDNIGHT OIL.

It’s naughty but it’s nice. A catchphrase that isn’t heard much anymore, the expression refers to sexual intercourse. It comes from the song “It’s Naughty But It’s Nice” popularized by U.S. singer Minnie Schult in the 1890s.

It’s not brain surgery. It’s not a difficult problem to solve. Brain surgeons, neurologists, rocket scientists, psychiatrists, and physicists and a few other professions are generally thought to attract the most brilliant of scientists.

It’s not cricket. See CRICKET.

It’s not funny. His early tragedies often had poetic power, but British poet laureate Nicholas Rowe (1674–1718) had no comedic talent. The author usually confined himself to what he called “she-tragedies,” about victimized women, yet he once tried his hand at writing something funny: *The Biter* (1704). He sat in the theater laughing hilariously throughout the premiere of his play, but no one else in the audience uttered a single laugh or smiled a smile all evening. Rowe never again wrote a comedy.

It’s not over till the fat lady sings. Things are never over until they’re over. The expression is a contraction of the older “The opera’s never over till the fat lady sings.”

It’s not the size of the dog in the fight, it’s the size of the fight in the dog. An old Texas proverb that is still frequently heard.

It’s not what it’s cracked up to be. *To crack* was standard English for “to boast or brag” until about 1700. Today this sense of the word is only found in the expression above, which can refer to a person as well as a thing. Davy Crockett was the first to use the phrase when he wrote in 1835 that “Martin Van Buren is not the man he’s cracked up to be,” an opinion of the president that history has affirmed.

It’s the berries. The best, the remarkable. An old U.S. expression perhaps inspired by the colorful fruits.

It’s the only ballgame in town. See THAT’S THE BALLGAME.

It’s the pits. Grape pits, orange pits, etc. contributed nothing to this relatively recent derogatory slang expression, which describes something of the worst order, though you might suspect that the bitter, unpalatable pits of a fruit would logically have something to do with the term. *It’s the pits* was originally junkie talk from “Needle Parks” across the country, the armpits being among the last and most painful places a drug addict can shoot dope when the rest of his body is pocked and diseased, the blood vessels collapsed.

Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini. A 1960 hit song written by Paul Vance and his songwriting partner Lee Pockriss. The song was about a girl with a new kind of bathing suit, one so different and skimpy that she was afraid to come out of her locker wearing it. The bashful girl was based on Mr. Vance’s wife Rose, who was thinking of buying a bikini and nervous about it.

It worked; I am become death. Physicist Robert Oppenheimer recalled that after he and his brother watched the explosion of the first atomic bomb at Los Alamos on July 16, 1945, he “remembered the line from the Hindu scripture, the *Bhagavad Gita*: ‘I am become death, the destroyer of worlds.’” However, according to Greg Herken’s *Brotherhood of the Bomb* (2001), Oppenheimer’s brother says these words came some time after the fact. What Oppenheimer really said at the moment was, “It worked!”

I want to be alone. Aside from some GOLDWYNISMS, this may be the single most famous quotation to come out of Hollywood, partly because it is a sentiment uncharacteristic of most film stars. Too bad that Greta Garbo didn’t say it. The legendary actress has made it clear for history that what she really said was: “I want to be *let* alone.”

I’ve got a stone in my shoe. I’ve got a problem or trouble that is bothering me. Used in *The Godfather* (1972), the expression may be an old Sicilian proverb. The speaker of these words often asks the listener to help him remove the stone, usually violently.

I’ve got to see a man about a dog. A euphemism for “I’ve got to go to the bathroom” that people use to excuse themselves, often abruptly. In its sense of “to urinate” the expression is British in origin, dating back to 1867. In the U.S. it was first recorded in 1942, when it meant to go for a drink: “[Got to] go see a dog—a dog about a man or a man about a dog.” But this American term for getting a drink is much older in the expression *to go see a man*, recorded in an 1867 baseball magazine: “. . . the rest of our nine having gone to see a man there was nobody to take the bat.”

Ivory soap. Probably the only soap named from the Bible. In 1879, one of Proctor & Gamble’s executives was inspired in his

coinage by Psalm 45: "All the garments smell of myrrh, and aloes, and cassia, out of the ivory palaces, whereby they have made thee glad."

ivory tower. In the *Song of Solomon* the poet sings that his beloved's neck is "as a tower of ivory," but the phrase in its modern sense has nothing else to do with biblical poetry. French literary critic Charles-Augustin Sainte-Beuve used *un tour d'ivoire* in 1837 to charge that romantic poet Alfred de Vigny evaded the responsibilities of life by retiring to an *ivory tower*. Whether the charge was justified or not, the image did evoke someone sitting cool and elegantly detached, above it all and looking down on life. The phrase has become a cliché, especially when applied to scholars or intellectuals. It is seldom used anymore in a kind sense, that is, to indicate a place of refuge from the world's strivings and posturings.

ivy. The ivy of the Greeks bore golden berries and was probably not the plant we call ivy today. Thought to prevent drunkenness, it was also given as a wreath to the winners of athletic contests. *Hedera helix*, the common English ivy so widely cultivated in temperate climates, is regarded as a symbol of everlasting life because it remains green in all seasons.

Ivy League. The colleges referred to as the *Ivy League* are Harvard, Yale, Princeton, Dartmouth, Cornell, Brown, Columbia, and the University of Pennsylvania. They are all "old-line institutions," with thick-vined, aged ivy covering their walls, and the designation at first applied specifically to their football teams. Sportswriter Caswell Adams coined the term in the mid-thirties. At the time Fordham University's football team was among the best in the East. A fellow journalist compared Columbia and Princeton to Fordham, and Adams replied, "Oh they're just Ivy League," recalling later that he said this "with complete humorous disparagement in mind."

I Want You! The words on the most famous recruiting poster of World War I, which showed Uncle Sam looking out and pointing at the viewer. It was by American artist and writer James Montgomery Flagg (1877–1960).

Iwo Jima. The Japanese call these volcanic islands in the western Pacific *Io-jima*. Mount Swiba, 546 feet high, is an extinct volcano. In February–March 1945, during World War II, *Io-jima* was taken at great cost by American forces.

I would like my roses to see you. See THE LAST ROSE OF SUMMER.

I wouldn't know him from Adam's off ox. See ADAM.

I wouldn't touch it with an 11-foot pole. A variation heard in several places of the old expression I wouldn't touch it with a 10-foot pole.

IWW. The initials of the "Wobblies," a labor organization important in the early years of this century, do not stand for International Workers of the World, as many people think. The organization was the Industrial Workers of the World.

Ixion; Ixion's wheel. Regarded in Greek mythology as the first murderer, King Ixion killed his father-in-law Eionius by digging a deep camouflaged pit in front of his palace and lining it with live coals. When Eionius came to collect the wedding gifts Ixion had promised him for his daughter Dia's hand, Eionius fell into the pit and burned to death. No one forgave Ixion, or indeed spoke to him, until the great god Zeus himself finally took pity on him and purified the wretched wanderer. But the ungrateful Ixion repaid Zeus's kindness by trying to win the love of Hera, the god's beautiful wife, and bragging about seducing her. For this base ingratitude and insolence, a furious Zeus had Ixion bound to a wheel of fire, Ixion's wheel, which would roll through the underworld in agony forever.

ixnay. See PIG LATIN.

Ixtacihuatl. A 17,342-foot-high, irregularly shaped dormant Mexican volcano whose name in the Aztec language means "white woman." It is also frequently called the sleeping woman.

Izvestia. See PRAVDA.

J

J. The letter *j*, along with *v*, came into the language in post-Shakespearean times, about 1630, making it one of the two youngest letters in the English alphabet. Before this it had shared its form with *i*.

jabberwocky. In its 28 lines Lewis Carroll's immortal nonsense poem "Jabberwocky" has contributed at least four new words of common usage to the English language, more than any other poem by far. *Jabberwocky* itself means "nonsense or gibberish"; a "bandersnatch" is an imaginary wild fierce animal or a person who is a menace or a nuisance; "galumph" (from gallop + *triumphant*) means to move heavily or clumsily; and "chortle" (from chuckle + *snort*) means to chuckle or utter with glee. Cases could also be made for *frabjous*, *frumious*, *slithy*, and other words in the poem, though these haven't yet been admitted to most dictionaries.

jabon. Another name, little-known, for the tropical shaddock fruit.

J'accuse. See DREYFUSARD.

jack. *Jack*, for money in general, is an Americanism first recorded in 1859, but the expression is probably older, possibly deriving from the expression *to make one's jack*, "to succeed in one's endeavors," first attested in 1778. This expression, in turn, may come from the British slang *jack*, for "a farthing and a counter used at gaming tables," which dates back to about 1700. Also, a home run in baseball. The term was originally a verb, first recorded in 1979, meaning to hit a ball hard, jack it, especially for a long home run. But though it is unrecorded in any dictionary, jack also has come to mean a home run itself. Speaking of Giant's star Barry Bonds, an opposing player said: "Two years ago he hit 73 jacks. Last year he won a batting title. I don't know what else the guy can do." (*New York Times*, September 9, 2003).

jackanapes. Applied to any pretentious upstart who apes his betters, the word *jackanapes* probably comes from the nick-

name of William de la Pole, duke of Suffolk. *Jack* was a common name for a tame male ape in England at the time (attached to the word, as it was to *jackrabbit*, *jackass*, and others), and Suffolk's coat of arms bore the clog and chain of a trained monkey. When, in 1450, the duke was arrested and beheaded at sea off Dover for alleged treason against Henry VI, he was derisively styled "the Ape-clogge" and later won the nickname Jack Napes, or Jacknapes. The ending might mean "of Naples," the source of apes brought to England in the early 15th century, but there is little doubt that the word earned its popularity and present meaning through Suffolk's nickname, which was even recorded in a satirical song of the day.

Jack and Jill. Jack and Jill / went up the hill / to fetch a pail of water / Jack fell down and broke his crown / and Jill came tumbling after. The most familiar of nursery rhymes has several most unfamiliar explanations. One has Jack and Jill being Hjuke and Bil of an older Scandinavian rhyme. Another has Jack and Jill as Empson and Dudley, the executed ministers of Henry VIII. A third explanation describes Jack and Jill as young lovers, with Jill, not Jack, being the one who "broke her crown," that is, lost her virginity at the top of the hill. A recent *New York Times* advertisement (May 23, 2006) turns the old rhyme into: Jack and Jill ascended the escarpment to procure an ewer of H₂O.

Jack Armstrong, the all-American boy. Jack Armstrong, and Frank Meriwell before him, seem to have no counterpart today on the airwaves, unless television's Hardy Boys qualify. "Jack Armstrong, the All-American Boy" was presented afternoons, right after school, by "Wheaties—Breakfast of Champions," during the thirties and early forties. No more than an animated ideal, he often inspired cynical jokes, but the name of this Wheaties-eating hero certainly became part of the language, frequently as a kind of sarcastic description for someone too square or goody-goody, in the language of the time. I had thought Jack's name might have been suggested by the real-life bully Jack Armstrong, who lost that legendary wrestling match with young Abe Lincoln and later became his friend. But it appears that General Mills (Wheaties) executive Sammy Gale had

roomed with a real Jack Armstrong in college and decided to use his name for the program's hero because it seemed to convey "all-American virtues of courage, a sense of humor, and the championing of ideals." Jack Lawrence Armstrong, the real Jack Armstrong, the son of a retired British Army officer, moved to the U.S. from Canada at the age of four and later received a civil engineering degree from the University of Minnesota. He was a much-decorated army air force officer during World War II and later served on the Atomic Energy Commission and worked for the Apollo and Gemini space programs. He died in 1985, aged 74.

jackass express; jackass mail. Any stagecoach pulled by mules in the early American West was called *the jackass express*. *Jackass mail* was the name used for the mail that was carried on the jackass express.

Jack Dempsey. The Amazonian fish named after the former world heavyweight champion is described as a "very aggressive species," although "the fighting between males . . . is ritualized."

Jack Frost. *Jack Frost* has been the personification of frost or cold weather since at least 1826, when the term is first recorded in a British sporting magazine.

jackfruit. The enormous edible fruit of this tropical tree in the mulberry family often weighs up to 70 pounds. The fruit of *Artocarpus integrifolia* is perhaps the largest tree fruit known, far larger than that of its close relative the breadfruit tree (made famous by Captain Bligh). See BLIGHIA SAPIDA.

Jack Horner. "He put in his thumb and pulled out a plum / And said, 'What a good boy am I!'" The Jack Horner of the nursery rhyme is supposed to have been, in reality, steward to the abbot of Glastonbury at the time that the monasteries were being dissolved in England. Jack somehow obtained deeds to the Manor of Mells in the area, either by subterfuge or, as the popular story states, when he found the papers hidden in a pie he was delivering from the abbot to Henry VIII. By this account, he lifted the crust, put in his thumb, and pulled out the "plum," becoming owner of the property himself. This may be the only nursery rhyme based on fact. In any event, the real Jack Horner's descendants have owned the manor for generations.

Jack-in-the-pulpit. The upright spadix of *Arisaema triphylum* is arched over by a green or striped spathe, which to early American settlers made it look like a man (Jack) standing in a pulpit, resulting in the common name *Jack-in-the-pulpit*. In parts of Great Britain it is known, perhaps more aptly, as "priest's pintle," the latter word meaning "penis."

Jack Johnson. John Arthur (Jack) Johnson, his memory recently revived by the play *The Great White Hope*, loudly proclaimed that he reigned as the first black world heavyweight champion in 1908 when he KO'd Englishman Tommy Burns—though his title claim was disputed and not settled until he demolished Jim Jeffries, the original great white hope, in 1910. Johnson held the title until 1915, when giant Jess Willard

knocked him out in 26 rounds in Havana, Cuba. The American fighter had often been called the "Big Smoke" in the United States, "smoke" being common slang at the time for Negro. For this reason, and because he was so powerful a man, the German 5.9 howitzer, its shell, and its shell burst were named after Johnson. A formidable weapon, whose shells emitted thick black smoke upon exploding, the Jack Johnson saw action against the Allies during World War I, when Johnson's name was prominent in the news for his fights and love affairs. Johnson, in fact, had fled to Europe in 1913 after being convicted of violating the Mann Act, unjustly or not. The great boxer died in 1946, aged 68.

Jack Ketch. Jack Ketch, appointed public executioner in 1663, was generally regarded as a clumsy, barbaric bungler who had taken several strokes to sever William, Lord Russell's head after he moved slightly when the axe was falling. He later apologized for his clumsiness, explaining that Russell did not "dispose himself as was most suitable" and that he had been disturbed while taking aim. No one believed him though, and his name became a mark of execration long before he died in 1683—"There stands Jack Kitch, the son of a bitch" went one contemporary rhyme. Of all the public executioners who hung commoners and beheaded nobles his name would be remembered longest, given, as Macaulay wrote, "to all who have succeeded him in his odious office." See also H.

jackknife. The ubiquitous American jackknife may take its name from the earlier Scottish *jocktilig*, a clasp knife named for its original manufacturer, Frenchman Jacques de Liège. A respected Scottish historian traced the word to this source in 1776, but modern scholars have been unable to confirm his derivation. See PENKNIFE.

Jack of all trades and master of none. The eloquent term for a *Jack of all trades and master of none* is a *sciolist*, which is Latin for "smatterer," and means someone having a smattering of knowledge, a little learning. *Jack of all trades and master of none* extends the little learning to a lot of things. The expression is first recorded in 1618 as *Jack of all trades* and seems to have been a complimentary term for someone who could do any kind of work. But within a century the work of *Jack of all trades* was being disparaged as not expert enough (specialization becoming more important every year) and by at least 1878 the derogatory expression *Jack of all trades and master of none* was being used.

jackpot. See HIT THE JACKPOT.

jackrabbit. An abbreviation of *jackass rabbit*, the large hare of North America so named because of its long jackass-like ears and legs. *Jackass-rabbit* is first recorded in 1847 by a traveler in the West: "[We] started a number of hares (called Jackass rabbits) and had no little amusement in witnessing some animated runs." Within 15 years the same hares were being called jackrabbits. They were also called mule rabbits.

Jack Robinson. As quick as you can say *Jack Robinson* has no connection with Jackie Robinson, the first black major league baseball player, though he was quick enough to beat out many

a bunt and steal many a base. Notable attempts have been made to trace this 18th-century British phrase, all unsuccessful. One popular explanation, first advanced by Grose, is that the saying has its origin in the habit a certain Jack Robinson had of paying extraordinarily quick visits to his friends, the gentleman leaving even before his name could be announced. But *Jack Robinson* was probably used in the phrase simply because it is a very common name in England and is easy to pronounce.

Jack Russell terrier. English country parson John Russell (1795–1883) was an avid foxhunter who rode to the hounds in his native Devon until he died at the age of 87. Though Oscar Wilde would have taken exception (*see IN AT THE KILL*), most everyone liked Jack Russell or “The Sporting Parson” and a famous strain of hunting terrier was named in his honor.

Jackson, Mississippi. One of the four U.S. state capitals named after presidents. The others are Lincoln, Nebraska, for Abraham Lincoln; Madison, Wisconsin, for James Madison; and Jefferson City, Missouri, for Thomas Jefferson. *See MONROVIA.*

Jackson Haines. The well-known sitting-spin of figure skating is called the Jackson Haines, after American skater Jackson Haines (1840–79), a former dancer, who is largely responsible for creating modern figure skating by applying dance techniques to the sport.

Jackson Hole, Wyoming. *See HOLE.*

Jacksonian democracy, etc. Jacksonism is the term for the political principles and policies advocated by Andrew Jackson, seventh president of the United States, and his followers. Old Hickory, so called because he was as tough as hickory wood, commanded troops in the War of 1812. Elected to the presidency in 1829, General Jackson served two terms, espousing a widespread Jacksonian democracy while vigorously opposing nullification and the national Bank of the United States. His famous “kitchen Cabinet,” the first of its kind, was simply a group of intimate advisers, and by adopting the “spoils system,” the granting of political jobs and favors to loyal supporters, he established a well-knit Democratic Party but intensified evils that were not removed until the Civil Service came into being half a century later. Jackson Day, January 8, is a legal holiday in Louisiana, celebrating his victory at the Battle of New Orleans in 1815. Jackson boots, crackers (firecrackers), hats, jackets, and trousers were all named after the hero, who died in 1845, aged 78. Today almost 100 places in the nation bear his name. Jacksonia was the name of a new Southern state suggested by the Tennessee senate in 1841 that was to include parts of Tennessee, Kentucky, and Mississippi. The proposal came to naught. *See CAPITOL.*

Jacksonian epilepsy. *See BRIGHT’S DISEASE.*

jackstraw. A worthless person, a man of straw. Jack Straw was the name or nickname of a leader of the Peasants Revolt, Wat Tyler’s rebellion of 1381. This revolt against English king Richard II mainly protested restrictions on pay increases to laborers and repudiated higher poll taxes. Richard agreed to

the peasants’ demands, but the revolt was suppressed and his promises unfulfilled when Tyler was slain by the mayor of London at a meeting held between the two men. In the original march on London to petition the king Tyler and his followers burned and wrecked much property, incurring the wrath of many. The protestor called Jack Straw must have been particularly hated, for his name soon took its present meaning.

Jack Tar. One story has it that the name Jack Tar, for “a sailor,” arose in the 17th century, when sailors wore canvas breeches often spotted with tar from work done on ships. According to another tale, sailors in Lord Nelson’s navy wore overalls and broad-brimmed hats made of the tar-impregnated tarpaulin cloth commonly used aboard ship. The hats, and the sailors who wore them, were called *tarpaulins*, which was finally shortened to *tar*.

Jack the Ripper. After 82 years, Jack the Ripper’s name remains the most familiar of all murderers; no other single criminal has been so exhaustively examined in literature and on stage and screen. The Ripper murdered and disemboweled at least five and possibly nine or more prostitutes in London’s East End in 1888, in one of the most gruesome, gory serial killings in British or any other history. “Saucy Jack” was never captured in the foggy night streets of Whitechapel or Spitalfields, and his pseudonym was derived from his signatures on the bizarre, mocking notes he reputedly sent to the police. (Sept. 30th: “Double event this time. Number one squealed a bit—could not finish straight off—had no time to get the ears for police.”) “Bloody Jack” was described as a man of medium height who wore a deerstalker cap, sported a small mustache and “talked like a gentleman.” For almost a century writers have speculated on the Ripper’s real identity, naming literally hundreds of “suspects,” including even Prime Minister Gladstone and Albert Victor Christian Edward, duke of Clarence and Avondale, Queen Victoria’s grandson and heir to the throne of England.

Jacobian; Jacobite. These two words are often confused. *Jacobian* refers to the reign or time of James I (1556–1625), Scottish king of Great Britain from 1603 until his death. *Jacobite* refers to a supporter of James II (grandson of James I), who ruled as king of Great Britain for a brief three years ending in 1688. Forced to abdicate, James II died in exile in 1701, age 68. Jacobites continued to try placing a Scottish (Stuart) king on the throne, failing with James Francis Edward Stuart, “The Old Pretender,” and finally with his son, “Bonny Prince Charlie,” whose forces were defeated at the Battle of Culloden in 1746.

Jacobin. During the French Revolution the Société des Jacobins, a radical club or society active beginning in 1789, was responsible for many extreme measures, including the bloody Reign of Terror in which thousands were killed. Though it began as a liberal organization, its name in the form of *Jacobin* came to mean any extreme political radical, as it does today. The Jacobins, only 3,000 strong, managed to control the French Revolution until their leader Robespierre’s death in 1794, when they went underground. Five years later the group was finally suppressed.

Jacob's ladder. A Jacob's ladder is a ship's wood-runged rope or chain ladder primarily used to let people ascend from or descend to smaller boats alongside. The name is also given to a steep flight of steps up a cliff, an herb or flower in the shape of a ladder, and a burglar's ladder. All take their name from the ladder seen by the biblical patriarch Jacob in a vision (Gen. 28:12–13), the ladder in the dream symbolizing the hopes of Jacob for his descendants.

Jacob's rod. See ASPHODEL.

Jacquard loom. This early automated machine (controlled by punched cards) could weave patterns in many fabrics. Napoleon quickly purchased the loom for the state and declared it public property, rewarding Joseph Marie Jacquard (1752–1834), a former Lyons weaver, with a 3,000-franc yearly pension and a royalty on each machine sold. Jacquard improved on his creation in 1806, adapting several features of a similar invention. Though he hadn't foreseen the widespread unemployment caused by the loom, his belief that it would greatly increase output was more than justified; the Jacquard loom revolutionized the textile industry, and created a new era in manufacturing.

Jacuzzi. A trademark name for a whirlpool bath of swirling comforting water that was invented by Candito Jacuzzi (1903–86) and which he first called the “Roman bath.” The American inventor made the bath to help his son, who suffered from rheumatoid arthritis.

jade. Spaniards in medieval times believed that this gem helped cure kidney ailments. They called it *pedra de ifada*, “stone of the side,” which became shortened and corrupted in English to *jade*. The *jade* for an old horse or a worthless woman, and the adjective *jaded* derive from another unknown word, of Middle English origin.

jaegers. Though *jaegers* can be any of several rapacious seabirds, in England they are also woolen underwear. The underwear is named for Dr. Gustav Jaeger, whose Dr. Jaeger's Sanitary Woolen System Co. Ltd. manufactured and marketed the various undergarments he designed, beginning about 1890. Americans are familiar with the term through *The Bishop's Jaegers* (1932), a novel by Thorne Smith, creator of the inhibited banker Cosmo Topper, and his ectoplasmic friends.

Jaffa orange. Other similar oranges use the name, but strictly speaking, Jaffa oranges are a sweet almost seedless type of orange grown in or near Jaffa, an ancient biblical port that is now part of Tel Aviv–Jaffa in Israel. In ancient times the port was called Joppa.

jag on. To be drunk, as in “He had a jag on.” *Jag* here is a 19th-century Americanism for a heavy load of something, such as a wagon full of wood or hay. Figuratively then, someone who has a jag on, carrying a heavy load, more than he or she can handle, is loaded.

jai alai. The name for this court game is Basque in origin, formed from the Basque *jai*, “festival,” and *alai*, “joyous,” indi-

cating that people have always had a good time playing *jai alai*. Other English words that come from the Basque include *bizarre* and *original*, a mostly Canadian word for the American moose.

jail, no bail. This is one slogan I've never heard before, but it was the invention of demonstrators who refused to pay fines for their part in civil rights sit-ins in 1961.

Jaislaak! A euphemism for *Jesus* heard in South African English. It is an exclamation of surprise, disbelief, etc., as in “Jaislaak, how did you get here so fast?!”

jalapeño. A hot green or orange-red pepper (*Capsicum annuum*) used in Mexican cooking and well known in the U.S.

jalopy. Here's one whose origins etymologists don't even venture a guess upon. It means, of course, a beaten-up old car or (rarely) airplane (usually called a *crate*). Should you want to investigate, the word seems to have surfaced first in Chicago in about 1924 and was sometimes spelled *jaloppi*. Possibly it derived from the slang of a foreign language. *Rattletrap* and *heap* are synonyms of about the same age.

jealousie. First called *jealousies* in 16th-century England, *jealousies*, their name taken from the French for jealousy, were originally blinds or shutters with wooden horizontal slats that admitted air and light but “jealously guarded” one's privacy. Today they are also made of glass.

jambalaya. A New Orleans Creole dish made of rice cooked with ham, sausage, chicken, and shellfish; or a combination of all, along with herbs, and vegetables, especially tomatoes, onions, and peppers. Hence, any diverse collection of things: “The show was a jambalaya of stunts.”

Jamestown Ships. These small ships—the *Susan Constant*, 100 tons; the *Godspeed*, 40 tons; and the *Discovery*, 20 tons are called the Jamestown Ships because they brought Captain John Smith and English colonists to Jamestown, Virginia, in 1607 to form the first English settlement in America. Exact replicas of these ships can be seen today at Festival Park in Jamestown, which has been called “the birthplace of the United States.”

Jamie Duff. A professional mourner. There is a story that this Scottish nickname for a mourner at a funeral comes from the name of one James Duff, an odd character who attended many funerals in the mid 19th century because “he enjoyed the ride in the mourning coach.” More likely the term is from the name of an old firm that supplied mourners for a price.

Jane or Jane's. Often cited as an authority in arguments about warships, *Jane* or *Jane's* generally refers to the prime reference on the world's navies, *Jane's Fighting Ships*, an illustrated book published periodically in England for almost a century and founded by Fred T. Jane. A volume on airplanes is also published by Jane's.

janissary. A collective bodyguard or household guard is called a janissary after the sultan of Turkey's *yeni-tshari*, or

“new army,” originally recruited by the Sultan Orchan in his reign from 1329–59. To strengthen the then feeble military, Orchan at first ordered every fifth Christian youth to be surrendered by his parents to the service of the sultan, given instruction in Muhammadanism, and specially trained in the arts of warfare. The *yenitshari*, the word corrupted into the English *janissary* in the process of passing through several languages, became the flower of the newly independent kingdom’s standing army. Its reputation for courage and discipline was highly respected and the fur-capped corps received many privileges, soon making compulsory recruitment no longer necessary. But by the 19th century the “new army” numbered some 135,000 and had begun actively defying the government. In 1826 specially trained Muslim troops were employed to abolish them, and a brutal massacre that year resulted in the death of almost every janissary.

January. Because it was the gateway of the new year, January was named for the Roman god Janus, keeper of the gates of heaven, who had two faces, one at the back to look at the old year and one at the front to view the new year. The Roman *Januarius* became *Januarie* in English and then *January*. Janus is also remembered in the word “Janus-faced,” for “a two-faced person,” a deceiver or double-dealer.

Janus-faced. See JANUARY.

Japanese words in English. Among Japanese words that have enriched English over the centuries are: kimono, karate, judo, tycoon, kamikaze, sukiyaki, samurai, hara-kiri, haiku, kabuki, geisha, sake, tsunami, and Nisei. rickshaw, banzai, Rimona, soybean, jujitsu

jape. *Jape*, possibly from the French *japer*, “to bark like a dog,” combined in English with the French *gaber*, “to mock or deride,” meant to trick or deceive, or to joke, when first recorded in the 14th century. Then, strangely enough, it lost this sense and came to mean “to seduce a woman” or “to have carnal intercourse with a woman.” Labeled an obscene word by the 16th century, *jape* was rarely used in print. Only 300 years later, in the 19th century, did it resurface with its original meaning, a *jape* becoming a joke or trick again.

jargantuan. See GOBBLEDYGOOK.

jargon. *Jargon*, or *jargoun*, meant “a twittering sound” or “meaningless chatter” in Medieval French. It later came to mean the argot or special vocabulary of a trade or profession, because such vocabularies were unintelligible to the outsider. Many trades have their own jargon, which facilitates things for the initiated.

jasmine. The jasmine vine with its fragrant flowers is native to Eurasia and Africa and was introduced into England in 1548. It takes its name from the Persian *yasmin* for the plant. According to a legend recounted in the rare 18th-century book *The Sentiment of Flowers*:

This beautiful plant grew in Hampton Court garden [England] at the end of the 17th century; but, being lost there, was known only in Europe in the garden of the

Grand Duke of Tuscany, at Pisa. From a jealous and selfish anxiety that he should continue to be the sole possessor of a plant so charming and rare, he [the duke] strictly charged his gardener not to give a single sprig, or even a flower, to any person. The gardener might have been faithful if he had not loved; but being attached to a fair, though portionless damsel, he presented her with a bouquet on her birthday; and in order to render it more acceptable, ornamented it with a sprig of jasmine. The young maiden, to preserve the freshness of this pretty stranger, placed it in the earth, where it remained green until the return of spring, when it budded forth and was covered with flowers. She had profited by her lover’s lessons, and now cultivated her highly prized jasmine with care, for which she was amply rewarded by its rapid growth. The poverty of the lovers had been a bar to their union; now, however, she had amassed a little fortune by the sale of the cuttings from the plant which love had given her, and bestowed it, with her hand, upon the gardener of her heart. The young girls of Tuscany, in remembrance of this adventure, always deck themselves, on their wedding day, with a nosegay of jasmine; and they have a proverb: “she who is worthy to wear a nosegay of jasmine is as good as a fortune to her husband.”

jaunty. Every jaunty person, “one who swaggers about cocksurely,” takes the adjective describing him from the jaunty, or master-at-arms, aboard British naval ships who supervised floggings. This jaunty in turn took his name from a mispronunciation of the French *gendarme*, or “policeman.”

java. *Java*, for “coffee,” originated as slang among American tramps in the late 19th century. It is obviously an allusion to the coffee-producing island.

jaw; jaw-jaw. To jaw is to talk incessantly about little of any worth, of any purpose. This expression for idle conversation is recorded as far back as 1748 in Tobias Smollett’s novel *Roderick Random*. *Jaw-jaw*, however, though it means the same, is a creation of British prime minister Winston Churchill, who said in a White House speech (June 26, 1954): “To jaw-jaw is always better than to war-war.”

jawbone of an ass. The phrase is from the Bible, Judges 14:16: “With the jawbone of an ass . . . have I slain a thousand men.” *Jawbone* has come to be associated with talking or jawing. On a rare occasion Oscar Wilde was bested after he told a Boston audience: “You’re Philistines who have invaded the sacred sanctum of Art.” Replied someone in the balcony: “And you’re driving us forth with the jawbone of an ass.”

jaw-dropping. An expression of disbelief or disappointment; a startling or shocking revelation. The phrase, apparently an Americanism, has become more popular recently, especially in political circles.

jaws of death. Shakespeare is often credited with the coining of this phrase, in *Twelfth Night* (“Out of the jaws of death”), but it appears earlier in *Divine Weekes and Workes* (1578) by

Guillaume de Salluste du Bartas. Shakespeare must have read the man for he precedes the Bard with a number of “Shakespearean” phrases, including *The world’s a stage*, *Night’s black mantle*, and *the four corners of the world*.

Jaws of Life. Suggested by JAWS OF DEATH, this is the name of a trademark hydraulic tool rescuer used to quickly pry or cut open vehicles involved in auto accidents to free people trapped inside them. The heavy duty apparatus was invented and is made in the U.S.

jay. While some writers suggest that the name of this common bird is of origins unknown, it probably derives, via Old French, from the Latin *gaius*, for the bird, and *gaius* probably comes from the Latin proper name Gaius. A number of birds are named after very common proper names, including *jackdaw* and *robin*. *Jay* is recorded in English as early as 1310.

Jay Hawk. This word for a Kansan may come from the nickname of a “Doc” Jennison, who led a regiment of Kansas Free State men in the years preceding the Civil War. It is said that abolitionist Jennison, “a frolicsome immigrant from New York State,” was called Gay Yorker, and that the name was naturally applied to his band as well. Even the pro-slavers, at least Quantrill’s raiders, were eventually called Jayhawkers in Kansas, as were all residents of the Jayhawk State in time. The transformation from *Gay Yorker* to *Jayhawker* does seem unlikely, though, and can at best be regarded as doubtful. Since *Jayhawker* was also 19th-century slang for a bandit, I would hazard that the word has something to do with the quarrelsome, thieving blue jay and the warlike hawk. Or perhaps there really was a rapacious jay hawk bird, as someone has suggested but nobody has ever confirmed.

Jayhawker State. A nickname for Kansas (see JAY HAWK). Kansas has also been called the Battleground of Freedom (in Civil War times), the Garden State (a title it shares with New Jersey), the Garden of the West (Illinois also claims this one), the Grasshopper State (after grasshopper invasions there), the Cyclone State, the Sunflower State (after the state flower), the Squatter State, the Central State, the Dust Bowl State (see DUST BOWL) and, best of all, the Navel of the Nation.

jaywalker. *Jaywalker*, which is far more succinct than “a pedestrian who crosses the streets in disregard of traffic signals,” was one of the abundant expressions (*backseat driver*, *joyride*, *step on the gas*, etc.) made necessary by the automobile. First recorded in 1917, the word incorporates the then-current slang term *jay*, for a stupid, inexperienced “hick.” *Jay* itself probably either derives from the “j” in the slang term *jughead*, or is a reference to the blue jay, a bird once commonly identified with rural areas.

jazz. Enough men to form a good jazz group are credited with lending their names to the word. One popular choice is a dancing slave on a plantation near New Orleans, in about 1825—Jasper reputedly was often stirred into a fast step by cries of “Come on, Jazz!” Another is Mr. *Razz*, a band conductor in New Orleans in 1904. Charles, or *Chaz*, Washington, “an eminent ragtime drummer of Vicksburg, Mississippi circa

1895,” is a third candidate. A variation on the first and last choices seems to be Charles Alexander, who, according to an early source, “down in Vicksburg around 1910, became world famous through the song asking everyone to ‘come on and hear Alexander’s Ragtime Band.’ Alexander’s first name was Charles, always abbreviated Chas. and pronounced Chazz; at the hot moments they called, ‘Come on, Jazz!’, whence the *jazz* music.” Few scholars accept any of these etymologies, but no better theory has been offered. Attempts to trace the word *jazz* to an African word meaning hurry have failed, and it is doubtful that it derives from either the *chasse* dance step; the Arab *Jazib*, “one who allures”; the African *jaiza*, “the sound of distant drums”; or the Hindu *jazba*, “ardent desire.” To complicate matters further, *jazz* was first a verb for sexual intercourse, as it still is today in slang.

Jazz Age. A coinage of F. Scott Fitzgerald for the era of the 1920s in America, a time dominated by youth and jazz music and marked by frenetic hedonism as well as great achievement. Also known as the Roaring Twenties and the Boom, this extravagant era, often treating life as a great party, was depicted in the caricatures of John Held and described in Fitzgerald’s classic fiction: *Tales of the Jazz Age* (1922), the first use of the phrase *Jazz Age*; his masterpiece, *The Great Gatsby* (1925); *Flappers and Philosophers* (1920); and his first novel, *This Side of Paradise* (1920). Of the Jazz Age Fitzgerald wrote: “It was an age of miracles, it was an age of art, it was an age of excess, and it was an age of satire.” See LOST GENERATION.

J. B. King. Similar to Kilroy was here (qv). Said to be for a millionaire turned hobo who first chalked graffiti on railroad boxcars, many of which he owned.

J. C. Penney. Yes, the “C” in the name of the J. C. Penney department stores does stand for “cash,” which was the middle name of the store’s founder—James Cash Penney.

jeans. See BLUE JEANS.

jeep. Eugene the Jeep, a character in Elzie Crisler (E.C.) Segar’s widely syndicated comic-strip “Popeye,” had supernatural powers and could do just about anything. Introduced in 1936, the mythical little animal was well known by World War II when Willis-Overland began manufacturing their versatile, open, 1¼-ton, four-wheel-drive vehicles for the armed forces. No one knows for certain, but the vehicle was probably named a *jeep* by U.S. servicemen from the sound of the army term GP (general purpose), this reinforced by the popularity of Eugene the Jeep and the “jeep” noise that he constantly made. In any event, *jeep* was “in the air at the time,” as Mencken says, used as the name for many contrivances, and the official army name for the vehicle—“half-ton-four-by-four command-reconnaissance car”—was definitely in need of improvement. A *peep* was the term invented to distinguish the new half-ton truck from the jeep, but it never really caught on. Wrote famed World War I correspondent Ernie Pyle: “The jeep does everything. . . . It is faithful as a dog, strong as a mule, agile as a goat.”

Jeez; Jeepers. See GEE!

Jeff Davis necktie. See SHERMAN HAIRPIN.

Jeffdom. See LINCOLNDOM.

Jefferson. A proposed name for the territory that became the state of Colorado, which before the Civil War was part of what was called the Jefferson Territory, in honor of Thomas Jefferson. Also a name proposed for the territory that became the state of Montana, which was also part of what had been called the Jefferson Territory.

Jefferson Bible; Jeffersonian. The Jefferson Bible, or Jefferson's Bible, is a collection of Jesus' teaching compiled from the New Testament by Thomas Jefferson and published at various times under his name. The author of the Declaration of Independence, founding father, and third president of the United States led an almost incredibly active life, but history best remembers Jefferson for his idealistic championship of democracy and *Jeffersonian* has become synonymous with "democratic." The expression *Jeffersonian simplicity* honors his dislike of pomp and ceremony in political and social matters. Jefferson was 83 when he died on July 4, 1826—the 50th anniversary of the Declaration of Independence and the same day on which his friend and fellow patriot John Adams died. Some 44 towns and counties bear his name.

Jefferson City, Missouri. Named after Thomas Jefferson, this is one of the four U.S. state capitals named after presidents. The others are Lincoln, Nebraska, for Abraham Lincoln; Madison, Wisconsin, for James Madison; and Jackson, Mississippi, for Andrew Jackson. See MONROVIA.

Jehovah. The ancient Hebrews considered YHVH (a name for God in Hebrew and the sacred tetragrammaton meaning "I exist") so holy that they never pronounced it and disguised it in the form of *Jehovah*, adding vowels from *Adonai*, another word for God, to suggest that anyone reading it should say *Adonai* instead of YHVH. During the Renaissance the vowels and consonants added to YHVH were mistaken for part of the name itself, and *Jehovah* was pronounced "Jehovah" or "Yahwee." See SEVEN NAMES OF GOD.

Jehovah's Witnesses. A religious movement first called the Russellites after its founder, American Charles T. Russell (1852–1916). In 1931 this fundamentalist group, which recognized the authority of Jehovah-God alone, took the name Jehovah's Witnesses. The Jehovah's Witnesses believe in Christ as the perfect man but not divine; they refuse to salute any national flag, to perform military service, or to receive blood transfusions. Their organ, *The Watch Tower*, sold relentlessly door-to-door, has as its motto: *Millions Now Living Will Never Die*.

Jehu. See JEZEBEL.

jell; It didn't jell. *Jell* is an Americanism meaning "to congeal or jelly" and may have been invented by Louisa May Alcott in her book *Little Women* (1869), where it is first recorded. The expression *it didn't jell*, "it didn't work, it failed," is first recorded in 1949.

Jell-O. The trademark name of this dessert, made of gelatin, sugar, and fruit flavoring, was coined by Mary Wait, the wife of its inventor, cough medicine maker Pearl B. Wait of LeRoy, New York, in 1897. By 1929, Jell-O and Postum cereal were the nucleus of the huge General Foods Corporation.

jelly. Jellies were originally frozen desserts, this reflected by the Latin word *gelata*, meaning "frozen," that is the ancestor of our *jelly*, which is first recorded in 1393. The Romans made their jellies by boiling animal bones. After cooking they set the liquid in a cool place where it solidified, the process suggesting freezing to them.

jellyfish. See SPINELESS AS A JELLYFISH.

jenny. A *jenny* is the female of certain animals, especially a female donkey. James Truslow Adams wrote in *The Epic of America* (1933): "[The Spaniards] shipped in so many horses and jennies for breeding mules that within a few generations these were running wild all over the country and were hunted instead of being bred."

Jenny is also the name of the Curtis training biplane of World War I. No one knows if a real Jenny lent her name to either of these words. See MULE.

Jenny Haniver. Seamen once fashioned strange figures from dried skates, rays, or mantas they had caught, and gullible landlubbers often bought these "mermaids" and "dragons," believing them to be real. Beginning in the 13th century, sailors turned out such Jenny Hanivers, many specimens lasting for 600 years or more, but their name remains a mystery. The surname may be a corruption of Antwerp, a bustling seaport of the time, but it is just as possible that some anonymous sailor bestowed the name of his sweetheart or another real woman on the lifelike mummies.

Jenny kissed me. Poet Leigh Hunt had been ill for several weeks during an influenza epidemic that had taken many lives, when he suddenly recovered and unexpectedly visited his friend Jane ("Jenny") Welsh Carlyle. Mrs. Carlyle impulsively jumped up and kissed him as he came in the door. This inspired Hunt's famous verse:

Jenny kissed me when we met,
 Jumping from the chair she sat in;
 Time, you thief, who love to get
 Sweets into your list, put that in:
 Say I'm weary, say I'm sad.
 Say that health and wealth have missed me,
 Say I'm growing old, but add,
 Jenny kissed me.

Jenny Lind. One of the less sensational P. T. Barnum attractions was Jenny Lind. The incomparable showman brought his *Swedish Nightingale* to America in 1850 for a concert tour, the golden-voiced operatic soprano giving 95 concerts in 19 cities and grossing some \$712,000—with over half a million being Barnum's share. Jenny Lind, at the height of her powers, became the most famous singer of her time, due in large part to Barnum's hoopla. Her name and nickname are only rarely heard today, but were once commonly used to describe a gifted

singer, and many fashions of the day, including a carriage, were named after her. There were rumors that Barnum and the singer were romantically involved, but she married composer Otto Goldschmidt in 1852, the couple later living in England. She died in 1887, aged 67.

Jenny Lind steak. An historical term honoring Swedish soprano Jenny Lind (1820–87), a singer immensely popular in the mid-19th century. The humorous phrase was defined as “a steak cut from off a horse’s upper lip.” See JENNY LIND above.

jeopardy. *Jeu parti* was originally a French chess term meaning “a divided play or game.” It thus came to mean “an uncertain chance, uncertainty” and entered English in this sense, spelled *jeupart*, early in the 13th century. By the end of that century it had attained its present meaning of “risk of loss; peril, danger,” but its spelling is not recorded as *jeopardy* until 1597.

jeremiad. A lengthy tale of woe or complaint that takes its name from Jeremiah, the major Hebrew prophet of the Old Testament—Lamentations and Jeremiah. Jeremiah’s long and sorrowful complaints were a protest against the sins of his countrymen and their captivity, his tirades and dire prophecies rarely equaled in history. Strangely enough, Jeremiah, who lived in the sixth century B.C., is also thought to be the author of several of the *Psalms*. See also NO BALM IN GILEAD.

jerk. Though *jerk* has been since the 1940s harmless, everyday slang for a fool, the word originally meant “a masturbator,” in the form of a *jerk off*, this expression having meant to masturbate since at least 1590.

jerkwater town. If you’ve ever traveled on a railroad line where trains are all steam-powered—and some still exist around the world—you’ll know that this expression, first recorded in 1896, has nothing to do with “jerks” who live in small, or jerkwater, towns. Steam engines often make stops in small stations for no other reason than to obtain water, the fireman jerking a cord attached to a long spigot extending from the water tower to fill the engine’s water tender. Similar practices, universal in the early days of railroading, gave rise to the Americanism *jerkwater town*, for any small, out-of-the-way place where no train stopped except to “jerk water.”

jerky. *Jerky*, first recorded in 1850, is dried and smoked strips of dried beef. Much used by travelers in the West, *jerky* is simply the Anglicization of the Spanish *charqui* for dried meat, and the Spanish word was often used instead of *jerky*. *Charqui*, in turn, comes from the Incan *echarqui* for dried meat. See BILTONG.

jeroboam; rehoam. Jeroboam reigned as the first of the kings of Israel, “a mighty man of valor,” who “did sin and make Israel to sin” (I Kings 14:16). Which may be why the oversized wine bottle, holding from eight to 12 quarts, was named after him by some scholarly wit at the beginning of the 19th century. The bottle is certainly “mighty” enough, anyway, and its contents can surely cause “sin.” The rehoam, two jeroboams, is named after Solomon’s son, who was at least wise enough to carry on his father’s marital policies: Rehoboam had 18 wives,

plus 60 concubines. *Jeroboam* also describes the large bowl or goblet better known as the “jorum,” the latter name in allusion to another biblical king who brought King David “vessels of silver, and vessels of gold, and vessels of brass” (II Sam. 8:10).

jerrican. The Germans developed this four-and-a-half-gallon gas container for the Afrika Korps during World War II. But the British stole the idea, naming the can the *jerrican*, after the jerries, or Germans.

Jerries. During World War I *Jerry* was perhaps the most offensive of the derogatory names given the Germans by Allied soldiers, these names including *Boche* (from the French for “blockhead”); *Kraut* (from sauerkraut); *Heinie* (from the German name Heinrich); and *Hun* (after the ancient barbarous warriors). But over the years *Jerry* came to be the mildest of such words, once its origins were forgotten: German soldiers were called *Jerries* by the British because their helmets resembled the chamber pots the British called jerries, which took their name from the slang *jeroboam*, for a chamber pot. See JEROBOAM.

jerry-built. The cheap, flimsy constructs of a Mr. Jerry of the Jerry Bros. of Liverpool may have inspired the word *jerry-built*. *Jerry-built* could also be connected with the trembling, crumbling walls of Jericho; the prophet Jeremiah, because he foretold decay; the word *jelly*, symbolizing the instability of such structures; or the Gypsy word *gerry*, for “excrement.” Still another theory suggests a corruption of *jerry-mast*, a name sailors and shipbuilders gave to makeshift wooden masts midway through the 19th century. *Jerry-masts* or rigs derive their name from the French *jour*, “day,” indicating their temporary nature.

Jersey. Jersey, the largest of England’s Channel Islands, was named for the Caesars, having been called Caesarea when the Romans ruled over it, *Jersey* being simply a corruption of *Caesarea*. In the eighth century B.C., *ey*, the suffix of the word *Jersey*, meant “an island,” so therefore Jersey is “the island of Caesar,” or “Caesar’s island.” Little evidence of the Roman occupation remains in Jersey or any of the islands in the English Channel. The Romans added the island to their empire after the Gauls had ruled there and, more than 1,500 years later the only evidence of their occupation is traces of Roman buildings found in Alderney. *Jersey* also refers to a breed of cattle, raised on Jersey and noted for yielding milk with high butterfat content. Close-fitting knitted sweaters and skirts, or similar women’s garments, are called jerseys because they were first made from jersey cloth, machine-woven fabrics of wool, etc., manufactured on the island of Jersey. See CAESARIAN SECTION.

Jersey barrier. Cones placed around the scene of an accident, of which there are far too many on the New Jersey highways, to make the site less dangerous.

Jerusalem. The name of the ancient holy city and capital of Israel derives from Hebrew, meaning “city of peace,” an ironic designation today.

Jerusalem artichoke. See ARTICHOKE.

Jerusalem cherry. Despite its common name, this plant (*Solanum pseudo-capsicum*) is not a cherry and does not grow in or near Jerusalem. A popular greenhouse plant grown for its scarlet, globe-shaped fruits, it is native to Brazil. The name *Jerusalem* is attached to a number of plants not native to that area, including the Jerusalem cowslip, Jerusalem oak, Jerusalem sage, Jerusalem thorn, and Jerusalem artichoke. It seems that, except in the last case, *Jerusalem* was bestowed simply as a vague name for a distant foreign place the plant was thought to hail from. See ARTICHOKE.

Jesse James. Jesse Woodson James became a kind of American Robin Hood in his own brief lifetime. A member of the Confederate Quantrill gang in his youth, he and his brother Frank later led the most notorious band of robbers in the country's history. The gang's daring bank and train robberies caused many deaths, but James was regarded as a hero by a public that hated foreclosing banks and greedy railroads. In 1882, changing his name to Thomas Howard, Jesse went into hiding at St. Joseph, Missouri. There, six months later, Robert Ford, "the dirty little coward that shot Mr. Howard," killed him for a reward. Jesse James was only 35 when he died. He is still a folk hero, commemorated in a popular ballad, folktales, movies, novels, and at least one play. Besides being slang for a criminal, a *Jesse James* is a truckman's name for a police magistrate and has been applied by baseball players to umpires.

Jesse tree. There is no such tree growing in nature. The Jesse tree is a vine with many branches, tracing the ancestry of Christ that is called "rod out of the stem of Jesse" in the Bible and is represented in church stained-glass Jesse windows, Jesse often represented in reclining position with the vine rising out of his loins.

Jesus bug; sea strider. While the Earth is host to over 1 million classified species of insects, only one insect lives in the ocean: *Halobates*, or the sea strider. *Halobates* can walk on the waves without getting seasick, but anchors its eggs to albatross or booby feathers. Known also as the Jesus bug because it walks on water, the variegated blue and black inch-long insect is supported by the surface tension of the water, each of its six feet resting in a minute depression as the insect speedily rows itself along, using its stiff-haired middle pair of legs as oars, its front pair for support, and its rear pair for steering. The bugs are attracted to light, and solid sheets containing thousands of immature specimens are often found off the Galapagos. A single bird's feather has been found to contain 25,000 *Halobates* eggs. No one knows what they feed on or where they find shelter to survive storms or tropical downpours, because when their backs get wet, they become waterlogged and sink.

jet black. The adjective comes from the mineral called *jet*, which is indeed velvet-black. The mineral, in turn, is named for Gagás, a town in ancient Lycaea, where it was discovered. *Gagas* ultimately was corrupted to *jet* in French before entering English.

jetsam. See FLOTSAM AND JETSAM.

Jew. *Jew* comes from the German *Jude*, which is a shortened form of *Yehuda*, the name of the Jewish Commonwealth in the

period of the Second Temple. Since the Commonwealth's name derived from the name of Jacob's son Yehuda (Judah), both *Jew* and *Jewish* ultimately derive from this proper name. *Jew* is first recorded in English in 1275, in the form of *Gyu*. See BUDDHISM; CHRISTIAN; HOLOCAUST; MOSAIC.

Jezebel. Jezebel "painted her eyes, and adorned her head, and looked out the window" when Jehu entered Jezreel. But Jehu, not to be tempted, promptly cried out, "Throw her down," and appropriately enough, three eunuchs responded. Jezebel's defenestration was complemented with her body being trampled by horses and eaten by dogs in one of the bloodiest of vengeful Old Testament passages (2 Kings 9:30–37). What had she done? The wicked ways of this worshipper of Baal were said to have brought evil upon the kingdom of Israel. So much so that *Jezebel* is still used figuratively for "a woman who flaunts loose morals," "a harridan," "a shameless bitch," or "a bold-faced prostitute." Jezebel was the wanton wife of the wicked King Ahab and daughter of the King of Tyre. *Jehu* is an old expression for "an intrepid coachman." The son of Jehoshaphat (of *jumping Jehoshaphat!* fame) "rode in a chariot" when he went to war, the Bible tells us, a hot rod that "driveth furiously."

jibber the kibber. In the late 18th century, *jibber the kibber* meant to fool seamen and wreck ships "by fixing a candle and lantern round the neck of a horse, one of whose fore feet is tied up; this at night has the appearance of another ship's light, and the deceived ship cracks into rocks or a [sand] bar." There seems to be no relation to a ship's *jib* in the phrase. In fact, the most anyone can make of the expression is that *jibber* means to confuse, deriving from the verb *to jibber*, to talk confusedly. See MOONLIGHTING.

jicama. The large, turnip-shaped root of the tropical American legume *Pachyrhizus erosus* eaten as a side dish and in salads. The plant ultimately takes its name from the Nahuatl *xicamatl*.

jiffy. Right away, a very short time. *Jiffy* may be a misspelling of *gliff*, an earlier term for a glimpse or a glance, but no one is sure. The word is first recorded in the late 1700s.

jigger. Our word for the small 1½-ounce shot glass used to measure whiskey probably derives from CHIGGER, for "tiny mites and fleas."

the jig is up. The expression suggests that the dance is over, and that the time has come to pay the fiddler. However, its derivation is more complicated. *Jig* is a very old term for a lively dance, but in Elizabethan times the word became slang for a practical joke or a trick. *The jig is up*—meaning your trick or game is finished, has been exposed, we're onto you now—derives from this obsolete slang word, not the *jig* that is still a gay and lively dance. See THE GAME IS UP.

jilleroo; jockeroo. A young woman who works on an Australian sheep ranch in the Outback is called a "jillaroo"; her male counterpart on the ranch is a jockeroo. Use of the words has spread to the rest of Australia.

Jim Crow. Blackface minstrel Thomas D. Rice, “the father of American minstrelsy,” introduced the song “Jim Crow” in 1828, claiming to have patterned it on the song and dance of an old field hand named Jim Crow he had observed in Kentucky. Rice’s routine, part of a skit called “The Rifle,” became so familiar here and on tour in England that a few years later a British antislavery book was titled *The History of Jim Crow*. It is from this book and similar uses of *Jim Crow* to signify a black that the discriminatory laws and practices take their name, though the first Jim Crow laws weren’t enacted until 1875 in Tennessee.

Jim Dandy. No particular Jim Dandy seems to be the eponym behind the century-old term *Jim Dandy*, which is still heard for someone or something that is especially fine or admirable. *The Dictionary of Americanisms* traces the term back to January 1887. Etymologist Gerald Cohen has cited a published sports usage of it some six months later in a New York Giants game, indicating a possible baseball origin. Certainly baseball helped popularize the phrase.

Jiminy. Ernest Weekley called this “a disguised oath,” probably for *Jésu Domine* (Lord Jesus). Jiminy Cricket is also a mild oath, used because its initials match Jesus Christ.

Jiminy Cricket. Pinocchio’s friend, whether Walt Disney knew it or not, bears a name that is a euphemism for *Jesus Christ*. An old one, too, the *Jiminy* portion dating back to 1664, when it was recorded as *Gemini*, probably deriving from the Latin *Jesu domini*. The mild exclamation of surprise *Jimmy!*, still heard occasionally, has the same origin, of course. *See also* GEE!

Jim-kay. An historical term meaning to stuff with food to a dangerous point. According to one story, a family kept a pet pig that they named James K. Polk, after the U.S. president, and fed James (or Jim) K. so much that he burst apart. Thus the president’s name became the basis for this odd addition to America’s political lexicon.

jimmies. A name given to the candy flecks, often chocolate, that ice-cream cones are dipped into. They are also called dots, nonpareils, shots, sparkles, and sprinkles.

Jimmy. Black English for a condom. I first heard the humorous word in Spike Lee’s movie *Mo’ Better Blues*, but it clearly dates back farther. Variants are *Jimmy hat* and *Jimmy cap*. *Jimmy* (with the “e”) can also mean “slip around,” as in “The pipe jimmeys in her mouth because most of her teeth are out and it’s hard for her to hold the pipestem.” (Jesse Stuart, *The Trees of Heaven*).

Jimmy Valentine. O. Henry’s story, “A Retrieved Reformation,” turned into the play *Alias Jimmy Valentine* (1909), popularizing the term *Jimmy Valentine*, for a safecracker Jimmy Valentine, the story’s main character, a master YEGG or safe-cracker, was said to be based on a character O. Henry met while serving time for embezzlement.

Jimsonweed. *Jamestown-weed* was the original name of *Jimsonweed*, or the thorn apple, a plant that can be deadly poison-

ous when its foliage is wilted. *Datura stramonium* was named *Jamestown-weed* because it was first noticed growing in America near Jamestown, Virginia, where the Indians smoked it like tobacco; in fact, soldiers among the insurgents in Bacon’s Rebellion of 1675 are said to have eaten this weed when defeated and driven into the wilderness, many almost dying of it. Over the years *Jamestown-weed* was slurred to *Jimsonweed* in pronunciation and by the 19th century was the common name for the plant.

jinete; jennet. The Zenetes, a North African Berber tribe, were such skilled horsemen and horse trainers that anyone who trains colts to the saddle is called a *jinete* in their honor. They also give their name to the *jennet*, a small Spanish horse and a female ass or donkey.

jingoisism.

We don’t want to fight, yet by Jingo
if we do
We’ve got the ships, we’ve got the men,
and the money, too

This refrain from the British music hall song “The Great MacDermott” (1878), urging Great Britain to fight the Russians and prevent them from taking Constantinople, gives us the expression *jingoisism*, for “bellicose chauvinism or excessive patriotism.” *Jingo* is a euphemism for “by Jesus” that dates back to the late 17th century. The British fleet did scare off the Russians from Constantinople.

jinx. Baseball Hall of Famer Christy Mathewson was among the first to use the word in print when he wrote in his *Pitching in a Pinch* (1912): “A jinx is something which brings bad luck to a ballplayer.” Big Six didn’t know that the word may owe its life to a bird called the *jynx*, which was used to cast charms and spells. The *jynx*, known in America as the wrynecked woodpecker or wryneck, takes its name from the Greek *jynx* for the bird. In the Middle Ages this *rara avis*, with its grotesque, twisted neck, its odd breeding and feeding habits, its harsh, strident cries during migration and its near silence the rest of the time, was thought to have occult powers. *Jynx* feathers were used to make love philters and black-magic charms, the bird’s name itself coming to mean a charm or spell, especially a black-magic spell, on a selected victim. It’s easy to see how the slang term *jinx* arose from *jynx*, but the long flight of the *jynx* from medieval times to the printed page circa 1912 is not easily explained. That’s why the *O.E.D.* and Mencken don’t attempt to give the origin of *jinx*. *Webster’s* admits the *jynx* version, however, as does the *Random House Dictionary* and other sources. Partridge traces *jinx* to the old Scottish word *jink*, “to make a sudden turn,” “the implication being [that jinxes] are all *twisters*.”

jipijapa. The name for the Panama hat in South America, after the plant such hats are made from. A playful name, pronounced “heepy-hoppa,” that should have wider currency in English. *See* PANAMA HAT.

jitterbug. *Jitter Bug* was first recorded in 1934 as the title of a song by American bandleader Cab Callaway and two collaborators. Callaway probably coined the words, which originally

meant a jittery or nervous person, the song's lyrics describing a "jitter bug" as someone who drinks regularly and thus "has the jitters ev'ry morning." Within a few years *jitterbug* began to take on its main meaning of dancing too fast to whirling swing music, *jitterbug* referring to any dancer who does so.

jix. Among the most interesting of acronyms is the eponymous *jix*, a word coined from the letters of a person's name. *Jix* was a synonym for "prudish interference" popular in England during the late twenties and early thirties. Journalists nicknamed British home secretary Sir William Joynson-Hicks "Jix" and the word only passed out of use with his death in 1932.

jizzywitch. Another name for the katydid (qv).

jo. *Jo*, as in "John Anderson, my jo," means beloved one, darling, or sweetheart in Scotland. The word is simply a variant of the word "joy" and dates to the 16th century or before.

job. First recorded in about 1627, but probably used long before this colloquially, *job*, for "a piece of work," may derive from the earlier word *job*, meaning "a small piece, a lump." The earlier *job*, in turn, may derive from *gob*, for "a lump," which has its roots in the Old French *gober*. *The New Dictionary of American Slang* (1986) gives the origin of *job*, for a "crime or criminal project," as "underworld from middle 1800s." But it may be much older than this and may not be from the underworld at all. I've come across it in an early poem by English poet William Cowper (1731–1800), "Pity for Poor Africans," in the stanza:

A youngster at school, more sedate than the rest,
Had once his integrity put to the test;
His comrades had plotted an orchard to rob,
And asked him to go and assist in the job.

jobbing house; job lots; job printer. *Jobbing house*, referring to a firm buying goods to sell in bulk to retailers, came into the language about 1870. *Job lots* refers to larger, often assorted, quantities of goods sold or handled as a single transaction. *Job Lots* is now often used as a name for stores that sell a miscellaneous quantity of goods, a quantity of odds and ends. *Job printer* is a printer who does varied work.

Job's comforter; patience of Job. A *Job's comforter* is someone who in meaning to comfort you adds to your sorrows, especially by advising that you brought your troubles upon yourself. "Miserable comforters are ye all," Job told the three friends who came to console him in his misery, the scolding lectures they delivered to him now known as *Jobations*. The Book of Job in the Old Testament is one of the world's greatest writings, questioning the existence of justice and moral order in the universe, its magnificent poetry more appropriate with each passing year. Job's myriad misfortunes—his stock stolen, his sons, daughter, and servants slain, his body afflicted with "loathsome sores"—and his patience with these afflictions by which Satan is said to have tested him, led to the expression *the patience of Job*, great patience, indeed.

Job's tears. In the Philippines, the annual grass Job's-tears (*Coix lacryma-jobi*) is the source of the nourishing cereal food

adlay. The tear-shaped seeds are found on the white or dirty-white female flower clusters, and inside each tear are the edible kernels that have long been used in the Far East for grain. Grown in western nations as an ornamental, the 3- to 6-foot-high, sword-shaped grass is named Job's-tears after the biblical Job, whose great misfortunes were borne with proverbial patience, but who must have shed many tears.

jock; jockstrap. Beginning in the late 1960s *jock* meant a big brainless college football player, but within a decade it covered any athlete at all, although the athlete does not necessarily have to be big or dumb—*jock* is a kinder word today. No one knows if the term is directly related to the racing *jockey* or to the *jockstraps* most athletes wear, though the latter derivation seems more plausible. *Jockstrap* takes its name from the centuries-old English slang *jock*, for "penis," which derived from the common nickname Jock for John.

jocko. Apparently a new name for kill. In a recent trial, a New York gangland lawyer complained that he didn't know the meaning of *jocko*, which the prosecutor said meant to kill (*New York Times*, June 25, 2005). The judge said it really didn't matter, considering the murder and racketeering charges the lawyer's client had already been convicted of: "One could infer that 'jocko' does not mean let's go out and picnic in Central Park." *Jocko* also means a nincompoop, saphed, a dolt, a natural born fool, etc. See JOCK; JOCKSTRAP.

jodhpurs. The horseback-riding pants were brought back to England in the 19th century from the district of Jodhpur in northwest India, where riders had been wearing them for many years.

jo. *Joe* may have become slang for coffee, as in a *cuppa joe*, because of the great consumption of it by G.I. Joes during World War II, according to Mark Pendergast in his fascinating book *Uncommon Grounds: The History of Coffee and How It Transformed Our World* (1999). This seems unlikely, as the term is first recorded in 1930 as tramp and underworld slang. Another interesting theory is that the word derives from Stephen Foster's song "Old Black Joe" (1850), a perennial favorite like so many of his songs ("Oh! Susannah," "Swanee," "My Old Kentucky Home," "Camptown Races," "Jenie with the Light Brown Hair," among others). But no matter how appealing, there is no firm evidence for any of these theories.

Joe Booker. A hearty stew famous in Boothbay Harbor, Maine, named after a long-forgotten Joe Booker, who may have been a cook.

Joe Echoes. People who were called *Echoes* in late-19th-century and early-20th-century America (Joe Echoes, Johnny Echoes, Eddie Echoes, etc.) weren't called that because they echoed other people's words. Those bearing this common nickname, usually the offspring of poor, recent immigrants, often echoed *themselves*, in sentences like "I betcha ya can't do it, I betcha," or "I tell ya it's mine, I tell ya!"

Joe Frogger. A cookie made of molasses and ginger, baked and sold in Marblehead, Massachusetts. Said to be invented by

and named for a black Gay Head Indian baker called Black Joe who lived during colonial times near a local pond inhabited by many frogs.

Joe Louis. Joe Louis, perhaps the greatest of all heavyweight fighters, came to be nicknamed the *Brown Bomber* for his blockbusting right and the color of his skin. Joe Louis Barrow, born on May 13, 1914, in Lafayette, Alabama, was the son of a sharecropper who died when Joe was four. The family moved to Detroit where Joe helped support them when he was only 16 by taking odd jobs that included work as a sparring partner in a local gym. This led to a boxing career that finally saw him take the heavyweight title from Jim Braddock in 1937. He defended his title more often than any other champion in ring history, and only Jack Dempsey outpooled him in the Associated Press survey of 1950 in which sportswriters picked the best boxers of the century. Louis lost three times in a career interrupted by service in World War II, once (before he became champion) to Max Schmeling, whom he knocked out in a rematch, and then to Rocky Marciano and Ezzard Charles, after he had retired as undefeated heavyweight champion but was attempting a comeback. His ring record included 64 KOs, eight decisions, and one win by default. A *Joe Louis* is synonymous for the utmost in a fighter, a heavyweight without peer.

Joe Miller. The English comic actor and barfly Joseph or Josias Miller (1684–1738), a favorite at the Drury Lane Theatre in parts such as Hamlet's first gravedigger, was an illiterate; he reportedly married his wife only to have someone to read his parts to him. When Miller died leaving his family in poverty, his friend playwright John Mottley gathered a collection of jokes attributed to Miller—and there were many, either because he was famed for his wit, or because it was something of a joke to credit this “grave and taciturn” actor with any joke making its rounds of the pubs. The proceeds of the 72-page book went to Miller's family, and being the only joke book extant for many years it went into numerous editions over the next two centuries. Because the jokes were widely quoted and imitated on the stage so long, any stale joke came to be called a *Joe Miller*.

Joe-Pye weed. A weed, according to the old saying, is only an uncultivated flower. Sometimes even more. The *Joe-Pye weed*, for instance, may have been named for an Indian medicine man of that name because he “cured typhus fever with it, by copious perspiration.” This tall, common plant, with clusters of pinkish flowers, might well be the only weed ever dedicated to a real person. Records from 1787 reveal the existence of a Joseph Pye, or Shawquaathquat, who was possibly a descendant of the original Salem, Massachusetts healer, but the colonial Joe Pye has not yet been unequivocally identified.

Joe Sixpack. A name at least since 1977 for the “ordinary” working man, a beer drinker who is satisfied with his sixpack (six cans of beer packed together) at the end of the day. Joe Sixpack has lots of synonyms, including *Joe Blow*, *Joe Average*, *Joe Citizen*, *Joe Q. Citizen*, *Joe Doakes*, *Joe Lunchpail*, and just plain *Joe*. See JOHN AND JANE DOE.

Joey. A coin named after a real person is the Joey, a fourpence piece honoring Joseph Hume, M.P. for Kilkenny, who in 1835 recommended that groats be coined for the sake of paying

short cab fares and other small transactions. American circus performers coined the word *Joey* for a circus performer in honor of English actor Joseph Grimaldi (1779–1837). An infant of one year when he made his London debut at the Drury Lane Theatre, Grimaldi performed for almost half a century in England. Starting his career as a dancer, he later became internationally famous as the first of modern clowns, one of the best known and beloved performers of his time. Grimaldi, the London-born son of an Italian actor, had no equal in pantomime and his much-acclaimed portrayal of a clown in *Mother Goose* has been revived many times over the years.

jog. To run at a slow though usually jolting pace. First recorded in this sense in 1948 in reference to track athletes training or warming up for a race, the word became commonly used with the beginning of the running-for-fitness craze of the 1960s, which was largely inspired by Dr. Kenneth Cooper's book on aerobic exercise.

jog bra. Patented in 1977, the first sports or (jog) bra is said to have been made by “sewing two jockstraps together.” See also BRA.

John; Johnny; Stage-door Johnny; Sugar Daddy. *John* refers to a prostitute's male customer, John being a common man's name. The word, widely used today, was first recorded in 1908, though it could be older. *John* or *Johnny* is also another term for a rich man who keeps a woman, a “sugar daddy.” *Stage-door Johnny* goes back a few years earlier, describing a young or old man who waits at theater doors hoping to pick up chorus girls.

John; John Thomas. The common first name John derives from the Hebrew *Yohanan*, “God is gracious.” It is the most popular of all U.S. and European first names, appearing in various languages as John, Jean, Juan, Johann, Joao, Johannus, Hans, Giovanni, Yan, Yannis, and Yahya—not to mention feminine versions such as Jean and Joan. The origins of “John Thomas,” long a slang expression for the penis, and “john,” a modern synonym for a toilet and a prostitute's client, will probably never be established beyond a doubt. But a British tradition, running counter to all known facts, derives the expression from the name of a real man of prodigious dimensions. According to this story, the expression “John Thomas” dates to the Middle Ages, about 1400. At the time there lived in a Wiltshire village a farmer named John Thomas, whose outlandishly large member constantly attracted the attention of people even when safely concealed beneath his codpiece. But John Thomas succumbed to the sin of pride. Confusing astonishment with praise, he took to exhibiting himself to anyone who happened by. Young John was finally tried, hanged, drawn, and quartered—except for the real offender, that is. Puritans being then as they are still, John Thomas's enormous penis was preserved in an economy-size pickle jar and Barnums of the time toured the countryside exhibiting dead what he had been executed for exhibiting alive. And so, according to the tale, the expression *John Thomas* became part of the language. The trouble is that no etymologist has traced the expression back further than 1840. All we have is the legend and the expression *John Thomas*, which, interestingly enough, D. H. Lawrence first used as the title for *Lady Chatterley's Lover*. In about 1650 the expression, broken down to *john*, became the common name for a toilet. Then again it may all be a phallic fallacy.

John and Jane Doe. *John Doe* is the oldest and most common of names for the average American, *Jane Doe* not heard nearly as much. *John Doe* was being used in England as a substitute name on legal documents by the 14th century and soon became a name for the common man, while *Jane Doe* was first recorded as his female counterpart in the late 1930s. *Joe Doakes* (1926), *Joe Citizen* (1932), *Joe Average* (1936), *John Q. Public* (1937), *Joe Lunchpail* (1965), and *JOE SIXPACK* (1977) are other favorites, though hardly as widely used. These are all neutral terms. For derogatory names describing the average man we have *Joe Blow*, dating back to 1867 and still heard frequently, *Joe Zilch* (1925), and *Joe Schmo* (1950)—all of them treating the common man as a foolish nobody or worse. The British term for the average man is *Joe Bloggs*.

John B. See STETSON.

John Bull. Dr. John Arbuthnot (1667–1735), Queen Anne’s physician, wrote a collection of pamphlets anonymously published in 1712 and entitled *The History of John Bull*. Though he did not invent the term *John Bull*, he made it famous as a personification of England, its plump red-faced English farmers dressed in a top hat and high boots. Dr. Arbuthnot described his character as “an honest plain-dealing fellow . . . very apt to quarrel with his best friends . . . if they pretend to govern him . . . a boon companion with his bottle. . . .” Among the other characters in the work is Lewis Baboon, the French king Louis XIV, a strange choice of names for a work meant to champion the end of war with France. Philip of Spain fared no better, dubbed Lord Strutt.

John Dory. The John Dory, or St. Peter’s cock (*Zeus faber*), a flat, highly valued European food fish, had its religious name long before its humorous one. *John Dory* is most likely a humorous designation for some real or imaginary person, perhaps the notorious privateer of that name active in the 16th century, and the subject of a popular song of the time. Like the haddock, which also has a dark black spot on each side, the golden-yellow John Dory has the reputation of being the fish from which the apostle Peter extracted money. In France, it still bears the name St. Peter’s cock; its oval spots are said to be the finger marks left when Peter held the fish to take the coin from its mouth.

John Hancock. If John Hancock had done nothing else, he would be remembered for his big, bold, belligerent signature, the first on the Declaration of Independence, writ “so big no Britisher would have to use his spectacles to read it.” “King John” Hancock (1737–93), also known as the King of Smugglers, was a Revolutionary patriot who led local merchants in protesting the Stamp Act, heading as he did the largest mercantile firm in Boston. Immensely popular in his own lifetime, he became a major general of militia, a member and president of the Continental Congress, and, except for one term, was elected annually as governor of Massachusetts from 1780 until his death. His name, as everyone knows, is commonly used to mean a signature or as a synonym for *name* itself. See JOHN HENRY.

John Henry. Like *John Hancock* above, this is a synonym for a signature or name, but we don’t know how the term arose.

There is probably no connection here with the black folk hero John Henry, who outdrove a steam drill with his hammer. *John Henry* originated in the American West as cowboy slang and that’s all anyone has been able to establish about it.

John le Carré. The pseudonym of David John Moore Cornwell (b. 1931), an English writer of espionage novels. Many of his books featured the mild-mannered secret agent George Smiley. Graham Greene called *The Spy Who Came in from the Cold* the best spy story he’d ever read.

johnnycake. “New England corn pone” someone has dubbed this flat corn bread once cooked on a board over an open fire. Most scholars agree that no cook named Johnny had a hand in inventing the bread. *Johnnycake* is usually traced to *Shawnee cakes* made by the Shawnee Indians, who by Colonial times were long familiar with corn and its many uses in cooking. Not everyone agrees, though, and one popular theory holds that *johnnycake* is a corruption of *journey-cake*, which is what early travelers called the long-lasting corn breads that they carried in their saddlebags. However, *johnnycake* is recorded before *journeycake* in the form of *jonikin*, “thin, waferlike sheets, toasted on a board . . . eaten at breakfast with butter”; *jonikin* is still used for griddle cakes on the eastern shore of Maryland. The word apparently progressed from *Shawnee cake* to *jonnikin* and *johnnycake*, and then to *journeycake*. Probably when people no longer needed to carry the cakes on journeys, *johnnycake* became popular again.

Johnny Canuck. The Canadian cartoon character who represents Canada, much as UNCLE SAM represents the U.S. and JOHN BULL represents England. The word *Canuck*, deriving from *Canada*, is chiefly used by Canadians to mean a Canadian and is often considered derogatory when used by foreigners.

Johnny-come-lately. Back in the early 1800s, British sailors called any new or inexperienced hand Johnny Newcomer. American sailors apparently adopted the expression, changing it to Johnny Comelately. The first recorded mention of the term—in an 1839 novel set on the high seas—uses it in this form in referring to a young recruit. The expression soon came to describe newcomers in all walks of life, changing a little more to the familiar *Johnny-come-lately*.

Johnny Reb. See BILLY YANK.

Johnny Town-Mouse. Many fictional characters have been based on real people, and many animal fictional characters, such as MOBY-DICK, have been based on real-life animals. But Beatrix Potter (1866–1943), the British author of *The Tale of Peter Rabbit* and other books, based an animal on a real human being. Johnny Town-Mouse, in her illustrated book of the same name, is based on her friend Dr. George Parson; her description of Johnny Town-Mouse adopts Parson’s facial features and even the long golf bag he used.

John O’Groat’s house. From *John O’Groat’s [house] to the Land’s End* is a colloquial expression for from one end of Britain to the other. The house in question once stood on the northeastern coast of Scotland, having been built by John de

Groat, who settled there with his two brothers from Holland in about 1500. The brothers' descendants eventually grew to eight families and quarrels began over the matter of precedence when they met each year at John O'Groat's. Old John solved this problem neatly by building an eight-sided room with a door to each side and an eight-sided table, so that each family would be at the "head of the table." A small green knoll in the vicinity of Duncansby Head is said to be the site of the house. It is not the northernmost point of Scotland, as is often claimed.

John Roberts. This is an amusing historical expression for a huge tankard of ale. In 1886 John Roberts, a Member of Parliament, sponsored the Sunday Closing Act for Wales, the law closing all pubs on Sundays. Confirmed drinkers took revenge by giving the name John Roberts to a large tankard that they filled on Saturday night with enough beer to last them through Sunday.

Johns Hopkins. Baltimore merchant Johns Hopkins (Johns was the surname of his great-grandmother) left 7 million dollars to found the eponymous Johns Hopkins University and hospital in 1873.

Johnson Box. The Johnson Box has been described as "an enticing paragraph in direct-mail advertising, just before a letter's salutation, that efficiently and pleasingly synthesized the sales pitch to follow." It was developed by direct-mail pioneer Frank H. Johnson (1911–2001), who said it was suggested to him by the colorful chapter summaries preceding chapters in 19th-century novels.

Johnsonese; Johnsonian. Dr. Johnson, as the great English man of letters Samuel Johnson is usually called, remains most famous for his monumental *Dictionary* published in 1755 and the immortal *Life of Samuel Johnson* written by James Boswell, generally considered the greatest English biography. A man of enormous energies who would have done even more were it not for the debilitating scrofula and often dire poverty that plagued him all his days, Johnson was revered as a moralist and a brilliant conversationalist. His *Dictionary* was the first to introduce examples of word usages by prominent authors, and along with his *Lives of the English Poets* (brilliant but essentially one-sided appraisals), it is still read today. Anecdotes about Johnson abound, but appropriate here is his reply to the lady who asked him why in his dictionary he defined *pastern* (part of a horse's foot) as the *knee* of a horse. "Sheer ignorance, Madam!" he explained. The two words that do Johnson honor reveal opposite sides of the Great Cham. *Johnsonian* refers to the good common sense reflected in his writings and conversation, while *Johnsonese* remembers the rambling polysyllabic style into which he would often slip—the very opposite of pithy *Johnsonian* phraseology. Partridge notes a third term honoring Johnson in his *Dictionary of Slang*: "*Doctor Johnson, the membrum virile*: literary: ca 1790–1880. Perhaps because there was no one that Dr. Johnson was not prepared to stand up to." Dr. Johnson died in 1784, aged 73. See also ROSWELL.

Johnston Smith. The odd pen name Stephen Crane used for his self-published novel *Maggie: A Girl of the Streets* (1893). He issued the work under the pseudonym Johnston Smith, the two most frequently listed names in the New York telephone book.

John Wayne. The term *John Wayne* (the movie name of Marion Morrison, 1909–79) can mean a "heroic person" or a "reckless, daring showy person," due to Wayne's star movie roles and his off-camera political views. No one knows how long any of these will last, but *John Wayne* has become the word for about 10 other things, including a John Wayne bar, an Army-field-ration candy bar; a John Wayne cookie or cracker, also Army field rations; a John Wayne hat, a bush hat; and John Wayne High School, after those who quit school to join the army. To John Wayne is to attack someone forcefully with little or no consideration.

John Wesley Hardin. A fabled gunfighter. After John Wesley Hardin (1853–95), killer of some 40 men, the first when he was only 12. Hardin, famous for his *quick cross draw* (crossing his arms to opposite sides and pulling his guns from his vest pockets) died when he was shot in the back of the head while playing cards. See WILD BILL HICKOK.

joint. "I have smoked opium . . . in every joint in America" (1883), is the first recorded use of the word *joint* for "a place." Joints are possibly so named because people join together in them. Marijuana cigarette joints are, similarly, often smoked jointly by two or more people. Another interesting theory holds that *joint* was first applied to Chinese opium dens, and took its name from the bamboo walls in such places, bamboo having prominent joints.

jolly boat. There is nothing particularly jolly about the jolly boat, a small craft usually hoisted at a ship's stern. The name of this little workboat, used mostly in harbors, is simply a misspelling of the Dutch *jolle*, meaning a small yawl.

jolly good; jolly good show; jolly good fellow. *Jolly good* in British English means "very good, extremely good," and the expression *jolly good show* is said to someone who has performed very well. Less dated than these expressions is *jolly good fellow*, which is frequently used on both sides of the ocean in the well-known song sung after a toast to a very popular person:

For he's a jolly good fellow
That nobody can deny.

The British version substitutes "And say so all of us" for "That nobody can deny."

Jolly Roger. French buccaneers may have flown a flag called the *joli rouge* ("pretty red") and this term may have been corrupted to "Jolly Roger" by English pirates when they transferred it to their black flag. *Jolly Roger* could, however, derive from the 17th-century English word *roger*, meaning "rogue or devil." Or it may come from the widely used Tamil title Ali Raja, meaning "king of the sea"—English pirates at first pronouncing "Ali Raja" as "Ally Roger," then "Olly Roger" and, finally, "Jolly Roger."

Joltin' Joe. A nickname for New York Yankee centerfielder Joe DiMaggio, one of baseball's greatest players, who hit safely in 56 consecutive games. The popular song "Joltin' Joe DiMaggio" was written in his honor. DiMaggio was also called the *Yankee Clipper*, both for the way he "clipped" the ball and for his grace as a fielder, moving as effortlessly as a clipper ship. He made even the hard catches seem easy.

a Jonah. A *Jonah* means a bringer of bad luck who spoils the plans of others. The phrase is so popular that it has even become a verb, as in “Don’t *jonah* me!” The biblical Jonah sailed to Tarshish instead of preaching against the evils of Nineveh as the Lord bade him. But the Lord sent a mighty storm to punish him for fleeing, so “that the ship was like to be broken,” the frightened sailors aboard deciding that he was an evil influence, a loser, bad luck. “And they said . . . Come, and let us cast lots, that we may know for whose cause this evil is upon us. So they cast lots, and the lot fell upon Jonah” (Jon. 1:7). After they jettisoned Jonah, calm returned to the seas, but Jonah, of course, was swallowed by a giant fish (possibly a whale) and after three days and nights was “vomited out upon dry land,” whereupon he did what he was supposed to have done in the first place.

Jonathan apple. The Jonathan apple, named after Jonathan Hasbrouck, an American judge who died in 1846, is fifth in order of commercial importance in America. It is a late fall-ripening apple, bright red and often yellow-striped, its round fruit mildly acid and the trees bearing it very prolific. The Jonathan, grown mainly in the Northwest, is but one of numerous apple varieties commending their growers or other notables. The Gravenstein, Grimes Golden, Macoun, and Stayman are only a few others that come to mind. See also MICHA ROOD’S APPLE.

a Jones. A Jones is a habit, especially drug addiction, the term arising in the drug culture among heroin users and passing into black slang as well. Whether there was any specific eponymous Jones, man or woman, whose name is behind the word is not known; most likely it is just a use of the common family name Jones. The expression was first recorded about 1962 but is probably older. Claude Brown in *Manchild in the Promised Land* (1965) gave the following use: “Yeah, baby, that’s the way it is, I’ve got a Jones.”

jonquil. It is good that we no longer pronounce the name of this pretty flower the way it should be pronounced. “Junkwill” is the proper pronunciation if we consider the word’s Latin ancestor *juncus*, meaning “rush” (from its long, rush-like leaves). But in the 19th century the jonquil (*Narcissus jonquilla*) began to be pronounced “John-quill,” which sounds much better.

Jordan almond. See ALMOND.

jorum. See JEROBOAM.

Joseph coat. “Now Joseph was handsome and good looking. And after a time his master’s wife cast her eyes upon Joseph, and said, ‘Lie with me.’” Joseph refused but Potiphar’s wife persisted. “. . . One day, when he went into the house to do his work and none of the men of the house was there in the house, she caught him by his garment, saying ‘Lie with me.’” Again Joseph abstained, this time fleeing from her and leaving his upper coat limp in her hand. Mrs. Potiphar proceeded to frame Joseph for attempted rape and her husband, captain of the pharaoh’s guard, had him flung into prison, though all went well with our hero “because the Lord was with him.” It is from this story, recorded in Genesis 37 and 39, and the “coat of many col-

ors” that Joseph’s father made him, that the name of the woman’s long riding coat, the *joseph*, derives. The name was probably applied by the 18th-century tailor who designed the short riding coat, later given to the women’s long coat and a cloaklike one worn by men.

Joseph Vissarionovich Stalin (1879–1953). It is often forgotten that the communist dictator was a writer, the author of five books and the first editor of *Pravda*. Born Iosif Vissarionovich Dzhygashvili he took the last name Stalin, “man of steel” in Russian, on joining the Russian revolutionary movement. Ironically enough, his first book was an argument in favor of self-determination for oppressed nations.

josh. The best guess is that the Americanism *josh*, for “to kid” or “fool around,” is a merging of *joke* and *bosh*. The pseudonym of an American writer may have something to do with the word, though. Henry Wheeler Shaw (1818–85) wrote his deliberately misspelled crackerbox philosophy under the pen name Josh Billings. Employing dialect, ridiculous spellings, deformed grammar, monstrous logic, puns, malapropisms, and anticlimax, he became one of the most popular literary comedians of his time. The expression *to josh* was used about 18 years before Josh Billings began writing in 1863, but his salty aphorisms probably strengthened its meaning and gave the term wider currency.

Joshua tree. *Yucca brevifolia*, a twisted, treelike plant that grows only in the Mojave Desert and is named after the biblical Joshua’s spear, because of its blade-like leaves.

joss. *Joss* is pidgin English for a Chinese house idol or cult image, while a *joss house* is a Chinese temple, and a *joss stick* is an incense stick burned before an idol. It seems that early Portuguese explorers, on asking the Chinese what they called such idols, were invariably answered with the Portuguese name for God, *Deos*, which sounded like *joss* to them.

jot. See IOTA.

joual. A French dialect heard in Quebec and Maine which takes its name from a regional pronunciation of *cheval*, horse. *Joual*, also spelled *joal*, borrows many words from English and has its own grammar. It is perhaps the least known dialect speech in the U.S.

joule. Though he made his living as the owner of a large brewery, James Prescott Joule (1818–89) had devoted himself to scientific research since inventing an electromagnetic engine as a youth. In 1840, the English physicist formulated Joule’s Law of conservation of energy, the first law of thermodynamics. That same year he was the first to determine the mechanical equivalent of heat and the heat equivalents of electrical energy, the unit of work or energy called the *joule* later named in honor of the measurements he made. Only 22 when he had these valuable discoveries to his credit, Joule went on to perform other important research, becoming one of the first to broach the kinetic theory of gases. Joule always insisted that his name be pronounced to rhyme with “jowl,” which led to this embarrassing clerihew:

James Prescott JOULE
 Let out a great HOWL,
 “Listen, you fool!
 I gave my name to the jowl, not the jool.”

See also CLERIHEW.

journal. Deriving from the Latin *dies*, “day,” the English *journal* doesn’t contain a single letter belonging to its ultimate ancestor. The Latin *dies* was the basis for the Latin *diurnus*, which became the Italian *giornale*, “journal,” and the French *journal*, meaning the same, and then passed into English as *journal* in about 1590.

journalism and strong drink. See TAKE TO JOURNALISM AND STRONG DRINK.

jovial. *Jovial* derives from the Latin *jovialis*, of or pertaining to Jupiter or Jove, the Romans’ highest deity. In its sense of a hearty, merry person, qualities the planet Jupiter was said to impart, *jovial* is said to have been coined or first used by British author Gabriel Harvey in about 1590. At least Thomas Nash claimed that Harvey invented the word, along with *conscious*, *extensively*, *idiom*, *notoriety*, and *rascality*—all of which Nash abhorred and said would not last. There are, in fact, no earlier citations for any of these words than the year Nash cites.

joy house. A brothel. Raymond Chandler (1888–1959) used the term in his hard-boiled detective novel *Farewell, My Lovely* (1940), which was made into a popular film.

joy o’ the mountain. This colorful name is given to trailing arbutus in the mountains of the American South. Trailing arbutus (of the *Epigaea* genus) is probably the most fragrant of all wildflowers. The evergreen plant is difficult to cultivate in home gardens, but thrives in the wild.

Judas; Judas goat; etc. On Holy Saturday in Corfu the people still throw crockery into the streets, enacting their traditional stoning of Judas Iscariot. Thousands of years have passed, but Christ’s betrayer remains the most infamous traitor of all time, his name recorded in many expressions, including *Judas* or *Judas Iscariot*, meaning any treacherous person who turns against a friend for some reward, as Judas did for 30 pieces of silver; *Judas kiss*, outward courtesy clothing deceit, alluding to the way Judas identified Jesus to the high priests in the Garden of Gethsemane; *Judas tree*, any of the several *circis* species, whose purple flowers suggest dark blood and upon which, tradition says, the traitor hanged himself after his act of betrayal; and *Judas goat*, the stockyard goat that leads unsuspecting animals to slaughter.

judo. *Judo* means “the gentle way” in Japanese. It is a modern variation of the ancient sport of *jujitsu*, first played by samurai. *Judo* was invented around 1882 by Japanese educator Jigoro Kano, who was appalled with the violence used by many of his countrymen practicing ju-jitsu. Kano outlawed many dangerous moves of the older sport, including foot strikes, and developed several new moves. The sport quickly caught on in Japan and other countries, including the United States, where Teddy Roosevelt became a devotee.

jug; jughead. Ernest Benzon, a wealthy playboy, was dubbed “Jubilee Juggins” because he foolishly squandered his entire fortune—a quarter of a million pounds—within two years after beginning to bet at the track during Queen Victoria’s Jubilee in 1887. One source claims that the nickname “Silly Juggins” also attached itself to him, and perhaps we do refer to young Jubilee when we use that term. *Juggins*, however, was synonymous with simpleton long before Jubilee Juggins. Possibly it is a rhyming variation of *muggins*, which derives from an unknown personal name and means the same. Or *juggins* may be a diminutive of *Jug*, a 16th-century pet name for Judith, Jane, or Joan. Jugs, Judiths, Janes, or Joans were often maidservants or barmaids at the time, and most servants of the day were considered dull and stupid, at least by their masters. The word *jug*, for “a pitcher,” could also come from these maidservant Jugs, who often handled them, but the Greek word *keramos*, “potter’s earth,” is another possibility. Most authorities regard these etymologies as incapable of proof, yet it is likely that all these words—and thus *jughead*—make fun of a personal name. *Jug*, in fact, may have arisen from some squat Joan or Jug’s resemblance to a drinking vessel of similar shape. See also HOOSEGOW.

jugged hare. *Jugged hare* is not an inebriated rabbit, but a young hare (genus *Lepus*) prepared in an earthenware pot or jug, its sauce sometimes thickened with the animal’s blood. This classic English dish, along with German *Hasenflecker*, is the most famous of hare dishes worldwide. The Spanish have a proverb, *vender gato por liebre*, to sell a cat for a hare, an expression that originated when Spanish hostels palmed off cat as hare and which is remembered by those Spanish markets that even today display hare paws intact to prove it isn’t some Tom from the back alleys.

the juice ain’t worth the squeeze. The juice here is orange juice, not liquor, and the saying means it’s not worth doing, the effort isn’t worth the result. Reported by a Maryland correspondent.

juice loans. Loans made at very high interest. A specialty of the Outfit, a Chicago branch of the Mafia. They are called “street taxes” by loan sharks, who have to pay it to mobsters.

jukebox. A juke house or juke is a house of ill repute, a whorehouse, taking its name from the black dialect called Gullah spoken on the islands off the coast of South Carolina, Georgia, and Florida. The Gullah word *juke*, or *jook*, in turn, apparently derives from the Wolof West African word *dzug* or *dzog*, meaning “to misconduct oneself, to lead a disorderly life.” *Juke* naturally came to be associated with anything connected with a *juke house*, even the early *jook* or *juke organs*, coin-operated music boxes that sounded like *hurdy-gurdies* and were often found in *juke houses*. When coin-operated phonographs became very popular in the early 1940s they were called *jukeboxes* after their early counterparts, so the name of this ubiquitous electrically operated machine can be ascribed to a West African tribe.

Jukes and Kallikaks. Their names happen to be fictitious, but the Jukes and the Kallikaks are real families whose histories showed early 20th-century sociologists that heredity, rather than environment, was the cause of feeble-mindedness as well as the

poverty and crime often resulting from it. The Jukes were a New York family given their pseudonym by Richard L. Dugdale, a prison sociologist who traced the clan back several generations after finding its members in various state prisons. Tracing the family to a backwoodsman named Max, who had married two of his own sisters, Dugdale uncovered a fantastic record of criminal activity, disease, and poverty. Of the 709 descendants on whom he obtained precise information, he established that 140 Jukes had been in prison, 280 had been paupers, and that the Jukes family in 75 years had cost New York State \$1,308,000. The Kallikaks, another real though pseudonymous family, were studied in New Jersey and revealed the same pattern of a high incidence of crime, disease, and delinquency, the two names soon linked together by writers on the subject. *Kallikak* combines the Greek *kallos*, “beauty,” and *kakos*, “ugly, bad.”

Julian calendar; etc. You can clip precious time from your age if you immigrate to Addis Ababa, the capital of Ethiopia, where the Julian calendar is still used locally. The “slow” Julian calendar, instituted by Gaius Julius Caesar, was corrected and replaced by the GREGORIAN CALENDAR in 1582, although it continued to be used in England until the middle 18th century, when it was proclaimed in 1752, that Wednesday, September 2, would be followed by Thursday, September 14. Inaccurate, but a great reform at the time, the Julian calendar had been introduced in 46 B.C. It established the year as 365 $\frac{1}{4}$ days, with a leap year of 366 days every fourth year. Caesar’s calendar divided the months into the number of days they presently contain, except for *August*, which Augustus Caesar insisted have 31 days when it was later named in his honor, not wanting Julius’s *July* to contain more days than his month. The *Julian day* also pertains to Julius Caesar. It is a chronological reckoning used by astronomers enabling every day since the beginning of the *Julian era* (fixed at January 1, 4713 B.C.) to be numbered consecutively, thus avoiding complications due to months and years of unequal length. The Julian day was devised by Joseph Scaliger in the same year as the Gregorian calendar.

julienne. One celebrated word sleuth seems to feel sure that *julienne*, when applied to a clear soup garnished with vegetables cut into thin strips, comes from the French *potage à la julienne*, the name bestowed by the chef of the Comte de Julienne. The *Oxford English Dictionary* is not so sure, citing “the French Jules or Julien, personal name,” and another big dictionary, sweeping any male chauvinism aside, gives us “French, special use of Julienne woman’s name.” *Webster’s* brings our French male chef to America, without a master, and has *julienne* named “after Julien, a French caterer of Boston,” as do several American writers on food. While the controversy simmers, people will go on enjoying the soup, and all kinds of other foods cut into julienne strips.

Juliet. See ROMEO AND JULIET.

Juliet cap. Actresses playing Juliet in Shakespeare’s *Romeo and Juliet* were the first to wear the little mesh cap decorated with pearls that women in later times adopted for dressy occasions and called the Juliet cap.

July. Mark Antony named the seventh month of the year in honor of Julius Caesar because it was the month he was born

in. Up until about 1800, *July* was pronounced like the girl’s name Julie in English, rhyming with “newly.” In the southern United States, the word is still generally accented on the first syllable.

Jumbo. P. T. Barnum purchased the fabled elephant Jumbo from the London Zoological Society in 1881 for “The Barnum and Bailey Greatest Show on Earth.” Jumbo, captured by a hunting party in 1869, was one of the largest elephants ever seen in West Africa; the natives called the six-and-a-half-ton beast by the Swahili word *jumbo*, meaning “chief.” He became a great favorite in the London Zoo, giving rides to thousands of children, and his sale to the American showman caused quite an uproar. Within six weeks the incomparable P.T. had reaped \$336,000 from the \$30,000 investment, and he made Jumbo’s name a synonym for “huge” throughout America and the world. See THICK AS JESSE.

jumper. Only in recent times has the jumper become a woman’s garment. Originally it was a coarse canvas shirt reaching to the hips that was worn by sailors. The word derives from *jump*, for a short coat men wore in the 18th century.

jumping bean; jumping cactus. The seed of certain Mexican plants of the genus *Sapium* and *Sebastiania* that jump or move about because of the movements of a moth larva inside the seed. *Jumping bean* and *Mexican jumping bean* are Americanisms first recorded in about 1885. *Jumping cactus*, which entered the language at about the same time, refers to the cholla cactus of the Southwest, so named because when the loose stems on the ground are touched the entire plant may move, and/or because it aggressively shoots its needles at people who come too close.

Jumping Jehoshaphat! The original Jehoshaphat of the exclamation was the ninth-century king of Judah, an ally of the kingdom of Israel. In relatively modern times Jehoshaphats has also become a slang synonym for breasts. This latest synonym is not recorded in any slang dictionary but is noted in Chris Miller’s *The Real Animal House* (2006) along with a half-dozen others. Holy Jumping Jehoshaphats! is a variation. See JEZEBEL.

jumping the couch. A brand-new expression meaning to show one’s almost manic joy by jumping up and down on a couch. The expression originated when movie star Tom Cruise suddenly performed a dance on the Oprah show, much to everyone’s puzzlement.

jump in the lake. Original no more, these words still have to be admired for their staying power. First recorded in 1912, the phrase means get lost, get out of here, go away. The great Ring Lardner used it in *You Know Me, Al*, and it is also found in *The Thin Man*, and *What Price Glory?* Often the phrase is go jump in the lake.

jump the broom with. To marry. “He jumped the broom with her years ago.” The phrase derives from the ancient practice, once legal in many places, of broomstick marriages, when

couples only had to jump over a broomstick held by two people to be declared man and wife.

jump the gun. See GIVE HER THE GUN.

June. One of ancient Rome's leading class, the Junius family, had June named in its honor, the naming probably influenced by the fact that the festival of Juno, goddess of the moon, fell on the first of that month.

Juneuary. A warm or mild January. Also spelled January.

Juneteenth. June 19, in honor of the emancipation date of blacks in Texas, where the holiday is celebrated annually by many African-Americans.

Jungian. Jungian psychology differs from FREUDIAN essentially in that it maintains that the libido, or energy, derives not from sexual instinct but from the will to live. Carl Gustav Jung (1875–1961), an early disciple of Freud, broke with the master over what he considered an excessive emphasis on sex as a cause of neurotic disorders and a regulator of human conduct. He became a world-renowned figure, postulating the existence of two unconscious influences on the mind—the personal unconscious, containing an individual's own experience, and the collective or racial unconscious, holding the accumulated memories of generations past. The Swiss psychiatrist divided mankind into *introverts* and *extroverts*, using those or similar terms for the first time. Among many other innovations, he invented the *word-association test*.

jungle. Another word that the British brought back from India, *jungle* began life as the Hindi *jangal*. In Hindi it first meant “a desert”; then it took on the meaning of “uncultivated land”; and finally, it came to mean “land wild with trees and other uncultivated growth.”

jungle gym. See MONKEY BARS.

junk. “Junk” was the best pronunciation 18th-century British mariners could make of the rude little Javanese sailing boat called a *djong*. *Junk*, therefore, became the name for the small boat and possibly the word for the things scattered about any ship that seemed as untidy as the *djongs* appeared, though the origin of *junk* in this last respect isn't certain.

junket. “The term *junket* in America is generally applied to a trip taken by an American official at the expense of the government he serves so nobly and unselfishly,” noted a *Detroit Free Press* writer in 1886. The Americanism had been used similarly by Washington Irving in 1809. Our *junket* comes from the British *junket*, for “a banquet,” which may derive from the old Norman word *jonquette*, meaning a reed basket in which fish and other things were carried, or “in which sweet cream cheese was brought into town for sale.” *Jonquette*, in turn, comes from the Latin *juncus*, “a reed.”

Junoesque. Said of any queenly, attractive, often large-breasted woman, after the majestic goddess Juno, wife of Jupiter in Roman mythology.

Jurassic. Wrote James Truslow Adams in *The Epic of America* (1938): “In what is known as the Jurassic period in the geological history of the earth, there suddenly developed in the course of animal evolution a vast number of huge reptiles.” The world has recently become more aware of this phenomenon with the release of the movie *Jurassic Park* (1993), based on a novel of that name by Michael Crichton. The geological term takes its name from the *Jura* mountains separating France from Switzerland and means “characterized by large quantities of granular limestone,” as these mountains are.

jury rig. A temporary repair made on a boat to replace a broken part, most often by using something crafted on board. Ultimately from the Latin *adiutare*, to help. “We jury-rigged some fishing gear.”

just a heartbeat away from the presidency. Presidential candidate Adlai Stevenson coined this phrase in a campaign speech on October 23, 1952. He was referring to Republican vice presidential nominee Richard Nixon, “the young man who asks you to set him one heartbeat from the presidency of the United States.”

just a hoot and a holler away. Nearby. “The store's just a hoot and a holler away.”

just another pretty face. A phrase that describes a woman (rarely a man) as of no distinction, mediocre, without much intelligence or ability, except for her good looks. With the coming of the women's lib movement in the 1960s, the phrase began to be heard much more as *not just another pretty face*, correcting the imbalance and not just regarding women as ordinary sex objects. Today the former term is even humorously applied to men.

just as leave. When someone says “I'd just as leave stay home as go to that party,” he or she should properly use *lief*, meaning “gladly or willingly,” not *leave*, in the phrase. However, people have used *leave* incorrectly for so long that *lief* is slowly but surely becoming obsolete in the expression. Nevertheless, *just as lief*, or *had as lief* can be traced back almost a thousand years.

just deserts. The expression, meaning something deserved or merited, has nothing to do with the word *dessert*, a sweet course served at the end of a meal, which comes from the French *desservir*, in its sense of “to merit by service.” The word *desert* for a wasteland derives from the Latin *deserere* “to leave uninhabited.”

just for openers. Originally a poker term dating back to the early 19th century and strictly meaning someone's first bet in a game, *just for openers* quickly extended to many other realms, especially the world of business, where it is still frequently used to mean someone's first action or first offer.

Justins. Cowboys began to wear fancy boots by the end of the 19th century, some hand-tooled leather ones costing them two months' pay, about \$50. The most famous of these were made by Fort Worth bootmaker Joseph Justin and called Justins in his honor. The term is still in use today.

just in the nick of time. Up until the 18th century, both time and transactions were commonly recorded by scoring notches, or nicks, on a stick called a TALLY. These nicks account for the *nick* in the common expression *just in the nick of time*, “not a second too soon.”

just like Jell-o on springs. Famously said by Jack Lemmon of Marilyn Monroe walking away in the film *Some Like It Hot* (1959), and since used to describe other sexy women. *Jelly*, not JELL-O, had earlier described this love-potion motion in the popular song lyric “I wish I could shimmy like my sister Kate, / She shakes like jelly on a plate . . .”

Just So Stories. These stories for children about how the leopard got his spots, the camel his hump, the elephant his trunk, etc., were published in 1902 by Rudyard Kipling, who became the first English writer to win the Nobel Prize five years later. The imaginative stories, among the author’s best work, got their title, *Just So Stories*, because Kipling’s daughter Elsie didn’t care about how unscientific they were; the little girl wanted to hear her father’s tales over and over, with no scientific explanation added, “just so.”

just under the wire. This phrase means to barely make the limit or meet the deadline. The expression is from horse racing,

where the imaginary “wire” is the finish line and a horse just under the wire is one who beats out another horse by a nose to finish in the money.

just what the doctor ordered. Anything that is most suitable, perfectly relevant. Often heard in the United States since at least the 1940s.

just when I thought I was out, they pull me back in. A lament of the Godfather in the book and movie of the same name when he tries unsuccessfully to break his ties with the mob. The phrase has been heard more commonly recently, in a humorous way.

Juvenalian. Savagely satirical, like the verse satires of Juvenal (ca. 60–ca. 140), the greatest Roman satirist, whose style was imitated by John Dryden, Dr. Johnson, Alexander Pope, and, especially, Jonathan Swift, among many. Juvenal wrote 16 satires attacking the vices, abuses, and fatuities of Roman life, satires marred by an excessive hatred of the rich and the condemnation of all women. But though kindly humor is absent in his pages and his unsparing pessimism fills all of them, his vigorous, ironic, terse style make him one of the world’s greatest writers of satire.

K

K. Representing the Greek *kappa* and the Hebrew *kaph* before it, the letter *K* was used by the Romans for the *K* sound in place of the *C*, which they abandoned. Roman libelers, for example, were branded on the forehead with a *K*, for *kalumniā*, “calumny.”

K (for a strikeout). The practice of using the letter *K* for a strikeout dates as far back as 1861, according to Joseph L. Reichler of the baseball commissioner’s office. In those days, when a hitter struck out, it was said that “he struck.” Letters were used for scoring, as they are today: *E* for an error, *S* for a sacrifice, etc. Since the letter *S* could not also be used for “struck,” the last letter, *K*, of the word “struck” was used, and it has remained the symbol for a strikeout. Henry Chadwick, the newspaperman credited with inventing the box score, invented these symbols, the term *K* used at the time “for a player who missed the ball in three swings.” It is first recorded in about 1880.

kabloona. A Canadian word meaning a white person, a European. Used chiefly in Arctic Canada, it was first recorded about 1765 and derives from the Inuit *qablunaaq*, which does not mean “person with big eyebrows” as it is often translated, but comes from the Inuit *gava*, “south,” suggesting a person who comes from the south.

kachina doll. A Hopi Indian doll. Carved from cottonwood root in the shape of a kachina, an ancestral spirit, it is used as a household decoration or given as a gift to a child.

kaffeeklatsch. This expression is used, mainly among housewives, as a synonym for the more popular “coffee break.” *Klatsch* is German for “a good gossip or gabfest,” one held over *kaffee*, or “coffee.”

kaffir. Long a derogatory term used by whites to describe blacks in Africa, *kaffir* derives from the time when Arab slavers first came to the east coast of Africa. The slavers called the people there *qafirs*, “unbelievers,” because they had not yet accepted Islam, and *qafir* became the pejorative *kaffir*.

Kafkaesque. Franz Kafka’s three novels (*The Castle*, *The Trial*, and the unfinished *Amerika*) and his short stories are characterized by the surreal distortion and sense of impending doom in a nightmarishly impersonal world that define this word. Kafka, an Austrian born in Prague, died of tuberculosis in 1924 when only age 40. Believing that he had failed in his life’s work, the author’s last request was for his friend Max Brod to burn all his papers and unpublished manuscripts. Brod refused to do this, rationalizing that Kafka did not really want it done or he would not have asked someone he must have known would never do such a thing. Instead, Brod published Kafka’s immensely influential writings. First recorded in *The New Yorker* in 1947, the adjective *Kafkaesque* is frequently heard today.

kaiser. Like *CZAR*, *kaiser* too derives from the surname of Gaius Julius Caesar, being merely the German word for caesar. *Kaiser* was the title of the emperor of the Holy Roman Empire and the emperors of Germany and Austria. The word has less of a stigma attached to it than *czar*. Another title for a ruler often attributed to Caesar is *shah*. *Shah*, however, actually derives from a Sanskrit word, meaning “dominion.”

Kalashnikov. Mikhail Kalashnikov invented the Kalashnikov automatic assault rifle, often called the AK-47, while recuperating from his wounds during World War II. Later, the weapon was modified and became known as the AKM. For his invention Kalashnikov was made a hero of socialist labor by the former Soviet Union. His rifle is still widely used throughout the world.

kale. *Kale* is 20th-century American slang for money, as well as a vegetable. The word derives from the Middle English *cale*, a variant of *cole*, for “cabbage.” American settlers called this primitive member of the cabbage family *colewarts*.

Kal-el. Superman is an alias or nom de guerre in the fight against evil. The comic book hero’s real name is Kal-el, bestowed upon him by his parents when he was born on the planet Krypton before it exploded. See *SUPERMAN*.

ka me, ka thee. An expression dating back to at least the early 16th century that means “I’ll help you if you help me,” “You scratch my back, I’ll scratch yours.” No one is sure where the word *ka* comes from, but it could be a corruption of *claw*, which fits in nicely with the “scratch” definition.

Kamerad, Kamerad! *Kamerad* doesn’t mean “I surrender” in German, as many people believe. It is German for “comrade.” German soldiers who used *Kamerad, Kamerad!* in surrendering during World Wars I and II were appealing to the mercy of “comrade” human beings. The expression, however, has taken on the meaning of “I surrender” in English.

kamikaze. Toward the end of World War II improved defenses and better U.S. aircraft made it difficult for Japanese planes to get close to U.S. ships and bomb or strafe them. Kamikaze planes on suicidal missions were employed as a last resort. The planes, heavily loaded with explosives, were flown in mass formations and crashed into enemy ships. Scores of ships were sunk or disabled by this suicidal tactic. The planes and their pilots took their names from the *kamikaze*, or “wind of the gods” of 1281 that had wrecked a Mongol fleet invading Japan.

Kandahar. This city in southern Afghanistan, important in the 9/11 war, was conquered by Alexander the Great in 329 B.C. It was shortly after named in his honor, Kandahar, a variation on his name.

kanga. A name Australians in the bush have for the kangaroo. Kanga also means money or cash. Another shortened name for kangaroo is ‘roo, while flyer is a name for a female kangaroo. See KANGAROO; KANGAROO COURT.

kangaroo. The great English explorer Captain James Cook asked a native of the Australian Endeavor River tribe for the name of a strange marsupial Cook had spotted. The native answered, “kangaroo,” or “I don’t know.” Cook assumed that this was what the native called the animal, which is how *kangaroo* (or “I don’t know”) got in the dictionaries. At least that is the derivation several etymologists suggest, there being no better theory, though the story isn’t mentioned in any official account of Cook’s voyages. The *O.E.D.* says the story “lacks confirmation” but can find no similar word in any Australian language. See also INDRI; KANGA; LLAMA; LUZON; NOME; YUCATAN.

kangaroo court. While this expression may have originated in Australia, it was first recorded in America during the California gold rush. Perhaps Australian “49ers” did bring it with them to the gold fields. According to this story, the source for the term is kangaroos in Australia’s back country, who when out of spear range sat staring dumbly at men for long periods of time before leaping off for the horizon; their staring was thought to be similar to the dumb stares of jurors sitting on a mock jury, and their leaping away suggesting the quick decisions of such an extrajudicial court. But there are no quotations supporting the use of *kangaroo court* in Australia at any time. The expression could have been coined in America, in fact, based on the several uses of the word *kangaroo* in England for

anything unusual or eccentric. Another guess is that Americans familiar with the kangaroo’s jumping habits, or Australians here with gold fever, invented *kangaroo court* as a humorous term for courts that tried “claim-jumpers,” miners who seized the mining claims of others.

kan pei! Thousands of war veterans, among others, know *kan pei* as a Japanese, Korean, and Chinese drinking toast. It translates as “dry cup,” and a person making the toast often downs his drink to the last drop and holds his empty glass upside down over his head to show that the glass is drained dry.

Kansas. The Sunflower State, admitted to the Union in 1861 as our 34th state, takes its name from the name of a Sioux tribe meaning “people of the south wind.” It had previously been called the Kansas Territory.

kaolin. The fine white clay used for ceramics and many other products takes its name from Gaoling Mountain in southeastern China, from where it was first exported to Europe.

kaput. In the old French gambling game of piquet, *capot* meant not to win a single trick. *Capot* became the German *kaputt*, with the same meaning, which over a long period of time was extended to mean “having been destroyed, wrecked, or incapacitated,” just as some players would be after not winning a single trick in a game. By the end of the 19th century *kaputt* had entered English as *kaput*.

karaoke. The Japanese invented this form of entertainment and the name for it in the late 1970s. Karaoke, frequently offered by bars and clubs, consists of people taking turns singing songs into a microphone over prerecorded tracks that contain music but not the words to the songs. The entertainment has spread worldwide, and many people have karaoke machines in their homes. The word is composed of the Japanese *kara*, “empty,” and *oke*, an abbreviation of *okesutora*, a Japanese rendering of the English *orchestra*. Literally it means “empty orchestra.”

karate. Born in China and refined in Japan, karate is the ancient art of defending oneself against an armed attacker by striking sensitive areas on the attacker’s body with the hands, elbows, knees, or feet. Centuries later the sport of karate based on this method of self-defense was introduced. Modern karate owes much to Japanese karate master Funakoshi Gichin, who taught the art and indeed gave it the name *karate*, from the Japanese *kara*, “empty,” and *te*, “hands.” *Shotokan karate* (named after Funakoshi’s nickname, Shoto) is the most popular form of karate today.

Katy-bar-the-door. Watch out, take precautions, big trouble is coming, as in “When that hurricane hits, it’s liable to be Katy-bar-the-door.” The Americanism, a century or so old, probably was coined in the Wild West.

katydid. John Bartram, America’s first great botanist, first recorded *katydid* (or a word similar to it) in 1751 as the name of the large, green arboreal insect of the locust family known scientifically as *Microcentrum rhombifolium*. The word

is of imitative origin, the chattering noise the insect makes sounding like “Katy did! Katy did!”

kayak. Traditionally an Eskimo canoe with a skin cover over its light framework, but today any small boat resembling it, no matter what materials are used. The word, first recorded in the mid-18th century, comes from the Inuit *qayaq*. Also, a fishing boat whose name is thought to be a corruption of the eastern *kaique* by early British North Pole voyagers.

kedgeriee. There’s an interesting story behind this delicious dish of rice, fish, milk, and eggs. Originally, this was an Armenian dish called *kidgeri*. Americans not only changed the spelling to *kedgeriee*, but substituted eggs for the eggplant that the Armenian recipe calls for.

keelboat. “These boats were long and narrow, sharp at the bow and stern, and of light draft. They were provided with running boards, extending from bow to stern, on each side of the boat,” a writer noted in the *American Pioneer* (1843). *Keelboats*, also called *keels* at the time, were first recorded in the language in 1785 and the word derives from the *kiel boot* (meaning the same thing) of early Dutch settlers. *Keelboatmen* were among the roughest of men on the frontier.

keelhauling; keelraking. *Keelhauling* today means merely a tongue-lashing from a superior, hardly a punishment compared to the original keelhauling used as a discipline for Dutch sailors in the 16th century. Erring Dutch sailors, and later seamen in many other navies, were keelhauled by being tied to the yardarm, weighted down, and then hauled by a rope under the vessel from side to side. Sometimes they suffered an even more dreaded punishment, being keelraked, or hauled under the ship from stem to stern.

keel over. To *keel* a boat is to roll her over on her keel; that is, to turn up the keel—the bottom of the boat—wrong side up—permost. This nautical practice and term led to the Americanism to *keel over*, first recorded in 1832, which meant “to turn a man or beast over on his back, to upset or capsize.”

keep a stiff upper lip. See STIFF UPPER LIP.

keep a straight face. To refrain from laughing. One story has this expression deriving from Irish peat diggers, who have to make their spade thrusts perfectly vertical when digging out peat (thus keeping a straight spade face—“face” here the working side of the implement). I can find no proof of this and the words more likely were suggested by someone trying to keep his face from squinching up in laughter. The phrase is first recorded in an 1897 issue of the *Spectator*: “The story is one which few people, to use an expressive vulgarism, will be able to read ‘with a straight face.’”

keeping up with the Joneses. According to his own account, cartoonist Arthur R. (“Pop”) Momand lived in a community where many people tried to keep up with the Joneses. Momand and his wife resided in Cedarhurst, New York, one of Long Island’s Five Towns, where the average income is still among

America’s highest. Living “far beyond our means in our endeavor to keep up with the well-to-do class,” the Momands were wise enough to quit the scene and move to Manhattan, where they rented a cheap apartment and “Pop” Momand used his Cedarhurst experience to create his once immensely popular *Keeping Up with the Joneses* comic strip, launched in 1913. Momand first thought of calling the strip “Keeping Up with the Smiths,” but “finally decided on *Keeping Up with the Joneses* as being more euphonious.” His creation ran in American newspapers for over 28 years and appeared in book, movie, and musical-comedy form, giving the expression *keeping up with the Joneses* the wide currency that made it a part of everyday language.

keep it under your hat. Keep something under your hat and it is kept to yourself, it remains a secret to anyone but you. Unlike “blockhead,” which goes back to the first hats, the expression is of surprisingly recent origin, having been first recorded in a similar form in 1909 and recorded in its present form in P. G. Wodehouse’s *The Inimitable Jeeves* (1923).

keep one’s end up. See HAVE ONE’S INNINGS.

keep on truckin’. Keep going, keep moving, don’t quit. Etymologist Joseph T. Shipley wrote that the expression “comes from the great marathon dance contests that were a part of our 1930s scene, when all the partners clung to one another, half-asleep, but on and on moving around the dance hall through the night, like the great trucks that go endlessly across our continent through the dark hours, as they ‘keep on truckin’ for the prize.” This scene was brilliantly depicted in the movie *They Shoot Horses, Don’t They?* (1969).

keep the ball rolling. The election of 1840, which pitted President Martin Van Buren running for reelection against “Tippecanoe and Tyler, too”—General William Henry Harrison, legendary hero who fought against the Indians at Tippecanoe, and Virginian John Tyler—brought with it the first modern political campaign. Some historians believe that the election gave us the expression *keep the ball rolling* as well as the word *O.K.* One popular advertising stunt that helped Harrison win was “to keep the ball rolling” for the “log cabin and hard cider candidate.” Ten-foot “victory-balls,” made of tin and leather and imprinted with the candidate’s name, were rolled from city to city for as far as 300 miles. These victory balls did popularize the expression *keep the ball rolling*, keep interest from flagging, but the saying undoubtedly dates back to the late 18th century. Of British origin, it alludes either to the game of bandy, a form of hockey where the puck is a small ball, or the game of rugby. In either sport there is no interest in the game if the ball is not rolling. The first form of the expression was *keep the ball up*. See BANDY; O.K.

Keep the faith, baby! This expression was common among Civil Rights workers in the 1960s and became a popular slang expression meaning “don’t give up.” It is much older than this, however, and has its origins in the Bible (2 Tim. 4:7): “I have fought the good fight. I have finished my course. I have kept the faith.” FIGHT THE GOOD FIGHT has also been a popular expression through the ages.

keep your beard out of my soup. Heard in conversation. Might be a joke, or could be an old expression meaning “mind your own business.”

keep your eye on the ball. Many sports could have spawned the American expression meaning “be closely attentive.” Baseball, tennis, golf, and basketball are all candidates, but the saying seems to have derived from the exhortations of college football coaches to their charges at the turn of the century. *To be on the ball*, to be vitally alert or in the know, is apparently an offshoot of this phrase, even though in baseball it has been said of a pitcher who has a wide variety of effective pitches.

keep your eyes peeled. To keep your eyes peeled for something is to keep them wide open, to keep a sharp lookout. The earliest known form of the frontier expression, recorded in 1833, was to *keep your eyes skinned* (presumably meaning with the lids drawn back): “I wish I may be shot if I don’t think you had better keep your eyes skinned so that you can look powerful sharp . . .”

keep your fingers crossed. Making the sign of the cross has long been thought to be effective in averting evil, but the use of crossed fingers as a symbol of the cross is American in origin, probably originating as a superstition among blacks in the 17th century. The practice was also thought to bring good luck and resulted in the expression to *keep your fingers crossed*, as well as the belief among schoolchildren and others that a lie told with the fingers (or toes, or legs, etc.) crossed “doesn’t count.”

keep your pants on. Don’t be impatient. This old expression could derive from a sexual situation, or it may, more likely, simply be an extension of **KEEP YOUR SHIRT ON**. No one is sure.

keep your pecker up. These words shouldn’t be X-rated; *pecker* here refers not to the penis, as many people believe, but to the lip. *Pecker* has been slang for lip, corresponding as it does to the beak, or pecker, of a bird, since the middle of the 19th century, when we first find this expression meaning “screw up your courage, keep a stiff upper lip.” (*Pecker*, for the male organ, has been slang only since the late 19th century.) The first recorded use of the phrase is impeccably British: “Keep up your pecker, old fellow” (1853). A more specific explanation is that it refers to a gamecock’s bill, the bird’s bill or pecker sinking lower toward the ground as he grows more tired and near defeat.

keep your shirt on. The stiff, starched shirts worn by American men back in the mid-19th century when this expression originated weren’t made for a man to fight in. Therefore, men often removed their shirts when enraged and ready to fight, a practice that is reflected in the older British expression to *get one’s shirt out*, “to lose one’s temper.” *Keep your shirt on* was a natural admonition from someone who didn’t want to fight and realized that an argument could be settled if both parties kept calm and collected. *Keep your hair on* and *keep your back hair up* are earlier related expressions for “don’t get excited.”

keep your stick on the ice! Perhaps no other people love the sport of ice hockey more than Canadians do. *Keep your stick on the ice* is their way of saying: Pay attention!

Keezer’s ghost! Cited as a common exclamation in George Allen’s “Rural Speech of Maine and Northern New Hampshire.” Also Great Keezer’s Ghost. Both expressions apparently are variations of the widespread exclamation Great Caesar’s ghost!

Kelley Blue Book. The standard guide in the U.S. for dealers and the courts in determining the value of all used cars of all makes and model years. It was developed by Sidney “Buster” Kelley (1909–2001) of the Kelley Kar Company, which from the end of World War I to the end of World War II was the biggest used car business in the world. The Blue Book was first published in 1926.

Kelly pool. This is a variety of pool in which each player draws a number; while trying to sink the balls in numerical order, the players must pocket their numbered balls as well. It is said to be named either for an unknown Irishman surnamed Kelly, or in honor of Ireland, where it was invented.

kelpie. Wives of Scottish fishermen believed that a black horse with red eyes called the kelpie rose from the sea to warn them of forthcoming maritime disasters. Kelpie would then descend into the deep until it could be of help again. Yet another Scottish legend has it that an equine water spirit called the kelpie delighted in drowning travelers.

Kelvinator; Kelvin scale. Barely 10 years old when he entered Glasgow University, William Thomson was appointed a full professor of natural philosophy there when only 22. The Scottish mathematician and physicist early became one of the greatest scientists of his or any other era and toward the end of his career was created first Baron Kelvin of Larga. In his long lifetime Lord Kelvin made fundamental theoretical contributions in numerous scientific fields including thermodynamics, electricity, solar radiation, and cosmology. He also personally supervised the laying of the transatlantic cable in 1866, initiated the determination of electrical standards, and invented many useful instruments—among them the modern compass, a deep-sea sounding apparatus, an electric bridge, a standard balance, the mirror galvanometer, the siphon recorder, and a variety of instruments for electrical engineers. This great, good, and kind man invented the absolute or Kelvin temperature scale, which has the advantage of expressing any temperature in a positive number, and the British Kelvinator, or refrigerator, was named in his honor in 1914 when theories he had advanced made the appliance possible. Lord Kelvin retired from Glasgow University after teaching there half a century, but three years later matriculated as a student in order to maintain his connection with the university—thus making him, at 75, the oldest genius ever to go back to school. He died in 1907, aged 83.

Kemble pipe. In 1678 Titus Oates fabricated a story about a Jesuit papist plot that would assassinate England’s Charles II, among other Protestants, and put the Catholic duke of York on the throne. As a result, many Catholics were persecuted, and some 35

died by mob violence or by legal hanging. Among the latter was William Kemble, who calmly smoked his pipe and chatted pleasantly all the way to the gallows. The liar Oates was merely, though severely, flogged and imprisoned until he was pardoned and pensioned by William III. All poor Kemble got out of the affair was the naming in his honor of a large pipe like the one he smoked.

Kenilworth ivy. A European creeping vine (*Cymbalaria muralis*) with small pale purple flowers that was named after Kenilworth Castle in central England, where it grows on the castle walls. It is also called coliseum ivy.

kenning. A *kenning* is a poetic phrase used in place of or in addition to the usual name of a person or thing. It is used to introduce color or suggest associations without distracting from the essential statement made. The word for these compound metaphors comes from the *Old Norse* phrase *kenna eitt vio*, “to express or describe one thing in terms of another.” For example, the sea in Old English was called “swan’s road” (*swansrad*), or “whale’s path”; a boat was a “wave traveler” or “foamy necked”; darkness was “the helmet of night”; the queen was “peace weaver”; and a sword was “hammer leaving.”

Kensington Hay. A name for the affected accent of residents of London’s Kensington borough, who often pronounce *mother* “mothah” and *high* as “hay” (as in *Kensington Hay Street*). The term was first recorded in the early 1900s.

Kentucky. The Blue Grass State was admitted to the Union in 1792 as our 15th state, formerly having been Kentucky County, Virginia. It takes its name from the Iroquois *Kentake*, “meadowland.” Historically Kentucky was called “the dark and bloody ground” because it was an Indian no-man’s-land used by several tribes as a burial and hunting ground.

Kentucky bite. Heavyweight champion Mike Tyson was hardly the first American to bite off part of an opponent’s ear in a fight in or out of the ring. Such tactics were all too common in years past, especially, it seems, in our old Kentucky homes. Melville noted the technique in *White-Jacket* (1844) and Hemingway described it graphically in several of his stories. More recently, Vincent, the new godfather in *Godfather III* bit off part of his rival’s ear.

Kentucky bluegrass. A grass (*Poa pratensis*) that grows particularly well in Kentucky but is widely used as a lawn grass throughout the United States.

Kentucky burgoo. A celebrated stew made of chicken or small game, and corn, tomatoes, and onions; traditionally served on Derby Day. *See* KENTUCKY DERBY.

Kentucky colonel. Someone upon whom the honorary title of Colonel is bestowed in Kentucky, though no one takes the title very seriously.

Kentucky Derby. A horse race for three-year-olds held annually since 1875 on the first Saturday in May at Churchill Downs in Louisville, Kentucky; it was named after the English Derby at Epsom Downs, first held in 1780. *See* DERBY.

Kentucky fried chicken. *See* GOSPEL BIRD.

Kentucky rifle. Famous in American history as the rifle of the pioneers, the long, extremely accurate Kentucky rifle is recorded by this name as early as 1838. The flint-lock muzzle-loader should, however, be called the Pennsylvania rifle, for it was first made in that state by Swiss gunsmiths in the 1730s and perfected there. “The British bayonet was no match for the Kentucky rifle,” wrote one early chronicler.

Kentucky right turn. According to William Safire’s “On Language” column in the *New York Times* (January 27, 1991), this is a humorous term meaning “the maneuver performed when a driver, about to turn right, first swings to the left.”

Kenya. Not many men have countries named after them, as does Jomo Kenyatta (1893?–1978) who is so honored by the republic of Kenya in East Africa. Kenyatta led his native land from 1964 until his death 14 years later.

kept woman. No invention of modern times, this term for a mistress dates back at least five centuries, when it was first recorded in 1560: “Others kept harlots and lived dishonestly.”

ketchup. Is it *ketchup*, *catsup*, *catchup*, or *kitchup*? Since the word derives from the Chinese Amoy dialect *ke-tsiap*, “pickled fish-brine or sauce,” which became the Malay *kechap*, the first spelling is perhaps the best. The original condiment that Dutch traders imported from the Orient appears to have been either a fish sauce similar to the Roman *garum* or a sauce made from special mushrooms salted for preservation. Englishmen added a “t” to the Malay word, changed the “a” to “u” and began making ketchup themselves, using ingredients like mushrooms, walnuts, cucumbers, and oysters. It wasn’t until American seamen added tomatoes from Mexico or the Spanish West Indies to the condiment that tomato ketchup was born. But the spelling and pronunciation “catsup” have strong literary precedents, as witness Dean Swift’s: “And for our home-bred British cheer,/ Botargo [fish roe relish], catsup and cabiar [caviar].” (1730). *Catchup* has an earlier citation (1690) than either of the other spellings, predating *ketchup* by some 20 years. *Ketjap*, the Dutch word for the sauce, and *kitchup* have also been used in English. Anyway, a red tide of half a billion bottles of ketchup, catsup, catchup, or kitchup is slopped on everything from Big Macs to vanilla ice cream(!) in America each year.

Kewpie doll. In 1909 the American author and magazine illustrator Rose Cecil O’Neill (1874–1944) published a poem in *Ladies’ Home Journal* that she illustrated with cupid-like imps. The imps proved so popular that she invented a doll called Kewpie (the name is a form of *cupid*), which she patented and made a fortune with, in the process adding the term *Kewpie doll* to the language.

key lime pie. Named for the tart limes of the Florida Keys, this delicious pie has been part of the Conch cuisine there for well over a century.

Keynesian. Keynesian economic theory advocates government monetary and fiscal programs designed to increase employment and stimulate business activity. The word comes from the name of British economist John Maynard Keynes (1883–1946), whose full employment theory was set forth in his *Treatise On Money* and his *The General Theory of Employment, Interest and Money*. Keynes's work revolutionized economic thinking and made him one of the leading economists of his time. He also belonged to London's intellectual BLOOMSBURY group, which included Virginia Woolf and E. M. Forster among its members.

Keystone State. A nickname for Pennsylvania since at least 1803, when it was first recorded. Pennsylvania also has been called the Quaker State, the Steel State, and the Oil State. Keystone was chosen because Pennsylvania was the keystone of the arch that the original 13 colonies loosely formed.

Key West. This southernmost area of Florida and the U.S. takes its English name from Spanish Cayo-Hueso, a small rocky islet to the west.

KF-79. A famous trick play invented by Columbia University coach Lou Little designed to fool Stanford in the 1934 New Year's Day Rose Bowl football game. Columbia quarterback Cliff Montgomery took the hike from center and handed the ball off to fullback Al Barabas, who hid the ball on his left hip, pretending he hadn't received it. Montgomery then faked a handoff to Ed Brominski and almost the entire Stanford team chased Brominski over the goal line while Barabas easily walked into the endzone. The 7–0 upset victory was Columbia's only appearance in a bowl game.

khaki. The *khaki* cloth used for soldiers' warm-weather uniforms, which are called *khakis*, owes its name to its color. *Khaki*, twilled cloth originally made in India, means "dust-colored or dusty," deriving from the Persian *khak*, "earth."

Khmer Rouge. A Khmer is a Cambodian, the member of a civilization that reached its peak in the ninth to 15th centuries. The official language of these Cambodians or Khmers is Mon-Khmer. Many were members of the Khmer Rouge (the red or communist Khmers who, under the vicious leadership of the dictator Pol Pot, killed from 2 to 3 million people in trying to force millions to work on huge collective farms). The agrarian utopia came to naught, the monster Pol Pot dying in 1998, but it left Cambodia a vast killing field (qv) of skulls and bones, a national unburied potter's field.

kibbutz. Kibbutz means "community" in Hebrew; the first of these cooperatives founded in 1909 along the Sea of Galilee. There were many cooperatives before the Israeli examples, their philosophy based on the work of British social reformer Robert Owen (1771–1858), said to have lost a considerable fortune championing his work. Don't confuse kibbutz with kibitzer (qv).

kibitzer. It seems that German card players of the 16th century found meddling onlookers just as annoying as card

players do today. The constant gratuitous "advice" of these chatterers reminded them of the kiebitz (the lapwing, or plover) whose shrill cries frightened game away from approaching hunters. Thus all kibitzers are named for this troublesome bird, our peewit, which inspired the German word *kiebitzen*, "to look over the shoulder of a card player." A play called *The Kibitzer* (1929), which made Edward G. Robinson famous, contributed and the popularity of *kibitzer*.

kibosh. The Gaelic *cie bas*, pronounced "kibosh," means "cap of death" and seems to offer the most logical explanation for the expression *to put the kibosh on* something, "to put an end to it, to dispose of it." But another theory has the expression as Yiddish in origin, deriving either from the German *keibe*, "carrion," or from the Yiddish word *kibosh*, meaning 18 pence. Regarding the latter, it's said that bidders at small auctions *put the kibosh on* other bidders, forced them out, by jumping their bids to 18 pence. Dickens first recorded the phrase in his *Sketches by Boz* (1836). Two women are fighting in the East End of London and a young playboy shouts to one of them, "Hooroar, put the kye-bosk on her, Mary!"

kick against the pricks. This expression is from Greek literature. Meaning "to show opposition to those in power," it refers to cattle kicking because they are being driven by someone pricking them with a sharp stick.

Kickapoo joy juice. A humorous term for any cheap liquor, *Kickapoo joy juice* remembers the Algonquin Kickapoo Indian tribe formerly resident in Pennsylvania, Ohio, and Wisconsin, but now living in Oklahoma and numbering about 800. The Kickapoos weren't notorious drinkers; their name just seemed right for the alliterative phrase. Before the Civil War a *Kickapoo ranger* meant a violent pro-slaver in Kansas. American cartoonist Al Capp gave the expression *Kickapoo joy juice* wide currency in his comic strip "Li'l Abner."

kick her (him) in the heart and you'll break your leg (foot). A phrase I have heard describing any hard-hearted person, someone stonehearted, cold, and pitiless.

kick it up a notch. Make something, especially a recipe, a little more intense, better, more flavorful, hotter, etc. The expression is used frequently by Emeril Lagasse, host of the *Emeril Live* television cooking show when he prepares a recipe. It may have its origins in cooking, possibly deriving from a cook turning up the heat a notch on an oven's thermostat.

kickoff. Today, to kick off an event means to start it. The phrase has obviously been influenced by American football, where the kickoff begins the game, but it more likely comes from soccer, in which there is a similar kickoff. *Kickoff* is first recorded in 1855, long before the first American football game.

kicks; get a kick out of. Cole Porter's "I Get a Kick Out of You" isn't the source of this expression, though nowhere are the words put to better use. The phrase goes back to the turn of the century and was first used to describe the effects of liquor or

drugs, not love. The case for drugs is strong, for the related expression *to get a charge out* of something derives from addicts' use of *charge* for the injection of a narcotic. *Kicks*, anything that gives one a thrill or satisfaction, comes from the same source as the phrase.

kickshaws. Tidbits of food, trifles of small value. The word, spelled *kickshaws*, was used by Shakespeare in *Henry IV, Part II*, but had formerly been spelled *kickhose*. The confusion is understandable when we realize that the word is merely a corruption of the French *quelque chose*, "something," which comes from the Latin *qualis causa*, "of what kind."

kick the bucket. A suicide who stands on a pail, slips a noose around his neck and kicks the pail, or bucket, out from under him would be the logical choice for the origin of this old slang term meaning to die. However, some etymologists say the phrase comes from an entirely different source. Slaughtered hogs, their throats slit, used to be hung by their heels, which were tied to a wooden block and the rope then thrown over a pulley that hoisted the animals up. Because hoisting the block was similar to raising a bucket from a well, the wooden block came to be called a "bucket," and the dying struggles of the hogs kicking against this "bucket" supposedly gave birth to the phrase. There are other theories, however, and this old expression—it may date back to the 16th century—must be marked "of uncertain origin."

kid. *Kid* is an adaptation of the Old Norse *kio*, also meaning the young of a goat, and seems to have come into the language in about 1200. The word was applied to the young of certain other animals not long after, but isn't recorded for a young child until 1599, as low slang, though it is now standard English. Since *kid* can mean a child or a young goat, *to kid* came to mean to hoax in early-19th-century England, to make a child or goat of someone.

kid-glove orange. The mandarin orange or tangerine, so called because you can break the skin and peel it without using a knife or staining the fingers.

kidney bean. The haricot bean takes its name from the French *haricot*, which derived from the Nahuatl Indian *ayacotl* for the bean; it is better known as the *kidney bean* for its shape, resembling a kidney.

kike. One respected authority offers the surprising theory that this vulgar, offensive term of hostility and contempt, often used by anti-Semites, offends not only persons of Jewish descent but the Italians and Irish as well. The *Random House Dictionary of the English Language* suggests that it is "apparently modeled on *hike*, Italian, itself modeled on *Mike*, Irishman, short for Michael." In other words, the deliberately disparaging term painfully illustrates the transfer of prejudice from one newly arrived immigrant group to the next. This view runs counter to the prevailing theory, however. Mencken and others, including *Webster's*, believe that the word "derived from the 'ki' or 'ky' endings of the surnames of many Slavic Jews." Neither theory offers absolute proof. See DAGO; HARP; WASP; WELSH.

Kilkenny cats. See FIGHT LIKE KILKENNY CATS.

killed with (by) kindness. Shakespeare recorded this expression first in *The Taming of the Shrew* (1596) and Thomas Heywood later wrote a play *A Woman Killed with Kindness* (1603). The words, meaning to destroy or harm by excessive kindness, may be much older. There is a story that the Athenian lawmaker Draco, a popular man despite the stern DRACONIAN laws he imposed, was literally killed with kindness. While he was sitting in the theater at Aegina in about 590 B.C., other spectators hailed him by throwing their cloaks and caps in tribute. So many landed on Draco that he smothered to death.

killer instinct. It is said that when former heavyweight champion Jack Dempsey fought, all he thought of was killing his opponent. In any case, the expression *killer instinct* seems to have been coined in the 1920s after Dempsey's beatings of Jess Willard, Georges Carpentier, and Luis Firpo. From boxing the term was extended to all areas of life, though no major dictionary records this very common expression.

killer ship. A killer ship is a ship of any size on which "death has been caused by her sea behavior"; for example, if someone falls overboard or to the deck from aloft; if there is a fatal accident aboard of any kind; or if she rams another ship and causes death. The expression dates back to at least the 19th century.

killer whale; orca. The killer whale (*Orcinus orca*) is technically a dolphin, but its relative the dolphin is its favorite food. Orca, as it is also called, has been dubbed the king of the sea and is certainly the sea's king of ferocity. Killer whales will leap out of the water onto Arctic ice to catch seals and walruses, and packs of them often attack and kill huge whales many times their size. Among the most intelligent of all marine animals, they are just as greedy and vicious. The creatures have been known and feared since earliest times and take their scientific name from the Latin *orca*, meaning the same.

killie. The *killie*, often caught by children in shallow water, is a minnow-like fish of several species often used as hook bait for bigger fish. The word is short for *killfish*, which comes from the Dutch *kille*, "channel or stream," plus *visch* or fish, and is first recorded in 1814. See MINNOW.

killing fields. The term is used today for any place where a horrific mass execution has taken place, often of civilians during or just after a war. *Killing fields* was first recorded in the *New York Times* in 1983 in reference to Pol Pot's murderous Khmer Rouge killing of 3 million Cambodians a decade earlier. A year later, the graphic film *The Killing Fields* gave the phrase a permanent place in the language of war.

killing no murder. The phrase, holding that assassination can sometimes be condoned, was originally the title of a pamphlet urging the killing of Oliver Cromwell (1599–1658). Written in 1657 by Royalist Edward Sexby (d. 1658) the pamphlet is ironically dedicated to Cromwell: "The true father of your country; for while you live we can call nothing ours, and it is from your death that we hope for our inheritances." Sexby tried to kill

Cromwell, narrowly failed, and was imprisoned in the Tower of London, where he died.

kill the fatted calf. When the Prodigal Son returns home in the biblical story (Luke 15:23) his father prepares a great feast for him saying: “Bring hither the fatted calf and kill it.” The story gives us the old expression *to kill the fatted calf*, to make a sumptuous feast to welcome someone.

kill the people! Thelma Ritter, playing a maid, says this to Bette Davis before she goes on stage in the classic American film *All About Eve* (1950). It is apparently a phrase, like break a leg! (qv), that means good luck in theatrical circles, though I suspect it is not much used today.

kill the ump. Umpires were often the targets of rocks, soda bottles, and tomatoes in the early days of baseball, and were frequently assaulted on and off the field by players and fans. Things got so bad that it was suggested that umpires be put in protective cages suspended over the field. As the following little ditty written in 1886 illustrates, fans of the day, much as now, claimed that umpires couldn’t see a foot in front of them: “Breathes there a fan with soul so dead,/ Who never to the ump hath said:/ Yer blind, you bum!” This charge so infuriated National League president Thomas Lynch, a former umpire, that in 1911 he had a committee of oculists test the vision of all the umpires in the league. The committee reported that every umpire had 20–20 vision or better. Was *kill the ump* ever more than an idle threat? Several minor league umpires did indeed lose their lives on the diamond over close calls. And in 1911 one Patrick Casey, a convicted murderer at Nevada State Penitentiary, was granted the customary last request. Casey wanted to umpire a baseball game before he died and so a game was arranged on the prison grounds and he was named umpire. When the game ended, he was executed.

Kilroy was here. No catchphrase has ever rivaled Kilroy since it appeared on walls and every other available surface during World War II. It was first presumed that Kilroy was fictional; one graffiti expert even insisted that *Kilroy* represented an Oedipal fantasy, combining “kill” with “roi” (the French word for “king”). But word sleuths found that James J. Kilroy, a politician and an inspector in a Quincy, Massachusetts shipyard, coined the slogan. Kilroy chalked the words on ships and crates of equipment to indicate that he had inspected them. From Quincy the phrase traveled on ships and crates all over the world, copied by GIs wherever it went, and Kilroy, who died in Boston in 1962 at the age of 60, became the most widely “published” man since Shakespeare. James Kilroy wrote this about the coinage in the *New York Times Magazine* (Jan. 12, 1947): “On December 5, 1941, I started to work for Bethlehem Steel Company, Fore River Ship Yard, Quincy, Mass., as a rate setter (inspector) . . . I was getting sick of being accused of not looking the jobs over and one day, as I came through the manhole of a tank I had just surveyed, I angrily marked with yellow crayon on the tank top, where the tester could see it, ‘KILROY WAS HERE.’”

kimchee. Korea’s traditional kimchee is a very spicy fermented mixture of cabbage, onions, and often fish, highly seasoned

with horseradish, garlic, ginger, and red pepper. There are several kinds, the most celebrated being kakutaki kimchee. The dish is often prepared in November and buried in the ground in large earthen jars to preserve it throughout the cold months. South Korean troops fighting in Vietnam had to be supplied with kimchee to bolster their morale, for a Korean meal without it is virtually unthinkable—there is even a Korean proverb saying, “We can live a whole year without meat, but without kimchee we can hardly live a week.” Many foreigners, however, find that kimchee burns their palates and complain that it has a strong, unpleasant odor.

Kim’s game. A parlor game in which the memory capacity of the players is tested. A number of objects are quickly shown to the participants, and they try to remember as many as they can, writing down the answers. The game is similar to one the eponymous hero plays in Rudyard Kipling’s novel *Kim* (1901), generally considered his masterpiece.

kindergarten. That young children should be taught according to their natural instincts, by stimulating and creating interest, is an accepted view today in educational circles. But when Friedrich Wilhelm August Froebel (1782–1852) put such ideas into practice in the world’s first kindergarten (“children’s garden”), which he founded in Blankenburg, Germany in 1837, his “Froebel teaching methods” met with wide disapproval. The German schoolmaster and former forester nevertheless remained convinced that preschool education was essential, devoting his life to establishing kindergartens and training teachers for them. Pleasant surroundings, the use of play, the study of nature, and the importance of the family were stressed in these schools. Froebel’s *The Education of Man* (1826) set forth his views, which were strongly influenced by an unhappy childhood both at home and in school.

Kinderhook. Old Kinderhook, the nickname of President Martin Van Buren, is the basis for the universal expression o.k. Old Kinderhook’s birthplace, Kinderhook, New York, in turn, takes its name from children. When Henry Hudson anchored the *Half Moon* near this hook of land, he was greeted by Indian children, *Kinder* in German and Dutch. See also o.k.

kindertransport. A German phrase that translates as “children’s transport.” It refers to the 10,000 children, three-quarters of them Jewish, who were sent by their parents to Britain to escape Nazi persecution before World War II. The film *Into the Arms of Strangers* (2000) tells their stories.

kind-hearted. Miles Coverdale, who translated the Bible from German and Latin versions in 1535, coined the term *kind-hearted*: “O give thanks therefore unto the Lord; for he is kind harted.” Coverdale in the same year also invented *noon-day*, for the middle of the day. He had as a precedent the earlier “noontime.”

kinesics (body language). This modern branch of linguistic science studies body motion as related to speech, taking its name from the Greek *kinein*, “to move.” There are said to be over 700,000 distinct movements of the arms, hands, fingers, and face “by which information can be transferred without speech.” The term *body language* was introduced in the 1970s.

King Bomba. *King Bomba* is an expression rarely used today, but might well be revived. The original King Bomba was Ferdinand II (1810–59) of Naples, who reigned from 1830–59. At one point in his reactionary reign the treacherous monarch held 40,000 political prisoners. He was called King Bomba for his ruthless bombardment of Sicilian cities in 1848, in which much damage was done, many atrocities committed, and many innocent people hurt. King Bombas, whatever their motives, have been all too common.

King Cole. The “merry old soul” of nursery rhyme fame is in British tradition a king of the third century. The monarch is mentioned in *Historia Regum Britannica* (1508) by Geoffrey of Monmouth, who says nothing about him calling for his pipe, bowl, or fiddlers three, and whose veracity, in fact, has been questioned. Old King Cole may also have been the grandfather of the Emperor Constantine. The city of Colchester doesn’t derive from his name, as is often stated, but is probably named from the Latin *colonia*.

King Cotton. A term once much used to personify the economic supremacy of cotton in the South. Wrote R. H. Stoddard in his poem “King Cotton” (1861): “Ye slaves of curs forgotten/ Hats off to great King Cotton!”

king devil weeds. In the late 19th century several European yellow-flowered hawkweeds of the genus *Hieracium* were inadvertently introduced into northeastern North America. Although showy and handsome, they became such troublesome weeds that they were rechristened “king devil weeds.” The two worst species of them, orange hawkweed and mouse-eared (yellow-flowered) hawkweed, are regarded by experts as among the 50 worst garden weeds, but they are beautiful to behold when flowering en masse in a meadow. They are called hawkweed because juice from their stems applied to the eyes was once thought to give humans the fabled sight of hawks. See PURPLE CROWN VETCH.

king fruit. See DURIAN.

King James Bible. A translation of the Bible, also called the Authorized Version, which was published in 1611. It was named after England’s King James I, who supported the translation. Forty-seven revisers worked on the version, though not James I, who was an active author. Jamestown, Virginia, was also named for King James.

King Kong. Slang for a big, monsterlike man, or for a powerful cheap wine, after the eponymous apelike beast in the movie *King Kong*. But King Kong of Skull Island was not really 50 feet tall and 60 feet broad, as RKO publicists claimed. Kong was created by genius model maker Willis H. O’Brien, who used six different models of the gorilla in the 1933 movie, which was first called *The Beast*, then *The Eighth Wonder*. Each of these miniature models, 18 inches high, had moving parts that enabled the gorilla to be filmed performing various scenes. When Kong scales the Empire State Building with actress Fay Wray in hand, for example, an 18-inch model of the beast holds a six-inch model of Miss Wray as he ascends the clearly phallic symbol. For close-ups, however, O’Brien did create a giant King

Kong head 18 feet high, which was covered with hair from the skins of 80 bears, according to a studio PR release. Its eyes were about a foot long, its nose two feet long, and its six-foot-long mouth was big enough to hide several men inside. These hidden technicians operated controls that could move Kong’s eyes, mouth, and neck. Later, in 1976, a remake of *King Kong* featured a 40-foot-high model of Kong (built at a cost of \$24 million) that required 20 technicians to operate. However, the film was a financial flop, even though it won an Academy Award for visual effects

King of Dullness. After Shakespearian scholar Lewis Theobald (1688–1744) exposed Alexander Pope’s errors as an editor of Shakespeare, the great poet retaliated by making him the King of Dullness in his *Dunciad* (1728). In the final edition of the satire, however, Pope enthroned Poet Laureate Colley Cibber (1671–1757) as king of Dullness, and Cibber has been stuck with his monarchy and monicker ever since. A rather rude, vain man with more talent for acting than writing, Cibber nevertheless was made poet laureate in 1730. Pope disliked his work, his appointment as laureate, and his literary criticism of Pope. See also NAMBY-PAMBY.

king of papers. A name often given to The Japanese *gampi*, a lustrous, vellumlike paper made from the wild thyme shrub. It was long made by Eishiro Abe, who lived well into his 90s and was designated a Japanese national treasure for his art. He made over 176 different kinds of paper by hand, using a complicated process that includes pressing and drying for a night and a day.

King of the High C’s. A nickname for the Italian tenor Luciano Pavarotti (b. 1935) for his unmatched ability early in his career to hit high notes. Pavarotti is responsible for a renewed interest in opera in the U.S. His notable operatic roles include Radames in *Aida*, the duke of Mantua in *Rigoletto*, and notably Calat in *Turandot*, featuring his signature aria “Nessun Dorma.”

King of the Planets. Jupiter, so named because it is the largest of the planets. Jupiter honors the supreme god of Roman mythology, who was called Jupiter or Jove and corresponded to the Greek god Zeus. The other planets are Mercury, Venus, Earth, Mars, Saturn, Uranus, Neptune, and Pluto.

King Ranch. The biggest of the cattle ranches. Started in 1851 by Irish immigrant Richard King who by the end of the 19th century owned over 1 million acres on the Texas Gulf Coast. Today the King Ranch is over 1.25 million acres, half the area of Delaware. At one time a Texas ranch called XIT (after its brand) covered 3 million acres.

Kings County; Queens County; Richmond. Since we have covered New York and the Bronx, it’s only fair that the origins of New York City’s remaining three counties, or boroughs, be touched upon here. Kings County, better known as Brooklyn, is named for England’s king Charles II; Queens County honors Catherine of Braganza, Charles’s queen; and Richmond, better known as Staten Island, is named for King Charles’s son, the duke of Richmond. Since New York County, or Manhattan, was named for King Charles’s brother James, duke of York, that

leaves only the BRONX of New York City's four boroughs that isn't named for Charles II's royal family.

King's English. Several English kings didn't speak English, but this term has nevertheless meant "proper English, English as it should be spoken," since the mid-16th century. It was used by Shakespeare in *The Merry Wives of Windsor* (1600) and three centuries earlier Chaucer wrote "God save the king, that is lord of this language."

king's evil. *The king's evil* is an old name, sometimes encountered in literature, for scrofula. Scrofula, a constitutional disorder of a tubercular nature, characterized by swelling of the lymphatic glands in the neck, was believed to be susceptible to cure by the royal touch. France's Louis IX is thought to be the first king to employ the practice, which soon spread to England, where Macaulay records that Charles II touched 92,107 persons during his reign. The practice ended with Queen Anne, Dr. Johnson being one of the last persons to be "touched" by royal hands in 1712.

King's Mountain Day. October 7, the anniversary of the day in 1780 when 900 "mountain men" defeated a much larger British force at King's Mountain, South Carolina.

King's peace. See QUEEN'S (OR KING'S) PEACE.

king's ransom. Just how much is a king's ransom? When Richard the Lion-Hearted was kidnapped by Duke Leopold of Austria while returning from the Third Crusade, he was ransomed for nearly \$5 million in today's dollars, a sum that almost bankrupted England when added to the cost of the Crusade. How far back this expression for "a large sum" goes is anybody's guess. We only know that the first recorded mention of it dates from about 1470. Marlowe used the term in his masterpiece *Faust* (ca. 1590).

King Tut. Egyptian King Tutankhamen's tomb was discovered in 1922 by George E. S. M. Herbert, earl of Carnarvon, and Howard Carter in the valley of the tombs of the kings at Karnak. Tutankhamen, heretic king of the XVIII dynasty in the 14th century B.C., lay swathed in a gold sarcophagus surrounded by a fortune in jewels, furniture, and other relics that threw much light on Egyptian history. His difficult name was condensed to *King Tut* and his immense wealth caught the public's imagination. *Don't act like King Tut* or *he thinks he's King Tut* became expressions applicable to any person pretending to be much more than he was, acting as if the world should pay him homage as it did King Tutankhamen.

King Tut's Golden Typewriter. The most imaginative of Canadian newspaper editor Charles Langdon Clarke's ingenious hoaxes—which included "the unearthing of the whale that swallowed Jonah"—was the story he printed in 1922 after KING TUT was discovered. KING TUT'S GOLDEN TYPEWRITER, Clarke headlined the tale, and he went on to describe the instrument, never bothering to explain how a typewriter could possibly type hieroglyphics. The story seemed so authentic (even though the typewriter was discovered in the 19th century) that rival newspapers picked up on it before Clarke admitted to the hoax.

Kinkaid. American Congressman Moses Kinkaid (1854–1922) saw his Kinkaid Act granting homesteads to Nebraska settlers passed into law in 1904. The homesteaders who settled these 640-acre grants under the provisions of the act were called Kinkaiders by the newspapers of the day and his name passed from the pages of the *Congressional Record* to the dictionaries.

kinnikinnik. Deriving from a similar but unrecorded word "in the Cree or Chippewa dialects of Algonquian" that means literally "what is mixed," *kinnikinnik* was first a nontobacco mix of dried sumac leaves, ground dogwood bark, and other ingredients that the Indians and early American settlers used. Later tobacco was often added to the mixture. *Kinnikinnik* is also the longest palindromic word in English and can have 12 letters when spelled *kinnik-kinnik*, as it sometimes is.

Kirby pickle. The Kirby pickle familiar to gardeners is a name applied generally to all pickling cucumbers and definitely is named in honor of a man. It bears the name of the developer of a once-popular pickling cucumber called the *Kirby*—Norvel E. Kirby of Philadelphia's I. N. Simon & Son seed company, now out of business. Simon introduced the Kirby in 1920 and it remained popular until the mid-1930s, when more disease-resistant types replaced it. Its name remained, however, as a designation for all pickling cucumbers.

kirk; the Auld Kirk. *Kirk* can mean a church in Scots. It is also the name, mainly British, of the official Church of Scotland (Presbyterian), and can be used as a verb meaning to attend church. The Auld Kirk is an informal name for the Church of Scotland.

Kismet; Kiss me, Hardy. *Kismet* comes from Persian *quismet*, meaning "division, portion, lot," which in turn derives from Arabic *quismah*, meaning the same. One's lot or portion is one's fate or fortune, and this became the meaning of the word when it came into English as *kismet* at the beginning of the 19th century. Some writers believe that Lord Nelson said, "Kismet, Hardy" (not "Kiss me, Hardy") to Captain Thomas Hardy as Nelson lay dying after the Battle of Trafalgar, meaning it was his fate to die after his great victory. Other authorities, including Partridge, find this theory improbable.

kiss. See A VELARIC INGRESSIVE BILABIAL STOP.

kiss-cow. This unusual term, probably obsolete, can be traced back to early 19th-century England, where a *kiss-cow* was someone who would suffer any indignity for a consideration, a sycophant who would "kiss the cow for the milk."

kissing bug. There are several species of venomous blood-sucking Hemiptera of the family Reduviidae called kissing bugs, these assassin bugs inflicting sharp bites on the lips that cause painful sores. There was, in fact, a great kissing-bug scare for two or three months in the U.S. in 1899, with many people bitten by such bugs while they slept. The insect seems to have inspired the punning *kissing bug* for a person who kisses a lot. This is an American expression, not Canadian as Partridge claims, first recorded in the late 1890s, and perhaps first applied to naval hero Richmond "Kissing Bug" Hobson, who was showered

with kisses by so many women that his name, in the form of HOBSONIZE, took on the meaning “to kiss.” Hobson, however, was always the kisser (first recorded in England in 1827), not the kisser. See CHAGAS’ DISEASE.

kissing-comfit. This name was long ago given to the candied root of the sea holly (*Eryngium maritimum*) because it is used as a lozenge to sweeten the breath and was once popular with young lovers.

kissing cousin. *Kissing cousins* is a southern Americanism that dates back before the Civil War. The term first implied a distant blood relationship, but today more often means a very close friend who is considered family. It still is used in its original sense of a relative far removed enough to permit marriage, “an eighth cousin” in the North.

kissin’ wears out—cookin’ don’t. Pennsylvania Dutch saying.

kiss-me-quick. In New England and the southeastern part of the U.S. a kiss-me or a kiss-me-quick was a ridge or depression in a roadway, one that caused a carriage to jolt and possibly throw a girl into her young man’s arms. The usage is recorded as late as 1945 in the Southeast and may still be used there to a limited extent. See WHAM, BAM (THANK YE, M’AM).

kiss-me-quick-before-mother-sees-me. The kiss-me-quick-before-mother-sees-me was a bonnet young women wore in the mid-18th century, a small hat set far back on the head that was considered daring for the day. It was also called a *kiss-me-quick*.

kiss-my-arse latitudes. *Kiss-my-arse latitudes* is used mostly in the British merchant marine for the “home stretch,” when a ship is close to port and the crew cares about nothing but getting ashore and tends to ignore orders—especially if the crew has been paid.

kiss my ass. The phrase probably dates back at least as far as Chaucer, whose *Miller’s Tale* (c.1389) uses it in a literal sense: “But with his mouth he kiste hir naked ers.”

kiss of death. Mafiosi did not invent this expression with their custom of kissing someone full on the mouth to indicate he will soon be killed. The term’s probable origin is in the kiss of betrayal Judas gave to Christ. The expression has been commonly used in the U.S. since at least the 1920s.

kiss of life; kiss of death. American English hasn’t anything as colorful as the British term *kiss of life* for mouth-to-mouth resuscitation. The lifesaving method’s name is based on *kiss of death*, which originally referred to the kiss Judas gave Jesus in the garden of Gethsemane and now refers to any traitorous action.

kit and caboodle. See WHOLE KIT AND CABOODLE.

kit-cat. Though pastry cook Christopher (Kit) Catt—or Cat or Catling—created little mutton pies, he nevertheless travels

in the company of Titians of the art world. Kit Catt’s mutton delights were called kit-cats and some leading Whigs of the early 18th century enjoyed them so much that they formed a club on his pastry shop premises in London. However, when Sir Godfrey Kneller was commissioned to paint 42 portraits of the Kit-Cat Club’s prominent members, who included Steele, Addison, Congreve, and Walpole, a problem soon presented itself. The rooms were so low in height that Kneller had to restrict his portraits to three-quarter size, each canvas measuring exactly 28 by 36 inches. Such canvases were called kit-cats, after the club in which they hung and the term is still used for any portrait of these dimensions representing less than half the length of the sitter but including the hands.

kith and kin. Though it dates back to the 14th century or earlier, this expression is still heard today. It means acquaintances and relatives, *kith* being Middle English for acquaintances, friends, or neighbors.

kiting. See FLY A KITE.

kitsch. *Kitsch* derives from the German *kitschen*, “to throw together a work of art,” which dates back to the 19th century. The Viennese novelist Hermann Broch has been credited with adding the noun *Kitsch* to the vocabulary of literature, in its sense of “art or literature judged to have little or no aesthetic value, especially when produced to satisfy popular taste.” The Czech novelist Milan Kundera adds that “Kitsch translates the stupidity of conventional ideas into the language of beauty and feeling.”

kitty. Willard Espy offers the following humorous explanation for *kitty*, the pot to which poker players contribute, in *Thou Improper, Thou Uncommon Noun* (1978): “[The name] Catherine turned to Kate, and Kate to Kitty. Some Kittys were no better than they should be, and Kitty became one of the many epithets applied to prostitutes. Spirited Johns—not yet lowercased for a prostitute’s customer—used to amuse themselves by tossing coins into the laps of Kittys, as poker players today throw their antes or bets into a kitty in the hope of getting a winning hand. The sequence cannot be proved—no one will talk—but it seems plausible.” See JOHN; NO BETTER THAN SHE SHOULD BE.

Kitty Hawk. See FLYING MACHINE.

Kiwanis. Upper Michigan Indians used the term *keewanis* to mean “make oneself known” or “to express oneself.” When a Detroit club promoting good fellowship and civic interests was founded in 1915, a local historian suggested that this Indian word be used for the club name. Feeling that “self-expression” suited the purpose of the club, which of course later became a national organization, members adopted the name with its spelling slightly changed to *Kiwanis*.

kiwi. *Kiwi*, like MAKO, is an English word that comes to us from the Maori language used by the Polynesian natives of New Zealand. *Kiwi-kiwi* is the Maori word for the flightless bird called a *kiwi* (*Apteryx australis*), which is often termed an *apteryx* in crossword puzzles. *Kiwi* is also slang for a non-flying

member of the Royal Air Force and Australian slang for a New Zealander. *Kiwi* fruit (*Actinidae sinensis*), also known as the Chinese gooseberry and *Yangtao*, is native to China but called *kiwi* because most of the fruit sold in American and British markets is grown in New Zealand.

klaxon. *Klaxon* was coined in 1908 from the Greek *klazein*, “to make a noise,” by the inventor who patented the first electrically operated horn on an automobile. When the patent expired, this trademark passed into the dictionaries without a capital as a word for any horn.

kleptocracy. A new word first applied to political leaders in the Congo (c. 1990s) who stole money from their own government and those doing business with their government.

klieg eyes; klieg light. Hollywood movie stars adopted the dark glasses that became their trademark because of the intense *klieg light* introduced to stage and studio early in this century. These bright incandescent lights, rich in ultraviolet rays, caused a form of conjunctivitis marked by burning of the eyeballs, redness, tearing, and photophobia that was common to all who worked under the arcs. In order to protect their *klieg eyes* the stars, as well as lesser lights, took to wearing “shades,” and have traditionally done so ever since. The *klieg light* was the invention of the German-born brothers Kliegl, John H. (1869–1959) and Anton T. (1872–1927), who immigrated to the United States and in 1897 established the firm of Kliegl Brothers, pioneering in the development of lighting equipment and scenic effects for the stage and early motion pictures. The light they invented was first called the *Kliegl light*, which proved too difficult to pronounce, their real name modified like those of many of the actors who worked with them.

Klingon. Etymologists have missed including this word in any straight or slang dictionary I’ve seen. The word has been used to describe a brutal, barbaric, warlike person for some 30 years now, ever since the term was invented for the TV series *Star Trek*. Therein the Klingons are debased warlike beings from the planet Klingon, who look no better than they act. See also BEAM ME UP, SCOTTY.

Klondike. The Canadian Klondike gold rush in the early 20th century brought with it boom times when many great fortunes were made. For Canadians and Alaskans a period when everyone is doing very well financially is termed a *Klondike*, as in “It’s a real Klondike here this year.” See CANFIELD.

klutz. Widely used in the U.S. since about 1918, *klutz* was originally a Yiddish term, deriving from the German *Klotz* for “a log or block of wood.” It describes a clumsy, graceless person; a bungler, a fool. *Klutz*, however, can also refer to an intelligent person who is badly coordinated. To *klutz* means “to botch up or bungle.”

KMIT. When foreign reporters questioned him about the name of a new ministry the Bolsheviks formed after the Russian Revolution Leon Trotsky told them it was named KMIT. Newspapers all over the world called the agency by these ini-

tials until someone found out what they stood for. Trotsky had been playing a contemptuous joke on the reporters and their capitalist employers. KMIT stood for the Yiddish *kuss mir im tuches*, “kiss my ass.”

knackered; knacker. A *knacker* is someone who purchases old livestock and slaughters them mainly for their hides and meat. This chiefly British slang, probably of Scandinavian origin, yielded the mainly British adjective *knackered*, which means tired out, beat, exhausted, as in Pat Barker’s novel *Double Vision* (2003): “Up early, across to the studio by eight, five hours unbroken work that generally left her knackered for the rest of the day . . .”

knapsack. *Knapsacks* were originally small sacks that German soldiers carried containing their rations, the word deriving from the German *knappen*, “to eat.”

knee-high to a grasshopper. *Knee-high to a toad*, first recorded in 1814, was the original of this Americanism, and *knee-high to a mosquito* as well as *knee-high to a frog* appeared before *knee-high to a grasshopper* came on the scene some 37 years later. But *knee-high to a grasshopper* has outlasted all the others, including the later *knee-high to a duck*. See also GRASSHOPPER.

knee jerk. Used to indicate an automatic, unthinking response to anything, *knee jerk* (as in *knee-jerk liberal*) is one of those relatively few terms that can be traced back to its exact origins. In 1948, the distinguished etymologist Sir Ernest Gowers proudly gave us the expression’s medical roots: “Some 70 years ago a promising young neurologist made a discovery that necessitated the addition of a new word to the English vocabulary. He insisted that this should be ‘knee jerk,’ and ‘knee jerk’ it has remained, in spite of the effort of ‘patellar reflex’ to dislodge it. He was my father; so perhaps I have inherited a prejudice in favor of homemade words.” Sir Ernest’s contention seems to be borne out by the *O.E.D.*, which gives as 1878 the first recorded use of the term, in Sir Michael Foster’s *Text-book of Physiology*: “Striking the tendon below the patella gives rise to a sudden extension of the leg known as the ‘knee-jerk.’” The first figurative use of the term isn’t known, but it seems to have been soon after the phrase’s coining.

kneewalkin’ drunk. Very drunk indeed. “He wasn’t unconscious but he was kneewalkin’ drunk.”

knew him when. American poet and journalist Arthur Guiterman (1871–1943) popularized this expression, meaning “I knew him before he became rich or prominent,” in a parody he wrote of Whittier’s lines (in *Maud Muller*) “of all sad words of tongue or pen,/ The saddest are these: ‘It might have been.’” Wrote Guiterman, in *A Poet’s Proverbs* (1924): “Of all cold words of tongue or pen,/ The worst are these, ‘I knew him when.’”

knickers. In England women’s *panties* are called *knickers*, which take their name from a man. When in 1809 Washington

Irving burlesqued a pompous guidebook of his day with his two-volume history of New York, he decided to capitalize on the name of Harmon Knickerbocker, head of Albany's old, prominent Knickerbocker family, and chose the pseudonym Diedrich Knickerbocker. Soon Irving's humorous work became known as *Knickerbocker's History of New York*, but it wasn't until English caricaturist George Cruikshank illustrated a later edition in the 1850s that the Knickerbocker family name was bestowed on the loose-fitting, blousy knee breeches still worn today. In that English edition Cruikshank depicted the alleged author and his fellow Dutch burghers wearing voluminous breeches buckled just below the knee. His drawings of this style that the early Dutch had worn were widely copied for boys' knee pants, baggy golf trousers four inches longer, and even women's silk bloomers—all dubbed *knickerbockers*, after the family Irving had immortalized. See DON'T GET YOUR KNICKERS IN A TWIST.

knight errant. See ARRANT THIEF.

Knights of the Bath. The order is so named because those inducted into it had to take a bath before their initiation, though the last knight to go through this purification ceremony did so at Charles II's coronation in 1661. It is one of the nine Orders of Knighthood of the British Empire. These, in order of precedence, are Knight of the Garter; Thistle; St. Patrick; Bath; Star of India; St. Michael; St. George; Indian Empire; Royal Victorian Order; and British Empire. Knights of the Bath are divided into Grand Cross of Bath (G.C.B., the first class); Knight Commander of the Bath (K.C.B., the second class); and Companion of the Bath (C.B., the third class). George I of England revived this ancient knightly order in 1725.

K-9 Corps. The army's K-9 Corps, organized during World War II, was originally called D4D, an acronym for "Dogs for Defense." But the much cleverer and more memorable *K-9 Corps*, a pun on "canine," quickly replaced the former term.

knish. A widely popular dish from Jewish cookery, consisting of dough stuffed with potato, cheese, or meat, etc., and baked or fried. The Yiddish word probably comes from the Ukrainian or Polish *knysz*, which, in turn, is of Turkish origin. Leo Rosten in *The Joys of Yiddish* (1968) also gives *knish* as a "vulgarism" for the vagina, and the American poet A. D. Fiske used "Anne Knish" as a pseudonym in *Spectra* (1916), a poetry collection he wrote with Harold Witter Bynner spoofing poetry of the day.

knock (throw) for a loop. To hit someone or something very hard, to defeat, to astonish or upset. This Americanism has been traced back to the early 1920s. Loop may have originally referred to the loop maneuver made by an airplane, but that is only a guess. The expression has several colorful variations, including *knock for a row of ashcans*, *knock for a row of milk cans*, *knock for a row of Chinese pagodas*, and, best of all, *knock for a row of tall red totem poles*.

knock down, drag out (fight). This expression for a rough, anything-goes fight is first recorded in 1827 British boxing cir-

cles, before there were many rules governing prizefighting. Today it is used figuratively for any all-out fight.

knocked into a cocked hat. To *knock someone into a cocked hat* means to beat him badly in a game of skill. The expression derives from the old game of ninepins, where three pins were arranged in the form of a triangle (like a three-pointed cocked hat). When all pins but these three were knocked down, the set was said to be knocked into a cocked hat.

knocker up. In the early 1800s people without servants had little more than a rooster or birdsong to wake them for work in the morning. This created a need for upknocking, a new (now obsolete) job category featuring the knocker-up, a man who went from house to house awakening all those who had paid him to do so. There may be some connection here with the British knock up (qv).

knock galley west. No one has been able to explain why a ship's galley or the compass point west have anything to do with this expression meaning "to knock into smithereens." They may not. The words may be a corruption of the English dialect term *collyweston*, which in turn derived from the town of Colly Weston in Northamptonshire, a town reportedly given to excessive violence. Colly Weston itself may have been named for a local, violent troublemaker named Colly Weston. All speculative maybes once again.

knock it off. Some authorities believe that these words meaning to stop work or any activity derive from a standard order in the days when galleys were rowed to the rhythm of mallets on a block. *Knock off* in those days was the signal to rest.

knock-kneed. *Knock-kneed*, having knees that knock together in walking, the opposite of bandy-legged, is, surprisingly, not an ancient term. At least it isn't recorded until 1807, in the statement that "children . . . from bad nursing become knock-kneed." See also BANDY.

knock, knock! First recorded in about 1936, this appears to have originally been an American catchphrase used by someone about to tell a dirty story. Then it came into use by someone entering a room without knocking. Perhaps it is from the old schoolboy joke "Knock! Knock! Who's there? Grandpa. Whad-dya want . . ." But one writer claims it may come from the Porter's scene in *Macbeth* (Act II, Scene iii): "Knock, knock, knock! Who's there . . . Knock, knock! Who's there, in the other devil's name . . . Knock, knock, knock! Who's there? . . . Knock, knock! Never at quiet! . . ."

knock on wood. Why do we say *knock on wood* and tap wood or our heads after declaring that some calamity has never happened to us? The superstition is an old one and has many possible explanations, none sure. It may be of pagan origin, deriving from the practice of rapping on trees to ask protection from friendly spirits who were believed to reside inside. Or it could be a Christian superstition similar to touching wooden crucifixes or rosary beads. One theory even holds that the practice comes from games like hide-and-seek in which players who succeed in touching wood are safe from capture. A last, far-fetched possibility is that the superstition is linked to a verse in

the sixth chapter of Galatians: "God forbid that I should glory save in the cross of our Lord Jesus Christ." You will be forgiven any vainglorious boast, according to this story, if you quickly recall the wooden cross Christ carried.

knockout blow (punch). A boxing blow that knocks its receiver unconscious. In scientific terms, according to the *New York Times* (September 15, 2005), "when a fighter is hit on the tip of the chin, his head swivels with such force, his brain vibrates inside his skull. That movement stretches nerve tissues in the brain, which then causes a concussion." The same source quotes a pugilist describing how a knockout blow *feels*: "It feels like you die and then come back to life. It doesn't hurt. It's just very dark, very black, and then you wake up. It could be 20 seconds or 30 seconds that go by, or it could be 10 minutes. You don't know how much time passes." See CHIN.

knock out of the box. To cause a pitcher to be removed from the game by the successful hitting of the opposing baseball team. Today there is no such box to be knocked out of, the pitcher pitching from the pitcher's mound. In baseball's early days, in the mid-19th century, pitchers stood in a marked box that they had to throw from, hence the expression. The term was first recorded in 1891 and is today used outside of baseball to mean "to defeat or eliminate."

knock them in the aisles. See LAY THEM IN THE AISLES.

knock the spots off. The origins of this Americanism for "to defeat decisively" are not clear, but some word sleuths believe it is from the world of boxing, reasoning that the expression is first recorded in a sports story and—admittedly reaching on this one—speculating that the spots in question were freckles figuratively knocked off the face of a badly beaten fighter. However, the expression could have its roots in the sharpshooting of 19th-century American marksmen, who could shoot the pips (or spots) out of a playing card nailed to a tree a considerable distance away.

knock up. In England *to knock up* has been standard English for "to arouse by knocking at the door" or "to visit" since at least 1663, when Samuel Pepys, in his *Diary*, recorded constables knocking him up. In American slang, however, *to knock up* has since about 1920 meant to make a woman pregnant, usually outside of marriage.

knots. Knots measure the speed of a ship at sea, each knot equaling a nautical mile (6,076 feet), which is slightly longer than a land-measured mile (5,280 feet). Since six nautical (geographical) miles are about equal to seven statute (land) English miles, a ship making 12 knots is actually traveling 14 land miles. A ship's speed came to be measured in *knots* because the log line thrown overboard to record distance was marked off by knots and had been used to measure a ship's speed since early times. In its nautical sense *knot* is first recorded in 1633.

know a hawk from a handsaw. Shakespeare made this phrase immortal in *Hamlet*, but its origins may never be established. The expression means "to be smart, to know one thing

from another" and is usually employed negatively today: *he doesn't know a hawk from a handsaw*. *Handsaw* in the phrase is said to be a corruption of *hernshaw*, a heron (thus it is literally "I know a hawk from a heron"), but there is no proof of this. The expression is quoted nowhere before Shakespeare and he could have been referring to the handsaw carpenters use, as he did in another play. Similarly, *hawk* here could refer to the tool called a hawk, which has long been used by plasterers.

know beans. See DOESN'T KNOW BEANS.

know-how. An Americanism coined about 1830 that means "knowledge of how to do something, expertise." It was first recorded in an 1859 issue of *Spirit of the Times* featuring a story in which one character tells another to charge "fifty cents for the killing" (of livestock) "and fifty cents for the know-how."

know like a book. "Complete understanding" is the meaning of *to know like a book*, and the Americanism obviously dates from times when there were few books in most homes. Those that were present, like the Bible, were often committed to memory, hence the familiar expression. *To know one's book*, a British saying, means something different—"to know one's best interest, to have made up one's mind." *To speak by the book*, is to speak meticulously, and *to speak or talk like a book* is to speak with great precision, usually pedantically.

know-nothing. Pledged to complete silence about their organization, members of New York's Order of the Star-Spangled Banner told anyone who inquired about their secret society: "I know nothing about it." Thus as early as 1850 they were called Know-Nothings. Later, when they merged with other groups into the national American Party in 1856, this stock reply became "I know nothing in our principles contrary to the Constitution." A strange statement for a party that was anti-Catholic, whose members vowed to vote only for native Americans, and which supported a 25-year residence requirement for citizenship, among other reactionary principles. The Know-Nothings achieved considerable success in local contests, but fared badly in the 1856 national elections, even with ex-President Millard Fillmore as their candidate and they ceased to be a political power after 1860. However, their name lives on as a synonym for any reactionary political group or individual that appeals to base emotions. Other political parties have fared just as badly over the years and one wonders which modern party will go the way of the Doctrinaires, the Intransigents, and the Know-Nothings. See DOCTRINAIRE; INTRANSIGENT.

know one's cans. Cowboys on the range in the 19th century were usually starved for reading matter and often read the labels on the cook's tin cans, learning them by heart. A tenderfoot could always be distinguished because he didn't know his cans. The expression isn't recorded in the *Dictionary of Americanisms* but is given in Ray Allen Billington's *America's Frontier Culture* (1977). Wrote Edna Ferber in *Cimmaron* (1930): "The back and the side doors of the dwelling . . . littered with the empty tin cans that mark any new American settlement, and especially one whose drought is relieved by the thirst-quenching coolness of tinned tomatoes and peaches. Perhaps the canned tomato, as much as anything else, made possible the settling of the vast West and Southwest."

know one's onions. Onions aren't widely known by variety, though the Vidalia and Hawaiian varieties are among several that are well known. Therefore, to speak of someone "who knows his apples," a later variant on the above phrase, would be more appropriate, as there are hundreds of apple varieties. *Know one's onions* was first recorded in 1922 and means to be astute in one's field. An old joke has the esteemed lexicographer C. T. Onions, a longtime editor of the *Oxford English Dictionary*, as the eponym behind the phrase.

know the ropes. Though common in horse-racing circles, these words are almost surely of nautical birth, referring to the complex system of lines on full-rigged sailing ships that bewildered recruits had to master before they became seasoned seamen. Dana used the term in *Two Years Before the Mast* (1840), indicating that it was an old expression he'd heard.

know thy opportunity. See SEVEN SAGES OF GREECE.

know thyself. See SEVEN SAGES OF GREECE.

know what's what. Wrote Samuel Butler in *Hudibras* (1663): "He knew what's what, and that's as high/ As metaphysic wit can fly." To know what is what is still to be a shrewd person, to know what is going on. The phrase is thought to derive from the old question in logic *Quid est quid?* "what is what," one which someone would have to be very shrewd to answer.

know which side one's bread is buttered on. This useful phrase dates back close to 500 years. It was first recorded in John Heywood's *Proverbs and Epigrams* (1562) in the form, "I know on which side my bread is buttered." Both early and later versions mean the same: "I know what's in my own best interest."

knuckle down. Marble players may have been responsible for this expression, which dates back to 17th-century England. One rule in the game provides that a player must shoot directly from the spot where his marble lands, which requires that he put his knuckles on the ground, or "knuckle down." Since marbles was a popular pastime with adults as well as children at the time, *knuckle down* possibly came to express earnest application to any job. However, the bones of the spinal column were also known as "knuckles" in the 17th century, and the expression may therefore derive from the act of "putting one's back into a task."

knuckle under.

He that flinches his Glass, and to Drink is not able.
Let him quarrel no more, but knock under the table.

This anonymous verse, from the late 17th century, suggests that our expression to *knuckle under*, or "to admit defeat," derives from an earlier British phrase, to *knock under*. People in taverns apparently rapped on the under side of the table when beaten in an argument. But another equally reasonable theory connects the term with an ancient form of submission to one's conqueror. As a token of submission a person fell to his knees. Since *knuckles* in Anglo-Saxon and Medieval English meant the knee joints as well as the joints of the fingers, this would account for the phrase.

koala. The name of the arboreal marsupial animal native to Australia is first recorded in 1808. The furry, gray bearlike creature with huge ears is also, appropriately, called the Australian bear. *Koala* itself was borrowed from the aboriginal name of the small sluggish animal. *Phascolarctos cinereus* is its scientific name. See BANDICOOT; KANGAROO.

Kodak. After inventing this camera in 1888, George Eastman claimed that he intentionally set out to coin a short, easy-to-remember name for it that could not be stolen. He chose *k* as the first and last letters in the word because *k* was the first letter in his mother's family name. The rest of the word came by experimenting with other letters in combination with the two *ks*, though some have suggested that he might have had Alaska's Kodiak Island in mind.

Koh-i-Noo. See MOUNTAIN OF LIGHT.

konpyutaa. The Japanese borrowing and alteration of the English word *computer*, one of the many computer terms borrowed from English. As with all Japanized terms, the English expression can be written in the katakana alphabet or written directly in Roman letters.

kook. A relatively new word for a strange or crazy person that dates back to the early 1950s, when it was apparently fashioned in Hollywood from the much earlier CUCKOO. "Kookie" was the name of a popular TV series actor of the time. Today both *kook* and *kooky* are heard more frequently than *cuckoo*.

Korean conflict; Korean emergency. See POLICE ACTION.

kosher. In *The Joys of Yiddish* (1968) Leo Rosten calls *kosher* "the most resourceful Yiddish word in the English language" and gives 10 meanings for it, ranging from its original meaning of "fit to eat, because ritually clean according to Jewish dietary laws," to "legitimate, legal and lawful," as in "Are you sure this deal is kosher?" Probably the most widely used of Yiddish words in English (excepting names for things, such as *matzo*, *bagel*, etc.) *kosher* derives from the Hebrew *kasher*, "fit, proper, permissible." See YIDDISH WORDS IN ENGLISH.

kowtow. The Chinese *k'-o-t'ou*, which we spell *kowtow* (rhymes with "know how"), means "knock your head"—that is, to kneel and bow before a superior by touching the floor with your forehead. The Mandarins required the *k'-o-t'ou* of their "inferiors," and adventurers in China at the turn of the century brought back the word if not the practice. To *kowtow* to someone has come to mean to show obsequious behavior, everything but banging one's head on the floor.

K.P. K.P. became the abbreviation for *kitchen police*, those soldiers selected to peel potatoes, wash pots and pans, clean grease traps etc., in World War I, not World War II, as is commonly believed. The verb *police*, meaning "to clean up an area," is first recorded in 1893, and may be a corruption of *polish*.

K-rations. You may have wondered what the "K" stands for in this well-known term for emergency army field rations

containing a nutritional meal. The “K” isn’t some mystery nutrient. It honors the American physiologist, Ansel Keys (b. 1904), who invented K-rations.

Kreutzer Sonata. Beethoven dedicated his famous violin sonata (op. 47) to violinist and fellow-composer Rodolphe Kreutzer in 1803 and it has since been universally known as the *Kreutzer Sonata*. The musician, a Frenchman of German extraction, was professor of violin at the Paris Conservatoire and conductor at Vienna’s Imperial Theater. A prolific composer with some 40 operas, numerous concertos and sonatas, and 40 unsurpassed études for the violin to his credit, Kreutzer died in 1831, aged 65. Tolstoy’s novella, *The Kreutzer Sonata* (1890), takes its title from the Beethoven work.

Kris Kringle. After nearly a century and a half this synonym for Santa Claus is still heard, even though the words have nothing at all to do with Santa. The term originated in America in about 1830 and was spelled *Krisskring’l* before taking its present form. *Krisskring’l* stemmed from a misunderstanding of the word *Christkindlein* used by German immigrants, its meaning not “Santa Claus” but “the Child in the Manger,” or “the little Christ child.”

Kristallnacht. The night of November 9–10, 1938, when German Nazis attacked Jews and their property. *Kristallnacht* means “night of crystal” in German and the word itself remains a reminder of the glass broken in the store windows by the violent crowd in the streets. See POGROM.

krummkake. Relatively few Scandinavian words have directly entered American English. An example is *krummkake*, a large, light, and very thin cookie made in an appliance similar to a waffle iron. The hot thin cookie is rolled around a cone-shaped tube until it hardens and is then filled with whipped cream. Krummkakes are known nationally today due to their inclusion in many cookbooks. This name has nothing to do with *crumbs*, deriving from the Norwegian *krumkake*, meaning the same.

kudos. *Kudos* is acclaim or praise for an exceptional achievement and derives from the Greek *kydos* “magical glory.” Etymologically, the word *kudos* is singular, as in “Kudos is his for his brilliant translation,” or in “He received kudos from everyone on his towering performance.” The word came into academic use in the early 19th century and began to be used popularly in the 1920s.

kudzu. The vine that ate the South. See BEAUTIFUL NUISANCE.

Ku Klux Klan. A secret organization that arose in the South after the Civil War to preserve white supremacy. From 1865 to 1877 the name was often applied to all secret political organizations with the same purpose. The term derives from the Greek *kyklos*, circle, plus *klan*, a variant spelling of *clan*. Since 1915 the Klan’s official name has been the Knights of the Ku Klux Klan and the organization has directed its words and actions against Jews, Catholics, and the foreign-born as well as African-Americans. An old story holds that the name of the organization is based on the sound of rifle-bolt being operated.

kulak. Millions of kulaks were exterminated by the Communists in the years following the 1917 Russian Revolution because these small farmers refused to collectivize their farms. These farmers had been named *kulaks* before the revolution from the Russian for “fist,” because they were said to be “tight-fisted,” cheap employers who took advantage of farm workers.

kumquat. The Chinese dialect *gamgwat*, “gold citrus fruit,” is the origin of the name of this shrub of the genus *Fortunella*, which yields golden citrus fruits, with sweet rinds and an acid pulp, that are used chiefly for preserves. See FORTUNELLA.

kung-fu. See CONFUCIUS SAY.

kunzite. One of the few precious stones named after a person, this transparent, lilac-colored gem takes its name from George Frederick Kunz (1856–1932), an American authority on gems and jewelry who worked many years for Tiffany & Co. in New York City and wrote several books on the subject, often serving as a government expert. Kunzite is a variety of the mineral spodumene, which occurs in prismatic crystals. See TIFFANY GLASS.

kvetch. To complain, gripe: “She’s always kvetching about something.” Formerly the Yiddish word mainly meant to squeeze or push out, from the German *quetschen*, “to squeeze,” but it has been heard mostly in the above sense since about 1965.

Kwanzaa. A word coined in 1966 by Dr. Maulana Ron Karenga, who invented the holiday, which takes place from December 26 to January 1. *Kwanzaa* derives from Kiswahili *matunda ya kwanzaa*, “first fruits,” and is based on African harvest festivals. The secular holiday celebrates the African-American cultural heritage.

L

L. Our twelfth letter has been traced to the early Phoenician and Hebrew alphabets, where it was drawn as an oxgoad or *lamed*.

£. The symbol for the British pound comes from the Latin word *libra*, just as our *lb.* for pound does. *Libra* in this case is part of the Latin phrase *libra pondere*, which means a pound by weight.

labanotation. This little-known word describes an important notation system that amounts to a graphic shorthand for dance, enabling a choreographer to delineate every possible movement of the human body individually or in ensemble. Introduced by its creator Rudolph Laban in his book *Kinetographie Laban* (1928), *labanotation* was the first practical method capable of scoring the various complex movements and positions of an entire ballet or musical comedy. Unlike the old numbered-footprint plans familiar to us all, the Laban system amounts to a complete break with tradition. It dispenses entirely with the musical five-line horizontal staff, using a three-line vertical staff that is divided in the center. Code symbols on each side of the line indicate foot and leg movements, while symbols in parallel columns outside the lines pertain to all other body gestures. Every slight movement from toe to head can be noted, as well as their direction, timing, and force, and by grouping together the staffs for individual dancers an entire work can be “orchestrated.” Laban did for the dance what Guido d’Arezzo did for musical notation almost a thousand years before him. Prior to his system dancers had to rely on their memories of performers who had appeared in classical ballets, but now almost exact revivals can be given and ballet composers can finally adequately copyright their creations. Born in Pressburg (Bratislava) on December 15, 1879, the German dance teacher and choreographer died in London on July 1, 1958.

labor. Adam Smith in *The Wealth of Nations* (1776) was the first person to use the word *labor* in its modern sense of work done to supply material wants. Before that, the word had the

same meaning as its parent, the Latin *labor*, which means toil, distress, and trouble.

labor of love. A *labor of love*, a work undertaken for the love or liking of it more than for any compensation, has been a common English expression since the 17th century, and it is much older, deriving from the biblical “Your worke of faith and labour of love” (1 Thess. 1:3).

Labrador. The peninsula of northeastern Canada and the Labrador retriever dog take their names from Lavrador of Terceira, who in 1498 piloted John Cabot’s ship to the area.

labyrinth. Though there were mazes before his, the Labyrinth, “double-headed axe,” of Greek legend built by the artificer Daedalus to confine the man-bull Minotaur may give us our word *labyrinth*. The only way out of this maze was through the help of a skein of thread. Later, the king of Crete imprisoned Daedalus and his son Icarus in the Labyrinth. Daedalus made wings for them and they escaped, but Icarus flew too close to the sun, melting the wax binding the feathers to his wings, and fell to his death. The story also gives us the words *daedal*, anything cleverly made, and *daedalist*, for an air pioneer.

lac. An Anglo-Indian word meaning 100,000, especially 100,000 rupees. *Lac* or *lakha* derives ultimately from the Sanskrit *laksha* meaning the same. Kipling used the word to mean a great many—“Oh lakhas of my friends.”

lace-curtain Irish. American immigrants of the middle-class, or aspiring to it. They were often successful and sometimes rich and loved their expensive lace curtains. The term is first recorded in about 1930. See SHANTY.

laced-mutton. A prostitute or courtesan wearing a fine dress. Shakespeare uses the term in *Two Gentlemen of Verona* (1592). See also MUTTON DRESSED AS LAMB.

Lachryma Christi. A strong smooth Italian wine that was originally *lacrima di Cristo* (tear shed by Christ), but was Latinized to *lachryma Christi*. Ernest Weekley compares the name to the German *liebfraumilch*, a white Rhine wine that translates as “Virgin’s milk.” Referring to the golden “tears of Christ,” David Pilgrim, in his novel *The Grand Design* (1944), has a character say: “’Tis a strange name for a wine grown on the slopes of Vesuvius, which is as near to hell as anyone can get in the world.” See LIEBFRAUMILCH.

lackadaisical. A lackadaisical person, a lethargic, listless, lazy person, was originally someone given to sighing “lackaday, lackaday,” a shortening of *alack-a-day* (“woe is the day”). Laurence Sterne may have coined *lackadaisical* from the earlier *lackaday*; anyway, he first recorded the word in his *Sentimental Journey* (1768).

lackey. Military commanders of the Moors were called *al-kaid*, “chief,” but when the Spanish captured these commanders and their men in regaining control of Spain during the Middle Ages, they enslaved them and made them servants. From their once proud name, corrupted to *alcayo* in Spanish, came our English word for the lowest of servants.

lackluster. *Lackluster* originally referred only to a lack of luster or brightness in the eyes; in fact, we don’t find it to describe anything else lackluster until Dickens’s time. The word was invented or first recorded by Shakespeare in 1600: “. . . looking on it with lack-lustre eye, he says . . .”

laconic. “If we enter Laconia, we will raze it to the ground,” an Athenian herald (or Philip of Macedon) is said to have announced to the Laconians. “If,” was the reply he received from the sententious Spartan magistrates. The Lacadaemonians were all supposed to be so parsimonious with words, and were noted in the ancient world not only for their stoic Spartan lifestyle but also for their short, brusque, and pithy way of speaking and writing, which was appropriate for their outward lack of emotion. Not only in Sparta, the capital, but throughout the country youths were taught modesty and conciseness of speech, taught so well that the word *laconic* comes to us by way of Latin from the Greek *Lakonikos*, meaning “like a Laconian.” A *laconic* person is generally one who expresses much without wasting words, who is terse, to the point, and usually undemonstrative.

la cover girl. A French borrowing of the American English term *cover girl* (a beautiful or attractive young woman whose photograph often appears on magazine covers). One of the hundreds of such borrowings used by the French despite the protests of language purists.

lacrosse. Lacrosse is probably the only sport whose name has religious significance. When French priest Pierre de Charlevoix saw Algonquin Indians playing their game of *baggataway* in 1705, he thought that the webbed sticks they used resembled a bishop’s cross and called the game lacrosse, which eventually supplanted the Indian name. While playing lacrosse “to celebrate George III’s birthday” on June 4, 1763, Ojibwa and Sac Indians propelled the ball over the walls of Fort Michillmacki-

nac and rushed in on the pretext of retrieving it, seizing weapons hidden by their squaws and massacring the garrison.

lad; lass. Many authorities cite the Middle English *ladde*, “serving man,” as the source for *lad*, “boy or young man.” Others, however, suggest the Anglo-Saxon proper man’s name *Ladda* as the word’s ancestor. *Lass* may be a truncated form of *laddesse*, the feminine of *ladde*, but it could derive from the Swedish *losk kona*, “an unmarried woman.”

ladanum. A fragrant plant whose gum is used in making perfume and medicines. The gum is culled by pulling leather or cloth through the shrubs in the heat of day, the gum or resin adhering to the strips. Another method is to collect the gum from the beards of browsing goats. *Ladanum* is confused with *myrrh* in the Bible.

Ladas. See FAST AS LADAS.

la-di-dah. Used to describe a very affected person or a very affected action. Sometimes heard as *la-ti-dah*, the expression, according to Eric Partridge, dates back to the mid 19th century and was popularized by a British music hall song of 1880 with the line: “He wears a penny flower in his coat, La-di-da!”

Ladies and gentlemen. *Ladies and gentlemen*, as a form of address to a mixed audience, used to be the reverse: It was traditional to say “gentlemen and ladies.” The change, putting ladies first, came in early America and first took place in the North, not in the chivalrous South.

Ladies’ Mile. A. T. Stewart’s Cast-Iron Palace, built in 1862, was the first store encountered when walking north along New York’s *Ladies’ Mile*. At the top of this stretch of lower Broadway and Sixth Avenue between 9th and 23rd Streets in Manhattan was Stern Brothers. Many early department stores, such as R. H. Macy’s, Lord and Taylor, and B. Altman, lined the elegant, cobblestoned streets of this shopping district, which played host daily to exquisitely clad ladies in flowing gowns and feathered bonnets who alighted from their horse-drawn carriages and floated toward the grand emporiums. Women promenaded in their best here up until the end of the 19th century, when the shopping district began to move uptown, but many of the old buildings that housed the stores remain. The women who shopped there may have inspired the phrase *window-shopping*.

ladies of the line. We have all heard of the self-explanatory *ladies of the night*, for prostitutes, but why *ladies of the line*? The expression comes to us from the American West, where prostitutes did business in tents and jerry-built shacks stretched out in lines at the outskirts of towns, mining camps, or railroad yards.

ladies of the night. This American euphemism for prostitutes was popular in the 1870s and is still used today. Interesting collective nouns for such ladies include: *a horde of hookers*, *a jam of tarts*, *a wiggle of whores*, *a flourish of strumpets*, *an essay of Trollope’s*, *an anthology of pros*. See BRIDES OF THE MULTITUDE.

Ladik; Ladikiyeh; Latakia. Every mother should have a boy like Seleucus, founder of the Syrian dynasty. The emperor is said to have named *five* cities after his mother Laodice in the middle of the third century B.C. This able Macedonian general of Alexander the Great tried hard to build his kingdom in the way that Alexander built his, founding Greek colonies governed along Persian lines wherever he could. Three of the at least five cities Seleucus Nicator named for his mother remain standing today, their names now pronounced *Ladik*, *Ladikiyeh*, and *Latakia*. Latakia, a seaport of Syria opposite the island of Cyprus, is the most prominent of these and is noted for its Latakia tobacco. (For the story of a city Seleucus Nicator's *grandson* named after his Laodice, his wife in this case, see LAODICIAN.)

la dolce vita. Italian for “the sweet life,” a self-indulgent life of pleasure as typified by director Federico Fellini's 1960 movie *La Dolce Vita*, which chronicled the lives of rich Italians and was popular throughout the world.

la donna e mobile. A famous melody from Giuseppe Verdi's opera *Rigoletto* (1851). The melody translates as “The woman is flighty.” The opera was abused by many critics as “uninspired” and “puerile and queer” for some 10 years before being generally recognized as a masterpiece, though the public loved it from the first time it was performed at La Fenice in Venice. See also VERDI.

lady. See LORD.

ladybird. See LADYBUG.

Lady Bountiful. British playwright George Farquhar (1678–1707) wrote his last and best play, *The Beaux' Stratagem*, on his deathbed with the help of a small gift of 20 guineas from an actor friend. A former actor himself who quit the stage after accidentally wounding an opponent in a dueling scene, Farquhar maintained his cheerful disposition to the end and left behind a genial realistic comedy when he died in poverty at the age of 29. Lady Bountiful, a wealthy character in his play, has come to represent any benevolent lady who contributes much of her wealth to a community (see BONIFACE). The expression is today used mostly satirically, as in “She's always playing Lady Bountiful.”

ladybug; ladybird. In *ladybug*, *lady* refers to “Our Lady,” the Virgin Mary, in whose honor the beneficial insect was named—not to the erroneous belief that all ladybugs are female. These brightly colored beetles of the family *Coccinellidae*, which feed on aphids and other destructive garden pests, are known in England as *ladybirds*, due to a British aversion to the word *bug*, which is strongly associated there with buggery, or sodomy. Some American southerners favor the British word, which is why Claudia Taylor Johnson, our former first lady, bears this familiar southern nickname.

lady chapel. See LADY'S-MANTLE.

lady fern. See LADY'S-MANTLE.

Lady Godiva. Strategically arranging her long golden tresses, Lady Godiva rode through Coventry, relieving herself of her

clothes and inhibitions in order to relieve her people of oppressive taxation. According to the traditional story, Lady Godiva (ca. 1040–ca. 1080) had jokingly agreed to ride naked through the crowded streets at high noon if her husband, Leofric, earl of Mercia and lord of Coventry, and one of the most powerful nobles in England, would lift burdensome taxes he had imposed on the townspeople. At least Leofric *thought* she was joking. To the delight of his twice-blessed tenants, the earl had to keep his promise when his wife took him at his word. He removed the levy almost as soon as she had removed her clothes and displayed herself in the marketplace. *Lady Godiva*, a title more humorously applied to any undraped woman, was apparently the benefactress of several religious houses in the reign of Edward the Confessor, and founded the Benedictine monastery at Coventry. Her real name was Godgifu, and her legendary ride, as famous as and more interesting than that of Paul Revere, was first recorded in *Flores historiarum* by Roger of Wendover (d. 1237), who quoted from an earlier writer. See also PEEP-ING TOM.

lady-killer. People have been humorously calling men “credited with a dangerous power over women” *lady-killers* since the early 19th century, though such *lady-killing* has been with us much longer.

lady of pleasure. James Shirley's play *The Lady of Pleasure* (1635) may have suggested this term for a prostitute, but the lady in the play was not a shady lady. Shirley's play was about “the cure of a wife's desire for a life of fashionable folly by her husband's feigning to engage in gambling and intrigue.” Nevertheless, *lady of pleasure* took its present meaning not long after the play was produced.

lady's-mantle; lady chapel; lady fern. A *lady's-mantle* (*Alchemilla*) is a flowering plant whose large, serrated, and many-lobed leaves resemble “the mantle of Our Lady,” and a *lady chapel* is a chapel attached to a large church and dedicated to the Blessed Virgin. The delicate *lady fern* (*Athyrium filix-femina*) does not refer to the Virgin Mary, as is commonly believed, taking its name from the legend that possession of its seeds could render a woman invisible.

lady's-smock. One of Shakespeare's favorite flowers, its Latin name (*Pratensis*) meaning “growing in meadows.” Wrote the Bard:

Daisies pied, and violets blue,
And Lady-smocks, all
silver white, and Cuckoo birds
of yellow hue do paint
the meadows with delight.

Lady with the Lamp. Florence Nightingale, the greatest of war nurses, is generally considered to be the founder of modern nursing. Born in the Italian city for which she was named, “the Lady with the Lamp” spent her childhood in England. At 17, she is said to have heard the voice of God calling her to service, and several years afterward she decided that she was meant to be a nurse. Despite the objections of her wealthy parents, she embarked upon a career in public health, in spite of the fact that nursing at the time was a disreputable profession

filled with prostitutes and worse. World fame came to her when she and 38 other nurses offered their services to the British army in the Crimean War (1854). Overcoming the initial suspicion of the troops, sometimes working as long as 20 hours a day, she became venerated as the *Lady with the Lamp* because she unfailingly made rounds of the wards each night to check on her patients. When the Lady with the Lamp died on August 13, 1910, aged 90, she was buried in the family plot in a small country churchyard in Hampshire, in a private service in which six British soldiers carried her coffin to the grave. The name *Lady with the Lamp* for Florence Nightingale was coined by Henry Wadsworth Longfellow in his poem "Santa Filomina" (1858), in which he referred to her as "A Lady with a lamp."

Laelia. These tropical American orchids, comprising about 35 species and prized for their showy flowers, may be named for Gaius Laelius, a Roman statesman and general who died about 165 B.C., or for his son Gaius Laelius, a Roman consul nicknamed Sapiens, the wise. Both father and son were soldiers and excellent orators, the father the best friend of Scipio Africanus Major, and the son famous for his friendship with Scipio Africanus Minor. The younger Laelius was also a close friend of Cicero, who wrote that he and Scipio used to like to go on holidays to the seaside, "where they became incredibly childish and used to collect shells and pebbles on the beach." Sapiens probably had a hand in writing the plays of Terence; his wide learning was admired throughout Rome. Another candidate English botanist John Lindley may have had in mind when he named *Laelia*, was a vestal virgin of that name, in allusion to the delicacy of the flowers. The vestal virgins, six in number, were daughters of the best Roman families, trained in youth to serve the goddess of hearth and home in her temple in Rome, where they prepared sacrifices and tended a perpetual sacred fire. Their vows included obedience and chastity, and after serving Vesta for 30 years they were allowed to leave the temple and marry, which they seldom did in practice. The virgins were influential, even having the power to pardon criminals, but if they broke the vows of chastity the penalty was a public funeral followed by burial while they were still alive. Needless to say, most remained vestal virgins.

laff box; laugh track. See TELEPROMPTER.

lagan; findals. These two terms aren't nearly as popular today as FLOTSAM AND JETSAM, but they have as long a history. *Lagan* refers to jetsam lying at the bottom of the sea but which is usually marked with a buoy in order to be found again by the ship's owner. *Findals* refer to *any* goods found in the sea, including an abandoned ship or derelict.

lager beer. See BOCK BEER.

lagniappe. *Lagniappe*, a "bonus gift" often given by merchants to customers, derives from the American Indian *yapa*, "a present to a customer," which came into Spanish first as *la napa*, "the gift." Pronounced *lanyap*, the word has also been used in Louisiana to mean small-scale bribery.

lah. In Singapore, where English is one of three official languages (along with Malay and Chinese), *lah* is an expression similar to

American English *like* or *you know*. Whereas an American might say, "She's, like, very tall," a Singaporean speaking English might say, "She's, lah, very tall." *Lah* is said to come from a Chinese dialect, but its use is considered to be a sure way to identify a Singaporean or a Malaysian.

laissez faire. The 18th-century Physiocratic school of French economists were free-traders who wanted all custom duties abolished. Their motto "*laissez faire, laissez passer*" ("Let us alone, let us have free circulation for our goods") later became the term for the principle of noninterference by government in commercial affairs, for allowing things to look after themselves.

Lake Hubbs. Marine scientist Dr. Carl L. Hubbs has more marine namesakes than anyone in history. Besides the lake above, 22 species of fish, one genus and one species of lichen, one bird, one whale, one crab, two insects, two mollusks, three species of algae, and a research institute are named after this scientist. In addition, a minnow and a lantern fish are named *Lauri*, for his wife.

Lake Itasca. Lake Itasca, the source of the Mississippi River, was originally named Lake Veritas Caput, "the true source," by one of the explorers who found it. But his companion thought this Latin name too long and cut it in half, to *Lake Itasca*.

Lake Superior. Lake Superior is aptly named, for it is the world's largest freshwater lake, with a surface area of 31,800 square miles.

Lake Webster. The body of water with the longest name is located near Webster, Massachusetts, and is called Lake Webster by almost everyone. However, its official, Indian-derived name is composed of 43 letters and 14 syllables, translating into English as "You fish on your side; we fish on our side; nobody fish in the middle." Should anyone want to try pronouncing it, the lake is called Chargoggagoggmanchaugagoggchaubunagungamaug. See D (RIVER).

La La Land. A humorous name for Los Angeles (L.A.), California, since the early 1980s. In lower case to be living in *la la land* means to be far removed from reality.

lallapalooza. See LOLLAPALOOZA.

Lama; Dalai Lama. The Buddhist priest of Tibet and Mongolia takes his name from the Tibetan *blama* (with a silent *b*), which derives from *bla*, superior, or spiritual teacher. The Dalai Lama is the highest priest of the Lamaist religion and is named *dalai* (ocean) because he is known as the ocean of compassion. He is also called the Grand Lama or Sacred Lama. In 1959, the current Dalai Lama fled from China to India; 30 years later he was awarded the Nobel Peace Prize. It is said that when a Dalai Lama dies, he reappears as a child.

Lamanite. The name given to American Indians in the *Book of Mormon*, which represents them as descendants of the Jewish prophet Laman, who is said to have led them to America from Jerusalem in 600 B.C.

Lamarckism. The chevalier de Lamarck, Jean-Baptiste-Pierre-Antoine de Monet (1744–1829) proposed a theory of evolution holding that species evolve by inheriting traits acquired through the use or disuse of body parts, this concept known as the inheritance of acquired characteristics. His theory in some ways anticipated Darwin's in 1859. Lamarck, who was France's royal botanist and custodian of the Jardin des Plantes, wrote many natural history books. He died in poverty, his eyesight gone and his work discredited. See DARWINIAN.

lamb. Somehow the Greek *elaphos*, for “deer,” is the basis for our words *elk* and *lamb*, two animals with little else in common. No one has satisfactorily explained this linguistic curiosity, but apparently the Greek word for deer, or one of its derivatives, was mistakenly thought to mean lamb somewhere along the way.

lambert. The son of a poor tailor and largely self-educated, Johann Heinrich Lambert nevertheless managed to win fame as a physicist, philosopher, mathematician, and astronomer. The German scientist, though he died of consumption in 1777 when only 49, made important discoveries in many fields. In mathematics Lambert proved the irrationality of pi and developed several trigonometry concepts, while in philosophy his *Neues Organon* (1764) pointed out the importance of beginning with experience and using analytical methods to prove or disprove theories. Lambert also made valuable contributions in electrical magnetism, mapmaking, and meteorology; several theorems in astronomy bear his name. It is for his work in physics on the measurement of light intensity and absorption that his name is honored in the dictionaries, the *lambert* being the unit of brightness in the metric system.

lambkill. As you might expect lambkill is poisonous to sheep. The plant is also known as sheepl Laurel.

Lamb of God. See GOD'S SEAL PUP.

lame duck. Before the adoption of the 20th Amendment to the Constitution in 1930, any president or congressman who was defeated for election in November elections still held office until the following March 4. These elected officials were called lame ducks because they were mostly ineffectual, although they could help pass legislation embarrassing to an incoming administration. The “Lame Duck Amendment” eliminated them, but lame-duck appointments to diplomatic posts, etc., can still be made by a defeated, outgoing president. No one is sure where the term *lame duck* comes from. It originated about 125 years ago and may have been suggested by the British *lame duck*, “a person who has lost all his money, who has been financially crippled on the stock exchange.” On the other hand it could be native born, a qualification of the American phrase *a dead duck*, an outgoing congressman being not quite dead yet, merely “lamed” until March 4 of the following year.

lampoon. The French *lampons*, “let us drink,” is said to be the source of our *lampoon*, for a sharp or scurrilous satire ridiculing someone or something. The source suggests the coarseness and crudity of the form, which dates only from the 17th century and is used more in graphic caricature than in prose or

verse—although there are notable examples in literature, including Pope's attack on Hervey in *Epistle to Arbuthnot*. Libel laws today make it much more difficult for a writer to really lampoon someone.

landlubber. Six centuries ago *lubber* meant “a clumsy lout,” a word sailors originally applied to green seamen who didn't know a sail from a rudder. Eventually the term was lengthened to *landlubber* and applied to all nonsailors.

Land of Blood. A nickname for Kentucky since the early 19th century, when it was famous or infamous for its many Indian wars.

land-office business. Prior to the Civil War, the U.S. government established “land offices” for the allotment of government-owned land in western territories just opened to settlers. These offices registered applicants, and the rush of citizens lining up mornings long before the office opened made the expression *doing a land-office business*, “a tremendous amount of business,” part of the language by at least 1853. Adding to the queues were prospectors filing mining claims, which were also handled by land offices. After several decades the phrase was applied figuratively to a great business in something other than land, even, in one case I remember, to a land-office business in fish.

land of milk and honey. The phrase is from the Bible (Exodus 3:8), promising the Israelites a rich land.

land of Nod. Jonathan Swift, as fond of puns as the next man and better at them than most, is responsible for this expression meaning “the land of sleep.” In his *Polite Conversation* (1738) Swift wrote that he was “going into the land of Nod,” that is, going to sleep. The *land of Nod*, which suggests the nodding of a sleepy head, was a pun on the “land of Nod” or “land of wandering,” the place where Cain was exiled after he slew Abel (Gen. 4:16).

Land of Perpetual Youth. A nickname for Florida, an allusion to Ponce de León's quest for the mythical Fountain of Youth. Many people continue the quest today.

Land of the Bitter Fog. An expression that refers to Baghdad and the fumes and smoke following the detonation of an IED (an improvised explosive device). See IED.

Land of the Golden Hills. A name given by Chinese prospectors to California at the time of the gold rush of 1849.

Land of the Long White Cloud. A translation of the poetic native Maori name for New Zealand.

Land of the Midnight Sun. Norway is generally called The Land of the Midnight Sun, but strictly speaking many areas in high latitudes above the Arctic Circle deserve the name. During the summer in these places the sun never descends below the horizon within the day and does indeed shine at midnight.

Land of the Rising Sun. See NIPPON.

Land of the Sky. A nickname, since at least the early 1800s, for the beautiful Great Smoky Mountains region in North Carolina.

Land of the Wooden Nutmegs. New England, named after the sharp Yankee traders who were said to have sold carved wooden nutmegs (and hams, pumpkin seeds, etc.) for the real thing.

Land sakes alive! Not many people use this old-fashioned euphemistic exclamation of surprise anymore, but many have heard their parents or grandparents say it. Often the phrase was *land sakes!*, *lands sake alive!*, *sakes alive!*, *my lands!*, *good land!*, *land!*, *Lordy!*, *land o' Goshen!*, and *good land a mercy!*

the land up over. See AUSSIE.

lang hame. A Scottish expression meaning the “long home,” that is, one’s grave in the earth, where he or she will reside for a long time. *Lang* is the typical pronunciation and spelling of *long*.

langley. In 1896 Samuel Pierpont Langley, already a celebrated physician and astronomer, constructed and flew the first heavier-than-air model plane. This pilotless steam-driven model traveled a distance of 4,200 feet over the Potomac River and though it included no provision for takeoff or landing, convinced many aviation pioneers that powered mechanical flight was possible. The government appropriated \$50,000 for the inventor to build a full-size craft, powered by a 50-horsepower gasoline engine, which failed in two 1903 test flights. This subjected Langley to great ridicule, but the fault was in the launching apparatus, and the plane was reconstructed and flown successfully in 1914, seven years after Langley’s death. Samuel Pierpont Langley (1834–1906) had a rich and varied career in science. *Langley Field* in Virginia pays tribute to his pioneering aviation work, and his accomplishments in physics are honored by the word *langley*, a measurement unit of solar radiation.

Langtry fever. America was seized by what was called *Langtry fever* in 1882 when the violet-eyed English actress Lillie Langtry first appeared on the American stage. Huge crowds turned out everywhere to see the beautiful Jersey Lily, who was better known for her liaison with the prince of Wales than for her acting ability. The daughter of a clergyman, she married a wealthy aristocrat and became one of the first English society women to act on the stage.

language. The word *language*, first recorded in about 1290, has its roots in the Latin *lingua*, “tongue.” At least 2,796 different languages are spoken on earth, these divided into about 60 families, with Chinese having the most speakers (1 billion) and English the second most (300 million, with an additional 200 million speaking it as a second language). Besides our 2,796 languages on this planet there are some 8,000 dialects or language variants.

language barrier. “He [his language] erects a barrier between himself and his reader,” a literary critic wrote in the late 18th

century. But Oscar Wilde’s quip about British and American English is the earliest mention I can find of the common phrase above. “We and the Americans have much in common,” he observed, “but there is always the language barrier.”

language of flowers. Many flowers and plants symbolize traditional ideas, such as the red rose for love and beauty and the snowdrop for hope (because its blooming indicates that spring will soon be here). The largest collection I’ve found of such symbolisms is found in a rare little book called *Drops From Flora’s Cup* written by Mary M. Griffin in 1845. Here are a handful of over 300 symbolic flowers the book covers.

Allyssum—Worth beyond beauty
 Amaryllus—Beautiful but timid
 Birch tree—Grace
 Blue bell—Constancy
 Crocus—Youthful gladness
 Cypress—Mourning
 Daisy—Innocence
 Honeysuckle—Bonds of love
 Ivy—Friendship
 Laurel—Glory
 Mulberry tree—Wisdom
 Olive branch—Peace
 Primrose—Early youth
 Rose, yellow—Infidelity
 Violet—Modesty
 Yew—Sorrow
 Zinnia—Absence

the language of war is victims. The words of Khalid Sheikh Mohammed, chief aide to Osama bin Laden, who confessed on March 15, 2007, that he was responsible for the horrendous 9/11 terror operation “from A to Z,” plus at least 31 similar operations around the world. “I’m not happy that 3,000 been killed in America,” he said. “I feel sorry even. I don’t like to kill children and the kids. The language of war is victims.” A little later he added: “War start from Adam when Cain killed Abel until now.” He claimed that he himself had cut an American war correspondent’s throat.

langur. This slim-bodied, long-tailed creature is the sacred monkey resident in Indian temples. They are also called *Hanunan*.

lanolin. Liebreich coined *lanolin* in 1885 from the Latin *lana*, wool, and *oleum*, oil. It is fatty matter from wool and is used in making products like soaps, cosmetics, and ointments.

Laodician. The word *Laodician*—usually meaning someone lukewarm or indifferent in religion or politics—derives from the name of a Syrian city. Its ruins can be seen today close to the Gonjele station on the Anatolian railway. Little is known of *Laodicea’s* history, but it was one of the earliest homes of Christianity. Yet the Church of Laodicea grew lazy and indifferent, leading to its chastisement in the Bible. This biblical rebuke led to the word *Laodicean* being applied to all people indifferent to religion, with a Laodicean attitude remaining a major problem to churches today. Ultimately the word came to mean a person

unconcerned about politics or even life itself. The city of Laodicea seems to have been named by Antiochus I after his wife Laodice.

Lapageria. French Empress Josephine, Napoleon Bonaparte's first wife, was born Marie Joséphe Rose Tascher de La Pagerie. A Creole of French extraction, she had been married to Viscount Alexandre de Beauharnais, who was guillotined after the French Revolution, Josephine escaping the blade herself only because of powerful friendships. The empress brought Napoleon much happiness, including two children from her first marriage—Eugène, later viceroy of Italy, and Hortense, who became queen of Holland—but her numerous love affairs caused him to consider divorce several times. On one occasion, it is said, the glass cracked over the picture of Josephine that Napoleon always carried. The emperor turned pale and declared, “My wife is either sick or unfaithful”;—his latter premonition proved true. In any case, Napoleon finally did have his marriage with Josephine annulled in 1809 on the alleged grounds of sterility, and the emperor married Marie Louise of Austria. Josephine lived out her life in retirement at her private retreat, La Malmaison, near Paris, and the emperor continued to consult her on important matters, always having valued her keen mind. She died in 1814, aged 51. An avid botanist as well as an ardent lover (her garden at Malmaison contained the greatest collection of roses in the world), the beautiful Josephine has the monotypic genus *Lapageria*, containing only one species, named for her. This showy Chilean vine of the lily family is among the most attractive climbing vines, its flowers rose-colored, trumpet-shaped, and, unlike Josephine, usually solitary.

La Pasionaria. A nickname, meaning “passion flower” in Spanish, given to the communist Spanish civil war leader Dolores Ibarruri (1895–1975), who was especially famous for broadcasting the slogan *No pasarán* (they shall not pass) from Madrid on July 19, 1936. Strong, passionate women like her are sometimes called La Pasionaria.

Lapp words in English. Even a little-known language like the Lappish spoken by Laplanders has contributed a few words to our English vocabulary, these including lemming and tundra.

larboard. See STARBOARD.

large as life. We owe this popular phrase to one of Thomas C. Haliburton's Sam Slick tales, *The Clockmaker* (1837), in which Sam Slick of Slicksville says of another character: “He marched up and down afore the street door like a peacock, as large as life and twice as natural.” Sam's words became a popular catchphrase in America and still survive in both the original and abbreviated versions.

lariat. Deriving from the Spanish *la reata* (the rope), this term for a long-noosed rope used to catch cattle and horses is first recorded in 1831 in the American West.

lark. A frolic, an escapade, a merry carefree adventure; or something very easy, as in “That test was a lark.” The word probably doesn't come from the vigorous, cheerful actions of

the bird called a lark, as is often stated. *Lark* more likely derives from the Saxon *lac*, meaning “sport.” Nobel Prize-winning novelist Saul Bellow wrote a play entitled *The Last Analysis* (1964), which was a quick failure at the box office. “It started as a lark,” he said, “but it turned out as an ostrich.” See OSTRICH.

larkspur. The lark is noted among birds for its long, straight rear claw or spur. Since the spur-shaped flower of the larkspur resembles the claw, it was given the bird's name. Larkspurs, of which there are some 200 species, are just as commonly called delphinium. See also DELPHINIUM.

Larousse. The famous series of *Dictionnaires Larousse* commemorates the French grammarian and lexicographer Pierre-Athanase Larousse (1817–75). In 1852 Larousse helped found the publishing house that bears his name. He later compiled the 15-volume dictionary and encyclopedia *Grand dictionnaire universel du XIX^e siècle* (1866–76).

larrikin. A chiefly Australian term for a young street hoodlum, one who doesn't usually intend to do serious harm. The word is said to derive from Larry, a pet name for Lawrence, but no one knows why. It might also come from *larrup*, “to beat or thrash.”

larva. One meaning of *larva* in Latin is “a mask.” Linnaeus first used the term as the scientific (yet poetic) term for a caterpillar because, as one writer puts it, “such a creature wears a disguise, the future insect is not recognizable in the present grub, its form a ‘mask’ which will one day be cast off.” See also PUPA.

lasagna. *Lasagna*, often made of wide noodles, cheese, and meat, among other ingredients, is a hearty, delicious Italian dish with a rather disgusting name. Somehow far back in time the Greek word for chamber pot (*lasanon*) became the Latin word for a cooking pot (*lasagna*) and over the years the lasagna gave its name to the common noodle dish cooked in it.

laser. See RADAR.

lass. See LAD.

last-ditch effort. A fight to the very end. The expression may have been coined by English bishop Gilbert Burnet in his *History of My Own Time* (1715), at least the *last ditch* part of it. Burnet wrote: “There was a sure way never to see [Holland] lost, and that was to die in the last ditch.” He was referring to soldiers dying while defending the last ditch of an entrenchment.

Last Frontier State. A nickname for Alaska, which is also called the Sourdough State, the North Star State, the 49th State, the Great Land State, and the Land Up Over (suggested by Australia's nickname, the Land Down Under).

Lasthenia. Among the students who attended the philosopher Plato's lectures at the Academy in Athens was a woman named Lasthenia, who stole in by disguising herself as a man. Little more is known of her, but centuries later her story in-

spired the naturalist Cassini to name the plant genus *Lasthenia*, for Plato's woman pupil. The small genus contains but three species, two native to California and the other to Chile. All are tender annual herbs, and their showy flowers are yellow on long, often nodding, peduncles.

last infirmity of noble minds. That infirmity is the desire for fame, according to the proverb, being the last vice an otherwise noble person retains as he grows old. Though Milton said this in his elegy *Lycidas* (1637) on the death of his old friend Edward King, the poem "Sir John van Olden Barnevald" called glory "that last infirmity of noble minds" 16 years before. An amazed Swinburne was sure that this was "the most inexplicable coincidence in the whole range of literature," but the idea was simply in the air at the time and can be traced back even earlier. Incidentally, both Bartlett and the *Oxford Dictionary of Quotations* still credit the words to Milton.

last leaf. Said of an aged person, the last of his or her generation. Oliver Wendell Holmes invented the expression in his 1831 poem "The Last Leaf," honoring Revolutionary War hero Major Thomas Melville, who had participated in the Boston Tea Party. O. Henry, one of the most neglected of American writers, wrote a memorable short story entitled "The Last Leaf" that was made into a movie.

last licks. Since at least 1883, *last licks* has meant a team's last three outs in baseball, its last chance to win the game. It has since come to mean anyone's last try at anything. To *put in one's best licks* means to make a winning effort and, although this term dates back to the 1700s and is of unclear origin, the baseball connection has kept it alive.

last of the big time spenders. An ironic catchphrase that describes, since about the 1940s, someone who is really very cheap. It's also the title of a song by Billy Joel.

last of the Mohicans. The Mohicans live—contrary to James Fenimore Cooper's famous story, we have not seen the last of them. Cooper adopted the name of the Algonquian-speaking tribe for the second of his "Leatherstocking Tales," and the title *The Last of the Mohicans* became an expression still used to indicate the last of any group with a certain identity. But the Mohicans—at least mixed-blood remnants of the tribe—still survive near Norwich, Connecticut and in Stockbridge, Indiana. The Mohicans, or Mahicans, were a powerful group in the past, occupying both banks of the upper Hudson in New York, while another branch, the Mohigans, lived in eastern Connecticut. While settlement and war with the Mohawks pushed them out of these areas—Dutch guns supplied to their enemies hastening their dispersal—and they almost entirely lost their identity. Probably some 800 survive today. The tribe owns a profitable gambling casino on its Connecticut reservation.

last rose of summer. Although he measured six-foot-six and 260 pounds, my grandfather was something of a courtly romantic and always rather grandly presented my grandmother with the last rose of the season, calling it "the last rose of summer." This may have been a widespread custom at the time and

centuries ago, for the phrase *the last rose of summer* can be traced back to Irish poet and songwriter Thomas Moore's *Irish Melodies* (1807), where it begins a short song: "Tis the last rose of summer / Left blooming alone; / All her lovely companions / Are faded and gone." These words also give us the term *last rose* for the final flowering of anything, but anything written on the rose has to end on a romantic note, and no one ever sounded more romantic than British playwright Richard Brinsley Sheridan (1751–1816), who once said to a beautiful young woman, "Won't you come into my garden? I would like my roses to see you." See ROSE.

last straw. See THE STRAW THAT BROKE THE CAMEL'S BACK.

last word. Since the end of the 19th century *the last word* has meant the ultimate in fashions. The expression, however, had been used in its literal sense three centuries before this. For example, take the last word, not *words*, of radiant British actress Ellen Terry (1847–1928), a word written in the dust on her bed table before she died in her sleep: happy.

last words. The first record we have of *last words*, for the final utterances of a dying man, is the title of a book, *The Last Words of a Dying Penitent*, published in 1672, but the expression is probably much older.

latchkey children. Children whose parents both work and who have to let themselves into their homes after school with a key. The term is older than one would think, dating back at least to World War II in America. At that time many mothers worked in defense industries and many fathers served in the armed forces.

lateen. A triangular sail, common on sailing vessels in the Mediterranean. It is named after the Romans who used such sails, from the Latin *vela latina*, Latin (Roman) sails.

later. Good-bye. An economical form of *see you later on* that some sources date back to the speech of jazz musicians in the 1920s. Widely used today, as in "Later, man," it is also heard as *lates*, *laters*, and *late*.

lather. See WORK INTO A LATHER.

Latin. We find the word *Latin*, for the language of the Romans, first recorded in about 950. Latin was a second language to cultivated Englishmen for over four centuries, from about 1400–1800, and it was then a supreme insult to call someone a "Latinless dolt." According to Trevelyan, grammar school boys were permitted to speak nothing but Latin even out of school and "a spy aptly named *lupus* was sometimes paid to report whether they used English words while at play—if they did, they were flogged."

Latino. A man born in Latin America or of Latin American descent. *Latina* is the feminine form. The terms are an alternative to *Hispanic*, which applies also to Spaniards and people of Spanish descent and hence acknowledges the Spanish (imperial) presence in Latin America.

Latin words in English. Though many Latin words and phrases are the basis for words in the English lexicon, very few can be traced directly back to the Roman occupation of Britain, which lasted almost 400 years, A.D. 43–410. Strangely enough, there are more ruins than there are words attesting to the Roman stay, the latter including *port*, *portal*, *mountain*, and *chester* (from the Latin *castra*, camp) that forms part of place names such as *Winchester* and *Manchester*. Latin words form about half of the English vocabulary, but the great majority came into the language during and after the Renaissance.

laugh and the world laughs with you. After Ella Wheeler Wilcox (1850–1919) published her poem “Solitude” in 1883, John A. Joyce claimed that he had written it 20 years earlier. Mrs. Wilcox offered \$5,000 for any printed version of the poem dated earlier than her own and none was ever produced. Joyce, however, had the last word when he died in 1915, aged 72. The most famous lines from the poem are attributed to him on his gravestone in Oak Hill Cemetery, Washington, D.C.; they have become proverbial:

Laugh and the world laughs with you
Weep and you weep alone.

laugher. A game in any sport in which one side wins by a huge margin is called a laugher, because such a lopsided victory is a laughing matter (at least to the winning team). The expression may have originated in baseball.

Laughing Philosopher. Democritus of Abdera lived to a ripe old age in the fifth century B.C., very possibly because of his disposition. Juvenal, at any rate, wrote that the Greek philosopher always laughed at the follies of mankind. This distinguished him from the melancholy and aloof Heraclitus, who lived at about the same time and was called the Weeping Philosopher because man’s follies made him sad. See WEEPING PHILOSOPHER.

laugh up one’s sleeve. It might seem impossible today to hide one’s laughter in one’s clothing, but it was possible to do so when wearing the large billowy shirtsleeves of four centuries ago. People at the time often smiled or laughed into their sleeves to conceal their amusement or contempt, and this led to the expression *to laugh up one’s sleeve*, “to laugh inwardly,” usually derisively. See UP ONE’S SLEEVE.

launch. Deriving from French, with its first recorded nautical use in about 1400, *to launch* did not first mean to break a bottle of champagne against a vessel and slide it into the water. Animal blood was used long before champagne as a sacrifice to the sea gods, red wine later substituted for the blood, and finally more precious champagne substituted for the red wine.

Laura.

It was the day when the sun’s heavy rays
Grew pale in the pity of his suffering Lord
When I fell captive, lady, to the gaze
Of your fair eyes, fast bound in love’s strong cord.

The Laura of Petrarch’s immortal love poems was no figment of the poet’s imagination. According to tradition, the poet laure-

ate of Rome wrote his poems for Laura, the daughter of Audibert de Noves and the wife of Count Hugues de Sade, an ancestor of the French nobleman who gave us *SADISM*. Petrarch never revealed the real Laura’s identity, guarding his secret jealously, but he wrote that he saw her for the first time in the church of St. Clara at Avignon on April 6, 1327, and that his first sight of her inspired him to become a poet. In the 18th century the Abbé de Sade identified her as the wife of Hugues de Sade; she bore the old man 11 children before dying of the plague in 1348 when she was only 40. But this identification is not certain. It is known only that Laura was a married woman who accepted Petrarch’s devotion but refused all intimate relations. Their platonic love inspired the long series of poems that are among the most beautiful amorous verse in literature, the most famous being the sonnet in praise of their first meeting quoted above. The Italians call this collection of lyrics the *Canzoniere* and it is titled *Rime in Vita e Morte di Madonna Laura*. Petrarch died long after his Laura (whoever she was), in 1374 in his 70th year.

laurels. Laurels or bay leaves have symbolized victory since the winners at the Pythian games in ancient Greece were crowned with wreaths of laurel. The usage is still common in such expressions as “win the laurels,” “to rest on one’s laurels,” and “to look to one’s laurels.” Contrary to popular belief, the Greeks did not give wreaths of leaves from the bay laurel tree to Olympic game victors; they were awarded wreaths made of wild olives. (Winners of the Nemean games were given wreaths of green parsley, and Isthmian game victors received wreaths of dry parsley or green pine needles.) In any case, “winning the laurels” or “crowned with bays” has come to mean a reward of victory. Laurel is a symbol of peace, too, and of excellence in all the arts. The bay laurel tree (*Laurus nobilis*) grows up to 60 feet in Greece but is most popular in the United States grown in tubs and kept pruned to a desired shape. See also POET LAUREATE.

lava. *Lava* is not a Samoan word, as I read in one place. The word derives from the Latin *labes*, “a sliding down,” in reference to the molten rock that flows from a volcano down a mountain. It is first recorded in 1750.

Laval. After the liberation of France, Pierre Laval was tried for treason, sentenced to death, and executed on October 15, 1945. The French politician, born in 1883, held many national offices before becoming premier of the collaborationist Vichy government in 1942. Believing that Germany would win World War II, he was instrumental in organizing a policy of collaboration with the Nazis within occupied France. Under Nazi pressure Laval instituted a rule of terror, authorizing a French fascist militia and agreeing to send forced labor to Germany. His name became a hated one, synonymous with traitor, though he claimed at his trial that his motives were patriotic. Laval fled to Spain when France fell to the Allies, was expelled, and finally surrendered himself. After his conviction, he tried to commit suicide, but was saved for the firing squad.

lavalava. Unlike *LAVA*, *lavalava* is a Samoan word, meaning clothing. A piece of printed cloth worn as a skirt or loincloth, it is the principal garment of both sexes in Polynesia.

lavalier. Louis XIV, the Sun King, had a voracious appetite for women as well as food. Françoise-Louise de La Baume Le Blanc, whom he later made Madame la duchesse de La Vallière, was only his first *maitresse en titre*, or official mistress to the king. Louise, an innocent girl, never asked for anything, and it was only toward the end of their affair in 1667 that Louis made her a duchess, granting her the estate of Vaujours. Long before that she had become famous throughout Europe for her great beauty and the glamorous fashions she introduced. One of these, called the *lavallière* in her honor, was the ornamental jeweled pendant, usually worn on a chain around the neck, that we know as the *lavalier*. Today the small TV microphone that hangs on a cord from the neck is also called a *lavalier*, taking its name from the pendant necklace that honors the famous beauty.

lavender. In medieval Latin the name for the lavender plant (*Lavandula spica*) is *livendula*, from *livere*, “to make bluish.” However, the plant was long used for scenting linen, and it was associated with *lavare*, “to wash,” which was probably combined with the former name to give it the name *lavender*. See also LAY OUT IN LAVENDER.

law and order. This slogan was employed long before present times in America, notably by Rhode Island’s Law and Order Party, which opposed Dorr’s rebellion in 1844. It has now been usurped by the series produced by Dick Wolf on NBC.

lawn. Americans alone spent some 8.4 billion on their lawns in 1995. The lawns we maniacally manicure today take their name from the obsolete word *laund*, which is a borrowing from Old French *lande*, “moor,” and was first recorded in the early 14th century. *Laund* meant merely “a woodland glade” and its first definition in 1548 described a “place void of trees.” *Lawn* is simply a variant spelling of that word, but it isn’t until the early 18th century that we find *lawn* used to mean a plot of GRASS kept closely mowed, usually by gardeners with scythes or by grazing animals. However, Chinese emperors had lawns as far back as 157 B.C., and the Maya and Aztec royalty made lawns, as did the ancient Romans, who used sheep to maintain them. Writing in the *Smithsonian* magazine (June 1991), Richard Wolkomir remarks on our passion for lawns despite the backbreaking and mindbending troubles they cause us: “Grassophilia has deep roots. A former Smithsonian ecologist, John H. Falk, once studied people’s terrain preferences. He found that, whether they live in the United States, Africa, or India, the great majority prefer grassy savannas over all other landscapes, even if they’ve never seen a savanna. He had theorized that grasslands were the early human’s preferred habitat and that preference seems to be genetically ingrained in man today.”

lawnmower. The word *lawnmower* isn’t recorded until 1875, while *lawn sprinkler* made its appearance 19 years later. However, the lawn mower was invented in around 1830 by English textile plant foreman Edwin Budding, who patterned his invention on factory machinery used at the time to shear the nap of woven cloth to a uniform height. Close to a century passed before retired American Army colonel Edwin George in 1919 invented the first motorized lawnmower, using the gasoline engine from the family washing machine for his invention. Then came the riding or ridden lawnmower upon which all adults look ridiculous, though some people take them seriously—es-

pecially the 40 or so people who compete in the Twelve-Mile Riding Lawn Mower Race held in Twelve-Mile, Indiana, on July 4 of every year, the winner usually breaking 45 minutes. Such people might be called “mownomaniacs.” *Mownomaniac* is a new word for someone obsessed with caring for, and especially mowing, his or her lawn. Mownomaniacs have been around for about a century and a half now (there were few lawns as we know them before 1850).

lawn tennis. When the island of Tanis was abandoned, in Lake Manzal, Egypt, the tinnisi cloth made there was put to good use and, according to one source, was made to cover tennis balls and “supplied the name of tennis.” That is the traditional story of the naming of *tennis*, but some sources believe tennis, or more likely, lawn tennis, was invented by British major Walter C. Wingfield in 1874. Lawn tennis is also called *field tennis* and tennis not played on lawns or grass include clay court and asphalt tennis.

law of the jungle. Some people; by words and actions, insist that we still live by the *law of the jungle*, that is, like animals not governed by the rules of civilization. The term probably dates back to the late 19th century. *Law of the prairie*, a similar U.S. term, is first recorded in 1823.

lawrencium. While a physics professor at the University of California in 1930, Ernest Orlando Lawrence invented and built the first atom-smashing cyclotron, for which he was awarded the Nobel Prize nine years later. The physicist also played a prominent role in the development of the atomic bomb while director of the radiation laboratory at Berkeley, California, conducting research into the separation of U-235. Lawrence died in 1958, aged 57. In 1961 Albert Ghiorso, Almon Lash, and Robert Latimer created a new synthetic radioactive element at the laboratory dedicated to its former director. Lawrencium, its atomic number 103, is believed to be a “dinosaur element” that first formed when the world was born and decayed out of existence within a few weeks.

Lawsonia. Linnaeus probably named *Lawsonia inermis*, the mignonette tree and the source of the dye henna, for John Lawson, a traveler in North Carolina said to have been burned alive by Indians. Lawson came to America from England in 1700 and traveled about a thousand miles through unexplored territory, recording his observations of native flora and fauna in his *A New Voyage to Carolina* (1709). A founder of Bath and New Bern, North Carolina, he was appointed the state’s surveyor general in 1708, but was captured and put to death in the Tuscarora uprising three years later. Whether Linnaeus related red men and death by fire to the red dyestuff taken from the eastern tree’s leaves is unknown, though not impossible. At least one authority, however, claims that the Swedish botanist named the plant for a Dr. Isaac Lawson, a Scottish botanist who published an account of a voyage to Carolina in 1709.

lawyer; attorney; barrister; solicitor. In America, *lawyer* or *attorney* describes anyone who does any kind of legal work, whereas in England a *barrister* is an attorney who does trial work and a *solicitor* one who does general legal work. Attorney in its legal sense dates back to about 1330, lawyer to 1377, solicitor to

1527, and barrister to 1545. *Advocate* and *counsellor* are also words used for a lawyer. All of these terms have finer distinctions in England than in the U.S. There are probably as many derogatory expressions for lawyer as there are honored ones, ranging from *ambulance chaser* to *mob mouthpiece*.

a lawyer with his briefcase can steal more than a hundred men with guns. A favorite saying (perhaps proverbial?) of Don Corleone in Mario Puzo's *The Godfather* (1969).

lay an egg. Comedians and other entertainers complain that they *laid an egg*, that their act “bombed,” utterly failed, but the phrase originated in the sports world, not in show business. Stranger still, the expression comes from the sport of cricket, England's national game. *Duck's egg* was British slang for “no score” in cricket for many years, and in about 1860 the expression *achieved a duck's egg* was used to describe a team that hadn't scored and had only large oval zeroes shaped like duck's eggs on the scoreboard. Ten years later the phrase became the more expressive *laid a duck's egg* and this came into American baseball slang as *laid a goose egg*. In baseball the expression for “zero” soon became just *goose eggs*, and it still is, but early vaudevillians adopted the expression “they killed the goose that laid the rotten eggs” and changed it to *laid an egg*.

lay it on with a trowel. An Americanism first recorded in about 1839, at about the same time *lay it on thick* was recorded. Both phrases mean the same, that is to slavishly flatter, exaggerate. A trowel, of course, is a tool used for depositing and working with mortar and plaster.

lay out in lavender. The aromatic lavender plant has been cultivated for centuries. Its many uses include the use of its branches to beat just-washed clothes. In allusion to this, *lay out in lavender* first meant to give someone a physical beating, to knock someone down or unconscious. In time, however, the phrase came to mean to give someone a verbal beating or to chastise, as in “If I debate him, I'll lay him out in lavender. See also LAVENDER.

layover to catch meddlers. An evasive answer often given to curious or prying children. “That's a layover to catch meddlers.” A layover is actually a bear-trap consisting of a pit covered with branches, a deadfall.

lay them in the aisles. Theatrical slang for “to have a sensational success,” to *lay* (or *knock*) *them in the aisles* may derive partly from the expression *to knock 'em cold*, which has its origins in boxing. Both expressions date from only about the 1920s. British listeners would have trouble making sense of the phrase, because until fairly recently they have used *aisle* for a section of a theater, not a passageway. Since the word is from the Latin *ala*, “a wing”—this corrupted to *aisle* over the years possibly because of some confusion with *isle*—their use of the word is more proper.

lazar. *Lazar* has almost dropped out of use as a word for a diseased beggar or leper, but *lazarone* still describes a beggar of Naples. Both words are named for Lazarus, the only character in all his parables to whom Christ gave a proper name. During

the Middle Ages *lazar* was the name given to those suffering from leprosy and other diseases, outcasts who were allowed to do nothing but beg. A *lazaretto*, or *lazar-house*, is a hospital for such persons, taking its name from *lazar* plus (*N*)*azaretto*, the popular name of a hospital in Venice managed by the Church of Santa Maria di Nazaret. The name Lazarus comes from the Hebrew *Eleazar*, meaning “God-aided,” or “God will help.” See also LAZARUS.

Lazarus. Strictly speaking a *Lazarus* is someone risen from the dead, but the word is used allusively in many ways. It recalls the brother of Mary and Martha of Bethany, whom Jesus raised from the dead after he had been in his tomb four days (John 11:38–44). One authority notes that “in the fourth century the house and tomb of Lazarus were shown to pilgrims, and the gospel narrative . . . may be based on the story told to first-century visitors to Palestine.” See also LAZAR.

lazy as Lawrence. What does a Roman judge do with a saint of a man who when told to bring forth the treasures of his church comes forward with all its poor people? The Romans under Emperor Valerian did not appreciate St. Lawrence's philosophy, and this deacon to Pope Sixtus II (later St. Sixtus) soon followed his bishop to a martyr's death in 258. The Romans burnt him alive on a gridiron over a slow fire, and legend has it that he addressed his torturers ironically with the words “I am roasted enough on this side, turn me round, and eat.” Over the years the legend has become more British and St. Lawrence's words are now “Turn me around, for this side is quite done,” which is supposed to signify that the martyr was too lazy to move in the flames. More probably the expression *lazy as Lawrence* refers to the heat of St. Lawrence Day, August 10. In fact, the speech over the fire probably comes from a much older story told by Socrates and others about the Phrygian martyrs.

lazy as Ludlam's dog. Tradition tells us that old Mrs. Ludlam, an English sorceress, had a dog who lived with her for many years in her cottage in Surrey near Farnham. So lazy was her dog that when strangers approached he always lay down or leaned up against a wall to bark, or didn't bother to bark at all. There are several versions of the tale, all of them responsible for the proverbial as *lazy as Ludlam's dog*.

lazybird. The cowbird (*Molothrus ater*) is called the lazybird in America because the female of the species lays her eggs in the nests of other birds instead of building her own. The term is probably an old one, though first recorded in 1917.

lazy Susan. The British call our *lazy Susan* a dumbwaiter, which the revolving servitor was called in America until relatively recently. It is said that the first use of the term dates back to about 75 years ago when the device was named after some servant it replaced, Susan being a common name for servants at the time. But the earliest quotation that has been found for *lazy Susan* is in 1934, and it could be the creation of some unheralded advertising copywriter. Therefore, *lazy* may not mean a lazy servant at all, referring instead to a hostess too lazy to pass the snacks around, or to the ease with which guests can rotate the device on the spindle and bring the sections containing different foods directly in front of them.

lb. *Lb.*, as an abbreviation for *pound* comes from the Latin word *libra*, just as the symbol for the British pound Sterling does. *Libra* in this case is part of the Latin phrase *libra pondere*, a pound by weight.

LBJ. Long Binh Jail, the U.S. military prison in South Vietnam, 1967. Also, the initials of Lyndon Baines Johnson, president at the time.

lchayim. *Lchayim* is the Yiddish drinking toast equivalent to the English “To your health,” the words translating as “to life.” It derives from similar Hebrew words meaning the same, and is pronounced *l-khy-im*.

LCI. See LSD.

LCT. See LSD.

lead a dog's life. See GO TO THE DOGS.

lead by the nose. The allusion here is to animals like oxen, horses, and asses who from early times were led around by bit and bridle or by a rope attached to a ring hanging from the septum of the nose. Even wild animals like bears and lions were led around Roman arenas by a rope attached to a ring in the nose. Therefore, someone who leads another by the nose dominates him or holds him under submission. The idea is found in the Bible (Isa. 37:29): “Because thy rage against me, and thy tumult is come up into mine ears, therefore will I put my hook in thy nose, and thy bridle in thy lips, and I will turn thee back by the way which thou camest.”

lead down the garden path. The origin of this common expression remains a mystery. Not recorded in print until 1926, it may be the creation of the novelist Ethel Mannin, in whose book, *Sounding Brass*, it first appeared, but this seems unlikely. In the book *to lead down the garden* (path) means “to seduce,” but the expression's common meaning is “to deceive in any way.” The *garden path* suggests that the deception is done in a pleasant way, so that the victim suspects nothing.

leadfoot. The name for a driver who frequently speeds, stamping his foot on the accelerator to the floor. The expression probably originated in the early 1920s.

leading question. This phrase has been employed in thousands of books, plays, and movies—not to mention law cases. The *leading question* tries to lead the witness to the desired answer.

leading strings. Straps that help a child learn to walk. This practice inspired the phrase *to be in leading strings*, to be under someone's control. The words are not frequently heard in the United States.

lead pencil; graphite. Pencils are not made of lead but of a mixture of graphite and clay. Bad habits are hard to break, however, and people have been calling graphite pencils “lead pen-

cils” since the 16th century, when they were first mistaken as such. *Graphite* itself derives from the Greek word for “to write.” See PENCIL.

lead-pipe cinch. A CINCH, borrowed from the Spanish *cincha*, is a saddle-girth used on horses or a girth used on pack mules. Because a well-fastened cinch holds the saddle securely so that it won't slip off, about a century ago the word *cinch* became a natural synonym for something sure and easy. Cinches, however, are usually made of leather, canvas, or braided horsehair, not lead pipe. So the expression *a lead-pipe cinch* is something of a mystery. One guess is that the phrase is from the underworld. Criminals using lead-pipe blackjacks, according to this theory, found it a cinch to dispatch their victims and a cinch to dispose of the “blackjack” should police near the scene of the crime stop them and frisk them for weapons.

lead with your chin. The allusion here is to boxing, where if he doesn't protect himself with a right- or left-handed lead, but sticks his chin out, leads with his chin, a fighter is exposing himself to a knockout blow. *Leading with your chin* or “sticking your chin out” has been slang for taking a big chance since the 1920s, while “taking it on the chin” has meant to suffer severe failure since about the same time. The expression *take it as in* “He can really take it,” that is, “he can deal with adversity well,” is probably a descendant of *take it on the chin*.

a lean and hungry look. Coined by Shakespeare in *The Tragedy of Julius Caesar* (1599). Caesar speaks: “Let me have men about me that are fat; sleek-headed men and such as sleep o' nights. Yon Cassius has a lean and hungry look; he thinks too much: such men are dangerous.”

lean over backwards. Judicial reforms in 18th-century England brought the appointment of many judges sensitive to the civil rights of accused persons, in marked contrast to older judges notorious for favoring or “leaning” toward the crown. The new justices were said to *lean over backwards* toward the accused and away from the crown or prosecution, in judging cases. In order to prove how honest, fair, and disinterested they were, despite their connections with the government, they went beyond the normal and expected. *Fall over backwards* means the same and *two inches beyond upright* is a synonym for “excessive rectitude” that should be heard more than it is.

learn by heart. The ancient Greeks believed that the heart, the most noticeable internal organ, was the seat of intelligence and memory as well as emotion. This belief was passed on down the ages and became the basis for the English expression *learn by heart*, which is used by Chaucer (1374) and must have been proverbial long before that. “To record” reminds us again of this ancient belief in the heart as the seat of the mind. When writing wasn't a simple act, things had to be memorized; thus we have the word *record*, formed from the Latin *re*, “again,” and *cor*, “heart,” which means exactly the same as *to learn by heart*. See BOWELS OF COMPASSION; LILY-LIVERED.

least said, soonest mended. See LITTLE SAID IS SOON AMENDED.

leatherneck. “Many sailors maintain that *leatherneck* originally referred to the dark leathery appearance of a dirty and long-unwashed neck,” wrote George Stimpson in *Book About a Thousand Things* (1946). “It may be a myth, but according to Navy tradition mariners in the early days were dirty of person. In sailor slang, washing without removing the undershirt and jumper is called a leatherneck or ‘Marine wash.’ When a sailor washes, according to the sailor, he usually strips to the waist and washes his face, neck and arms, but when a marine washes he does so after the fashion of civilians, that is, he merely takes off his coat and rolls up the sleeves of his shirt to the elbows and washes his hands to the wrist and face to the neck.” Stimpson’s yarn is the best, but there are other theories, some more likely. One is that the Marines were simply named “leather-necks” for the black leather stock at the neck of the uniforms that they began wearing in 1804.

leave in the lurch. *Lourche*, or “lurch,” was an old French dicing game resembling backgammon, popular in the 16th century. Any player who incurred a lurch in the game was left helplessly behind the goal, so far behind his opponent that he couldn’t possibly win, which led to the figurative meaning of leaving someone in a helpless plight. The expression persists in English despite the fact that no one plays the old dicing game anymore, possibly because *lurch* describes a similar losing position in the game of cribbage.

leave in the soup. To leave someone in the lurch or in trouble. The expression is an Americanism first recorded in 1889 in connection with some South Dakota con man who skipped town with a lot of money, leaving many investors in trouble.

leave no stone unturned. So familiar is this saying that no one has trouble understanding Ogden Nash’s pun, “When I throw rocks at seabirds, I leave no tern unstoned.” It was advice that the Delphic oracle gave when the Theban general Polycrates asked how he could find treasure that the defeated Persians had hidden somewhere on the field after the battle of Plataea in 479 B.C. “Move all things,” the Delphic oracle said, and Polycrates did so, finally locating the horde. The expression has meant “to show great industry” in English since the mid 16th century, probably first as a variation of the earlier *leave no straw unturned*, in reference to the straw-covered floors typical of the time.

Leave them while you’re looking good. See GENTLEMEN PREFER BLONDES.

leave well enough alone; don’t fix it if it’s not broke; Melbourne. The sense of these two common expressions can be found in LET SLEEPING DOGS LIE, which is over 700 years old. *Why not let it alone* was the motto of British prime minister Lord William Lamb Melbourne in the early 19th century, and *don’t fix it if it’s not broke* is a relatively recent term. Lord Melbourne has the capital of Victoria, Australia, named after him. Originally called Dootigala, it was renamed for the prime minister in 1837, 10 years after it was settled.

leaving flat. A good friend doesn’t leave one flat, when he or she has no use for you anymore. The expression goes back to

the early days of the 20th century, but that is about all we know about it. Perhaps it suggests the flat on a car’s tire, one which the “friend” refuses to help fix, leaving his friend flat.

Leblang. New York ticket agent Joseph Leblang sold reduced-price tickets to Broadway shows in the 1920s. He was so noted for this that his name became an eponymous word meaning to sell same, or meaning the tickets themselves (Leblings).

lede. As many writers know, the lede is the first sentence of an article and is pronounced lead (rhymes with the lead in to lead a dog’s life). It is often a short summary as an introduction to the article.

ledger. In medieval times ledgers were large breviaries (books of daily prayers, readings, etc.) used in English churches, their name deriving from the Old English dialect *liggen*, “to lie,” because they were books that lay in one place at all times, being too heavy to carry like other books. By the mid 16th century the same name was given to large record books used by businessmen that were also too heavy to move from place to place, and soon *ledger* was applied to any business record book.

leech; leechcraft. *Leechcraft* was the Anglo-Saxon word for the practice of medicine. Only a relatively few doctors are leeches today, but in Anglo-Saxon times doctors were called leeches, the term probably deriving from an Old English word meaning “to heal.” One theory holds that the bloodthirsty worms called leeches were named after the doctors called leeches, because the doctors so often employed the worms in trying to cure people. A second theory has it that the blood-sucking worm’s name derives from another similar Old English word that was confused with the Old English word for doctor and was eventually pronounced and spelled the same. *To leech* began to be used figuratively in the late 18th century, meaning “to cling to and feed upon and drain” (the way the worm does), a *leech* becoming a person who does this. In the 19th century *to stick to someone* (or *something*) *like a leech* became proverbial and Tennyson wrote of a world swarming with literary leeches. Those famous leeches that were all over Humphrey Bogart in *The African Queen* (1951) were only rubber and were stuck to Bogart with waterproof glue. Each “leech” contained a small “blood sac” that broke when peeled off.

leek. The national emblem of Wales takes its name from the Old English *leac*, for this member of the onion family; but the plant is native to central Asia and many peoples have had different names for it—Nero was nicknamed “Porrophagus” because he ate so many leeks, believing that they improved his singing voice. The leek has only recently been identified as the fabled store-henge that the Greeks considered a love potion.

Leeuwenhoek’s little animals. Antonie van Leeuwenhoek (1632–1723), a former Dutch linen maker who designed a very powerful single-lens microscope, changed the course of science with his observations of the “animalcules” in a drop of pond water and his observations helped disprove the doctrine of spontaneous generation (that eels are generated from sand, grubs from wheat, and so on), making *Leeuwenhoek’s little animals* a phrase that has lived for centuries.

left-handed compliment. The expression *left-handed compliment*, “a thinly disguised insult that poses as praise,” apparently has its origins in the practice of morganatic marriage widely prevalent among German royalty in the Middle Ages and even practiced in modern times—Archduke Francis Ferdinand and his wife, who were both killed in the assassination that set off World War I, were married morganatically. These were usually marriages between royalty and commoners, the commoner agreeing that she would have no claim to her royal husband’s title or property, nor would any children of the marriage—all she received was a *morning gift* (from the Latin *morganaticum*) on the morning after the marriage was consummated. In the special wedding ceremony held for these marriages, common up to the 17th century, the groom gave the bride his left hand instead of his right and thus morganatic marriages came to be known as *left-handed marriages*. Since they were a thinly disguised insult, it is possible that they later lent their name to the deceptive *left-handed compliment*. See RIGHT.

left-handed monkey wrench. There is no such tool, but green workers on a job are sometimes told to find one as a joke. The same applies to a “left-handed screwdriver” or “hammer.” The terms are Americanisms, probably dating back to the early 20th century but possibly much older.

left holding the bag. To be left responsible for something, to be the fall guy or scapegoat after the others involved in a crooked scheme have protected themselves from prosecution or absconded. The term is an old Americanism dating back to 1760 or earlier, and Thomas Jefferson used it. The British use the phrases *left holding the can* and *left holding the baby*. *Left holding the bag* is recorded in Royall Tyler’s *The Contrast* (1787), the first stage comedy written by an American. In the play Jonathan, the trusty Yankee retainer of the serious-minded American Revolutionary War officer Colonel Manley, is a servant full of homespun shrewdness. After referring to Shay’s Rebellion, a 1786 revolt of Massachusetts farmers against high land taxes, Jonathan says: “General Shay has sneaked off and given us the bag to hold.”

left sittin’ on air way up in the sky. Thrown from a horse; the last line from an old folk song about a cowboy trying to break a horse and failing:

When my stirrups I lose and also my hat,
And I starts pullin’ leather as blind as a bat,
And he makes one more jump, he is headed up high
Leaves me settin’ on air way up in the sky.

legalese. When Charles A. Beardsley, then president of the American Bar Association, kidded his fellow lawyers with the famous words “Beware of and eschew pompous prolixity,” he was campaigning against what philosopher Jeremy Bentham called “literary garbage,” legal talk that has nothing to do with communication. “Legalese” consists principally of long-windedness, stilted phrases such as “Know all men by these presents,” redundancies including “separate and apart” or “aid and abet,” such quaintisms as “herewith and heretofore,” and foreign-language phrases that could easily be translated into plain English: e.g., *ca-veat emptor* (“let the buyer beware”) or *amicus curiae* (“friend of

the court”). Despite the efforts of Beardsley and many others, the situation has not improved much over the last millennium. Some, like Sir Thomas More, have believed that it never will. More, a lawyer himself, explained that lawyers are “people whose profession is to disguise matters.”

legend. The Medieval Latin word *legenda*, from the Latin *legere*, to read, meant “something to be read,” especially something about the lives of saints. Often these biographies were filled with incredible stories, which led to *legenda*’s meaning of “unlikely story or myth,” a meaning that was retained when the word passed into English as *legend*.

legend in one’s lifetime. It is possible that Florence Nightingale may be the first person so described, in Lytton Strachey’s *Eminent Victorians* (1918): “She was a legend in her lifetime, and she knew it . . .” In the same book Strachey described the great nurse as a *living legend*, the first recorded use of that cliché. A variation is *a legend in her own time* and a cynical variation on that is the modern *a legend in her own mind*. See also LADY WITH THE LAMP.

leghorns. These prolific egg layers are a breed of chickens originally bred in Livorno, Italy, which the English, never good at pronouncing foreign words, called Leghorn. Highly regarded straw hats called leghorns are also made in Livorno.

Legionnaires’ disease. During a 1976 convention held by the American Legion in a Philadelphia hotel, hundreds of legionnaires came down with a type of pneumonia no one had known before. Twenty-nine men died from *Legionella pneumophila*, or Legionnaires’ disease, which was found to be thriving in the hotel’s air-conditioning unit.

le gouter. An old tradition among Parisians similar to English afternoon tea. At *le gouter* (luh-goo-tay), a little after four o’clock and before six, cafes and tea parlors serve a great variety of rich pastries along with hot chocolate and coffee for a late afternoon snack that will hold hunger off until dinner begins at about nine.

lei. The well-known Hawaiian flower wreath. The garland of flowers is traditionally worn around the neck.

lemon. Lemons were probably initially grown in the Middle East, for *lemon* is first recorded as the Persian and Arabic word *limun*, which became the Old French *limon*. *Limon* passed into English when the French exported the fruit to England, and by the mid-17th century the fruit was being called the lemon there. *Lemon*, meaning something defective or inferior, derives from the sour taste of a lemon and is apparently an Americanism dating back to the turn of the century, as is *lemonade* (a drink the British call “lemon squash”). See ZEST. Slot machines with pictures of lemons may have suggested the term *lemon* for anything of inferior quality. One lemon on a machine and the slot machine player loses, which would not endear lemons to any player. The slot machine was invented at the end of the 19th century, just a few years before *lemon* was being used in this sense.

lemonade. As mentioned briefly above, *lemonade* is an Americanism for a drink made of lemon juice, water, and sugar, always served cold, usually with ice. To the British, Australians, and New Zealanders, however, *lemonade* means “clear soda pop,” often with a lemon flavor, such as the trademarked Sprite or 7-Up.

Lemon Fair River. This river’s name is the subject of several stories. One claims it derives from the old English phrase *lemon fair*, meaning “mistress fair.” Another says an Indian massacre occurred on the stream’s banks, and the massacre was called the “lamentable affair,” which over the years was corrupted to *lemon fair*. George R. Stuart, in *Names on the Land* (1945), states “the most likely explanation is that the strange name is only a Vermonter’s attempt to render *Les Monts Verts* (The Green Mountains).”

lemon sole. Sour lemons have nothing to do with *lemon sole*, except that lemon juice might be squeezed on the fish before eating. The term is an established redundancy; when we say *lemon sole* we are saying “sole sole,” for the *lemon* part is a corruption of the French *limande*, for “sole.” The sole was so named because its shape was thought to resemble the sole of the foot.

le mot Cambronne. See THE GUARD DIES BUT NEVER SURRENDERS!

lemur. The great Swedish botanist Linnaeus named this aboreal primate after the ancient Roman *lemures*, frightening specters of the dead, so naming them because of their ghostly appearance (pale face and black eyes) and their nocturnal habits.

Lena Blackburne Rubbing Mud. Perhaps the only mud named after a person. Lena “Slats” Blackburne managed the Chicago White Sox in the 1920s and 1930s. He found a Delaware River mud close by his New Jersey home that seemed better than other muds umpires rubbed on baseballs to make new balls less slippery and easier to grip when introduced in a game. His mud was in fact so good that it was packaged commercially as Lena Blackburne Rubbing Mud and eventually became the official mud of the American and National Leagues.

Leningrad; Leninism. N. Lenin was the pseudonym Vladimir Ilyich Ulyanov adopted toward the end of 1901, variants such as V. I. Lenin coming into use a little later as his revolutionary activities in Russia became more prominent. He is thus known in history as Nikolai Lenin or Vladimir Ilyich Lenin, his real name rarely used. Only 54 when he died in 1924, he must still be regarded as one of the most effective political leaders of all time, though not “mankind’s greatest genius,” as *The Great Soviet Encyclopedia* calls him. But Lenin’s name is legendary in the communist world, his body embalmed in a tomb in Moscow’s Red Square that was once a shrine to Soviet citizens. The former capital city of St. Petersburg was named Leningrad for him in 1924. *Leninism* refers to the particular communistic principles based upon Marxism propounded by the founder of the modern Soviet state, which are collected in his 22-volume life and works. Leninism’s central point is the creation of the dictatorship of the proletariat, or working class. Since 1991,

with the overthrow of communism in Russia, Leningrad’s name has officially been changed back to St. Petersburg.

lentil; lens. Lentils are the beans that made the mess of pottage that the Bible implies Esau traded his brother for (though Scripture nowhere mentions the phrase “a mess of pottage”); they take their name from the Latin word for the bean, which also gives us the word *lens*, a double convex lens resembling a lentil bean in shape.

leonine contract. Aesop’s fable about the lion who hunted with several other animals has the lion claiming all the spoils of the hunt. One-quarter of the spoils he claimed as king of beasts; a second quarter because he was braver than any other animal; a third for his mate and cubs; “and as for the fourth, let him who will dispute it with me.” Another version of the tale has the lion saying the last share belongs to everyone, “But touch it if you dare!” In any event, from “The Lion and His Fellow-Hunters” derives our term a *leonine contract*, “a completely one-sided agreement,” and a *lion’s share*, “the largest portion of anything.”

a leopard doesn’t change its spots. Leopards are so named because they were once thought not to be a separate species but a cross between the lion (*leo*) and the *pard*, a Tibetan wildcat or panther. Like the creature’s name, the saying *a leopard doesn’t change his spots* also goes back to ancient times. It is an allusion to the pessimistic rhetorical question found in Jer. 13:23: “Can the Ethiopian change his skin or the leopard his spots? Then also you can do good who are accustomed to evil.” See GIRAFFE.

leotards. We owe this word to 19th-century French aerialist Jules Léotard, who claimed in his *Mémoires* to have invented the outfit still worn by circus performers. Originally the costume was a one-piece elastic garment, snug-fitting and low at the neck and sleeveless. Leotard, born to the circus—when he was a baby, his aerialist parents would hang him upside down from a trapeze bar to stop his crying—intended his costume for men, not women. “Do you want to be adored by the ladies?” he exhorts his male readers in his *Mémoires*. “[Then] put on a more natural arb, which does not hide your best features!” Léotard, billed as “The Daring Young Man On The Flying Trapeze,” died of smallpox in 1870 when only 28.

leprechaun. These Irish elves, who figure in many a legend, take their name, first recorded in 1604, from the Old Irish *lu*, meaning “small,” and the Old Irish *corp*, “body.” The last part of the word, however, was borrowed from the Latin *corpus* for body, this an excellent example of church Latin’s influence on the Irish language.

lesbian. Lesbos, a Greek island in the Aegean Sea off the west coast of Turkey, was a center of civilization in the seventh and sixth centuries B.C. There Sappho, the most famous poetess of her time, taught the arts of poetry to a select group of young women. The legend has never been proved but the romantic ardor of some of Sappho’s lyrical poems probably accounts for the tradition that she and her followers engaged in homosexual love, female homosexuality being named for the

Lesbians, or residents of Lesbos. The word *Lesbian* (with a capital) designates any inhabitant of the island, which is noted for its rich soil as well as its sardine and sponge fisheries. Here Epicurus and Aristotle once lived and the philosopher Theophrastus was born. Sapphism, from Sappho's name, is a synonym for lesbianism. The poetess, according to legend, threw herself into the sea when spurned by the handsome youth Phaon, but the story is generally regarded as pure invention. Sappho may have married and had a son. Her simple, passionate verse, characterized by matchless lyricism and vivid use of words, originally formed nine books, but only fragments of these are extant today. The "Tenth Muse," as she was known, used the four-line verse form now called sapphics in her honor, and is in fact noted for her careful control over meter. See SAPPHO.

lèse-majesté. An offense against the sovereign power in a state, especially a ruler, or even an attack against any belief or institution revered by large numbers of people is called *lèse-majesté*, which comes from the Latin *laesa majestas* (injured majesty) by way of medieval French. The term is first recorded in 1430.

le shake hand. A French borrowing and alteration of the English word *handshake*. The French language newspaper *Le Monde* recently reported a study claiming that every 166th word in the French vocabulary is English.

lespedeza. Japan or bush clover, sometimes called the hoop-coop plant but widely known as *lespedeza*, is believed to have been brought to America in the early 19th century with a cargo of tea unloaded at Charleston or Savannah. The plant became an escape that was first identified at Monticello, Georgia in 1846, and this initial collected specimen is now preserved at Harvard's Gray Herbarium. A member of the pea family, *lespedeza* has become a very important crop not only for hay and forage but for improving poor soils—it has been shown that corn and cotton crops can be increased 10 to 30 percent by turning under a crop of *lespedeza* previous to their planting. The slender plant grows to a height of about 18 inches, its leaves divided into three leaflets on many branched stems. The genus *Lespedeza*, however, contains 125 species, of which Japanese clover (*Lespedeza striata*) is only one. Many of these species are native to America and it was to them that the botanist Michaux referred when he named the genus in 1803. *Lespedeza* was named in honor of V. M. de Zespedes, Spanish governor of East Florida in 1795, whose name Michaux misread as *Lespedez*.

less is more. British poet Robert Browning (1812–89) may have invented this phrase, which is first recorded in his poem "Andrea del Sarto" (1855). The words have since been applied to writing, acting, architecture etc., deemed good because it is lean and spare, unadorned, as in, for example, Hemingway's best prose.

les sommobiches. A name the French gave all American soldiers during World War I, because so many of them constantly used the expression *son of a bitch*. The latter term is hardly an Americanism, however: *The four-word epithet*, as it has been

called, was first recorded in 1688 and is probably centuries older in forms like *bitch-son*. Son of a bitch, or S.O.B., is so common for a despicable person that it is sometimes even applied to a woman. See also GODDAM.

let George do it. We say this satirically today when there is work to be avoided, but France's Louis XII was serious when he said, "Let George do it." He referred to his brilliant adviser Cardinal Georges d'Amboise (1460–1510) and entrusted important affairs of state to him so often that the phrase "let Georges do it; he's the man of the age" became proverbial, eventually losing its *s* and becoming "let George do it" and bestowing more glory on the cardinal than his magnificent tomb in the Rouen Cathedral. Louis's minister of state, a prodigy who became a bishop when only 14, was truly "the man of the age," a Renaissance man who excelled in everything he did, from literature to science.

lethal; lethargy. The *waters of Lethe* refers to the River Lethe, one of the rivers of Hades in Greek mythology. The dead were required to taste these waters in order to forget the past and find oblivion. From the myth derive our words *lethal* and *lethargy*.

let her rip. Letting things go at full speed was called *let-her-rip-itiveness* in mid-19th-century America. The Americanism derives from another American expression, *let her rip*, which apparently first referred to railroad locomotives. Americans were always obsessed with speed. Wrote one early train traveler out West: "Git up more steam—this ain't a funeral! Let her rip!"

let's get our cows over our buckets. There's no mention of this phrase in all the standard references, but it seems to refer in its original sense to any wasteful action when milking cows—let's be careful.

let's get the show on the road. Let's get going, let's leave right now. The source of the expression is obviously show business and possibly dates back to the late 1800s.

let sleeping dogs lie. Chaucer seems to have expressed this idea first in *Troilus and Criseyde* (1374), though he put it in the reverse form: "It is nought good a slepyng hound to wake." For at least 400 years the saying remained basically the same, until in the 19th century it became the familiar *let sleeping dogs lie*, "leave well enough alone."

let's not go there. Let's not discuss or get into that, let's not open that can of worms, let's keep this a friendly discussion or debate.

let's put some lipstick on this pig and sell it. Said to be a recent exhortation of a brokerage firm to its brokers, urging them to make a worthless dog or pig of a stock appear to be an attractive investment.

Let's roll! Inspirational words that may prove as immortal as *Remember the Alamo! Remember Pearl Harbor*, and other

patriotic American war slogans. The words were originally used by airline passenger Todd Beamer to rally fellow passengers against terrorists who had hijacked United Airlines Flight 93 on the beginning of the 9/11 terrorist attacks. All 40 passengers and the crew died when the plane crashed in Pennsylvania, but much greater loss of life in the Washington, D.C., area was prevented. President George W. Bush has since used the phrase in various speeches.

let's see the color of your money. When this saying originated in the early 18th century paper money wasn't in general use, so it couldn't allude to the inferior color of counterfeit money, as has been suggested. So-called red money (gold) and white money (silver) was in existence, however. Probably the expression was born when someone selling something refused to discuss the matter until the prospective buyer proved that the more valuable red money, not white, was jingling in his purse or pocket.

let's see your color. Let's see the color of your money, how much money you've got. "Let's see your color," said the judge.

Let's slip out of these clothes and into a dry martini. A by-now almost proverbial quip by author and wit Robert Benchley. Benchley was known to drink; in fact, he was known to drink more and to be able to hold more than anyone in his circle. "What do you drink so much for?" F. Scott Fitzgerald, of all people, once lectured him. "Don't you know alcohol is slow poison?" "So who's in a hurry?" Benchley replied. Another time he observed, "Drinking makes such fools of people, and people are such fools to begin with, that it's compounding a felony."

letter. The first private letter written in English dates from about 1392 (before then letters had been written in French), and manuals for letter writers abound from about that date on. *Letter*, for "a missive," is first recorded in about 1225. The word derives from the Latin *littera*, "a letter of the alphabet."

letter (sports). The practice of awarding college varsity athletes letters, or monograms of the first letter of the college's name, began with the great University of Chicago football coach Amos Alonzo Stagg, in the early 1900s.

letter carrier. An old term for a postman still commonly used in northern California; occasionally heard in metropolitan New York and other areas as well.

let the cat out of the bag. *Let the cat out of the bag* may have originally referred to the master-at-arms aboard a British naval ship taking the cat-o'-nine-tails from its blood-red carrying bag before a seaman was flogged. The connection between this and an untimely revelation is a tenuous one, but no better explanation has been offered so far.

let the dead bury their dead. Don't worry about things over and done with, forget what happened in the past. The expression comes from the Bible (Matt. 8:22): "But Jesus said, Follow me, and let the dead bury their dead."

Let them eat cake. Marie Antoinette may have said this in referring to the Paris proletariat after they pleaded for bread in 1770, but she did not invent the famous retort. Rousseau's *Confessions*, written two or three years before the remark is attributed to her, told of a "great princess" who said the same thing to her peasants at least 15 years before Marie Antoinette was born. Some claim that the thoughtless remark was circulated to discredit Marie, while others say she repeated it herself, and she was certainly capable of such a "little joke." The French phrase is *Qu'ils mangent de la brioche* and may mean "they" should eat the outer crust (*brioche*) of the bread, the "stale" part as opposed to the soft inside part.

letting the fox guard the henhouse. Letting an enemy watch over one's property. Used recently in political circles, regarding a proposal calling for Iran to supervise certain Iraqi interests.

lettuce. *Lettuce* probably takes its name from a form of the Latin *lactuca*, "milky juice." The Roman gourmet Apicius watered the lettuce in his garden with mead every evening so that it would taste like "green cheese cakes" when he picked it mornings.

lettuce bird. A popular name for the goldfinch (*Astragalinus tistis tistis*) is "lettuce bird" because lettuce seed is among its favorite foods. A good way to draw this attractive yellow bird to the garden is to let some lettuce plants bolt, blossom and bear seed. Because of its musical abilities the goldfinch is also called the "wild canary."

let your hair down. I can't find an old quotation to support the theory, but this expression may have originated in the days of Louis XIV, when elaborate hairstyles such as the FONTANGE, a pile of style that rose two feet and more above the wearer's head, were popular among Frenchwomen. These styles were such a nuisance that several were actually banned by the Sun King. Certainly none permitted informality or intimacy, and only when a woman let down her hair at night in privacy did she relax any and shed at least one inhibition.

Levi's. The word *Levi's* has become more popular in the eastern United States recently as a synonym for jeans, denims, or DUNGAREES—probably due to the bright-colored styles that Levi Strauss and Company are manufacturing today. The trademarked name has been around since the gold rush days, though, when a pioneer San Francisco overall manufacturer began making them. Levi Strauss reinforced his heavy blue denims with copper rivets at strain points such as the corners of pockets, this innovation making his product especially valuable to miners, who often loaded their pockets with ore samples. Within a few years the pants were widely known throughout the West, where the name Levi's has always been more common than any other for tight-fitting, heavy blue denims.

lewd. Beginning with its original meaning of lay (as in *layman*), *lewd* has had seven different meanings through the years: unlettered, low, bungling, vile, lawless, and licentious. Today only the last meaning is much used and it is first recorded in 1712, for the biblical "lewd fellows of the baser sort" (Acts 17:5) refers to lawless fellows, not lascivious ones.

No one knows why, although the word is in good company with those many words in English that begin with an “P” and have something to do with sexual debauchery. They have a rather revolting, loathsome pronunciation; you sort of squinch up your nose and sneer when saying them: leer, lecherous, loose, libidinous, lustful, even luxury. Probably the pronunciation does not have a lot to do with the prevailing meaning. But like many words associated with sex, *lewd* is undergoing a change today. It is being used more playfully, with less high-mindedness, and may have an eighth meaning in another century or so. We already have the precedent of Shakespeare calling Falstaff an old lewdster, and Falstaff, after all, was eminently likable, no one you would squinch up your nose at.

Lewisia. See CLARKIA.

lexicographer. Dr. Johnson, working on his great dictionary, invented a definition almost as well known as the word itself—“Lexicographer: A writer of dictionaries, a harmless drudge.” The word, from the Greek meaning the same, is first recorded a century earlier.

L 5. My correspondent Eric Halsey advises that L 5 “is the designation of one of the Lagrange points in the Earth’s orbit where it would be advantageous to place a self-sustaining human space colony.” The L 5 Society advocates the establishment of such a colony.

L’Hara. According to one interesting account, uncorroborated here, this was the name for the police in the Spanish-speaking New York City barrio during the 1930s and 1940s. It seems that many of the Irish New York cops at the time were named O’Hara, which, in the distorted form of *L’Hara*, became the eponym for police in general.

Lhasa apso terrier. The “forbidden city” of Lhasa in Tibet gave its name to this long-haired terrier bred as far back as the 12th century.

Liberator. See BOLIVIA.

libertine. Early in the 16th century a group of European freethinkers dubbed themselves the Libertines, a word that had previously meant “a freed slave.” Because they believed that there was no sin, and acted accordingly, these Libertines saw their name become a synonym for any morally or sexually unrestrained person, a rake, or a profligate.

liberty, equality, fraternity! The motto of the French Fifth Republic today, these words were originally the motto of Revolutionary France. Napoleon, an imperialist, employed them most effectively.

Liberty Tree (Elm); Liberty Hall; Liberty Stump. A tree that grew in Boston from which effigies of unpopular people were hanged during the protests over the Stamp Act in 1765. The ground under the tree became known as Liberty Hall. In 1775 the British cut the venerable elm down, and for a time it be-

came known as the Liberty Stump. Soon after Liberty Trees were being planted all over the country, some say in almost every American town. Most of them died from the disease that struck elms early in the 20th century.

library. Library derives from the Latin *liber*, “book,” but the first library known with certainty to have existed was a collection of clay tablets in Babylonia in about the 21st century B.C. The first private library in ancient Greece was probably that of Aristotle in about 334 B.C. The dramatist Euripides was also said to have a large library, as did Plato and Samos, and later Mark Antony is supposed to have given the vast 200,000-volume library of the kings of Pergamum as a present to Cleopatra. Tradition ascribes the formation of the first public library at Athens to the beneficent tyrant Pisistratus in 540 B.C., but the earliest public library still existing today is the Vatican Library in Rome, founded in 1450. A public library was opened in Boston as early as 1653, and Benjamin Franklin proposed the Library Company of Philadelphia in 1731. The purchase of Thomas Jefferson’s library of 6,457 books formed the nucleus of the U.S. Library of Congress after the original holdings of the national library in Washington, D.C., were destroyed by fire in 1814. Created by Congress in 1800, the library is now the world’s largest, with 35 acres of floor space containing some 100 million items, including over 17 million books. By law the library on Capitol Hill must be given two copies of every book registered for copyright in the United States, and over 60,000 are published in America annually. See also BODLEIAN LIBRARY.

lickety split. Bartlett’s *Dictionary of Americanisms* (1859) defines *lickety split* as “very fast, headlong; synonymous with the equally elegant phrase ‘full chisel.’” Today *lickety split* is only heard infrequently and it is folksy rather than “elegant.” The *lick* in the phrase is probably associated with speed because of the rapidity with which the tongue moves in the mouth, and *split* is perhaps associated with “split second.” The Puritans used the phrase, but it wasn’t very popular until the mid-19th century. *Lickety cut, lickety switch, lickety click, lickety liver, and lickety brindle* were variations on the expression.

lick into shape.

Beres ben brought forth al fowle and transformyd and after that by lykynge of the fader and moder they ben brought in to theyr kyndely shap.

—The pylgremage of the sowle, 1400

For at least 10 centuries people believed that bear cubs were born just formless masses of grotesque flesh and that both Mama and Poppa Bear took turns literally licking them into shape. No one debunked this legend for so long because bears usually keep their cubs hidden for a month or so after their birth, and any debunker who ventured into a bear den in search of evidence probably didn’t come out to do his debunking. So the story was widely believed—by Pliny, Montaigne, Shakespeare—up until and even after the discovery of America. By the time the marvelous tale was disproved the expression *lick into shape*, “make ready, make presentable,” had gained a permanent place in the language. The name for a young bear, one that hasn’t ever been licked into shape by its mother, is an unlicked cub.

lido. *Lido* for a spit of land enclosing a lagoon, or a bathing beach or a public, open-air swimming pool takes its name from the famous Lido resort in Venice, which is on such a spit of land.

Liebfraumilch. The German white wine's name translates as "milk of the Blessed Mother," referring to the Virgin Mary. The name originally applied only to wines made near the Liebfraukirch in Worms. *See* LACRIMA CHRISTI.

Liechtenstein. Liechtenstein is one of the few countries named after a family. It is a principality created in 1719 by uniting the barony of Schellenburg and the country of Vaduy, both of which had been purchased by the Austrian family of Liechtenstein.

lief. *See* JUST AS LEAVE.

lie like a butcher's dog. Grose, in the 1788 edition of his *Classical Dictionary of the Vulgar Tongue*, tells us this was "a simile often applied to married men," who, "like the butcher's dog" would often "lie by the beef without touching it." The humorous expression for involuntary sexual abstinence didn't last until Victorian times, when it might have achieved wider currency.

lie like a tombstone. Used to describe a great liar; the comparison is with the tombstones of old, whose inscriptions often exaggerated the good qualities of those who lay beneath them.

lie low. In its slang sense, this warning is said to be first published in an 1888 collection of proverbial sayings of Uncle Remus. It means to hide one's identity, hide out, to escape notice. The first Uncle Remus was Joel Chandler Harris, who related the wise words, including the famous tar baby tales and stories of the old former slave, which are the best of American black folktales.

the lie of the pipe dream. Although one of the most famous phrases in American literature, *the lie of the pipe dream* is seldom, if ever, collected. It is from Eugene O'Neill's play *The Iceman Cometh* (1946), which takes place in Harry Hope's saloon, where O'Neill's guilt-ridden characters cling to pipe dreams about their lives, illusions that the salesman Hickey shatters for them. One character, the anarchist Larry Slade, decides that they can't live without their illusions, that "the lie of the pipe dream is what gives life" to people like themselves. *See* PIPE DREAM.

life begins at forty. This saying takes its name from Walter B. Pitkin's 1932 book *Life Begins at Forty*. For many years people accepted the age of 40 as the maximum the majority of people would achieve, but today most people would aim or hope for 90 or even 100, would feel insulted by a mere 40!

life-boat. The *OED* gives an 1801 first recorded use of this word for "a boat specially constructed for saving lives in cases of loss of a vessel at sea." A British patent had been granted for

such an unsubmergible boat in 1785, but it had not been called a life-boat. The boat was so named, according to a 1802 source quoted in the *OED*, "in consequence of the lives of many persons shipwrecked having been preserved by it." In American slang a life-boat is a pardon or commutation of a prison sentence, usually a death sentence.

life-everlasting. A New England plant. No native sons need a description of the plant. At the height of summer, life-everlasting lies along pasture slopes and in sunny hollows like patches of snow. Looking closely, the blossoms have a tidy look of artifice, clusters of miniature roses with petals of straw. They seem to demand that something be done with them . . . even though the flowers (of the genus *Anaphalis*) are used to make bouquets and wreaths. In times past, women filled pillows with them to relieve asthma sufferers.

lifeguard. According to the *OED*, American author and editor William Dean Howells (1837–1920) was the first to record this word in 1896. However the *Random House Dictionary of the English Language* traces the word to 1640–50.

life is just a bowl of cherries. Attempts have been made to link this expression with a much older one, *life is but a cherry-fair*. However, the older phrase, from the early 17th century, means life is all too short and fleeting, as short as the annual English fairs held in orchards where cherries were sold each spring. Evanescence is not the spirit of *life is just a bowl of cherries*—which means life is joyous, wonderful, and which seems to have originally been the title of a popular song of the late 19th century.

life is short, but the art is long. The full aphorism by the Greek physician Hippocrates is "Life is short, but the art is long, the opportunity fleeting, the experiment perilous, the judgment difficult." A variation in the translation by Chaucer is "The life is so short, the craft so long to learn." *See* HIPPOCRATIC OATH.

life of Riley. In a comic song written by Pat Rooney of the "Dancing Rooneys" in the 1880s and performed by him on the vaudeville circuit, the song's hero, Riley, tells of what he'd do if he "struck it rich." He promises New York will "swim in wine when the White House and Capitol are mine." Many word ferrets believe that the phrase *the life of Riley* derives from the Rooney song, though Mencken champions the tune "The Best in the House Is None Too Good for Reilly," written by Lawlor and Blake toward the turn of the century. Yet the Hoosier poet James Whitcomb Riley (1849–1916) may just lend his name in some way to the saying. Riley's simple, sentimental poems depicting the lives of barefoot boys loafing and living a life of ease in the summer were immensely popular at the time the phrase came into use.

life rates. Both men and women live longer on the average in every developed country than in underdeveloped countries. In Japan, people live longer than in any other country (women, age 85; men, age 78.) In Sweden, women live until age 82, men until age 78. In the United States, women live until age 80, while men live until age 75.

life's a bitch, and then you die. An anonymous cynical phrase probably coined in the United States (at least it sounds like it was). The unasccribed phrase has several versions and variations.

Lifting Monday; Lifting Tuesday. Easter Monday was called Lifting Monday, or Heaving Day, in the English counties of Shropshire, Cheshire, and Lancashire because of an ancient custom that allowed men to lift up and kiss any woman met in the street that day. On Lifting Tuesday women could do the same to men. "Lifting or heaving differs a little in different places," one writer explained. "In some parts the person is laid horizontally, in others placed in a sitting position on the bearers' hands. Usually, when the lifting or heaving is within doors, a chair is produced." According to another observer, "the woman's heaving-day was the most amusing," with the women trying to lift and heave the men, but the custom, recorded as late as the 1870s, caused too many disturbances and was abandoned before the end of the 19th century.

lift yourself up by the bootstraps. Riding boots and many other long boots have inside, near the top, loops or straps that make it easier to pull on a tight-fitting boot. When yanking on these straps it feels as if you are laboriously lifting yourself upward instead of putting on a boot, and no doubt such struggles inspired the saying to *lift yourself up by the bootstraps*, to raise yourself in the world exclusively through your own efforts. Such bootstraps, and even specialized boot hooks to pull them with, date back to Cromwellian times, but when the expression was invented is a mystery. It hasn't been traced back before 1944, although it is almost certainly much older. In 1941 Robert A. Heinlein published a story in *Astounding Science Fiction* called "By His Bootstraps."

liger. See TIGON.

light a fire under. See BUILD A FIRE UNDER.

light colonel. Army slang going back 60 years or more, a *light colonel* is a pun on Lt. (Lieutenant) Colonel and indicates that Lt. Colonel is a lower and less weighty rank than full colonel.

lightning/lightning bug. See THE PERFECT WORD.

lightning never strikes twice. Not only does lightning strike twice in the same place, it is *more likely* to strike in the same place than not, simply because the tree or whatever else serves as the conductor for the first strike is the highest, most attractive point in the area. Nevertheless, the old superstition has been around for centuries and is often used in the expression *lightning never strikes twice*, meaning that anything, either bad or good, that happened once won't happen again. The ancients held that persons struck dead by lightning were incorruptible and they honored them, but many used various charms to protect themselves against lightning, which kills about 150 people a year in the U.S.

lightning pilot. A pilot on the Mississippi River in the 19th century who was lightning quick, who got all the speed possi-

ble from his ship, was called a lightning pilot. The term was used by Mark Twain and many other contemporary writers.

light on a bush. Folk poetry for the berries of the bayberry bush (*Myrica pensylvanica*), the phrase *light on a bush* originated among American pioneers in the 17th century. The waxy berries were of course used to make candles; in fact, in Colonial times September 15 was known as Bayberry Day, "a time when old and young sallied forth with pail and basket, each eager to secure his share in the gift of nature."

lightweight. British boxers who weighed under 154 pounds were called *lightweights* as early as 1850, although the American lightweight division today is 127–135 pounds. Before that, in the 1730s, *lightweight* had been used in English horse racing to refer to lightweight gentleman riders. Both of these terms were the inspiration for the general expression *lightweight* meaning an unimportant or inconsequential person, which is first recorded in 1882. See HEAVYWEIGHT.

like a duck. The old saying goes: If it looks like a duck and walks like a duck and talks like a duck, it generally is a duck.

like a hot knife through butter. Something easy to do, without much effort. "Will you be able to finish this on time?" "No problem, like a hot knife through butter."

like a house on fire. Although log cabins weren't the homes of the earliest American settlers—Swedes settling in Delaware introduced them in 1638—they became a common sight on the western frontier in the 18th and 19th centuries. As practical as they were, these rude wooden structures were tinderboxes once they caught fire. So fast did they burn to the ground that pioneers began to compare the speed of a fast horse to a log cabin burning to the ground, saying he could go *like a house on fire*. By 1809 Washington Irving, under the pseudonym Diedrich Knickerbocker, had given the expression wide currency in his *History of New York from the Beginning of the World to the End of the Dutch Dynasty*, the first great book of comic literature by an American. The phrase soon came to mean "very quickly or energetically."

like all get out. Very fast, quickly, as in "He ran after them like all get out."

like a shot out of hell. When the last half of this phrase was coined is a mystery, but *like a shot* dates back to 1809. Dickens later employed the expression, and it became widely used for "fast, very quickly," like a bullet fired from a gun.

like father, like son. British author George Farquhar had this to say about this proverb: "'Tis an old saying, 'like master, like man,' why not as well, 'like mistress, like maid?'" It is generally heard as in praise of resembling someone, as in "You look just like your father."

like Grand Central Station. Very crowded, packed, hectic. In use since the early 1900s, the phrase refers to New York's Grand Central Terminal, where trains arrive and depart for

many destinations, and the busy Grand Central subway stop in the terminal.

like herding cats. A clever recent expression that isn't recorded in any dictionary. It means a "difficult, almost impossible job," as in "Making people pay such a tax will be like herding cats." The cat is an animal that is highly independent and unlikely to be forced into anything. The verb *to herd* is frequently used in the expression *ride herd on* (cattle), which dates back to the turn of the 19th century in the West and means to closely supervise something. *To herd* can also mean "to oversee" convicts or laborers, and even in some regions to take care of children: "Will you herd the baby for me?" or "She was herding the kids."

like in Macy's window. A synonym for the ultimate in public exposure: "We'll be like in Macy's window." Traditional window displays date back to the early 1880s when the use of plate glass on a wide scale made display windows a standard feature of department stores. Macy's display windows in New York were long the most prominent among them, especially those in their flagship store on 34th Street, "the World's Largest Store" with over 2.2 million square feet of floor space. In fact, Macy's old 14th Street store in Manhattan was famous for its Christmas displays as far back as the mid-1800s, featuring a collection of toys revolving on a belt.

like it or lump it. Be happy with it or just put up with it against your will, resign yourself to it. *Lump it* could come from the word *lump*, which once meant to gulp down a bitter medicine. The expression dates back to 1791, according to the *Dictionary of Americanisms*.

like lemmings. It may not be true that lemmings commit mass suicide by marching into the sea. The Norway lemming (*Lemmus lemmus*), resembling a cross between a rat and a miniature rabbit, is an incredibly prolific creature, females giving birth to three litters every 11 months, with up to 12 babies per litter. Young from each litter can conceive when only 19 days old, which means that females from the first and second litters are able to reproduce within the year. Scientists have recently theorized that the extraordinary lemming population explosions that occur irregularly in periods from five to 10 years are triggered by a super hormone that appears in new spring shoots of grass. This stimulative substance, when nibbled in small doses by the lemmings, apparently increases litter size and hastens maturation. When the lemming population explodes, the fabled lemming migration begins, the basic drive apparently the need to find a suitable nesting area. The pernicious lemmings begin their migration by coming down from the Scandinavian mountains, thousands of them proceeding in a straight line, a few feet separating each. They eat little on the way but destroy everything in their path. The landscape is carpeted with them, and they frequently interrupt rail and highway traffic. Onward the line of lemmings forges, largely male because pregnant females settle down along the way in suitable habitats. The line of lemmings traces a furrow in the earth, stripping it of vegetation while making a low whistling sound. Nothing stops it. It may go around impassable obstacles such as rocks, but will immediately form into a single straight line again. The lemmings resist

any attempt to stop them, defending themselves against dogs and even men. The living line avoids human habitations but gnaws through haystacks, levels farmlands, and scoots between the legs of people at times, relentlessly marching on. When they come to water, the lemmings, good swimmers, continue on their course, thousands of them plunging in and trying to make it to the opposite shore, often climbing over boats rather than be diverted from their straight line. The line doesn't steer away from wide rivers and (apparently believing they can reach the other side) even plunges into the ocean on reaching the coast, where the exhausted lemmings, always struggling to stay alive, drown or are swallowed up by fish and seabirds. Those females who remain behind in suitable habitats make their way back to the mountains, so this amazing mass behavior is not suicidal, as many people believe. "The false idea that lemmings have a death wish conforms to some evident need in rhetoric," columnist Philip Howard wrote not long ago in the *Times* of London. "It is all bunkum. Lemmings just don't do what they are supposed to do. The only animal that regularly commits mass suicide is *Homo sapiens*. But evidently we have a need for some vivid metaphor from nature to illustrate the human propensity to self-destruction. The poor bleeding lemming has been adapted as a cliché to fit the description."

like looking for maidenheads. Eric Partridge, in *A Dictionary of Catchphrases* (1977), defines this British phrase as "looking for something either unprocurable, or at the least, exceedingly scarce," tracing it back to about 1890. I think I have heard a version making something even more unprocurable: *looking for maidenheads in a whorehouse*.

like pigs in clover. To be completely content, very happy. The first mention of the Americanism was a brief poem in the *Boston Gazette* (Jan. 7, 1813): "Canadians! Then in droves come over, / And live henceforth like pigs in clover." In Britain *pigs in clover* describes wealthy people behaving badly, but I've never heard or seen the words used that way in the U.S. See CLOVER.

like poundin' sand in a rat hole. To perform a very easy task, as in "He couldn't pound sand in a rat hole."

like rats deserting a sinking ship. Brewer tells us that "it was an old superstition that rats deserted a ship before she set out on a voyage that was to end in her loss." However, the expression probably comes from a 1579 proverb claiming that rats desert a falling *house*. Any sensible rat would do either if it could, but the expression still describes a selfish, cowardly desertion.

like the curate's egg. Something satisfactory in some ways but not in others: "The play was rather like the curate's egg." The expression originated with a story in the British magazine *Punch* (November 9, 1895) in which a timid curate had been served a bad egg while dining at the home of an important parishioner. He is asked how the egg tastes and, not wishing to offend his host, says that parts of it are excellent.

like trying to find flea shit in a pile of pepper. The phrase is used by a U.S. senator in the movie *J.F.K.* (1991), but I'm sure it's older. It means "almost impossible to find," harder by far than finding a needle in a haystack.

like trying to nail Jell-o to a tree. Theodore Roosevelt seems to have invented the idea behind this metaphor, if not the exact words, in a July 2, 1915, letter to William Roscoe Thayer, in which he described the difficulty of negotiating with Colombia regarding the Panama Canal. His exact words were: “You could no more make an agreement with them than you could nail currant jelly to a wall—and the failure to nail currant jelly to a wall is not due to the nail; it is due to the currant jelly.”

Likker’ll make you not know your momma. A Gullah dialect proverb that dates back to at least the 18th century and probably earlier. It may, in fact, be an adaptation of an African proverb brought to America by South Carolina slaves. See SPEAK SOFTLY AND CARRY A BIG STICK.

lilacs. There are lilacs white, blue, pink, red, and purple, in many variations, but the word *lilac* means “blue.” *Lilac* began as the Persian word *nilak*, “bluish,” for the flower, passed into Arabic as *laylak*, and became *lilac* in Spanish, whence it came into English in the same form.

Lillian Russell. Beautiful and flamboyant Lillian Russell was the toast of the town almost from the night she made her debut at New York’s Tony Pastor’s Opera House in burlesques of Gilbert & Sullivan comic operas. Only 18 at the time, the singer and actress was fresh from Clinton, Iowa, where she had been born Helen Louise Leonard in 1861. For the next 30 years Lillian Russell’s beauty and talent for light opera brought her fame and fortune unsurpassed by any contemporary performer. Success included her own company, a collection of male admirers that has probably never been matched since, and a number of sumptuous apartments and houses, such as her summer home in then fashionable Far Rockaway, New York, where she entertained lavishly. Among several things named for her were the Lillian Russell dessert, half a cantaloupe filled with a scoop of ice cream, and the town of Lillian Russell in central Kansas, which today has a population of about 6,200.

lilliputian. The Lilliputians of the island of Lilliput in Jonathan Swift’s satiric novel *Gulliver’s Travels* (1726) are little people averaging six inches tall. Thus *lilliputian*, which suggests “little” in sound as well, has come to mean tiny or diminutive. See BROBDINGNAGIAN.

lilt. See FECKLESS.

lily-livered. The liver, the largest gland in our bodies, was once believed to be the seat of passion. It was also believed that the liver of a coward contained no blood, not as much “as you find in the foot of a flea,” since a coward wasn’t capable of passionate violence. Hence the expression *white-livered* and *lily-livered* for cowardly. Shakespeare wrote of cowards with “livers white as milk” and later came lusty expressions such as “a lily-livered, action-taking knave.” See LEARN BY HEART; BOWELS OF COMPASSION.

Lily Marleen. One of the few songs or poems whose real-life origins are known. This song, called “the most beautiful love

song of all time” by John Steinbeck, was written in the early years of World War I by German officer cadet and poet Hans Leip. He took the woman’s name in the title from a girl he loved back home named Lili, a grocer’s daughter, and a green-eyed beauty named Marleen whom he’d met in a Berlin art gallery. The poem was not published for another 20 years and only became popular in 1939 when Berlin composer Norbert Schultze set it to music and singer Lale Andersen recorded it. The whole story of the song, which became popular the world over, is told in Carlton Jackson’s book *The Great Lili* (1995). See also JENNY KISSED ME.

lima beans. Named for Lima, Peru by early European explorers who found them there, tender lima beans are often called butter beans in the U.S. The succotash made from them (and corn) derives from the Narraganset Indian *msquatash*, literally “fragments.” The lima bean’s botanical name *Phaseolus* is said to derive from the resemblance between the bean’s pod and a special type of ship that originated at Phaselis, a town in Pamphylia.

limb. In the early 19th century “leg” was considered an indelicate word in America and *limb* (from the Anglo-Saxon *lim*, meaning the same) served as a euphemism for it. English novelist Captain Frederick Marryat described a visit to a young ladies’ seminary in 1837: “On being ushered into the reception room, conceive my astonishment at beholding a square *piano-forte* with four limbs. However, that the ladies who visited their daughters might feel in its full force the extreme delicacy of the mistress of the establishment, and her care to preserve in their utmost purity the ideas of the young ladies under her charge, she had dressed all these four limbs in modest little trousers with frills at the bottom of them!”

limburger; Limburger cheese. Limburger cheese was introduced to America by German immigrants in the 19th century and was soon well known for its pungent smell. The soft cheese takes its name from the Limburg province of Belgium (not Holland) where it is made. Its strong smell and flavor long ago made Limburger cheese the butt of many comedians’ and cartoonists’ jokes. And since the cheese from Belgium’s Limburg province was popularly thought to come from Germany, *Limburger* also became a derogatory term for a German during World War I.

lime; limey. Limes have been cultivated for thousands of years and take their name ultimately from the Persian *liman* for the fruit. As far back as 1795, lime juice was issued in the British navy as an antisorbutic, to protect against scurvy. After about 50 years, Americans and Australians began calling English ships and sailors “lime-juicers,” and later “limeys.” The term “limey” was eventually applied to all Englishmen, and today the designation and the story behind it are widely known. Originally a contemptuous term and an international slur, *limey* is now considered a rather affectionate designation.

limelight. Royal Engineer Thomas Drummond (1797–1840), a Scottish inventor, devised the Drummond light as an aid in murky weather while assisting in a land survey of Great Britain, and soon after adapted it for use in lighthouses. Drummond,

who later became secretary of state for Ireland, utilized calcium oxide, or lime, which had been isolated by Sir Humphry Davy and gives off an intense white light when heated. The Drummond light wasn't used on the stage as a spotlight or called limelight until after the inventor's death in 1840, when the expression *in the limelight*, "in the full glare of public attention," naturally arose from it. Limelights have long been replaced by arc and Klieg lights, but the phrase *in the limelight* still survives.

limericks. Poet Edward Lear's (1812–88) nonsense verses were labeled *learics* by M. Russell, a Jesuit wit of the day, the new word a play on the poet's name, on the fact that what he wrote weren't dignified lyrics, and on the leering grins some such verses even then produced. It wasn't until 52 years after Lear's book was published that the one-stanza poems, by now immensely popular, were dubbed *limericks*. One theory has it that the name arose then because a popular contemporary song had a chorus that went, "We'll all come up, come up to Limerick." It seems that there was also a party game played at the time in which each guest would invent and recite a *learic*, the whole group singing the chorus about "coming up to Limerick" between recitations. This may be true, but it is just as likely that the *learic* became the *limerick* because people believed that the verses were invented in Ireland, the land of poetry.

limousine. Originally any closed car, the limousine takes its name from a hood of that name worn by Limousins, inhabitants of the French province of Limousin. In recent times *limo* is increasingly being used in place of limousine, and very long custom-made limos are called stretch limos.

Lincoln, Nebraska. Named after Abraham Lincoln, this is one of the four U.S. state capitals named after presidents. The others are Madison, Wisconsin, for James Madison; Jefferson City, Missouri, for Thomas Jefferson; and Jackson, Mississippi, for Andrew Jackson. *See* MONROVIA.

Lincolndom; Daviddom; Jeffdom. Southerners used *Lincolndom* as a humorous designation for the North during the Civil War, the term first recorded in 1861 and referring, of course, to President Abraham Lincoln. On the other side of the lines, the South was called Daviddom, (and, more rarely, Jeffdom), after Jefferson Davis, president of the Confederacy, these words being coined a few months before *Lincolndom*. *See also* FRANKLIN CONDUCTOR, JACKSONIAN DEMOCRACY.

Lincoln gimlet. *See* SHERMAN HAIRPINS.

Lincolniana It is surprising that only some 25 place-names in the United States honor our 16th president, little more than half those commemorating Jefferson and less than one-third of those named for Andrew Jackson. But this can be explained by bitterness toward Lincoln in the South. For none of his countrymen, not even Washington, has become a folk hero and giant in American tradition equal to Lincoln, and he is certainly more loved and respected the world over than any other American. His story, from his birth in a Kentucky log cabin to the Emancipation Proclamation, the immortal Gettysburg

Address, and the assassination by John Wilkes Booth, is so widely known in its smallest details that it is, rather than history or myth, a living part of the American legend from generation to generation, making Lincoln a father image to us all. Lincolnite designated a supporter of President Lincoln during the Civil War. Lincolniana is any material, such as writing, anecdotes, or objects, pertaining to him. Lincoln's birthday, February 12, is a legal holiday in many states. *See* HONEST ABE.

Lincoln shingles. Hardbread, also dubbed sheet-iron crackers, was called Lincoln shingles by U.S. troops on the frontier. The term is first recorded in Captain Eugene F. Ware's *The Indian War of 1874*, but must date back to Civil War times, given the use of Abraham Lincoln's name. A synonym was *teeth dullers*.

Lindau's disease. *See* BRIGHT'S DISEASE.

linden tree. The handsome linden, or lime, or basswood tree (*Tilia*) is of interest here because it gave its name to the greatest of botanists and the greatest of name-givers. The story is best told by the American botanist L. H. Bailey in his classic but unfortunately out-of-print treatise *How Plants Get Their Names*, 1933: "Carl Linnaeus was born in southern Sweden in 1707. His father, Nils Ingermarsson, took a Latin surname when he began his school and university career to become a scholar and eventually a churchman, adapting it from a certain famous lind, the lime-tree or linden. It was custom in those days for persons to choose a Latin name or to Latinize the patronymic. The family of Linnaeus chose the name Tiliander from the same tree, *Tilia* being Latin for the lindens. Another branch of the family became Lindelius. The particular lind tree, it is written, 'had acquired a sanctity amongst the neighbors, who firmly believed that ill-fortune surely befell those who took even a twig from the grand and stately tree.' Even the fallen twigs were dangerous to remove, and they were heaped about the base of the tree. It had perished by 1823. To the people the name Linnaeus was rendered *Linné*, the accent preserving the essential pronunciation of the word. Linnaeus, for his part, wrote that 'Linnaeus or Linné are the same to me; one is Latin, the other Swedish.' His great Latin books were written naturally under the name Linnaeus, and thus is he mostly known to naturalists. In later life a patent of nobility was granted him and he was then Carl von Linné. We find him signing himself as Carolus Linnaeus Smolander, his province or nation being Smoland and Carolus being the Latin form of Carl or Charles; also as Carl Linnaeus, Carl Linné, and Carl v. Linné. This much is by way of preface to explain the forms in which the name of this marvellous man appear." *See* LINNAEAN SYSTEM.

Lindley Murray. An American grammarian whose work was long regarded as standard with no competition. Murray, a Quaker minister, published his most important book, *English Grammar*, in 1795, after moving from the United States to England. He was also the author of numerous schoolbooks.

Lindy. Even today's astronauts returning from the moon did not receive the hero worship heaped upon Charles Augustus

Lindbergh when he made the first solo flight across the Atlantic on May 20–21, 1927, in his *Spirit of St. Louis*. Lindbergh was awarded the Congressional Medal of Honor for his 33½-hour nonstop flight from New York to Paris, promoted to colonel in the Air Force, and received the French Cross of the Legion of Honor, the English Royal Air Force Cross, and the American Distinguished Flying Cross among hundreds of national and international honors. There had never been such adulation and perhaps there never will be again—in June 1927 alone, it is reported, Lindbergh received 3,500,000 letters, 14,000 parcels, and 100,000 telegrams. The Hero, the Lone Eagle, Lucky Lindy, the Flying Fool symbolized the beginning of a new technical age that in itself made great personal heroism less likely. Lindbergh's unprecedented fame even resulted in the lindy or lindy hop, a jitterbug dance very popular up until the mid-1950s, being named in his honor. His name made headlines again in 1932 with the tragic kidnapping and killing of his infant son, for which Bruno Richard Hauptmann was found guilty and which led to the Lindbergh Law passed by Congress in 1934. The law made all kidnappings across state lines and the use of the mails for ransom communications federal offenses.

line-of-battle ship. In the days of sail, a line-of-battle ship, as opposed to other vessels such as frigates, was a capital ship fit to take part in a major battle. “Line of battle” simply referred to the formation of ships in a naval engagement.

lingo. A strange language, a foreign language, the word possibly deriving from the Portuguese *lingoa*, which comes in turn from the Latin for “a tongue.”

lingua franca. A lingua franca is any hybrid language, a combination of various tongues. Pidgin English and Bêche-de-Mer or beach-la-mar, are two such trade languages in the Pacific, but the earliest one recorded is lingua franca itself, meaning “the Frankish tongue” in Italian. Lingua franca arose along the Mediterranean, a medley, or babble, of Italian, French, Spanish, Greek, Turkish, and Arabic common to many seamen in the ninth century or earlier. A Frank was any West European at the time, for the tribe ruled over most of Europe. The language enabled Muslims to conduct business dealings with Europeans, and Mediterranean traders still find it very useful in the Levant.

linguine. Linguine is thin, flat pasta, so thin that it reminded some poetic person centuries ago of “little tongues,” which is what *linguine* means in Italian. See also VERMICELLI.

linguistic cleansing. An invention of Canadian author Mordecai Richler (1931–2001) apparently based on the far more chilling euphemistic ETHNIC CLEANSING. In coining the term Mr. Richler wrote, “In 1977, shortly after the separatist Parti Québécois, then in office, brought in the French Language Charter, we were subjected to a degree of linguistic cleansing. [The word *hamburger*] was adjudged an impurity imposed on Québécois pure laine by their colonial masters in the foreign capital of Ottawa. So it was ruled that it should be immediately replaced by *hambourgeois*, which was what we were supposed to ask for if we suffered a Gros Mac attack.”

lining one's pockets. Despite all the other foppish British Beaus before and after Beau Brummell, only Brummell's name lives on as a synonym for a dandy or fancy dresser. Beau Brummell, aided by the patronage of the Prince of Wales, later George IV, was the *arbiter elegantiarum* of London fashion for almost 20 years, a man noted for his excesses as well as his good taste; he often spent an entire day dressing for an affair, had all his gloves made by three glovers—one to fashion the hands, another for the fingers, and a third for the thumb, etc. So valued was his patronage that one tailor presented him with a coat whose pockets were lined with money, which gave rise to the expression *lining one's pockets*, for “bribery or graft.”

links. The Old English *hlinc*, “rising ground,” is the ancestor of our links for a golf course; the first course called a links was located at Leith, Scotland in the late 16th century. The most famous poem about golf links is American poet Sarah N. Cleg-horn's quatrain:

The golf links lie so near the mill
That almost every day
The laboring children can look out
And see the men at play.

Linnaea. Named for its flowers in pairs at the end of slender, upright stalks, the twinflower was scientifically called “*Linnaea*” by Linnaeus himself. The great botanist apparently chose this humble genus, consisting of two species, out of modesty, describing the twinflower as “a plant of Lapland, lowly, insignificant, disregarded, flowering but a brief space—from Linnaeus who resembles it.” See LINDEN TREE; LINNAEAN SYSTEM.

Linnaean system. Linnaeus, most famous of all naturalists, not only dubbed us *Homo sapiens*, but chose the names for far more things than any other person in history, classifying literally thousands of plants, animals, and minerals. Carl von Linné—*Carolus Linnaeus* is the Latin form of his name—showed an early love of flowers that earned him the nickname “the little botanist” when he was only eight years old. The son of a Lutheran minister who cultivated his interest in nature, he became an assistant professor of botany at Uppsala University, then studied medicine in Holland, where in 1735 he wrote his *Systema Naturae*. Linnaeus was only 28 at the time, and his masterpiece was followed by *Genera Plantarum* in 1737 and *Species Plantarum* 16 years later. These books marked the beginning of taxonomy, a system of scientific nomenclature that would be elaborated in more than 180 works. The Linnaean system the naturalist developed divided the kingdoms of animals, vegetables, and minerals into classes, orders, genera, species, and varieties, according to various characteristics. It adopted binominal nomenclature, giving two Latin names—genus and species—to each organism. In this two-name system all closely related species bear the same genus name, e.g. *Panthera* (Latin for “cat”) *leo* is the lion, and *Panthera tigris* is the tiger. The system Linnaeus invented provided scientists with an exact tool for the identification of organisms and is standard today, although many old popular names for plants and animals linger on. Further it recognized all organisms as part of a grand scheme, a unique concept at the time. Linnaeus continued to practice medicine and headed the botany department at Uppsala, naming thousands of plants that he collected and

classifying hundreds more than professional and amateur botanists sent him from all over the world. He named some plants for their characteristics alone, some for prominent people and others for their discoverers, but in almost every case the designation he applied remains intact. Linnaeus was 71 when he died at Uppsala in the cathedral in which he is buried. His garden at the university, where he grew many of his plants, is still visited by pilgrims from all over the world. *See also* LINNAEA; LINDEN TREE.

the li-on is busy. This immortal intonation was first used at the Metropolitan Telephone and Telegraph Co.'s old Nassau exchange in New York City, by a Brooklyn-born operator around 1882. Dialing, Touch-Tone phones, cell phones, and the decline and fall of Brooklynese have made the words rare, possibly obsolete.

lionize. To *lionize* a person can mean to show him sights worthy of him, the term taking its name from the old practice of showing visiting dignitaries the lions that used to be kept at the Tower of London menagerie, a major tourist attraction until it was abolished at the beginning of the 19th century. An earlier use of the word, however, is to *lionize* a person by making a fuss over him, by making him feel like a lion. Both expressions date back to the early 1800s.

lion's share. *Lion's share* refers to the whole of or the largest portion of anything. It derives from one of Aesop's fables, in which a lion, hunting with several lesser beasts, insisted that the spoils be divided in four parts: one for his share; a second for his greater courage; a third for his family; "and as for the fourth let who will dispute it with me." *See* LEONINE CONTRACT.

lipogram. If anyone has ever discovered the value of lipograms, except as exercises in verbal ingenuity, she or he ain't telling. A lipogram is "a written work composed of words chosen so as to avoid the use of specific alphabetic characters," and the first practitioner of lipography is said to have been the Greek lyric poet Lasus, born in Achaia in about 548 B.C. The next great poet to write a letterless poem was Lasus's pupil Pindar, who wrote *Ode minus Segma* late in the fifth century B.C. The Greek *Odyssey of Tryphiodorus*, however, outdoes both Lasus and Pindar. It consists of 26 books, with no *a* in the first book, no *b* in the second, no *c* in the third, and so on. (Someone said of the work that it would have been better if the author left out the other letters, too.) Spanish playwright Félix Lope de Vega y Carpio (1562–1635) wrote each of his five novels without using one of the vowels, but Lope de Vega is far better known for the 2,200 plays tradition says he completed (close to 500 survive). Another famous European lipogram is Ronden's *Pièce sans A* (1816). This was perhaps influenced by German poet Gottlob Burmann (1737–1805), who wrote some 130 poems without employing the letter *r* and for 17 years omitted *r* from his daily conversation, never speaking his own name, which he hated anyway. James Thurber wrote a story about a country where the letter *o* was illegal, but the best-known American book without a certain letter is Ernest Vincent Wright's *Gadsby* (1939), which has no *e*'s in it. The author, a California musician, pried the *e* off his typewriter keyboard to restrain himself and typed a 267-page, 50,000-word epic using no word containing that most common of vowels.

liquor will make you not know your mother. *See* LIKKER'LL MAKE YOU NOT KNOW YOUR MAMA.

Lison's case. Almost all cases of human *dentition*, the process of growing new teeth, are limited to the growth of one and then a second set of teeth. There are, however, several cases of *three* sets of teeth recorded in medical history. In fact, in 1896, a *fourth* dentition, called *Lison's case*, was observed in the mouth of an elderly Frenchman.

Listerine. A trademark that is practically synonymous today with "mouthwash," *Listerine* takes its name from Joseph Lister, first Baron Lister (1827–1912), famous for founding antiseptic surgery. Basing his methods on Pasteur's theory that bacteria cause infection, Lister in 1865 used a mixture containing carbolic acid as a germicide and invented methods of applying it to wounds and incisions, such procedures greatly reducing postoperative fatalities from infection. Lord Lister, who became president of the Royal Society, tried unsuccessfully to disassociate his name from Listerine when the product was first marketed, much preferring to see himself commemorated by the Lister Institute of Preventive Medicine in London, of which he was a founder. Lister is also credited with inventing the forceps, a serrated surgical saw called the lister, and many other surgical instruments.

lists. *See* ENTER THE LISTS.

Literary Emporium. Boston used to be known as America's Literary Emporium, due to the comparatively large number of literati and publishing houses there in the early 19th century. British actor Edmund Kean coined the term in one of his speeches from the stage when on a tour of America.

litterbug. Litterbug, meaning someone who habitually litters, is an anonymous coinage, probably based on firebug, dating back to the end of World War II. It owes its popularity to the Lakes and Hills Garden Club of Mount Dora, Florida, which used the slogan "Don't be a litterbug!" in a 1950 roadside cleanup campaign.

Little. An American qualifier sometimes attached to first names where the son has the same first name as the father. "In some parts of the world Little Joe would be called Joseph Twine II, but in Texas he's called Little Joe, to distinguish him from his father, Big Joe," Larry McMurtry observed in *Cadillac Jack* (1982).

a little bird told me. One scholar suggests that this familiar saying may have originated with the similar-sounding Dutch expression *Er lif t'el baerd*, which means "I should betray another." More likely the idea behind the phrase is in the noiseless flight of a bird, reinforced by a biblical passage from Eccles. 10:20: "Curse not the kind, no not in thy thought, . . . for a bird of the air shall carry the voice, and that which hath wings shall tell the matter." Used by Shakespeare and Swift, the expression dates back to at least the 16th century.

Little Boy. The code name for the atomic bomb dropped on Hiroshima by the U.S. Air Force plane *Enola Gay* in 1945. *See* A-BOMB; MANHATTAN PROJECT.

Little Church around the Corner. Several New York City churches refused to hold funeral services for eminent comedian George Holland (1791–1870) on the grounds that he was an actor. Fellow comedian Joseph Jefferson kept up the search and finally found another church where the pompous minister again refused Holland burial services, but told Jefferson, “there is a little church around the corner where they do this sort of thing.” The funeral was finally held there, at 1 East 29th Street in the Protestant Episcopal Church of the Transfiguration, which soon became known as the Little Church around the Corner and is still the scene of many theatrical funerals and weddings.

little drops of water make the mighty ocean. The saying comes from the poem “Little Things” (1845) by Julia A. Fletcher Carney, the first two lines of which read: “Little drops of water, little grains of sand, / Make the mighty ocean and the pleasant land.” Colorful equivalents in other languages include: A hair from here and a hair from there finally make a beard (Arabic); Little by little the bird makes his nest (French); Drop by drop the sea is filled (Italian); Grains of sand pile up to make a hill (Japanese); and Dripping water hollows a stone (German).

Little Englander. An isolationist who is against Great Britain becoming part of any European Union. The term has been used, however, for over a century and at first described an anti-imperialist.

Little Flower. A nickname for Fiorello LaGuardia (1882–1947), who served as mayor of New York City from 1933 to 1945. Later, after LaGuardia headed the American War Relief Administration in Korea, many Koreans named their newborns Lee Mi Wah, a literal translation of “Little Flower,” in his honor. New York’s LaGuardia Airport is also named after the colorful mayor, who regularly read the Sunday comic strips, or “funnies,” to New York kids on the city radio station.

Little Jack Horner. See JACK HORNER.

Little Lord Fauntleroy. The hero of the novel of the same name written by Frances Hodgson Burnett in 1886 gives us the expression *a little Lord Fauntleroy*, for a sissyish boy or man. *Fauntleroy* clothes are frilly velvety ones like those worn by the little lord.

littleneck clams. Littleneck clams don’t have little necks, but hailed originally from either Little Neck Bay, Long Island, New York, or Little Neck Bay, Ipswich, Massachusetts. No one knows which for sure.

little old ladies in tennis shoes. This U.S. catchphrase, which has been around since the 1920s, describes old ladies who are, according to Partridge, “bourgeois-beldames—fussy, prim, self-important, naïve, ignorant, self-confident, self-righteous, gullible, conventional, conservative, old-fashioned, prudish, unfashionable, and typical rural or small town.” See also OLD LADY IN DUBUQUE.

little old lady in Dubuque. See OLD LADY IN DUBUQUE.

little people; dwarf; midget. Little People of America says that there are 300,000 or more dwarfs in the United States. *Little people* and *dwarf* are the preferred terms for these people, while *midget* is now considered offensive.

little pitchers have big ears. See LITTLE RABBITS HAVE BIG EARS.

a little pot is soon hot. Said of a small person quick to lose his temper or to become passionate. It is a rhyming British proverb dating back to the mid-16th century and the *little* in it can mean small in mind as well as size. Shakespeare used it in *The Taming of the Shrew*.

little rabbits have big ears. Australians surely have lots of rabbits eating the landscape, but that has nothing to do with the origins of the phrase. It is probably an extension of the 16th-century proverb *little pitchers have big ears*, which warns adults that children are present and may be listening. A water pitcher handle bears some resemblance to an ear.

Little Rhody. A nickname for Rhode Island first recorded in 1851. Rhode Island is also called the Plantation State, in reference to its official name, the State of Rhode Island and Providence Plantation. Its nickname the Lively Experiment State comes from its 1663 charter, which promised to “. . . hold forth a *lively experiment* . . . with a full liberty in religious concernment.”

little said is soon amended. This proverbial phrase, also *least said, soonest mended*, possibly derives from a rhyme Oliver Goldsmith may have written for John Newberry’s edition of *Mother Goose’s Melody* . . . in 1760:

There was a little man,
Who wooed a little maid,
And he said, little Maid, will you wed, wed, wed?
I have little more to say,
So will you aye or nay,
For the least said is soonest men-ded, ded, ded.

little skeezics. A mischievous child. The word, altered slightly, became the name of a popular character in the comic strip *Gasoline Alley*. Also *skeezucks*.

little steps. The immortal Danish fabulist Hans Christian Andersen (1805–75) arranged for a composer to write his funeral march. “Most of the people who will walk after me will be children,” he instructed, “so make the beat keep time with little steps.”

little wee bit lassockie. Fully four words indicating smallness are employed in this Scottish English expression meaning a “little lass,” first recorded in 1810. The last word in the expression is sometimes *lassock*.

Little Willies. See GRUE.

lit up like a Christmas tree. Brightly and brilliantly colorful. I’ve been unable to locate a source for the phrase, which might

date back to Victorian times. The best I can do is cite F. Scott Fitzgerald's *The Great Gatsby* (1925): "[Gatsby's parties were illuminated by] enough colored lights to make a Christmas tree of Gatsby's enormous garden."

live all the days of your life. "May you live all the days of your life," Jonathan Swift wrote in *Polite Conversation* (1738). Similar instructions that have become proverbial, or almost so, include, live for the moment; you only live once; live and let live; enjoy yourself, it's later than you think; you can't take it with you, and *carpe diem*.

Live and let live. Apparently this well-known phrase was originally a Dutch proverb—at least an English writer claimed it was in 1622, when the words first appeared in English. It is still widely used.

Live by the sword, die by the sword. This old proverb, dating back to the 17th century, has its roots in the Bible, (Matt. 26:52): "All they that take the sword shall perish with the sword."

live cash; live. Some Canadians, especially those from Newfoundland, often use the term *live cash* for money real or actual, such as a bankroll of bills: "You have any live cash?" *Live* alone is applied to things homemade, including "live bread" or "live jam."

lively deaths. William Randolph Hearst's *New York Morning Journal*, suspecting the *New York World* was ransacking its obituary columns, faked an obituary for one Replie W. Thanuz. The *World* promptly stole it, only to have their rival point out that Replie W. was "we pilfer" spelled backward and that Thanuz was a phonetic spelling of "the news." When enough time had passed, the *World* avenged itself by planting the name Lister A. Raah in a news story. After printing it, the *Journal* learned that this was an anagram of "Hearst is a liar."

livestock. A term used by slave traders for the slaves they sold in pre-Civil War days.

living fossil of the sea. A name often given to the common HORSESHOE CRAB (*Limulus polyphemus*), which is really no crab but a distant relative of the spider. Horseshoe crabs, or king crabs, are called living fossils because they have barely altered their appearance in 200 million years—these arthropods looked the same millions of years before the first of the giant dinosaurs lumbered over the land. They probably haven't changed much because their large shell, which resembles a horseshoe, protects them so well, making it unnecessary for them to develop any further.

living from hand to mouth. Those of us who do so have just enough money to feed ourselves and our families, with maybe enough money to pay the rent. The expression dates back to early 18th-century England.

living in the lap of luxury. To live without wanting for anything, as if a maternal figure, symbolized by a lap, provided for

one's every need. The expression is first found in Lord Byron's poetic drama *Werner* (1822): "Rash, new to life, and rear'd in luxury's lap."

living legend. See LEGEND IN ONE'S LIFETIME.

living literature. The strangest of libraries belonged to Abdul Kassem Ismail (938–995), the grand vizier of Persia (Iran). It consisted of 117,000 books arranged alphabetically on the backs of 400 or more camels that walked in a fixed order whenever the grand one traveled.

living off the fat of the land. To be living a life in which one has the best of everything, especially foods. The expression is based on a verse from the Bible (Gen. 45:18): "Ye shall eat the fat of the land."

living stones of the church. The congregation, the individual worshippers who attend the church. The old term probably first referred to the Roman Catholic church.

llama. "¿Como se llama?" ("What is it called?") Spanish invaders asked South American Indians when they first encountered this unfamiliar animal. Not knowing what the Spanish were saying, the Indians repeated the Spanish word *llama*. The Spanish thought this was the name of the animal and dubbed it the *llama*, whose name therefore means "name." So goes the old story about the origin of *llama*. The *O.E.D.* and others claim that it probably comes from "a Peruvian word." See INDRI; KANGAROO; LUZON; NOME; YUCATAN.

llano. A Spanish term, first recorded in 1605, for arid, treeless prairies like the vast *Llano Estacado* (Staked Plain), a high dry plateau of 40,000 square miles in western Texas and New Mexico.

Lloyd's of London. See A-1.

L.L. Whisky. Any superior whisky. The words honor the duke of Richmond, who was Britain's Lord Lieutenant from 1807 to 1813 and had the initials of his title marked on a cask of his favorite whisky.

lo.

Hope springs eternal in the human breast;
Man never is, but always to be blessed.
The soul, uneasy, and confined from home,
Rests and expatiates in a life to come.
Lo, the poor Indian! whose untutored mind
Sees God in clouds, or hears him in the wind;
His soul proud sciences never taught to stray
For as the solar walk, or milky way;
Yet simple nature to his hope has giv'n,
Behind the cloud-topped hill, an humbler heav'n.

Alexander Pope's well-known words *Lo, the poor Indian* in the above lines from his *Essay on Criticism* (1711) inspired the term *Lo*, for an American Indian. The word isn't recorded in this sense until 1871, but must be considerably older. "Is it no

longer a matter of astonishment,” someone wrote in 1873, “that the Lo’s are passing so rapidly from the face of the earth?”

loaded for bear. Ready for anything, well prepared, heavily armed. “Loaded for b-ar,” as the expression was often pronounced, probably goes back to American pioneers hunting in the forests where they had to carry guns loaded with ammunition powerful enough to kill a bear, the most dangerous beast they might encounter. The phrase was first recorded, however, in 1875. Today it can also mean “very drunk.”

loaded to the gills; loaded to the guards. Anyone *loaded to the gills* DRINK LIKE A FISH or has drunk alcohol “like a fish drinks water” and is obviously drunk. Sailors use a younger version of the old expression when they say *loaded to the guards*. The “guards” here are part of the PLIMSOLL MARKS ON vessels, lines beyond which it is dangerous to load a ship.

loafer. Loafer, for “a lazy do-nothing, an idler, or lounge,” is apparently an Americanism, first recorded in 1830, deriving from the German *Landläufer*, “vagabond.” Other possible ancestors are the English dialect word *louper*, “vagabond,” the expression *to loup the tether*, “to wander,” and the Dutch *loof*, “weary.” The verb *to loaf* is apparently a back-formation from the noun. *Loafer* has been the name for a slip-on shoe without laces in the U.S. since the 1940s.

lobbying. Although it is an Americanism that isn’t recorded until 1808, a lobby, a group trying to influence the government to promote its own special interests, seems to derive ultimately from the large entrance hall to the British House of Commons that was called the Lobby as early as the 17th century. In the Lobby people could talk to members of Parliament and many tried to influence MPs there.

Lobelia. Linnaeus named over a thousand plants, including hundreds that have come to be household words. Many of the botanist’s namings honored people. Indeed, by labeling species as well as genera, the Swedish botanist sometimes commended two people with the same plant. This is the case with *Lobelia dormanna*, the water lobelia.

Linnaeus named the plant’s family *Lobeliaceae* and its genus *Lobelia* after Matthias de l’Obel, or Lobel (1538–1616), a distinguished Flemish botanist and physician who lived a century before Linnaeus. But he called *L. dortmanna*, one of its three hundred species, after an obscure druggist named Dortmann whom he met while studying in Holland. Nothing is known about Dortmann, but Lobel had been both physician and botanist to England’s learned King James I. A native of Lille, Lobel tried to classify plants according to their leaf formations long before Linnaeus and wrote several of the earliest botanical books. The *Lobeliaceae* family commemorating him contains 24 genera and over 700 species, some of which are trees and shrubs, but its *Lobelia* genus consists of about 300 species of annual or perennial herbs widely grown for their mainly blue, red, yellow, or white flowers. The species *Lobelia inflata* was used by American Indians like tobacco, has a tobacco-like odor, and was also employed as the base for a popular home remedy, though it is considered poisonous in quantity. Another species, *Lobelia syphilitica*, the blue syphilis, was

used by the Indians to treat syphilis; it was even introduced into Europe centuries ago for this purpose.

loblolly pine. *Loblolly* is first recorded in 1597 in Gerarde’s *Herbal* as a thick gruel or stew. It is probably an onomatopoeic word, one writer noting that “it describes a semi-liquid state” and “itself shakes in pronunciation like jelly, which is most nearly what it describes.” In America settlers began to apply *loblolly* to miry muddy places and called *Pinus taeda*, a long-leaved southern pine, the loblolly pine because it commonly grew in such swampy places. The name is first recorded in about 1730. There is also a *loblolly bay* (*Gorclonia lasianthus*) and in 19th-century America a mudhole was humorously called a *loblolly*.

lobotomy; lobotomobile. *Lobotomy*, the practice of surgical incision into the brain’s frontal lobe to treat various mental disorders, is rarely performed today, but was common in the early 1950s, accounting for about 5,000 operations a year. According to a *New York Times* (April 29, 2004) article by Randy Kennedy there was even “a real neurologist, Dr. Walter Freeman, who pioneered outpatient lobotomies in the late 1940s and, before he lost his surgical privileges in the late ’60s, drove around the country promoting the operation in a camper van he called the *lobotomobile*.” American director Richard Ledes’s film *A Hole in One* (2004) treats the subject of lobotomies. Probably the most famous novel and movie treating the subject is Ken Kesey’s *One Flew Over the Cuckoo’s Nest* (1962) in which the rebellious joyful character McMurphy, a patient in a mental institution, is reduced by a lobotomy to blank passivity.

lobster. Lobsters are, in fact, a kind of bug. The word *lobster* itself is a melding of two foreign words: the Latin *locasta*, meaning “locust,” and the Anglo-Saxon *lape*, which means “spider.” “Real” lobster is not the freshwater lobster that the French call *écrevisse*, or crawfish, the small European crustacean with no claws; or even the warm-water spiny lobster from which lobster tails are obtained and labeled *langosta* or *langouste* in some restaurants. The true lobsters number among their ranks only *Homarus americanus*, often called Maine, or North Atlantic, lobsters; the smaller blue lobster of Europe, *H. vulgaris*; *Nephrops norvegicus*, the orange Norwegian lobster, variously called lady lobster, scampi, or prawn; and *H. capensis*.

lobster à l’américaine. *Homard à l’américaine*, as the French call it, is uncooked lobster meat sautéed in oil and served with a rich tomato and white wine sauce. It may have been invented by the chef M. Reculet during the siege of Paris (1870–71) and named in honor of some customer from across the Atlantic. A second explanation holds that the dish originated in Brittany’s Armorique, and that its present name is simply a misspelling of *homard à l’armoriquaine*.

lobster Newburg. The most famous of lobster dishes, lobster Newburg, should have blazoned the name of Benjamin J. Wenberg (1835–85), a late 19th-century shipping magnate, across the pages of menus everywhere, but gastronomic lore has it that he was foolish enough to displease the great restaurateur Lorenzo Delmonico. It’s said that Wenberg discovered the dish

in South America and described it glowingly to Delmonico's owner. Lorenzo, instructing his chef to prepare the shelled lobster in its rich sauce of sherry, thick cream, and egg yolks, served the dish to his wealthy patron and named it *lobster Wenberg* in his honor. It remained thus on Delmonico's menu for almost a month, until one evening when Wenberg got drunk, started a fight in the posh restaurant's dining room and was evicted. Soon after, the dish appeared on an enraged Lorenzo's menu as *lobster Newburg*, probably in honor of the city on the Hudson.

lobster shift. *Lobster shift*, for the newspaper shift commencing at four in the morning, is said to have originated at the defunct *New York Journal-American* early in this century. The newspaper's plant was near the East Side docks and workers on this shift came to work at about the same time lobstermen were putting out to sea in their boats.

lobster Thermidor. Creamy lobster Thermidor may have been invented by a French chef in honor of Napoleon. But some culinary experts contend that this classic fare was named for Victorian Sardou's play *Thermidor* and first served to the public on the evening of January 24, 1874, at the once famous Chez Maire restaurant. According to this account, the controversial drama closed after one performance, but the toothsome dish remained a long-running hit.

locale was Celtic and his season Spring. The pertinent part of Judge John M. Woolsey's U.S. district court decision of December 6, 1983, allowing James Joyce's *Ulysses* to be brought into the country, reads as follows: "In respect of the recurrent emergence of the theme of sex in the minds of his [Joyce's] characters, it must always be remembered that his locale was Celtic and his season Spring . . . whilst in many places the effect of *Ulysses* on the reader undoubtedly is somewhat emetic, nowhere does it tend to be an aphrodisiac. *Ulysses* may therefore be admitted into the United States."

locate. Probably the earliest of all American back formations, the verb *to locate* derives from the noun *location*. It is recorded by a traveler in 1652 and counted among its early users Ben Franklin and George Washington, who apparently didn't care that some considered it a "vulgarism."

loch; Loch Ness monster; Champ. The familiar word *loch* for a lake or an arm of the sea similar to a fjord can be traced back to Old Irish hundreds of years ago. A small lake is called a *lochen*. The 24-mile-long Loch Ness in Scotland is probably the most famous loch, thanks to the fabled Loch Ness monster, a huge marine creature reportedly sighted as far back as the sixth century but never authenticated. Naturalist Sir Peter Scott named the monster *Nessiteras rhombopteryx* ("The diamond-finned Ness Monster"), giving it scientific status for a short while, but this turned out to be a prank, the words being an anagram of "monster hoax by Sir Peter S." "Nessie" has also been dubbed the Great Orm (from Scandinavian *sjo-orm*, "sea serpent"); the Worm; Loathly Worm; Eadh Uesge (water horse); Water Bull; Hippotatam; Beiste; and the Water Kelpie. America's counterpart of "Nessie" is Champ, a sea monster said to live in New York's Lake Champlain.

Lochinvar. The brave hero of a Sir Walter Scott ballad in *Marmion* (1808), who steals his love, the bride of a "dastard," from a bridal feast, sweeps her up on his horse, and rides away with her: "So faithful in love, and so dauntless in war, / There never was a knight like the young Lochinvar!" *Dastard*, ultimately from Old Norse, means "a sneaking miserable coward."

lock and load. An order in the military to load one's rifle with a round of ammunition and then lock the weapon in the safety position. The expression was originally *load and lock*, as it logically should be, and was first recorded at the beginning of World War II. Figuratively the words mean "get ready for any action."

locker room talk. This term refers to the vulgar, lewd, or obscene language men (and maybe even women) are thought to speak in locker rooms, although some locker rooms are more staid than others. It's a good guess that the expression doesn't go back beyond the 1940s, but no one knows for sure.

lock horns. Possibly New Englanders who witnessed moose fiercely battling over a female, their massive horns locked together, invented this expression for "a violent clash." There is no evidence of this in the first American literary use of the phrase in 1839, however. When Swinburne used the phrase in 1865, he spoke of a heifer and her mate locking horns, which could also be the source of the expression.

lock, stock, and barrel. The firing mechanism, or lock (by which the charge is exploded); the stock (to which the lock and barrel are attached); and the barrel (the tube through which bullets are discharged) are the three components of a firearm that make up the whole gun. Thus the expression *lock, stock, and barrel* means the whole works, the whole of anything. The saying is an Americanism first recorded in Thomas Haliburton's Sam Slick stories (1843), but likely goes back to the muskets of the American Revolution. However, the expression might also be rooted in the *lock* on a country store's door, the *stock*, or goods, inside, and even the *barrel* on which business was often transacted.

lock the barn door after the horse is stolen. The venerable rustic aphorism for "taking a precaution too late" hangs in there; it is still heard in cities that haven't seen a barn for half a century. Back in England in the 1300s we would have recognized the expression, its first literary use being in John Gower's *Confessio amantis* (1390): "For whan the grete Stiede Is stole, thanne he taketh hiede, and maketh the stable dore fast." See BARN.

loco. A Spanish word meaning crazy that became common in the West and finally all the United States, the language needing as many words for "crazy" as it can get.

locoweed. Various plants of the genera *Astragalus* and *Oxytropis* native to the southwestern United States are called "locoweed" (from the Spanish *loco*, "insane") because when eaten by horses, cattle, and sheep they cause irregular behavior, in-

cluding weakness, impaired vision, and paralysis. In the West a person who acts crazy is sometimes said to be “locoed,” that is, crazed as if from eating locoweed.

loganberry. California Judge James Harvey Logan (1841–1921), who had been a Missouri schoolteacher before working his way west as the driver of an ox team, developed the loganberry in his experimental home orchard at Santa Cruz. Logan, formerly Santa Cruz district attorney, was serving on the superior court bench in 1880 when he raised the new berry from seed, breeding several generations of plants to do so. Though a respected amateur horticulturist, he never adequately explained how the berry was developed. One account claims that the loganberry originated “from self-grown seeds of the Aughinbaugh [a wild blackberry], the other parent supposed to be a raspberry of the Red Antwerp type.” Several experts believe that it is a variety of the western dewberry, or a hybrid of that species, crossed with the red raspberry. The dispute may never be resolved, but experiments in England have produced a plant similar to the loganberry by crossing certain blackberries and red raspberries. In any case, there is no doubt that the purplish-red loganberry is shaped like a blackberry, colored like a raspberry, and combines the flavor of both—or that it was first grown by Judge Logan and named for him. Its scientific name is *Rubus loganbuccus* and the trailing blackberry-like plant is grown commercially in large quantities, especially in California, Oregon, Washington, and other places having fairly mild winters.

log cabin. The first log cabins in America were built by Swedish settlers in Delaware in about 1638. English settlers, who had never seen such structures in England, soon followed the Swedes’ example and named the little log houses log cabins.

loggerheads. To be at loggerheads—“engaged in a violent quarrel, or a dispute”—seems to refer to medieval naval battles during which sailors bashed each other with murderous instruments called loggerheads. These loggerheads were long-handled devices with a solid ball of iron on the end that was heated and used to melt pitch or tar, which could be flung at the enemy. The loggerheads themselves apparently made for handy lethal weapons *after* the boiling pitch was used up, and mariners from opposing ships probably engaged each other with them, being at loggerheads. *Loggerhead* also has an earlier meaning of “an ignorant blockhead, a knucklehead,” and this idea of stupidity most likely contributed to the popularity of a phrase that suggests that the people at loggerheads in the dispute are headstrong and unwilling to compromise. The expression is first recorded in 1685.

logic of force. See LONG TELEGRAM.

logomachy; flyting. *Logomachy*, from a Greek word meaning “word contest,” is “fighting about words,” often about verbal subtleties. However, it can be loosely used to mean fighting with words, actual “combats of curses,” the most colorful example of these being the poets who led pre-Islamic Arabs into combat, hurling curses at the enemy (warfare and the arts were specialized even then). But a better word for word fighting is *flyting*. *Flytings* (from the Old English *flyte*, “to contend or

jeer”) were contests held principally by 16th-century Scottish poets in which two persons “assailed each other alternately with tirades of abusive verse.” Following is one of 32 stanzas directed at Scotland’s James V by his former tutor, Sir David Lindsay. Bear in mind that this vitriolic diatribe *lost* the flyting.

Purse-peeler, hen-stealer, cat-killer, no I qyell thee;
Rubiator, fornicator by nature, foul befall thee.
Tyke-sticker, poisoner Vicar, Pot-licker, I mon paz thee.
Jock blunt, dead Runt, I shall punt when I slay thee.

See THE DOZENS.

logorrhea. *Logorrhea*, apparently patterned on *diarrhea*, comes from the Greek *logos*, “word,” plus *rhein*, “flow,” “stream.” It is first recorded as a psychological term in 1904: “Logorrhea refers to the excessive flow of words, a common symptom in cases of mania.” As with many similar terms the word came to be loosely used and can now describe any bigmouth who talks too much.

logrolling. “You scratch my back and I’ll scratch yours” was the idea behind this term, which was invented by American pioneers on the western frontier. Settlers clearing land and building their log cabins could always count on neighbors for help in rolling down logs, with the tacit understanding they’d do the same for their neighbors whenever asked. The good neighborly expression, with its associations of rum, food, and fiddling, became tainted when politicians in many fields adopted it. Legislators are still well known for logrolling with representatives from other states; that is, one congressman will support the pet project of another if he assists in passing a bill furthering the interests of the first. *Literary logrollers* form mutual admiration societies, favorably reviewing each other’s books in order to promote sales and reputations. Commenting on one instance of such a practice, A. E. Housman said there had been nothing like it since the passage in Milton where sin gave birth to death.

Lolita. A Lolita has in the last 25 years become the word for a nymphet or adolescent nymphomaniac. Capitalized still, the term derives from the name of the main character in Vladimir Nabokov’s novel *Lolita* (1955). It has been pointed out recently that in 1916—39 years before Nabokov’s novel was released—German author Heinz von Lichberg published a short story called “Lolita” which also features a narrator obsessed with a young girl, among other similarities. A May 23, 2004, *New York Times Magazine* piece by Christopher Caldwell treats the subject at some length.

lollapalooza. An extraordinary person or thing; an exceptional example of something. The French expression *allez-fusil*, “Forward the musket!,” became common in Ireland after French troops landed at Killala in 1798. County Mayo residents pronounced it “ally foozee” and coined a new word from it meaning “sturdy fellow.” Mencken, among others, believes that our *lollapalooza*, which is also spelled *lallapalooza*, comes from this word. Surprisingly few words came to American English from the eloquent Irish, the list almost limited to *banshee*, *bog*, *lollapalooza*, *paddy wagon*, *shamrock*, *shanty*, *shebang*,

shenanigans, shillelagh, smithareens, whisky, and possibly *speakeasy*. Phrases, as these pages show, are another story.

lollipop. Is the lollipop named after a racehorse? The story goes that in the early 1900s one George Smith, a Connecticut candy manufacturer, “put together the candy and the stick” and named it in honor of Lolly Pop, the era’s most famous racehorse, the name “lollipop” then becoming an exclusive trade name used by the Bradley-Smith company of New Haven. It is true that candy on a stick wasn’t known in America before about 1908 and neither was the word *lollipop*. Smith may have invented the confection (there are no other claimants) and he may even have named his candy on a stick after the horse in question. But the word *lollipop*, for a piece of sucking candy that dissolves easily in the mouth (*not* one, however, that is attached to a stick) was widely used in England as early as the late 18th century. It apparently derives from the English dialect word *lolly*, used in northern England to mean “tongue,” plus the word *pop*, in reference to the sound children made when sucking the candy. Somehow the lollipop remained unknown to Americans until the candy on a stick was invented in the early 20th century, but this is not to say that the racehorse Lolly Pop couldn’t have been named for the earlier British term.

lollipop woman (man). A colorful British name for a school crossing guard. Named after the round red and white STOP sign mounted on a stick that such guards carry and use to stop cars when children are crossing the street.

lolly. Although almost no Americans use the word, many know that *lolly* is somewhat dated British slang for money, thanks perhaps to British crime films. Few know, however, that *lolly* can also refer to an ice or a steak or candy in Britain. In Australia *lolly water* means “soft drink.” See LOLLIPOP.

lollygagging. The *Dictionary of Americanisms* quotes an indignant citizen in the year of our Lord 1868 on “the lascivious lolly-gagging lumps of licentiousness who disgrace the common decencies of life by their love-sick fawnings at our public dances.” This is the first recorded use of *lollygagging*, which means “to fool around, dawdle, waste time” and can mean “lovemaking,” though this last is no waste of time and my dear old grandmother never used the word in such a way to me.

Lombard Street. The name of this London street, where many banks and other financial institutions are located, is sometimes used to mean the financial community in general, the way Americans would use WALL STREET. Lombard Street itself is named after the Italian bankers, moneylenders, goldsmiths, and pawnbrokers who first did business there in the 13th century. *Lombard* today can mean “banker” or “moneylender.” “All Lombard Street to [against] a China Orange” is an old proverb meaning very long, almost impossible odds. The winding Lombard Street in San Francisco is called “The Crookedest Street in The World.” See LUMBER; PAWNSHOP; BOURSE.

London. *London*, loosely translated, meant “the wild place,” being so named by Celts who found a harbor in the Thames there near two desolate gravel hills, calling the area *lond*, “wild.”

lonely. Shakespeare coined *lonely*, or first recorded it, from *lone* plus *ly*, in *Coriolanus* (1608): “I go alone Like to a lonely Dragon . . .” The word *loneliness* had been invented before this and may also have suggested *lonely* to him.

lonely Louis. So shy was the French novelist born Louis-Marie-Julien Viaud that his friends named him *le Loti* after an Indian flower that grows in lonely secluded areas. When he began writing, he took the nickname as his pseudonym.

Lone Ranger. The fictional masked rider of the plains who with his “faithful Indian companion Tonto” and his “great horse Silver” was a champion of justice to a generation of devoted followers on radio, in the movies, and on TV. This enduring symbol of the imaginary West was born in 1933 on Detroit radio station WXYZ. He shot pure silver bullets, never shot to kill and at the end of each program always shouted a hearty “Hi-ho, Silver!”

lonesome water. Sweet water from close to one’s first home. Wrote Jesse Stuart in *Beyond Dark Hills* (1938): “I knowed you’d come back to drink of lonesome water. Once you get a drink of lonesome water you always come home.”

lone star flag. This name was usually applied to the flag of the Texas Republic but referred to the flags of several southern states in Civil War times, including the flags of Virginia, South Carolina, and Louisiana.

Lone Star State. A nickname for Texas, after the single star on its state flag. Texas has also been called the Beef State, the Jumbo State, the Banner State, and the Blizzard State.

longboat. In the days of sail longboats were so named because they were the largest boats carried by ships. Up to 40 feet long, they were up to eight feet abeam and were built to hold great weights.

longer letters. French philosopher Blaise Pascal (1623–62) wrote in a letter to a friend: “I have made this letter longer only because I have not had time to make it shorter.”

the longest night; the longest day. *The longest night* is another term for the Holocaust (qv). *The longest day* was June 6, 1944, D-day, when the Allies landed in France. It is said that German Field Marshal Erwin Rommel (the Desert Fox) was the first to use the phrase, when he told an aide a few months before the Normandy landing that “the first 24 hours of the invasion” would be decisive, sealing Germany’s fate: “For the Allies, as well as Germany, it will be the longest day.” Years later, the words would become the title of a famous book and movie.

long good-bye. A poignant name for ALZHEIMER’S DISEASE, a common form of dementia characterized by memory lapses, loss of mobile ability, and an inability to remember anybody or anything. Patients cannot recognize themselves or people near and dear to them and often live a long time, “the long good-

bye,” before they succumb to the disease. The term is a recent one that has been used by several public figures (including Nancy Reagan on *60 Minutes*, 9/24/02) and apparently isn't included in any dictionary.

long green. The first U.S. greenback dollars were printed in 1863 and this term came into use soon after. *Long green* means “a lot of money,” suggesting green bills laid in a long line, end to end.

long in the tooth. That horses' gums recede and their teeth appear longer as they grow older, owing to their constant grinding of their food, is the idea behind this ancient folk phrase, which means one is getting on in years.

long pig. Partridge traces long pig, “human flesh as food,” to 1852, but says it was probably suggested by a translated Fijian phrase. It should be noted that the Fijians were so fond of human meat that the greatest compliment they could bestow on any Cordon Bleu dish was to say that it tasted “as tender as a dead man.” One Fijian chief (Ra Undre Undre) ate 900 people all by his lonesome, but Fijians were not the only people who thought that human flesh tasted like pig or pork and called it *long pig*—the Polynesians and Maori were great enthusiasts as well. A few tribes, however, thought that white man tasted like “roasted ripe banana,” while others said white man was a bit too tough.

long row to hoe. Rows in American home gardens today, usually a dozen feet or so in length, can't compare to the long rows of corn, beans, and other crops on early American farms. These rows, which often stretched out of sight, had to be weeded by hand at the time and approaching one with hoe in hand was dispiriting, to say the least. The expression a *long row to hoe* was probably well established for any time-consuming, tedious task many years before Davy Crockett first recorded it in 1835. It is still heard in a day when mechanized equipment has replaced hoes on farms, perhaps because, according to a recent poll, some 100 million Americans consider themselves vegetable gardeners.

Longshanks. Edward I, king of England from 1272 to 1307, was so tall that he was known as Edward Longshanks, as is noted in early chronicles. Edward was also called the Hammer of the Scots. His policy of no taxation without the consent of Parliament is said to have become the basis of “no taxation without representation.” Edward's last words were “carry my bones before you on your march, for the rebels will not be able to endure the sight of me, alive or dead.” See GOING BY SHANK'S MARE.

longshoreman. The longshoreman, who helps load and unload ships, takes his name from a contraction of “along-shoreman,” while the synonym *stevedore* is from the Spanish *estibador*, “one who packs things.” A *shenango* is a specialized longshoreman, one who handles cargo on railroad barges. His name derives from the county of Chenango in upstate New York, from which many such workers were once recruited.

long shot. From the time of William the Conqueror, archery was encouraged by English rulers and every adult male was

required to own a longbow. With a six-foot English longbow made of seasoned heart of red yew, which was so valued at the time that it was protected as a war material, a skilled archer could shoot as far as 400 yards. In village archery contests every man strove to set a village record with the most accurate, longest shot. Thus *long shot* may have entered general speech as a synonym for any unusual or improbable feat, from a long archery shot that hit the mark dead center to a horse that won a race against great odds. See also NOT BY A LONG SHOT.

the Long Telegram. According to the *New York Times* (March 18, 2005), diplomat George Kennan (1904–2005) dispatched “perhaps the best-known cable in American diplomatic history. It explained to policy makers baffled by Stalin that while Soviet power was ‘impervious to the logic of reason,’ it was ‘highly sensitive to the logic of force.’ The 8,000-word Long Telegram made Kennan famous.”

long time, no see. The expression may date back only to the early 1920s, when it was first recorded as American slang. Other greetings common at the same time are *How's tricks?*, and *What do you say?* But according to another theory, *long time no see* came into the language from PIDGIN ENGLISH, brought home from the Far East by U.S. and British sailors in the early 1900s along with other expressions such as CHOP-CHOP for “hurry” and NO CAN DO. *Long time no see* is said to be a direct translation into pidgin of a Chinese expression meaning the same. See also CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.

long words, short words. H. G. Wells always carried two fountain pens in his waistcoat. “The big one,” he was quoted as saying, “is for the long words, the little one for the short words.”

Lonsdale belt. An important British boxing belt awarded to a fighter who wins a British title three times in a row. It is named after the earl of Lonsdale, Hugh Cecil Lowther, who was a good enough boxer to serve as sparring partner for American world heavyweight champion John L. Sullivan. Lord Lonsdale died in 1944 at the age of 87. He attributed his long life to “good living,” which included riding to the hounds until a week or so before his death and drinking white burgundy for breakfast every day.

loo. *Loo*, a slang word for “toilet” and British in origin, may be a mispronunciation of *le lieu*, French for “the place.” But no one is sure. It could also be a shortening of *gardy loo!* a warning cry housewives made when they emptied chamber pails out the windows into the street, *gardy loo* being a corruption of the French *gardez l'eau*, “watch out for the water.” A man traditionally walks on the outside of a woman in the street because chamber pots were emptied out the window in Elizabethan times; in those days a man was expected to take the greater risk of walking near the curb and protecting his lady by shielding her with his body as well. Among men walking together without women brutal fights were fought over who would “take the wall.” See JOHN; TWISS.

look before you leap. The old saying is often said to be from Samuel Butler's *Hudibras* (1663): "And look before you ere you leap; / For as you sow, ye are like to reap." But John Heywood's collection of proverbs (1562) clearly takes precedence with *look ere you leape*. There are a good number of counterparts in other languages: *Turn the tongue seven times, then speak* (French); *Have an umbrella before getting wet* (Japanese); *Before you drink the soup, blow on it* (Arabic); *First weigh (the consequences), then dare* (German); *If you don't know the ford, don't cross the stream* (Russian); *Be careful bending your head, you may break it* (Italian).

look like death warmed over. The phrase describes someone who appears very ill and pale, as in "You look like death warmed over, were you out all night?" The expression, which frequently refers to someone hung over, was first recorded in 1939 and is British in origin, although they say, "Look (or feel) like death warmed up."

look one way and row another. *Look one way and row another* means "to be aimed at one thing, but in reality to be seeking or striving for something quite different," like an oarsman rowing a boat toward land while his eyes are fixed on the open sea. The expression is a well-known one that John Bunyan used or coined in *The Pilgrim's Progress* (1678), a work which has been translated into over 100 languages.

looks like she swallowed a watermelon seed. A humorous way American mountain folk describe a pregnant woman. The expression dates back to the early 19th Century.

looney tunes. Looney Tunes was originally the name of a Warner Brothers cartoon series that first appeared in 1930, taking its name of course from *looney*, which comes from lunatic. In recent times, *looney tunes* has been used by law enforcement authorities to mean a crazed subject and has had increased general usage in the same sense. President Reagan referred to terrorists and their supporters as looney tunes. It was street slang long before this, however.

loony. See CRAZY AS A LOON.

Loop. Well known as Chicago's business, shopping, and theatrical center, the Loop was named after the elevated railroad, built in 1897, whose tracks "loop" the district.

loophole. Medieval castles and other fortifications were often built with narrow windows that widened inward but were no more than vertical slits on the outside. Enemy archers found these defensive positions difficult targets, but archers behind the windows had ample room to fire on attackers. Called *loop-holes* from the old word *loop* for "a narrow window," these windows became obsolete when the invention of gunpowder made castles and city walls unimportant in warfare, but the word came to represent an outlet or way to escape, a purpose loop-holes had never really served. By the 17th century, writers were using *loophole* to signify a narrow way out and today we associate the word with a clever, tricky way out of a situation, especially in regard to evading a law.

loose lips sink ships. World War II posters urged sailors and others not to talk about war-related matters, for "The slip of a lip may sink a ship," "Slipped lips sink ships," and "Idle gossip sinks ships." The most memorable of such slogans was "Loose lips sink ships." Another was "Don't talk chum/chew Topp's gum."

loosestrife. One credulous author wrote that the Romans put loosestrife flowers under the yokes of oxen to keep the animals from fighting with each other. Many people believed similar myths about loosestrife (*Lysimachia*) in ancient times, this belief stemming from the fact that the plant's name was derived from the Greek *lusi*, from *luein*, "to loose," and *mache*, "strife." Actually, loosestrife was named *lusimachon* by the Greeks from the name of one of Alexander the Great's generals, Lysimachus, who supposedly discovered it.

loot. *Loot*, wrote Rudyard Kipling, is really "the thing that makes the boys get up and shoot." The word derives from the Hindi *lut*, meaning the same, which the British found plenty of in India.

lord; lady. Each of these dignified words (though today we have terms like *baglady*) has its roots in a loaf of bread. The lord, or head of a household, was the *loaf-protector*, the Old English for this term, *hlaif-weard* (loaf-ward) or *hlaford*, eventually yielding the word *lord*. Similarly, the lord's wife, or mistress of the house, eventually took the name *lady* from the Old English *hlafdige*, "loaf-kneader," or maker of the loaf of bread.

Lord God Bird. A name for the ivory-billed woodpecker, a bird once thought extinct that made a dramatic reappearance in April 2005. The bird was once common in the southeastern United States, but disappeared with its vanishing habitat. When it was glimpsed again in Arkansas, people understood how it came to be called the Lord God Bird. With stiff wings and swift flight, people who were lucky enough to spot them would cry, "Oh, Lord God!"

Lord Hawhaw. Lord Hawhaw was the name for several announcers who broadcast to England from Nazi Germany during World War II. William Joyce (1906–46) earned the sobriquet for his mocking broadcasts. The American-born British fascist is examined at some length in Rebecca West's brilliant *The Meaning of Treason* (1947). Joyce was captured after the war, adjudged a British subject because he held a passport, and hanged for his crimes.

Lord Muck. If someone calls you Lord Muck in Britain, he is calling you a pretentious braggart and show-off. This slang expression dates back to 1890, according to Partridge. I can find no documentation of American use of the words.

Lord of All the Beasts of the Earth and Fishes of the Sea. A title Ugandan dictator Idi Amin assumed after taking control of Uganda. He also considered himself, for some reason, "The

Last King of Scotland.” He died in exile in Saudi Arabia in 2003.

lordotic. Someone suffering from *lordosis*—a curvature of the spine forward, producing a hollow in the back—is called *lordotic*. The word comes from the Greek *lordos*, bent back.

“Lord” Timothy Dexter. The English are most famous for eccentric writers, but American author Timothy Dwight (1747–1806) of Newburyport, Massachusetts, could hold his own with the most outré of them. “Lord” Dexter, as he called himself, spent his considerable fortune on a curious Georgian mansion in Newburyport complete with his own royal court consisting of a fishmonger poet laureate, a huge witless jester, and an African princess housekeeper, among others. Dexter’s autobiography, *A Pickle for the Knowing Ones* (1802), included the names of the men he wanted to serve as his pallbearers. The pamphlet became famous for the complete lack of punctuation throughout its 24 pages. Stung by criticism, however, Dexter repented in the second edition, providing an extra page filled with all kinds of punctuation marks. Readers had complained that there were no stops, he noted, so he had “put un A nuf here and thay may pepper and solt it as they plese.”

Lorelei. The *Lorelei*, rising 433 feet high on the right bank of the Rhine River near St. Goar, is a rock cliff noted for its strange echo. Centuries ago the legend grew that the steep cliff was the home of a young maiden who had leaped into the Rhine and drowned in despair over a faithless lover. She was transformed into a siren whose song lured sailors to death in the dangerous Rhine narrows. Those who saw her lost their sight or reason, and those who heard her were condemned to wander with her forever.

Los Angeles. *Los Angeles* is a shortening of the California city’s original name: *El Pueblo de Nuestra Señora la Reina de los Angeles de Porciúncula* (“The town of Our Lady Queen of the Angels of Porciúncula”). It is more often called *L.A.* Call it “L.A.” and it loses 54 letters.

lose one’s head; lose it. The first expression probably gave birth to the current *lose it*, meaning “to lose one’s sanity” for a time or permanently. *To lose one’s head* means essentially the same, “to lose one’s rationality,” and dates back to a similar French phrase of the early 19th century.

lose one’s shirt. *Lose one’s shirt* used to mean to be very angry, giving us the present-day *keep your shirt on*, “keep cool, be calm.” Only in this century did the expression come to mean to lose everything. It has many antecedents that convey the same idea, including *He’d give you the shirt off his back*, his last possession, and *not a shirt to his back*, meaning someone penniless and propertyless, with nothing at all. Chaucer, in “The Whf of Bathes Tale,” wrote of someone he admired though “had he nought a schert.”

losing face. The Chinese have a phrase for losing one’s dignity before others, and *tiu lien* was simply translated into *lose face*

by English traders there in the late 19th century. These same English, however, invented the phrase *to save face*, “to maintain one’s dignity,” using the Chinese model.

lossie. In South Africa *lossie* refers to a fast woman or floozie, with which the word rhymes. *Loss* in Afrikaans means a “loose” or promiscuous woman. See FLOOZIE.

lost cause. The cause of the South in the Civil War; first recorded as the title of a book in 1866, a year after the South lost the war. It is still used humorously today.

The Lost Dauphin. The second son of Louis XVI and Marie Antoinette, he became dauphin at the death of his older brother. The French revolutionists imprisoned him in 1792 along with the rest of the royal family, but though he was proclaimed king, he died in prison. There are many stories about what happened to him, especially tales featuring his cruel jailor Antoine Simon, but accounts of his death have always been disputed. He seems to have been lost to history, escaped by one account, killed in jail by others, betrayed by friends and lovers, hunted throughout Europe, truly lost forever.

the Lost Generation. “*Une génération perdue*,” remarked Monsieur Pernollet, owner of the Hôtel de Pernollet in Belley. He was speaking to Gertrude Stein and pointing at a young mechanic repairing her car. Young men like the mechanic, Monsieur Pernollet said, had gone to war, had not been educated properly in their formative years, and were thus “a lost generation.” Stein remembered Pernollet’s phrase and applied it to Ernest Hemingway and his friends. Hemingway quoted her in *The Sun Also Rises* (1926) and the words became the label for an entire literary generation. See GENERATION X; BABY BOOM.

lost in the world. A current saying I’ve heard discrediting someone who is pathetically helpless, childlike, bewildered, unable to deal with reality much of the time, sometimes mentally ill. Perhaps there is a connection with LOST GENERATION after World War I, or with homeless people living on the streets today, but I can find no evidence of either origin.

lotus-eater. A daydreamer, someone who leads an indolent, dreamy life of ease indifferent to the busy world, is sometimes called a *lotus-eater*. In the *Odyssey* Homer writes that the Lotus-eaters, or Lotophagi, were a people who lived on the northeast African coast and ate what later Greek writers identified as the fruit of the shrub *Zizyphus lotus*, which made them dream all day, forget friends and family, and lose all desire of ever returning to their homes. Any traveler who ate the sweet fruit or drank a wine made from it wanted only to live in Lotus-Land. *Lotus*, however, is a name given to many plants. The Chinese make a lotus seed dessert called *pinh tan lian tye*, reputed to be an aphrodisiac, and the delicious sugarberry or hackberry (*Celtis australis*), grown in the northern U.S., has been called the fabled food of the Lotus-eaters. Even jujubes, long a favorite candy, were once thought to be flavored with lotus fruit.

loud and clear. In U.S. aviation radio transmission *loud and clear* means the air weather is perfect for flying. The phrase may date from the early 1920s.

loudhailer. See MEGAPHONE.

loud-mouth soup. See MARTINI.

loudspeaker. See MEGAPHONE.

Lou Gehrig's disease. The fatal paralytic disease amyotrophic lateral sclerosis has had this name since Yankee first baseman Lou Gehrig died of it in 1941. Known as the Iron Man, the Iron Horse, and the Crown Prince (to Babe Ruth) of Swat, Gehrig played in 2,130 consecutive games for the Yankees before the disease took its toll, a record that lasted until 1995. See TODAY I CONSIDER MYSELF . . .

Louisette. See GUILLOTINE.

Louis heel. There is no doubt that France's Louis XIV, called *le Roi Soleil*, the Sun King, because he adopted the rising sun as his personal emblem, was a vain and haughty man who surrounded himself with pomp and ceremony. *Le Grand Monarque* is characterized by the apocryphal remark attributed to him, *L'état, c'est moi*, "the state is I." He is therefore a likely candidate for the inventor of the high Louis heel. Because Louis was a short man, the story goes, he ordered his shoemaker to add cork to his shoe heels to make him taller and kept having more and more cork added to them, his loyal court aping the style. The tale is a good one, but probably isn't true. Most likely Louis's grandson, Louis XV, is responsible for the Louis heel, which became the imposing carved French heel on men's shoes that was ultimately copied by women. The heel, which is only medium today, once reached such ridiculous heights that court ladies had to use balancing sticks to navigate.

Louisiana. The Creole or Pelican State was named Louisiana in 1682 by the French explorer Robert de La Salle as a homage to the Sun King, France's Louis XIV, applying the designation to the entire Mississippi Valley. The Louisiana Purchase, engineered by President Jefferson because he believed Napoleon might close the Mississippi to United States commerce, brought the 1-million-square-mile area under American ownership in 1803 for a mere \$15 million. In the history of this country only SEWARD'S FOLLY and possibly MANHATTAN Island were shrewder real estate deals. The purchase included part or all of 11 states—Arkansas, Colorado, Iowa, Kansas, Louisiana, Missouri, Montana, Nevada, North Dakota, South Dakota, and Wyoming. Mencken notes there was a child named Louisiana Purchase to commemorate the event—but then the boy's sister bore the name Missouri Compromise.

Louis styles. Four decorative and architectural styles are named after French monarchs reigning when the styles were in vogue: *Louis Treize style*, for Louis XIII (1610–13): a period characterized by a gradual transition from the rich free forms of the Renaissance to classicism in both architecture

and furniture; *Louis Quatorze style*, after Louis XIV (1643–1715): massive baroque designs that emphasized formality and dignity rather than comfort dominated here; *Louis Quinze style*, for Louis XV (1750–74): fantasy, lightness, elegance, and comfort are the main themes of this rococo period, most interior decoration obsessed with a love of curved lines that was almost bizarre; *Louis Seize style*, after Louis XVI (1774–93): here occurred a reaction against the excessive designs of the *Louis Quinze* style, a return to straight lines, and the classic ideal in ornamental details. All of these styles had one thing in common: They emphasized richness and luxury, which is why they were swept out with the French Revolution.

Louisville; Louisville Slugger. Louisville, the largest city in Kentucky, was named for France's Louis XVI in 1780 in recognition of the assistance he had given America during the Revolutionary War. Home of Fort Knox, the Kentucky Derby, the mint julep, many bourbon distilleries, and the only inland United States Coast Guard station, Louisville also houses the famous Hillerich & Bradley's baseball bat factory, where the renowned Louisville Slugger has been made since 1884. The bat is of course named after the city named after a king. Louisville Sluggers are made from prime white ash, one mature tree is needed to make 60 bats, and more than 6 million are turned out each year. Some 2 percent of the annual production goes to professional ballplayers, these fashioned from specifications noted in a 50,000-card file covering the bat preferences of ballplayers past and present.

lounge. Longinus, according to the apocryphal gospel of Nicodemus (7:8), was the Roman soldier who pierced the crucified Christ's side with a spear. Later, tradition tells us, the soldier converted to Christianity and in medieval times was honored as a saint. Contemporary mystery plays may have depicted Longinus, or Longis, as he was also called, as a tall, lazy lout leaning on his spear—at least in the centurion phase of his life. It has been suggested that *to lounge* could have derived from the posture of Longis, *lounges* and *lounge lizards* following after the verb. The theory isn't likely to be confirmed, but *Webster's* and other authorities do give *longis*, the Old French for "an awkward, drowsy person," as the source for the word.

lounge room; sitting room; living room; sitkamer. Australians invite you into the "lounge room" if you visit their homes, while Britons ask you to come into the "sitting room." Both would be inviting you into what both Americans and Canadians call the "living room." If you were in South Africa, however, you'd be asked into the "sitkamer" (composed of *sit* plus *kamer*, Afrikaans for chamber).

love. A person who fails to score in tennis might be said to be playing for the love of the game. According to this theory, which is widely supported, *love*, for "zero in tennis," comes from the expression "play for the money or play for love [nothing]." The idea here is similar to that behind the word *amateur*, which comes from the Latin *amare*, "to love," and strictly speaking means a person who loves a game or subject. But there is another explanation for the term *love* in tennis, an expression used since at least 1742. *Love*, for *goose egg*, or "noth-

ing,” may have been born when the English imported the game of tennis from France. Because a zero resembles an egg, the French used the expression *l'oeuf*, “egg,” for “no score.” English players, in mispronouncing the French expression, may have gradually changed it to *love*.

love affair. Shakespeare may have invented the term *love affair*. We find no use of the words earlier than in *Two Gentlemen of Verona* (1591), where the Bard writes: “I’ll . . . confer at large all that may concern thy love affairs.”

love apples. Why tomatoes were dubbed “love apples” is a matter of some dispute. First cultivated by the Mayans and called the *xtomatl*, the tomato was named the *pomi del peru* and *mala peruviane* when Cortés brought it to Europe from America. That tomatoes hailed from exotic climes and were a scarlet, shapely fruit undoubtedly helped, but the designation *love apple* owes just as much to semantics as sexuality. All Spaniards at the time were called Moors, and one story has it that an Italian gentleman told a visiting Frenchman that the tomatoes he had been served were *Pomi dei Moro* (“Moor’s apples”), which to his guest sounded like *pommes d’amour*, or apples of love. However, another version claims that “apples of love” derives in a similar roundabout way from the Italian *pomo d’oro*, “golden apple,” and a third tale confides that courtly Sir Walter Raleigh presented a tomato to Queen Elizabeth, coyly advising her that it was “an apple of love.” In any case, the tomato quickly gained a reputation as a wicked aphrodisiac, and justly or not, it has held this distinction ever since. “These Apples of Love . . . yield very little nourishment to the body and the same naught and corrupt,” the English traveler John Gerard wrote in his 16th-century gardening guide. In Germany the tomato’s common name is still *Liebesapfel*, or “love apple,” and the expression *hot tomato*, for “a sexy woman,” is common to many languages.

lovebird. The West African parrot *Agapornis pullarius* was apparently the first bird to be called the lovebird because of the remarkable affection it shows for its mate. This usage is recorded in the late 1500s, over three centuries passing before *lovebirds* is recorded as applying to humans (as an Americanism in the 1930s). But the phrase *like a pair of lovebirds* was common before this and one doubts that human lovebirds weren’t so called much earlier.

love-car. This can be a car parked in a lonely place with a couple making love in the front or backseat, or it may have been invented by Robert Lowell in his poem “Skunk Hour” (1959): “I watched for love-cars. Lights turned down, / they lay together, hull to hull . . .” I have not seen or heard the term used outside the poem.

love child; love brat. *Love child*, for “a child born out of wedlock,” isn’t a euphemism from Victorian times, as is often said. The kind words date back at least to 1805, when recorded by a writer referring to *love child*’s use in another locality. Before this Pope used the similar *babe of love* in the *Dunciad* (1728): “Two babes of love close clinging to her waist.” *Love brat*, a nastier variant, is recorded earlier than either expression, sometime in the 17th century.

love day. The ancient custom of settling disputes on legally appointed special days called love days is one that might well be revived. The custom is so old that the words are a translation of the Medieval Latin *dies amoris*. Shakespeare mentioned such love days in *Titus Andronicus* and the words also came to mean “a day devoted to love-making” in the 16th century, “when bonny maides doe meete with Swaines in the valley . . .”

lovee. We tend to associate nonce words like *lovee* with modern comics. “Amos and Andy,” for instance, were consistently coining things like the *hitter* and the *hittee*, the *kisser* and the *kissee*, etc. But *lovee*, in the sense of the one loved by a lover, a recipient of love, dates back at least to the mid 18th century when Samuel Richardson used it in his novel *Sir Charles Grandison* (1735): “The Lover and the Lovee make generally the happiest couple.”

love is blind. Shakespeare possibly coined this now proverbial phrase. At least it is first recorded in *The Merchant of Venice* (1596):

But love is blind, and lovers cannot see
The pretty follies that themselves commit.

Lovelace. Another lover to join our eponymous list of Lotharios, Don Juans, Casanovas, etc., *Lovelace*, however, usually refers to a selfish foppish lover, one who lives to seduce young women. The word comes from the name of the handsome rake Robert Lovelace, a character in Samuel Richardson’s million-word epistolary novel *Clarissa* (1748–49). The heartless Lovelace stops at nothing to have Clarissa and eventually rapes her, which leads to her death.

love lay. A love lay is a love song, the term dating back to the 14th century. A lay, from the Old French *lai*, “song,” was originally a short narrative or lyrical poem intended to be sung, but has come to include historical narrative poems (ballads) such as Scott’s *The Lay of the Last Minstrel*.

lovelihead. A rare word, meaning “loveliness,” *lovelihead* has its origins in a line by Ben Jonson: “Those Sweet and Sacred fires Of Love betweene you and your Lovelyhead”—in his poem “Underwoods” (1633).

lovelock. Courtiers in the time of Queen Elizabeth I wore lovelocks, which were long locks of hair hanging in front of the shoulders that were curled and decorated with ribbons. Later, *lovelocks* came to mean a small curl plastered to the temples. The man’s version was called a bellrope.

lovelorn. No Mr. Lonelyhearts invented the word *lovelorn*, for “someone forlorn or pining for love.” John Milton coined the word in *Comus, A Masque* (1634), a pastoral entertainment in which a character says to another: “Where the lovelorn Nightingale Nightly to thee her sad Song mourneth well.” Milton also coined *all-conquering*, *earth-shaking*, and SMOOTH-SHAVEN.

love machine. The first recorded use of this phrase for an insatiable lover appears not to be Jacqueline Susann’s *Love*

Machine (1985), but Norman Mailer's *The Naked and the Dead* (1948).

love me, love my dog. What the phrase means is “if you want to love me, you’ll have to take me faults and all.” Almost 900 years ago St. Bernard (1091–1153), famous abbot of the monastery of Clairvaux, said this in Latin: “*Qui me amat, amat et canem meum.*” Despite the canine association, he is not St. Bernard de Menton (923–1008), who founded the Alpine shelter now called the Hospice of the Great St. Bernard and after whom the ST. BERNARD *dog* is named.

love me little, love me long. English poet Robert Herrick wrote a poem “Love Me Little, Love Me Long” (1648), but the phrase is recorded as far back as 1546.

love money. Romantic couples used to break coins in two, each lover keeping a half as a remembrance or pledge of fidelity. The broken coins were called love money and the custom is recorded in Roman times.

love nest. Considering that LOVEBIRDS goes back several centuries, it is hard to believe that *love nest*, for “an apartment where two lovers meet, usually clandestinely,” dates only to the beginning of this century. But it is, so far as is known, an Americanism first recorded in 1900.

love tap; love pat. People were probably calling gentle taps indicating love *love taps* long before Mark Twain used the expression in *A Connecticut Yankee in King Arthur’s Court* (1889). But Twain’s is the first recorded use of the expression, which may have been suggested by the earlier *love pat*, recorded in 1876.

love tooth. *Love tooth*, similar to *sweet tooth*, once meant an inclination for love, a liking of love. “I am nowe old,” wrote John Lyly in *Euphuus* (1580), “yet still have I in my head a ‘love tooth.’”

lovey-dovey. *Lovey-dovey* is often cited as an Americanism, but it is recorded first in England in 1769 as a term of affection: “The domestic Lovies and Dovies.” By 1819 we find recorded: “My dearest love—lovey, dovey!” *Dovey*, of course, stands for “little dove.”

lowbrow. A word invented in 1902 by a *New York Sun* reporter to describe anti-intellectuals. See HIGHBROW.

lower class; lower order. See UPPER CLASS.

lower the boom. *Lower the boom* can mean to hit someone hard, as in “Clancy lowered the boom,” or to ask someone for a loan. The idea behind the American expression, which probably dates back to the late 19th century, is that of a cargo-loading boom hitting someone.

lox. Although *bagels* and *lox* are a staple of the Jewish cuisine, the dish is not a staple of long standing. Jews were generally in-

troduced to lox in late 19th century New York, and even today lox is not commonly found in Europe or Israel. Lox is so valued in New York that there have been cases of *counterfeit* lox made from other fish (notably *saithe* from Germany) treated with chemicals and food dyes and sold as the real thing. Real lox is a highly salted smoked salmon.

lox; gox. There is, in addition to the illustrious *lox* (from the Scandinavian *lax*, salmon) of *bagel and lox* fame, a word *lox* used in space research terminology. *Lox* here means *liquid oxygen*, the term used in *lox tank*, *lox unit*, etc., and as a verb meaning to load the tanks of a rocket vehicle with liquid oxygen. This *lox* came into use in the 1960s and is the antonym of *gox*, gaseous oxygen.

LSD; LCI; LCT. Many people are confused by these acronyms for World War II landing ships. The *LSD* (*Landing Ship Dock*) was a large ship used for repairs. The smaller troop carriers were called LCIs (*Landing Craft Infantry*), and LCTs (*Landing Craft Tank*).

L7. One rarely hears or sees this late-fifties Hollywood slang for “a square” anymore, perhaps because while it is clever visually, it has no ear appeal. *L7* means square, “not with it” according to bandleader Artie Shaw, because “if you form an L and a 7 with your finger, that’s what you get.”

luau. The word for a Hawaiian feast often made for tourists.

lubber. Any clumsy, stupid person. Although it is widely used throughout the U.S., the expression is an old one dating back to fifteenth-century England. It is most often heard in LANDLUBBER, a sailor’s derogatory term for someone unfamiliar with ships or the sea that is just recorded in 1690.

lucifer. Like *Vesuvius* and *Promethean*, *lucifer* was a colorful name for “matches” in the 19th century. The words’ origins are obvious except in the case of *lucifer*, which doesn’t derive from the name of the devil, as one would suspect, but from the morning star, the “Light-Bringer,” *lucem ferre*. *Lucifer* is also the only one of the three to still have some currency, in the song “Pack Up Your Troubles In Your Old Kit Bag”: “strike up a lucifer to light your fag.”

lucky bugs. See DOLLAR BUGS.

lucky dad. In Scottish English *lucky dad* refers to a father who has become a grandfather.

lucky fluke. A *fluke*, in the sense of lucky things that happen to someone, is possibly from the dialect word *flack*, “a blow.” The word *fluke* here seems to come from billiards, where a fluke means aiming at one thing and hitting another, a lucky blow that is to your benefit. *Lucky* is redundant here, but is usually yoked to *fluke* in the phrase. The expression dates back to the 19th century.

lucky horseshoe. Legend says that St. Dunstan, a blacksmith who later became archbishop of Canterbury, outwitted the dev-

il when he asked St. Dunstan to shoe his cloven foot. Recognizing Satan, St. Dunstan tied him up and subjected him to great pain while he shoed him, making the devil promise before he released him that he would never enter a place where a horseshoe was nailed (open end up so that the luck won't run out) above the door. Another explanation for the lucky horseshoe, put forth by two respected scholars, is that it was originally a symbol of fertility because it roughly resembled the vulva. England's naval hero Lord Nelson believed in the lucky horseshoe and had one nailed to the mast of his flagship *Victory*. He lost his life beneath it at Trafalgar. See HORSESHOES; NELSON'S BLOOD.

Lucky Pierre. *Lucky Pierre* refers to a man who shares a bed with two women, to put it delicately. The term has its origins in an old dirty joke, or jokebook, the age and content of which are unknown. Just when I was about to give up finding any recent use of the words, a play entitled *Lucky Pierre or L.P.* opened Off-Broadway (11/02), L.P. being a synonym for Lucky Pierre. Lucky Pierre can also mean a man or woman in the middle between two men. The term is first recorded in 1943.

Lucullus will sup with Lucullus. Lucius Licinius Lucullus (ca. 119–57 B.C.), a celebrated Roman general and consul who drove Mithridates' fleet from the Mediterranean, among other military successes, had been relieved of his office by Pompey in 67 B.C. But he had amassed a fortune and retired into the elegant leisure for which he has become famous, spending huge sums on public displays and on his estates. Horace tells us he lavishly entertained the artists, poets, and philosophers with whom he surrounded himself, and that his feasts were famous throughout Rome. The gourmand even had files of menus listed according to cost, serving the most expensive ones to his most important guests, and it is said that on one occasion an unparalleled dinner cost him the equivalent of more than \$8,000. Another time, Plutarch says, he ordered his cook to prepare a particularly magnificent meal and was reminded that he was dining alone that night. "Lucullus will sup tonight with Lucullus," he replied, or "Today Lucullus is host to Lucullus." These sayings are now used to indicate a luxurious meal enjoyed by a gourmet who dines alone. The Roman general's military prowess is almost forgotten, but the adjective from his name lives on as a synonym for "gastronomically splendid" and a sumptuous and extravagant meal is still called a Lucullan feast or banquet.

lucus a non lucendo. An etymological contradiction, an absurd conclusion or explanation. The Latin words literally mean "grove from not giving light," that is, a grove (*lucus*) is so called because it doesn't shine (*lucere*). The Roman grammarian Honoratus Maurus Servius invented the term to illustrate how words are falsely derived from those having a contrary sense (for example, deriving *ludus*, Latin for "school," from *ludere*, Latin for "to play." Addison gave another example in the *Spectator*: "One Tryphiodorus . . . composed an Epick Poem . . . of four and twenty books, having entirely banished the letter A [Alpha] from his first book, which was called *Alpha* [as *Lucus a non Lucendo*] because there was not an *Alpha* in it."

"Lucy in the Sky with Diamonds." The famous Beatles song isn't about LSD, despite the LSD initials running down the

original record cover. John Lennon's son had drawn a picture of what he called "Lucy in the sky with diamonds," which inspired his father to write the song and use the title. The cover was just coincidence. The initials usually stand for lysergic acid diethylamide 25, or acid, as it is called, a potent hallucinogen.

Lucy Stoner. Use of the "Ms." form of address for a woman today recalls the all-but-forgotten *Lucy Stoners* active earlier in this century. A woman who refused to change her maiden name upon marriage was often called a Lucy Stoner. The term recalls American feminist Lucy Stone (1818–93), who deserves far greater recognition than she has received. On graduation from Oberlin, the only college accepting women at the time, Lucy Stone was 29, and she plunged headlong into the woman suffrage and antislavery causes. Her important work included helping to form the National Woman's Association, of which she was president for three years, and the founding of the *Women's Journal*, the association's official publication for nearly 50 years. An eloquent speaker for women's rights, Lucy Stone became well-known throughout the U.S. In 1855 she married Dr. Henry Brown Blackwell, an antislavery worker, but as a matter of principle she refused to take his name, and she and her husband issued a joint protest against the inequalities in the marriage law. Lucy Stone would never answer to any but her maiden name all her married life, and the Lucy Stone League later emulated her, defending the right of all married women to do so.

Luddite. The masked bands of workers who made night raids on English factories from 1811 to 1816 were protesting layoffs, low wages, and poor-quality goods, all caused by the large-scale introduction of textile machines to replace handcraft. The riots began in Nottingham and spread throughout England, the raiders directing their rage against the machines and systematically destroying them. Led by a "General" or "King Ludd"—named for a probably mythical Ned Ludd, said to have destroyed stocking frames in a Leicestershire factory 30 years earlier—the rioters soon became known as Luddites. Increasing prosperity in the country, combined with even more repressive measures, finally put them down. But not the memory of them. Today a Luddite is anyone who fears and would eliminate automation—not only for the unemployment it creates, but for its effect on the quality of life and for the human destruction that the machinery of war might cause. In our rebellion against an impersonal society, the word is used much more sympathetically than before. Indeed, some serious observers believe that the Luddites were right.

luff. See ALOOF.

lug. Ultimately of Scandinavian origin, *lug* in American slang means "a clumsy fool, a blockhead," as in "Get out of here, you big lug." Today the word is often used lightly or humorously. In Scotland *lug* means "a person's ear," as it does in Parson Mason Locke Weems' *The Life and Memorable Actions of George Washington* (c. 1800). Washington probably was one of Weems' parishioners and the Episcopal clergyman was the first to spread the legend of little George chopping down the cherry tree.

lukewarm. Moderately warm or tepid. The word is first recorded in 1350 and Ernest Weekley holds that the *luke* in it is “an unexplained alteration of *lew*.”

lulus. The lulus we hear most about today are those taken by state legislators, who have been known to abuse them. A lulu, in this respect, is any tax-free item in an official expense account that is regarded as “in lieu of” part of a salary. The term is a recent one, dating back only 20 years or so, and apparently derives from the word “lieu.” If it does, *lulu* is one of the simplest of reduplications, that is, new words formed from the repetition of elements in an older word. Like *mama* and *papa*, it contains one basic sound that is repeated. But some authorities think that *lulu* is just a special use of the earlier term *lulu*, for “any remarkable or outstanding person or thing.” The earlier word has been traced back to 1886, and since it was often used to describe an attractive woman (“She’s a real lulu”) it is thought to derive from the common girl’s name Lulu, often a nickname for Louise. *Lulu*, or LOO, is a British euphemism for toilet.

Lum. This proper name, as in the old radio program “Lum and Abner,” is a corruption of *Columbus*.

lumber. Our story begins with the Longobardi, or long beards, a Germanic tribe that in about 568 invaded Italy, where their name became *Lombardi* in Italian, and settled the region now called Lombardy. The merchants of Lombardy, who gradually migrated to the area from all parts of Italy, eventually won fame or infamy as bankers, moneylenders, and pawnbrokers. In time, the moneymen and their lombards, or pawnshops, radiated out from Milan and other parts of Lombardy to greener pastures. But *Lombard* came to be pronounced *Lumbard*, or *Lumber* in English. London’s Lombard Street had its Lombard shops (pawnshops), and these had their Lombard rooms, storage rooms—all pronounced “lumber,” too. Over the years the Lumber rooms on the street grew filled with unredeemed pledges on loans—large crates, cumbersome furniture, and other odds and ends that are still called lumber today. At this point, however, the word *lumber* was put to a new use. There are several explanations for the change, which is recorded as early as 1662. One is that American homesteaders in clearing their land for farming, left many discarded trees lying around, this clutter, or lumber, later cut or split into the wooden planks we know as lumber today. The word *lumber* for “to walk clumsily or heavily” does not derive from the Longbeards, coming directly from the Middle English verb *lomenen* meaning the same thing. See LOMBARD STREET.

luminarias. Pueblo peoples in New Mexico build bonfires called luminarias outside their houses during the Christmas season, a custom deriving from the Mexican Christmas custom of setting votive candles called *luminarias* (Spanish for lamp or lantern) in sand inside small paper bags, often colorfully designed, through which light shines. The custom has spread in recent times throughout the Southwest, where neighborhoods are filled with luminarias lining driveways, sidewalks, and rooftops. Luminarias are also called *farolitos*.

lummoX. See DUMB OX.

lunatic. Lunatics are literally “moonstruck persons,” the word deriving from the Latin *luna*, “moon.” At least since Roman times it has been popularly believed that the mind is affected by the moon and that “lunatics grow more and more frenzied as the moon increases to full.” Recorded in English as early as 1290, *lunatic* is no longer used medically. “The lunatic, the lover and the poet,” wrote Shakespeare in *A Midsummer Night’s Dream*, “are of imagination all compact.” See LOONEY TUNES.

lurch. See LEAVE IN THE LURCH.

lush. Near Drury Lane Theatre in London was the Harp Tavern, where a club of hard drinkers called The City of Lushington had been founded in 1750. Lushington’s had a chairman, the “Lord Mayor,” and four “aldermen,” who presided over the wards of Poverty, Lunacy, Suicide, and Jupiter (the supreme Roman god who presided over all human affairs). The club members, we are told, “were wont to turn night into day,” and by example their convivial fraternity may have given us another word for a sot, or habitual drunk. *Lush*, at least as a generic term for beer or drink, first appeared in about 1790, long after The City of Lushington’s formation, and it could very well be a contraction of the club’s name. For in years to come a number of phrases employed the name Lushington. *Alderman Lushington is concerned*, 1810, meant “somebody drunk”; *to deal with Lushington*, 1820, meant “to drink too much,” as did *Lushington is his master*, 1825; and by 1840 a *Lushington* meant “a drunkard.” Even before this a *lush cove* had become a slang term for a drunkard, and *lush* itself both a verb for “to drink” and an adjective meaning tipsy. By the end of the 19th century we finally find *lush* alone being applied to any habitual drunk, as it is to this day.

Lusitania. This famous British liner was named for the Roman province of Lusitania in the Iberian Peninsula, which its name from the area’s warlike tribes, called the Lusitani. She became one of the most famous ships in history because her sinking by a German submarine set America on the path into World War I; many Americans were among the 1,195 people on the *Lusitania* when she went down off Old Head of Kinsale in 1915. Most historians believe the tragedy was the fault of both a brutal submarine commander and the pigheaded skipper of the *Lusitania*, who refused to stay away from dangerous waters or even to speed through them. Some historians have also maintained that the *Lusitania* was surreptitiously carrying munitions.

Lutetia; Lutece. See PARIS.

Lutheran. Pertaining to the works of German theologian Martin Luther (1493–1546) or the Lutheran church. Luther, the German leader of the Protestant Reformation, was a prodigy who began his studies at age five as well as a talented musician who wrote several Lutheran hymns, including the well-known “Away in a Manger.” He may have said, “The devil should not have all the best tunes,” but this saying has been attributed to several people. His most famous words are from his speech at the Diet of Worms in 1521, in which he said, “I can do no other” (“Ich kaan nicht anders”) or “This and this alone can I do.” The couplet “Who loves not woman, wine, and song /

Remains a fool his whole life long” has also been attributed to him, without any proof. See BEAST 666; MEALY-MOUTHED; PA-PIST; WHY SHOULD THE DEVIL HAVE ALL THE GOOD TIMES.

lutz; flutz. In 1918 Viennese figure skater Alois Lutz developed the lutz jump, in which a skater jumps from the back outer edge of one skate and makes a full rotation in the air in the opposite direction of the skating curve, landing on the back outer edge of the opposite skate. By the time of the Salt Lake Winter Games of the 2002 Olympics, the word *flutz* had been anonymously coined, probably by a coach or judge, to describe a poorly executed lutz, specifically one made by a skater who takes off on the wrong edge of his or her skate. *Flutz* is a combination of *flip* and *lutz*, the flip being the jump that most closely resembled the lutz. See CHOCTAW.

Luzon. When anchored in the Philippines, Magellan’s men supposedly asked an old fisherman the name of the place nearest them. “*Luzon?*” the fisherman replied in Tagalog, meaning “What did you say?” But the sailors thought he meant the place was called *Luzon*, which remains the Philippine island’s name to this day. Though quite possibly folk etymology, the story bears repeating, both for its entertainment value and for want of a better derivation. See also INDRI; LLAMA; KANGAROO; NOME; YUCATAN.

lycanthrope. See WOLF MAN.

Lycoris. Mark Antony is mainly remembered for his fatal romantic entanglement with Cleopatra, and it is often forgotten that he led a riotous life while a youth, having had four wives—Fadia, Antonia, Fulvia, and Octavia—before he committed suicide for his Egyptian queen. One of his outside interests was Lycoris, a Roman actress who became his mistress. Centuries later the English botanist Herbert named the six lovely fragrant flowers of the *Lycoris* genus after this beautiful woman. The amaryllis-like *Lycoris* grow from a bulb and are lilac-pink or pink, the flower cluster a loose umbel. Native to China, Japan, and central Asia, they are generally grown in greenhouses in the United States and England.

Lycurgus. A great Spartan orator and lawmaker of about 326 B.C. He was so honest and trusted that he was chosen to administer the state finances.

lyddite. See SHIMOSE.

Lyme disease. Lyme disease is named after the Connecticut town where it was first recognized in the 1970s. The minuscule tick *Ixodes dammini* harbors the spirochetes of the disabling disease. The ticks are carried to humans by deer and white-footed mice that leave them on grass and foliage.

lynch. Our word for extralegal hanging definitely comes from the name of a man, but just who was the real Judge Lynch? At least a dozen men have been suggested as candidates for the dubious distinction. Scholarly opinion leans toward Virginia’s Captain William Lynch (1742–1820), who was brought to light by Edgar Allan Poe in an editorial on “lynching” that he wrote in 1836 when he edited the *Southern Literary Messenger*. Poe claimed that the “lynch law” originated in 1780 when Captain Lynch and his followers organized to rid Pittsylvania County of a band of ruffians threatening the neighborhood. Poe even affixed a compact drawn up by Lynch and his men to the editorial. William Lynch’s identity was further verified by Richard Venables, an old resident of the county, in the May 1859 issue of *Harper’s Magazine*. But without evidence of any actual hanging there was still room for doubt. Finally, additional proof was found in the diary of the famous surveyor Andrew Ellicott, who visited Captain Lynch in 1811 and gained his friendship. William Lynch related how his lynch-men, as they were called, were sworn to secrecy and loyalty to the band. On receiving information accusing someone of a crime, the accused was seized and questioned before a court of sorts. If he did not confess immediately, he was horsewhipped until he did, and sometimes hanged whether he confessed or not.

Lysenkoism. A much derided generic doctrine supported by Stalin and the Communist Party and named after Soviet agricultural scientist Trofim Lysenko (b. 1898).

M

M. *M* in the Phoenician alphabet represented the wavy appearance of water and was, in fact, called *mem*, “water,” in Hebrew. In medieval times an *M* was branded on the brawn (fleshy part) of the left thumb of a person convicted of manslaughter. *M* is always pronounced in English, except in Greek words such as “mnemonics.” In Roman numerals the capital letter *M* stands for 1,000 (Latin, *mille*).

macabre; danse macabre. *Macabre*, “gruesome, ghastly, or grim,” comes directly from the *danse macabre*, or dance of death, which probably originated with a 14th-century German morality play eventually known throughout Europe. Death debates all his victims in this drama, winning his arguments with young and old, rich and poor, wise and foolish—and a weird dance ends the play as he leads his victims offstage. The dance of death survived in many allegorical paintings, sculptures, and tapestries, notably the engravings by Hans Holbein (1538), its popularity due to the overpowering awareness of death during the Hundred Years’ War and the Black Death, a plague that wiped out two-thirds of Europe’s population. *La danse macabre* is believed by most scholars to have been suggested by and received its name from the dance of the seven martyred Maccabee brothers recounted in 2 Maccabees, an apocryphal book of the Old Testament. The Medieval Latin *chorea Machabaeorum* became corrupted to *danse macabre* in French, the adjective *macabre* not appearing in English until the end of the 19th century.

Macabre style. A book-binding style made for France’s Henry III after the *princesse de Cleves* died, a style that used tears, skulls and bones tooled in silver to express the king’s grief. A number of books could qualify as *macabre* in the binding, though not of the *macabre* style. In France, for example, a publisher with a weird sense of humor produced an edition of Rousseau’s *Social Contract* bound in the skins of aristocrats guillotined during the French Revolution. Sold at auction in New York in early 1978 was a 21-volume series about animals by French author Maurice Hammonneau. The author hunted down each animal described and used the

appropriate animal skin to bind each volume. Included was a book on human beings, no explanation being given about the source of that one.

macadam; tarmac. Perhaps the smooth, perfectly drained miniature stone roads that John Loudon McAdam (1756–1836) built in his father’s garden as a child inspired the first macadam roads, but his system seems to have been the improved version of an older French model. McAdam, a Scotsman whose name is also spelt Macadam and MacAdam, began experimenting in road-building at his own expense at Ayrshire and then at Falmouth, where he had moved in 1798, and his persistent efforts finally got him appointed as surveyor for all Bristol roads in 1815. McAdam had discovered that an expensive French road-building method invented 20 years before his first experiments offered the best solution to the problem of drainage. The roads he began to build were layers of small, sharp-angled, broken stones placed over a drained, gently sloping roadbed, each layer compacted by the traffic that passed over it, and with water running off into ditches on each side. McAdam’s roads revolutionized transportation, gradually replacing the common dirt road, and in 1827 he was made general surveyor for all highways in England. But his method was improved just as surely as he had improved on the French method. Subsequently his stone layers were crushed into the earth with heavy rollers and their surface coated with a bituminous covering, and these blacktop roads came to be called macadam or tarmac (a shortening of “tar” and “macadam”) roads.

macadamia. *Macadamia*, a genus of Australian trees often called the Queensland nut and valued for its edible seeds, is not named for the roadbuilder John McAdam. It honors a Doctor John Macadam, secretary of the Victoria Philosophical Institute.

macaroni. The word *macaroni* comes from the Greek *makar*, meaning “blessed,” which shows how highly it was valued even in ancient times. *Macaroni* meant a well-traveled young Englishman of the 18th century, but also an insufferable fop and a delicious pasta.

macaronic verse. This is verse where the poet mixes words of his own language with those of another language, forcing his native words to fit the grammar of the foreign tongue, his intention almost always comic or nonsensical. The form seems to have been popularized in 1517 by Italian poet Teofilo Folengo, who called it the literary equivalent of macaroni (which is of course commonplace and a mixture of a number of ingredients). The Germans call it *Nudelverse* (noodle verse). See SPAGHETTI.

macguffin. Alfred Hitchcock defined the word *macguffin* while talking about his film *Notorious* (1946): "So the question arose, in designing the story for the film, what were the Germans up to down in Rio, what were they doing there? And I thought of the idea that they were collecting samples of uranium 235 from which the future atom bomb would be made. So the producer said, 'Oh, that's a bit far-fetched—what atom bombs?' I said, 'Well, both sides are looking for it . . . [but] if you don't like uranium 235, let's make it industrial diamonds. But it makes no difference, it's what we call the "macguffin" . . . The *macguffin* is the thing the spies are after, but the audience *doesn't care*. It could be the plans of a fort, the secret plans of an airplane engine."

machete. A large, heavy knife often used for cutting brush and as a weapon. *Machete* is a word borrowed from Spanish in early 19th-century America. It is also the name of a tarpon of the Pacific Ocean, after the resemblance of the tarpon's shape to a machete.

Machiavellian; Old Nick. A politician whose last name is a synonym for political immorality. Niccolò Machiavelli first conceived the idea of military conscription. Not a man to be much loved in an age where honor is given great lip service, Machiavelli still wasn't all that bad. Through his famous book *The Prince*, Niccolò di Bernardo Machiavelli (1469–1527) has become known as the father of political science. But this remarkable work is remembered mainly for its insistence that while his subjects are bound by conventional moral obligations, a ruler may use any means necessary to maintain power, no matter how unscrupulous. Thus *Machiavellian* has come to mean cynical political scheming, generally brilliant and always characterized by deceit and bad faith. The legend of this thin-lipped, sarcastic, hyperactive man gave rise in later years to the theory that his first name was the basis for *Old Nick*, a synonym for the devil. No one really knows how *Old Nick* originated, but the Niccolò origin is wrong. The rumor stems from Samuel Butler's humorous identification in *Hudibras*: "Nick Machiavel had n'er a trick/(Though he gives name to our Old Nick)."

machine gun. A gun, operated with a mechanism, that fires rapidly and repeatedly. It was so named in about 1865, though such guns were not perfected until the 1880s. Military historians have estimated that machine gun fire was responsible for more than two-thirds of World War I casualties. See also MAXIM GUN; TOMMY GUN; UZI.

machine politics. Volunteer firemen in the early 19th century learned to work smoothly as a team on the levers of water-pumping machines, and perhaps, as one investigator suggests,

their well-organized political associations suggested the term *machine politics* for this reason. Aaron Burr, who converted New York's patriotic Tammany Society into the political Tammany Hall we know today, is often credited with inventing the phrase, but then so are Nathaniel Hawthorne and even the duke of Wellington. The use of *machine* in a political sense, however, doesn't seem to have been recorded until 1865.

Mach number; Mach angle. Mach number is the ratio of the speed of a body to the speed of sound in air. Almost exclusively used to measure flight speed, it has only become common in the last few decades, as increased aircraft speeds have made old mph measurements too cumbersome. Mach 1, for instance, is the speed of sound, 762 miles per hour at sea level, while Mach 2 is twice the speed of sound. The word derives from the name of German scientist Ernst Mach (1838–1916), who died 31 years before Captain Charles Yeager first broke the sound barrier over Edwards Air Force Base in Muroc, California. (On October 14, 1947 Chuck Yeager flew his Bell X-I rocket plane at Mach 1.015.) Because of Mach's investigations into the supersonic speed of projectiles and the shock waves produced at these speeds both the measurement unit and the Mach angle, the angle a shock wave makes with the direction of flight, were named in his honor.

Machu Picchu. The name of an ancient Inca fortress city in the Andes never found by the Spanish invaders of Peru. This "Lost City," the ruins of which weren't discovered until 1911, once held architectural wonders, including a palace and a temple. Perched high on a steep ridge, it dramatically overlooks the Urubamba River 2,000 feet below and looks up at the Andean peak that gave it its name.

mackerel. *Mackerel* derives from the French *maquereau*, which is of unknown origin. One unproved story has the French word for the fish deriving from the French for "panderer" or "pimp," which is the same *maquereau*. According to this theory, the fish is so named because it is popularly believed to lead female shads to their mates every spring!

Mackinaw blanket; Mackinaw coat. John S. Farmer, in *Americanisms Old and New* (1889) first gave the origins of this term common in America since about 1830: "A superior kind of blanket which derived its distinctive name from the island of Mackinaw, formerly one of the chief posts at which Indian tribes received their grants from the government. A provision of one of the Indian treaties was that part of the payment made to the redskins should be in these superior blankets, and from that fact the name *Mackinaw Blankets* or *Mackinaws* simply was derived." A *Mackinaw coat* is a coat made from a Mackinaw blanket, or from any blanket.

mackintosh. See RUBBER.

Macy's window, etc. R. H. Macy & Company's flagship store in New York City, covering a square city block and containing 2.2 million square feet of floor space, is the world's largest store under one roof. Expressions that we owe to Macy's and that are now part of the language include *Macy's window*, for the ultimate in public exposure; *Macy's Thanksgiving Day Parade*; *Does*

Macy's tell Gimbels!; and *like a Macy's basement* for any mob scene. In 2006, after Macy's \$11 billion merger with May Department stores, Federated Department Stores, Macy's parent company, renamed more than 400 stores in 11 regional chains as Macy's, making it easily the world's most famous chain. Stores like Filene's, Marshall Fields, Strawbridge's, and many more now have become Macy's. *See also* AGORAPHOBIA; DEPARTMENT STORE; SHOP; STORE.

Madame Bovary. Gustave Flaubert and his publisher were charged with "immorality" when his great novel *Madame Bovary* appeared in magazine form in 1856, but both were acquitted and the book was published a year later. The fictional Madame Bovary is based in part on Louise Colet (1810–76), a French poet and novelist with whom Flaubert carried on an affair for some nine years, beginning in 1846. The real Madame Bovary lived in Paris with her husband, Hippolyte Colet, and her affair with Flaubert was the author's only serious liaison. It is hard to see where Flaubert could have gained his amazing insights into feminine psychology except by his intimate observations of this woman. Louise Colet's story is told in her novel *Lui: roman contemporain* (1859). A *Madame Bovary* has come to mean a woman with an inflated, glamorized opinion of herself. *Bovarism*, a rare word that should have greater currency, means, to quote Aldous Huxley, "the power granted to man to conceive himself as other than he is," *bovaric* and *bovarize* deriving from it. Whether Louise Colet shared these qualities with Madame Bovary is debatable, but her name is linked with the words.

Madame Petroleum. A character in Friedrich Durrenmatt's play *The Visit* (1956), who is said to be one of the richest women in the world, owning 5 percent of it.

Madame Récamier. The French artist Jacques-Louis David painted Madame Récamier on a chaise-longue, making her familiar to millions. Among his many striking portraits were *Napoleon on Horseback*, *Josephine*, and the *Assassination of Marat*. One critic has written that "Probably no French painter exercised, during his own lifetime, such a great influence on the whole art of Europe as David."

mad as a hatter. Lewis Carroll's Mad Hatter in *Alice in Wonderland* (1865) isn't responsible for this phrase. *Mad as a hatter*, "crazy, completely demented," was used by Thackeray in *Pendennis* (1849) and by that prolific American phrasemaker Thomas Haliburton in *The Clockmaker* (1837), almost 30 years before Carroll. Several explanations for the expression have been advanced. One holds that the term was originally *mad as an adder* (an adder being a venomous viper whose bite was once thought to cause insanity) and that British mispronunciation corrupted *adder* to *atter* and then *hatter*. The curious metaphor is best explained by hatmaking itself, though. The mercuric nitrate long used in making felt hats often poisoned hatters, the effects of this mercurial compound causing men who worked with it for years to be afflicted with uncontrollably twitching muscles, a lurching gait, incoherent speech, and confused minds.

mad as a march hare. Erasmus used the expression *mad as a marsh hare*, claiming that "hares are wilder in the marshes

from the absence of hedges and cover." But Chaucer had the phrase *mad as a hare* before him, and *march hare* seems to have preceded *marsh hare* in use. Buck hares are wild frolickers in March, their breeding season, which has made them a synonym for lunacy for centuries. Lewis Carroll gave the expression new life with his creation of the March Hare in *Alice in Wonderland*.

mad as a rained-on rooster. A phrase recently introduced by television commentator Dan Rather.

mad as a wet hen. Hens don't become very upset from getting wet, so this old expression isn't a particularly apt one. An Americanism that dates back to the early 19th century, it was apparently based on the false assumption that a hen, being exclusively a land animal, unlike, say, the duck, would go beserk if caught in the rain or doused with water. Better was the old expression *wet hen* for "a prostitute."

mad, bad, and dangerous to know. Lady Caroline Lamb's famous description of her lover, the English poet Lord Byron, who was no less mad than she. *See* BYRONIC.

madcap scheme. Today a *madcap scheme* is a rash, reckless, wildly impulsive scheme, while a *madcap* is a person with the same characteristics. But in times past a madcap was simply a crazy person, the word deriving from *mad* for "crazy" and *cap* as a synonym for "head." This term, used by Shakespeare, is first recorded by his detractor Robert Greene, in 1589.

mad cow. Mad cow disease, transmitted by eating infected beef, causes the brain to grow mushy.

mad-dog. To mad-dog someone is to fix an evil hostile glare at that person, the phrase first recorded in 1990. Far worse is *mad-dog barkin' crazy!*

made in Japan English. The Japanese have borrowed and altered thousands of English words to which they have given new meanings. One example of this is the words *image* and *up*, which they have combined into the Japanese word *imejiappu* and given the meaning "improving one's image." The Japanese call constructions like this "made in Japan English," after the cheap goods or trinkets once commonly sold in U.S. five-and-dime stores.

Madeira. The Portugese islands of Madeira off the west coast of North Africa give this fortified wine its name. Madeira is said to have originally had its unique taste because of the rolling motions of the ships that carried it on the long sea voyages to Europe.

madeleine. These small, rich, shell-shaped cakes are doubtless the most famous pastry in all literature. They are said to be named for their inventor, Madeleine Paulmier, a 19th-century pastry cook of Commeray, France, though André Simon and other gastronomes credit their invention to "one Avice, chief pastry cook to the prince de Talleyrand." At any rate, Madeleine Paulmier and the anonymous Madeleine, for

whom Avice may have named the cakes, both take their given names from Mary Magdalene. It was on a visit to his aunt that Marcel Proust was served the scalloped petite madeleine, “so richly sensuous under its severe religious folds,” whose taste brought back the flood of memories resulting in his seven-volume masterpiece *À la recherche du temps perdu*. One cynic has called Proust’s work “the tale of a man who fell in love with a cookie.” Proust’s fragile madeleine, made with flour, butter, sugar, and eggs, “the same weight of each,” flavored with lemon rind and baked in a small but deep scallop-shaped mold, has no relation to the English sponge bun bearing the same name. See TOLL HOUSE COOKIE.

Mademoiselle from Armentières. This British army song (1916) is one of the few good songs left from World War I, but is at least a better inheritance than that vicious war itself. The song was suggested by the older tune “Three Prussian Officers Crossed the Rhine,” and, despite being the scene of heavy fighting during the war, Armentières was remembered mainly by the lyrics. The lines most people seem to know:

Mademoiselle from Armentières, parlez-vous.
 Mademoiselle from Armentières, parlez-vous.
 Mademoiselle from Armentières, hasn’t been kissed
 in 40 years.
 Inky, dinky, parlez-vous . . .

Madison, Wisconsin. Named after James Madison, this is one of the four U.S. state capitals named after presidents. The others are Lincoln, Nebraska, for Abraham Lincoln; Jefferson City, Missouri, for Thomas Jefferson; and Jackson, Mississippi, for Andrew Jackson. See MONROVIA.

Mad Mullah. This is not the sobriquet of any Afghanistan mullah involved in the recent war against terrorism. It belongs to Mohammed bin Abdullah, who claimed he was the messiah of all Muslims and made war on all Somaliland tribes allied with the British for some 20 years until he died in 1921.

Mad Poet of Broadway. As evidenced by his book of verse, *Elixir of Moonshine by the Mad Poet* (1822), MacDonald Clarke (1798–1842) was known as “the Mad Poet of Broadway.” The New York poet, among the first of American bohemians, drowned in the East River, possibly a suicide. Author of the “Rum Hole” (1835), in which a groghouse is “the horrible Light-House of Hell . . . built on a ledge of human bones, whose cement is of human blood.” Clarke was eulogized by Walt Whitman, among others. The Mad Poet of Broadway had no illusions about achieving fame while he lived, as is shown by this epigram often attributed to him.

’Tis vain for present fame to wish.
 Our persons first must be forgotten;
 For poets are like stinking fish,
 They never shine until they’re rotten.

The epigram may, however, derive from John Randolph’s description of Edward Livingston: “He is a man of splendid abilities, but utterly corrupt. He shines and stinks like rotten mackerel by moonlight.”

Clarke is best remembered for his couplet, “Now twilight lets her curtain down / and pins it with a star.” See POET OF THE D.T.’S.

Mad Prince. An old name for Hamlet, the complex central figure of Shakespeare’s play. George Jones, a British actor who immigrated to the United States in 1838 and changed his name to Count Johannes, for some reason became obsessed with the role of Hamlet. As the years passed, he played the role more and more, until it was the only part he would accept. But the count unfortunately got worse, not better, with each performance. Soon audiences began booing him; he was hooted and jeered off the stage. Jones, probably insane to begin with, grew so mad that he took to gibbering insanely on the stage. Finally, no producer would have him, even as a curiosity, and he was forced to retire. The mad actor, one early critic said, had become too mad to play the Mad Prince.

madras. Generally *madras* refers to a fine cotton cloth with a plaid, striped, or checked pattern, although it can be a striped silk or rayon cloth, or even a bright colored silk cloth worn as a turban. In any case, it is a cloth originally made in Madras, India, during the 17th century, when the British East India Company founded the seaport city.

madstone. Any hard substance extracted from the digestive system of an animal (such as a hair ball in a deer’s stomach) and used to treat the bites of mad dogs was called a madstone by Americans in the 19th century. Thousands of people believed that they were cured of snakebites, bee stings, spider stings, and other bites by madstones. Abraham Lincoln, in fact, had his son treated for dog bite with a madstone applied to his wound.

madwort. See ALYSSUM.

maelstrom. Undoubtedly the best-known whirlpool in the world, the Maelstrom is found in the waters of the Lofoten Islands off Norway’s west coast. *Maelstrom* is a Norwegian word deriving from the Dutch *malen* (“to grind or whirl”), and *strom* (“stream”)—hence “grinding stream.” A legend surrounding the Maelstrom has it that two magic millstones aboard a vessel sailing this passage ground out so much salt that the ship foundered, but the millstones still continued to grind away underwater, making the surrounding waters “forever turbulent and salty.” First used to describe this Norwegian phenomenon alone, the word since has come to mean all large whirlpools the world over and widespread turmoil in general.

Maevius. See BAVIUS.

Mae West. This inflatable life jacket was introduced at the beginning of World War II and named for one of the world’s most famous sex symbols because it “bulged in the right places.” Mae West (1893–1980) starred on Broadway until two of her plays, *Sex* and *Pleasure Man* were closed by the police in 1928. Migrating to Hollywood, she won fame as “Diamond Lil,” the “Screen’s Bad Girl,” and the “Siren of the Screen.” Her name, Webster’s advises, is also given to a twin-turreted tank, a

malfunctioning parachute with a two-lobed appearance, and a bulging sail. When told that her name was included in *Webster's*, she said: "I've been in *Who's Who* and I know what's what, but this is the first time I've made the dictionary." Among her many famous sayings are "Peel me a grape, Beulah [her maid]," and "Come up and see me sometime." It is said that Mae West acquired the nickname "Baby Vamp" when she was only five and played a vamp at a church social; she repeated the performance in a stage play the same year, perfecting her famous walk at that time. "I do all my best work in bed," she once replied when a reporter asked her how she went about writing her memoirs. She claimed to be sexually active well into her 80s and once claimed (*not* in her 80s) to have made love with one of her paramours for 15 consecutive hours. Several inventors have claimed they invented the Mae West life jacket, but most authorities choose U.S. inventor Alvin Markus (1885–1943), holder of many patents. See the *New York Times* (May 16, 2005) for an interesting account of the invention.

Mafia. See quote: ". . . the word *Mafia* had originally meant place of refuge. Then it became the name of the secret organization that sprang up to fight against the rulers that had crushed the country [Sicily] and its people for centuries." (Mario Puzo, *The Godfather*, 1969). See OUTFIT.

magazine. "This Consideration has induced several Gentlemen to promote a Monthly collection to treasure up, as in a Magazine, the most remarkable Pieces on the Subjects above-mention'd," explained the editor of *Gentleman's Magazine* (1731), the first publication to be called a magazine. The word *magazine* itself, however, is from the Arabic *makhzan*, "storehouse," and has been used in that sense in English since the 16th century.

magenta. This red-purple dye was synthesized by French chemists in 1859, just after Napoleon had defeated the Austrians at Magenta in Italy. The reddish dye and its color were named in honor of the battle, because there was so much blood spilled there. Magenta, the place, had been named for a would-be emperor of Rome, General Maxentius, who in 306 had established a camp there called *Castra Maxentia*, "Maxentius's camp," which came to be called simply Magenta.

magic bullet. See CHEMOTHERAPY.

magic flower. No one knows the name of the magic flower of Greek myth that Flora gave to the goddess Juno to make her pregnant. According to the myth, Juno was jealous about the birth of the goddess Athena without a mother and was determined to have a child by herself. (Athena's father, Zeus, had swallowed his pregnant wife Metis, because he feared she would give birth to a son stronger than himself; Athena sprang from the head of her father when the god Prometheus split his head open with an axe.) Flora's magic flower enabled Juno to have a child without a father, and she gave birth to Mars, who was a god of vegetation sacred to farmers, and later became the god of war.

magic lantern. The first magic lanterns were rude optical instruments employing a lens to cast a magnified image of a

transparent picture drawn on glass onto a wall in a dark room. Such devices were known in Europe by the mid-17th century, but the first one called a *magic lantern* was the brainchild of a Danish inventor who exhibited it in France in 1665, the French dubbing the machine a *lanterne magique*.

Maginot line. André Maginot (1877–1932) barely escaped with his life in World War I when he was severely wounded during the defense of Verdun, but it was contaminated oysters that finally caused his death from typhoid. Decorated with the Cross of the Legion of Honor and the Médaille Militaire, the former sergeant, who had enlisted as a private despite the fact that he was French undersecretary of war in 1913, returned to government service and eventually became minister of defense. Determined that France would never be invaded again, he and his generals proceeded to plan and have built a fortified wall along the eastern border from Switzerland to Belgium, a wall that extended 314 kilometers at \$2 million per mile. The *Maginot line*, complete with self-sufficient forts dug seven floors deep into the earth, was meant to warn against surprise attacks from Germany in Alsace and Lorraine, but only engendered a false sense of security in France (which became known as the *Maginot mentality*), even though the wall was never extended to the coast. Maginot's death spared him from seeing his defenses easily bypassed by the Germans in World War II when they entered France through Belgium. The line's impregnability was never tested, but it could easily have been blasted by bombs, battered by tanks, or circumvented by paratroopers if it had been finished. The fault lay not so much with Maginot as with a war-weary country almost wanting to be lulled into a sense of false security. See SIEGFRIED LINE.

Magna Carta. The Magna Carta is the "great charter" of English liberty that the nobles extorted from King John in 1215. It was intended to guard against abuses of power by the Crown, including the guarantee that no subject be kept in prison without trial and judgment by his peers.

magnet. *Magnet* derives from a Greek word meaning "the stone of Magnesia," Magnesia being an ancient city of Asia Minor where the iron-attracting ore was first found. *Magnesia*, as in *milk of magnesia*, a mild cathartic made from magnesium salts, is also named for the city.

magnolia. Like Matthias de L'Obel, for whom Linnaeus named the *Lobelia*, Pierre Magnol (1638–1715) was a French physician and botanist who published a book classifying plants. Professor of botany at Montpellier University, Magnol had somehow obtained an education despite the fact that he had been denied entrance to French colleges because he was a Protestant. Through his courses in botany his name became celebrated, and Linnaeus honored him further by applying it to the beautiful magnolia tree upon devising his own monumental system of classification. The magnolia had been introduced into Europe from Japan in about 1709, but wasn't named for the professor until after his death. Linnaeus owed much to Magnol, who originated the system of family classification of plants, and picked a large plant family to honor him—Magnoliaceae, including 10 genera and over 100 species. The magnolia family, native to Southeast Asia and the southeastern United

States, contains some of the most beautiful garden shrubs and trees. Its lemon-scented fragrance was once used by the Chinese to season rice. The tree's huge, showy flowers, sometimes 10 inches across, are commonly white, yellow, rose, or purple, appearing with or before the first leaves of spring, and the magnolia grows to heights of up to 100 feet. Leaves of one species, the southern umbrella tree, are often two feet long, and the attractive leaves of *Magnolia grandiflora* are used to fashion funeral wreaths.

Magnolia State. A nickname for Mississippi, which was first called the Mudcat State after the large catfish (mudcats) in its waters. It has also been called the Eagle State (probably from the eagle on its state emblem), the Border-Eagle State, the Ground-hog State, the Mud-Waddler State, and the Bay-ou State.

magnum opus. A literary masterpiece, or any great work of a writer, composer, or artist. The words come from the Latin *magnum*, great and *opus*, work.

Magyar. *Magyar*, the language of the Hungarians, is unrelated to English, not stemming from the Indo-European family like most European languages and belonging to a group that includes Finnish, Estonian, and Samoyed. Aside from meaning the Hungarian language, *Magyar* means "an individual of the Mongoloid race, now forming, numerically and politically, the predominant section of the inhabitants of Hungary." Magyar words that have come into English include hussar, vampire, goulash, paprika, and coach—from the Hungarian town of Kocs, where horse carriages were made.

Mahabharata; Ramayana. One of the longest poems in the world is the *Mahabharata*, which tells the story of the descendants of the Hindu King Bharata. *Mahabharata* means "the great Bharata," and the poem's 110,000 couplets, or 220,000 lines, make it four times longer than the Bible and eight times longer than Homer's *Iliad* and *Odyssey* combined. The Indian poem is really the combined work of many generations of writers, written between the years 400 B.C. and 150 B.C. Though its main theme is the war between descendants of Kuru and Pandu, it is a vast repository of philosophy and legend. The *Ramayana*, named after the god Rama, is another great Indian epic poem, containing 24,000 stanzas in seven books as we know it today. Still another claimant for the longest poem is *The Mathnawi of Jalaluddin Rumi*—at 257,000 lines.

Mahernia; Hermannia. One of the most unusual words, the plant genus *Mahernia* is an anagram of *Hermannia*, another genus to which it is closely allied. Linnaeus must have been in a playful mood when he coined the word from *Hermannia*, which he had also named. Linnaeus named *Hermannia* for Paul Hermann (1646–95), a professor of botany at the University of Leyden, who is surely the only man to be honored by two genera in this odd way. *Hermannia* is a large genus, including some 80 species of ornamental, greenhouse evergreen shrubs, their flowers usually yellow. The closely related anagram genus, *Mahernia*, includes about 30 species, which are pretty greenhouse herbs or small undershrubs of which the yellow, fragrant honeybell (*M. verticillata*) is most

notable. Both genera are native to South Africa. *See also* MHO; QUISQUALIS.

Mahershallalhashbaz. In early New England children commonly received long names from Scripture. This admirable, almost unpronounceable one is from the book of Isaiah.

mah-jongg. *See* CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.

mahogany. No one knows where this foremost of all cabinet woods originated or where the word *mahogany* came from. Some say the source of the word may be a non-Carib language of the West Indies, while others say it is perhaps of Mayan origin. The strong durable wood comes mainly from two species of trees of the genus *Swietenia*: the West Indies mahogany (*Swietenia mahagoni*), and the Honduras mahogany of Central and South America (*Swietenia macrophylla*). Lumber from these valuable trees has been used by the Spanish since at least 1514, but the word *mahogany* wasn't recorded until over a century later. *Mahogany* also means a reddish-brown color like the tree's.

mahout. An elephant keeper and driver, usually in India. The word rhymes with *boot* and comes from a Hindi word meaning "elephant driver." It was noted by the English in the mid-17th century.

Maidenhead. Legend has it that the English town of Maidenhead is so named because the severed head of one of 11,000 virgins martyred in Cologne, Germany is buried there. Actually, only one virgin, known as Undecemilla, was beheaded in Cologne centuries ago and later elevated to sainthood. But in transcribing her saint's day to the Roman Catholic Church calendar a scribe erred, indicating in shorthand Latin that on her day, *Undecem militia Virg. Mart.*, "eleven thousands of virgins were martyred." And not even Undecemilla is buried in Maidenhead. She has nothing to do with the town's name, which is a corruption of the town's older name, Maydenhythe, a "dock midway" between two other towns.

Maid of Arts. This was a name briefly experimented with in the 19th century for a woman who received a Bachelor of Arts degree from a college or university. At the time it was felt only men should receive a degree called a *Bachelor of Arts*. By the same reasoning *Maid of Science* and *Maid of Philosophy* also had their brief day.

mailbox; pillarbox. The streetcorner mailbox or pillarbox, as the Brits call it, was invented and named by British novelist Anthony Trollope (1815–82) about 1858 (not by author Tobias Smollett, as is sometimes said). The American name *mailbox* for the collection box wasn't recorded until 1872. Trollope, a Post Office official, wrote over 50 novels in addition to holding his job, rising at 5:30 every morning to write for 2½ hours before going to work.

a mailbox for the dead. While recording the plight of homeless vagrants on the outskirts of Reno, Nevada, American poet

Langston Hughes (1902–67) took a long walk and came to a small mountain cemetery. On the cemetery gate there seemed to be a mailbox, though there was no house in sight. Upon reaching the gate he realized that what he saw was only an old board that had warped into the shape of a mailbox. The idea of a “mailbox for the dead,” however, caught his fancy, and that night he began a story that would fit the title. During his writing he kept calling his father, whom he had not seen for more than 13 years. The next day Hughes received a telegram informing him that his father had died the night before, at the same time the poet had been writing “A Mailbox for the Dead.”

mailed fist. The term *mailed fist* means “aggressive military might” and though it refers to the mail armor of the medieval knight, who even wore steel gloves, it came into use only in relatively recent times. The phrase derives from an order Kaiser Wilhelm II of Germany gave to his brother, Prince Henry of Prussia, when he sent him to China in 1897 at the head of forces that were to restore order after two German missionaries had been killed. “If any man dares impugn our right,” the Kaiser declared, “smite him with your mailed fist!”

Maine. Maximillian Schele De Vere in *Americanisms* (1871) says that the name *Maine* may have been chosen for the Pine Tree State “in compliment to the Queen of England, who had inherited a province of the same name in France.” According to George R. Stewart in *Names on the Land* (1945):

In a New England charter of 1620 the lawyers wrote “the country of the Maine Land,” words which suggest a general description rather than a name. Two years later, however, a charter was granted to two old sea-dogs of the Royal Navy, Sir Ferdinando Georges and Captain John Mason, and in it the word had certainly ceased to be a description. Dated on August 10, 1622, the charter declared that “all that part of the mainland” the grantees “intend to name the Province of Maine.” Some have thought that this name arose because of the greater number of islands off that northern coast, which made men have more reason to speak of “the main.” Others have tried to connect it with the Province, or County, of Maine in France. But again, *main* as equaling *chief* or *important* would have been of good omen, if a little boastful. Moreover, about 1611 Captain Mason had served in the Orkneys, and must have known the name as used there.

Mainiacs. A humorous title given to residents of Maine, who are more properly called *Mainers*.

main liner. The main line of the Pennsylvania Railroad bordered an exclusive suburban area just northwest of Philadelphia. Hence the expression *main liner*, for “a wealthy, socially prominent person, a member of the upper crust.” The expression isn’t heard as much anymore as the other *mainliner*, “a drug addict who takes his narcotics by intravenous injection.”

Main Street. *Main Street* is the typically American designation for the principal thoroughfare in a town, while the British synonym is High Street (the *high* denoting importance, not elevation). In early Colonial days, along the East Coast, there were

High Streets, some surviving today, but *high* came to suggest elevation in America as the pioneers moved inland toward the mountains. The most famous *Main Street* is found in Sinclair Lewis’s novel of the same name, published in 1920. Even New York City has its Main Streets; in fact, Manhattan is the only one of New York City’s five boroughs that doesn’t have a Main Street. Over the years Main Roads, Main Drags, and Main Stems have also been added.

Maintenon. Born in 1635 in a French prison where her father was being held as a counterfeiter, Françoise d’Aubigné’s life seemed no better as she grew to young womanhood. She married the famous comic poet Paul Scarron while still a girl of 16, serving mainly as his nurse until his death in 1660. Several years later she finally got a break of sorts when the King’s mistress, Madame de Montespan, interceded with Louis XIV to put her in charge of their illegitimate children. Gradually she supplanted de Montespan in the Sun King’s esteem, and in time he made her the Marquise de Maintenon. Madame de Maintenon became Louis’s *maitresse en titre* when Montespan left the court and was even a great favorite of Queen Marie-Thérèse, who died in her arms in 1683. Two years later Louis married his older, official mistress in a secret ceremony. Maintenon’s influence on court life was considerable, though it has probably been exaggerated as concerns matters of state. Madame de Maintenon was no slouch as a gourmet, and her name is remembered in *lamb chops à la Maintenon* and other creations, in addition to being a synonym for “a mistress.” She died in 1719, four years after Louis. See LAVALIERE; MONTESPAN; POMPADOUR.

maize. See CORN.

major league. The baseball terms *major league* and *minor league* date back to 1882, when the National League was called the major league and the American Association (not today’s American League) was called the minor league. Later these two leagues merged and the unified teams became known as the major leagues, any league below them being called a minor league. Today, of course, the major leagues are composed of the American and National Leagues, each with two divisions. Because the major leagues are the highest level of professional baseball, the term *major league* has generally come to mean the best of anything. *Big league*, a synonym, also comes from baseball, where it was used as early as 1899.

makari. *Makari* are poets, from the rare word *makar* (a variant of “maker”), an archaic Scottish term for poet.

make a clean breast of it. “That man of peace . . . hath been entrusted with King’s breasts,” someone wrote of an early diplomat. *Breast* has been a synonym for the heart since ancient times and, like the organ it houses, was long thought to be the seat of consciousness, the repository of all private thoughts, emotions, and secrets. To memorize something was to *know it on breast* as well as *learn it by heart* and a person burdened by guilt had a *stained breast*. These expressions are obsolete now, but the phrase to *make a clean breast*, “to make a full confession or disclosure,” has remained part of the language since the early 18th century. One suspects that it is much older, going back to

days “when men had breasts like lions” and ceremonial heart burials like Robert Bruce’s were common in England.

make a long story short; short and sweet. One would think the common advice *make a long story short* would be proverbial, but it is first found in print in Robert Bagot’s novel *Passport* (1905). On the other hand, *short and sweet*, “brief and pleasant,” is proverbial, one writer in 1539 calling it “an English proverb.”

make a mountain out of a molehill. In his “Ode to a Fly” the ancient Greek satirist Lucian conveyed this same idea, “to give something much greater importance than it deserves.” His “to make an elephant out of a fly” remains a French and German proverb to this day, but for some unknown reason the expression never passed directly into English. Instead, the elephant became a “mountain” and the fly a “molehill.” Foxe’s *Book of Martyrs* (1570) first recorded “makeing mountaines of Molehils.”

make a pig’s ear of. An old saying meaning to make a mess of something. One explanation of the phrase is that the ear of a slaughtered pig is worthless, mostly gristle, not fit to eat. With few exceptions, most people just don’t fancy pig’s ears. See IN A PIG’S EAR.

make a scene. The display involved in *making a scene*, “making a disturbance, usually in public,” suggests that the expression is theatrical in origin. Strong emotions often portrayed in short scenes of stage plays probably are responsible for the phrase. In fact, the first literary use of the idea is in Samuel Footé’s farce *The Liar* (1762), where one of the characters says, “We parted this moment. Such a scene!”

make bricks without straw. Trying to do anything without the proper tools or materials is said to be *making bricks without straw*. The expression goes back to biblical times and is found in Exodus, it being necessary to make bricks with chopped straw to prevent them from shrinking and cracking as they dry.

make ends meet. This phrase seems to be merely a shortening of *to make both ends of the year meet*, meaning the same—“to live within one’s income.” Smollett first recorded the saying in his picaresque novel *The Adventures of Roderick Random* (1748).

make fur fly. The cruel “sport” of trapping raccoons and setting dogs on them to see how long the coons could last may have suggested this expression to American pioneers. Certainly the air was filled with fur during such fights. By at least 1825 the saying meant “to attack violently.” In the autobiographical *A Narrative of the Life of David Crockett, of the State of Tennessee* (1834) we read: “I knew very well that I was in the devil of a hobble, for my father had been taking a few horns, and was in a good condition to make the fur fly.”

make good. To succeed, prosper, or fulfill a promise, as in “He made good on his word.” This Americanism was born as a

poker term, which is explained in the manual *Poker: How to Play It* (1882): “When all who wish to play has gone in, the person putting the ante . . . can play like the others by ‘making good’—that is, putting up in addition to the ante as much more as will make him equal in stake to the rest.” By the turn of the 19th century the poker term was being used figuratively.

make hay while the sun shines. Sun is the best and cheapest way to dry grass for fodder, and this proverb thus reminds us to take full advantage of any opportunity before it passes. “When the sunne shinth make hay,” John Heywood wrote in his *All the Proverbes in the English Tongue* (1546), and the saying has been a common one ever since.

make him an offer he can’t refuse. Used jokingly today, but popularized by the film version of Mario Puzo’s *The Godfather* (1972), in which the GODFATHER, played by Marlon Brando, uses it as a veiled threat. One of his confidants tells him that a certain Hollywood producer will never give his godson an important part in a movie he is making. “I’m gonna make him an offer he can’t refuse,” is the godfather’s exact answer, implying the potential of violence to the producer. That violence turns out to be decapitating the producer’s prize racehorse and placing the horse’s head in the bed where he is sleeping. The phrase is used several times in the *Godfather* movies.

make love. *Make love* began life centuries ago as a synonym for to court; those who were making love were simply courting. No one at the time would have associated the words with their relatively recent sense of having sexual intercourse.

Make me a child again just for tonight. The familiar words are from the poem “Rock Me to Sleep” (1860) by Elizabeth Chase Akers (1832–1911): “Backward turn backward, O Time, in your flight, / Make me a child again just for tonight.”

make my day. This expression is first attested in Florence Barclay’s 1909 novel *The Rosary*, where a character says: “I knew I wanted her; knew her presence made my day and her absence meant chill night . . .” *Make*, however, had been used as a verb meaning “to secure the success of” (as in *Clothes make the man*), since the 16th century. Today *go ahead, make my day* has come to mean “give me the chance to do what I’d like to do—to hurt you badly!” The expression was popularized by the Clint Eastwood character Dirty Harry (a tough police detective) in the movie *Sudden Impact*.

make no bones about it. Someone who talks frankly or straight from the shoulder about a subject *makes no bones about it*. Possibly the phrase refers to “not making much” of the dice or bones when rolling them in a dice game, but the theory seems farfetched. The allusion is probably to a person making no fuss or objection about eating soup or stew if there are bones in it. (*I can’t swallow that, I can’t stomach that, and That sticks in my craw* are other expressions in which acceptability is related to terms of eating.) *Make no bones about it* is an ancient saying; Nicholas Udall’s translation of Erasmus’s *Paraphrase of Luke* in 1548 relates that Abraham, when commanded to sacrifice Isaac, “made no bones about it . . . but went to offer up his son.”

make one's gorge rise. Hunting falcons are fierce, gluttonous creatures that store the food they eat in a pouch called the crop, or gorge. Their trainers in medieval times noticed that they frequently overate and vomited part of their food, which came to be called gorge, after the pouch it came from. To *make one's gorge rise* therefore became a synonym for “to make someone sick.” The saying at first indicated extreme disgust and later expressed strong resentment, so that today the phrase means to make a person violently angry.

make one's hair stand on end. Surprisingly, this metaphor isn't recorded before 1530, in a French phrase, but the idea behind it is found in the Bible (Job 4: 14–15): “Fear came upon me and trembling . . . the hair of my flesh stood up.” The hair on cats, humans, and other animals can stand on end and become rigid with fear; the tiny muscles controlling this reaction are so effective that even baldheaded men feel a prickling of the scalp from sudden terror. An English clergyman at an execution in the early 19th century observed the following: “When the executioner put the cords on the criminal's wrists, his hair, though long and lanky . . . rose gradually and stood perfectly upright, and so remained for sometime, and then fell gradually down again.”

make one's mouth water. In his *The Decades of the Newe Worlde or West India* (1555) historian Richard Eden wrote: “These Craftie foxes . . . espying their enemies afarre of, beganne to swalowe theyr spittle as their moths watered for greediness of theyr pray.” No one knows who invented the phrase *to make one's mouth water*, “to salivate in anticipation, to look forward to something eagerly,” yet it is interesting that this first known use of the expression had reference not to any gourmet food as we know it today but to human meat that West Indian cannibals spotted in the distance.

to make one's point. In the game of dice or craps, *to make one's point* is to succeed in shooting the same number you shot when you first cast the dice. Over the centuries—and the expression has been around since the 1300s—the words have also come to mean “to establish or win one's argument,” as in, “All right, you've made your point, let's get on with the discussion.”

make the feathers fly. To badly beat an opponent in a fight. This Americanism is first recorded in John Neal's romantic novel *Brother Jonathan* (1825): “If my New York master only had hold o' him; he'd make the feathers fly.”

make the grade. A train that makes the grade is one that manages to surmount a steep grade, or slope. Probably someone coined the expression which means “to win despite great obstacles,” after a long, heavy effort laboring up a steep hill. But the phrase, which has been traced to only about 1930, may derive from milk making the grade, “reaching a proper standard” and being good enough to be labeled Grade A.

make the horn. The Greek hunter Actaeon came upon Artemis bathing and, either because he saw her naked or because he had boasted that he was a better hunter than she, the goddess of wildlife (she is called Diana in Roman mythology) changed him into a stag and he was torn to pieces by his own

hounds. Because he had had horns—at least for a short time—Actaeon's name became a synonym for a man with an unfaithful wife. In fact, *to actaeon*, now obsolete, was once a verb meaning “to cuckold.” No one really knows why horns are a symbol of cuckoldry, but one guess is that stags, which are of course horned, have their harems taken from them in the rutting season by stronger males. At any rate, making the horn—thrusting out a fist with the first and last fingers extended—has been a gesture of contempt, implying a person is a cuckold, since Roman times.

make things hum. Since at least the early 18th century, humming, suggesting the blending of many human voices or the activity of busy bees, has been used to express a condition of busy activity. Two hundred years later the expression *to make things hum* was invented in America. Possibly the hum of machines in New England textile factories was the inspiration for the phrase, in reference to the fabled Yankee mechanics who made things hum again when the machines broke down.

make waves. Team players in any sport usually don't make waves, that is, they don't make trouble, and this expression might come from the sport of sculling, in which all of the rowers' strokes must be smooth and uniform, not choppy. But the phrase possibly comes from an old joke about a person who arrives in hell and hears thousands of lovely serene voices singing, though he can't make out the words. Amazed at such peace and tranquility in the nether regions, he approaches closer only to find the chorus of hell standing up to their chins in a sea of excrement, singing endlessly to each other, softly, serenely, carefully, “Don't make waves, don't make waves.” Which is a far better story than the sculling one, anyway. One early way to depict sea waves in a stage play was to assemble dozens of extras on hands and knees under a large blue or green cloth. The extras (or “human wave machine”) would then move about under the cloth heaving backward and forward to suggest the movement of the sea.

make whoopee. *Whoopee* has been an American exclamation of joy or approval since about 1860. However, it was apparently newspaper columnist Walter Winchell who coined the expression *making whoopee*, for “wild merrymaking,” the expression then made very familiar by the popular song “Making Whoopee” (1930).

making a unicorn. The Greek philosopher and scientist Anaxagoras (c. 500–c. 430 B.C.) was brought a ram with a single unicornlike horn in the center of its forehead and told that a soothsayer had claimed the single horn was a supernatural omen. Anaxagoras killed the animal, cleft its skull and showed that the brain had grown upward toward the center rather than filling both sides of the cranium, thus producing the single horn.

making up. This Irish expression means an insignificant lie, a little white lie. “It wasn't a lie, it was a making up,” says a character in the movie *Da* (1980) set in Ireland.

mako shark. A New Zealand Indian fisherman named Mooris is said to have hunted this shark for its long center

tooth, hunted it so well in his canoe that the shark was named for him. It may, however, be named for the Maori of New Zealand, who also hunted it in canoes. The mako shark (*Isurus oxyrinchus*), also called the mackerel shark, is found in both the Pacific and the Atlantic—not to mention seafood restaurants. See KIWI.

Malagasy words in English. Malagasy, the Malayo-Polynesian language of Madagascar, has contributed several words to English, including bantam and kapok.

malakoff. Malakoff, or Malakhov, a fortified hill overlooking Sevastopol from the east, was the scene of one of the most publicized battles of the Crimean War. After a long siege, the French finally stormed Malakoff and took it on September 8, 1855. The historic hill is supposed to be named for a drunken Russian sailor who set up a liquor shop on the heights after being fired from his job in the Sevastopol shipyards. Houses and finally fortifications were built around him and he ultimately won more fame than most of his more sober contemporaries. At one time a crinoline also honored the man's name and today the reformed drunkard is remembered by *malakoff*, a form of four-handed dominoes, by *malakoff*, a small French cream cheese as well as the name of a rich almond-flavored charlotte dessert—all of which commemorate the battle fought on his famous hill.

malamute. This powerful dog is one of the oldest Arctic sled dogs and is named for the Eskimo tribe called the Mahlemuit, who used these dogs 2,000 to 3,000 years ago.

malapropism. “Then, sir, she should have a supercilious knowledge in accounts;—and as she grew up, I would have her instructed in geometry, that she might know something of the contagious countries . . . and likewise that she might reprehend and the true meaning of what she is saying.” The preceding is a speech of Mrs. Malaprop in the first act of Richard Brinsley Sheridan's *The Rivals*. Mrs. Malaprop is the name of an affected talkative woman in the play, the aunt of the heroine, Lydia Languish. Sheridan coined her name from the French *mal à propos*, “unsuitable, out of place,” for he had her ludicrously misuse many “high sounding” words out of her ignorance and vanity, just as Shakespeare had Dogberry do in *Much Ado About Nothing* and had Mistress Quickly do in *Henry IV, Parts I & II*. Sheridan's *The Rivals* was produced in London in 1775, when he was only 24. Mrs. Malaprop's name soon became a synonym for the misuse of words, especially by those who are trying to sound important. See GOLDWYNISM; SLIPSLOP.

malaria. *Malaria* derives from the Italian for “bad air.” The disease was long associated with Rome, where the marshes around the city were a breeding ground for the mosquitoes that spread malaria until they were drained in 1939. Malaria was also called the *summer vapors*, *the fever*, and *Roman fever*. In his short story “Daisy Miller” (1878), Henry James called it the “villainous miasma.”

malarkey. Baloney, bunk, nonsense. Perhaps some Irishman named Malarkey was so noted for his B.S. that it was named for him, but there is no proof that this is so. More likely, though

also not certainly, the word was invented by that prolific word-coiner American cartoonist T. A. Dorgan, TAD having first used it as *Milarkey*, in 1922.

Malay, Tamil, and Telegue words in English. These Dravidian languages give us a number of English words, including calico, mango, copra, curry, coolie, pariah, junk, atoll, teak, ketchup, bamboo, gong, orangutang, fetish, caste, anaconda, catamaran, and mulligatawny.

male. See FEMALE.

male-female names. According to Mario Pei's *What's in a Word* (1968), many American names can be both female and male. Such names include Pearl, Marion, Leslie, Beverly, Kim, Francis, and many others. Such namings are more common in the South than elsewhere.

mall. See SHOPPING MALL.

Mallomars. Though they are now made in Toronto, the tasty chocolate-covered Mallomar cookie, a U.S. favorite since it first was sold in 1913 in New Jersey, sells 70 percent of its product in the Northeast. Mallomars are, of course, fashioned from marshmallow, one of its ingredients. And Mallomars are plural, not singular—because, as a food historian explains, “That's what's trademarked.”

Malpighian. His name is not well known outside scientific textbooks, but the Italian physiologist Marcello Malpighi (1628–94) deserves recognition as the founder of microscopic anatomy, the discoverer of the movement of blood through the capillaries, which completed the theory of circulation formulated by William Harvey, and for his pioneer work in the study of plant and animal tissues. Malpighi, a professor of medicine at Messina University, later served as private physician to Pope Innocent XII. He was one of the first men to use the microscope to study animal and vegetable tissue and the first to attempt an anatomical description of the brain with this instrument. He is commemorated by several words, including the Malpighiaceae family of ornamental tropical plants. The technical terms of *Malpighian corpuscle*, *Malpighian layer*, *Malpighian tube*, and *Malpighian tuft* recall his important work in anatomy.

malted milk. *Malted milk*, used today for the popular soda fountain drink made of malt, milk, ice cream, and syrup, was once a trademark for a baby food. In 1881 James and William Horlick patented a dried extract of wheat, malted barley, and whole milk “For infants, Invalids, the Aged, and Travelers.” The investors coined the trademark Malted Milk, which they enjoyed for many years until it was infringed upon and was eventually applied to the ubiquitous fountain drink.

Malthusian. Thomas Robert Malthus (1766–1834), an English curate, published his *An Essay on the Principle of Population As It Affects the Future Improvement of Society* in 1798, and his name almost immediately aroused a storm of controversy throughout the world. His essay contained what came to be

called the Malthusian theory: that population increases faster, geometrically, than the means of subsistence, which increases arithmetically. According to this theory, population would always outstrip food supply unless checked by natural controls such as war, disease, or famine. Malthus later revised and refined his pessimistic outlook, including a control that he called “moral restraint”—late marriage and sexual abstinence. Most of the economist’s predictions haven’t been borne out, but his analysis remains correct in many respects and the Malthusian principle still operates in parts of the world where the birthrate has not dropped through birth-control practices. A Malthusian is one who accepts the pioneer demographer’s theory, or, more generally, an advocate of birth control. It is interesting to note that Charles Darwin was struck by the phrase “struggle for existence” when reading Malthus’s *Essay*, the words stimulating him “to find the key to biological change in the process of natural selection.”

mama; mammal. See BABE.

mamalese. I haven’t seen this synonym for baby talk anywhere save in Austin Bunn’s *New York Times Magazine* article “Terribly Smart” (3/24/02), and perhaps the author coined it: “The Baby Einstein video series, which immerses ‘learning enabled’ babies in English, Spanish, Japanese, Hebrew, German, Russian and French long before mamalese, was purchased by Disney. . . .”

mamelle. See GRAND TETONS.

mammalia. Still another term invented by Linnaeus, this one in 1758, that includes all suckling creatures, including human beings. See LINNAEAN SYSTEM.

mammon; the mammon of unrighteousness. *Mammon* became the personification of greed or a passion for money, the god of this world, only in medieval times. In the Bible the word (from the Syriac *mamuna*) means riches or gain, as in “Ye cannot serve God and mammon” (Matt. 6:24) or “The mammon of unrighteousness” (Luke 16:9). In Ben Jonson’s *The Alchemist* (1610), Sir Epicure Mammon is a worldly sensualist, a greedy, voluptuous knight who is conned by the alchemist.

mammoth. *Mammoth* means something of great or enormous size, but the word was first applied to a large hairy elephant of the genus *Mammuthus*, sometimes called the woolly mammoth, when skeletons of *Mammuthus primigenius* were found in Siberia in 1706. The creature’s name in Russian was *mamant*, which became the English *mammoth* and was eventually applied to anything of huge size.

mammy. *Mammy* is an Irish term meaning mother, and *mam* is a British regionalism that means the same. *Mammy* was once commonly used in the American South to mean a black woman hired to care for white children but is considered by many to be a derogatory expression today.

mamser; momser. Some Hebrew words have been standard in English for centuries. *Mamser*, for example, first recorded in

1562, was frequently used to mean “bastard” during the Middle Ages, and people were familiar with the word from its use in Deut. 23:3. *Mamser* became obsolete by the late 19th century, but is still heard in the Yiddish *momser*, meaning the same and a half-dozen other things, including: an untrustworthy man, a difficult man, and impudent man, a detestable man, a scalawag, and even a clever, quick fellow.

man. See WOMAN.

man about town. This expression has been popular since the mid 17th century, for “a fashionable person who is often seen at public and private functions.” *Girl about town*, invented at about the same time, is rarely, if ever, used anymore.

manager. Managers were originally horse trainers, the word *manage* deriving from the Italian *maneggiare*, meaning “to train horses.” But not long after *manage* was introduced in England the word came to be applied to the military, meaning to handle weapons as well as horses and then to conduct a war. By the late 16th century it had assumed its current meaning.

Man alive! An exclamation expressing anger, disappointment, amazement, or excitement, *man alive!* was first recorded in England in 1829, according to Partridge. Today *Man!* is more commonly heard, as is *Man oh man!*

mañana. The Spanish word for tomorrow or sometime in the future. The *land* or *kingdom of mañana* was once a common American term used to mean a place where time was often disregarded, a land of postponement, and often applied to Mexico.

man bites dog. “If a dog bites a man,” editors used to instruct cub reporters, “that’s an ordinary occurrence. But when a man bites a dog, that’s news.” The inspiration for both the advice and the saying *man bites dog* can be traced back to Oliver Goldsmith’s poem “Elegy on the Death of a Mad Dog” (1757), about a dog that “went mad and bit a man,” which concludes with the lines:

The man recover’d of the bite,
The dog it was that died.

According to Partridge, this touching poem passed into folklore in a number of versions, possibly including a funny one where a man *did* bite a dog, finally illustrating the journalistic advice.

mandarin orange. This fruit either takes its name from the orange, flowing robes of Chinese mandarin officials or from the superiority implied in the title “mandarin.” The word is first recorded in an 1816 botanical treatise.

man doesn’t get his hands out of the tar by becoming second mate. During the age of sail only the *first* mate was exempted from the dirty work of sticking his hands into the tar bucket for tarring the rigging. Hence this British expression, which probably originated in the 18th century, is used colloquially to indicate that responsibilities don’t end with promotion.

mandrake. The “magical” mandrake (which, incidentally, gave its name to the old comic book hero Mandrake the Magician) was at first known as the “mandragora,” because its root uncannily resembles a miniature man, and it was as magical and awe-inspiring as a dragon. But in medieval times the word for dragon was *drake*, so the plant became known as “mandrake.” Like ginseng roots, and even peony roots to some extent, the roots of the mandrake were associated with many fantastic beliefs. One claimed they were an aphrodisiac (especially if shaped like a woman), another held that they caused barrenness in women and yet another claimed they could cure any illness. Many people believed that mandrake would shriek like a human being when uprooted and that a person should not touch the roots when pulling them up. To avoid the latter, a dog was actually tied to the plant to tug it out of the ground.

man for breakfast. Lawlessness often went unpunished in the American West and people reading their morning newspapers had their *man for breakfast*, or murder, every day. The expression persisted from the late 19th century well into the 20th century.

man Friday; girl Friday. The cheerful, hardworking companion of Robinson Crusoe in the 1719 novel of that title by Daniel Defoe gives his name to both *man Friday*, “a male general helper,” and his modern-day female counterpart. *Girl Friday* is more often *gal Friday* today. All of these expressions can now be considered demeaning.

Manglish. A combination of Malay and English words, or mangled English usage by Malaysians, is sometimes called Manglish. An example of the latter is “My wife, she got no patience one.” (“My wife has no patience.”).

mango. The mango is one of the most important of tropical fruits. Mango varieties number in the hundreds. Some of the notable dessert mangoes are the Alphonse of Bombay, the Ferdandin of Goa and the Kimayuddin of South India. The delectable fruit, whose name derives from the Portuguese *manga*, taken from its Malayan name, or from the Chinese *man-guoh*, meaning hair-fruit, is grown in the American South, but these varieties can’t be compared to tropical ones in taste. One Indian poet described mangoes as “sealed jars of paradisaical honey”; the Buddha was given a grove of them so that he could sit in the shade and meditate; and a Hindu god, Subramanya, renounced the world because he couldn’t obtain a mango he desired. The mango isn’t a difficult fruit to eat once you get the hang of cutting the pulp away from its large central seed, but it might be better to eat it in a bathtub to avoid the explosion of juice that is common to novices. The nutritious mango tastes something like a peach, but the comparison is wholly inadequate. An attractive bright yellow and red fruit, it hangs like a pendulum from its long stem. A building in Angkor that dates to A.D. 961 bears the following quotation under one of its most beautiful female figures: “Drawn by the flower of its glory to the fruit of the beauty of the mango tree of her body . . . the eye of man could nevermore tear itself away.”

man hands. Hands that are large or unfeminine. The term is used to describe a beautiful woman whose overly masculine

hands are her only flaw: “She’s gorgeous except for those man hands of hers.” Coined on the television series *Seinfeld*.

Manhattan; Manhattanization. Since 1898 *Manhattan* has been the name of New York’s central borough, and has always been a synonym for New York City itself. From the Manhattan Indians, indirectly, we also have the *Manhattan cocktail*, made with whiskey, sweet vermouth, and bitters, first mixed about 1890; *Manhattan clam chowder*, made with tomatoes, unlike the traditional New England milk clam chowder; and *Manhattan Project*, the code name for the project that developed the first atomic bomb. *Manhattanization* is a word that seems to have originated only recently. In the 1971 fall elections, San Francisco residents were urged to vote for an amendment halting the construction of tall buildings to avoid the Manhattanization of San Francisco.

Manhattan clam chowder. See CHOWDER.

Manhattan Project. The code name for the group of scientists and administrators who developed the atomic bomb for the United States during World War II. See LITTLE BOY.

Manhattan schist. The thick, tough bedrock that makes it possible to build the skyscrapers of Manhattan. Exposures of it can be seen in Central Park.

Manichean. The Persian prophet Manes (ca. A.D. 216–276) considered himself a successor to Zoroaster, Buddha, and Jesus, sent into a darkening world to restore light. Zoroastrian priests saw to it that he was banished from Persia. Wandering widely, he spread his new religion (Manicheism) throughout the Roman Empire and as far off as India. However, when he returned to Persia, he was flayed to death or crucified—history is unclear. Manicheism, however, was a major religion in the Orient for over a thousand years and remained an influence on other religions into the 13th century.

manifest destiny. The 19th-century belief or doctrine that it was the divine destiny of the United States to expand its territory over the whole of North America. An 1845 editorial by John L. O’Sullivan supporting the U.S. annexation of Texas was the first to use the term: “[It is] our manifest destiny to overspread the continent allotted by Providence for the free development of our yearly multiplying millions.”

man in the gray flannel suit. The man in the gray flannel suit remains a synonym for a conformist corporation man, although dress styles have changed considerably in the business world since Sloan Wilson coined the phrase in his novel *The Man in the Gray Flannel Suit* (1957).

man in the street; man of the cars. The “ordinary” or “average” person. The first term is recorded in 1831, when British statesman Charles Greville refers to it as a racing term in his diary. A similar 19th-century American phrase was *man of the cars*, referring to the streetcars of the time.

manioc. A starch food similar to the potato, tropical manioc is the nutritious tuberous root of the cassava plant that is usually prepared boiled but is also used as a bread flour and for tapioca. *Manioc* derives from the Tupi Indian name for the root, *manioca*. It has a reputation as an aphrodisiac—like a thousand other foods.

man is a wolf to man. Both *Bartlett's* and *The Oxford Dictionary of Quotations* attribute this expression, in a slightly different form, to Bartolomeo Vanzetti in his eloquent last speech to the Massachusetts court trying him and Nicola Sacco on charges of robbery and murder in 1927. But the expression is much, much older, dating, back at least to the Roman playwright Plautus in his *Asimaria*. In 1577 a British author wrote: "Lyons doo not one encounter another, the Serpent stingeth no Serpent: but Man is a Woolfe to Man." The expression was afterward used by many writers, including Cowper.

Manitoba. The Canadian province Manitoba is named for God, or Manitou, the Great Spirit of the Algonquins.

a man mad about Homer. Celebrated German archaeologist Heinrich Schliemann (1822–90) was a self-educated man who spoke 12 languages fluently. According to a biographer, he baptized his children, named Andromache and Agamemnon, "by laying a copy of the *Iliad* upon their heads and reading a couple hundred of Homer's hexameters aloud." The buried treasure he uncovered in the graves of Troy (actually it proved to be the city below Troy) was the richest ever found to that day and Schliemann lived in great wealth until his death on Christmas morning in 1890. He once explained how he learned Greek: "In order to acquire quickly the Greek vocabulary, I procured a modern Greek translation of *Paul et Virginie*, and read it through, comparing every word with its equivalent in the French original. When I had finished this task I knew at least one half the Greek words the book contained; and often repeating the operation I knew them all, or nearly so, without having lost a single minute by being obligated to use a dictionary . . . Of the Greek grammar I learned the declensions and the verbs, and never lost my precious time in studying its rules; for I saw that boys, after being troubled and tormented for eight years and more in school with the tedious rules of grammar, can nevertheless none of them write a letter in ancient Greek without making hundreds of atrocious blunders. I thought the method pursued by the schoolmasters must be altogether wrong . . . I learned ancient Greek as I would have learned a living language."

Mann Act. Widely known as The White Slave Act, the Mann Act was a 1910 U.S. law named for its author, Congressman James Robert Mann (1856–1922), which forbid under heavy penalties the transportation of women from one state to another for immoral purposes.

manna from heaven. By extension, this expression means any unexpected, providential benefit, a windfall. Until the 19th century, the phrase meant only the miraculous manna from heaven mentioned in the Bible: "a small round thing, as small as the hoar frost on the ground . . . like coriander seed, white:

and the taste of it was like wafers made with honey (Exodus 16)." It was this manna that Moses told the children of Israel the Lord had provided for them to eat in the wilderness in their journey out of Egypt. The etymology of *manna* is unclear. It is popularly said to derive from the manna that is the secretion of the tamarisk; or possibly from the Hebrew *man*, the exudation of a plant louse that hardens at night and can be eaten in the morning.

manniporchia. Curiously, only in northern Maryland does this word, deriving from the Greek *mania a potu*, (craziness from drink) mean the D.T.s. (delirium tremens). If anyone knows why, I haven't been able to find that person, in print or in person.

mano a mano. Spanish for "a face to face confrontation," or a bullfight in which two rival matadors fight several bulls each.

the man of a thousand faces. Great movie makeup artists have been the stuff of legends since early Hollywood days, when actor Lon Chaney Sr. was known as the "Man of a Thousand Faces." Since then creations such as the Hunchback of Notre Dame and a hundred monsters worse than Dr. Frankenstein's have become part of American folklore. This is not to mention dramatic makeup jobs on actors like Dustin Hoffman, who passed from youth to great age in *Little Big Man*, or the deterioration of the main character in *The Picture of Dorian Gray*.

man of few words. Shakespeare wrote that "men of few words are the best men." This expression for a laconic, taciturn person who is often "a man of action" was born several centuries before the Bard, however, being first recorded in about 1450.

man of letters. First attested in English in 1645, *man of letters* may come from the French *homme de lettres*. Originally the term meant "a scholar, a man of learning," but today it is mostly applied to authors, critics, or literary scholars.

man of men. *A man of men* or *a man among men* means an excellent man, the kind one encounters once or twice in a lifetime, if at all. Christopher Marlowe first recorded the term in 1594, and Shakespeare, the writer of writers, used it not long after.

man of straw; straw man. A man made of straw would certainly be one without a heart or conscience, so that this expression is apt for "an unscrupulous person who will do anything for gain." However, the words may refer to real "straw men," who in the past loitered near English courts with a straw in one of their shoes—this indicating that they would be willing to give false testimony or swear to anything in court for enough money.

man of Sumter. General P. G. T. Beauregard (1818–93) is known as *the man of Sumter* in American history because he headed the forces that bombarded Fort Sumter, South Carolina on April 12, 1861 to begin the Civil War. His troops called him "Old Borey" or "Peter."

man of the cloth. It wasn't until the 17th century that *man of the cloth* was applied to a clergyman of any faith. Until then the term had meant anyone wearing any uniform in his work.

man of the Revolution. The patriot called the man of the Revolution in American history isn't George Washington, as one might suspect. Samuel Adams has the honor "because of the leading part he played in bringing about the War of Independence."

man on the horse. We know that this expression meaning "the person in authority or in charge" is an Americanism, but it is first recorded in England. In 1887 a British newspaper writer noted: "The man on the horse . . . to use the picturesque American phrase, is not now Lord Salisbury." No doubt the expression dates back at least 20 years earlier, perhaps to Civil War days.

Man o' War. Considered by many to be the greatest American racehorse, Man o' War, or Big Red as he was often called, won 20 out of 21 races. Bred by millionaire August Belmont in 1917, he went on to set five world records, his long, strong stride gobbling up ground. The renowned stallion was also called the leading sire of all time. Man o' War died in 1947. His only loss was to a horse named Upset. See BELMONT STAKES.

man proposes, God disposes. This universal proverb has its roots in Proverbs 16:9: "A man's heart deviseth his way: but the Lord directeth his steps." The words are proverbial in Hebrew, Greek, Latin, English (since at least the 15th century), and many other languages.

mansard. This type of roof, unlike the conventional peaked shape, has a double, almost vertical, slope on each side, with the upper part almost flat. *Mansard* refers to the roof and the high room under it, both designed by Nicolas-François Mansart (1598–1666), a French architect of the Renaissance who is generally known as François Mansard. The roof he devised allows for high-ceilinged attics and was widely adopted by Victorian architects. Mansard's great Church of Val-de-Grâce, Paris, is said to have influenced Christopher Wren's plan for London's St. Paul's Cathedral. One of the most influential architects of his time, his pure classical designs have been an inspiration to others for centuries. Mansart, the son of a carpenter to the king, was chosen to design the Louvre, but refused to allow his design to be altered during construction, and so the Italian Bertini replaced him. His nephew Jules Hardouin-Mansart designed the magnificent Hall of Mirrors at the Palace of Versailles, the Hôtel des Invalides (which houses Napoleon's tomb), and the Place Vendôme, among other architectural masterpieces. One reason the mansard roof was so popular was taxes, writes my correspondent Eric Halsey: "There was a stiff tax on buildings higher than 6 stories, and the mansard roof allowed the addition of one, two, or three additional floors that officially counted as attic space."

mansei! The Korean equivalent of Japanese BANZAI. The word was shouted in the charges that the North Koreans made against American and U.N. forces during the Korean conflict. See THE FORGOTTEN WAR; KAMIKAZE.

manticore. The manticore, a vampiric, man-eating monster of ancient times, takes its name from the Persian *martya*, "man," and *xvar*, "to eat." The mythical monster is first mentioned by the Greek physician Ktesias in the 5th century B.C. It was usually represented as a monster the size of a horse with the body and claws of a lion, but it was depicted in many ways, sometimes with the head of a man and the breasts of a woman.

mantra. A word or phrase repeated over and over. *Mantra* derives from the Sanskrit *mantrah*, "prayer."

Mantuan Swan. See SWAN SONG.

manufacture. Mass-produced products that are *manufactured* on assembly lines in the world's factories would be made by hand if we took the word's meaning literally. For *manufacture* derives from the Latin *manu*, "by hand," and *factura*, "a making," from which our word *factory* also derives.

manure. *Manure* originally meant "to work by hand," to do manual labor, especially to work the soil by manual labor, deriving from the Old French verb *manouvrier*, meaning the same. The English verb yielded the noun *manuere*, which at first meant "the action of cultivating the soil" and was extended to include the dung put into the soil when a euphemism was wanted for "dung."

the man who broke the bank at Monte Carlo. Fabled in story and song is the man behind this phrase, Englishman Joseph Hobson Jagger, who in 1886 noticed that one of the roulette wheels at Monte Carlo wasn't functioning properly and bet on numbers that were appearing more often than they should have in mathematical probability. Jagger won more than 2 million francs in one week and became world famous.

the man who invented a language. Norwegian philologist, playwright, and poet Ivar Andreas Aasen (1813–96) is the only person known to have created a national language. The author had collected all of his country's difficult regional speech for the books he had written on Norwegian dialects. Out of these he fashioned a popular language, or *folk-maal*, which replaced the Dano-Norwegian his countrymen had previously used, to enable all the nation's different dialect users to understand each other. The new national language was named Landsmaa. Aasen has been hailed as having "an isolated place in history as the one man who has invented or at least selected and constructed a [national] language." In order to do this, he not only constructed the new composite language but also wrote many poems and plays in the *folk-maal* to help popularize it, not to mention a dictionary and grammar.

man will prevail. People often look for the source of these words but fail to find it because the words are only part of the quotation. The full quote is "I believe that man will not only endure, but prevail," and it is from William Faulkner's acceptance speech when he won the 1950 Nobel Prize in literature. Faulkner's work largely celebrates those who endure, including the old black servant Dilsey (in *The Sound and The Fury*), whose great

strength counterpoints the weak, disintegrating family she serves.

man with a belly. A very important person. Wrote Mario Puzo in *The Godfather* (1969): “For one thing, the five New York Dons were in the old Sicilian tradition, they were ‘men with a belly’ meaning, figuratively, power and courage; and literally, physical flesh, as if the two went together, as indeed they seemed to have done in Sicily. The five New York Dons were stout, corpulent men with massive leonine heads, features on a large scale, fleshy imperial noses, thick mouths, heavy folded chests.”

man without a country. Contrary to what many people have believed since grade school, Edward Everett Hale’s famous story “The Man Without a Country” is fictional. Only the name of the main character is real. In the story Lt. Philip Nolan cries out, “Damn the United States! I wish I may never hear of the United States again!” and is of course sentenced to sail the seas all his life on a Navy ship without ever hearing his country’s name again. Nothing like this ever happened to the real Philip Nolan, an adventurer whose career Hale used as background. Hale later regretted using the man’s name and wrote a book called *Philip Nolan’s Friends* (1876), “to repair my fault, and to recall to memory a brave man,” as he put it.

man works from sun to sun, but woman’s work is never done. An old American proverb that dates back to life on the farm two centuries ago.

many a fight is lost (left) in bed. An adage that probably dates back, in one form or another, to the earliest days of professional boxing but is rarely recorded in any dictionary. It advises that a fighter, or any athlete, who engages in sex the night before or close to a fight weakens himself and endangers his chance of winning. Athletes in many sports are divided on this. Muhammad Ali, for example, said he didn’t believe it, while other fighters and trainers have endorsed the advice. A good marathon runner told me thinking of sex inspired him onward.

many happy returns. Up until the 19th century this was a New Year’s Day and even April Fools’ Day greeting as well as the birthday greeting that it exclusively is today. What the words wish, of course, is that the happy day returns again many times, not the hope that one will get many “returns,” or birthday presents, as some children think.

many small potatoes and few in a hill. New Englanders, especially Mainers, use this expression for something or somebody of small consequence. It dates back about a century.

Maoism. A name given to the Chinese brand of communism, that is, communism adapted to the special needs of China. The term remembers Mao Tse-tung, who dominated communist politics from the outbreak of the revolution until his death in 1976 at 82 and was a virtual dictator in his later years. Collections of his sayings (such as “Engage in no battle you are not sure of winning”) have sold hundreds of millions of copies in Chinese. Similarly, *Castroism*, after Cuban revolutionary Fidel Castro (b. 1927), whose forces overthrew the Fulgencio Batista

regime in 1959, describes Cuban communist political and economic principles.

Maori words in English. Maori has contributed several words to the English language, including kiwi and mako.

maple-head. Eponymous words and phrases often derive from the names of obscure people. This unusual old term from the Ozarks means “a very small head.” It is said to celebrate a pioneer family named Maple noted for their small heads. See BOBBIT.

maple syrup; maple sugar. “There can’t be a remedy better for fortifying the stomach” than maple sugar, a pioneer wrote in 1705. Maple sugar, boiled from maple syrup and the only sugar the first settlers had, has a long history that dates from the time American pioneers learned how to make it from the Indians. The same, of course, applies to maple syrup, another maple-tree product Americans are still familiar with, but there were also maple-derived products like maple water, maple vinegar, maple molasses, maple wax, maple beer, and even maple wine.

maquiladora city. Cities in Mexico on the U.S. border that have maquiladora programs set up by the Mexican government. Under these programs, parts are shipped by, say, an American manufacturer in El Paso to a company in the nearby Mexican city of Juárez that assembles the parts, the finished products exported back to the United States duty free except for the value added in Mexico. The idea was born in about 1964. *Maquiladora* derives from the Spanish *maquila* (the portion received by a miller for milling someone’s grain).

marathon. This grueling 26-mile, 385-yard footrace honors a peerless runner but is named after a prosaic vegetable. It recalls the historic battle of Marathon. *Marathon* means “field of fennel” in Greek, the word deriving from the Greek *marathon*, a fennel plant. In 490 B.C. on the great plain of Marathon covered with this yellow-flowered plant, 20,000 invading Persians tried to establish a beachhead and defeat the armies of the Greek city states before launching an assault on Athens itself. Led by General Datis, the Persians were under the orders of King Darius to enslave Athens and “bring the slaves into his presence.” Legend has it that the Greek soldier Pheidippides, a champion of the old Olympic games and the best runner in Greece, was dispatched from Athens to Sparta to announce the arrival of the invading Persians at Marathon and seek a promise of help. Pheidippides covered the distance of 150 miles over mountain trails in two days, only to find that the Spartans were unwilling to send help until after the conclusion of an ongoing religious festival. He then ran back to join his forces in the defense of Athens. Although the bronze-clad Greeks were outnumbered two to one, their commander, Miltiades, employed revolutionary tactics to defeat the Persians on the marshy plain near Marathon village. Another story has Pheidippides (or another runner) racing 22 or 23 miles to Athens from Marathon to announce that the Greeks had won, his dying words, “Greetings! We win!” The standard marathon distance today was set in 1896, the distance from London’s Windsor Castle to the stadium where the Olympic games were held. See FENNEL.

Marcel wave; marcelling. Every hairdresser might wish to have the success Marcel Grateau had with his curling iron. In 1875, when only 23, this Frenchman invented marcelling, a process that makes soft, continuous waves in the hair. The Marcel wave became so popular with Parisian women, and women everywhere, that Marcel Grateau made a fortune and was able to retire before turning 30. He lived a long life of luxury in an elegant chateau, and just before his death in 1936, aged 84, France's hairdressers held a week-long celebration honoring him and his contribution to their craft.

March. When spring came in days of old the Romans apparently thought it was a better time to make war than love. Anyway, they named the month, then the first month of the new year, for Mars, the god of war, perhaps in the hope that he would help them in their spring campaigns.

Marco Milione. As everyone knows who has seen or read Eugene O'Neill's play *Marco Millions* (1928), this is the name Italians gave to Marco Polo (ca. 1254–ca. 1324) and his many wonderful travel tales of China and the court of Kublai Khan, among other colorful places. His fellow Venetians also called him *Il Milione*, "the million." The name recalls the millions of wonders and riches he discovered.

Marconigram. See WIRELESS.

Mardi Gras. *Mardi Gras*, literally "fat Tuesday" in French, takes its name from the fat ox (*boeuf gras*) paraded through Parisian streets in ancient times by mock priests at the head of the carnival procession on the day before the beginning of Lent. The fat ox was a reminder of the abstinence from meat during the coming Lenten season of fasting and prayer. Called Shrove Tuesday in England, and previously Pancake Tuesday because pancakes were traditionally served on the day before Ash Wednesday, the festival of Mardi Gras may have its origins in the old Roman fertility festival of Lupercalia once held at the same time of the year.

Marenisco, Michigan. Another unusual place name, *Marenisco*, Michigan, was coined from the first syllables of the four names of its first woman settler: *Mary Relief Niles Scott*.

margarine. The Latin *margarita*, "pearl," is the ancestor of *margarine*, which, before dyes were commonly added, was a white, pearl-like substance extracted from hog's lard. *Oleomargarine* (from the Latin *oleum*, "oil," plus *margarine*) was coined first, in 1854, by the French chemist Marcellin Berthelot, and shortened to *margarine* in the U.S. by 1873.

marigold. There are several genera whose flowers are called marigold; the chief ones are *Tagetes*, which includes among its 30 species the French and African marigolds, and *Calendula*, a genus that counts the popular pot marigold among its 20 species. The pot marigold was found in the Holy Land by the early Crusaders and brought back to Europe, where it was probably named after the Virgin Mary and the color gold, being called "Mary's gold" or "Marygold" before it became *marigold*. Linnaeus gave the pot marigold its scientific designation, *Calendula officinalis*, but he merely used a name that had been given to

the plant centuries before. The herbalist Gerard remarks that the name *Calendula* was bestowed upon the plant because it supposedly bloomed regularly "in the calends" or first days of almost every month (*calends* mean the first of the Roman month). *Calendula officinalis* differs from the so-called French and African species (*Tagetes*) mainly because its leaves are not strong-smelling. But the flowers of the *Tagetes* genus, also herbs, do resemble the pot marigold, so early American settlers gave them the same name. *Tagetes* possibly honors the Etruscan god Tages, though this is not certain. All flowers of the genus are native from North Mexico to the Argentine.

marijuana. *Cannabis sativa* goes by some 200 names in practically every language throughout the world, including pot, grass, seed, weed, tea, dope, reefers, joints, and Texas tea. But the hemp plant's crushed leaves, flowers, and, sometimes, twigs, are best known as marijuana. The word comes from the Spanish prenomens Maria and Juana, translating as Maryjane, and no one knows why. The Chinese used *Cannabis* at least 5,000 years ago, and George Washington is said to have grown it at Mount Vernon—for the rope produced from the hemp. One hundred years ago, according to the National Institute of Mental Health, "extracts of *Cannabis* were as commonly used for medicinal purposes in the United States as aspirin today." See POTHEAD.

marina. *Marina*, from the Italian *marina* meaning the same, refers to a harbor or boat basin used primarily for small ships such as private yachts and speedboats. The word was recorded as early as 1795, but it wasn't until after World War II that it became commonly used. Today thousands of marinas serve boat owners. Some are small basins mooring 50 boats, while others hold 100 times that many.

marine. The term *marine* for a type of soldier didn't originate with the U.S. Marines but dates back to the early 17th century when the word (from the Latin *marinus*, "of the sea") was used in England to describe specially trained soldiers serving on British warships.

Marinism. Il Cavaliere Marino, as the pompous Neapolitan poet Giambattista Marino (1569–1625) was called, headed the *seicento* school of Italian literature, which became noted for its flamboyance and bad taste. Poems like his 45,000-line *Adone* show brilliant mastery of technique but were intended to dazzle the reader at any cost, their extravagance leading to his name standing for any florid, bombastic style, pages full of sound but signifying nothing. Marino, or Marini, had his trouble with censors, too. His satirical works were not appreciated by his satirized patrons, and he was forced to leave Italy, taking refuge in Paris for eight years before he could return home safely.

marivaudage. Important advances in the development of the novel were made by French writer Pierre Carlet de Chamblain de Marivaux (1688–1763), who is undeserving of his fate at the hands of the dictionaries. *Marivaudage*, however, means an affected, overstrained style, as exemplified by the witty bantering of lovers in his two unfinished novels and 30 plays. Marivaux's subtle, graceful works are mostly excellent psychological

studies of middle-class psychology and led a contemporary to remark that his characters not only tell each other and the reader everything they have thought, but everything that they would like to persuade themselves that they have thought. *Marivaudage* has also been described as “the metaphysics of love making.” The author was much admired in his own time, though not by Voltaire, whose work he criticized, and it is said that Madame de Pompadour secretly provided him with a large pension.

marjoram. Marjoram is any of several mints, including sweet marjoram and pet marjoram. The old saying *as a pig loves marjoram* (that is, not at all) is still heard occasionally. *Marjoram* is an alteration of the Latin *amaracus* for the herb.

Mark Antony's wig. Cleopatra reputedly gave the virile but balding Mark Antony a wig made of her pubic hairs, and Mark Antony's wig was later brought back to Rome. According to the old story, this wig was worn by many Roman emperors on “revel evenings” and finally presented to the pope by Constantine in 328. The papal treasures supposedly included a sporran of pubic hair that the queen of Sheba had lost to Solomon in a riddling contest, and this was allegedly added to the wig and presented to England's licentious Charles II by Pope Clement X as part of an attempt to convert his kingdom to Catholicism. Charles, it is said, added pubic hairs plucked from his mistresses before he tired of plucking and gave the wig to the earl of Moray, who donated it to his club of ribald rakehells called the Ancient and Most Puisant Order of the Beggar's Benison and Merryland. There the head of the order wore the wig at all ceremonies, and initiates were required to augment it with pubic hairs of their wives or mistresses. Mark Antony's wig was last heard of when some members of the order reportedly absconded with it in 1775 and formed a new group called The Wig Club. See CLEOPATRA'S PEARL.

market. The Latin word *mercari*, “to trade,” altered to *markatte* and finally *market*, came to be applied, by the 12th century, to the place where the trading occurred. The word may possibly have been used 300 to 400 years before that.

mark of Cain. The *mark of Cain* is not described in the Bible, which simply says in Gen. 4:15: “And the Lord put a mark on Cain . . .” The mark was not made to identify Cain as a murderer, but to warn the world that Cain was condemned to be forever “a fugitive and a vagabond . . . in the earth,” *i.e.*, that it was forbidden to kill him. Cain, the first born of Adam and Eve, and the first biblical murderer, through jealousy slew his brother Abel, and lied to the Lord that he did not know his whereabouts (“I know not: Am I my brother's keeper?”). The curse of Cain refers to the legend that he was never to die or reach home again. Why Cain's hair (or Judas Iscariot's) is traditionally represented as reddish yellow, or *Cain-colored*, remains a mystery. Cain and Judas were usually depicted with such hair and beards in ancient tapestries, but not necessarily because their acts suggested murder or the shedding of blood. The term probably has as much to do with yellow being the traditional color used to depict jealousy and betrayal.

mark time. First mention of the military parade ground term *to mark time* is in a British Army manual *Regulations for the Instruction of the Cavalry* (1833). “On the word ‘mark time,’” the manual says, “marching is continued without gaining any ground.” Naturally the process of marking time suggested any action that fills time but doesn't lead to progress, and not long after its first military use the phrase was used as a metaphor for just that.

mark twain. *Mark twain!* means “mark two fathoms (12 feet) deep” and was called out when riverboat leadsmen sounded the river with weighted line. It is well known that former riverboat pilot Samuel Langhorne Clemens took his pen name Mark Twain from the leadsmen's call *mark twain!*

marmalade. Though made today of oranges and lemons, the conserve called marmalade takes its name from the Latin *me-limelum* or “honey apple,” which was some variety of apple grafted on quince stock. The Latin for “honey apple” became the Portuguese word for “quince,” and the first marmalades recorded, in the early 16th century, were made of quinces and brought to England from Portugal. But over the centuries there have been plum, cherry, apple, and even date marmalades as well. “Natural marmalade” is the fruit of the marmalade tree (*Lucuma mammosa*).

marone! A very old, common expression among Italians meaning wow, that's great, fantastic, etc. A good example of it is found in the beginning of the film *The Godfather*. Several writers claim the word comes, indirectly, from *Maronite*, a member of the religious sect founded by fourth century monk St. Maron, but I wouldn't bet on it. The word *maronite*, however, is from the name of John Maro, a seventh-century Syrian religious leader.

maroon; marooned. Black people who lived in the distant forests of Dutch Guiana (now Suriname) and the West Indies were often runaway slaves who had found their freedom there. They were called *marroons*, French for “runaway black slaves,” a term first recorded in 1666. Because they lived in the wilderness their name came to mean “to be lost in the wilds,” and soon after began to be used to describe someone stranded (marooned) on an island.

marrow. *Marrow* is a British term that is sometimes used in America. It means “a long, green squash,” and has its origins in the use of *marrow* as the term for the pulp of a fruit, which dates back to at least the 10th century. Squash was often called marrow-squash in 18th-century America.

Marrowsky. SPOONERISMS, the unintentional shifting of sounds at the beginnings of words (for example, “It is customary to kiss the bride” becomes “It is kisstomary to cuss the bride”), were first called marrowskis, a name said to derive from the name of Polish count Joseph Boruwlaski, who suffered the same affliction as Reverend Spooner. The word is first recorded in 1863 and soon after intentional marrowskis became the basis for a kind of slang called marrowsky language. Metathesis, the process of shifting letters or sounds, is responsible for a number of English words, including *dirt*, which was earlier *drit*.

marsala. Italy's best-known fortified wine, with its molasses-like flavor, takes its name from Marsala, the town on Sicily's west coast where it is made.

“La Marseillaise.” France's national anthem, written and composed in 1792 by Captain Claude Joseph Rouget de Lisle (1760–1835), a French artillery officer. Its original title was *Chant de guerre pour l'armée du Rhin* (War Song for the Rhine army), but came to be called the Marseillaise because it was sung by the band of soldiers from Marseilles who marched on the Tuileries palace on August 10, 1892. *See* THE INTERNATIONALE.

Marseilles. The oldest town of France, dating back to its settlement by Phocaean Greeks in about 600 B.C. It has been hailed as one of the handsomest cities in France, from the sea a gleaming white city rising on a semicircle of bare hills, and on land the Canebière, its principal thoroughfare one of the great arteries of the world.

Marse Robert. Master Robert. A nickname of Confederate general Robert E. Lee (1807–70) during the Civil War. He was also called Robert Edward Lee, Uncle Robert, The King of Spades (for always urging his men to dig in deeper, deeper) and even Bobby Lee (though not to his face). His father was the legendary cavalryman Light-Horse Harry Lee, George Washington's favorite during the Revolutionary War. *See also* ULYSSES S. GRANT.

marsh; marsh gas. *Marsh* derives from the Middle English *mershe*, which comes from the Old English *mersc*. Marshes, often a transition between water and land, generally contain grasses, sedges, cattails, and rushes, as well as methane gas, often called “marsh gas” or “swamp gas,” resulting from the decomposition of organic matter. Salt marshes, composed of *Spartina* grasses, are far more productive than wheat or hay fields, producing up to 10 tons of organic material per acre, compared to four tons produced by an acre of hay and two tons produced by an acre of wheat. Several studies have estimated the following average yearly values per acre of marsh: \$100 in commercial and sports fisheries by-products; \$630 in aquaculture potential, such as the harvesting of oysters; \$2,500 in tertiary waste treatment potential, the marsh's capability for removal of phosphorus, nitrogen, and sulphur, compared with the cost of equivalent treatment by man-made facilities; and \$4,100 in life-support value, the marsh's ability to absorb carbon dioxide, produce oxygen, support waterfowl and other animals, and protect cities and beaches from the damaging effects of storms. That's \$7,330 an acre, compared to the \$107 yield-per-acre figure for an acre of corn.

marshal; Marshall Plan. The German *marahscal*, meaning “servant in charge of the mares,” became *maréchal* in French and *marshal* in English, having been adopted by the French as the title for a high-ranking general of armies when cavalry became important in warfare as early as the fifth century. Though never used in the American military, it is said that *marshal* was being considered for the one rank above four-star general during World War II. It didn't sound right with the name of the man selected for the job, however, and instead of being made Marshal Marshall, George Catlett Marshall was named General of the Armies Marshall. As Secretary of State, General Marshall

later proposed the broad European Recovery Plan aiding Europe after the war, the plan popularly named the Marshall Plan in his honor. General Marshall, a five-star general and chief of staff, was awarded the Nobel Peace Prize in 1953.

the marshmallows of the sea. A name sometimes given to ocean scallops because of their shape.

Martha. St. Martha is the patron saint of housewives, and a Martha is a woman somewhat too devoted to her domestic duties. Both references are to the New Testament Martha, the sister of Mary and Lazarus, who, unlike Mary, was preoccupied with her household duties. Though Martha, encumbered with her duties and mildly rebuked by Jesus, represents the active as opposed to the contemplative life, she is later said to have become a missionary in Gaul. St. Martha (her feast day is July 29) is traditionally represented in a plain housedress, a bunch of keys hanging from her belt, and a ladle in her hand. The dragon pictured with her is the fearsome Tarasque, which legend tells us she slew at Aix en Provence while it ravaged Marseilles. Active she certainly was.

Martha's Vineyard. Possibly discovered by Leif Eriksson in the 11th century, Martha's Vineyard, an island about five miles off Massachusetts's southeast coast, was once an important center for whaling and fishing. The Indians called the island Noe-pe, “Amid the Waters,” while the Norsemen named it Staumey, “Isle of Currents.” It was christened Martin's Vineyard by English navigator Bartholomew Gosnold in 1602, apparently for no reason in particular. After a century it took the name *Martha's Vineyard*, probably because its name was confused with that of a little neighboring island to the southeast called Martha's Vineyard that had also been named by Gosnold. That little island is now called No Man's Land, after an Indian named Tequenoman.

Martian canals. The myth of artificial canals on Mars is no longer believed by many people, after recent space explorations. In any case, the search by astronomers for life on Mars in years past was probably inspired by a linguistic accident. When in 1877 the astronomer Giovanni Virginio Schiaparelli observed faint lines on Mars through the telescope he called them *canali*, Italian for “channels.” *Canali* was erroneously translated into English as *canals*, “carrying with it a strong connotation of being man-made, which *canali* does not.”

Martin drunk. *See* ST. MARTIN'S DAY.

martinet. Colonel Martinet, the strict disciplinarian from whose name the term *martinet* originated, was “accidentally” killed by his own troops while leading an assault at the siege of Duisberg in 1672. Jean Martinet, sometimes called the marquis de Martinet, had been a lieutenant colonel of the king's regiment of foot and inspector general of infantry in the army of France's Louis XIV. The Grand Monarch, then only 22, and his brilliant 19-year-old war minister the marquis de Louvois had formed a model standing army in 1660, replacing the old system where the state hired entire units for its army—a regiment, for example, being in the employ of its colonel and a company in the pay of its captain. But these old units had to be molded

together into an efficient, homogeneous group and Colonel Martinet's exacting work with the Sun King's own Royal Regiment made him just the man for the job. As inspector general, Martinet was assigned the task of designing all drill systems for the new army and training its infantrymen to fight as a unit in battle. His methods, several of them named for him, were later copied by many European countries. In the process, however, his strict and tedious drills made Martinet's name synonymous with not only sharp military efficiency but stern spit-and-polish discipline inflicted by a goose-stepping stickler for details, who insists that his men carry out his rigid orders as if they were puppets. Today his name is applied to excessively severe soldiers and civilians alike. *See also* MARTINS.

martingale. Residents of the town of Martigues in Provence, France once wore economical breeches with a strap belt. Some authorities think that these *chausses à la martingale* give us the word for the part of a harness used to keep down a horse's head, as well as part of the rigging of a ship. Other etymologists discount *Martingalo*, "an inhabitant of Martigues," and trace the word to the Spanish *almartaga*, "a rein or harness." How the reckless *martingale*—a betting system in which the stakes are doubled or raised even higher after each loss—derived from either the stingy *Martingalos* or a harness is anybody's guess.

martini. H. L. Mencken traced the martini to 1899 and traces the cocktail's name from the Martini and Rossi firm, maker of a popular vermouth. Others say the drink originated with a now forgotten Italian or Spanish bartender named Martini. The dry martini is made, according to the classic recipe, by drinking a little vermouth, exhaling into the interior of a cocktail glass and filling it with gin—after you drink it, you'll forget that you forgot the olive. Mencken also mentions the *martini sandwich*, a dry martini between two glasses of beer, which he says "is favored by many American linguists." Novelist George V. Higgins called the martini "loud-mouth soup."

martins. St. Martin gives his name to the small bluish black swallows called *martins* that begin to migrate southward from France and England at about the time of *St. Martin's Day* and return again in March, the Martian month. The martin was first called the *martinet* in France. Numerous martins occur all over the world, including the American purple martin, a bird valued by farmers because it eats harmful insects and drives away hawks and crows.

Martin varnish. *See* COMA BENENICES.

martyr. *Martyr* ultimately derives from the Greek word for "witness" and was applied as a designation of honor by early Christians to those who accepted the penalty of death rather than renounce their faith. But by the 14th century the word was being generally and even sarcastically used. The expression *a martyr to science*, one who loses his life through his devotion to science, seems to have been first applied to Claude-Louis, Comte Berthollet (1748–1822), who died trying to determine the effects of carbolic acid on the human body.

martyrdom video. A recent type of video biography that is made by suicide bombers (or prepared for them) and is released

after their deaths, showing how much they gave for the "cause" and how they'll be rewarded in the afterlife.

Marx Brothers. The stage names of the famous family comedy team originated during its early vaudeville days. Groucho was named for the money pouch called a "grouch" that he carried for the act; Chico for the chicks he always chased; Gummo after the rubber boots he wore; Harpo for the harp he played; and Zeppo, it is said, after a trained monkey that once appeared on the same bill as the Marx Brothers.

Marxian. After the German economist and revolutionary socialist Karl Marx (1818–83). Marx was a founder of the First International Workingmen's Association, but his most important contributions to history by far were the *Communist Manifesto* (1848), which he wrote with Friedrich Engels, and the enormously influential *Das Kapital* (1867). The dialectical materialism set forth in this last work has come to be known as Marxism, and a Marxist, depending on one's political inclinations, is either one favoring Marxian economic teachings or one who is economically doctrinaire and extremist.

mary. In the Melanesian pidgin jargon of the southern Pacific the word *mary* means "a woman," as in "That fella him catch'm money belong mary." (That man took the woman's money.) Melanesian pidgin is also called Neo-Melanesian and *beche-demer*. Other examples of this pidgin include *long way big bit* (very far), *sing-sing* (a song or dance), *pigeon* (a bird of any kind), *finish altogether* (die), *belly* (any part of the body below the neck), and *gammon* (to lie). There are hundreds more. *See* PIDGIN ENGLISH; PIDGIN LANGUAGE.

Mary had a little lamb.

Mary had a little lamb,
Its fleece was white as snow
And everywhere that Mary went
The lamb was sure to go;
He followed her to school one day,
That was against the rule;
It made the children laugh and play
To see a lamb in school . . .

There seems to be no doubt that the Mary and little lamb in the well-known nursery rhyme were real, but there is some uncertainty about who wrote the poem. Sara Josepha Hale first published the 24-line verse over her initials in the September 1830 issue of *Juvenile Miscellany*. Over the years it became known that it was based on the true experiences of 11-year-old Mary Sawyer, who had a pet lamb that followed her to the schoolhouse at Redstone Hill in Boston one day in 1817. In fact, Mary Sawyer a half century later confirmed the story during a campaign to save the famous Old South Church of Boston from being torn down.

Maryland. A popular but incorrect belief has it that *Maryland* was named for the Virgin Mary because it was originally settled by Catholics. The Old Line State actually bears the name of Henrietta Maria (1609–69), wife of England's King Charles I and daughter of France's Henry IV. When Maryland was settled under Lord Calvert in 1632 as a haven for persecuted Catholics,

Henrietta Maria was a natural selection for its name, and in the original Latin charter the area is called *Terra Mariae*. It seems that Maryland was to be named for King Charles at first, but he already had the Carolinas named after him and suggested “Mariana,” as a name honoring his queen. This was rejected by Lord Baltimore because it was the name of a Jesuit who had written against the monarchy and *Terra Mariae* was adopted instead. Maryland, one of the 13 original colonies, bears the name “Old Line State” because of the bravery of her soldiers—men of the line—during the Revolutionary War.

marzipan. A confection made of almond paste and sugar molded in various forms. One sweet fable tells of a cook of 16th-century Brandenburg, Germany, named Franz Marzip, who is said to have invented marzipan for his physician employer. Other sources say that Oriental rulers had enjoyed the confection for centuries and that the crusaders brought it back to Europe in the shape of a coin of the time called a *marchpane* (which later became *marzipan*). In any case, Lubbeck, Germany is called “the world’s marzipan capital” today, famous for its *Holstentors*, cuisine’s most celebrated marzipan.

mascot. *Mascots*, animals that are adopted as good luck symbols for sports teams, take their name from the French word *mascotte*, meaning “good luck charm.” The word is first recorded in English in 1881 at about the time the French opera *La Mascotte* was being performed in Europe.

masher. The first *mashers* may have been not men but Gypsy women who flirted with men. This may be the case if the word for a man who makes passes at women in public places comes from the Gypsy expression *masherava*, “to allure, entice with the eye.” *Masher* could, however, derive from the standard English sense of *mash*, “to crush, pound, smash.” *Mash* in the lewd sense is first recorded in America in 1860, *masher* in 1875.

mashie. Golf’s number 5 iron may take its (now rarely heard) name from the way unskilled golfers “mashed” a ball with it, or it may have resembled some Scottish kitchen utensil used to mash potatoes when the club was introduced in 1888. But more likely it derives from the French word for club, *massue*.

masochism. A masochist derives sexual pleasure from having pain inflicted on himself, but, as with *SADISM*, the use of the term has broadened now to include pleasure derived from self-denial and from suffering in general. The word is taken from the name of Leopold von Sacher-Masoch (1835–95), an Austrian novelist whose characters dwelt lovingly on the sexual pleasure of pain, just as he did. A prolific, talented novelist who had published several scholarly histories and had once been a professional actor, Sacher-Masoch became a leading literary figure of his time. But he finally suffered a complete breakdown before turning 50, and his second wife committed him to an asylum after he tried to kill her on several occasions. In a fitting ending to his bizarre life, his wife officially announced that he had died, even mourning him, 10 years before his actual death in confinement. The pre-Freudian psychiatrist Richard Krafft-Ebing probably first used Sacher-Masoch’s name to describe his ailment, recording *masochism* in 1893.

Mason-Dixon line. Although Dixie wasn’t named for the Mason-Dixon line, the latter term has come to be used as a figure of speech for an imaginary dividing line between North and South. The Mason-Dixon line has an interesting history. Originally the 244-mile boundary set between Pennsylvania and Maryland in 1763–67 by English surveyers Charles Mason and Jeremiah Dixon, it was extended six years later to include the southern boundary of Pennsylvania and Virginia. The line had been established by English courts to settle a territorial dispute between the Penns of Pennsylvania and the Calverts of Maryland, but the use of *Mason-Dixon line* in Congressional debates during the Missouri Compromise (1819–20) gave the expression wide currency as a dividing line between free and slave states. After the Civil War the term was retained as the boundary between North and South, especially as a demarcation line of customs and philosophy. Its existence probably did influence the popularity of the word *DIXIE*.

mason jar. With the renewed interest in vegetable gardening and fresh, healthy foods that are raised for taste and not ease of shipping, the mason jar, used for home canning, is coming into prominence again. The wide-mouthed glass jars with either glass or metal screw tops were named for their inventor, New Yorker John Mason, who patented them in 1857.

massa. This American term for “master,” long used by slaves, could derive from the English “master,” or from the West African *masam*, “chief,” or it could be a blend of both. No one knows for sure.

Massachusetts. “Place of the big hill” is the English translation of the Algonquian *Massachusetts*. The Bay State was admitted to the Union in 1788 as our sixth state and had been called the Massachusetts Bay Colony before then. It is now officially called the Commonwealth of Massachusetts.

the Massachusetts game. A version of baseball, similar in some respects to the present game, whose rules were codified in about 1858 and is one of the forebears of real baseball.

massage. See *MATZO*.

Massholes; foreigner. A century ago many more rivalries and much more name-calling existed between states. The name-calling, at least, hasn’t ended. Novelist Richard Russo, for example, notes in his fine *Empire Falls* (2001) that summer visitors to Maine from Massachusetts are locally called “Massholes,” a memorable derogatory regionalism I can find in no other source. It sounds like a coinage typical of Mainers, who also call people from out of state “foreigners” and might call someone a “grasshole” for working too hard on his lawn.

massive retaliation. See *AGONIZING REAPPRAISAL*.

the mass of men lead lives of quiet desperation. Henry David Thoreau wrote this in the first essay of *Walden* (1854). More fully he wrote: “The mass of men lead lives of quiet desperation. What is called resignation is confirmed desperation . . .”

mast. *Mast*, akin to the Old English word for meat, is the fruit of forest trees such as the oak (acorns) and the beech. These accumulate on the ground and are often eaten by deer and domesticated pigs, among other animals.

Master of the Universe. American author Tom Wolfe invented this term in its sense of an extraordinary Wall Street trader, a preeminent moneymaker, in his novel *Bonfire of the Vanities* (1987). Master of the Universe was apparently suggested by a toy doll of the same name.

masterpiece. Long before *masterpiece* became associated with the fine arts during the Renaissance, it meant the perfect piece of work that an apprentice under the English guild system had to make before he was recognized as a master. After he had served his apprenticeship and was able to make a piece worthy of a master, a masterpiece, he became a master himself and was no longer required to work under supervision.

master-race. A Nazi claim that Germans or “Aryans” were superior to all other people. It is first recorded in the early 1940s, but may be older.

mastic; masticate. Mastic, the chewing gum discovered by Columbus in Santo Domingo, is an exudation obtained from the lentisk, or mastic shrub (*Pistacia lentiscus*), cultivated mainly on the Mediterranean island of Chios. The resin, found in the lentisk’s bark, speedily exudes when the bark is cut, hardening into oval tears the size of peas that are transparent and of a pale yellow or faint greenish tinge that darkens slowly with age. Mastic’s primary use since ancient times has been as a masticatory to sweeten the breath and preserve the teeth and gums. People throughout southeastern Europe and the Near East have used it for this purpose, and Dioscorides, the great Greek physician and botanist of the first century, refers to mastic’s curative powers in his *De Materia Medica*. In fact, mastic goes so far back in history that it may have constituted the Greek word *mastichon*, “to chew,” which is the root of the English word *masticate*. Today a chewing gum made with mastic and beeswax is still enjoyed by many Greeks and Middle Easterners.

mastiff. The mastiff is a large, strong breed of dog. It was tamed early on, as is witness by its name, which comes from a Latin word meaning “tame, domesticated.”

mastodon. This extinct animal, resembling the elephant, is so called from the New Latin *Mastodon*, its genus name. The Latin comes from the Greek *mastos*, breast plus *odon*, tooth. It is so called in the Greek because of the “nipplelike projections on the mastodon’s teeth,” according to *Chambers Dictionary of Etymology*.

matador. In Spanish *matador* means “killer,” coming from the Latin *mactator*, to kill, just as the Spanish *matador* performs the final passes and kills the bull.

Mata Hari. Behind the patina of the pseudonym *Mata Hari* (“Eye of the Dawn”) is a rather prosaic Dutch name. Margaretha Geertruida Zelle (1876–1917) used *Mata Hari* as both

her stage name and *nom de guerre* when she chose to become a spy for the Germans before World War I. Acclaimed throughout Europe for her interpretations of naked Indonesian dances, she met many men in high places, including German officials in Berlin who recruited her as a spy in 1907. During World War I, her dancing was the rage of Paris and she became intimate with top Allied officers, who confided military secrets to her. Mata Hari, who slept with literally hundreds, thrived on the deceit of espionage, but she was eventually betrayed to the French secret service by another German agent, Captain Walther Wilhelm Canaris, later to become head of the German secret service in World War II. Her trial was the most publicized of the many espionage trials held during the war, and her name become synonymous with a glamorous female spy and femme fatale. She was convicted by a French court-martial and executed by a firing squad.

mate. This word for buddy, chum, comrade, pal, or partner dates back to the late 14th century in England and is still common there. It has, however, become a hallmark of Australian speech. The Aussies even apply *mate* to people they barely know, while Americans rarely use the word except as a synonym for a spouse. *Matey* in both Australian and British English means very friendly: “They’ve been matey now for a year or so.”

matinee idol. This term for a star isn’t heard nearly so much today as it was 50 years ago. It refers to the matinee (afternoon) performances of plays and films, when many women were present in the audience, some of whom idolized certain actors. *Matinee*, a French word deriving ultimately from the French for “morning,” was first recorded in English in 1848 by the English novelist William Makepeace Thackeray. RUDOLPH VALENTINO was probably the most famous matinee idol. Though he was an Irishman with “an incurable Irish brogue” and had played in Dublin and London before sailing for America, the handsome actor John Henry (1738–94) has often been called “America’s First Matinee Idol” (even though there were no matinees in his day). Henry did so well acting and producing that he could afford his own coach for transit, a rarity among the thespians of his time, but he tried to avoid ostentation by having the words THIS OR THESE painted on the coach under a picture of two crutches. The coach was necessary, he explained to his detractors, because gout had crippled him and he would have to walk on crutches if he didn’t ride. Henry was possibly the first American actor involved in a sex scandal. After his first wife was lost at sea, he lived for some time with her sister, by whom he had a child, but abandoned her to marry still another of his departed wife’s sisters. When his star faded in America, he sailed back to Ireland but died of a heart attack in passage; his new wife went insane over her loss and died a year later. See STAR.

mattress. In medieval times Arabs often slept on plush cushions thrown on the floor. The Arabic word *matrah*, “the place where something is thrown,” came to mean a cushion or mat in Arabic and eventually passed into English as *materas*, the ancestor of our word *mattress*, when the Crusaders brought this custom of sleeping on cushions home to Europe.

matzo. This unleavened bread in the form of large, square corrugated crackers takes its name from the Hebrew-Arabic

massah, “to touch, handle, squeeze,” in reference to making the bread. *Matzo* thus has the same root as “massage.”

maudlin. Christ exorcised Mary Magdalene of evil spirits, and *Magdalene* has become a synonym for a reformed prostitute. However, in classical paintings and old folk plays, based on the Bible stories relating to her, Mary was often shown with eyes red and swollen, disheveled and weeping endlessly for her sins. Her name—pronounced *maudlin*, just as Oxford’s Magdalene College is pronounced today—was applied by the British, with their mistrust of easy emotion, to the excessive, tearful sentimentality that is often associated with drunkenness. In fact, the fifth stage of drunkenness in Thomas Nashe’s analysis of intoxication presents us with the “maudlin drunk,” and *maudle*, “to talk in a drunken way,” comes from this use of the word. But it should be added that biblical scholars cannot agree on the identity of Mary Magdalene. The Mary of Magdala who was the first witness to the Resurrection may not have been the Mary who washed Christ’s feet with her tears, wiped them with “the hairs of her head,” and whom Christ forgave because “she loved much.” Legend, however, combines the three Marys figuring in Christ’s ministry into one.

Maundy Thursday. The day before Good Friday. *Maundy Thursday* takes its name from Christ’s “new commandment” beginning *Mandatum novum do vobis*, “I give unto you” (John 13:34), with which the ceremony of the washing of the feet is initiated. The ceremony commemorates Christ washing the feet of his disciples on Holy Thursday.

Mauritania. This country of northwest Africa takes its name from the Moors, its name translating as “land of the Moors (Mauri).” Its official name is the Islamic Republic of Mauritania.

Mauser. The original Mauser, and subsequent improved models, were used by the German army for many years following the rifle’s introduction in 1871. Its inventors were Peter Paul Mauser (1838–1914) and his older brother Wilhelm (1834–82), the younger Mauser also inventing the Mauser magazine rifle in 1897.

mausoleum. Queen Artemisia of Caria was so grief-stricken when her husband, King Mausolus, died in 353 B.C. that she collected his ashes and mixed a portion of them with her daily drink until she died of inconsolable sorrow three years later. But she had ordered a sepulchral monument erected to her husband’s memory in the Carian capital of Halicarnassus that became one of the Seven Wonders of the World. Built on a base of about 230×250 feet and towering over 100 feet high, the tomb of Mausolus (or more correctly Maussollus) wasn’t completed until after Artemisia’s own death, in 350 B.C. Caria, located in what is now southwest Turkey, attracted the greatest Greek architects to work on the vast white marble edifice, which was richly decorated with the sculpture of Scopas and Praxiteles and included statues of Mausolus and his queen. Nothing quite like this ornate super tomb had ever been seen before, and the Greeks called it a *Mausoleion* after the dead king, *Mausoleum*, the Latin form of this word, becoming our *mausoleum*. The imposing structure stood for almost 1,800 years before it crumbled in an earthquake in 1375. The

Crusaders who occupied Halicarnassus in the 15th century used much of its marble to build a castle, but in 1859 Sir Charles Newton brought some of the structure’s remains, including the statue of Mausolus, to the British Museum. Among notable modern mausoleums are those of Napoleon under the Dome des Invalides in Paris; General U. S. Grant on Riverside Drive in New York City; and Lenin in Red Square, Moscow. Leaving a party on Riverside Drive early one morning, humorist Robert Benchley wandered over to Grant’s tomb, not realizing that friends were following him. After a while his friends saw him pick something up, write a few words on a slip of paper, and then place the object back on the ground again. When he left, his friends came closer. There, outside the tomb, stood an empty milk bottle with a note in it reading: “One milk, no cream—U. S. Grant.” See also TAJ MAHAL.

mauve. British scientist William Perkin discovered the color mauve in 1856 while experimenting with the coal tar component aniline in an attempt to produce clear quinine. Mauve, “a moderate grayish violet to moderate reddish purple,” was so named by Perkin after the French name of the mallow plant—he just happened to like the word *mauve*, which sounded quite sophisticated to an 18-year-old. The color became widely popular after Queen Victoria wore it to a royal wedding. *The Mauve Decade* (1926) by Thomas Beer is a study of American life during the last part of the 19th century.

maverick. Texas lawyer Samuel Augustus Maverick (1803–70) reluctantly became a rancher in 1845 when he acquired a herd of cattle in payment for a debt. Maverick, a hero who was imprisoned twice in the war for independence from Mexico, eventually moved his cattle to the Conquistador Ranch on the Matagorda Peninsula, 50 miles from San Antonio. But he was too involved in other activities to prove much of a rancher. When in 1855 he sold out to A. Toutant de Beauregard, their contract included all the unbranded cattle on the ranch. Since careless hired hands had failed to brand any of Maverick’s calves, Beauregard’s cowboys claimed every unbranded animal they came upon as a *Maverick*. So, apparently, did some of Maverick’s neighbors. Though Sam Maverick never owned another cow, his name soon meant any unbranded stock, and later any person who holds himself apart from the herd, a nonconformist. All of the standard sources give Texan Sam Maverick as the eponym behind this word. But John Gould, in *Maine Lingo* (1975), credits a Sam Maverick who “was already settled on an island in the harbor when the Puritans came in 1630 to establish Boston.” Therefore, he “became the only Bostonian permitted to vote without church affiliation” and was considered a “oddball,” a “stray,” his fame spreading through New England. Gould claims the “use of *maverick* for an unmarked log in a Maine river preceded the meaning of an unbranded calf on the western plain by many years.” A good story that may be true, but no specific, dated sources or quotations are given, although Gould says his Maverick “is mentioned often in early Boston records.” Could this be a rare, perhaps unprecedented case of two eponyms independently becoming the same word?

mawkish. *Mawkish* originally meant having a sickly, nauseating or insipid flavor, but also means “characterized by sickly sentimentality, feebly emotional.” Whatever the meaning, anything mawkish is being compared to a maggot, the

word deriving from the obsolete English *mawk*, maggot, which comes from a Scandinavian word meaning the same.

Maxim gun; Maxim silencer. Sir Hiram Stevens Maxim, inventor of the first automatic machine gun, also invented a better mousetrap, an automatic fire sprinkler, a gas meter, a delayed-action fuse, a smokeless powder, a heavier-than-air flying machine, an inhalator for bronchitis, and sundry other items. The world did beat a path to his door, for his arms company merged with the Vickers firm in 1896 to become the giant Vickers Armstrong Ltd. and he was knighted for his accomplishments. Sir Hiram (1840–1916) was born in Maine, but became a naturalized British subject in 1881, after serving as chief engineer for America's first electric power company. The Maxim machine gun, invented in 1883, is a single-barreled, recoil-operated weapon that fires some 10 rounds a second, the first modern machine gun in that the recoil from one cartridge was used to both expel the empty shells and reload the weapon. But what has turned out to be the greatest of the Maxim inventions is the Maxim silencer devised by Hiram's son Hiram Percy Maxim (1869–1936), who remained an American and who invented the Maxim automobile as well. Maxim silencers were weapon attachments originally developed only to make the explosion of firearms practically noiseless. But they were soon perfected to eliminate noise from many modern machines. Thanks to the silencer, noise pollution is much less than it would be, the invention prolonging lives rather than making it easier to take them. See DEVIL'S PAINTBRUSH.

maximize. See INTERNATIONAL.

Maxwell; Maxwell's equations; Maxwell's law. For no logical reason, the brilliant Scottish physicist James Clerk Maxwell (1831–79) was better known in his lifetime than he is today. Despite his relatively brief career, Maxwell ranks as one of the greatest theoretical physicists of all time. His most important work was in the field of electricity, where he advanced the theory that light and electricity might be the same in their ultimate nature, and his theory of electromagnetism, published in 1873 in his *Treatise on Electricity and Magnetism*, has been called "one of the most splendid monuments ever raised by the genius of a single individual." Maxwell began his scientific career when a boy of 15. After teaching at Scottish colleges, he was appointed the first professor of experimental physics at Cambridge, directing the organization of the renowned Cavendish Laboratory. Maxwell's law and Maxwell's equations arise from his electromagnetic theory, but he is more widely honored by the *maxwell*, the unit of magnetic flux named in his honor.

May. The merry month of May may have been named for Maia, the goddess of spring, or to honor the Maiores, the Roman senate in early times. No one is sure, but the Latin *Maius* for the month became our *May*. The Romans, incidentally, thought May was an unlucky month for marriages, for their feast in honor of Bona Dea, the goddess of chastity, was held in the month of May.

Mayan. See NAHUATL.

Mayday. See CQD.

Mayflower Compact. The former wine ship that transported the early settlers to America took its name from the mayflower, another name for the blossom of the hawthorn tree. In the *Mayflower Compact*, signed by the 51 adult passengers aboard ship, all agreed to stay together where they landed, choose their own leader, and abide by majority rule, this being the rude beginning of American democracy.

mayonnaise. Port Mahon gave its name to *mayonnaise*. The story is that the duc de Richelieu attacked the Spanish island of Minorca and drove out the British for a while in 1756. But Richelieu was ravenously hungry after the battle. The Frenchman stormed the nearest kitchen ashore, tossed all the food he could find into one pot and blended it all together. This apocryphal tale got back to Paris, where chefs concocted a dressing of blended-together ingredients that they named *Mahonnaise* in honor of Richelieu's victory at Port Mahon.

may the road rise up to meet you. A traditional Irish saying to travelers, wishing them well.

may you be in heaven a half hour before the devil knows you're dead. A humorous old saying that is often attributed to the Irish.

may you live every day of your life. A quotation attributed to Jonathan Swift in the recent novel by Eugene O'Kelly, *Chasing Daylight: How My Forthcoming Death Transformed My Life* (2006). *The Chasing Daylight* of the title is a golf metaphor.

may your friends be many, your troubles be few, and your sausages long. A Pennsylvania Dutch saying.

may your neck never be longer. May you never be caught and hanged by the neck until dead. I heard this in a 1950 pirate movie and wonder if any reader knows an older source other than the inspired work of a screenwriter.

may your shadow never grow less. An expression of Eastern origin, dating back in English at least to the 19th century and meaning "may your health and prosperity always continue." According to Brewer: "Fable has it that when those studying the Black Arts had made certain progress they were chased through a subterranean hell by the devil. If he caught only their shadow, or part of it, they became first-rate magicians, but lost either all or part of their shadow. This would make the expression mean, May you escape wholly and entirely from the clutches of the foul fiend." More likely the expression is just a colorful way of saying "May you never waste away."

Mazda. Ahura Mazda, the Persian god of light, has lent his name to the lamps and light bulbs of the General Electric Company since 1910, when G.E. borrowed it and registered it as a trademark. According to Persian belief, Ahura Mazda created all the 486,000 good stars—the lucky stars that people are born under as opposed to the like number of evil stars. Today *Mazda* is also the name of a Japanese auto.

mazel tov. One of the better-known American Yiddish expressions, *mazel tov* is often believed to mean “good luck to you.” However, Leo Rosten in *The Joys of Yiddish* (1968) says it has come to mean “Congratulations” or “Thank God!” rather than its literal meaning “Good Luck.” Advising that this “distinction is as important as it is subtle,” he offers an example: “Say *mazel tov!* to an Israeli ship captain when he first takes command: this congratulates him on his promotion; don’t say *mazel tov!* when the ship reaches port; this suggests you’re surprised he got you there.” Though Rosten and most others say *mazel tov* literally means “good luck” (from *mazel*, luck and *tov*, good), *mazel* is actually the Hebrew for “star,” so the expression literally means “May a good star shine upon your days.”

mazuma. See GELT.

M.C.; emcee. In this case the initials became the word. *M.C.*, an abbreviation of *Master of Ceremonies*, came first. This began to be used as a verb in the early 1940s and was spelled *emcee*. The term *femcee*, for a female *emcee*, never caught on.

McCarthyism. *McCarthyism* was coined by author Max Lerner and introduced for the first time in his newspaper column on April 5, 1950. The word notes the witch-hunting practices and disregard of civil liberties that his critics accused Senator Joseph McCarthy (1905–57) of using and inspiring during the “Red” scare in the early 1950s. The Wisconsin senator, a great patriot to his supporters, first charged the Democratic administration with allowing communist infiltration of the State Department. After taking on other government departments, he finally met his match when he attacked the army for alleged security lapses. The army, in turn, accused him of seeking special privileges, and while McCarthy was acquitted by the Senate of this charge, he was censured by a vote of 67–22 for his insolent behavior toward Senate committees. Earlier, the McCarthy hearings were televised and his countenance and repeated “Point of order, Mr. Chairman, point of order” became familiar throughout America. His low tactics ruined the lives of many innocent people.

McClellan pie. After a general widely found far too cautious and unsuccessful in the field. Civil War general-in-chief George Brenton McClellan (1826–85) is remembered by several things named after him, including the humorous McClellan pie, hardtack biscuits; the McClellan saddle, or McClellan tree, which he designed; and the McClellan cap, a type of Army cap.

McDonald’s. In recent times the trademark name of the American fast-food restaurant has become almost as well-known as o.k. and the trademark COKE, mainly because McDonald’s has franchises throughout the world. Often McDonald’s is a synonym for a hamburger. The Japanese have borrowed the name from English and altered it slightly to *Makudonarudo*. The original McDonald’s (which no longer exists) was on E Street in San Bernardino, California. The original McDonald brothers sold all but three of their stores to Ray Kroc. These three, now owned by the “Pep Boys” (Manny, Moe, and Jack), are the world’s only legal non-Kroc McDonald’s.

McGill University. Opened in 1829, the Canadian university was named after millionaire James McGill, who left a bequest to establish it.

McGuffey’s reader. More than 123 million copies of McGuffey’s readers have been sold since they were first published in 1836, and as many as 30,000 copies were sold as recently as 1960. The school readers, noted for their moral lessons and selections from great English writers, have had a profound effect on the shaping of the American mind. They were the work of educator and linguist William McGuffey (1800–73). McGuffey, reared on the Ohio frontier, was possessed of a phenomenal memory that enabled him to become a teacher at the age of 13. After graduating from Washington and Jefferson College in 1826, he became in turn a professor of languages at Miami University in Ohio and president of both Cincinnati College and Ohio University. He later served as a professor at Woodward College, Cincinnati, and the University of Virginia, and was a founder of the Ohio public school system. The educator’s initial book was published under the title *McGuffey’s First Eclectic Reader*. Five more were to follow, the last being issued in 1857.

McGurk’s Suicide Hall. A New York City Bowery saloon of the 1890s. So named because so many people committed suicide in it: six in 1899 alone. Other colorfully named dives of the so-called genteel Gay Nineties included the Rat Pit, the Hell Hole, the Inferno, the Dump, and the Flea Bag. All were staffed with fearsome bouncers like Eat-’Em-Up Jack McManus of McGurk’s.

McIntosh. Like many fruit varieties, the McIntosh apple was discovered accidentally. It is named after John McIntosh, an Ontario farmer, who found the late red apple in 1796 while clearing woodland in Dunclan County and was so impressed by it that he began to cultivate the variety. Today the Early McIntosh, one of the best early red apples, bears the same name, as does the Sweet McIntosh, regarded by many as the sweetest of all red varieties. The original McIntosh is still grown, however, a self-sterile type with whitish-yellow flesh and a superb though slightly acid taste. McIntosh apples account for some 10 percent of apples grown in this country, but they constitute about 75 percent of the New England harvest and 50 percent of the New York State crop. Most connoisseurs rate them superior in taste to the Red and Golden Delicious apples that have become the dominant American varieties. See MICAH ROOD’S APPLE.

the McKinley grip. A handshake perfected by William McKinley when he ran for president (and won) in 1897. McKinley would shake with his right hand and hold the elbow with his left. He was said to be able to shake a hand every two seconds, the record for any president.

McMansion; McJob. *McMansion* is a derogatory term first heard in 2000 for a large, very expensive house with no originality of design, one that looks like all the other “mansions” in the area. *Mc* is an allusion to the MCDONALD’S fast-food restaurant chain, which has also given us the term *McJob*, coined in the 1980s for any low-paying, unstimulating job.

McNaughton Rules. Assassin Daniel McNaughton shot and killed British prime minister Robert Peel's private secretary, Edmund Drummond, in 1843, mistaking the Peel look-alike for Sir Robert. McNaughton, an illegitimate, illiterate Scotsman, was tried and acquitted by reason of insanity, the court ruling that a person who is unaware of doing wrong could be considered insane and not responsible for his actions. This McNaughton ruling, though changed considerably over the years, is still used in a general sense today.

mea culpa. Latin for "my fault," "through my fault," or "I'm to blame."

me-all. A pseudo-Southernism that probably originated on the stage or screen. "Do you-all have anything that will fit me-all?"

mealy-mouthed. *Mealy-mouthed* for someone who doesn't speak directly or simply on an issue may derive from the German expression *Mehl im Maule behalten*, "to carry meal in the mouth, be indirect in speech." In any case, it is first recorded in the works of Martin Luther, who wasn't at all mealy-mouthed.

meander. *Meander*, "to wind in and out, to wander aimlessly," comes from the ancient name of the crooked Menderes River in Phrygia, now in western Turkey. The river, noted for its wandering course, is still called the Menderes, which became *Maiandros* in Greek, the Greek word eventually yielding *meander*, which came into English late in the 16th century via French.

mean enough to take his wife's egg money. Said of a very stingy man, one so cheap he would steal or forcibly take the pin money a woman had saved by selling eggs, etc.

meaner than a junkyard dog with 14 sucking pups. The meanest, that is, a vicious dog that not only guards a junkyard but a big litter of her pups as well. The expression is mainly heard in the American South.

meanwhile, back at the ranch. An expression that originated as a movie caption in the silent film era at the beginning of the century, these words are used humorously today when someone wants to get back to a story after going off on a tangent.

measly. Measles has generally been considered an insignificant disease, despite the fact that a form of the measles used to kill many and can lead to serious birth defects if contracted by a pregnant woman. Hence our word *measly*, "insignificant or worthless," coined sometime in the middle of the 19th century.

meat. *Meat* in Middle English meant food in general. The word became confined to the flesh of animals when there was a large increase in flesh eating and *meat* by the 17th century lost its meaning of food in general.

meat and potatoes. Over the years *meat and potatoes* has come to mean "the simple fundamentals" because a meat

course and potato course are so often principal parts of a meal. *Meat and drink* means food in general. See POTATO.

Mecca. Mecca, where the prophet Muhammad was born in Saudi Arabia in about A.D. 570, is the world's holiest place for Muslims. In fact, in order to be a good Muslim one must make at least one pilgrimage to Mecca and pray five times a day facing in the direction of Mecca.

Medal of Honor. The United States' highest military decoration, awarded to a serviceman who distinguishes himself beyond the call of duty, this blue-ribboned gold star was established by Congress in 1862 as an award for Union heroes in the Civil War.

meddlesome Matty. A meddlesome Matty is a woman who is always poking her nose in others' business, or anyone who constantly fidgets with someone else's belongings. The expression derives from the character in the eponymous poem "Meddlesome Matty" (1804) written by Ann Taylor of "Twinkle, twinkle, little star" fame.

median strip. The most common term in America for the grassy strip or area separating opposite sides of a highway. Among other terms used to describe this strip are a *meridian* (in the Midwest), a *medial strip* (Pennsylvania), *neutral ground* (Louisiana), a *mall* (upstate New York), and a *divider* (New York City area).

Medicean. Immensely wealthy Florentine banker Giovanni di Bicci de' Medici (1360–1429) founded Italy's powerful Medici family. The Medicis ruled in Florence from the 15th to the 18th century, their influence felt throughout Italy, especially since the family produced three popes—Leo X, Leo XI, and Clement VII. Catherine de' Medici became queen of France, as did Marie de' Medici. A genealogical table of the Medici would yield a score of figures who greatly influenced their times, but this family did so much, both good and evil—ranging from patronage of the arts to political poisonings and tortures—that their name came to mean a variety of things. *Medicean*, then, is simply "pertaining to the Medici," its meaning depending on the way it is used, or to which Medici it refers.

medicine. Maurice B. Gordon nicely explained this word, as Indians used it, in *Aesculapius Comes to the Colonies* (1949): "The word 'medicine' itself is a good example of the American Indian's dualism of theology and medicine . . . He employed the term not only for a drug or herb but also for some supernatural agency which may be invoked to cure disease or even insure the success of an undertaking."

mediterranean. Can mean any large body of water surrounded by dry land, as well as the Mediterranean Sea. Its use as the name of the sea was first recorded in 1594.

Mediterranean Sea. Formed from the Latin *medi*, "middle," and *terraneus*, "earth," the *Mediterranean* means "the sea in the middle of the earth," which, indeed, the ancients believed it to be.

Medusa; medusae. It is because of their labyrinths of poisonous tentacles that the free-swimmer stages of all jellyfish are called “medusae,” after the writhing serpentine tresses of the Medusa of Greek mythology, one of the Gorgon’s heads that turned to stone anything that met its gaze. It is just possible that the Medusa itself was conceived by some ancient mariner who had encountered a particularly formidable pelagic specimen. At any rate, it has long been known that the poisons of certain jellyfish are very virulent and have inflicted fatal injuries to humans. *See* SPINELESS AS A JELLYFISH.

Meenagorp. Translated from Irish, this well-known mountain in county Tyrone, Ireland, means “mountain of corpses,” perhaps after a bloody ancient battle there.

meerschaum. A mineral resembling white clay that is used mostly for making tobacco pipes, *meerschaum* is German for “sea foam.” About as heavy as water, frothy pieces of it sometimes float to shore. Ancients, coming upon it, erroneously thought it was a kind of petrified sea foam, giving it its name. Because meerschaum is absorbent, tobacco pipes made of it become brown with use. In mineralogy it is called “sepiolite.”

megabucks. This synonym for “big money” is first recorded in 1946, deriving from the Greek *megas*, “large, powerful,” and probably reinforced by the constant use of *mega* in *megabombs*, etc.

Megan’s Law. In 1994 seven-year-old Megan Kanka was murdered by a previously convicted child molester who lived near her New Jersey home. Public outrage led to a state law allowing police to notify residents if a convicted sex offender moves into the neighborhood. Two years later, a federal court made such notification mandatory.

megaphone; loudspeaker; bullhorn; loudhailer; bitchbox. *Megaphone*, the word first recorded in 1878, refers to a cone-shaped device that greatly magnifies sound, is used outside, and is not electronic; while *loudspeaker* (invented about 1880) refers to an electronic device that magnifies sound in a room or a hall, etc.; and *bullhorn*, first recorded in 1950, refers to a high-powered, cone-shaped, electrical loudspeaker for outdoor use. In Britain and Australia each of these devices would be called a “loudhailer,” a term unknown in the U.S. Since World War II *bitchbox* has been U.S. slang for the loudspeaker of a public address system in a military compound, over which authorities always seem to be bitching about something to the troops.

Megillah. One of the Hebrew scrolls in synagogues read on certain Jewish holy days. They include the Song of Solomon, Ruth, Lamentations, Ecclesiastes, and the Book of Esther, which is read in synagogue during the festival of Purim. Since a Megillah is long and detailed, *the whole megillah* became a Yiddish phrase, now used by many Gentiles, meaning a long-winded story or a long, tedious explanation. A *big megillah* means the same. *Megillah* itself derives from Hebrew for “scroll.”

Mein Kampf. The bible of National Socialism, which was written by German dictator Adolf Hitler while he was confined for 13 months in the fortress of Landsberg. Among the many gems of hate spewed over the book (chapter 14): “In starting and waging a war *it is not right that matters, but victory.*” Hitler’s original title for the book was *Four-and-a-Half Years of Struggle Against Lies, Stupidity, and Cowardice*. Much later this inspired *Time* magazine critic Timothy Foote to observe, “Everyone needs an editor.”

melba toast; peach melba. Melba toast, according to the traditional story, originated as several pieces of burnt toast served to the Australian opera star Dame Nellie Melba at the Savoy in London. The prima donna had been on a diet, ordered toast, and enjoyed the crisp, crunchy, overtoasted slices that were served to her by mistake. The maitre d’ named them in her honor and put melba toast on the menu. Whether the story is true or not, thin crispy melba toast honors Dame Nellie, as does the peach melba, which the French chef Escoffier concocted for her. Nellie Melba was the stage name adapted from the city of Melbourne by Helen Porter Mitchell (1861–1931), who became a Dame of the British Empire in 1918. The world-famous soprano made her debut in *Rigoletto* in Brussels (1887) and went on to star at London’s Covent Garden, the Paris Opera, La Scala, and New York’s Metropolitan among numerous opera houses. Unlike many opera stars, Nellie Melba did not study singing until she was over 21 years old, although she had previously been trained as a pianist.

Melbourne. *See* LEAVE WELL ENOUGH ALONE.

melons. There are so many melons that it would be near impossible to treat them here. All melons, however, are nutritious foods, particularly high in vitamins A and C. An old piece of doggerel compares men and melons, with melons decidedly the winner:

Men are like melons,
Shall I tell you why?
To find a good one
You must one-hundred try.

meltdown. No more serious accident can happen in a nuclear power plant than a meltdown. The term, first recorded in the 1960s, signifies a condition where the reactor core (the assembly of the fuel elements) burns through or melts into the ground below the nuclear power station, releasing highly dangerous radiation.

melting pot. In his play about immigration entitled *The Melting Pot* (1908) English author Israel Zangwill wrote: “America is God’s Crucible, the great Melting Pot where all the races of Europe are melting and re-forming!” Though Zangwill didn’t stew blacks and Asians in his pot, the phrase quickly came to include everybody in America, “a homogeneous melting pot of heterogeneous individuals,” as someone said. The term, by the way, doesn’t refer to the loss of ethnic identity but to the breaking down of racial and national prejudices.

Melungeon. Though you won't find it in many dictionaries, *Melungeon* is the name of a people of mixed white, black, and American Indian ancestry living in eastern Tennessee and western North Carolina.

memento mori. A Latin reminder that one must die, a reminder of death or mortality.

Memphis. The southern city, famous for Beale Street, the W. C. Handy museum, and Elvis Presley's Graceland home, was founded by Andrew Jackson in 1819. It was named after its storied sister city, which was the capital of the Old Kingdom of ancient Egypt from ca. 3400 to ca. 2445 B.C., at the apex of the Nile delta 12 miles above Cairo.

memsahib; sahib. Indians used to address British women as *memsahib* in the days when the sun never set on the Empire. The word is simply a feminine form of the Urdu *sahib*, "sir or master," *mem* representing the English "ma'am." The respectful title is first recorded in 1857, *sahib* attested to as far back as 1696. The terms are still used in India, but aren't exclusively applied to the British anymore.

men. Among the most amusing of the many words adopted by the Thais that were borrowed from English but have been given different meanings than they have in English. In this case the Thai *men* is a shortening of *menstruate*.

mendelevium. All attempts to classify the elements had failed before Dmitri Ivanovich Mendeleev (1834–1907) invented his own system in 1869–71. The Russian chemist's *Periodic Law of the Chemical Elements* arranged the elements in order of increasing atomic weight, making it easy to check the now commonplace tables in the vertical columns, and provided spaces into which undiscovered elements would probably fit. Mendeleev taught organic chemistry at the University of St. Petersburg. Known as one of the greatest teachers of his time, his *Principles of Chemistry* (1869) was a standard textbook. The artificially produced radioactive element *mendelevium* was named in Mendeleev's honor in 1955 when four American scientists—Glenn Seaborg, Bernard Harvey, Gregory Choppin, and S. G. Thompson—formed it in the laboratory by bombarding the element EINSTEINIUM with alpha particles.

Mendel's law. Mendel's law is the theory of heredity formulated by the Austrian Augustinian abbot and botanist Gregor Johann Mendel (1822–84). Mendel's painstakingly careful experiments, crossing different strains of peas in his monastery garden at Brunn, led to Mendel's law, reported in 1865, stating that characteristics of the parents of crossbred offspring reappear in successive generations in certain proportions and according to fixed laws. His *Mendelian* laws were neglected until long after his death, when Hugo de Vries and others independently rediscovered his findings in about 1900. They soon became the foundation for the modern study of heredity. Mendel was not uneducated as is sometimes inferred, having studied natural science at the University of Vienna from 1851 to 1853.

menhaden. This abundant oily fish has a name related to its use. Caught in great numbers by American Indians and buried in their corn fields, it bears an Algonquian name meaning "fertilizer." It is also called the mosbunker, the bunker, the marsh-bunker, and by some 30 more popular names (see the *American Naturalist* XII, 1878, pp. 735–39 for a listing). In 1949 *Brevoortia tyrannus* was called "America's No. 1 fish . . . yielding some \$10 million worth of oil, meal, and dry scrap last year."

Ménière's disease. According to the *Family Medical Guide* (1976), this disease of the inner ear "is characterized by attacks that commence suddenly with violent dizziness, ringing in the ear, vomiting, a reeling sensation and unsteadiness of body equilibrium so severe that if the person does not lie down, he would fall to the floor. . . ." Bouts may last from a half hour to several weeks. The disease is named after French physician and otologist Prosper Ménière (1799–1862), who first described it. English author Jonathan Swift is thought to have suffered all his life from Ménière's disease or syndrome, long before it was so named. Although he tried many nostrums to improve his condition, including long walks of up to 38 miles, Swift became toward the end of his life "like the ruin of a great empire," as Thackeray put it. Swift came to have so little use for life that as his customary farewell to friends he would say, "Good night, I hope I never see you again."

Mennonites. See AMISH.

menorah. 1) A nine-branched candelabrum lit on the Jewish holiday of CHANUKAH, the Feast of Lights. 2) A candelabrum with seven branches used in the biblical tabernacle. 3) A candelabrum with any number of branches used in modern synagogues.

Men seldom make passes / at girls who wear glasses. Author Dorothy Parker's celebrated couplet was originally published in her friend Franklin Pierce Adams's "The Conning Tower" column under the title "News Item." One of the great wits of all time, Parker had the sharpest tongue of anyone at New York's celebrated Algonquin Round Table, a luncheon group that met at the Algonquin Hotel in the 1920s and included Adams, Robert Benchley, Heywood Brown, George S. Kaufman, Alexander Woollcott, and others from time to time. Later, an anonymous wit qualified Parker's famous couplet, writing: "Whether men will make passes at girls who wear glasses / Depends quite a bit on the shape of the chassis."

mentor. Mentor, in Greek mythology, was the friend of Odysseus and took charge of his household when the hero of Homer's *Odyssey* went off to war. When problems arose Pallas Athene descended from heaven to inhabit Mentor's body and, through him, to give good advice to Odysseus's son Telemachus. *Mentor* has since meant an adviser, teacher, or coach.

men with beards. May Lamberton Becker explains the expression in her *Golden Tales* (1981): "Joseph Palmer [a member of Bronson Alcott's short-lived Fruitlands community] jailed (in 1843) for wearing a beard . . . At eighty-four he died and was buried under a stone at North Leominster that gives his

name and age, his portrait with the offending decoration, and the words ‘Persecuted for Wearing the Beard.’ Even Emerson, it seems, was not without a slight sense of superiority to the unshaved; he classified certain reformers as *men with beards*. They were not tolerated in business or the professions in the [1840s]; curiously enough, by the seventies public sentiment had swung in precisely the opposite direction.”

meow. *Meow* has been the English echoic word for the sound of a cat for centuries. The word is similar to those in many languages (German *miaw*, Italian *miao*, French *miaou*), but the Japanese hear the sound slightly differently as *nya nya*, and in Arabic our *meow* is *nau-nau*. See also COCK-A-DOODLE-DO.

Mercator’s projection. Gerardus Mercator, his name being the Latinized form of Gerhard Kremer, devised Mercator’s projection in 1568. His famous cylindrical chart gave all meridians as straight lines at right angles to the parallels of latitude, and is the basis of mapmaking today. Mercator, born in 1512, was a Flemish geographer and mathematician whose accurate maps and globes revolutionized mapmaking and freed geographers from “the tyranny of Ptolemy,” the earlier astronomer and geographer, who had underestimated the earth’s size.

Mercedes-Benz. The Mercedes-Benz auto isn’t named after two men who designed it, as most people believe. Emil Jellinek, an Austrian, manufactured the car in 1886, and he named it for his daughter, Mercedes. When the Daimler company later merged with Jellinek’s Benz automotive works, the name assumed its present form.

mercerize. A mercer is a dealer in textiles, but the old word has nothing to do with the method for treating cotton textiles called mercerization. The process was invented by John Mercer (1791–1866), an English calico printer who discovered it in 1850. Mercerizing involves treating material under tension with a caustic soda solution and then acid to neutralize the alkali used. This shrinks, strengthens, and gives a permanent silky luster to the yarn or fabric, also making it easier to dye. Mercer’s method wasn’t widely successful until long after he died, the breakthrough coming in 1895 when the 25 percent shrinkage was virtually eliminated by treating the material under tension, the one factor he had overlooked. The inventor had named his process “sodaizing,” but the hundreds of millions of yards of material and thread annually produced by the method are called mercerized in tribute to his pioneering work.

merchant. The swift Roman god Mercury, for whom MERCURY is named, was the god of business. Thus from his name come the words *merchant*, *merchandise*, *mercer*, *commerce*, and *commercial*, among others.

merchants of death. *Merchants of death* is applied to any group of manufacturers or businessmen who make money from war and even promote wars in various ways so that they can make money. This is another term from the title of a book—*The Merchants of Death* (1920) by H. C. Engelbrecht and F. D. Hanighan, which argues that munition makers were among the major causes of World War I.

mercury; mercurial. Mercury, with his winged hat and sandals, was the fastest and busiest of the Roman gods, as our old saying *quick as Mercury* reflects. For the same reason the liquid metal *mercury* was named for him, because it flowed quickly from place to place. The planet *Mercury*, also named for the god; gives us the word *mercurial*, “rapid, unpredictable changes in mood,” astrologers in ancient times believing that because Mercury was the planet closest to the sun those born under its influence were most subject to such shifting moods. See MERCHANT; FAST AS LADAS.

meretricious. The Latin root of *meretricious*, meaning “tawdry, gaudy, deceitful,” is *meretrix*, “whore.” The English word first meant “pertaining to a prostitute,” taking on its later meanings because prostitutes often dressed gaudily and were deceitful.

Meriden audience. A humorous theatrical term for a very small audience. It is said to have originated with a performance of Countess Helena Modjeska’s traveling troupe, starring Julia Marlowe, in Meriden, Connecticut, in 1888. Miss Marlowe played to an audience of two, the local mayor and a little boy.

meritocracy. Government by people who merit their jobs rather than those whose qualifications are mainly of class. British sociologist Michael Young (b. 1915), now Lord Young, coined the term in his book *The Rise of the Meritocracy* (1955).

mermaid. Mermaids, whose name derived from the Latin *mer* (“sea”), date back long before history was written. In Greek mythology the 50 daughters of Nereus, the god of the sea, were beautiful mermaids who rode the waves on the backs of dolphins, and any sailor lucky enough to catch one could demand that the mermaid predict the future as a price for letting her go.

mermaid’s purses; mermaid’s glove. The horny skate, ray, and shark egg cases often washed up on the beach by wave action are popularly called *mermaid’s purses*. A *mermaid’s glove* is a British sponge (*Halichondria palmata*) whose branches resemble human fingers.

merrily, merrily . . . From a little song Ariel sings in Shakespeare’s *The Tempest* (1611): “Merrily, merrily shall I live now / Under the blossom that hangs on the bough.”

Merry Andrew. Henry VIII’s personal physician, Dr. Andrew Borde or Boorde (ca. 1490–1549), has been regarded by some as the original *Merry Andrew*, at least since Thomas Hearne designated him so in the preface to his *Benedictine Abbas Petroburgensis* in 1735. Borde did have a reputation for a salacious wit and a bedside manner that mixed facetiousness with healing, but to call the eccentric doctor a buffoon or clown would be stretching the evidence too far. He did not author a contemporary joke book, as is sometimes alleged, but he was a man known for his vast learning as well as his reputation for enjoying a good joke. The *Oxford English Dictionary* notes Hearne’s statement, and like most authorities dismisses it, claiming that the author based his identification on little

evidence or even intrinsic probability. The expression did arise in Borde's time, but probably from the generic name for men servants or serving men, "Andrew" being commonly bestowed on servants in those days. The first *Merry Andrew* was most likely such a servant, the cognomen later being applied to any conjurer's assistant who engaged in buffoonery to help make the magician's hands quicker than the eye.

merry-go-round. The word *merry-go-round*, first recorded in 1729, may have been suggested by the British dialect term *merry-go-down* for strong ale (1500), according to Weekley:

As the merry-go-down
goes down, goes down,
the whole world spins
like a merry-go-round.

Another old use of *merry* is in the obsolete *merry-go-sorry*, laughter and crying mixed close together.

merrythought. *Merrythought*, first recorded in 1607, is a charming synonym for the wishbone in the breast of a fowl, taking its name from the tradition of two persons pulling on the bone until it breaks, the one who holds the longer piece getting any wish he has made.

merry widow. Late in the 19th century Merry Widow was a U.S. trade name for a brand of condoms. Within 30 years or so, however, *merry widow* had become a synonym for any kind of condom and remained so until the firm making Merry Widows went out of business in the 1940s. The product preceded Franz Lehár's operetta of that title, which was first produced in 1905. *Merry* does figure in several British slang expressions, all obsolete, including *merry-legs*, a harlot; *merry-maker*, the penis; *merry bout*, sexual intercourse; *merry bit*, a willing wench; and, merriest of all, a *merry-arsed Christian*, a whore.

mervousness. A short-lived political word and only an amusing historical footnote today, *mervousness* is a blend of *Merv* and *nervousness*. The duke of Argyll coined it in the early 1880s when the British government worried nervously about Russia having designs upon the area of Merv in Turkestan. In fact, the British *mervousness* was warranted, for the Russians grabbed Merv in late 1883.

mescal button. A dried, buttonlike top of a mescal of the genus *Lophophora*, long used as a hallucinogen by certain southwestern Indians during religious ceremonies. The word, first recorded in 1885, is ultimately from the Nahuatl *mexcalli*, for "an intoxicant distilled from agave."

meshugge. A Yiddish term for "crazy" that derives from the Hebrew word meaning the same. *Meshugge*, pronounced to rhyme with "Paducah," can be used literally or in a lighter vein. The derivation *meshuggener* for a crazy man has also become fairly common in English, as has the adjective *meshuggeneh* ("That's a meshuggeneh idea").

mesmerize. Franz Anton Mesmer doesn't entirely deserve his centuries-old reputation as a charlatan. Though he wasn't aware of the fact, Dr. Mesmer was one of the first to treat

patients by hypnosis, and his motives generally seem to have been beyond reproach. The Austrian physician, garbed in the flowing, brightly colored robes of an astrologer and waving a magic wand, would arrange his patients in a circle, have them join hands in the dimly lit room and then pass from one to another, fixing his eyes upon, touching, and speaking to each in turn while soft music played in the background. Apparently he never did understand that the supernatural had nothing to do with his success, that his hypnotic powers accomplished this. Many physicians supported his claims but when Louis XVI appointed a scientific commission—which included Benjamin Franklin—to investigate his practice, they labeled him an impostor. A man born before his time, the hypnotist died in obscurity in Switzerland in 1815, aged 82. Freud and others would profit from his work, but he would mainly be remembered as a quack occult healer. Mesmerism was used for hypnotism before the latter word was coined, but today is employed mostly in the sense of spellbinding, enthralling by some mysterious power, in fact, swaying a group or an individual by some strange personal magnetism.

Mesmerizer Creek, Texas. Over a century ago a settler on the banks of this Texas town actually tried to domesticate American bison by hypnosis, his colorful ways inspiring the colorful place name *Mesmerizer Creek*.

Mesopotamia. Mesopotamia, an ancient region of southwest Asia in modern-day Iraq, was the home of many early civilizations, including Babylonia. To the English speaker the word suggests *mess*, *pot*, or something of that order, yet there is a nice story about it: The British actor George Whitefield's voice was so masterly that "he could make men either laugh or cry just by pronouncing the word Mesopotamia."

mesquite. A spiny, shrublike tree of the Southwest (*Prosopis juliflora* or *glandulosa*) that often forms dense thickets; or the wood of such a tree, used for barbecuing at least since the Indians used it in cooking buffalo meat. *Mesquite* derives from the Nahuatl *mizquitl* meaning the same.

message to Garcia. In his inspirational *A Message to Garcia* (1899), Elbert Hubbard dramatized the true adventure of Lt. Andrew Summers Rowan, U.S. Bureau of Naval Intelligence, who during the Spanish-American War was sent by the U.S. chief of staff to communicate with General Calixto García, leader of the Cuban insurgent forces. No one knew just where the elusive García might be, but Rowan made his way through the Spanish blockade in a small boat, landing near Turquino Peak on April 24, 1898, where he contacted local patriots, who directed him to García far inland, and returned to Washington with information regarding the insurgent forces. The brave and resourceful Rowan became a hero, but Hubbard transformed him into an almost Arthurian figure and it was his essay that made *carry a message to Garcia* a byword.

Messalina; messaline. The notoriously cruel, greedy, and venal Valeria Messalina managed to cuckold her weak-minded husband Emperor Claudius I so many times that even in corrupt Rome her name became proverbial for a lascivious, unfaithful woman. One of the profligate empress's favorite tricks

was to make love to men and learn about their real estate holdings, later condemn them to death for treason, and then confiscate their property. But she went too far when she eliminated the freedman Polybius. Shortly afterward, in her husband's absence, the empress forced her current lover, a handsome youth named Gaius Silius, to divorce his wife and marry her in a public ceremony. The freedman Narcissus, alarmed at Polybius's fate, took this opportunity to inform Claudius of her treachery and he ordered his third wife put to death. She was either killed in the gardens of Lucullus, which she had obtained by confiscation, or forced to commit suicide there with her paramour. She was only 26 when she died in A.D. 48. No one knows why, but the fabric *messaline*, a thin, soft silk with a tweed or satin weave, also pays the empress homage.

Messerschmitt. This was the most famous German fighter of World War II and the main support of the Luftwaffe. The aircraft, technically the ME-109 and ME-110 pursuit planes, were designed by German aircraft engineer and manufacturer Wilhelm or Willy Messerschmitt (b. 1898). Messerschmitt built his first plane when he was 18 and owned his own factory by 1923, his early experience in gliding leading to his interest in power-driven aircraft. Besides the renowned fighter he built a remarkable twin jet, the ME-262. The inventor had been awarded the Lilienthal prize for aviation research in 1937, but was declared a minor offender in the postwar trials of Nazis.

mess hall. Since Civil War days the colorful name for a tent, or Quonset, or any place where meals are served to soldiers and sailors. But the military has recently decreed that such places should properly be called the more eloquent dining facilities.

mess of pottage. See LENTILS.

mestizo. A man of mixed Spanish or European and American Indian ancestry; from a Spanish word meaning "of mixed race." *Mestiza* is the feminine form. See GAUCHO.

me Tarzan, you Jane. See TARZAN.

metathesis. See BIRD.

method acting. See STANISLAVSKI'S METHOD.

method in one's madness. Used to describe someone who acts crazy or erratic in order to further his aims, the old expression seems to have originated with Shakespeare. At least its earliest ancestor is first recorded by the Bard in *Hamlet*: "Though this be madness, yet there is method in it."

Methodist. The evangelical Protestant religion was founded on the principles of the brothers John and Charles Wesley in England in the early 18th century. It was named after Charles Wesley's Oxford "Holy Club" (especially Wesley himself among them), who were noted for their "methodical" ways. Charles certainly was methodical enough to write over 6,500 hymns, the popular *Hark! The Herald Angels Sing* among them.

Methuselah tree. See BRISTLECONE PINE.

metromania. "An insatiable desire for writing verse." One of a list of more than 140 manias from the Web site www.phrontistert.info run by anthropologist Stephen Chrisomalis at the University of Toronto.

metrosexual. *Newsweek* (November 10, 2003) says presidential hopeful Howard Dean proclaims during his campaign that he's a metrosexual, "a word used to describe a straight man in touch with his feminine side." I can't find metrosexual recorded anywhere else, though the metro in the word may suggest the relative sophistication of men living in metropolitan areas.

Mexican hairless dog. This "toy breed" actually does have a little hair: fuzzy on the top of the head and a few hairs at the end of the tail. No one has been able to trace its ancient origins, though some say it came to Mexico with the Aztecs. The well-proportioned eponymous little dog was long valued for healing powers claimed for it.

Mexican jumping bean. See JUMPING BEAN.

Mexican standoff. A stalemate, a confrontation that neither side can win. Originally an American cowboy expression describing a gun battle with no clear winner, the words date back to the mid-19th century. It is often used to describe a pitching duel in baseball today.

Mexico. *Mexico* derives from the Aztec name of great war god Mextli.

mezuzah. *Mezuzah* is from Hebrew for "doorpost." It is a small scroll, inscribed on one side with biblical passages (Deut. 6:4-9 and Deut. 11:13-21) and on the other with the word *Shaddoi*, a name for God, that is inserted in a small tube and attached by some Jews to the doorjamb of the home. An Orthodox Jew touches his lips and then the mezuzah on leaving or entering the house or apartment.

mho. It is safe to make the earthshaking claim that this is the only word deriving from a man's name spelled backwards. This unusual crossword puzzle and Scrabble word means just the opposite of the OHM; mho is the electrical unit of conduction, while the ohm is the electrical unit of resistance. The inverted word, whose plural is *mos*, was coined by Lord Kelvin and of course honors physicist Georg Simon Ohm, just as the ohm does. In fact, the *mho* is often called a reciprocal ohm. See MAHERNIA; QUISQUALIS.

MIA. This abbreviation for "missing in action" didn't originate during the Vietnam War, as many believe. The initials were used in military parlance at least during the Korean conflict and probably further back, though they did pass into general use in the Vietnam era.

Micah Rood's apple. An apple with streaks of red running through the white flesh. The tale is that on a spring day in 1693 a jewelry peddler visited old Micah Rood's farm at Franklin, Pennsylvania. Shortly afterward the peddler was found murdered under an apple tree in Rood's orchard, but his jewelry

was never recovered and the farmer never was convicted of the crime. According to legend, though, all the apples harvested from the tree that autumn had streaks of blood inside. Rood died of fright after seeing them, the “damned” spot or streaks called “Micah Rood’s curse” from that day on. When recounting this one, don’t ruin a good story by quibbling that apples with red running through the flesh were common before Rood’s time, that they are simply a “sport,” like the famous golden delicious variety and many others. There seems to be no record of a farmer named Micah Rood, but two other peddlers were involved in sensational murders at the time he was allegedly murdered; perhaps these cases inspired the story. See MCINTOSH.

Micawberish attitude. An attitude that is very optimistic, often to a fault. Named after Mr. Wilkins Micawber, a character in Charles Dickens’s *David Copperfield* (1849–50), the novel Dickens liked best. Micawber, poor but always hopeful, the eternal optimist, does become an esteemed magistrate in Australia. “An optimist,” wrote J. H. Cabell, “proclaims that we live in the best of all possible worlds; and the pessimist fears this is true.”

Michigan. Our 26th state, admitted to the Union in 1837, takes its name from *Michigaman*, both the name of an Indian tribe and a place, translating as “great water.” The Wolverine State had first been the Michigan Territory. The Indians thought it “the first batch of earth the Great Spirit made.”

Mickey Finn. This term, for “a powdered knockout drug or purgative slipped into a drink to render its drinker unconscious or otherwise helpless,” seems to have originated in Chicago in the late 19th century and has been attributed to a gangland figure named Mickey Finn, remembered for his sleight of hand but nothing else. The original Mickey Finn is said to have been a laxative commonly used for horses. Possibly some unknown bartender named Mickey actually administered it, but one guess is as good as another here.

Mickey Mouse. Mickey Mouse only began to lose popularity when he was streamlined for later films, his tail cut off and his bare chest covered, among other “modernizations.” He looked as if he had come off an assembly line of drawing boards, and this commercial slickness was reflected in phrases like *Mickey Mouse music*. In the armed forces during World War II and the Korean conflict *Mickey Mouse* meant anything childish or silly, such as white-glove inspections. “Mickey Mouse movie” was a humorous term G.I.s gave the frightening films servicemen were shown that gruesomely detailed the effects of gonorrhea and syphilis and that caused many men to swear off sex—for a few days. Mickey Mouse was of course invented by the late Walt Disney (1901–66) in 1923. Disney called his creation Mortimer Mouse at first, but changed the name when his wife suggested Mickey Mouse instead. The cartoonist was Mickey’s voice in the early Mickey Mouse cartoons. In Disney’s words, “He was my firstborn and the means by which I ultimately achieved all the other things I ever did—from Snow White to Disneyland.” See also DISNEYAN.

Mickey Mouse names. Mickey Mouse’s popularity knows no national boundaries; sojourners everywhere find home in his

cartoons. In France, he has become known as Michael Souris; in Italy as Topolino; in Japan, Miki Kuchi; in Spain, Miguel Ratoncito; in Latin America, El Raton Miguelto; in Sweden, Muse Pigg; in Germany, Michael Maus; and in Russia, Mikki Maus. At its peak, his fan mail approached 10,000 letters a day.

Mickey Mouse rules. One theory holds that World War II U.S. Navy Military Indoctrination Centers, or M.I.C.’s, where undisciplined sailors were restrained, gave their initials to this expression for petty rules. The term has been around since early in World War II and probably can be explained by the fact that such rules seem silly and childish, like MICKEY MOUSE cartoons. Mickey Mouse was better honored when his name became the password chosen by intelligence officers in planning the greatest invasion in the history of warfare—Normandy, 1944. Mickey Mouse diagrams were maps made for plotting positions of convoys and bombarding forces at Normandy.

microcosm. *Microcosm* derives from the Greek for “little world,” the Greeks applying the word to man, whom they considered as the world in miniature. The term is now used for anything regarded as a world in miniature. Its opposite is *macrocosm*.

microscope. The term was first recorded by Galileo’s friend Francisco Stelluti. Galileo himself referred to the instrument as the *occholino* (little eye). See TELESCOPE.

Midas; Midas touch. Just as the title pharaoh was bestowed upon all Egyptian rulers, Midas was the title of the kings of Phrygia, an ancient kingdom in what is now central Turkey, but the Midas who became the basis for the Midas legends has never been positively identified. In legend King Midas is the father of Gordius. Several tales are told of him in Greek mythology, the most famous of these making his name proverbial. This story had King Midas befriending Silenus, the Greek god of wine and fertility, a jolly old man, often drunk but gifted with great powers of song and prophecy. Midas led Silenus to Dionysus, his pupil and boon companion, and this grateful god of fertility and wine rewarded him by promising to fulfill any wish he might make. King Midas told Dionysus that he wished everything he touched would turn to gold, and his wish was granted. But Midas got much more than he bargained for—even his food and drink turned to gold, and he nearly starved to death before the greedy king’s appetite for gold decreased and he asked the god to lift the spell. Dionysus commanded him to bath in the Pactolus River, which washed him clean of his cursed power and has ever since had gold-bearing sands. From this original morality tale, on which there have been many embellishments, we have the *Midas touch*, referring to anyone who effortlessly makes money from every project he undertakes.

Middle America. Capital columnist Joseph Kraft (1925–86) coined *Middle America* in the mid-1960s as a term for “the middle-class America whose views were often overlooked by the opinion-molders on the two coasts,” according to one of his editors.

middle class. See UPPER CLASS.

middle finger. This name for the third finger on the human hand (if you include the thumb as a finger) has an obvious origin. Centuries ago it was called the *long man* because it is, also obviously, the longest of the fingers. See THUMB.

middle of the road. Toward the end of the 19th century this term came into use to describe political parties or factions of political parties that took a cautious, moderate position between extremes supported by their opponents. Highways at the time were often unpaved, with untended roads whose left and right sides were well below the grade of the middle. After a heavy rain cautious travelers stayed in the middle of the road, which may have suggested the political phrase.

middle passage. See TRIANGULAR TRADE.

middling. In fair health. “She’s middlin’.” It is sometimes used in the phrase *fair to middling*, meaning “fairly well or perhaps a little better.”

midget. See LITTLE PEOPLE.

midnight ride of Paul Revere. A literary reference to the ride of Paul Revere from Charlestown to Lexington and Concord to warn Americans of the approach of British troops at the beginning of the Revolutionary War. It comes from Henry Wadsworth Longfellow’s poem *Paul Revere’s Ride* (1861).

midshipman fish. Native to mainland America, the midshipman fish (*Porichthys notatus*) has golden spots on each side like the brass buttons on a midshipman’s coat. Familiar along the Pacific coast, the luminescent midshipman is also called the talking fish, the grunter, the grunt, and the singing fish. The sound it makes when disturbed—made by vibrating its air bladder—is actually similar to the croak of a tree frog.

midsummer dream game. See ALL-STAR.

midsummer madness. Something completely mad, unreasonable, or foolish. Shakespeare is the first to record this expression, in *Twelfth Night* (1600). In the Bard’s day midsummer was believed to be a time when madness was common.

midsummer men. The orpine (*Sedum telephium*), also known as live-forever, is called midsummer men because it used to be potted and hung in the house to tell young women if their sweethearts were true—the plant’s leaves supposedly bending to the right if they were faithful, to the left if they were false.

midway. *Midway* for the central area of a carnival, fair, or any exposition comes directly from the Midway Plaisance at the World Columbian Exposition held in 1893 in Chicago. At this location stood the first FERRIS WHEEL and other great attractions.

MI5, MI6. Frequently encountered in spy novels, these are official British intelligence organizations. MI5 is supposed to

protect domestic military and political secrets, while MI6 is responsible for discovering foreign military and political secrets. Both services work with Scotland Yard’s Special Branch. The letters *MI* stand for *M*(ilitary) *I*(ntelligence), and the numbers stand for Section 5 or Section 6.

MIG. All Russian fighter planes called by the acronym MIG honor the original aircraft’s inventors, designers *Mi*(koyan) and *G*(urevitch). It is sometimes written *MiG* and *Mig*.

might as well be hung (hanged) for a sheep as a lamb. In former times thieves were sentenced to death when caught stealing either a sheep or a lamb, which led to this originally British expression that dates back to at least the early 19th century and means if the punishment is the same for either action one might as well commit the worse (and more profitable) one.

might makes right. A saying from the early 1400s that is sometimes given as *might is right*. “But so goes the world. Might makes right,” John Wilkes Booth wrote to his mother on the same day he assassinated President Lincoln. Booth did not know that the president had said in his Cooper Union address (February 27, 1860): “Let us have faith that right makes might . . .”

mighty small potatoes and few to a hill. This old Americanism is heard more often today in its abbreviated form *small potatoes*. Both expressions mean someone or something of little consequence, insignificant, and were first recorded in 1831. A variation is *small potatoes and few in a hill*.

migraine headache. Migraine comes from the Greek *hemikrania*, “half the skull,” this extremely severe type of headache usually confined to one side of the head. The word seems to have been a fashionable one when Horace Walpole first recorded it in a 1777 letter to a friend.

a Mike Fink. In days past, a Mike Fink meant “a rough and ready hero given to exaggeration about his exploits.” Mike Fink was a real American frontier hero (ca. 1770–1822), a river boatman and Indian fighter whose tall tales contributed greatly to the American folklore of exaggeration, a fact supported by the 12 or more different accounts of his death.

mile. The Latin *mille*, “one thousand,” is the ancestor of our word *mile*, which is 5,280 feet, because it once referred to 1,000 paces of the Roman legion’s formal parade step, left foot and then right foot, each pace equalling 5.2 feet.

mile-a-minute weed. An invasive, pernicious weed (*Polygonum perfoliatum*) that is a native of Asia but has spread to the United States. The plant grows at an incredible speed and in one reported infestation grew over phragmites and small trees. Its sharp thorns give it another name—*devil’s tail tear-thumb*.

milestone; milepost. *Milestone* refers to a surveyor’s mark (often a concrete post) set to mark distances by miles, each

milestone marking a mile. The Americanism dates back to about 1740 and has also come to mean a notable point in the life of a person, a nation, etc. *Milepost* is used in the same ways, but refers to a post made of wood.

a mile wide, a foot deep, too thick to drink, and too thin to plow. This colorful description of the muddy, shallow Platte River in Nebraska was first recorded over a century ago. It was also used to describe the Powder River. See POWDER RIVER.

milk. *Milk* has been used for more than 400 years to mean to dishonestly extract money from someone until there is nothing or very little left, as in “She milked him of everything he had.” It literally refers to the milking of animals. To milk a mine is to extract all or large portions of the ore from it after selling the mine.

milk of human kindness. Shakespeare invented this expression for gentleness in *Macbeth* (1606), when he has Lady Macbeth say to her husband, “Yet do I fear thy nature; / It is too full of the milk of human kindness . . .”

milkshake. In most of America a milkshake is a thick sweet drink made of milk, syrup, and ice cream. An exception is Rhode Island where such a drink is called a cabinet, after the wooden cabinet in which the mixer used to be encased; a *milkshake* in Rhode Island is just milk and syrup shaken up together. In northern New England the drink most Americans call a *milkshake* is often called a *velvet* or a *frappé*.

Milk Street. A Boston street so named because “country slickers” used to water their milk at a stream there before bringing it into market and selling it to city bumpkins.

milk the bull, ram. To take on a foolish, impossible task, as the bull or ram has no milk, one being a male cow and the other a male sheep. The expression is a streamlining of the 17th-century proverb “Whilst the one milks the ram, the other holds under the sieve.”

mill. To *mill about* is to move aimlessly in a circle. First recorded by Kipling in 1874, the expression is related to the circular motion of mill wheels. See PUT THROUGH THE MILL.

Millerite. See SEVENTH DAY ADVENTISTS.

milliard. *Milliard* is the British word for the American English “billion” or one thousand million. This term is also used in Russia and Germany. The American English *trillion* is equivalent to the British English *billion*. *Milliard*, from the French *milliard*, which comes from the French *mille*, “thousand,” is first recorded in 1793. Wrote Byron in *Don Juan*: “I’ll bet you millions, milliards.” See BILLIONAIRE.

milliner. One of the great fashion centers of the world in the early 16th century, Milan, Italy set styles for all Europe. Milan gloves, Milan hats, Milan point lace, Milan ribbons, Milan needles, and even Milan jewelry were among the many items exported to England from the Paris of its day. Shopkeepers who

sold these imported articles, only some of them merchants from Milan, were naturally named Milaners, but the English pronounced and spelled the word *Milliners*, which eventually lost its capital. The small shops, run primarily by men at first, did often specialize in making and selling ladies’ hats, but the use of *milliner* exclusively for a designer or a seller of women’s headgear is fairly recent.

millionaire. Fur and real estate tycoon John Jacob Astor (1763–1848) was probably the first American to be called a millionaire, for the word entered English from the French *millionnaire* in about 1820, but there were Americans who accumulated millions before him, the first probably being the Virginia planter and banker Robert “King” Carter, who owned more than 300,000 acres in the late 17th century. See also BILLIONAIRE; MILLIARD; MULTIMILLIONAIRE; MYRIAD; TRILLIONAIRE.

a million dollar body and a ten cent mind. Many people could say this, but the phrase’s inventor was American heavy-weight boxing champion Max Baer, in about 1935.

million-dollar wound. A war wound, suffered in combat or self-inflicted, that is bad enough to send a soldier home or at least behind the lines out of the combat zone. The term *million-dollar wound* dates back to World War II, while the practice of self-inflicted wounds is as old as the “art of war.” In the American Civil War, for example, minor self-inflicted wounds were common, and the reaction to them was often harsh. One Union soldier at Cold Harbor shot himself in the foot. Sure by the powder burn that the wound was self-inflicted, a surgeon chloroformed the soldier and sawed off his leg. “I shall never forget the look of horror that fastened on his face when he found his leg was cut off,” an observer wrote.

million-footed Manhattan. A phrase used by Walt Whitman in his poem “A Broadway Pageant” (1883). In it he also called the borough “Superb-faced Manhattan.” It might more accurately be called twenty-million footed Manhattan today, counting visitors.

millions for defense, not one cent for tribute. See XYZ AFFAIR.

Milo of Croton. A famous athlete and warrior of the late sixth century B.C. who won six victories in wrestling at Olympia. He died, it is said, when his hand became caught in the trunk of a tree he was trying to split open with his fist. Trapped there, he was eaten by wolves.

Milquetoast. Timorous men are still called *Caspar Milquetoasts*, or *Milquetoasts*, even though the cartoon character of that name, created by H. T. Webster as “The Timid Soul” in the 1930s, has long ceased to appear in the Sunday comics.

mimosa. *Mimosa* is from the Greek “to mimic,” in allusion to the sensitive collapse of the leaves in some species of this tree, which were thought to be mimicking the motions of animals at one time. The mimosa’s reaction to shock or cloudy

weather is one of the strangest cases of physiological response among plants, its leaflets folding up face to face at the slightest irritation and its leaves collapsing entirely if the shock is sufficient.

mimulus. These showy flowers were once thought to resemble a monkey's face and were thus named from the Greek *mimo*, "face." Other names for them are *monkey flower* and the *cardinal monkey flower*. One species, *Mimulus moschatus*, is called *monkey musk*, but actually has no smell at all. Experts are at a loss to explain why the flower mysteriously lost its perfume at the end of the 19th century.

mind (memory) like a steel trap. See SMART AS A STEEL TRAP.

the mind's eye. (1) the mental ability to imagine or remember scenes; (2) the imagination. According to Ernest Weekley the phrase was first used by Shakespeare.

mind your own business. See 11TH COMMANDMENT.

mind your p's and q's. Be very careful, precise. We have been using this expression since at least the late 18th century without any definite proof of where it comes from, and we still don't know. Not that there is any want of theories. Of the top 10 contenders, three are listed here:

- The obvious explanation is that English children learning to write the alphabet were told to mind their *p*'s and *q*'s, to be careful not to reverse the loops on the letters and make *p*'s look like *q*'s and vice versa. Why wasn't the admonition mind your *b*'s and *d*'s, though?
- A similar theory holds that apprentice printers were told to mind their *p*'s and *q*'s, to be very careful in picking out type, especially since a typesetter has to read letters upside down. The trouble with this theory is that the reverse of a *p* isn't a *q* but a *d*.
- Word delvers always come up with a good barroom story whenever it's possible to work one in, and a third explanation has British tavernkeepers minding their *p*'s and *q*'s when figuring up the monthly beer bill—being careful, that is, not to confuse pints and quarts.

mingo. A humorous, perhaps obsolete term for a chamber pot; it derives from the Latin *mingo*, "I make water," which probably hasn't been heard since the 19th century.

miniature. *Miniature* doesn't derive from the Latin *minor* or *minimus*, "small," as seems the case. It comes from *minium*, a Latin borrowing from Basque. *Minium* (from the Basque *arminea*) means "red lead, vermilion," Basque Spain being a major source of red lead in ancient times. *Miniature* first meant "a manuscript containing letters illuminated with red vermilion." The word was then erroneously applied to small portraits, because it was confused with the Latin *minimus*, and later came to describe anything small.

miniature golf. See TOM THUMB GOLF.

minimize. See INTERNATIONAL.

miniskirt. Though it is associated with the 1960s, the miniskirt has been worn by women in all decades since, with increasing general approval as the years passed and prudishness capitulated to sexual power. Said to be the creation of French designer André Courrèges, the very short skirt was first called a "miniskirt" about 1964. An even shorter version of the miniskirt is called the micromini. Other "mini" words include minibike, minibus, minimart, mininuke, minipark, and minivan.

minister. The first meaning of *minister* in English was "a servant or attendant," the word deriving ultimately from the Latin *minister* meaning the same. *Ministers* waited on table or worked in the kitchen. Minister, for "a clergyman," possibly owes its life to the fact that such men were "servants of God."

Minister's Rib Factory. A name people jokingly gave to Mount Holyoke Seminary (which later became Mount Holyoke College) "because the South Hadley, Massachusetts, school turned out so many wives for ministers and missionaries," according to Imogene Wolcott in *The New England Yankee Cookbook* (1939).

mink-lined rut. See GENTLEMEN PREFER BLONDES.

minnesinger. *Minnesinger* refers to a German lyric poet in the troubadour tradition. These poets and singers flourished from the 12th through the 15th century, but their name wasn't coined until the early 19th century, from the German *minne*, love, plus *singer*.

Minnesota. No one is sure exactly what *Minnesota* means, for the Sioux word translates as either "sky-blue water" or "cloudy water." The Gopher State had been called the Minnesota Territory before being admitted to the Union in 1858 as our 32nd state.

minnie ball. French Army Capt. Claude-Étienne Minié (1814–79) invented the minnie or minié ball bullet that became famous around the world and was extensively used in the American Civil War. Minié's invention came in 1849, designed for the Minié rifle, but more important, something of a final answer in the search for an ideal bullet. The elongated bullet, one of the first of its shape, was more accurate and could be loaded faster than any shell before it. Experts thought it to be the ultimate in ballistic ingenuity and it was certainly the first step in the development of the modern bullet. With it a soldier could fire *two* aimed shots a minute!

minniebush. Often planted in rock gardens, this small shrub of the heath family is so named not because it's a little bush, as some people believe, but because it honors the Scottish surgeon and botanist Archibald Menzies (1754–1842).

minnow. The name of this little fish is often used to describe anything small, but it is (at three to four inches) many times the size of gobies (see ANNUAL FISH). Minnows are of the order *Cypriniformes*. They can be differentiated from the similar

KILLIE by the placement and shape of their fins—the minnow's caudal fin is always forked. The so-called topminnow is therefore not a minnow at all, but one of the many killie species.

minor league. See MAJOR LEAGUE.

mint. *Mint* derives from the name of the Greek nymph Minthe, who was transformed into the herb by Proserpine, the jealous wife of Pluto, god of the underworld. Wild mint (*Mentha sativa*) has been chewed since earliest times and is often regarded as an aphrodisiac. Aristotle forbade the chewing of mint by Alexander the Great's soldiers because he felt it aroused them erotically and sapped their desire to fight. (For a mint where money is made, see MONEY.)

mint julep. An alcoholic drink, associated with Kentucky since the early 19th century, made with bourbon, sugar, and finely cracked ice and garnished with sprigs of mint, all served in a tall, frosted glass. *Julep* comes ultimately from the Persian *gul*, rose, and *ab*, water, indicating that it was originally some kind of rose water drink.

minx. *Minx* has nothing to do with *minks*, except that a minx may wear a mink. *Minx* refers to an impudent or saucy, flirtatious girl or woman. The word may come from Low German *minsk*, hussy, but some authorities mark its origin unknown. In any case *minx* has been part of the language since the 16th century, when it first meant a pet dog. In *Othello* (1604) Shakespeare used it as we often do today: "Damn her, lewd minx! O, damn her!"

miracle fruit. When chewed together, the berrylike fruits of the African shrub *Synsepalum dulcificum* and *Thaumatococcus daniellii* make sour substances taste sweet. For this reason they are called the "miracle fruit," "miracle berry," "miraculous fruit," and "serendipity berry." Another African shrub, *Dioscoreophyllum cumminsii*, goes by the same names for the same reason.

the miracle of Coogan's Bluff. See THE SHOT HEARD ROUND THE WORLD.

mirage. *Mirage*, ultimately from the Latin *mirare*, to look or wonder at, refers to an optical illusion, something without substance or reality. Most often mirages occur in the desert, as hundreds of cartoons depicting illusory oases have shown, but American humorist George Ade used the word differently. One afternoon he was sitting with a little girl at a friend's house. "Mr. Ade," she said, looking up from his storybook, "does *m-i-r-a-g-e* spell *marriage*?" "Yes, my child," Ade softly replied.

Miranda. See URANUS.

mirandize. To advise anyone taken into custody by the police that he or she has a right to remain silent and to have legal counsel. The U.S. Supreme Court made this ruling in 1966, when plaintiff Ernesto A. Miranda brought the case to court in *Miranda v. Arizona*. *Mirandize* itself has become commonly used, as in, one detective to another: "Did you mirandize him when you picked him up?"

miscegenation. This term is not often heard anymore. It refers to marriage or cohabitation between a man and woman of different races. The term derives from the Latin words for "to mix" and "race" and is said to have been coined in a pamphlet entitled *Miscegenation: The Theory of the Blending of the Races, Applied to the American White Man and Negro*, published anonymously by New York journalist David Goodman Croly (1829–1889) in 1863.

mise en scène. French for a stage setting, or physical surroundings.

miserere. See BENEFIT OF CLERGY.

the miseries. An American slang term for menstruation.

mish-mosh. A confusing mess, a hodgepodge. In *The Joys of Yiddish*, Leo Rosten reports that Groucho Marx once told a politician, "You'll never get votes in the Bronx if you go on saying *mish-mash* instead of *mish-mosh*." *Mish-mash* is indeed the most common pronunciation in the U.S., but the *O.E.D.*, tracing the word back to 1585, spells it *mish-mosh*. No one is sure, but the word may come from the German *Mischmasch* or the Danish *misk-mask*, both meaning about the same.

The Missae a c Missalis Anatomia. Published in 1561, this has been called the world's worst printed book, its 172 pages including a full 15 pages of errata. Its anonymous author claimed that Satan had soaked his manuscript, making it splotted and illegible in many places and causing the printer to make so many mistakes.

Miss America. The winner of the annual national beauty contest held in the U.S. every year since 1921, though it wasn't called the Miss America contest until the following year. The winner is crowned as the most beautiful young woman in the nation. *Miss America* is also used to describe any pretty American girl. Since the Miss America contest debuted, there have been many spinoffs, including a Mrs. America, Miss Universe, and Miss World contest.

Miss Elizabeth. A term used by blacks to describe any white female employer. The female counterpart of Mr. Charlie.

missing man formation. One plane, the missing man, from a formation of fighter planes heads up and away from the others, disappearing into the clouds or "the wild blue yonder." A relatively recent way in which the U.S. Air Force honors deceased American heroes and leaders at a funeral, such as that of President Ronald Reagan on June 10, 2004.

missionary position. The face-to-face position, man atop woman, that Christian missionaries allegedly taught converts (who were ignorant of the position) was the only proper way to have sex. I've been unable to ascertain whether missionaries taught or advocated this practice, and the expression was first recorded only as recently as about 1965—one would expect that the first references to this would be much older. The term's slang antonym, *dogways*, was first recorded in the late 19th

century in England, according to Partridge, while in the U.S. *The Random House Historical Dictionary of American Slang* dates *dog fashion* to 1900.

a miss is as good as a mile. Charlemagne's faithful warriors Amis and Amile shared many things in common, even their martyrdom—but they aren't the inspiration for this old saying. The expression is really meaningless until you study its original form: "An inch in a miss is as good as an ell." In the 19th century the phrase was shortened by Sir Walter Scott, who also substituted the alliterative *mile* for "ell."

Mississippi. The Chippewa called the river for which the state is named the *mice sipi*, the "big river," which white men spelled *Mississippi*. The Magnolia State was admitted to the Union in 1817 as our 20th state.

Miss Lizzie Tish. A usually sarcastic term for a girl or woman who acts and dresses as if she were superior to everyone else: "She thinks she's Miss Lizzie Tish with her nose up in the air." No one seems to know the origin of "Lizzie Tish" but the term was common in the 1930s and 1940s and is still occasionally heard today.

Miss Lonelyhearts. A disparaging name for a newspaper columnist, usually a woman, who gives advice to the lost and lovelorn, typically in answer to their letters. The term is kept alive in American author Nathaniel West's masterpiece *Miss Lonelyhearts* (1933) in which a male writer takes on the job of the columnist. The British call a Miss Lonelyhearts an Agony Aunt or, rarely, an Agony Uncle, but these expressions haven't much currency in the U.S. *Agony column*, common in Britain and the U.S., dates back to the mid-19th century, when it was a column in which people advertised for missing persons.

miss Lucy. A South African fish (*Chrysoblephus gibberups*) that is also called the "red stumpnose" and several other names. Wrote one newspaper editor: "I like the name miss Lucy. Maybe in the days of the early fishermen there was a colorful character ashore known . . . as Miss Lucy and this fish was named after her."

Missouri. *Missouri* is either from the name of a Sioux tribe, "people of the big canoes," living in the region, or from an Algonquian word adapted by the French meaning "muddy water," in reference to the Missouri River. The Show Me State was admitted to the Union in 1821 as our 24th state, having previously been the Missouri Territory.

miss the boat. To miss a chance or opportunity because one is too late, as a person might be for a ship set to sail at a specific time. This American expression dates back to the early 1900s. *Miss the bus* or *train* are variations on the phrase.

mistletoe. Kissing under the mistletoe might not seem so romantic to those who know one possible origin of this word. According to some authorities, *mistletoe* derives from the Old English word *mistiltan*; *tan* means "twig" and *mistil* means

"dung." It seems that in olden times people thought mistletoe shoots sprang from bird droppings. Another theory is that *mistil* means "bird-lime" and refers to a sticky substance long used to catch birds that was made by boiling mistletoe twigs. Mistletoe, known to be poisonous, was used in connection with human sacrifices by the Druids, which is why the early Christian church forbade its use in church decoration. Kissing under the mistletoe is an English custom dating back to the early 17th century. Few people know that each kiss requires the plucking of a berry from the mistletoe and that the kissing is finished when the last berry is picked. The berries should not be eaten: They are poisonous.

mistral. A violent, cold, and dry northern wind that blows toward southern France and closeby regions. The word, dating back to the late 16th century, comes ultimately from the Latin *magister*, master.

Mistress of the Night. Not a fabled courtesan but a flower. The tuberose (*Polianthes tuberosa*) in the ancient "language of flowers" signifies "the pleasures of love." Because the strongest fragrance of their highly fragrant white flowers is released after sundown, it is called the "Mistress of the Night."

mithridatize. Mithridates VI trusted no one. Coming to the throne when only 11, this king of Pontus, an area in Asia Minor along the Black Sea, eventually murdered his mother, his sons, and the sister he had married in order to retain power, and once killed all his concubines to prevent his harem from falling into enemy hands. All his days he had guarded himself against poisoning by accustoming his body to small amounts of poison, rendering himself immune by gradually increasing these daily doses. Then, weary of his son's treachery, he decided to commit suicide and found that he had *mithridatized* himself far too well. No poison in any amount worked, for he had total immunity. Instead, he had to have a mercenary or slave stab him to death. Such is the story, anyway, that the credulous Pliny the Elder tells us about Mithridates, King of Pontus (120–63 B.C.), betrayed by the very poisons he himself had so often used to kill. A *mithridate* is the antidote to all poisons that Pliny claims Mithridates had developed. It contained 72 ingredients, none of them given by the historian. See TAKE WITH A GRAIN OF SALT.

miz. In the U.S. South, *Miz*, meaning "Mrs.," has long been a title of respect for a married woman. In Britain, however, *miz* means depressed, down, a shortening of *miserable*. A British detective novel might well be titled *The Case of the Miz. Ms.*, for *ms.* is also commonly used there.

mnemonics. See MUSES.

moai. See EASTER ISLAND.

moaningstfullest. American mountain folk like to use comparative and superlative suffixes, which can be attached to any part of speech, as in "He was the moaningstfullest hound I ever did see." *Beautifulst*, *curiousest*, and *workingst* are also good examples.

mob. Englishmen often criticize Americans for their laziness in shortening words like *fanatic* to *fan*, but they were doing the same thing long before. Early in the 17th century some British Latin scholars introduced the phrase *mobile vulgus*, “movable (or fickle) crowd,” for an excited or fickle crowd. People shortened this to one word, *mobile*, which they pronounced “mobilly,” and then further abbreviated it to *mob*. Language purists were quite indignant. “This Humour of speaking not more than we need . . . has so miserably curtailed some of our words,” Addison complained, citing *mob* as a new vulgarism. “I have done my utmost for some years past to stop the progress of ‘mob’ . . .,” Steele wrote in the *Tatler*, “but have been plainly borne down by numbers, and betrayed by those who promised to assist me.” *Mob*, of course, survived all its critics. Said Swift of the word in *Polite Conversation*, “Abbreviations exquisitely refined: as *Pozz* for ‘positively,’ *Mobb* for ‘Mobile.’”

Moby Dick. Mocha Dick, the stout gentleman of the latitudes, the prodigious terror whale of the Pacific, the redoubtable white sperm whale that fought and won over 100 sea battles against overwhelming odds—such was the reputation in the extravagant language of the time of the whale Herman Melville immortalized as Moby Dick. Melville probably first read about Mocha Dick in a piece by Jeremiah N. Reynolds in the May 1839 *Knickerbocker Magazine*; undoubtedly, though, he heard of him long before in the forecastles of ships he sailed on. The last mention in history of Mocha Dick is dated August 1859, when off the Brazilian banks he is said to have been taken by a Swedish whaler. He had already become legend when Herman Melville wrote *Moby-Dick* in 1850—Melville changing his prenomens to Moby probably to suggest his amazing mobility and to avoid association with the color mocha for his white whale. The whale had been named Mocha Dick not for his color, but after the conical-peaked Mocha Island off the coast of Chile. See MOCHA.

mocha. The Arabian Red Sea port of Mocha gave its name to the variety of coffee called mocha sometime in the early 15th century, when it was a leading exporter of coffee beans. It was only when chocolate was flavored with mocha coffee centuries later that *mocha* became the word for a chocolate brown color. Today the city of Mocha is in Yemen and is called Mukka. See MOBY DICK.

mock epitaphs. Mock epitaphs are humorous words usually invented by someone for his or her gravestone, though not for actual use. They are hardly a modern phenomenon, dating back to ancient times. Robert Benchley’s “This is all over my head” is a well-known one. So is Dorothy Parker’s “This is on me.” See ON THE WHOLE I’D RATHER BE IN PHILADELPHIA.

(a) modest man with much to be modest about. A famous insult by which Winston Churchill summed up Clement Attlee, the British prime minister who came after him in 1946. See CHURCHILLIAN.

mogul. See HIGH MUCKEY-MUCK.

Mohammedanism. See MUHAMMADANISM.

Mohawks. The Mohawk Indians were one of the smallest tribes of the Iroquois League of Five Nations, but were probably the most fierce and aggressive. In fact, *Mohawk* comes from *Mohowawok*, “man-eaters,” a name given the tribe by their enemies, the Narragansett. Living along the Mohawk River in New York State from Schenectady to Utica, the Mohawks sided with the British during the Revolution, but the British did not honor their name in English, *Mohawk* or *Mohock* being used as early as 1711 to indicate one of a class of aristocratic ruffians who infested the streets of London. These *Mohocks* were said to have mauled passers-by “in the same cruel manner which the Mohawks . . . were supposed to do,” being in Swift’s words: “a race of rakes . . . that play the devil about the town every night, slit people’s noses, and beat them.”

mohole. One of the few people to have a hole in the ground named for him is Yugoslav geologist Andrija Mohorovičić. The first two letters of his name, *Mo*, plus *hole*, give us the word *mohole*, a hole bored through the Earth’s crust for geological study.

mojo. An African-based word from the U.S. Gullah dialect that means “magical powers” or power of any type and is heard throughout the country today among both blacks and whites. Gullah in its purest form is spoken by African Americans on the Sea Islands off the Georgia–South Carolina coast.

mokusatsu. If the Japanese word *mokusatsu* hadn’t been misinterpreted, World War II might have ended sooner, atomic power might never have been used in warfare, and tens of thousands of lives might have been saved. *Mokusatsu* has two meanings: (1) to ignore, and (2) to refrain from comment. As historian Stuart Chase has written, “The release of a press statement using the second meaning in July 1945 might have ended the war then. The Emperor was ready to end it, and had the power to do so. The cabinet was preparing to accede to the Potsdam ultimatum of the Allies—surrender or be crushed—but wanted a little more time to discuss the terms. A press release was prepared announcing a policy of *mokusatsu*, with the ‘no comment’ implication. But it got on the foreign wires with the ‘ignore’ implication through a mix-up in translation: ‘The cabinet ignores the demand to surrender.’ To recall the release would have entailed an unthinkable loss of face. Had the intended meaning been publicized, the cabinet might have backed up the Emperor’s decision to surrender.” Instead, there came Hiroshima and Nagasaki.

mole. John le Carré did not originate the term *mole*, for “an undercover agent in the enemy camp,” we are told by retired intelligence officer Walter L. Pforzheimer. According to a news feature in the *New York Times* (Feb. 7, 1984), Mr. Pforzheimer’s extensive library of spy literature contains a rare Elizabethan manuscript that proves the term was coined by Francis Bacon. The sense behind the term, of course, is that a mole burrows underground and sleeps there for long periods.

moll. See GUN MOLL.

molly. Of the many tropical fish kept in millions of home aquariums only guppies are more popular than *mollies*, but few

enthusiasts know that the fish takes its feminine name from a man. Count François N. Mollien (1758–1850) wasn't a tropical fish collector—the hobby dates back only to about 1860—but a French financial genius who served several governments. Mollien was often consulted by Napoleon, who unfortunately refused to accept his advice against instituting his ill-fated “continental system.” The tropical freshwater fish genus *Mollienesia* was irregularly named in Mollien's honor and since then all *mollies* with their female nickname bear this man's abbreviated surname.

mollymawk. See ALBATROSS.

Molotov cocktail. This “cocktail for Molotov” was so named by the Finns while fighting the Russians in 1940. The Russians were dropping bombs on Helsinki at the time, but Russian statesman Vyacheslav Mikhailovich Molotov (1890–1986) claimed that they were only dropping food and drink to their comrades. This equation of food and drink with bombs quickly resulted in the black-humorous term *Molotov breadbasket* for an incendiary bomb and then *Molotov cocktail* for a gasoline-filled bottle with a slow burning wick that is ignited before the crude incendiary is thrown; when the bottle hits the ground it bursts and the ignited gasoline spreads over its target. The weapon had first been used by the Chinese against Japanese tanks in 1937. Molotov was Soviet premier at the time the Finns derisively named the “cocktail” after him. He had only the year before negotiated the infamous Russo-German nonaggression pact, which is sometimes called the Molotov-Ribbentrop pact but is best known as the Pact of Steel. Molotov, a communist from his early youth, changed his name from Skriabin to escape the Czarist police. (*Molotov* comes from *molot*, Russian for “hammer.”) He rose quickly in the party hierarchy, serving in many capacities. In 1940 the city of Perm was renamed Molotov in his honor, but the wily diplomat later fell into disfavor, being sharply attacked by Khrushchev at the 22nd Party Congress in 1961, and was expelled from the Communist Party, to which he was readmitted in 1984.

molting. Molting is a process associated with growth that involves shedding an outer covering, such as feathers, skin, or shell, the word deriving ultimately from the Latin *mutare*, to change. A vivid example of molting is seen in the lobster's shedding its hard inelastic shell. After feeding rapaciously, the crustacean lies on its side, and the membrane joining its body and tail splits across the back. Curling up into a V-shape, the lobster then begins working itself out of its suit of armor. It pulls its entire body through the narrow slit, including its claws, which must be drawn through openings only a 10th their size. The whole process takes from five to 20 minutes. With yet another skeleton of its old life behind it, the reincarnated creature crawls into a secure burrow until it grows heavier and its jellylike armor calcifies. It must do this 10 times in its first year alone.

moly. According to Homer, the Greek god Hermes gave the mythical herb moly to Ulysses as an antidote against the sorceries of Circe. A number of plants bear the name *moly* today, but none has been identified as the moly of legend.

mom and pop stores. Mom and pop stores are an old American institution; there were, for example, thousands of

candy stores run by a husband and wife team in New York City from the 1920s through the 1950s. But the term *mom and pop store* is first recorded in 1962. It is occasionally used today to describe any small business with a few employees.

moment. *Moment* has always been used to mean a portion of time too brief to be taken into account, an instant. But as the name of a definite measure of time it has varied throughout the years. Today *moment* specifically means a minute, 60 seconds, while, according to one old English time unit, a moment took 1½ minutes and in medieval times a moment was either ¼ or ⅓ of a minute. Rabbinical reckoning makes a moment precisely ⅓ hour. In 1767 a writer described a clock with three hands, “one for the hours, one for the minutes, and a third for the moments.”

momprenuer. A recent word, based on entrepreneur, that comes ultimately from the Old French for to undertake. An entrepreneur is anyone who undertakes and organizes and operates a business, while a momprenuer is a woman, usually a mother, who works out of her home, making it easier to care for her children and her business at the same time.

momser. See MAMSER.

Momus. Momus, the Greek god of ridicule, was banished from heaven for his censures upon the gods—he once blamed Zeus for not having put a window in the breast of a man that Zeus had made. His name has been used in English for a fault-finder or captious critic since at least the 16th century.

monadnock. Any mountain or rocky mass that has not eroded greatly over the ages and stands isolated in a plain. The term takes its name from a similar mountain—New Hampshire's Mount Monadnock.

Mona Lisa smile; Gioconda smile. The *Mona of Mona Lisa* is short for Madonna or Milady. Leonardo da Vinci worked over a period of four years on his celebrated portrait of Madonna Lisa, who may have been the wife of the Florentine gentleman Francesco Giocondo. Little is really known about the portrait, among the most beautiful in the world, which was completed in 1506 and is still famous for the enigmatic smile that the sitter wears, which has generally been regarded as subtly sensual, a smile of feminine mystery expressing some secret pleasure or emotion. Leonardo is said to have had music played during Madonna Lisa's sitting so that the strange rapt expression wouldn't fade from her face, but this is only one of the many legends attached to the painting, as is the story that Leonardo was in love with the lady. The painting was sold to Francis I for 4,000 gold florins and has remained a treasure of the Louvre ever since, except for a brief period when it was stolen and returned to Italy. The Mona Lisa smile is sometimes called the Gioconda smile, and the enigmatic Madonna's husband is sometimes identified as Zanobi del Giocondo of Naples rather than Florence.

monastery. Why, when a number of monks share the house called a “monastery,” does the word for that house derive from Greek *monazien*, to live alone? No one is sure, but possibly the

word, first recorded in the early 15th century, was suggested by early Christian monks such as St. Anthony and St. Paul, who lived alone as hermits in Egypt. St. Paul is said to have been 113 when he died in the third century, and his grave outside his cave is said to have been dug by two lions.

Monday. Monday was called *Monandaeg*, “the day of the moon,” by the ancient Anglo-Saxons.

Monday-morning quarterback. Someone who plans strategies or criticizes the actions of others with the benefit of hindsight and not in the heat of battle is a Monday-morning quarterback. The Americanism is from football, dating back to the early 1940s, and originally referred to the fervid fan who tells anyone who will listen on Monday morning just what the quarterback in Saturday’s or Sunday’s game should have done.

Monday’s child, etc. An old anonymous English rhyme, dating back about 150 years, says Monday’s child (a child born on a Monday) is fair of face. The rest of the rhyme goes:

Tuesday’s child is full of grace,
 Wednesday’s child is full of woe,
 Thursday’s child has far to go,
 Friday’s child is loving and giving,
 Saturday’s child works hard for his living,
 But a child that is born on the Sabbath day,
 Is fair and wise and good and gay.

Mondrian. The nonobjective paintings of Dutch artist Pieter Cornelis Mondriaan, or Piet Mondrian (1872–1944), have had a tremendous influence on 20th-century design and architecture as well as painting. His abstract geometric designs, such as *Broadway Boogie Woogie*, which hangs in New York’s Museum of Modern Art, are concerned with the geometric order underlying nature. Mondrian’s dislike of curved lines and use of only primary colors developed, starting in about 1910, when he came under the sway of the French cubists; he is regarded as one of the purest nonobjective painters. The artist’s work influenced the German Bauhaus movement, which insisted on modern, functional design in industry, architecture, and interior decoration. In the mid-1960s, various Mondrian fashions in women’s suits and dresses were named after his style, the connection often tenuous.

Monet. Said his fellow artist Cézanne of Claude Monet: “Monet has only an eye, but good God, what an eye!”

money. In Roman mythology Juno was the wife of Jupiter and queen of the heavens, the goddess whose prime responsibility, among many, was to warn people of dangers. The Romans were so grateful that she had warned them of the Gallic invasion in 344 B.C. that Lucius Furius built a temple to Juno Moneta, as she was called (her last name deriving from the Latin word *monere*, “warn”), on the Capitoline Hill. Later, the first Roman mint was attached to the temple and Juno Moneta became the goddess and guardian of finance. The coins minted there were called *moneta*, after the goddess, and the word became *moneai* in French, which later became our *money*. The word *mint*, a place where money is made, also derives from *moneta* via the old English *mynot*. See also MINT.

money bags. Keats is the first to record this term for a rich person, in 1818, according to the *OED2*. Whether the poet invented the word is not known. See PLAY THE MARKET.

money doesn’t grow on trees. Usually said, angrily, as an admonition by parents to children who spend money recklessly. This is one of the most widely known proverbs in the language, yet I can find it listed in no U.S. or UK books of quotations. Another good one is shake the money tree, “to make a great profit.” Still others include: money is the root of all evil; money talks; money bags; a fool and his money are soon parted; money’s not everything; money to burn; funny money. There must be nearly 100 of them in all. See also PIN MONEY.

money doesn’t stink. Roman emperor Vespasian (A.D. 9–79) supposedly quipped *pecunia non olet*, “money doesn’t stink,” when criticized for taxing the public urinals in Rome, these later dubbed VESPASIENNES after this frugal successor to Nero.

money is no object. According to a recent *New York Times* article, however: “On this island (Nantucket), the phrase is more than a figure of speech . . . Starter homes sell for \$800,000 or more, a coffee shop breakfast for two can top \$50, and carpenters routinely commute to work by airplane . . .”

money is the root of all evil. According to the biblical passage from which the expression derives, Paul wrote to Timothy in 1 Tim. 6:10: “For the love of money is the root of all evil.” Not the same thing at all.

money makes money. People have known for ages that money makes money, that the wealthy among us are often more successful in financial matters because they have more capital. The saying dates back to the late 1500s and may be older.

money talks. Now a folk saying rather than slang, *money talks* means that wealth is power, or money buys anything. Though it is probably older, no one has been able to trace the phrase back before 1910. J. D. Salinger used it in *Catcher in the Rye* (1950): “In New York, boy, money really talks—I’m not kidding.”

monger. See WARMONGER.

mongo. *Mongo* is trash or rubbish objects, collected from garbage cans, past and present garbage dumps, garbage dumpsters, and wherever else it can be found by intrepid foragers. The word’s origin may have first been used by sanitation workers in New York City. Mongo hunters have furnished whole apartments with mongo, have found valuable jewelry, first editions, even a Revolutionary War-era tricorne hat. For the last word on the subject see Ted Botha’s recent book *Mongo: Adventures in Trash* (2004). See also BEACH GLASS.

mongoose. The Marathi name *mangus* for this Indian animal is the basis of our word *mongoose*. The *gus* in *mangus* sounded like *goose* to British ears, even though the mongoose is not even remotely related to the goose.

moniker; monicker. A person's moniker is his or her name or nickname or alias. The word dates back to mid-19th-century England. It could be simply an alteration of *monogram*, but there are many theories about its origins. One involved theory says that hoboes called themselves "the monkery" and that because monks assume new names on taking their vows, *moniker* (as an alteration of *monkery*) became hobo slang for an assumed name.

Monitor; Merrimack; Virginia. Though the Civil War battle of the *Monitor* and *Merrimack*, the first ironclad action at sea, is a familiar one, there is usually some confusion about the name of the Southern vessel. Actually, she was launched as the *Merrimack* in 1855 at the Boston Navy Yard and was originally a wooden steam frigate. She was then seized by the Confederacy in 1861, encased while in dry dock with double layered railroad iron, renamed the *Virginia*, and then launched again in 1862. After that time she was called both the *Merrimack* and the *Virginia*, even though only the last name was correct. In fact, she was most often referred to as the *Merrimac* (without the terminal *k*) over the years, a spelling that is totally unjustified. A nickname for the *Monitor* was the *tin can on a shingle*. She was the forerunner of today's battleship.

monkey. *Monkey* may derive from a proper name. In one Low German version of the *Reynard the Fox* fable, published in about 1580, Moneke is the son of Martin the Ape. Moneke either took his name from the German surname Moneke, which has many variants, or from the Italian *monna*, "a female ape." However, it is certain that the name for monkey persisted due to the popularity of *Reynard the Fox* and the little moneke that the tale included.

monkey bars. A large three-dimensional playground structure consisting of horizontal and vertical bars (usually steel) that children can climb and swing on. Originally monkey bars were called "jungle gyms," formerly a one-word trademark, but though several sources date *monkey bars* to 1950–55, this term certainly was used at least as far back as the late 1930s, when I swung on monkey bars playing Tarzan.

monkey language. See TARZAN.

monkey's blood. Since the 17th century this has been colorful slang for red wine in the British navy.

monkey see, monkey do. Usually words heard from teasing children, this phrase dates back to about 1930.

monkey's fist. *Monkey* is generally nautical talk for anything small. A *monkey's fist*, dating back at least to the 19th century, is thus the nautical term for the knot or weight at the end of a heaving line that makes it easier to throw.

monkeyshines; monkey business. "You may have barefooted boys cutting up 'monkeyshines' on trees with entire safety to themselves," observes one of the earliest writers to use *monkeyshines*, monkey-like antics, which is first recorded in 1828. *Monkey business* was recorded a little earlier, at the beginning

of the century, both words suggested by the increasing number of monkeys imported by America's growing circuses and zoos.

monkey suit. Organ grinders used to dress their simian employees in bright-colored little coats and pants that looked ridiculous on them. Feeling that a tuxedo made him look much the same, some anonymous wit dubbed his tux a monkey suit, back a century or so ago.

monkey's uncle. Usually heard in the phrase "Well, I'll be a monkey's uncle!" The exclamation isn't used as much as it was in the 1920s, but still has some currency, expressing astonishment.

monkey's wedding. Not many Zulu words have come into the English language, but South African English includes the phrase *monkey's wedding*, rain and sunshine coming at the same time, which is said to be the translation of a Zulu expression meaning the same. No one knows, however, what a monkey's wedding has to do with mixed rain and sunshine. Perhaps there is a fable explaining the phrase, but no one has found it.

monkey talk. According to the *National Geographic* (February 2002), scientists have observed Nigerian male putty-nose monkeys repeat nonhuman (words) to their mates and offspring to warn them of predators nearby. "Many commonly repeat *pyow* or *hack* for their warning words," the scientists tell us. A sentence made of the word would be *Pyow pyow, hack hack hack hack*. (Let's leave this place and go elsewhere.)

monkey wrench. One would think that the monkey wrench was so named because the wrench's sliding jaws reminded someone of a monkey's chewing apparatus. This may be the case, but there is some reason to believe that the tool was named after its inventor. One source suggests that this mechanical wizard was London blacksmith Charles Moncke, but the British do not commonly call the tool a monkey wrench, using instead the term *adjustable spanner wrench*, or just *spanner*, so this theory is suspect. A more likely explanation turned up some years ago in a collection of clippings on word origins collected by a Boston doctor. One article from the *Boston Transcript*, appearing in the winter of 1932–33, attributed the wrench's invention to a Yankee mechanic by the name of Monk employed by Bemis & Call of Springfield, Massachusetts. Monk supposedly invented the movable jaw for a wrench in 1856 and although it was given another name at first, workers in his shop were soon calling it monkey wrench. The tale has not been confirmed, but the 1856 date coincides with the first use of the word in the *Oxford English Dictionary* (1858). None of the standard dictionaries make an attempt to trace the word's origin, not even to say that the wrench resembles a monkey's jaw, just as a crane resembles a crane's neck.

monkshood. See ACONITE.

monosyllable. See VENERABLE MONOSYLLABLE.

Monroe Doctrine. Something else named for our fifth U.S. president, James Monroe (1758–1831). Monroe Doctrine was

the name others gave to his speech before Congress on December 2, 1823, in which he warned European powers not to interfere in affairs of the American continent. *See* ADAMITE.

Monrovia. Monrovia, the seaport capital of Liberia, was named for U.S. president James Monroe in 1822 when the American Colonization Society founded it as a haven for ex-slaves from the United States. Mencken quotes a Liberian diplomat who says that the descendants of these American slaves, now Liberia's ruling class, "prefer to be called . . . Monrovia Liberians to distinguish themselves from the natives of the hinterland, who are generally called by their tribal names." Monrovia is the only world capital, except Washington, D.C., that is named for an American president.

Monsieur and Madame Veto. *See* VETO.

monsoon. 1) The seasonal prevailing wind of the Indian Ocean and southern Asia, blowing from the southwest in summer (the wet monsoon), and from the northeast in winter (the dry monsoon). 2) The season of heavy rain caused by the wet monsoon winds. The word *monsoon* comes ultimately from the Arabic word *mawsim*, season. *See* DOLDRUMS; CHINOOK WINDS

Montana. Montana, previously the Montana Territory, takes its name from the Spanish word for "mountainous." The Treasure State was admitted to the Union in 1889 as our 41st state.

monte. A card game of Mexican origin that first became popular in the Southwest. Today, three-card monte is an always crooked "game of chance" practiced by card swindlers on street corners throughout the U.S.

Monterey Jack. A mild American cheddar cheese said to have been named about 1945 after its inventor, David Jack, and Monterey County, California.

Montespan. Another of Louis XIV's favorites whose name became synonymous with "mistress." Françoise-Athénaïs de Pardailan, the marquise de Montespan, was the daughter of a nobleman, Gabriel de Rochechouart, duc de Mortemart. While serving as maid of honor to Louis's queen Marie-Thérèse in 1663 she married the marquis de Montespan. The Sun King's first mistress, La Vallière, introduced Madame de Montespan to him, which she eventually regretted, as the beautiful and brilliant woman replaced her in the king's affections. La Vallière was cruelly discarded and Montespan became Louis's mistress, bearing him seven children, all of whom were later legitimized by the crown, in addition to the two she bore her husband. In the end, however, Montespan lost out to Madame de Maintenon, her companion and the governess of her children, suffering the same fate as her predecessor. But Montespan did not give up so easily. When Louis's affections showed signs of ebbing and he turned to Madame de Maintenon in about 1673, Montespan tried resorting to magic, consulting the infamous sorceress La Voison. She even tried to poison the Sun King's food, but Louis had such fond memories of her that the assassination attempt was hushed up. In 1691, she retired to a

convent with a large pension from the king, and she died 16 years later, aged 66. *See* LAVALIERE; MAINTENON; POMPADOUR.

Montessori method. Italian physician and educator Maria Montessori (1870–1952), Italy's first female doctor of medicine, became interested in the education of mentally handicapped children and opened a school for them in 1907 in the slums of Rome. This led to her method of educating all children by stressing development of a child's own natural abilities and initiative, often in play rather than by formal teaching methods. Her child-centered approach led to her book *The Montessori Method* (1909) and the development of hundreds of Montessori schools throughout the world.

Montezuma's revenge. A euphemism for diarrhea, the words apparently dating back to about 1940 and named after the Aztec emperor who lost his empire to the conquistadors. Usually caused by impure water, the debilitating illness also goes by the names the Curse of Montezuma, the Mexican two-step or fox trot, the Aztec hop, and the Mexican toothache. In other parts of the world it is known as the Tokyo trots, the Rangoon runs, and the Delhi belly. *See* AZTEC TWO-STEP.

month of Sundays. A very long time, as in "It's taken me a month of Sundays to finish this." The expression, still heard, is a holdover from another era, when Sundays were considered long days because Christians weren't permitted to do much on them besides observe the day religiously, an obligation often enforced by laws. The expression dates back to Victorian times in England. *See* BLUE.

(a) Monus. Monus, the Greek god of ridicule, was banished from heaven for his censures upon the gods—he once blamed Zeus for not having put a window in the breast of a man that Zeus had made. His name has been used in English for a fault-finder or captious critic at least since the 16th century.

mooch. *Mooch* was first recorded in an 1857 British slang dictionary, meaning "to go about sponging on your friends." This led to the current American meaning of "to borrow, usually with no intention of paying back, to freeload or beg," as in "He's always mooching cigarettes off me." But in British English the original meaning of *mooch* has changed, and the word now means "to walk about slowly and carelessly without any purpose," or to hang out, a meaning not heard in America. "Minnie the Moocher" (telling of a low-down hoochie-coocher) is a 1931 song by Cab Calloway, which became his theme song.

Moog synthesizer. This computer-like musical instrument, able to duplicate the sounds of 12 instruments simultaneously, was named in the 1960s for its American inventor, Robert Moog.

mooncussers. Mooncussers were so called because they cussed the moon and the light that it brought, which robbed them of their livelihood. During the early 19th century, these lowlifes lured merchant ships to shore on dark nights by waving lanterns that were mistaken for the lights of other vessels. When ships were destroyed on the rocks, their cargo was

collected as salvage. Inhabitants of the “backshore” of Cape Cod were called mooncussers by American sailors. Though these people were not often accused of luring ships to their destruction, they did salvage wrecks off the cape. An old story tells of a man running up to a cape church door one stormy Sunday morning and shouting “Wreck ashore!”: “The minister called out authoritatively, ‘Keep your seats until I have pronounced the benediction,’ in the meantime making his way down the aisle as rapidly as his dignity permitted. Pausing at the door, he gave the blessing, adding, ‘And now, my friends, let’s all start fair.’”

moonglade. See quote from James Russell Lowell’s *The Biglow Papers*, 1867: “Moonglade: a beautiful word for the track of moonlight on the water.”

Moon Hoax. Quite a few Americans have walked on the moon by now and none has seen evidence of life there, but in 1835, according to *New York Sun* reporter Richard Adams Locke, the eminent British astronomer Sir John Herschel trained a new, powerful telescope on the moon and observed some 15 species of animals, including what seemed to be a race of winged men. Locke’s article, supposedly reprinted from the actually defunct Edinburgh *Journal of Science*, raised the circulation of Locke’s newspaper from 2,500 to 20,000, and inspired one ladies’ club to raise money to send missionaries to the moon. The book that the *Sun* reporter wrote based on the article sold over 60,000 copies, and was studied assiduously by a scientific delegation from Yale. Locke finally admitted his hoax the following year, calling it a satire on absurd scientific speculations that had gotten out of hand. His friend Poe, who never believed a word of the story, nevertheless admitted that it had anticipated most of his own “Hans Pfall,” which was the reason he left that story unfinished.

Moonies. A name given to the followers of Sun Myung Moon (b. 1920), founder of the controversial Unification Church, which has often been charged with the brainwashing of converts and unscrupulous fund-raising methods. An avowed anticommunist, Moon emigrated to the U.S. after the Korean War and became a successful businessman before founding his church.

the Moon is made of green cheese. Often credited to Sir Thomas More and Rabelais, this proverb actually dates back to at least the early 15th century. Even then it was assumed that anyone who believed the moon was made of green cheese, or “cream cheese,” as one writer put it, was a complete fool. Originally the expression was *The moone is made of a green cheese*. Green cheese wasn’t a cheese green in color, but a new cheese that hadn’t aged properly yet and resembled the full moon in shape.

moonlighting. *Moonlighting* has taken on the meaning of working at a second job after one’s regular job, especially by public servants such as policemen, who are sometimes prohibited from doing so. But the word dates back to at least the late 19th century when, in England and Ireland, it meant “the performance at night of an illicit action,” especially an expedition to steal or harm another’s property.

moonlit. *Moonlit* is an adjective one might have guessed had been invented by a young romantic poet, and so it was. Tennyson coined the word in his *Arabian Nights* (1830), when he was only 21: “The sloping of the moon-lit sward . . .” The British poet laureate, successor to Wordsworth, also invented *evil-starred*, in “Locksely Hall,” 1842.

moonshine. Liquor made illicitly by individuals with no distilling license; in this sense, *moonshine* dates back to the late 19th century. The name reflects the fact that the liquor was made surreptitiously, at night under the light of the moon. It was first used in this sense in America, although the British previously used the term to mean any smuggled liquor. Colorful synonyms are angel teat, Kentucky fire, squirrel whiskey, swamps dew, white lightning, and white mule.

moonshine wars. A name for the hostilities between moonshiners and federal Prohibition agents during the Prohibition era, from 1920 to 1933. Hundreds of agents and moonshiners were killed in those “wars” throughout the United States and just one small group of agents is said to have destroyed a still every day for a year.

moon shot; moon ball. *Moon shot* refers to a rocket launching aimed at sending a spacecraft to the Moon, the term first recorded in 1958, before the U.S. made a successful moon shot. In baseball *moon shot* or *moon ball* is a long, lofty home run hit far up toward the Moon. Paul Dickson, in *The Dickson Baseball Dictionary* (1989), calls *moon shot* “a space age term,” adding that “it took on new meaning in 1986 when a statistician determined that slugger Mike Schmidt hit best under a full moon.”

the moon’s reflection. The Chinese poet Li Po (c. 700–762), “a lighthearted winebiber,” fell out of a boat and was drowned when he tried to kiss and embrace the moon’s reflection in the water.

moose. Early American Indians noticed that the creature we call a moose ate tender bark that it ripped off trees. They named the herbivore *mus*, meaning “to tear away,” this Algonquian word becoming the English word *moose*.

moot point. A moot point is either a question that is debatable or a point that is purely hypothetical. The Anglo-Saxon words *mot*, “to meet,” and *gemot*, “a meeting,” are the parents of the term. In ancient times a moot was an assembly of the people, usually a court where important questions were settled by means of the public assembly. Debates on important issues were common in such courts, giving the word *moot* its present meanings. Moot courts, where hypothetical cases are discussed by law students for practice, originated at the London law colleges called the Inns of Court in the 16th century, and these moot courts reinforced the current meaning of *moot point*.

mop-up operation. Along with *concentration camp*, another horror of modern warfare, this military term traces back to the Boer War, when the British cleared the last traces of the enemy from territory they had just won—the way a housewife mops up something spilled on the floor. The word *mop* probably

comes from the Latin *mappa*, “cloth,” which also gives us the word *map*. Mop fairs, or hiring fairs, were held in England over two centuries ago, with domestics gathering on the fairgrounds ready to be inspected by potential employers.

mora. Deriving from the Italian *mora*, of unknown origin, *mora* or *morra* is a game in which one player guesses the number of fingers held up simultaneously by another player. The ancient Romans called the game *micare digitis* and a Chinese version is called *chai mei*. The game, explains one writer, “consists in showing the fingers to the other across the table, and mentioning a number at the same moment; as if one opens out two fingers, and mentions the number four, the other instantly shows six fingers, and mentions that number—if he errs in giving the complement of 10, he pays a forfeit by drinking a cup.” A similar game called “love” was recorded in England about a century earlier (1585), a player in this version holding up a certain number of fingers and the other player, eyes closed, trying to guess that number. The old game was played by Rabelais and, no doubt, Shakespeare.

mordido. Graft, a bribe. In *Texas* (1985) James Michener wrote: “[It’s] the most useful word on the border. Means *little bite*. And sometimes not so little. It’s the oil that makes Mexico run. Payola. Graft.”

more. “Lots were cast who should walk up to the master after supper that evening and ask for more [gruel] and it fell to Oliver Twist. Child as he was, he was desperate with hunger [and] he rose from the table . . . advancing to the master: ‘Please, sir, I want some more.’ The master aimed a blow at Oliver’s head with the ladle . . . ‘Oliver Twist has asked for more!’”

One of the great scenes from Dickens’s *Oliver Twist* (1837–38) and the best use of *more* in the language.

more deadly than the male. See THE FEMALE OF THE SPECIES.

more temperate than Zeno. It is said that Antigonus II, trying to tempt the philosopher Zeno of Citium (c. 335–c. 263 B.C.) with luxury, invited him to be his houseguest. Zeno sent his pupil Persaeus in his place. The philosopher’s life was so consistent with his teachings that the saying more temperate than Zeno became proverbial in his lifetime. See also A BITING REMARK.

more than one way to skin a cat. *There are more ways of killing a cat than choking it with cream* was the older form of this British expression. This implied that the method under discussion was rather foolish, since cats like cream and wouldn’t likely choke to death on it. But the saying evolved until it took on its present meaning—that there are more ways than one of accomplishing an undertaking. The expression shouldn’t be confused with the American saying *skinning the cat*, which describes the maneuver where a child, hanging from a tree branch, draws up his legs through his arms and over the branch and pulls himself into a sitting position atop the branch.

morganatic marriage. See LEFT-HANDED COMPLIMENT.

Morgan horse. The Morgan is one of the first horse breeds developed in the United States. A bay stallion named Figure was foaled in 1789 in Springfield, Massachusetts. He belonged to Justin Morgan (1747–98), a Vermont schoolteacher. The horse bearing Morgan’s name was probably a blend of thoroughbred and Arabian with other elements, fairly small at 14 hands high and 800 pounds. Morgan, an aspiring musician, bought his colt in Massachusetts, naming him Figure and training him so well that he won trotting races against much larger thoroughbreds. Eventually, Figure came to be called after his master. After his owner died, the horse was bought and sold many times in the 28 years of his life. One of those unusual horses whose dominant traits persist despite centuries of inbreeding, his individual characteristics remain essentially unchanged in the Morgan breed of horses he sired. Morgans are still compact, virile horses noted for their intelligence, docility, and longevity, many of them active when 30 years of age or more. Heavy-shouldered, with a short neck but delicate head, they are noted for their airy carriage and naturally pure gait and speed. Morgans were long the favorite breed for American trotters until the Hambletonian strain replaced them.

Mormon. The name of members of the Church of Jesus Christ of Latter-day Saints, which is centered in Salt Lake City, Utah. *Mormon* derives from the name of the fourth-century prophet said to be the author of writings found by Joseph Smith and published in 1830 as the *Book of Mormon*. “Mormon Church” is a common but unofficial name for the Church of Jesus Christ of Latter-day Saints.

Mormon City. An old name for Salt Lake City, Utah.

Mormon crickets. Early Mormon settlers knew of no way to fight the wingless locustid (*Analrus simplex*) and were left to rely on their prayers. (See GULL). The Mormon cricket remains a formidable problem in Utah today, destroying over \$25 million in crops in 2001. These “eating machines” will eat anything, even themselves, according to the U.S. Agriculture Department. They have been plaguing Utah farmers for over a century and a half, and there is no end in sight.

Mormon State. A popular nickname for Utah, which was of course settled by Mormons. Utah calls itself the Beehive State and its state seal depicts a beehive and bees representing the industry of its people. It is also called the Deseret State (*deseret* is a word in the *Book of Mormon* signifying a honeybee), the Land of the Mormons, the Land of the Saints, and the Salt Lake State. See UTAH.

Mornay sauce. French Protestant leader Philippe de Mornay (1549–1623) invented *sauce Mornay* for King Henry IV. Made with fish broth, the white sauce is enriched with Parmesan and Gruyere cheese and butter. Popularly known as the Protestant Pope, Mornay was Henry’s right-hand man until the king converted to Catholicism and the Seigneur Duplessis-Mornay fell out of favor. After Henry’s assassination, Louis XIII finally retired Mornay as governor of Saumur because of his opposition to the government’s rapprochement with Catholic Spain. Mornay’s spiritual writings and organizing abilities strongly influenced the development of a Protestant party in France.

morning glory. Because the morning glory only opens its flowers in the morning, it has been used as a synonym for a person who begins something brilliantly but does not fulfill his or her promise. The expression dates back almost a century in American sports. This honeysuckle (*Ipomoea purpurea*) takes its genus name from the Greek for “worm” and “similar,” in allusion to its twining habit.

moron; amp. It is often noted that *moron*, as a scientific designation for a feeble-minded person, was the only word ever voted into the language. It was adopted in 1910 by the American Association for the Study of the Feeble Minded from the name of a foolish character in Molière’s play *La Princesse d’Élide*. This claim overlooks the fact that the unit of electric current called an *ampere*, or *amp*, was adopted at the International Electrical Congress held in Paris 29 years earlier. The ampere, the unit by which the strength and rate of flow of an electric current can be measured, was named for the brilliant French scientist André-Marie Ampère (1775–1836). His name also gives us such technical terms as *amperehour*, *Ampère’s law*, *ampere-turn*, and *amperometric titration*.

morpheme. A *morpheme*, from the Greek *morphema*, “unit of form,” is the smallest part of speech that conveys a meaning. In the word *dogs*, for instance, *dog* is one morpheme, while *-s*, indicating plurality, is another.

morphine. The narcotic drug takes its name from the Roman poet Ovid’s name for the god of dreams, Morpheus, who is the son of Hypnos, the god of sleep. His name, in turn, is based on the Greek *morphe*, form, with allusion to the forms or shapes seen in dreams. To be IN THE ARMS OF MORPHEUS is to be asleep.

Morris chair. Something of a Renaissance man was English poet, artist, and pamphleteer William Morris (1834–96). His collected works fill 24 volumes, and it would take a good many volumes to do justice to his full life. In addition to his poetry and art, Morris found time to help establish Britain’s Socialist Party and can be counted an architect, interior decorator, master craftsman, novelist, translator, editor, publisher, and printer as well. In 1861 he founded a company to reform Victorian tastes by producing wallpaper, furniture, stained glass, metalware, and other decorations. Thus began the arts and crafts movement in Britain, which emphasized naturalness and purity of color in objects produced by hand. Among the furniture made by the company was the Morris chair, a large easy chair with an adjustable back and removable cushions.

Morris dance. The Morris dance, originally a “Moorish dance,” derived from the ancient military dances of the Moors. Introduced into England from Spain by John of Gaunt in about 1350, its name in French was *danse mauresque* and in Flemish *mooriske dans*. But the dance, which used the tabor as an accompaniment, eventually assumed a very British flavor. It was usually performed by groups of five men and a boy—the five miming Robin Hood, Little John, Friar Tuck, Allan-a-Dale, and other characters from the Robin Hood stories, while the boy played Maid Marian. Generally danced on May Day and in various processions and pageants, the fantastic spectacular was

banned by the Puritans but was later revived. It has been revived recently with the renewed interest in folk dancing.

Morrison shelter; Morrison mousetrap. A portable World War II bomb shelter or air-raid shelter. The British indoor shelter was made of steel and shaped like a table. Two or three people could fit under it, and it was commonly used as a table when not employed during an air raid. It is named after British home secretary Herbert S. Morrison (1888–1965), who possibly did not like the shelter’s slang name: “Morrison mousetrap.”

Morse code. “What hath God wrought?” were the famous words sent in Morse code by its inventor on May 24, 1844. Samuel Finley Breese Morse (1791–1872) had begun experimenting with his electric telegraph 12 years earlier, and Congress later granted the penniless inventor \$30,000 to build the experimental line from Washington to Baltimore over which he sent his historic message. The Morse code he invented in conjunction with his telegraph was first called the Morse alphabet and is of course a system of dots and dashes representing letters, figures, and punctuation, the dash in the system equaling three times the length of the dot in time. Morse didn’t start out as a scientist. After graduation from Yale, he studied in England and began a career in art, earning a reputation as a portrait painter. Though his interest in electricity began during his college days, he was unaware that a number of telegraphs had been independently invented before 1830. Morse was forced to defend his invention in various patent suits, but emerged a victorious and very wealthy man.

mortal coil. Shakespeare, of course, made this term famous in *Hamlet*, but many who use the phrase have some vague idea that the *coil* in it is a synonym for the globe or sphere. This is not so, the *coil* here deriving from Elizabethan slang for turmoil or bustle.

mortarboard. The caps worn with their gowns by high school and college graduates in America were apparently named by some anonymous mid-19th-century wit who thought they resembled the square boards masons still use for holding mortar. The cap began life as ecclesiastical headgear in the 17th century and wasn’t worn by university students until the early 1800s or thereabouts.

mortgage. English jurist Sir Edward Coke explained in the early 17th century why the Old French expression *mortgage* meant “dead pledge,” taking its name from *mort*, “dead,” and *gage*, “pledge”: “It seemeth that the cause why it is called mortgage is, for that it is doubtful whether the Feoffer will pay at the day limited such summe or not & if he doth not pay, then the land which is put in pledge upon condition for the payment of the money, is taken from him for ever, and so dead to him upon condition, & c. And if he doth pay the money, then the pledge is dead as to the Tenant . . .”

mosaic. The two words *mosaic*, “a design or picture made from small pieces of stone or other material,” and *Mosaic*, referring to the prophet Moses, are unrelated. In fact, the strict Jewish and Muhammadan interpretations of the Ten

Commandments Moses brought down from Mount Sinai hold that the second Commandment forbids the making of any likeness of anything, so the capital letter in *Mosaic* is an important distinguisher. The word for the design *mosaic* comes to us via French and Latin from the Greek *Mousa* (“a Muse”), *mosaic* work being associated with the Muses in ancient Greece. See MOSES’ CRADLE.

moscato. Everything is not swell with muscatel. *Moscato*, or *muscatel*, is a rich, sweet wine. According to Bill Bryson’s excellent *Mother Tongue* (1990), its name in Italian means “wine with flies in it.” *Mosca* means “fly” in Italian.

Moses’ cradle; Mosaic code. A Moses’ cradle is a shallow wicker bassinet, its name deriving from the basket made of bullrushes that Moses’ mother hid him in when oppressed Israelites were ordered to kill all their male children (Exod. 2:1–5) Pharaoh’s daughter found the child, named him Moses, “Because I drew him out of the water,” and let his mother nurse him. As a young man, Moses, who grew up in the splendor of the court, killed an Egyptian oppressing a Jew and fled into the wilderness, but at the age of 80 he was called by God, through a voice from a burning bush, to return to Egypt and free the Hebrews. Pharaoh refused God’s demand until 10 plagues were sent and Moses then led his people to Mount Sinai. For 40 years after he led them through the wilderness, drawing up religious and ethical rules known as the Mosaic code during this time. The first five books of the Bible, the Hebrew Torah or the Pentateuch, are regarded as Moses’ work. After viewing Canaan from Mount Nebo, he died alone at 120, his people compelled to wander in the wilderness until one generation had passed away because they had rebelled against crossing into the Promised Land. See MOSAIC.

mosey. According to *Webster’s* and most authorities the Spanish *vamos*, “let’s go,” became *vamoose* in American English, which begot the slang word *mosey*, “to stroll or saunter about leisurely.” But it is possible, one theory holds, that the word instead takes its name “from the slouching manner of wandering Jewish peddlers in the West, many of whom were called Moses, Mose, or Mosey.” Neither explanation seems ideal, but nothing better has been offered.

mossback. A very conservative person, a reactionary. The term is said to have been coined to describe draft-dodging southerners who hid out in the swamps so long that moss grew on their backs. These mossybacks weren’t forgotten after the Civil War, for by the early 1880s their derogatory name began to be used as an epithet for extremely conservative political factions.

the most unkindest cut of all. “This was the most unkindest cut of all,” Shakespeare had Antony say in *Julius Caesar*. This most famous of literary double superlatives wasn’t the only such “grammatical crudity” he used. The double superlative and double comparative (“more larger”) were considered excellent devices for emphasis, by Elizabethan writers. So were multiple negatives like the Bard’s “Thou hast spoken no word all this while—nor understood none either.”

most used letters. E, T, A, O, L, and K, are the most used letters in English, according to one critic. Another opts for the letter *e* as the most commonly used letter in English. It is, he says, followed in order of use by *t, a, i, s, o, n, b, r, d, l, u, c, m, f, w, y, p, g, v, k, j, q, x, z.*

motel. Most sources credit West Coast motor lodge owner Oscar T. Tomerlin with coining the word *motel* in 1930, Tomerlin welding it together from *motor hotel*, which he had previously called his place. But in her book *Palaces of the Public, A History of American Hotels* (1983) Doris E. King says that the word originated in 1925 with a San Luis Obispo, California establishment that offered a garage with its roadside cottages and called itself a *Mot-el Inn*. See NO-TEL MOTEL.

moth-eaten. People have been using this expression for at least 600 years to describe something eaten by moths or old. However, it isn’t adult moths, but moth larvae that destroy clothing that isn’t stored properly. The moths we see fluttering around in the closet don’t eat clothing, and some species eat nothing at all during their brief adult lives.

Mother Carey’s chickens. *Mother Carey’s chickens* is a mystery because no real Mother Carey has ever been found. But many etymologists uphold Brewer’s theory that the phrase is a corruption of the Latin *Mater Cara* (“Dear Mother”), another name for the Virgin Mary. However, in the absence of evidence, Ernest Weekley’s conclusion in *The Romance of Words* still seems best: “Mother Carey’s chickens, probably a nautical corruption of some old Spanish or Italian name; but, in spite of ingenious guesses, this lady’s genealogy remains as obscure as that of Davey Jones or the Jolly Roger.” The sea birds are also called PETRELS.

motherese. The sounds a mother makes to comfort her baby when she has to set it down. According to the *National Geographic* (November 2006), the helplessness of human babies could even lie at the root of speech, which could have evolved from *motherese*.

Mother Goose. The famous book of nursery rhymes often called *Mother Goose’s Melodies* is said to have been printed in Boston in 1719 by Thomas Fleet, from verses his mother-in-law, Mrs. Elizabeth Goose, created or remembered and repeated. There is no doubt that Mrs. Goose (1665–1757) existed. She was born Elizabeth Foster in Charlestown, Massachusetts, and at the age of 27 married Isaac Goose (formerly Vergoose) of Boston, inheriting 10 stepchildren and bearing six children of her own. One of her daughters married the printer Fleet, who had a shop on Pudding Lane in Boston. At this point the facts become unclear, yielding, at any rate, many a good story.

mother-in-law plant. A common name for *Dieffenbachia seguline*, which itself honors 19th-century German botanist J. F. Dieffenbach. *Dieffenbachia* is called the “mother-in-law plant” and “dumbcane” because an irritating enzyme in the leaves of this houseplant causes swelling of the tongue and temporary speechlessness should they be chewed. But no one should wish *Dieffenbachia* poisoning on a mother-in-law or anybody else;

it is a dangerous, painful condition requiring prompt medical care.

mother lode. In contemporary speech, *mother lode* is used as a synonym for “jackpot.” Its literal meaning since the 1880s is a principal vein of ore in a mine; also, capitalized, the Mother Lode of the Sierra Nevada, a great California quartz vein running from Mariposa to Amador.

mother of all; Mother of Parliaments; mother of all bombs. The phrase *mother of all* was overused at the time of the Persian Gulf war (1991) and is less often heard today. It was employed in constructions like *the mother of all guns*, *the mother of all wars*, *the mother of all ships*, etc. *Mother*, of course, has been used figuratively for centuries for the utmost or origin of anything, as in *Mother of Parliaments*, a British expression coined by John Bright in 1865. The *moab* is a fearsome U.S. bomb developed at the time of the second Iraq War (Operation Iraqi Freedom) but not used in combat. The acronym stands for *mother of all bombs*.

Mother of States. Usually applied to Virginia, because it was the first state settled by the English, this nickname has also occasionally been given to Connecticut.

the mothers. Used as a synonym for “wives” by fundamentalist Mormons.

Mother’s Day; Mothering Sunday Founded by Julia Ward Howe, the American poet who wrote “The Battle Hymn of the Republic,” shortly after she returned to Boston from Europe on a crusade for world peace in 1872. Howe called for June 2 to be set aside for “Mothers’ Peace Day” and beginning with Boston, many cities and states adopted the tradition before President Woodrow Wilson authorized Mother’s Day as a national holiday in 1915. Today it is celebrated on the second Sunday in May. Father’s Day, the third Sunday in June, is set aside to honor fathers.

The original Mother’s Day was what the British call Mothering Sunday, the fourth Sunday in Lent, also known as Laetare Sunday or Mid-Lent Sunday. Children since the 19th century have customarily given presents to their mothers on this day, hence its name. But the first Mother’s Day was celebrated in the U.S. in 1908, when Congress resolved that the second Sunday in May be recognized as the national day to honor mothers. Mother’s Day is widely accepted in Britain today, but the British also celebrate Mothering Sunday.

Mother Shipton. A female NOSTRADAMUS, Mother Shipton is a legendary figure in English literature who is supposed to have foretold the death of Cromwell and the great London fire of 1666, among other accurate predictions. According to the *Life of Mother Shipton*, written by Richard Head in 1667, more than a century after her death, her real name was Ursula Shipton and she lived in Knaresborough, Yorkshire, from 1488–1561. Born Ursula Southill or Southiel, her peasant mother was regarded as a witch by villagers, and Ursula appears to have been so ugly that she was called the “Devil’s child,” though not so ugly as to prevent a builder named Tobias Shipton from marry-

ing her. Virtually nothing is known about her life, all the “facts” at best traditions, but Mother Shipton’s prophecies, like Mother Nixon’s, had a phenomenal hold on the minds of rural folk until as late as 1881. In that year the rumor that she had predicted the end of the world caused people to flee their homes and pray in the fields and churches all night. It developed that this prediction, along with others foretelling the coming of the steam engine, telegraph, telephone, and other modern inventions arose out of a forgery of the early *Life* by Charles Hindley, in which he added many “predictions” that had already come to pass.

motive-hunting of a motiveless malignity. Thus did Samuel Taylor Coleridge (1772–1834) describe the villain Iago’s soliloquy in Shakespeare’s *Othello* (at the end of act one, scene three), which shows Iago trying to rationalize the hostility he feels. The full quote of the famous phrase is “Iago’s soliloquy, the motive-hunting of a motiveless malignity—how awful it is!” The observation is from Coleridge’s *Lectures on Shakespeare and Milton* (1811–12). In that same work he coined his homely definitions of prose and poetry: “Prose—words in their best order; poetry, the best words in their best order.”

mot juste. French for the perfect or appropriate word.

Motown. A much-used nickname for Detroit, Michigan, a shortening of *Motor Town*, referring to all the cars made in America’s automobile capital. Since the 1950s *Motown* has also described the upbeat, pop-influenced music made by such black artists as Stevie Wonder, the Supremes, and Marvin Gaye that was first produced on records by the black-owned Tamla Motown label in Detroit. This music is often called the “Motown sound.”

mountain lion. The North American panther or cougar. The name originated in the Colorado Rocky Mountains over a century ago.

mountain man. Men, much celebrated in song and story, who had great skills for living off the land in the mountains. Usually a guide, trapper, or trader in the Far West before the region was settled.

Mountain of Light. A translation of the Persian *Koh-i-Noor*, the name of the 106-carat diamond that is one of Britain’s Crown jewels and has been kept in the Tower of London since it was given to Queen Victoria with the annexation of the Punjab in 1849. Every queen of England has since worn it at least once.

mountain oysters. See PRAIRIE OYSTERS.

Mount Bote. In his *Strangers in High Places* (1966) Michael Frome tells a story about how this mountain in the Great Smokies got its name through a mispronunciation: “In the 1850s a road was built from Cades Cove to the Spence Field on Thunderhead Mountain. Since there were no engineers to lay out the route, it was left to the decision of the builders, some of

whom were Cherokee, as to which ridge the road should follow. As each Indian was asked his opinion, he reportedly pointed to the westernmost ridge and said 'Bote' to indicate how he voted. There being no V sound in the Cherokee language 'Bote' was as near as they could frame the word; thereafter it was Bote Mountain, while the other ridge, the loser, became Defeat Ridge." See GREAT SMOKIES.

Mount Desert. An island off the Maine coast south of Bangor. Wrote Norman Mailer in *Harlot's Ghost* (1991): "... Mount Desert—indeed, one's affection for the island even shares the local accent. As detected by the natives, one spells it Mount Desert, but the pronunciation is Mount Dessert. The view is as fine as sugar frosting to a New Englander's eye."

mountebank. Quacks often sold their nostrums at medieval fairs by mounting a bench and giving their pitch—so often that they were given the name *mountebanks*, from the Italian *montambanco*, "mount on bench."

Mount Everest. The highest mountain in the world (29,028 feet), in the central Himalaya mountains on the border of Tibet and Nepal, takes its name from Sir George Everest (1790–1866), the British surveyor-general of India from 1830–43. Sir George never reached the top of the mountain, however. Not until 1953 did climber Edmund Hillary (later knighted for his accomplishment) and the Sherpa guide Tenzing Norgay become the first men to reach the summit.

Mount Rushmore. The colossal busts of Presidents Washington, Jefferson, Lincoln, and Theodore Roosevelt are carved on the face of the Mount Rushmore National Memorial in South Dakota, but the mountain itself is named for an obscure New York lawyer who was sent to the area by businessmen eager to know if mineral rights would be a good investment there. Young Charles Rushmore, traveling all over the Black Hills, was well liked by miners thereabouts, and one story has it that when a stranger inquired about the name of a local hill, a worker jokingly replied, "Why that's Mount Rushmore." The name stuck. The story, which may be apocryphal, is from a letter to the *New York Times Book Review* (12/22/02).

Mount Vernon. See GROG.

mourning dove. The American bird gets its name from both its often incessant mournful cry and its dull grayish blue plumage. It is also called the turtledove, wild dove, old-field dove, and Carolina dove or pigeon.

mourning tree. Once cut, the cypress never grows again, which probably led to its being dedicated to Pluto, the king of the infernal regions in Roman mythology. For this reason the beautiful *Cupressus funebris* was often planted in cemeteries along the Mediterranean and its wood was used to make coffins, the tree often referred to as the *mourning tree*.

Mouse-trap; The Mousetrap. Shakespeare and Agatha Christie, an unlikely combination, share the use of this play title. The

Mouse-trap is from Shakespeare's *Hamlet* (1601), in which it is the play about fratricide arranged by Hamlet to be presented by a troupe of visiting players. Agatha Christie's *The Mousetrap*, a mystery, had the longest run of any play in history, with over 10,000 performances when it closed, bringing millions to the author's nephew, to whom she gave all the royalties as a gift when the play opened.

mousse. See CHOCOLATE MOUSSE.

moustache. This is the British spelling of mustache (qv).

mouth-watering. Cavemen 100,000 years ago surely felt their mouths watering over the smell and sight of meat roasting in their fires, but this expression somehow wasn't recorded until 1555 in English. Soon after, this term for appetizing came to be used figuratively as well as literally.

moveable feast. A church feast that doesn't fall on the same date every year, that isn't "fixed." *A Moveable Feast* (with an "e" in the title) is a 1964 memoir by Ernest Hemingway consisting of sketches of the author and his many friends and acquaintances in Paris, 1921–26.

movie; film. The most popular name for American motion pictures is *movies*, a word first recorded in 1906. At first the motion picture industry regarded this term as undignified, but by the 1930s all opposition had faded. Many designations were used before *movies*, including *motion pictures* (1891), *picture show* (1896), and *moving pictures* (1898). *Films*, *cinema*, and *flicks* are also heard though these are primarily British variations. The word *film* itself was not recorded until 1905. See MOVING PICTURES; ROMAN NOIR.

movie sexperts. "Goodness, where did you get that necklace?" a friend asked Mae West.

"Never mind," Miss West responded, "but you can take it from me that goodness had nothing to do with it." This became the title of her autobiography.

"How did you get to know so much about men?" gossip columnist Hedda Hopper once asked the irrepressible Miss West.

"Baby," Mae replied, "I went to night school."

Told about a certain promiscuous actress, Dorothy Parker observed, "That woman speaks 18 languages and she can't say 'no' in any of them."

"What do you wear when you go to bed?" a reporter asked Marilyn Monroe.

"Chanel No. 5," she answered. (Another version has her saying she put on nothing but the radio).

moving picture. This synonym for a movie, film, flick, motion picture, etc., has a longer history than one would think. The term dates back to the early 18th century, when it was first used to describe picture books flipped quickly to give the effect of motion. These flip books, known since ancient times and still common today, suggested other devices called moving pictures and the term was finally applied to the cinema two centuries later.

moxie. The rather bitter, tart, unsweetened flavor of Moxie, a popular New England soft drink, or tonic, as soda pop is often called in the area, has been suggested as the reason it yielded the slang word *moxie*, for “courage, nerve, or guts.” Or maybe, Moxie braced up a lot of people, giving them courage. These are only guesses, but the tonic, a favorite since at least 1927, is definitely responsible for *a lot of moxie* and other phrases, which, however, aren’t recorded until about 1939. But Moxie was originally made in 1884 as a patent medicine nerve tonic said to cure “brain and nervous exhaustion, loss of manhood, softening of the brain, and mental imbecility.” This goes far in explaining *moxie*, “nerve or courage,” if earlier uses for the term could be found. In any event, Moxie’s Lowell, Massachusetts makers fizzed up their product toward the turn of the century when the government began cracking down on their health claims and Moxie became America’s first mass-market soft drink, the company even selling their product in “Moxie-mobiles,” car-shaped bottles.

Mr.; Mrs. Because it was originally an abbreviation of *mistress* (wife), a word that has completely changed its meaning since then, *Mrs.* can no longer be spelled out in full form and is considered a word in itself—unlike *Mr.* which can be written out as *Mister*.

Mr. Charlie. Originally a slave term for a boss or overseer, *Mr. Charlie* is now black slang for a white man or white people in general. Also heard as *Charlie*, *Charles*, *Chuck*.

Mr. Clean. Someone very clean, untouched by scandal or corruption; someone obsessively clean. The eponym here is the liquid cleaner Mr. Clean introduced in the late 1950s. The Mr. Clean pictured on the bottle and in ads was a bald muscular man who inspired a rash of bad jokes (“He found his wife on the floor with Mr. Clean”).

Mr. Micawber. A *Mr. Micawber* is an incurable optimist and to be *micawberish* is to be incurably cheerful and optimistic. The words honor Mr. Wilkins Micawber of Dickens’s *David Copperfield*, one of the immortal author’s immortal characters. Mr. Micawber fails at every scheme he tries, but remains certain that “something will turn up,” and is always optimistic and cheerful. No fool, he is an honest, able man and his optimism does prevail, for he finally emigrates to Australia and becomes a magistrate.

Mrs. Grundy.

They eat, and drink, and scheme, and plod,
And go to sleep on Sunday—
And many are afraid of God—
And more of Mrs. Grundy.

These lines from Frederick Locker-Lampson’s poem “The Jester” (1857) were inspired by a character in British playwright Thomas Morton’s comedy *Speed the Plough*, first staged at London’s Covent Garden in 1800. Actually Mrs. Grundy is something less than a character, for she never appears on stage and is never described physically. She is the epitome of propriety, the narrow-minded, straitlaced neighbor of Farmer Ashfield and Dame Ashfield, his wife, who is obsessed with Mrs. Grundy’s

opinion of things. “What will Mrs. Grundy say? What will Mrs. Grundy think?” is on Dame Ashfield’s lips so often that the words became proverbial for “What will that straitlaced neighbor say? What will the neighbors think?” and Mrs. Grundy herself became a symbol of prudish propriety or social convention. Dickens’s Mrs. Harris, the mythical friend of Sara Gamp in *Martin Chuzzlewit* (1843) is a similar character. See BOX AND COX.

Mrs. O’Leary’s cow. Mrs. Patrick O’Leary’s cow has had more abuse heaped upon it than any cow in history, for something it didn’t do. Mrs. O’Leary was supposed to have been milking her cow on the morning of October 8, 1871, when bossie kicked over a kerosene lamp in the barn and started the great Chicago fire that killed 250 people and caused some \$300 million in property damage before it was contained. No one knows how the fire really started (perhaps by spontaneous combustion in the O’Leary’s haymow), but in 1924, two years before his death, Chicago newspaper reporter Michael Ahern admitted that he had invented the tale to make his stories about the blaze more colorful.

Mrs. President. See HONEST ABE.

Mrs. Robb’s Bonnet. Mrs. Robb wanted to bring a beautiful plant she had found to England from Turkey, in the early 1890s. Having no container in which to transport the plant, she sacrificed her hat and used her hatbox to carry the plant, which became known scientifically as *Euphorbia robbiae* and popularly as *Mrs. Robb’s Bonnet*.

Mr. Watson, come here: I want you. This was the first complete sentence transmitted over the telephone, by American inventor Alexander Graham Bell to his assistant Thomas A. Watson on March 10, 1876. See AHOY; TELEPHONE; TELEGRAPH.

Mr. W. H. Shakespeare’s sonnets, published in 1609 by Thomas Thorpe but dating back to the 1590s, were dedicated to “Mr. W. H., the onlie begetter of these insuing sonnets.” Who W. H. is remains a mystery after almost four centuries. There are numerous candidates, four favorites among them: 1) Henry Wriothesley, third earl of Southhampton, to whom Shakespeare had dedicated *Venus and Adonis* (1593) and *The Rape of Lucrece* (1594); 2) William Herbert, the third earl of Pembroke, to whom the *First Folio* was dedicated; 3) Sir William Harvey, the earl of Southhampton’s stepfather; and 4) an anonymous friend of publisher Thorpe who procured the manuscript for the publisher. Also in contention are a mistress who betrayed Shakespeare with a friend; a dark beauty the Bard loved; and a rival poet. Oscar Wilde’s *The Portrait of Mr. W. H.* is an amusing attempt to establish W. H.’s identity.

Ms. This widely used title for a woman (pronounced “Miz”) only dates back to 1950, no mention of it found anywhere before the following note in the scholarly journal *Word Study* (October 1950), which explains its origins and reveals its inventor: “An old problem, with a suggested solution, is discussed by Roy F. Bailey of the Bailey-Krehbiel Newspaper Service in Norton, Kansas. Mr. Bailey believes that we should have a word

with which to address a woman whether she is married or single. Many women sign their names without indicating their marital condition. Many firms, when they are unable to discover what the condition is, write 'Miss.' Mr. Bailey suggests 'Ms' to stand for either *Miss* or *Mistress* and as an equivalent of 'Mr.'

Much Ado About Nothing. The title of Shakespeare's great comedy *Much Ado About Nothing* (1598–99) is said by linguistics scholar John McWorter to be word play upon "Much Ado About an O Thing." The female genitalia, he advises, is the O Thing. Dr. McWorter's most recent book is *The Power of Babel* (2005).

much ado about nothing. Shakespeare contributed this common saying to the language, making it the title of his popular comedy *Much Ado About Nothing* (1598–9), which used as its chief source a novella by Italian writer Matteo Bandello. There are many equivalents in other languages of this expression, including *A great vineyard and few grapes* (Portuguese); *Much smoke but a small roast* (Spanish); and *Much bleating, little wool* (German).

mucilage. See NOSE.

muckluk telegraph. In Canada *muckluk telegraph* is a humorous term for word of mouth. *Muckluk* alone means "warm, sturdy boots" made from seal fur that Eskimos wear, or a similar boot. The term derives from the Inuit for "large seal."

muckraker. Teddy Roosevelt used the expression *man with the muckrake*, taken from *Pilgrims Progress*, as a derogatory term for those who indiscriminately and irresponsibly charged others with corruption. Lincoln Steffens and other reformers, however, gladly wore the epithet *muckraker* as a badge of honor.

mucus. See NOSE.

mud. See HIS NAME IS MUD.

muff. Not much used today, a muff is a thick tubular case for the hands that is covered with fur and used mostly by women to keep their hands warm. Around the turn of the century, the word was first used to describe a baseball player who misses an easy catch, one who makes a play as if his hands were in a muff.

mug; mugging; mugger. Mugging seems first to have been New York City slang for what was called "yoking" in other parts of the country, that is, robbery committed by two holdup men, one clasp the victim around the neck from behind while the other ransacks his pockets. The term either derives from the "mugs" who commit such crimes or from the expression on the victim's face as he is brutally yoked, which can appear as if he is mugging, grimacing, or making a funny face. The term is now well-known throughout the country. As often as not the *mugger* acts alone today, and *mugging* has become a synonym for holding someone up. The spelling "mugg" seems to be yielding to *mug*. The word *mug*, for "a grimace" was

introduced to England by the Gypsies and may derive from the Sanskrit word *mukka*, "face." *Mug* was used as slang for "face" in Britain as early as 1840. *Mug* for a heavy cup may come from the Swedish *mugg* meaning the same.

mugwump. The term for great chief in Algonquin Indian dialect sounded like "mugquomp" to settlers in what is now the northeastern U.S. and soon came to mean any pompous "big shot," its spelling altered to a simpler *mugwump*. A century later *mugwump* took on another meaning in politics when regular Republicans attached it to those Republicans who bolted the party to support Democrat Grover Cleveland, instead of the corrupt James Blaine. Since then any party member who doesn't accept the party leadership and supports the opposition is called a mugwump.

Muhammad Ali. The chosen name of Cassius Clay, which many African Americans considered a "slave name." Ali, born in 1942, was a U.S. boxer who held the Olympic light-heavyweight championship in 1960 and became the world professional champion four years later. He was a true boxer complete with fancy footwork and stinging punches, although he had a knockout punch as well. The only man to regain the title twice, he was noted for his quick wit and little poems, such as:

You don't want no pie in the sky when you die,
You want something here on the ground
While you're still around.

Muhammadanism. Muhammad (or Mohammed, or Mahomet) "the praiseworthy," was the title given to the founder of the Muslim religion, his original name having been Kotham or Halabi. The prophet of the Arabs was born after his father's death in about A.D. 570, grew up as an orphan in Mecca, and died in Medina in 632. A camel driver at 25, he married his employer, a rich widow 15 years his senior, who became the first of his 10 wives. Muhammad was 40 when he felt he had been called to be a prophet and began receiving messages he believed were from God, who commanded him to relay them to his countrymen. He called the monotheistic religion he preached Islam, not Muhammadanism, its keystone being that "There is no God but Allah and Muhammad is his prophet." See IF THE MOUNTAIN WILL NOT COME TO MUHAMMAD.

mujahedeen. So often has this word been heard in the war against terrorism (2001) that it will almost certainly be used figuratively before long. *Mujahedeen* is Arabic for "warriors of the Holy War" and refers to the fundamentalist Muslims throughout the world fighting such a war, or *jihad*. These holy warriors are usually guerrillas or terrorists today. According to William Safire's *On Language* column in the *New York Times* (11/9/01), *mujahedeen* isn't recorded in English until 1922. The word isn't listed in any major English dictionary. Its singular form is *mujahid*, and among several alternative spellings of *mujahedeen*, all correct, is *mujahidin*.

mulberry. Legend has it that the mulberry takes its botanical name, *Morus* from the Greek *morus*, meaning "a fool." According to the *Hortus Anglicus*, this derivation is related to the fact that it "can't be fooled," that the tree "is reputed to be the wisest of all flowers as it never buds till the cold weather is past and

gone.” As for the word *mulberry* itself, which should properly be *morberrry*, it more prosaically derives from the Latin *morus*, which became *mure* in French. The English called the berry the “mureberry” at first, but this was difficult to pronounce (too many *r*’s) and was eventually corrupted to *mulberry* in everyday speech. An ancient legend recounted in Ovid’s *Metamorphoses* tells how mulberries became red. Pyramus, a Babylonian youth, loved Thisbe, the girl next door, and when their parents forbade them to marry, they exchanged their vows through an opening in the wall between their two houses. Thisbe agreed to meet her lover at the foot of a white mulberry tree near the tomb of Ninus outside the city walls. But on reaching their trysting place she was frightened by a lion and dropped her veil when she fled deep into a cave. The lion, its mouth red from another kill, ripped the veil, covering it with blood, and when Pyramus arrived and found the bloody veil, he thought that Thisbe had been killed and devoured by the beast. Throwing himself on his sword, he committed suicide just as Thisbe emerged from the cave. Distraught at the sight of her dying lover, Thisbe, too, fell upon his sword and committed suicide, the blood of young love mingling and flowing to the roots of the white mulberry, which thereafter bore only red fruit.

mulberry mania. Much has been written about international tulipomania, but almost none of our history books mentions our American mulberry mania of the 1830s. This was a craze for planting the Philippine white mulberry variety *Morus multicaulis* (“many stemmed”) with the expectation of making great profits in the silk industry. The leaves of these trees, used by the Chinese in sericulture and even tried by the British under James I, were said to be superior to all others for silkworm feeding, and millions of them were planted in the “multicaulis fever” that ensued. Although Ben Franklin had tried to establish a silk industry in Philadelphia, the fever really began in Connecticut, where the seven Cheney brothers founded America’s first silk mill at South Manchester in 1838, after having experimented with silk culture for five years. One year, from 300 mulberry trees laid horizontally in the ground, there sprang 3,700 shoots, or enough to feed 6,000 silkworms. This meant bushels of cocoons and yards of much-wanted silk. Many farmers followed the Cheney’s example, and across America books and articles were published about raising mulberry trees. Silk societies were formed and bounties offered. Prices escalated crazily. In 1838 two-and-a-half-foot cuttings sky rocketed from \$25 to \$500 per hundred. In Pennsylvania alone as much as \$300,000 changed hands for mulberry trees in a week, and trees were frequently resold by speculators at great profits. But by 1840 mulberry trees glutted the market, and were valued at only five cents each. When speculation collapsed and the so-called “golden-rooted trees” were uprooted from plantations in 1839, disgruntled investors coined a new word, *multicaulished*, meaning “run out,” “good for nothing,” “disliked.” See TULIP.

mulch. Mulching has been nature’s way of protecting and providing for plants since time immemorial, the moist, rich spongy carpet of the forest floor a perfect example of mulching. The word *mulch* itself is an ancient one. In Anglo-Saxon *melsc* was “mellow,” and in German dialect *molsch* meant “rotten;” these words led to the English *mulch*, which was first used in the mid-17th century. Today mulches are divided into organic materials like leaves and hay, or inorganic ones like black plastic

or aluminum foil. The organic mulches are preferred because they add nutrients to the soil, whereas the inorganic ones control weeds better.

mule; no pride of ancestry, no hope of posterity. The long-eared, short-maned mule takes its name from Latin *mulus* meaning the same. Mules are said to have “no pride of ancestry, no hope of posterity” because they are sterile beasts of burden, being the offspring of a male donkey and a female horse. Maybe the mule has a posterity of sorts in expressions like *stubborn as a mule* and the old term *mule* for a smuggler or person who delivers contraband, especially drugs.

mule bear. See GRIZZLY.

mule deer. A small, 3½-foot-high deer (*Odocoileus hemionus*) of North America. So called because of its long, mulelike ears. Also known as the burro deer.

mule rabbit. See JACKRABBIT.

muller. Our murderer wore a low-crowned felt hat pulled down over his face in an attempt to disguise himself. But his scheme didn’t work. Mr. Muller was arrested and convicted of murder, the publicity attending his hat making it more famous than the killer himself. Not only was Muller the prototype for countless real and fictional villains with large-brimmed hats pulled down over their eyes, but his name came to mean “a deerstalker hat” in England from about 1855 to 1885, a muller probably being the only hat in history that was named for a murderer.

mulligan. When you’re allowed to take a *mulligan* in golf—a free shot not counted against the score after your first one goes bad—you may not be emulating some duffer of days gone by. *Mulligan* probably comes from the brand name of a once-popular sauce that was standard in barrooms. This potent seasoning of water and hot pepper seeds was sometimes mixed with beer, and jokers swore that it ate out your liver, stomach, and finally your *heart*—just what happens when you accept too many *mulligans* on the golf course. On the other hand, there are those who say that *mulligan* derives from the name of Canadian David Mulligan, who in the late 1920s was allowed an extra shot by his friends in appreciation for driving his friends over rough roads every week for their foursome at the St. Lambert Country Club near Montreal.

mulligan stew. Mulligan stew is made of meat and vegetables—whatever is available or can be begged or stolen. It is an American term, honoring an Irishman whose first name has been lost but who may have made a tasty Irish stew. Mulligan, popular among American tramps, is also called slumgullion, or slum, the term coming into use during the American gold rush when slumgullion was originally the muddy residue remaining after sluicing gravel.

mulligrubs. The *O.E.D.* calls *mulligrubs*, “a state of depression,” a “gross arbitrary formation,” and lets it go at that. The word is from British dialect, first recorded in 1599, and is

possibly a corruption of “moldy grubs.” Besides meaning *the blue devils* it can mean a stomachache. A variant is the obsolete *mubblefubbles*.

mullion. There are indeed “millions of mullions” in modern skyscrapers, for a mullion is the slender vertical member separating windows. The word is an alteration of the synonymous *monial*, and is first recorded in 1567.

mull over. To study, ponder, think about carefully, ruminate; as in “She mulled over the proposal.” The term possibly comes from Middle English *mull* meaning “to moisten, crumble, soften, pulverize.” It does not come from *mull* meaning “to spice and heat wine,” origin unknown, or *mull*, a soft thin muslin, from a Hindi word.

multimillionaire. *Multimillionaire* was first applied to John Jacob Astor, soon after his death in 1848, aged 85. Astor had made his money in fur and New York City real estate, “the richest man in America” amassing a fortune of well over \$75 million—which made a person a lot richer back then than it does today. See also BILLIONAIRE; MILLIONAIRE; MILLIARD; MYRIAD; TRILLIONAIRE.

multiplication, division, and silence. A historical expression no longer much used that gives the qualities most needed by a machine politician, who had to *multiply* the sources of graft, *divide* it among his flunkies, and *keep quiet* about it all. New York’s “Boss” Tweed (1823–76) may have invented the phrase when asked what qualities he looked for when selecting his henchmen.

mum. *Mum* came into the news recently with the death of Britain’s beloved Queen Mum, or Queen Mother, in 2002 at the age of 101. *Mum* is a short form of *mother* rarely heard in the U.S. *Mummy* is also mostly used by the British. The U.S. equivalent is *mom* or *mommy*. Queen Mother becomes the title of the king’s consort after her husband, the king’s, death and one of her children succeeds to the throne. *Mum* meaning silent, as in *mum’s the word*, dates back to the 14th century, but its origin is unknown.

numbo jumbo. Mama Dyumbo was really more a male chauvinist god than anything else. The English explorer Mungo Park writes in his *Travels in the Interior of Africa* that Mama Dyumbo was the spirit protecting the villages of the Khassonke, a Mandingo African tribe on the Senegal. His name literally means “ancestor with a pompon,” or wearing a tuft on his hat. Mama Dyumbo was mostly a ploy used by crafty husbands to silence their noisy wives. He was called upon when a man thought one of his wives talked too much, causing dissension in his house. The husband or a confederate disguised himself as Mama Dyumbo and seized the troublemaker, frightening her with his mask, tufted headdress, and the hideous noises he made. He’d then tie the offender to a tree and “whip her silent” amid the jeers of onlookers. (The custom recalls the ducking stool procedure employed in America.) Mungo Park dubbed the bogey employed in this ritual “Mandingo,” but he became known as Mumbo Jumbo, a corruption of *Mama Dyumbo*. Because the god bewildered offending women, *numbo jumbo*

came to mean confusing talk, nonsense, and meaningless ceremony, or even technical jargon that could just as well be put into plain English.

mummichog; mummachog. American names for barred killifish. They derive from the Narragansett Indians’ word *Moamitteaug*, “a little sort of fish,” which was first recorded in 1787 as “Mummy Chog.”

mummy. The Egyptians preserved the corpses of their dead in elaborate ways, concluding the process by wrapping a corpse in bandages and waterproofing the bandages with a waxy pitch that their Persian conquerors called *mum*. This word became *mummi* in Arabic and, over a thousand years later, changed to *mummy* in English, coming to mean not only the waxy pitch covering the bandages but the preserved body itself.

mum’s the word. All sorts of theories have been offered for the origins of this term for “Keep quiet, don’t tell a soul,” but it probably resulted from the humming *mum* sound made when one speaks through closed lips. The expression probably dates back to Shakespeare’s day and he used a word something like it.

Munchausen. Baron Munchausen once shot a stag with a cherry stone and afterwards found the stag with a cherry tree growing out of its head. At least so Rudolph Erich Raspe wrote in his *Baron Munchausen’s Narrative of his Marvellous Travels and Campaigns in Russia* (1785). Raspe was a German librarian who fled to England to escape the consequences of a jewel theft he had committed and wrote the very successful book to restore his resources. But he did base his character and many of his adventures on an actual Karl Friedrich Hieronymus, Freiherr von Munchausen (1720–97), a German officer who served in the Russian cavalry against the Turks and was known to grossly exaggerate his experiences. Thanks to Raspe’s further exaggerations of his escapades in his one-shilling book, and many additions afterward in editions fathered by other authors, the real baron’s name soon meant both a fantastic liar and a marvelous, classic lie.

munchkin. Munchkins were once only the little people who lived in Oz, a land invented by L. Frank Baum in *The Wonderful Wizard of Oz* (1900). But with the great popularity of the book and the motion picture made from it, the word became a synonym for any little person, especially a small, adorable child.

mung bean; bean sprouts. The Asian mung bean takes its name from the Tamil *mungu* meaning the same. These are the beans that are easiest to sprout, taking barely three days, and are used for Chinese *bean sprouts*.

Murcott Honey orange. See ORANGE.

Murder, Inc. Spelled this way, but always pronounced “Murder Incorporated.” This enforcement agency of the organized crime syndicate during the 1930s is believed responsible for between 400 and 500 deaths. Murder, Inc., was controlled by

top crime bosses such as Meyer Lansky, Lucky Luciano, and Frank Costello and led by Lord High Executioner Albert Anastasia, a notoriously violent killer. The group provided the mob with a ready pool of paid assassins to be used around the country. Killings were considered strictly business and carried out to protect the interests of the growing syndicate. Members of the group headquartered at Midnight Rose's, a 24-hour candy store in Brownsville, Brooklyn, where they traded tips on killing techniques and waited for assignments. Most prominent among the assassins was Pittsburgh Phil Strauss, target of 58 murder investigations but believed responsible for twice that many deaths. In 1940 law enforcement authorities arrested a number of mob members, including Abe Reles, a Murder, Inc., lieutenant. Reles, fearing others would talk to the police before him, turned informer to save himself, providing details on hundreds of murders and sending many of his colleagues to the electric chair. Before completing his testimony against the highest-ranking mob bosses, Reles fell to his death from the window of a Coney Island hotel where he was under police protection. He was thereafter called "the canary who couldn't fly."

Murderers' Row. Still a popular nickname for the batting order of the 1927 New York Yankees, one of the greatest teams in baseball history. The lineup, which "murdered" opposing pitchers, included Babe Ruth, who hit his famous 60 home runs that year; Lou Gehrig (47), Earl Combs; Bob Meusel; and Tony Lazerri. The Bronx Bombers won 110 games in 1927. The phrase *Murderers' Row* was, however, coined way back in 1858, according to historian Bill Bryson, who traced it to a sportswriter's account of a baseball game, his use of the term suggested by "the isolated row of cells containing dangerous criminals in the Tombs prison in New York." The words have been used generally to describe any group of dangerous people.

murder the language. This common saying, applied to inept writing, may have been suggested by a reference that the *OED* dates back to about 1644 ("Hopkins and Sternhold murder the Psalmes"). John Hopkins (d. 1549) and Thomas Sternhold (d. 1570) were joint versifiers of the Psalms, whose work was ridiculed by John Dryden and especially in an epigram by Lord Rochester entitled "Spoken Extempore to a County clerk after Having Heard Him Sing Psalmes":

Sternhold and Hopkins had great qualms
When they translated David's psalms
To make the heart feel glad;
But it had been poor David's fate
To hear thee sing, and then translate,
By God! 'twould have made him mad.

Novelist Henry Fielding, also a British justice of the peace, wrote an article for the satirical journal *The Champion*, demanding that English poet laureate and playwright Colley Cibber (1671–1757) be tried for murder of the English language. Fielding was apparently getting even with Cibber, who had called him "a broken wit."

murder will out. "Mordre wol out, that see we day by day," Chaucer wrote in "The Nun's Priest's Tale." Before this we find a similar phrase, *Murder cannot be hid*, used with the same

meaning: Your sins will find you out, your sinful secret will be revealed.

Murmansk run. During World War II a Murmansk run became a synonym for a dangerous sea voyage because hundreds of cargo ships were sunk by Nazi subs and planes while crossing the North Atlantic to the ice-free Russian port of Murmansk.

murmur. See ONOMATOPOEIA.

murphy. A murphy is a confidence game, originating in America, in which the victim is let in on "a good thing" and asked to put up evidence of his good faith in the form of cash. When he supplies the required amount, the con man pleads that he must leave quickly on business, but will return shortly, depositing the envelope containing the cash with his victim. Only when the mark opens the envelope later does he realize that paper cut to size has been substituted for his money. There are endless variations on the game, including the trick where a prostitute collects from a customer first and then goes out the back door. No one has identified the Murphy who first used this ruse to murphy someone. The same holds true for the *murphy* that stands for an Irish or white potato, named so because Murphy is a very common Irish name and potatoes, the English believed, were the staple food of the Irish diet. *Donovan*, another common Irish name, is also used by the English as slang for a white potato.

Murphy bed. A Murphy bed is a space-saving bed that can be folded or swung into a closet or cabinet; it is named after American inventor William Lawrence Murphy (1876–1950).

Murphy's Law. Who the illustrious Mr. Murphy was remains anybody's guess, but some swear that he formulated two other laws besides the immortal "If anything can go wrong it will." The other two are "Everything will take longer than you think it will" and "Nothing is as easy as it looks." It is said that Murphy was killed by a car driven by an Englishman just arrived in the U.S. while taking a stroll down a country road and carefully walking on the left-hand side of the road to face the approaching traffic. *O'Toole's Commentary on Murphy's Law*, a law in itself, says basically that "Murphy was an optimist."

Musa. See BANANA.

muscle. See MUSSEL.

muscular Christianity. This expression has nothing to do with the spread of Christianity by force, as some people think. An anonymous admirer so named Charles Kingsley's brand of religion in the middle of the 19th century; the reverend taught that Christianity should be hearty and strong-minded in order to help one "fight the battle of life bravely and manfully." Reverend Kingsley himself found the term "painful if not offensive," but it didn't need his approval. Dickens's amiable canon Mr. Crisparkle in the unfinished *The Mystery of Edwin Drood* is a good example of the type in literature. Kingsley, an advocate of social reform, is famous for his novels *Westward Ho!* and *Water Babies*.

Muses. The nine Muses were the children of Zeus and Mnemosyne (a personification of memory who was one of the six Titans, a daughter of Heaven and Earth). Originally they were goddesses of memory, but Pindar writes that the celestials implored Zeus to create the Muses to sing the great deeds of the gods. It was traditional for authors, especially epic poets, to invoke a particular Muse to help in the act of creation, the appeal for inspiration usually coming near the beginning of a work (as in the *Iliad*, the *Odyssey*, and *Paradise Lost*). While relatively few writers today believe in external forces inspiring them, or the “storm of association,” as Wordsworth called it, most depend on inspiration from within rather than the divine afflatus (as William Faulkner said of the Muses and inspiration: “No one ever told me where to find it”). Nevertheless, if one’s inner inspiration fails, here are the nine Muses all ready for invoking:

Calliope (her name, pronounced Ka-lie’o-pee, does not rhyme with *rope*, although the musical instrument named after her can; the name means “beautiful voice”). The chief Muse, usually associated with epic poetry, poetic inspiration, and eloquence, she has as her emblems a pen and a scroll of parchment.

Clio (Klie’o; means “to tell of”); Muse of history and heroic exploits, who is often represented like Calliope. The British author Joseph Addison used the name Clio as a pseudonym.

Euterpe (Yoo-ter’-pee; means “to delight well”). Muse of music and lyric poetry, patron of flute players, joy, and pleasure, her symbol is the double flute, which she invented.

Thalia (Tha-lie’a; means “blooming”). Muse of gaiety, comedy, and pastoral life, depicted wearing a comic mask and garland of ivy while holding a shepherd’s crook and a tambourine.

Melpomene (Mel-pom’i-nee; means “to sing”). Muse of tragedy, song and harmony, “the mournfullest Muse” is shown wearing a tragic mask, sword, and garland of grape leaves.

Terpsichore (Terp-sik’o-ree; means “dance-liking”). Muse of dancing, choral song, and lyric poetry, usually depicted seated and holding a lyre.

Erato (Er’a-toe; from the Greek *eros*, love). Muse of erotic and love poetry, miming, and geometry, shown holding a stringed instrument such as a lyre.

Polyhymnia (Pol’ee-hym’nee-uh; means many hymns). Muse of the chant and inspired hymn and said to be the inventor of the lyre, she is depicted as grave in countenance and wrapped in long, flowing robes.

Urania (Yoo-ray’nee-uh; from *uranus*, sky). Muse of astronomy and celestial phenomena, whose name means “the heavenly one” and whom Milton made the spirit of the loftiest poetry, she is often shown pointing with a wand or staff at a celestial globe she holds in her hand.

Mnemosyne, the mother of the Muses, gave her name to *mnemonics*, the art or science of memory training. Calliope gave hers to an organ composed of steam whistles. *Terpsichorean* means anything pertaining to dance, and *euterpean* is anything having to do with music. The Muses collectively are responsible for *museum*, which literally means the home of the Muses. See also 10TH MUSE.

museum. See MUSES.

Mush! French trappers in the Northwest used to urge on the dogs pulling their sleds across the snow with *marchons!*: “let’s

go!, hurry up!” This was corrupted to *mush on!* in English and by 1862 had become *mush!* “Dog French,” one writer called it.

mushroom. When Englishmen in the 15th century tried to pronounce the French word for this succulent fungus, *mousseron*, it came out “muscheron,” which over the years became “mushroom,” this pronunciation probably to some extent influenced by the common English words *mush* and *room*. All in all, they may have been better off with their native name for the edible fungus: *toad’s hat*. “Toad’s hat” is no longer heard, but *toadstool* is of course still the name for inedible, poisonous mushrooms. The French word *mousseron*, from which mushroom sprang up, is generally accepted as a derivative of *mousse*, “moss,” upon which mushrooms grow. Cities that sprang up rapidly, that seemed to spring up like mushrooms overnight, were called *mushrooms* in England as early as 1787. Within another century the name became a verb meaning to spread out, being first applied to bullets that expand and flatten, then to fires, and then to anything that grows rapidly. The fungus called a *mushroom* takes its name from the Latin *mussirio* meaning the same.

mushroom cloud. This image for the explosion of an atomic bomb was first used by *New York Times* reporter William L. Laurence in reporting the initial test of the bomb on July 16, 1945, near Alamogordo, New Mexico. Laurence called the cloud a “supramundane mushroom:” “At first it was a giant column that soon took the form of a supramundane mushroom. For a fleeting instant it took the form of the Statue of Liberty magnified many times.”

musicked. The term is not commonly heard today, though the poems of Petrarch, according to one biographer, are “the most completely musicked in world literature.” By the 16th century, every line of his lyric poetry was set to music; in fact, some of his most popular stanzas were made into songs over a dozen times.

music of the spheres.

Forward and backward rapt and whirled are
According to the music of the spheres.
—Sir John Davies, *Orchestra* (1596)

Pythagoras taught that the spheres, or planets, made harmonious sounds as they moved through space and Plato said that on each planet there sat a siren singing a sweet song that harmonized with the songs of all the other planets. Even further back, in biblical times, the Book of Job relates that “the morning stars sang together.” The reasoning behind the belief is that “planets move at different rates of motion . . . and must make sounds in their motion according to their different rates,” but “as all things in nature are harmoniously made, the different sounds must harmonize.” At any rate, Chaucer, Milton, and Shakespeare all believed this theory and gave expression to it in poetry, although the phrase *music of the spheres* didn’t find its way into the spoken language until the end of the 18th century.

musk. *Musk* refers to a pungent substance from the sex glands of the 20-inch-high musk deer that roams the Himalayan and Atlas ranges. The best quality comes from Tibet, where

hunters take it from the golf-ball-size scent glands beneath the animal's stomach. Male musk deer secrete the strong-smelling musk to attract females, which may have inspired humans to think of it as an aphrodisiac. It is primarily used in perfumery—a pound of the stuff commanding five times the price of gold. Legend has it that Cleopatra wore perfume made from musk and that the Queen of Sheba wore it to drive King Solomon wild.

mussel. Both the muscles in our bodies and the mussels in the sea take their name from the common house mouse. The early Romans rather whimsically thought that body muscles, appearing and disappearing as men competed in athletic games and then rested, resembled tiny mice appearing and disappearing at play. Similarly, little dark-colored mice were also thought to resemble the dark-colored marine bivalves the Romans liked to serve at their banquets. Thus, both the muscle and the mussel were named *musculus*, or “little mouse.” The marine mussel's name is spelled differently today only because this makes it easier to distinguish it from *muscle*.

mustache; ah, your father's mustache; curse be upon your mustache. *Mustache* was originally a French word, borrowed by the English at about the time of the Renaissance. *Ah, your father's (or fadder's) mustache!* was a popular rejoinder among kids in the 1940s to 1950s and may date back much further. It means “Sez you!” or “That's what you think!” *Curse be upon your mustache* is not from any comedy routine. Apparently, it is an old “derogatory Arab epithet,” according to a *New York Times* story (3/6/03) by Jane Perlez, reporting from Qatar. There, at a conference of Muslim countries, Iraqi delegate Izzat Ibrahim told the Kuwaiti delegate Muhammed Salah al-Salem al-Sabah to “shut up, you monkey,” adding for good measure, “Curse be upon your mustache, you traitor!” The Kuwaiti's response was nowhere near as colorful. He called the Iraqi a hypocrite.

mustang. A small wild horse of the Southwest plains descended from horses introduced to the New World by the Spanish. The word derives from the Spanish word *mestengo* (stray beast).

mustard. Mustard takes its name from the *must* or “new wine” that was first used in mixing the paste, which is made from various plants of the *Brassica* genus, including, chiefly, *Brassica nigra*, “black mustard,” and *Brassica hirta*, “white mustard.” Frederick the Great believed mustard did so much for his masculinity that he invented a drink made with powdered mustard, champagne, and coffee. The history of hot mustard as an aphrodisiac is a long one. Rabelais, for example, writes that his lusty Demisemiquaver friars “began their meal with cheese, ending it with mustard and lettuce, as Martial tell us the ancients did. As each received a dishful of mustard after dinner, they made good the old proverb: Mustard after dinner / is good for saint and sinner.”

mustard gas. The first gas used in World War I. The oily volatile liquid blistered the skin, damaged the lungs, and often caused blindness or death. Introduced by the Germans in 1915, it was named “mustard gas” after its mustardlike odor and the

taste it left on the tongue. It is scientifically called dichlorodithyl sulfide.

musth. A period of heightened sexual activity that male elephants go through once a year. Violent frenzies often occur in this rutting period, which is also called *must*. First used in English in about 1870, *musth* derives from the Persian for drunk, which comes from the Urdu *mast*.

muti. A Zulu word used throughout South Africa that means “medicine.” “That muti the doctor prescribed is too strong for me.”

mutt. *Mutt*, for a “mongrel,” has a long pedigree and was first a contemptuous term for a common, stupid man. As early as 1508 *mutton* was a Scottish word for a dumb man; by the 18th century *muttonheaded* was being used in England; and by the early 1900s Americans were calling commonplace stupid men *mutts* before applying the word to commonplace mongrel dogs. Every dog is of course a mutt, if you go back far enough in its ancestry.

Mutt and Jeff. We use this expression frequently to compare two friends or a loving couple, one short and one tall. The term is from the comic strip “Mutt and Jeff” created by Henry Conway (Bud) Fisher in 1907, but the little guy is named after former heavyweight champion James J. Jeffries. It happened when artist Fisher had Augustus Mutt, the tall, chinless member of the duo, visit a sanitarium in an early strip; there Mutt met a pleasant little inmate who fancied himself the boxing great Jim Jeffries. Mutt dubbed him Jeff for this reason. Jeffries (1875–1953) was one of the few heavyweight champions to retire undefeated, but just as Joe Louis was KO'd when he made a comeback so was Jeffries—by Jack Johnson in 1910. See MUTT.

mutton dressed as lamb. An old expression describing old (or middle-aged) people trying to look or dress as if they were younger or richer. The allusion may be to a butcher dressing meat. The words seem to be 18th-century British in origin, like *muttonhood*, which meant “adulthood” a century ago and *lamb*, which meant a “virgin.”

mutual admiration society. An Americanism that was first recorded in Oliver Wendell Holmes's *Autocrat of the Breakfast Table* (1858) but was coined by Thomas Gold Appleton, Longfellow's brother-in-law. The *OED* defines the phrase as “a satiric designation for a coterie of persons who are accused of over-estimating each other's merits,” though it also can be used in a lighthearted, humorous way, as between two friends. Called “the first (best) conversationalist in America” by Emerson, the rich, worldly Appleton was according to Van Wyck Brooks in *New England: Indian Summer* (1940) “the only man who could ride over Holmes and Lowell and talk them down.” He also coined the humorous *all good Americans go to Paris when they die*, which is often attributed to Holmes or Oscar Wilde. Holmes, in fact, quoted the remark in *The Autocrat of the Breakfast Table*. See FROZEN YANKEE DOODLE; ALL GOOD AMERICANS GO TO PARIS WHEN THEY DIE.

muumuu. Missionaries in Hawaii didn't approve of nudity and provided local women with Mother Hubbard dresses to cover themselves. These shapeless dresses lacked a yoke, appearing as if they were cut off at the neck, and the women called them muumuus, from the Hawaiian word for "cut off." Adapted somewhat over the years, made more colorful for one thing, the muumuu became the typical Hawaiian dress and in time became popular worldwide as a loose-hanging housedress.

Muzak. This trademarked name has been around since the late 1930s, when, so the story goes, it was coined as a blend of *music* and the popular *Kodak*. Since then Muzak has been the light, serene music piped into elevators, restaurants, stores, and even offices and factories. The word is often used disparagingly for light or overly sentimental music.

my back teeth are floating. "I have to urinate—badly." This U.S. expression, still heard, originated in the early 1900s and is used in England as well.

Mycenae. The ancient city of Mycenae in southern Greece, where important ruins are found today, possibly takes its name from *mykes*, mushrooms. One legend tells that Perseus, son of the god Zeus, being hot and thirsty, picked a mushroom and drank the water flowing from it, expressing his gratitude by naming the city in its honor. While all sources do not accept this story, most say Perseus founded the city.

my country right or wrong. See OUR COUNTRY RIGHT OR WRONG.

"My Country 'Tis of Thee." See AMERICA THE BEAUTIFUL; AMERICA.

my foot! An American expression of extreme disagreement or strong skepticism about something another person has said. First recorded as *your foot!* in the Roaring Twenties, it is almost always heard as *my foot!* today.

my friends. The first use of these common political introductory words is often credited to Franklin D. Roosevelt, but he borrowed the introduction from another politician and Abraham Lincoln used it long before that. It probably goes back ages, shown by Shakespeare's use of "Friends, Romans, countrymen . . ." in *Julius Caesar* (1599).

my lips are sealed. I'll keep it a secret, I won't tell a soul. This has been traced to British Prime Minister Stanley Baldwin in 1936–37. Baldwin vowed confidentiality several times when asked about the abdication of King Edward VIII. "My lips are sealed," he said on one occasion, "I am bound to keep silence." Whether or not he invented the expression is unknown, but this is the first record of it. See LOOSE LIPS SINK SHIPS.

My mama didn't raise a (or no) stupid child (or fool). Don't take me for stupid or ignorant.

myna bird. See PARROT.

myriad. Before MILLION was introduced in about the 12th century the largest number word was *myriad*, which derives from a Greek word meaning countless, infinite, and was then Greek for 10,000. One ancient ecclesiastical historian wrote of "a hundred and ten myriads" (1,100,000) slain and starved to death over a certain period, and Archimedes wrote of *the myriads of myriads of myriads* of poppy seeds in the world. Today *myriad* is used chiefly to mean countless or innumerable.

myrmidons of the law. When the inhabitants of the island of Aegina were wiped out by a plague, the Greek god Zeus rewarded his son Aeacus, the island's leader, by creating new human beings from ants to repopulate the place. According to Greek legend, these people were called Myrmidons, after the tribe of ants (*Myrmax*). The Myrmidons later followed Achilles to the Trojan War, in which they were noted for their faithful obedience and brutality. Their name is applied to officers of the law—policemen, sheriffs, etc.—who carry out any order unthinkingly and without scruples.

myrrh. "A bundle of myrrh is my well-beloved unto me; he shall lie all night betwixt my breasts," says the Song of Solomon. Unfortunately, the aromatic herb sweet cicely (*Myrrhis odorata*) that is common to Europe is not the fabled myrrh of the Bible. The word *myrrh* comes from the Greek name for perfume, but the biblical myrrh, which is still used to make incense and perfumes, was probably obtained from the spiny shrub *Commiphora myrrha*. Myrrh's age-old reputation is shown in the classical myth of Myrrh, a daughter of King Cinyras, whom the gods changed into a myrrh tree for having incestuous relations with her father. (Their child Adonis was born from the split trunk of the tree.) Frankincense has a similar reputation and is also still used in incense and perfumes. This biblical aromatic generally comes from the Asian and African species *Boswellia carteri*.

myrtle. Myrtle takes its name from *myrtos*, the Greek word for the plant. Myrtle crowns were awarded to victors of the Greek Olympic games, and the plant has been a symbol of strength and love since ancient times. The Romans offered myrtle to Priapus as tokens of their gratitude for success in sexual affairs. The ancient Britons dedicated the plant to their goddess of love, always including myrtle in bridal bouquets and often planting myrtles near the homes of newlyweds. Mentioned in Petronius's *Satyricon*, myrtle berries, leaves, and flowers were used in many love potions, and the plant's aromatic leaves and flowers have long been employed in perfumery. There are more than 100 species of myrtle from both the Old and New Worlds. In Greek mythology, Phaedra, the wife of Theseus, fell in love with her stepson Hippolytus, but he rejected her advances. While awaiting his return one day she sat under a myrtle shrub (*Myrtus communis*) and wiled away the time by piercing its leaves with a hairpin. This is why, according to legend, the leaves of the myrtle reveal many little punctures when viewed under a strong light. Phaedra hanged herself after falsely accusing Hippolytus as her seducer. Theseus then banished Hippolytus and caused his son's death. Myrtle, which originated in western Asia, is believed by the Arabs to be one of the three things (along with a date seed and a grain of wheat) that Adam took with him when he was cast out of Paradise.

According to Roman mythology, Venus wore a garland of myrtle when she rose from the sea, and when satyrs tried to watch her bathing in the nude she hid behind a myrtle bush.

myself am Hell. This expression is from English poet John Milton's *Paradise Lost* (1667) and is fully, "Which way I fly is Hell; myself am Hell." In the same poem Milton wrote, "The mind is its own place, and in itself, can make a heaven of hell, a hell of heaven." Earlier, in *Religio Medici* (1642), Sir Thomas Browne wrote, "The heart of man is the place the devils dwell in: I feel sometimes a hell within myself."

mystery meat. See DO WE EAT IT, OR DID WE EAT IT?

mystique de la merde. The literal meaning of this French phrase is "the mystique of shit," but the term, first recorded in 1956, refers to a preoccupation, mostly of writers and artists, with the coarser, seamier side of life.

myth. *Myth* derives from the Greek word *mythos*, which simply meant a tale or story. Over the ages the word came to mean a story about the gods or demons, and, much later, any fanciful story with supernatural elements.

my way or the highway. Follow my rules or leave; a coinage probably dating back to the late 20th century. Heard mostly in the United States.

N

N. The letter *N* was originally a wavy line (m) in Egyptian hieroglyphs and meant “the sea” or “a fish.” In Phoenician the letter was called *nun*, “fish.”

nabob. The *nawabs* who governed provinces in India from the early 16th century through the Raj were Moguls who owed allegiance to the Mogul emperors of India but grew so wealthy and powerful that they kept all tributes from the people and made their offices hereditary. Europeans, noting the immense wealth and power of these men, took to calling any wealthy, powerful man a nabob, which is merely a corruption of *nawab*.

Nabokov’s Pug. Just to indicate the thousands of specialized eponymous words that can’t be included here, we might mention the butterfly *Nabokov’s Pug*. It is named for the Russian-born author and lepidopterist Vladimir Nabokov (1899–1977), who, most specifically, discovered *Eupithecia nabokovi McDonough* “on a picture window of [publisher] James Laughlin’s Alta Lodge in Utah” in 1943. The prose stylist, author of *Mary*, *Invitation to a Beheading*, *Lolita*, *Pale Fire*, and other novels, emigrated from Russia shortly after the revolution, residing in the United States and Europe. Once a Harvard research fellow in lepidopterology, a number of his discoveries are named for him. The word *butterfly*, incidentally, may be a SPOONERISM for “flutter-by.”

Naboth’s vineyard. Any property that so excites a person’s greed that he or she will do anything to obtain it. The expression has its roots in the biblical story (1 Kings 21) of King Ahab having Naboth murdered and seizing his property after Naboth refused to sell him his magnificent vineyard.

naff. A British expression with some American usage, if only because some Brits tell photographers and reporters to naff off, get lost, beat it, fuck off. The term’s origins are unclear, but *naff* may derive from *naf*, English slang for the vagina. *Naf*, in turn, derives from a reverse spelling of the first three letters of *fanny*, British slang synonym for the vagina.

nag. *Nag* meaning “to scold” came into English from the Swedish and Norwegian *nagga*, to gnaw at or to irritate (as in “a nagging pain”). This *nag* is no relation to *nag* meaning an old worn-out horse, which probably entered English from a Low German word meaning the same.

Nahuatl. The language of the Aztecs that is cited as a source of many words treated in these pages. Nahuatl is far from a dead language and is spoken in many interior regions in Mexico. For that matter, the Mayan language lives on in Guatemala and other Central American countries. According to Mario Pei’s *What’s in a Word* (1968): “In South America, Quichua, the tongue of the Incas, is still used almost exclusively by some six million natives in a broad band from Ecuador, across Peru and Bolivia to northern Argentina.” Perhaps one day centuries hence, when the rest of the world has worn itself out, these patient, once-great civilizations will rise again.

nail a lie to the counter. Early country store proprietors often protected themselves against the many types of bogus money in circulation by keeping a copy of *Day’s New York Bank Note List and Counterfeit Detector* (1826) on the shelf by the cashbox. They have also been said to have nailed all counterfeit coins they had accepted to the counter as an aide against clerks being cheated in the future and as a warning to would-be sharpies trying to pass bad money in the store. Some say that this practice was the inspiration for the Americanism *to nail a lie to the counter*, “to expose anything false.”

nail one’s colors to the mast. Crews on warships in the days of sail often nailed their ship’s flag or colors to the mast to signify that they would never surrender and would fight to the last man. From this practice came the expression *to nail one’s colors to the mast*, to make one’s principles or position clear and stick to them no matter what.

Nairobi. Kenya’s capital and its largest city, Nairobi was founded in 1899. Its name comes from the Kenyan for place of “cold water.”

naked ape. A term for a human being coined by British author Desmond Morris in his 1967 book of the same name. Morris explains that of all the 193 monkey and ape species, only *Homo sapiens* isn't covered with hair.

naked bear. *Hush or the naked bear will get you!* was an expression mothers stilled their crying children with a century ago. First recorded in 1818, the words refer to an American Indian legend of "a very ferocious kind of bear, which they say once existed, but was totally destroyed by their ancestors." Longfellow mentions the naked bear in one of his poems.

naked boy. "Naked boy" and "naked lady" are folk names for the meadow saffron or autumn crocus (*Colchicum autumnale*), on which the flowers appear before the leaves. More poetically, the meadow saffron is called "the leafless orphan of the year" because the flowers are destitute or orphaned of leaves.

Naked Came the Stranger. A sex novel published by Lyle Stuart in 1969 that was said to be written by "a Long Island housewife" but was actually written by 25 *Newsday* reporters to prove that the public would buy anything. The hoax became a best seller.

Naked Fanny. An obsolete but amusing historical term from the Vietnam War, when U.S. fliers nicknamed the Royal Thailand Air Force Base, *Nakhon Phanom*, Naked Fanny because that's what the Thai words sounded like to American ears.

naked truth. According to an old Roman fable, when Truth went swimming in the river, Falsehood stole Truth's clothes. Truth went naked rather than put on the clothes Falsehood had left behind. Such is the origin of *nuda veritas* or the "naked truth," which can be traced back as far as the writings of Horace.

namby-pamby. Poor Ambrose Philips (ca. 1675–1749) had the bad luck to accidentally tread on Alexander Pope, easily the most venomous and malicious of the great English poets. Politics and envy had more to do with Philips's misfortune than insipid versifying, for he was a Whig and Pope a Tory, and in 1713 the Whig *Guardian* praised the Whig pastoral poet as the only worthy successor of Spenser. This inane criticism enraged "the Wasp of Twickenham" and initiated a quarrel between the two poets that Samuel Johnson described as a "perpetual reciprocation of malevolence." Pope's friend, poet, and composer Henry Carey soon joined in the fray. Carey, rumored author of the words and music of the British anthem "God Save the King," satirized Ambrose in the same book that included his popular song, "Sally in Our Alley," parodying Philips's juvenile poems and writing: "So the nurses get by heart Namby-pamby's little verses." The author of *Chrononhotonthologos*, a burlesque that he characterized as "the Most Tragical Tragedy that was ever Tragedized by any Company of Tragedians," even entitled his parody of Philips *Namby-Pamby*—taking the *amby* in each word from the diminutive of Ambrose and the alliterative *P* in the last word from *Philips*. Pope, ready for the kill, seized upon the contemptuous nickname and included it in the edition of his enormously popular poem "The Dunciad," which appeared in 1733. The

phrase immediately caught the public fancy and much to his distress, Ambrose Philips saw his name come to stand for not only feeble, insipidly sentimental writing, but a wishy-washy, weakly indecisive person as well. Philips, incidentally, is the author of the well-known palindrome "Lewd did I live, evil I did dwell." See PALINDROME.

name. See HIS NAME IS MUD.

names for both sexes. Linguist Mario Pei says in *What's in a Word* (1968) that in the American South a greater number of first names can be both female and male than in any other area of the country. Such names include Pearl, Marion, Leslie, Beverly, Kim, and Dana. Although these names are all used for both males and females in other sections as well, they are so used with more frequency in the South.

Nantucket. There is a hoary tale, probably untrue, that an old seaman owned an island group off Massachusetts. To his oldest daughter he gave his most productive island, which he named Martha's Vineyard; to his next, he gave the island closest to home, Elizabeth's Island; and to his last daughter, Nan, he just offered what remained, and Nan-tuck-it. No one is sure of *Nantucket's* real derivation.

Nantucket sleigh-ride. This old expression refers to a whaleboat fastened to a whale, which runs off furiously, towing the boat behind it. Such Nantucket sleigh-rides, often lasting for miles, are described in Herman Melville's *Moby-Dick* (1850) and other great books of the sea.

Napoleon. Emperor Napoleon exacted heavy tolls on those he defeated, which is why this 19th-century card game is named for him. In five-card Napoleon the winner collects chips from each of the other players.

napoleon pastries. These were not named for Napoleon. A traditional story says the emperor carried napoleons in his breast pocket when retreating from Moscow, a tale that persists despite the fact that *napoleon* in this case is simply a corruption of *napolitain*, because the pastries were first made in Naples, Italy.

narcissus; narcotic. Like Hyacinthus (see HYACINTH), Narcissus was a handsome youth of Greek mythology. The nymph ECHO wished that he would fall in love with himself after he spurned her love. When Narcissus chanced to see his own reflection in a still pool, that is just what he did, and he drowned while gazing at his own image. After his death, the gods changed his body into the beautiful flower that has been called a narcissus ever since. Narcissus's name is also remembered in *narcissism* and in *narcotic*, named after the narcissus because some narcissus varieties contain substances that induce sleep. See also DAFFODILL.

narwhal. The arctic narwhal, a whale that grows up to 20 feet long and has an eight-foot-long tusk, takes its name from the Scandinavian *nar*, "ghost" or "corpse" (for its white color) and *whal*, the Scandinavian word for whale. The narwhal is

probably responsible for the legend of the unicorn so widely believed in medieval times. This “unicorn of the sea” uses its long tusk, or left incisor tooth, which grows outward in a counterclockwise spiral, to battle other narwhals. Only the male of the species has the tusk, employing it during the mating season when fighting over females.

Nashville, Tennessee. The capital of Tennessee (qv), founded in 1779 as Fort Nashborough, is named for General Richard Nash, who was the ancestor of 20th-century humorous poet Ogden Nash (1902–71). Nashville is known for its country music industry. *See* GRAND OLE OPRY.

nasion. A name for the space between the eyebrows. Or as one dictionary defines it: “The point in the skull where the nasal and frontal bones unite.” Or, to make it clearer, as another unabridged book puts it: “the intersection of the internasal suture with the nasalfrontal suture in the midsagittal plane.” The word from the Latin *naso*—nose—isn’t recorded until about 1885. *See also* PHILTRUM.

nassau. In a golf game, a nassau is an 18-hole match in which one point is given to each of the players having the lowest scores for the first nine holes, the second nine holes, and the entire round. The scoring and betting system is not named for the seaport capital of Nassau in the Bahamas, as is often said. It is actually named after the Nassau County Golf Course at Glen Cove in Nassau County, Long Island, New York, where it was developed in 1901 by players who didn’t want to lose by embarrassingly high scores.

nasturtium. “Nosetwister” is the translation of the two Latin words, *nasus* and *torqueo*, that make up this word. The name *nasturtium* was given by the Romans to watercress (*Nasturtium officinale*) because of its pungency; “it received its name from tormenting the nose,” Pliny said, and the English called it *nos-smart*. In the 16th century *nasturtium* was applied to the showy orange-colored flowers we call by that name today, which were also known as Indian cress. The flower is today considered part of the genus *Tropaeolum*, its scientific name no longer *Nasturtium Indicum*, but it is still popularly called *nasturtium*, while watercress never is.

nasty. A word used at least since the early 15th century, *nasty*’s history is obscure, but it possibly comes from the Aryan *nizd* for “bird’s nest,” from which our word *nest* may also derive. According to this theory early Teutons noticed that birds fouled their nests and called anything foul and stinking *nesty* or *nasty*. The *O.E.D.* notes that “the original force of the word has been greatly . . . toned down.”

nasty-neat. Fanatically clean and orderly. “She’s so nasty-neat, you’re afraid to sit on a chair in her house.”

Natchez Trace. An old, once-popular route that began as a series of buffalo trails; it stretched over a total of 700 miles, from New Orleans to Natchez, Mississippi, and then on to Nashville, Tennessee.

National Dictionary Day. An American holiday that falls on October 16th of every year, honoring the great U.S. lexicographer Noah Webster (1758–1843). For more on Webster *see* WEBSTER’S.

national pastime. Baseball was becoming a truly national game in about 1856, when the expression is first recorded, but at that time the term really meant baseball as played by a new code of rules introduced by the New York Knickerbocker Ball Club in 1845. As the game grew even more popular, people assumed that the expression *the national game* implied that baseball was the nation’s favorite sport, and they used it this way; the variation *the national pastime* was introduced in the 1920s.

nation of shopkeepers. Napoleon applied this term contemptuously to the English, but he didn’t invent it. Apparently he read it in Adam Smith’s *Wealth of Nations* (1776) or quoted the phrase of a contemporary. Smith wrote in full: “To found a great empire for the sole purpose of raising up a people of customers, may at first sight appear a project altogether unfit for a nation of shopkeepers; but extremely fit for a nation that is governed by shopkeepers.” Thirteen years before him Josiah Tucker, dean of Gloucester, had written in his *Tract Against Going to War for the Sake of Trade*: “A Shop-keeper will never get the more Custom by beating his Customers; and what is true of a Shop-keeper, is true of a Shop-keeping nation.”

Native American. In the last decade *Native American* has been much used as a synonym for Indian, American Indian, or Amerindian. It is preferred by some, though far from all, “aboriginal people of the Western Hemisphere.” *Indian* itself is of course a misnomer used since Columbus, believing he had found India on his first voyage, applied the name to the people he found living in the Americas. A Native American, however, can be anyone born in America, and the first people known to have settled in America weren’t Native Americans, they were Asians who crossed the Bering Strait sometime during the late glacial epoch. The term *Native American* was first applied not to Amerindians but to white Anglo-Saxon Protestants in about 1837 when the Native American Association was formed as an anti-Catholic and antiforeign movement. Thus, though the term *Native American* does avoid offensive stereotypes associated with the word “Indian” throughout American history, it has a certain negative connotation of its own. *See* FIRST NATIONS.

Native American place-names. “Mississippi,” Walt Whitman wrote, “the word winds with chutes—it rolls a stream three thousand miles long. . . . Monongahela, it rolls with venison richness upon the palate.” Thousands of charming place-names deriving from American Indian languages adorn the map of the United States. These include, to mention just a few of the most notable, Chicago, Niagara, Allegheny, Saratoga, Susquehanna, Potomac, Tallahassee, Manhattan, and Tacoma. Fully 24 of the 50 states bear American Indian names.

nattering nabobs of negativism. Spiro Agnew (1918–96), U.S. vice president under Richard Nixon, coined this phrase in 1969. *Natter* means to talk incessantly, its origin unknown, and *nabob* is used here in its sense of “an influential person.” Agnew resigned in 1973 in a plea deal after being charged with accept-

ing bribes. He was the first vice president in U.S. history to resign because of criminal charges. The quote refers to liberals, who liked him as much as he liked them. The whole quote is: “In the United States today we have more than our fair share of the nattering nabobs of negativism. They have formed their own Four H Club: the hopeless, hysterical hypochondriacs of history.” As for President Nixon, he became the only U.S. president to resign from office, thanks to his part in the Watergate scandal.

Nattier blue. Painter Jean-Marc Nattier (1685–1766) was famous for his portraits of the court of France’s Louis XV, and for the soft shade of blue he used in them. It took a few centuries after his death, but this color became very fashionable in textiles and was named after him.

natural death; natural causes. A natural death is one that occurs from natural causes such as old age or disease, *not* a death caused by murder, war, or accident, etc. The term has been traced back to the late 16th century.

naught; naughty. *Naughty* has come to mean bad in a minor way, somewhat improper or indecent, mischievous, as in “a naughty child.” But in Middle English it was a much stronger word meaning wicked or immoral, deriving from the Old English *nauht*, which meant “nothing” and also gave us the word *naught* for zero. Dr. Johnson silenced two spinsters who complimented him for the omission of “naughty words” in his great dictionary with the comment: “What! my dears! then you have been looking for them!”

naughty; Naughty Nineties. The Naughty Nineties, which some called the Gay Nineties, refers to the 1890s, a period when the puritanical ways of the Victorian age were fading and more permissive behavior became acceptable. *Naughty Nineties*, however, isn’t recorded in print until 1925.

Naumachia. Roman emperors held “sea battles” on land in the Naumachia (from the Greek for “sea battle”), a flooded amphitheater Augustus built on the right bank of the Tiber River. The combatants in the two opposing fleets, who were usually prisoners or criminals, fought to the death unless spared by the emperor. As many as 24 triremes fought in these bloody contests.

nausea. The Greek *naus* means ship, and the ancient Greeks fashioned their word for seasickness, *nausia*, from it. In time *nausia*, which gave us the English word *nausea*, came to mean any stomach disturbance similar to seasickness.

Navaho. White settlers bestowed the name *Navaho* upon this Indian tribe, which called itself the Diné, or “people.” *Navaho* comes from *tewa navaho*, “great planted fields,” a term other Indians used in referring enviously to the great land holdings of the wealthy, powerful Diné tribe.

navel-gazing. See CONTEMPLATE ONE’S NAVEL.

Navel of the Nation. See JAYHAWKER STATE.

navel orange. The first navel orange was a “bud-sport” that originated for reasons unknown from the bud of an otherwise normal orange tree in a monastery garden in Bahia, Brazil, from where it was imported into the U.S. in 1870. This sweet, usually seedless orange takes its name from the depression in its rind resembling a human navel, which contains an aborted ovary that appears as a small secondary fruit within the fruit. Many other varieties, however, exhibit this characteristic at times. See DON’T KNOW HIM FROM ADAM.

navvy. This manual laborer or ditchdigger takes his name from the esteemed *navigator*. *Navvy* for such an occupation may have been suggested, in about 1825, by a joke about British canal diggers being directors or navigators of ships (the ships could only sail in the directions they dug). Brewer, however, has it this way: “Canals were thought of as lines of inland navigation, and a tavern built by the side of a canal was called a ‘Navigation Inn.’ Hence it happened that the men employed in excavating canals were called ‘navigators,’ shortened into navvies.” See also WORK LIKE A NAVVY.

navy. The color navy blue made its debut in the Royal Navy in 1857, when for the first time an act of Parliament required English sailors to wear identical uniforms. This outfit included a blue jacket, which inspired the name of the color navy blue, or just navy, shortly after it became standard issue. Today any navy blue or navy clothing takes its name from the color of that first navy blue jacket.

Nazi. A Nazi has come to mean any brutal dictatorial person, the word deriving, of course, from Adolf Hitler’s National Socialist party, which came to power in 1933 and ruled Germany through World War II. The German *National Sozialist* yields *Nazi*.

N.B. This is the abbreviation used for the Latin *nota bene*, “note well, take notice,” often used in literary and scholarly works. Voltaire told of how a commentator on Lucretius by the name of Creech noted on his manuscript: “N.B. Must hang myself when I have finished.” According to Voltaire, “He kept his word, that he might have the pleasure [of committing suicide] like Lucretius. Had he written upon Ovid, he would have lived longer.”

N.C.L. It is said that these initials stand for the Naked Conga Line, a popular dance at a Mexican resort, though I can find no other mention of it no matter how hard I try.

Neanderthal; Neandertal. This is among the most ironic of etymologies. It is seldom noted (no English dictionary records the derivation) that *Neanderthal*, for “a primitive backward person,” is named after a gentle poet—and a learned, pious churchman to boot! The early forms of *Homo sapiens* called *Neanderthals* were so named because the first skeletons of them recognized as a distinct group of archaic humans was found in the Neander Valley (the Neander Thal) near Dusseldorf, Germany in 1856. But the Neander Valley had been named for the German poet and hymn writer Joachim C. Neander (1650–80), a schoolmaster who wrote the beautiful hymn on the glory of God in creation, “Lo Heaven and Earth and Sea and Air!” There is further irony in the fact that the poet’s great-grandfather’s name had been Neuman, the great-grandfather changing this

to Neander in the 16th century at a time when Germany was undergoing a rebirth of learning and many were translating their names into Greek. Thus, traced to its ultimate source, *Neanderthal*, which today means a primitive and brutal man, translates as “the man from the valley of the new man [the man of the future]”!

neatsfoot oil. Neatsfoot oil doesn’t keep anything neat, but it does help preserve leather. Our common word *neat* has no place here, where *neat* is simply an old word for cattle and *neatsfoot oil* refers to an oil made from the feet of neet (cattle).

Nebraska. Nebraska, previously the Territory of Nebraska, takes its name from the Omaha Indian *ni-bthaska*, “river in the flatness,” for the Platte River. The Cornhusker State was admitted to the Union in 1867 as our 37th state.

necessary. A euphemism, originating in 17th-century England, for a privy or outhouse. In the U.S. it was also known by the term *necessary house*.

necessity mess. An American dish made of thinly sliced potatoes and onions fried in the grease of salt pork. Also called “very poor man’s dinner.”

neck and neck. Since the late 18th or early 19th century, this British turf term for a close horse race has been commonly used to describe any race or contest that is virtually tied or even.

necklace. One of the newer horrors of execution, *necklace* refers to a tire filled with gasoline that is placed around the neck of someone thought to be a police informer and set on fire. The gruesome practice was introduced by young black activists in 1985 in South Africa, where Nobel laureate Bishop Desmond Tutu once saved the life of a man about to be necklaced.

necktie party. An old humorous term for a hanging; also called a *necktie social* or *necktie frolic*.

neck verse. See BENEFIT OF CLERGY.

nectarine. This silky smooth-skinned fruit is a mutation of the peach and often grows on the same tree. Cultivated for thousands of years, the Queen of Peaches takes its name from the Greek *nekter*, the drink of the gods.

need it yesterday. Business talk since about the 1950s meaning “to want something,” such as a report or study, immediately, with no delay at all. An employee might say to his boss about a recent assignment, “When do you want it done?” and his boss would reply, “I need it yesterday.”

a needle in a haystack. The proverb is usually heard as looking for a needle in a haystack, which means performing an almost impossible feat. The workhorse saying dates back to the middle of the 16th century and is still often heard today.

negligee. Apparently this French garment didn’t reach American shores until about 1939. It is a woman’s dressing gown, made of flimsy, often transparent material whose aim is usually undressing, not dressing, and is worn for intimate occasions.

negotiate. Those who negotiate are often worried and under a strain. This is reflected in the origin of the word *negotiate*, which derives from the Latin *negotium*, composed of *neg*, “not,” and *otium*, “ease,” or “not at ease.” The word is first recorded in the 16th century.

negus. History tells us little about Col. Francis Negus except that he lived in Queen Anne’s reign and concocted the first negus known to be devised by man. A negus is brewed by mixing wine, usually port or sherry, with hot water, sugar, lemon juice, and spices such as nutmeg. Walpole and other writers have praised the hot drink, which warms a body up but can be perilously potent. Colonel Negus died in 1732 and 10 years later people were commonly calling his bequest by his name.

neighbor. Broken down, this word means “near dweller,” ultimately from the Germanic *nehwiz*, near, and *buram*, dweller or farmer, which came into Old English as *neahgebur*. *Neighbor*’s later meaning of a fellow human did not come until much later.

Neilsen Ratings; Q rating. Neilsen ratings are a survey conducted by the A. C. Neilsen Company since about 1960 to measure television viewership of various programs. The ratings are based on meters placed in TV sets and viewer diaries of a preselected sample of viewers. A. C. Nielsen had been measuring radio audiences since 1922. The ratings, especially the Sweeps, taken in the months of February, May, July, and November, determine what the networks charge sponsors. The Q rating is a poll that tries to measure the familiarity of actors, products, etc., to the television viewing audience. It is named for its deviser, the TVQ/Marketing Evaluations Co. See GALLUP POLL.

neither fish, flesh, nor fowl. An expression that dates back at least to the 17th century, meaning “neither one thing nor the other,” suitable to neither the clergy, who eat fish, nor the generality, who eat flesh, nor the poor, who must eat fowl. A variation is *neither fish nor fowl not good red herring*.

neither here nor there. Irrelevant, immaterial, as in: “That’s neither here nor there; let’s get back to the subject at hand.” The phrase derives from *neither so nor so* (neither this nor that), an English expression that has been traced back to 1783.

neither hide nor hair. In *hide and hair*, meaning “completely, wholly, every part,” goes back to Chaucerian times, but its opposite, *neither hide nor hair*, is a 19th-century Americanism, probably arising on the frontier. A hungry predator devouring his prey “hide and hair” has been suggested as the source of the first metaphor, but that is hard to swallow for man or beast. Anyway, the reverse phrase means “nothing whatsoever” and its earliest record is in an 1858 book by Timothy Titcomb, the

pseudonym of the American writer Josiah G. Holland, who founded *Scribner's Magazine*: "I haven't seen hide nor hair of the piece ever since." See BONE, HIDE, AND HAIR.

nekton. See PLANKTON.

Nelly Bly. American journalist Elizabeth Cochrane Seaman (1867–1922) adopted the pen name Nelly Bly from a song by Stephen Foster. She is said to have taken it when an editor insisted that she use a pseudonym and an office boy happened to walk by whistling the tune. One of the first female reporters, Nelly Bly began her career when only 18. Her forte became exposés, such as her account in *Ten Days in a Madhouse* (1887) of the horrible conditions on New York's Blackwell's Island, where she was an inmate for 10 days after feigning insanity. In 1889 the *New York World* sponsored her famous trip around the globe, which she completed in the record time of 72 days, six hours, and 11 minutes and which brought her international fame far exceeding that of any woman of her day. Flowers, trains, and racehorses were named for Nelly Bly and songs were written in her honor.

nelson. See FULL NELSON.

Nelson's blood. After Lord Horatio Nelson, Britain's greatest naval hero, was killed at the battle of Trafalgar in 1805 by a sniper firing from the top of the French ship *Redoubtable*, his body was brought back to England to be buried in St. Paul's Cathedral. The fabled hero became the subject of many legends, including one that his body was brought home pickled in rum. Needless to say, it wasn't long before British sailors were calling rum Nelson's blood.

nematode. Beginning gardeners might be puzzled by the term *nematode-resistant* affixed to many plants, especially tomatoes. A nematode is simply a small, microscopic worm that attacks the roots of plants and often causes great damage. The word is a learned borrowing from the Greek word for "thread" applied to threadlike things such as these unsegmented worms. Some plants have a better ability to repel these worms than others and are called nematode-resistant.

nemesis. Nemesis was the Greek goddess of justice or revenge, her name deriving from the Greek for vengeance; thus *nemesis* means anyone who avenges or punishes. Shakespeare used the term in *Henry VI, Part I*, but it is first recorded a few years earlier in 1576. The word also means an opponent or rival one cannot best or overcome.

nene. Hawaii's official state bird, also called the Hawaiian goose (*Nesochen sandvicensis*). The official name of the barred, gray-brown wild goose is pronounced "neigh-neigh."

neologist. A coiner or maker of new words. Many neologists and neologisms are included in these pages, including several coiners who invented scores of words and phrases.

nepotism. Deriving directly from the Latin *nepos*, "a descendant, especially a nephew," *nepotism* was coined when

Pope Alexander VI (1431–1501), the most notorious of political popes, filled important church offices with his relations. Among the many family appointments the Spaniard Rodrigo Borgia made to consolidate his political power were the installing of his son Cesare as an archbishop when the boy was only 16 and the bestowing of a cardinal's hat on his young nephew Giovanni. Alexander's detractors were so many and so widespread that the new term soon entered all the languages of Europe, referring not only to politics but to business and any other place where such favoritism was practiced.

Neptune. Neptune, the Roman god of water, is usually represented as a stately old man carrying a trident and sitting astride a dolphin or huge sea horse called a hippocampus. The ruler or king of the sea, his name is used for the sea itself. Poseidon was the god of the sea in Greek mythology, his wife Amphitrite, the goddess of the sea. Other sea gods include Triton, their son; Nereus, his hair seaweed green, who lives with his wife Doris at the bottom of the Mediterranean; Portunus, the protector of harbors; and Oceanus, god of the ocean. There were also 50 nereids, daughters of Nereus, and the oceanids, daughters of Oceanus.

Neptune's sheep. See WHITE HORSES.

nerd. The storyteller-artist Dr. Seuss (the pen name of the late Theodor Seuss Geisel) apparently invented the word *nerd* in his children's book *If I Ran the Zoo* (1950): "And then, just to show them, I'll sail to Ka-Troo And Bring Back an It-Kutch a Preep and a Proo a Nerkle a Nerd and a Seersucker, too!" The nerd is pictured by Dr. Seuss as a thin, cross, humanoid creature. His word and illustration were picked up by small kids and within 10 years became a term for a socially inept, though often intelligent, person.

Nero; nero's crown; coliseum. Cruel, vindictive, dissolute, profligate, treacherous, tyrannical, murderous—it would take a far longer string of adjectives to describe Nero, the last of the Caesars. A Nero is a bloody-minded tyrant for reasons apparent to any high school history student and it is enough to say here that the memory of Nero Claudius Caesar Drusus Germanicus, born Lucius Domitius Ahenobarbus, was publicly execrated when he died. Among the Roman emperor's countless victims were the rightful heir to the throne, Britannicus (Nero poisoned him); his own mother, Agrippa (Nero had her killed by his soldiers after failing to drown her); his first wife, Octavia; his pregnant second wife, Poppaea (Nero is said to have kicked her to death); the son of his benefactor Lucan; and a woman who refused to marry him. Nero may well have set fire to Rome in A.D. 64 because he wanted to see what Troy looked like when it burned, although there is no trustworthy proof of the story. And that Nero fiddled while Rome burned is essentially true, though he probably sang and played the harp, not the fiddle, while regarding the spectacle with cynical detachment. The tyrant rebuilt Rome, including a grandiose "Golden House" for himself, blamed the blaze on the Christians and persecuted them with such fury that they regarded him as the Antichrist. With such a record it's hard to understand why anyone would name a beautiful flowering plant after him, but someone did. Nero's crown (*Tabernaemontana coronaria*) is named for the

bloody-minded, spindle-shanked, pot-bellied tyrant. Better to call the fragrant shrub “crape jasmine” or “Indian rose bay.” Nero is also remembered in *nero antico*, a black marble found in the Roman ruins and later used for ornamental purposes; and in *Neroinize*, “to rule, oppress, or make depraved in the manner of Nero.” The word *coliseum* also owes something to him. An 11-foot-high statue, or colossus, of him by Zenodorus stood near where the emperor Vespasian built the huge amphitheater called the Colosseum, the amphitheater taking its name from Nero’s colossus and giving its name to *coliseum*. See ADAM’S APPLE TREE.

Nero of the North. In 1520, at Stockholm, King Christian II of Denmark, Norway, and Sweden (1481–1559) massacred some 100 Swedish nobility. Soon after this the despot became known as the Nero of the North, and the Swedes and Norwegians rose up against him, the Swedes raising Gustavus I to the throne. At home in Denmark, Christian became hated for such acts as putting the mother of his mistress in charge of the nation’s finances. Also called Christian the Cruel, he wound up spending the last 24 years of his life in jail. See NERO.

nervous Nellie. Any very cautious, worried person, often fearful and jittery. Sometimes capitalized, the expression is said to come from the nickname of Frank Billings Kellogg (1856–1937), U.S. secretary of state, who won the Nobel Peace Prize in 1929 largely for his successful negotiating of the 1927 Kellogg-Briand Pact, sometimes called the Pact of Paris, which condemned “recourse to war for the solution of international controversies.” Briand was Aristide Briand, foreign minister of France, one of the 62 nations that ultimately ratified the agreement, which failed to provide enforcement measures. The name *Nervous Nellie* seems to have attached itself to Kellogg when he served as a U.S. senator from Minnesota (1917–23), but he was always a nervous man.

nervous pudding. See BURN ONE WITH A FEATHER.

nescience. Though *nescience* (from the Latin *nesciens*, “ignorant”) can be a synonym for ignorance, some writers make an important and useful distinction between the words. While ignorance is “not knowing something one should reasonably be expected to know,” *nescience* means “not knowing something one cannot be reasonably expected to know.”

nesselrode. A mixture of preserved fruits and nuts used over desserts, *nesselrode* is believed to have been invented by the Russian statesman Count Karl Robert Nesselrode (1780–1867).

Nessiteras rhombopteryx. *Nessiteras rhombopteryx* was suggested by British naturalist Sir Peter Scott as the scientific name for the fabled Loch Ness Monster, which many have claimed, without much proof, to have seen rising from the depths of Loch Ness in Scotland. Believers rejoiced that a noted scientist was on their side, until it was found that *Nessiteras rhombopteryx* is an anagram of “Monster hoax by Sir Peter S.”

nest egg. People saved nest eggs as early as the 17th century. The expression relates to the pottery eggs once put in hens’

nests to induce the hens to lay their own eggs. Persons who start saving a nest egg put a little money (like a porcelain egg) aside, which encourages them to save more.

nester. A squatter, homesteader, or farmer who settled in cattle country. The name may derive from the patches of brush such settlers stacked around their first vegetable patches to protect them, which looked like bird nests to cattlemen.

Nestor. There may have been a real King Nestor behind the character the poet Homer describes both in the *Iliad* and the *Odyssey*. Nestor, in Homeric legend, was the youngest of Neleus’s 12 sons and the king of Pylos in Greece. At about 70, he was the oldest and most experienced of the Greek chieftains besieging Troy, being represented as a wise and indulgent prince who lived so long that he ruled over three generations of subjects. Nestor counseled moderation among the quarreling Greek leaders. Full of wise advice and stories of his exploits in days gone by, his wisdom was revered and much sought after despite his prolixness. But the fact that Nestor talked too much was redeemed by the fact that he had a lot to talk about. He had been, for example, the only person spared when Hercules took Pylos. His name is frequently used today to describe a wise old man, and *Nestor* does not imply that the sage is garrulous.

neurobat. See ACROBAT.

Nevada. The Spanish for “snowed upon” or “snowy” is the basis for *Nevada*. The Silver State, which had first been part of the Washoe Territory, was admitted to the Union in 1864 as our 36th state.

Nevaeh. A girl’s name, mostly in the United States. There were only eight Nevaehs in 1999, but there are fully 4,457 as of 2006, according to the *New York Times* and the Social Security Administration. How come? Mainly because Christian rock star Sonny Sandorval so named his infant daughter in 2000. Why did he do so? Because *Nevaeh* is *Heaven* spelled backward.

never complain, never explain. A credo that goes back at least to 19th-century England, where it was attributed to Prime Minister Disraeli by his archrival Gladstone, though there is no proof of it.

never give a sucker an even break. See THERE’S A SUCKER BORN EVERY MINUTE.

never go to sleep angry. A rather common proverb that dates to the 17th century in the slightly different *never let the sun go down on your anger*. The biblical “Let not the sun go down on your wrath” is from Ephesians 4:26.

never grab with both hands, just grab with one. A cynical contemporary maxim instructing a person not to be too greedy and grasping, but not to be too altruistic either, especially in business dealings.

never hoppen. Meaning “You’re crazy if you think something will happen,” this expression was very popular among Koreans and GIs during the Korean War, but it was pidgin English before then.

nevermore. Edgar Allan Poe was not the first or last to “quoth” the word, symbol of darkest doubts, in his poem “The Raven” (1845). Here is a sample from William Faulkner’s *Absalom, Absalom* (1936): “Quentin didn’t answer. He lay still and rigid on his back . . . breathing hard hot slow, his eyes wide open upon the window, thinking ‘Nevermore Nevermore Nevermore.’”

never-never land. Today *never-never land* usually signifies an unreal, imaginary, or ideal condition or place, as in “the never-never land of the movies.” Originally, however, it was Australian slang for an isolated, sparsely settled region and was first applied to all of Australia and then to the remote Australian outback of Western Queensland and central Australia. This region was probably called *never-never land*, or *country*, because those who visited there vowed “never, never” to return. Sir James Barrie first gave the meaning of an imaginary place to *Never Land* in his play *Peter Pan*, having Peter teach the Darling children to fly away to the wonderful realm of a child’s imagination. Today the British sometimes call installment plans “never-never plans,” because one’s ownership of the goods bought on such plans lies far in the distance in never-never land.

never say die. Don’t despair, there is always hope—*Nil desperandum*. As English poet William Cowper put it:

Beware of desperate steps. The darkest day.
Wait till to-morrow will have passed away.

never speak ill (or bad) of the dead. Also heard as *never speak evil of the dead*, this expression wasn’t recorded in English until the 16th century, but in Latin it dates back to the sixth century B.C., when it appeared as *say nothing of the dead but what is good*. This ancient belief and saying is believed to have been uttered by the Spartan ephor (magistrate) Chilon, one of the SEVEN SAGES OF GREECE.

never up, never in. Its sexual implications have helped this golfing expression last since the early 1920s as a catchphrase of pessimism. It means, literally, never up near the hole with the first putt, never in the hole with the second put. Or else it means “don’t leave it short,” if you don’t putt hard enough to reach the hole it can’t go in.

New Amsterdam. The Dutch name for what is now New York City. New Amsterdam, named after the city of Amsterdam in the Netherlands in about 1626, was originally one of the Dutch trading posts in New Netherland. Among other firsts during the New Amsterdam period of the city, the first murder occurred in 1638, the first lottery was held in 1665, and the first “welfare” assistance was given in 1661.

New Deal. *New Deal* comes from Franklin Delano Roosevelt’s acceptance speech at the Democratic National Conven-

tion on July 2, 1932: “I pledge you, I pledge myself, to a new deal for the American people.” Coined by Roosevelt’s speechwriters, Raymond Moley and Judge Samuel Rosenman, the phrase incorporated elements of Woodrow Wilson’s New Freedom and Teddy Roosevelt’s Square Deal.

New England. Captain John Smith thought that the area called New England in North America greatly resembled England. He was the first to record the name, on a map he made in 1616: “That part we call New England . . . betwixt the degree 41. and 45.”

New England boiled dinner. Meat, often corned beef, boiled with vegetables such as potatoes, carrots, turnips, and onions.

New England clam chowder. See CHOWDER.

New England conscience. This expression is often illustrated with a story about William Ellery of Rhode Island, signer of the Declaration of Independence. When Ellery was a collector of customs in 1790, his grandson dropped into the office. Casually taking a sheet of paper off his grandfather’s desk to write a letter, he felt Ellery’s hand restraining him. “My boy,” the old man said, “if you want paper, I’ll give you some, but this is Government paper.” However, a cynical definition of *New England Conscience* advises that having one doesn’t keep you from doing anything, it just keeps you from enjoying it.

New England weather. An old term for very varied, unpredictable weather. Mark Twain had this to say about it at a dinner of the New England Society in 1876: “There is a sumptuous variety about the New England weather that compels the stranger’s admiration—and regret. The weather is always doing something there; always attending strictly to business; always getting up new designs and trying them out on people to see how they will go. But it gets through more business in Spring than in any other season. In the Spring I have counted one hundred and thirty-six different kinds of weather inside of twenty-four hours.”

Newgate Calendar. Often used today as a synonym for a who’s who of crime and notorious criminals everywhere, the Newgate Calendar was begun in 1773 as a biographical record of the most notorious criminals confined at England’s famed Newgate Prison. Newgate Calendar was long the pseudonym for the reviewer or reviewers of crime books for the *New York Times Book Review*.

New Hampshire. When Captain John Mason was granted the land including this state in 1622 he named it after his homeland—England’s Hampshire County. The Granite State was admitted to the Union in 1788 as our ninth state.

New Jersey. Though it doesn’t look like it at first glance, the state’s name is another that has to be credited to the Caesars. *New Jersey* was named after *Jersey*, the largest of England’s Channel Islands, in honor of Sir George Carteret, who had been governor of the Isle of Jersey and successfully defended it against Cromwell’s forces. In 1664 Charles II had granted all

lands between the Delaware River and Connecticut to his brother, the duke of York, who in turn granted the New Jersey portion to Carteret and Lord Berkeley. England's Isle of Jersey (a corruption of *Caesaria*) had been named for the Caesars when the Romans added it to their possessions, and so *New Jersey* also bears the immortal name. The relationship can be best seen in New Jersey's official Latin name, *Nova Caesaria*.

New Mexico. Spanish explorers from Mexico named this area *Nuevo Mexico*, "New Mexico," in 1562. The Land of Enchantment became our 47th state in 1912, previously having been called the New Mexico Territory.

new potatoes. Small, often thin-skinned red potatoes, so called because they are often the first of the season. They are also called "salad potatoes," because they are frequently used in potato salad, and "salt potatoes," because they are boiled in salted water. Another interesting potato term, not often heard anymore, is the 19th-century expression *shadow potatoes* for potato chips.

news.

News is conveyed by letter, word or mouth
And comes to us from North, East, West and
South.

Contrary to the old rhyme above, which helped popularize the myth, the word *news* wasn't coined from the first letters of the major points of the compass. The word was originally spelled *newes* and derives from the Old English word *niwes*, meaning "new." The legend possibly originated with old newspapers printing a replica of the globe with compass points on their masthead. But the word is much older than the earliest newspapers.

newspeak. See *DOUBLETHINK*.

Newton's apple. Everyone knows the story about Sir Isaac Newton sitting under an apple tree pondering the question of gravitation when an apple fell on his head and inspired the train of thought that led to his law of universal gravitation. But the particulars are usually omitted in this tale. According to Voltaire, who first told the story, and got it from Newton's niece, Mrs. Conduit, the apple fell in his mother's garden at Woolsthorpe, where he was visiting her in 1666. Even the name of the apple is known—it was a red cooking variety called the Flower of Kent. (If you want to sample it, plant the same tree Newton sat under—grafted scions of the tree have been taken over the years since 1666 and are available from English nurseries.) The apple that bopped Newton must have inspired a long train of thought, for the law of universal gravitation didn't come to fruition for nearly 20 years. Such charming stories have become part of the Newton legend, whether reliable or not. Perhaps the greatest figure in the history of science, Newton could still say of himself: "I do not know what I may appear to the world, but to myself I seem to have been only a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me."

New York. New York is named for James, duke of York and Albany, who in 1664 was granted the patent to all lands between the Delaware River and Connecticut by his older brother, King Charles II. The duke gave away the Jersey portion, but held on to what was then the Dutch colony of New Netherlands. York became the patron of Col. Richard Nicholls, who that same year set sail for the New World, captured New Amsterdam from the Dutch and named both the city of New Amsterdam (New York City) and the colony of New Netherlands (New York State) after the duke. New York State's capital, Albany, is also named for the duke of York and Albany. See *YORK; PUT UP YOUR DUKES*.

New York, we've got you covered. A New York slogan for the "gift" condoms that are dispersed throughout the city.

New York alligators. There are many stories about New Yorkers flushing baby pet alligators down the toilet and the alligators growing to full size in the sewer pipes beneath the city streets. There were, in fact, several stories about alligator sightings in the local papers during the 1930s, and Smelly Kelly, a noted city worker who sniffed out gas leaks in the underground tunnels, claimed he had encountered one. True or not, the tales are part of New York City folklore. So are New York "rats as big as cats" in the subway tunnels, but these could simply be raccoons, hundreds of which commute on foot in the tunnels every day along with the 4 million people who prefer to use the train. See *ALLIGATORS-IN-THE-SEWERS LEGEND*.

New York Times. The eminent daily newspaper was founded in 1851 by journalist Henry J. Raymond and former banker George Jones as the *New-York Daily Times*. Its goal was to oppose the distorted news reporting of the day. The name became the *New York Times* in 1857. In the 1890s it went through a period of decline and then was bought by Adolph Ochs who brought it back to prominence under the slogan "All the News That's Fit to Print" and whose family has maintained the paper's reputation since. The slogan remains on the paper's masthead.

next to death. After heavyweight champion Muhammad Ali faced Joe Frazier in "the thriller in Manila," he was asked how he felt. "Next to death," he replied.

next year in Jerusalem. Jerusalem belongs to the Jews again, so these words are no longer a wish or a promise. But the ritual declaration *Next year in Jerusalem!* had been made by Jews at Passover for over 2,000 years, ever since Jerusalem was lost to the Romans.

Nez Percé. French traders named this Indian tribe they encountered in Idaho the *Nez Percé* (pierced nose), though there is no evidence that these Native Americans practiced nose piercing. Why they were so named remains a mystery.

n.g.; n.n. The expression *n.g.* has been an abbreviation for "no good" since at least 1839 in America, and it meant "no go," "completely unacceptable," some five years before this. The term *n.n.* is a British one dating back to the beginning of this century and means "a necessary nuisance," especially a husband.

Nheengatue. A language, meaning “good talk,” spoken in Brazil’s Upper Rio Negra region. It is one of 23 languages spoken in the area, which linguists call “the most plurilingual region in all of the Americas” (*New York Times*, August 28, 2005).

niacin. The valuable vitamin, surprisingly enough, takes its name from *nicotinic acid*, plus the suffix *in*. In fact, it was at first called *nicotinic acid*, but that name’s association with tobacco necessitated the new coining in the early 1940s.

Nicaragua. The Indian chief Nicaro, who reigned in the country before the Spanish conquered it, gives his name to Nicaragua.

nice guy. *Nice* has undergone a complete change in meaning since it came into English late in the 13th century. Deriving from the Latin *nescius*, “ignorant,” *nice* originally meant foolish, or simpleminded, and came to mean “wanton or ill-mannered” before another century had passed. By the early 1400s *nice* was being used for “extravagant dress,” but before the century was out “extravagant dress” (as is so often the case in the world of fashion) had changed to “fashionable dress” and by Shakespeare’s time *nice* meant “fastidious or refined.” It took another 100 years or so before “refined” yielded to “agreeably delightful,” this definition first recorded in 1769.

nice guys finish last. This cynical proverb has been attributed by *Bartlett’s* to former Brooklyn Dodger manager Leo Durocher, who wrote a book using it as the title. Back in the 1940s Leo was sitting on the bench before a game with the New York Giants and saw opposing manager Mel Ott across the field. “Look at Ott,” he said to a group of sportswriters. “He’s such a nice guy and they’ll finish last for him.” One of the writers probably coined the phrase *nice guys finish last* from this remark, but the credit still goes to The Lip.

nice Nelly. Someone so prudish he or she is ridiculous. American humorist Franklin Pierce Adams (he usually signed his work with his initials FPA) is responsible for this term. A prudish woman called Nice Nelly was a character in his newspaper column “The Conning Tower” and her name passed into the language from there. *See also* OLD LADY IN DUBUQUE.

nice night for the sow to have pigs. Heard in the midwestern U.S. to describe a very bright moonlit night. A pig is a young swine, often called a hog when it reaches 120 pounds.

nice work if you can get it. Common in the U.S. since at least the late 1930s, this phrase—which means “a favorable or agreeable arrangement”—is in Noel Coward’s *Peace in Our Time* (1947). A musical comedy song of the same title popularized the expression in America (in *A Damsel in Distress*, 1937).

nickel. *Nickel* has stood for a U.S. five-cent piece since 1881, but has never been the official designation for the coin. The coin is so called because it is made partly of nickel. Before *nickel* was applied to the five-cent piece it was the name for a U.S. nickel penny authorized in 1857 and a nickel three-cent piece. A *nickel* is also a Canadian English term, from Newfoundland,

that means a movie, as in, “We saw a great nickel.” It is so called after a well-known movie theater named the Nickel (a nickelodian) in St. John’s, Newfoundland.

nickel curve. In baseball a nickel curve is a curve that doesn’t break much. The term has been traced to William Arthur (Candy) Cummings (1848–1924), a Hall of Famer who is credited with inventing the curveball over 120 years ago. Cummings’s curve was inspired by the half clam shells that he skimmed across a Brooklyn beach as a youngster, but he perfected it by experimenting with a baseball that cost a nickel.

nickname. *Nickname*, first recorded in 1440, derives from an earlier Old English *ekename*, meaning “an extra name.” Sloppy pronunciation of the words eventually turned an *ekename* into a *nekename* and finally a *nickname*.

nick of time. *See* JUST IN THE NICK OF TIME.

nicotine. $C_{10}H_{14}N_2$, as the nicotine staining my fingers is scientifically described, is named for Jean Nicot, lord of Villedieu (ca. 1530–1600), French ambassador to Lisbon in 1560 when Portuguese explorers were first bringing back tobacco seeds from the new continent of America. Nicot was given a tobacco plant from Florida, cultivated what is said to be the first tobacco raised in Europe, and sent the fruits of his harvest to France’s queen mother Catherine de Médicis and other notables. After introducing what Catherine called *the ambassador’s powder* (snuff) into France, the enterprising Nicot proceeded to grow a tobacco crop that he brought back to Paris and built a tidy fortune on. The *American powder* became so popular that the tobacco plant itself was called *nicotina*, after Nicot, and Linnaeus later officially named the whole *Nicotiana* genus of the nightshade family in his honor, this group including the tobacco plant most commonly cultivated today, the species *Nicotiana rustica*. *Nicotine*, the oily liquid found in tobacco leaves, wasn’t so named until 1818, when it was first isolated. It is one of the most physiologically active drugs known, producing most of the observed effects of smoking. The alkaloid is poisonous to bugs as well as humans, and is used as an insecticide in agriculture.

Nietzschean. The philosophy of Friedrich Wilhelm Nietzsche, much distorted by the Nazis and other “supermen,” did however champion the “morals of master men,” especially in the philosopher’s famous four-part work *Thus Spake Zarathustra* (1883–91). The son of a German pastor, Nietzsche was acutely antagonistic to humble and compassionate Christianity—a slave morality born of resentment, he thought. The philosopher denied the values of beauty, truth, and goodness and asserted that man is perfectible through the will to power. Nietzsche did not claim that the Germans were a master race, as Nazi propagandists insisted; his Nietzschean doctrine of the *Übermensch*, or dominant man, above good or evil, applied to no particular nationality. *Übermensch*, incidentally, means “overman” or “beyondman” in German, not “superman.” George Bernard Shaw coined the latter word from Nietzsche’s term when he wrote *Man and Superman* in 1903. Nietzsche, rejected and reviled by his contemporaries, died insane at the age of 56 in 1891, 11 years after suffering a physical and mental collapse that

prevented him from doing more work. It is interesting to note that the philosopher criticized anti-Semitism and many other tendencies that led to Nazism. Few other men have had so strong an influence on 20th-century thought. See SUPERMAN.

nifty. *Nifty* for “smart, stylish, fine, or clever” may have originated as American theatrical slang. It is first recorded in an 1865 poem by Bret Harte, the author claiming that the word derived from *magnificent*. Another possible source is the older *snifty*, “having a pleasant smell.”

nigger; N-word. When used by a white person to describe a black or African-American person, this is probably the most offensive, hateful, hurtful term in the language today. Like *Negro*, the word derives ultimately from the Latin *niger*, black. It is not an Americanism, the first recorded use of *nigger* being in a 1786 poem by Robert Burns, although variations on it, including *negar*, *neger*, and *niger*, are recorded two centuries before then. Though African Americans do commonly use the word in different ways among themselves (“That nigger’s got luck you wouldn’t believe”), blacks rarely if ever do so in the presence of whites. Since the O. J. Simpson murder trial in 1995, when evidence of its use by a detective-witness was introduced, it often has been euphemistically called the *N-word*. *Nigger* has also been an offensive derogatory term applied to Indians as well as blacks up until recent times. In fact, the objectionable word was applied to themselves by white mountain men in the early West. Once commonly used expressions such as a *nigger in the woodpile* (concealed but important information, a “catch” in a situation) are rarely heard today. So sensitive are people black and white to the use of *nigger* that the word *niggardly* (miserly), which sounds like but is no relation to it etymologically, is often avoided. There is no character named “Nigger Jim” in Mark Twain’s *Adventures of Huckleberry Finn*, as is so often said. The runaway slave in Twain’s novel is named Jim, just Jim; nowhere in the book is his name anything else. For an in-depth study of the abominable n-word see African-American scholar Randall Kennedy’s *Nigger* (2002).

nightcap. A drink, usually alcoholic, before going to bed, to help one sleep better. The term was coined two centuries ago when people wore nightcaps to keep their heads warm in those days of primitive heating. The bedtime drink came to be associated with and named after the practice of putting on a nightcap just before retiring.

nightmare. Bad dreams in Roman times were attributed to demons called the *incubus* and *succubus*. The incubus (from the Latin *incubare*, “to lie on,” which also gives us the word *incubate*) was said to consort with women in their sleep. This explained the heaviness or suffocation a woman might feel during a bad dream. The superstition was so widely believed in the Middle Ages that any woman who gave birth to a “witch” was supposed to have been visited by a male demon. The female counterpart of the incubus was the succubus (from the Latin *suc* or *sub*, “under,” and *cubare* “to lie”), who slid beneath a male sleeper. In the Dark Ages, there were laws against these demons whose existence was recognized by both church and state. Soon they became known as the “night hag,” “the riding of the witches,” and the *nightmare* as well. The *nightmare*, how-

ever, had nothing to do with a female horse, taking its name from *night*, plus the Anglo-Saxon *mare*, meaning “incubus.” *Nightmare* eventually replaced the older Latin word *incubus*, which is now used to describe an oppressive load. Although the word wasn’t born from a horse, it caught the popular imagination because of the graphic picture it suggested of a terrible horse bearing sleepers off on a frightening ride.

The Night of the Long Kiss. A famous osculation rivaling Hollywood’s *Brokeback Mountain* kiss or the salty one in *From Here to Eternity*. The night of the long kiss, as it has been called, dates to 1907. On January 3, the marquise de Morny’s pantomime play *Rêve d’Egypte* premiered at the Moulin Rouge music hall in Paris with the famous French author and actress Colette starring as a woman reunited with her lover. Colette, scantily clad—almost unclad—played opposite her lesbian lover, the marquise de Morny, who played the male role. It was a realistic performance, especially the long uninhibited kiss between the two women toward the end of the play. Unfortunately, the marquise de Morny’s husband and a group of his friends had front-row seats. Their outrage spread to most of the audience and a riot broke out in the theater, with people throwing bottles and glasses at the actors and fighting with each other in the aisles.

night of the long knives. On the night of June 29, 1934 Hitler and his allies killed or had imprisoned a number of Nazi party members he wanted out of the way. Since then a *night of the long knives* has meant “a time when an act of great disloyalty is done,” especially when several people form a conspiracy to do it.

night soil. Because cesspools used to be cleaned during the night in the 18th century, their contents were called *night soil* and the cleaners “night men.” That the contents were sometimes added as fertilizer to soil at night could account for the *soil* in the expression.

nihilism. Meaning total rejection of established laws and institutions, and denial of all real existence, *nihilism* was coined from the Latin *nihil*, “nothing,” by Russian novelist Ivan Turgenev to name and describe the principles of a Russian revolutionary group in the late 19th century.

nimby. An American acronym that has been common since the late 1980s. It appears to have been coined by American scientist Walter Rodger and means “not in my back yard,” referring to objection by residents to the establishment in their neighborhoods of dangerous, unsightly, or other undesirable projects, such as shelters for the homeless, prisons, landfills, and incinerators. The people often don’t mind if such projects are built elsewhere.

niminy-piminy. Affectedly delicate or refined. Apparently the rhyming compound was coined by (General) John (Gentleman Johnny) Burgoyne in his *The Heiress* (1786), when Lady Emily instructs the vulgar Miss Alscrip stand in front of a mirror and keep pronouncing *mimini-pimini* to give a pretty form to the lips. In *Little Dorrit* (1855–57) Dickens had Amy do the same with *papa, potatoes, poultry, prunes, and prism*.

Nimrod. In the Bible Nimrod is the son of Cush and the founder of Babel. He may have been an Assyrian king who built the city of Nineveh, the capital of the Assyrian empire. According to Scripture, Nimrod was “a mighty hunter before the Lord” (Gen. 10:8–10), and historians tell us that the Assyrian kings were noted for their prowess in hunting. Aramaic translations of the Old Testament say “that mighty hunter before the Lord” means “sinful hunter of the sons of men,” which accounts for Pope’s and Milton’s description of Nimrod as “a mighty hunter, and his prey was man.” But a *Nimrod* is more generally the nickname for a great, daring, and skillful hunter, or even sportsman. In recent slang it means a stupid person or a jerk, probably after a cartoon in which Bugs Bunny calls hunter Elmer Fudd “poor little Nimrod.”

nincompoop. Dr. Johnson suggested that *nincompoop*, “a fool or blockhead,” came from the Latin *non compos mentis*, “of unsound mind,” but the earliest forms of the word, first recorded in about 1676, are *nicimpoop* and *nickumpoo*, making this unlikely. The word is probably “a fanciful formation,” as the *O. E.D.* puts it, of obscure origin.

nine. *Nine* is obviously a synonym for a baseball team because that’s the number of players on a team. But the first recorded use of the word *nine* in this sense is in the name of a team called the New York Nine, which played against the New York Knickerbockers Ball Club in 1846. Thus the term *nine* may derive from the name of a specific team.

nine days’ wonder; 90-day wonders. Minor marvels, things that cause great sensations for a short time and then pass into limbo, have probably been called *nine days’ wonder*, or something very similar, since Roman times. Kittens, puppies, and other young animals have their eyes closed for a number of days after birth and then open them and see the light—just as astonished people eventually “open their eyes” and see astonishing things in their true perspective. This is probably the reasoning behind the expression, *nine* being used because it has always been regarded as a mystical number and might have been thought to be the number of days young animals keep their eyes closed. Robert Burton gave us a proverb that seems to confirm this theory: “A wonder lasts but nine days, and then the puppy’s eyes are open.” In both World Wars and the Korean Conflict, the nickname *90-day wonders*, an offshoot of the earlier phrase, was given to young, sometimes zealous second lieutenants who were trained for only three months in Officer Candidate School (OCS).

9/11 war. It seems safe to say that the war resulting from the terrorist attack on the World Trade Center in New York on September 11, 2001, will always be remembered by most Americans as the 9/11 war. The only real rival for this designation is the *war on terrorism*. See LET’S ROLL; REMEMBER.

nine months winter and three months late in the fall. An old one-liner describing, often accurately, New England weather. The saying dates back well over a century.

19th hole. Mencken calls *the 19th hole* “the one American contribution to the argot of golf.” While this isn’t quite true

(*par*, *birdie*, *eagle*, *chip*, and *sudden death* are among U.S.-invented golf terms) the expression has been with us at least since the early 1920s and means “a convivial gathering place,” such as a locker room or bar, after a game of golf.

the 98-cent man. For many years it was estimated that the value of a human life, in chemical terms, was 98 cents, leading to the expression *the 98-cent man*. Inflation has changed this figure in recent times. Today the chemical elements in the body—5 pounds of calcium, 1½ pounds of phosphorus, 9 ounces of potassium, 6 ounces of sulfur, about 1 ounce of magnesium, and less than an ounce each of iron, copper, and iodine—are worth about \$8.37.

99.44 percent pure. This bit of advertising hype for IVORY SOAP is often used jokingly to describe anything pure. The *New York Times* (5/22/94) reported that: “A Procter & Gamble archivist, Edward Rider, says that although the soap’s history is shrouded in myth, the best source for the number is an analysis done Dec. 14, 1882, by a New York City chemist, W. M. Habirshaw, who found the soap to be 72.53 percent ‘fatty anhydrides,’ 9.28 percent ‘soda combined’ and 17.63 percent ‘water by difference.’” If you add up the numbers you get 99.44 percent. And the first known ad to use this figure appeared a week later.

The Nine Worthies. Shakespeare lists these men in *Love’s Labour’s Lost* (1595): Three pagans (Hector, Alexander, and Caesar); three Jews (Joshua, David, and Judas Maccabaeus); and three Christians (King Arthur, Charlemagne, and Godfrey of Bouillon). The choices vary on other lists.

ninny. *Ninny*, for “a fool or simpleton,” is probably an abbreviation or pet form of *innocent*, it being only a short step from “adorably innocent” to “foolishly simple.” The word is first recorded in 1592 and an early synonym, used by Rabelais, was *ninny-whoop*. Thus it predates NINCOMPOOP.

Ninth Commandment. Ninth of the Ten Commandments: “Thou shalt not bear false witness against thy neighbor.” See TEN COMMANDMENTS.

ninth wave. A nautical superstition of old holds that waves become progressively higher until the ninth wave (some say the 10th) and that then the progression begins all over again. While waves sometimes form larger ones when they meet, there is no fixed interval when a large one can be predicted.

Niobe of nations. Byron called Rome or Italy the *Niobe of nations* because of her lost empire. Niobe in Greek mythology lost all her 14 children when she taunted Leto because she had only two offspring. Leto commanded her two children—Apollo and Diana—to avenge the insult and cause the death of all Niobe’s sons and daughters. Inconsolable, Niobe “wept herself to death and was changed into a stone from which ran water.”

nip and tuck. *Nip and tuck* pretty much means “neck and neck,” but the latter phrase suggests, say, two runners racing at

the same speed with neither one ahead of the other, while *nip and tuck* describes a close race where the lead alternates. The earliest recorded form of the expression is found in James K. Paulding's *Westward Ho!* (1832): "There we were at rip and tuck, up one tree and down another." Maybe the *rip* originally came from "let 'er rip" and later became *nip* because of the expression "to nip someone out," to barely beat him, while the *tuck* was simply an old slang word for "vim and vigor." Other guesses at the phrase's origins are even wilder.

nip in the bud. To obtain larger peonies or tomatoes, to get larger flowers or fruit of any kind, gardeners have long pinched off excessive blossoms on plants, nipped them early in the bud to channel all a plant's strength into a few remaining buds, which will then yield large flowers or fruit. No fruit comes from a nipped-off bud, of course, and so the gardening term *to nip in the bud* became proverbial in Elizabethan times for calling a halt to something before it has a chance to develop, especially in regard to bad habits or plans with little chance of success.

a nip of whiskey. A *nipperkin* (possibly from the Dutch *nypelkin*) was a small container holding a half pint or less of liquor, usually wine or ale, the term being first recorded in 1694. *Nipperkin* was shortened to *nip* within a century or so and came to mean even less, no more than a shot glass full of spirits.

Nippon. Japan's native name, which gives us *Nipponese*, the source of the derogatory word *Nip* for a Japanese person frequently heard during World War II. *Dai Nippon* means "the place where the sun comes from," or "the land of the Rising Sun."

Nissen hut. See QUONSET HUT.

nitpicker. "She can wel pyke out lyce and nitis," William Caxton, the first English printer, wrote in a book of fables he translated from the French and published in 1484. But it took centuries before a nitpicker, "one who picks lice eggs [nits] from one's body or clothes," changed in meaning to one who looks for and finds small errors (as small as nits), a pedant. I'd guess that the expression is an Americanism dating to the late 19th century.

nitty-gritty. Getting down to the nitty-gritty is getting down to basic elements. Though first recorded in the 1960s the expression is probably older; the nitty-gritty of the phrase may be gritlike nits (small lice) that are difficult to remove from the hair or scalp.

nitwit. This Americanism, first recorded in 1926, may be a combination of the German *nicht*, "not," and the English *wit*—*nichtwit*, "not with wits, without wits"—corrupted in speech to *nitwit*. Another theory has *nitwit* deriving from "a scornful English imitation" of Dutchmen who answered questions asked in English with the Dutch expression *Ik niet wiet*, "I don't know." This, however, would date *nitwit* to Dutch days in New York and there are thus far no examples of the word's use that far back.

nix. *Nix* is probably a British borrowing from the German *nichts*, "nothing." Meaning "nothing" or "no," it dates back to the late 18th century, when it is recorded as *nichts* in British slang, the word being spelt *nix* by 1812 at the latest. The expression *nix on that*, "nothing doing," is an Americanism first recorded in 1902. The famous *Variety* headline STIX NIX HIX PIX widely popularized *nix* in America.

Nixon's resignation. Sure that he would be impeached and found guilty in the Senate for his Watergate cover-up, Richard M. Nixon decided to resign from office. It came as a very brief 12-word letter addressed to Secretary of State Henry Kissinger on August 7, 1974, reading:

I hereby resign the office of the President of the United States.

Nixon's the one! This political slogan was turned against Richard Nixon in 1968 when he ran for the presidency—the button with the slogan was sometimes worn by pregnant women (Democrats, of course). In any case, Nixon won, perhaps more because of his slogan "Let's Get America Going Again."

Nixopedia. A wealth of negative material collected by Kennedy's aide Myer Feldman and his group about Richard M. Nixon for use in the 1960 presidential race, which of course Kennedy won. Feldman was a little-known but important adviser, at least one newspaper calling him "The White House's anonymous man." He worked similar tricks against Barry Goldwater in the 1964 presidential campaign, but remains best known for what one critic dubbed his Nixopedia.

n.n. See N.G.

no-account. No-good, worthless, good-for-nothing, sometimes *no-count* in the South and other regions. Nobel Prize winner William Faulkner (1897–1962), one of America's greatest authors, was known as Count No Count to his neighbors in Oxford, Mississippi, during his early writing days. No one thought he would amount to much, this strange, seemingly lazy, rather seedy little man dressed in greasy khakis and a tweed sports jacket that had seen better days. The rumor spread that an intellectual friend, lawyer Phil Stone, must really be writing the stories that Faulkner to which signed his own name. See FAULKNERIAN.

Noah's Ark. It's safe to say that everyone over the age of six is familiar with the biblical story of Noah's Ark. However, few people are aware of this description in the files of the Atlantic Mutual Insurance Company, which has one of the world's largest archives on marine disasters:

Noah's Ark. Built in 2448 B.C. Gopher wood pitched within and without. Length, 300 cubits; width, 50 cubits; height, 30 cubits. Three decks. Cattle carrier. Owner: Noah and Sons. Last reported stranded Mount Ararat.

Noah's Brig. *Noah's Brig*, a tiny rockbound island in the Hudson River, is named for one Captain Noah, an 18th-century captain of a fleet of rafts who had the misfortune of encounter-

ing the island under adverse conditions one night. Noah sighted “a dark object floating the waters,” which looked like a brig under sail. “Brig ahoy!” he cried, but no answer came. “Brig ahoy!” he shouted. “Answer or I’ll run you down!” There was still no reply and Captain Noah stubbornly held his course. Then a crash—wood crunched on rock: Noah had mistaken two trees on the island for masts with sails set.

no applause—just throw money. A line famously said by vaudeville comedian Joe Frisco in the 1880s and recently (2005) used as the title of a book on vaudeville by Trav S. D. (Travis Stewart). See VAUDEVILLE.

no balm in Gilead. “Is there no balm in Gilead; is there no physician there?” Jeremiah laments in the King James Version of the Bible. His words, from Jer. 8:22, give us the common expression meaning there is no consolation, no remedy. *Balm* is simply a shortening of *balsam*, a resinous gum long noted for its healing and soothing properties. But the Hebrew word *tsori*, rendered as *balm* in the King James Version, really means resin, probably the resin yielded by the mastic tree, another ingredient in many ancient remedies. So Jeremiah should literally be saying “Is there no resin in Gilead?” or “Is there no mastic in Gilead?” Not knowing exactly what substance Jeremiah referred to caused early translators of the Bible a lot of trouble. John Wycliffe and others used the word *gumme* or *resin* in the phrase, and in the so-called Bishops’ Bible (1568) the translators had Jeremiah say “Is there no treacle in Gilead?” The bishops who did this translation were using treacle in its early sense of a salve, but later generations knew the substance as molasses or any sickeningly sweet substance and humorously referred to the Bishops’ Bible as the Treacle Bible. See JEREMIAD.

Nobel Prize. “The day when two army corps will be able to destroy each other in one second,” Alfred Nobel predicted, “all civilized nations will recoil away from war in horror and disband their armies.” The Swedish inventor of dynamite proved to be wrong in his prophecy, which may have been a rationalization for his invention, but the \$9 million he left in his will to set up the Nobel Prize Foundation has greatly aided the cause of peace. Nobel Prizes are awarded to persons, irrespective of nationality, who have done outstanding work in the five fields Nobel considered most important to the benefit of mankind: physics, chemistry, medicine and physiology, literature, and peace. The prizes, given in Stockholm and Oslo on December 10th of each year in which awards are made, consist of varying amounts of money, a diploma, and a gold medal. The first ceremony was held in 1901. See DYNAMITE; FEYNMAN DIAGRAM.

no better than she should be. An early-18th-century translation by Peter Motteux of *Don Quixote* is the first to record this classic understatement, meaning “an immoral woman.” Whether it was coined at this time no one knows.

noble experiment. President Herbert Hoover did not coin the expression *noble experiment* for Prohibition, nor even repeat the words. While seeking the presidency in 1928, Hoover answered a question about prohibition in a questionnaire Idaho senator William E. Borah sent to several candidates. What

Hoover actually replied in part was: “Our country has deliberately undertaken a great social and economic experiment, noble in motive and far-reaching in purpose.”

noble science. A euphemism for “boxing” dating back to the 19th century, when aristocrats like the poet Lord Byron took boxing lessons from pugilists and the ability to box was requisite for a nobleman. Boxing was also dubbed “the manly art of self-defense” at the time.

noblesse oblige. *Noblesse* has been used as a synonym for nobility in English since it was borrowed from the French in the early 14th century. However, *noblesse oblige*, the French for “nobility obliges,” seems to be a recent coinage of the last 50 years or so. It generally means the obligation of the nobility, or the rich, to help others worse off than they.

nobody but nobody undersells Gimbels. This slogan of the now defunct Gimbels department store, often used by other stores today, was invented by the irrepressible Bernice Fitz-Gibbon, an English teacher who became Macy’s star copywriter before Gimbels shoplifted her from them. (She had coined Macy’s famous *It’s Smart to Be Thrifty* slogan, not to mention a legendary ad featuring a voluptuous woman in a strapless evening gown that was captioned “How do you keep it up night after night?”) Gimbels’ slogan became world famous, Winston Churchill once asking his friend Bernard Baruch if it was “really true that nobody, but nobody, undersells, Gimbels?”

nobody home! Knocking themselves on the head, people sometimes say *Nobody home!* or *Nobody’s home upstairs!* after forgetting something or after making a foolish statement. This is not contemporary slang, but dates back to the 1700s and an epigram of Alexander Pope’s called “The Empty House”:

You beat your pate, and fancy wit will come:

Knock as you please, there’s nobody at home.

A more modern equivalent is “The lights are on, but nobody’s home.”

nobody loves Goliath. A saying of the seven-foot-tall Philadelphia Warrior basketball star Wilton “Wilt the Stilt” Chamberlain (1936–1999), whose play dominated the NBA for many years. Called the greatest offensive player in basketball history, Chamberlain was also known as The Dipper, because he dipped so many shots into the basket from above. On March 2, 1962, against the New York Knicks, he scored 100 points, the most ever scored in a single pro game.

nobody never hit nobody. Famous triple negative words of Yankee catcher Yogi Berra when he testified in a lawsuit about a fight in a nightclub.

nobody’s land. Another name for NO-MAN’S-LAND especially in the military during World War I.

no-brainer. A conclusion or answer to a question that is easy to figure out. The phrase is a recent one, dating back about 10 years.

no bucks, no Buck Rogers. A recent U.S. space agency saying advising or threatening that there will be no exciting manned space probes unless Congress appropriates money needed by the agency for many purposes.

no can do; can do. The negative phrase, and its opposite, are not contemporary expressions, as many people believe. They date back about a century and a half to England, where they probably originated in the Royal Navy.

no chain on the bike. An expression used by riders in biking competitions when everything goes right and easy. “Today was my last day, my strongest,” Lance Armstrong said. “There was no chain on the bike.” (*New York Times*, July 20, 2005)

no cheese, no bees, no trees. American astronaut Neil A. Armstrong’s humorous reply back on Earth to those who asked, just as jocularly, if the Moon was made of green cheese. On July 20, 1969, Armstrong had become the first man to walk on the Moon.

no comment. This common expression used by people hounded by reporters is an Americanism dating back no earlier than the beginning of the century. The original journalists given “no comments” may have been Hollywood gossip columnists in the 1920s. In his *On Language* column (March 5, 2006), William Safire says that in 1946 Winston Churchill told reporters: “I think *no comment* is a splendid expression. I got it from Sumner Welles.” Though Churchill made the phrase famous, it has never been a favorite of reporters.

no dice. *No dice*, for “no” or “absolutely not,” derives from the game of dice, where *no dice* means “a throw that doesn’t count.” *No dice* can also mean “worthless and completely unsuccessful,” all of these meanings apparently dating back to the late 1920s in the U.S.

no flies on him. He’s full energy, a virtual dynamo, the English phrase dating back probably to Victorian days. No flies on me, a variant, is an Americanism first recorded in about 1910.

no good deed goes unpunished. This cynical phrase seems appropriate for the late 20th century and almost surely hails from there. See ONE GOOD TURN DESERVES ANOTHER.

no great shakes. That monument of noncomputerized scholarship, the great *Oxford English Dictionary*, suggests that this expression alludes to the shaking of dice. Someone who is *no great shakes* is nothing extraordinary, like a gambler who shakes the dice and throws a low point—no sevens or eights. Considering its first recorded use, the expression must have been known as early as the 17th century. Lord Broughton, recalling an 1816 art show in his *Recollections of a Long Life* (1865), wrote: “W. said that a piece of sculpture there was ‘*nul-lae magnae quassationes*,’ and the others laughed heartily.” The others, proficient linguists, got the joke immediately when they translated the Latin for *no great shakes*. Another suggestion is that the expression derives from the provincial word *shake*, “to brag”—according to this highly improbable theory

someone who is *no great shakes* would be nothing to brag about.

no hits, no runs, no errors. Dating back to at least the 1930s and deriving from literal use in reports of baseball games, *no hits, no runs, no errors* has come to mean either complete failure (like the team shut out with no hits, no runs, no errors), perfection (like the pitcher who pitches a perfect game with no hits, no runs, no errors), and even something uneventful or without hitches (as in a game where there were no hits, no runs, no errors).

no holds barred. The expression *no holds barred*, meaning “no limits or reservations, free and uninhibited,” was surely suggested by a wrestling contest in which all holds are allowed, but not by an officiated match in which there are rules and regulations. It probably dates back to the 19th century.

nohow. Anyhow. An Americanism dating back to the early 19th century. In one of Solomon Franklin Smith’s books set in the Southwest in the 1850s, he tells of a woman who was offered condolences on the death of her husband. “Warn’t of much account, no how!” she replied.

no ifs, ands, or buts about it. An expression used mainly for children when something needs to be accomplished, as, for example, “Do your homework, no ifs, ands, or buts!” Meaning no excuses.

noisette. The hardy, widely grown garden rose named the *noisette*, a cross of the moss rose and the China rose, originated in America in about 1816. It was named after an early cultivator (not the originator) of the hybrid, Philippe Noisette of Charleston, South Carolina. It is less often called the Champney rose, for its discoverer, John Champney of Charleston.

noisome. Many people on first encountering this word believe it means “noisy,” but *noisome* has no connection with the word *noise*. *Noisome*, which means “offensive or disgusting, noxious,” was formed from the Middle English *noy*, harm or annoyance,” and the suffix *some*, in the sense of “characterized by some quality.”

no ka de. A good example of one of the ways English words are used in Japan. Foreign borrowings (not only, but mostly, English, and including technical terms) total about 100,000 words, fully one-third of the Japanese vocabulary. *No ka de* is the Japanese of the English words *no car day*. In Japan it is the day of the month when certain drivers are not allowed to use their cars. To help curb air pollution every driver is assigned a certain “no car day.”

noli me tangere. *Noli me tangere*, “touch me not,” are the words Christ spoke to Mary Magdalene after His resurrection. The impatiens (*Impatiens holotii* and other species) are called *noli me tangere* and *touch me not* because their seed pods burst and scatter their seeds when touched. They are also called

snapweed, and Busy Lizzie in reference to their frequent blooming. *Impatiens* is from the Latin for impatience, in allusion to the bursting of the seed pods.

no love lost. This has been called “an ambiguous phrase” that meant both “they have no love for each other” and “their affection for each other was mutual” when it was first recorded in the late 17th century. Today, however, these words always mean “they dislike each other, have no love for each other.”

no-man’s-land. World War I created many a *no-man’s-land*, but isn’t responsible for the phrase. *No-man’s-land* was first used in the early 14th century for the unowned wasteland outside the north wall of London that was used as an execution site for criminals. For many years no one wanted to own this land where criminals were beheaded, hanged, or impaled, their rotting bodies left on display as a warning to lawbreakers. The place became known as *no-man’s-land* because no one claimed it, and the expression was soon applied figuratively to other places. About 400 years later *no-man’s-land* was applied to the little-used place on a ship’s forecastle where blocks, ropes, and tackle were stored. The term was first used in its military sense of the area between hostile entrenched lines in about 1900 and became famous in this sense during World War I. The dead could be seen in these *no-man’s-lands* just as they had been seen in the original six centuries before. “A wilderness of dead bodies,” the writer who first used the military term called it. In a letter to his mother British poet Wilfred Owen, killed in the war, wrote: “No Man’s land is pockmarked like the body of foulest disease and its odour is the breath of cancer . . . No Man’s Land under snow is like the face of the moon, chaotic, crater-ridden, uninhabitable, awful, the abode of madness.” In another letter he spoke of “Hideous landscapes, vile noises . . . everything unnatural, broken, blasted; the distortion of the dead, whose unburiable bodies sit outside the dug-outs all day, all night, the most execrable sights on earth.”

nom de debauch. The pseudonym British aristocrats took on before becoming members of notorious clubs like the Hellfire Club.

nom de guerre. “A name of war,” just another term for a pseudonym, usually for outlaws, pirates, war lords, and the like. Blackbird, Diabolito, Long Knife, Captain Buzzard, Gentleman Harry, Big John, Black Bart, and Calico Jack—these are only a few of the many pirates who chose to live under colorful pseudonyms or names of war that they invented or had bestowed upon them. *Nom de guerre* is also a term (mostly French) for a pen name. In English *nom de plume* is preferred, as is *pseudonym* (the Greek for “false name”).

nom de plume. French for “pen name or pseudonym.”

Nome. The Alaskan seaport, according to one persistent story, was dubbed *Nome* after a British naval cartographer aboard the *Herald* working on a map of Alaska noted a cape without a name and wrote “Name?” above it. In London the printer misread “Name?” as *Nome* and so the cape was named. Later,

Cape Nome’s moniker was transferred to the port near it, which had been called Anvil City. No other plausible explanation has been given for Nome’s name. *See also* INDRI; KANGAROO; LLAMA; LUZON; YUCATAN.

no more chance than a kerosene cat in hell with gasoline drawers on. A southern expression meaning “absolutely no chance at all” and dating back to the 1920s.

No more free lunch! When he was elected in 1934, New York’s reform mayor Fiorello La Guardia invented the slogan “No More Free Lunch!” (No more graft). The words are a translation of the Italian “E finite la cuccagna!” said to have been shouted by the Little Flower while he angrily shook his fist at City Hall.

no more Hoares to Paris. In the days before World War II, British diplomat Sir Samuel Hoare made rather disadvantageous arrangements with the French in Paris and King George V quipped famously to his foreign secretary: “[Send] No more coals to Newcastle; no more Hoares to Paris.” Sending *coals to Newcastle* means doing something superfluous, as Newcastle was a great coal-mining center—which adequately explains the rest of the quip.

no more use for them than Meader’s teeth. A saying, only historical now, that derives from the old story about a man named Nick Meader, who at about the time of the War of 1812 borrowed a hammer to knock out all his teeth, claiming, “I have no need of them, for I can get nothing to eat.”

nonce word. *See* GHOST WORD.

nondenial denial. Government or any official evasion. The expression was made famous by the words and phrases of President Richard Nixon’s chief spokesman, Ronald L. Ziegler (1940–2003) known as *Zig-Zag* to reporters. When Ziegler was asked if U.S. troops were planning to invade Laos in 1971, he advised: “The president is aware of what is going on in Southeast Asia. That is not to say anything is going on in Southeast Asia.” The youngest press secretary in U.S. history at 29, he coined the phrases *photo-op* and *third-rate burglary* (for Watergate), among other inventions.

none-so-pretties. A folk name, two centuries old, for the flowers more commonly called pansies today.

no news is good news. This is not a recent saying, as one might think. A slight variation on it dates back to at least the reign of England’s King James I, who in 1616 wrote to one of his ministers and asked him not to write back unless he had a favorable answer, advising him that “no news is better than evil news.”

nong-nong. One of the few words that have entered English from an Aboriginal language, *nong-nong* is heard primarily in

Australia, meaning “a complete fool, a silly person.” Such a person is also called a “nong.”

no-no. See YEAH, YEAH.

nonpareil. See HUNDREDS AND THOUSANDS.

noodling. A way to catch catfish by using one’s bare fingers as both bait and hook. The technique, common in the South, can be painful, as catfish have sharp teeth. Catfish can weigh more than 100 pounds and *noodling* is so called because these fishermen wiggle their fingers like spaghetti to attract the monster fish.

noogie. No one is sure where noogie comes from, though the word is first recorded among U.S. college students in the early 1970s. A *noogie* is a blow to the head with the knuckles, but it can also mean rubbing someone’s head with the knuckles.

no oil painting. A man or woman whose appearance isn’t handsome or beautiful is said to be “no oil painting,” as in “She’s no oil painting, but everyone likes her.” An oil portrait of someone usually does all it can to make the sitter attractive. See WARTS AND ALL.

nook and cranny. As in “We searched every nook and cranny for Irene’s missing earring.” A *nook* is a small narrow opening in a wall, the word of Scandinavian origin, while a *cranny*, of Old French origin, is a lonely secluded place or a small corner. The words in the phrase are sometimes used separately, as in the recent headline: Intimate Nooks Filled with Treasure.

nookie. Partridge defines this as “sexual intercourse” and says it is “middle class and almost polite.” He calls it late-19th-century “baby talk,” though some others call it “slang.”

noon. Why does *noon* derive from the Latin *nono*, meaning “nine”? Noon actually first meant the ninth hour of the day—counted from sunrise, which comes at 6 A.M. on the average. *Noon* was thus at 3 P.M., halfway between midday and sunset, or the middle of the afternoon. Early in the 13th century the meaning of noon began to change from 3 P.M., or the middle of the afternoon, to 12 o’clock, or the middle of the day itself, possibly because it was a handy word to apply to the time when the midday meal was eaten.

noonday. See KIND-HEARTED.

no one knows the luck of a lousy calf. An old American saying meaning no one knows the fate of an unpromising person, he or she may succeed beyond all expectations. Usually said of children considered “unpromising” by adults.

no-pan. In Japanese bars and nightclubs, topless and bottomless waitresses abound. The Japanese have taken to calling the latter “no-pan,” a word they made by shortening the English expression *no-panties*.

no problem. Don’t worry about it, no trouble to replace or fix it. As in “I’m sorry I broke the plate.” “That’s O.K., don’t worry about it; no problem.” A very common American expression.

Nordic. This is a word that has been much distorted in modern times, especially by Nazi propagandists, who used it, like *Aryan*, to describe a vastly superior blond, blue-eyed “race” (Nietzsche’s “blond beast” type) inhabiting Germany. Actually the Nordic type properly describes Scandinavians. The word derives from the Latin *nordicus*, “northern.” According to Walter Theimer, in *The Penguin Political Dictionary* (1949): “There is a Nordic type, making up about 70 percent of the population in Scandinavia, less than 20 percent in Germany, Holland and Great Britain, and less than 15 percent in the United States . . . The existence of a common Nordic-primitive people has never been proved.”

no rest for the weary. Frequently said half in jest by someone laboring too hard, this expression was probably suggested by the older phrase *no peace for the wicked*, which is from the biblical “There is no peace, saith the Lord, unto the wicked.” (Isa. 48:22).

Norfolk Howard. There are many notable name changes in history. One of the most famous among them would have to be the change made by Italian Cardinal Grugno in 1009, which began the custom of popes taking a new name on accession. The cardinal had an excellent reason for adopting the name Sergius IV; Grugno means “swine snout” in Italian. Usually people do have good reasons for legally changing their names—like C. J. Crook who changed his name to C. J. Noble. This type far outnumbers the logically unaccountable changes like W. Jones to W. Smith (1798). Sometimes even the most logical name changes backfire, though. On June 26, 1862, Joshua Bug of Norfolk, tired of his “base” name, took an ad in the *London Times* announcing that he would henceforth be known as Norfolk Howard, this being one of England’s most aristocratic names. His countrymen soon foiled the poor man’s grandiose plans for metamorphosis, however, displaying the British sense of humor so many say doesn’t exist and adopting *Norfolk Howard* as a slang synonym for “bedbug.” See OFFICIAL MONSTER RAVING LOONY PARTY; ZIPPITY-DOO-DAH.

no more use for them than Meader had for his teeth. A historical saying that derives from an old story about a man named Nick Meader who at about the time of the War of 1812 borrowed a hammer to knock out all his teeth, claiming “I have no need of them, for I can get nothing to eat.”

no room to swing a cat. This phrase probably has something to do with the old “sport” of swinging cats by the tails as targets for archers. The expression goes back at least to the mid-1600s, and CAT-O’-NINE-TAILS isn’t recorded until about 1670, which makes it unlikely that the phrase originated with some sea captain having no room to punish a rebellious sailor with a “cat.” The only other plausible explanation is that *cat* in this case refers to a sailor’s hammock or *cot*, there being little room on olden ships to swing one, but there are no quotations to support this theory.

the Norse gods.

Woden—death, poetry, victory
 Thor—thunder and war
 Tyr—War
 Loki—evil and fire
 Balder—light or beauty
 Frey—sun or fertility
 Idun—eternal youth

Norskie. This mildly derogatory term for a Norwegian-American is mainly heard in the Northwest, as it has been for over a century. See SCANDAHOOVIAN.

North Carolina; South Carolina. Both states really honor three kings—deriving from the Latin *Carolus*, meaning “Charles.” Originally dedicated to France’s Charles XI in the 16th century, the territory now comprising North and South Carolina was next named for England’s Charles I. Charles I granted the patent for the Carolinas to Sir Robert Heath in 1629, Heath calling the territory Carolana in his honor. This it remained until 1663, when Charles II granted a new patent and the colony was called Carolina in *his* honor.

North Dakota; South Dakota. These states are named for the Dakota tribes in the area, *Dakota* meaning roughly, “allies” from *da*, “to think of as,” and *koda*, “friend.” (For other friendly Indians, see TEXAS.)

northeast, southwest, northwest, southeast. In parts of Kansas settled along the geographical grids suggested by Thomas Jefferson, the appropriate burners on gas and electrical stoves are still called northeast, southeast, northwest, southwest. Nowhere else is this nomenclature used.

northern fox grape. A wild grape ranging from New England to Illinois and south to Georgia that is so named because it supposedly “smelleth and tasteth like unto a foxe.” It is the source of the Concord and other cultivated grape varieties.

North Star State. See GOPHER STATE.

Norway rat. The common but infamous brown house rat is called the *Norway rat* in the United States because it was introduced here from Norway, apparently deserting Norwegian ships trading at U.S. ports three centuries ago.

no sabe. Don’t know, don’t understand. The Spanish phrase has been common in the U.S. since the mid-19th century and is often pronounced *no savvy*.

nose; mucus. Our word *nose* derives directly from the Anglo-Saxon *nosu*, but can be traced back to the Anglo-Saxon *nasa*, which meant “dual or double” and is the tap root for *nosu*, the nose having two nostrils. The nose’s mucus, from the Latin *mucus*, “slime from the nose,” gives us the word *mucilage* for glue, which someone thought resembled it.

no-see-ems. Thoreau cites this Penobscot Indian term for small biting insects in *The Maine Woods* (1864). Today northwestern loggers use the similar term *no-see-um* for the *punkie*, a minute, almost invisible fly or midge of the family Chironomidae that has a terrific bite. *No-see-um* apparently comes from Chinook jargon or a pidgin English once spoken between loggers and Indians.

nosegay. A bunch of sweet-smelling flowers has been called a *nosegay* since at least the early 15th century. *Nosegay* has survived because it reminds us of how the nose delights in or is made gay by the smell of flowers, but the charming, playful *tussie-mussie*, or *tuzzy-muzzy*, for the same (as well as a gold or silver representation of a bunch of flowers) is extinct now. *Posy*, for a bunch of flowers or flower-like words, is little heard, but lives on in the language forever thanks to Marlowe’s “Passionate Shepherd,” who rhymed: “I will make thee beds of roses/ And a thousand fragrant posies.”

nose out of joint. Sometimes this expression is used wrongly as a general description of a conceited person. The only connection here is that it really means to humiliate a conceited person, as well as to supplant a person in another’s affections, and to upset someone’s plans. Recorded as early as the 16th century, the phrase suggests the altering of a nose that is always confidently stuck up in the air, the downfall of vanity. Samuel Pepys wrote that the marriage of Charles II to Catherine of Braganza, “a very fine and handsome lady,” would put his mistress Madame Castlemaine’s “nose out of joynt.” Actually having one’s nose out of joint is a very painful condition.

nose writing. Aldous Huxley often wrote with his nose, though he produced none of his masterpieces this way. “A little *nose writing*,” he notes in *The Art of Seeing*, “will result in a perceptible temporary improvement of defective vision.” Huxley’s eyesight was so bad that he learned Braille to relieve his eyes; he often read at night in bed, hands and book under the covers. A follower of Dr. William Bates, the author practiced the ophthalmologist’s exercises for improving eyesight. Any myopic writer or reader who wants to try need not dip his nose in ink. Simply fix your eyes on the end of your nose and move your head as if you were writing a word, sentence, or anecdote.

Nosey Parker. Matthew Parker, who became Archbishop of Canterbury in 1559, acquired a reputation for poking his nose into other people’s business. Actually, he was an intelligent, if somewhat overzealous, churchman of marked Protestant persuasion who introduced many administrative and ceremonial reforms into the Anglican Church. His reputation is largely undeserved, but Catholics and Puritans alike resented his good works, taking advantage of his rather long nose and dubbing him *Nosey Parker*, which has meant an unduly inquisitive person ever since. Parker had been chaplain to Anne Boleyn and Henry VIII before becoming archbishop. A scholar of some note, he died in 1575 aged 71. The above, at least, is the most popular folk etymology for *Nosey Parker*. But other candidates have been proposed Richard Parker, leader of the Sheerness Mutiny in 1797, is one strong contender. This Parker poked his nose so deeply into what the military thought their exclusive bailiwick that he wound up hanged from the yardarm of H.M.S. *Sandwich* on July 30 of that year.

nosh. To nosh is to snack or eat between meals, while a nosh is a snack. A Yiddish contribution to English first recorded in about 1955, *nosh* is ultimately from the German *naschen*, “to eat on the sly.”

no skin off my back. Originally *no skin off my nose* was the form of this Americanism, which dates back 75 years or so. It means “it is no concern to me, not my business, doesn’t hurt me one bit.” Perhaps *nose* better fits the phrase than *back*—if you don’t stick your nose into someone else’s business, you won’t get it punched. But the phrase is also heard as “no skin off my tail,” “no skin off my ass,” and “no skin off my butt,” all of these often preceded by *it’s* or *that’s*.

no slow fuckin’! Work faster, no malingering. A guard says to chain gang convicts in the movie *J.F.K.* (1991): “Move it along. No slow fuckin’.”

no soap! In 1775 young actor and author Samuel Foote (1720–77) composed the following speech when pompous fellow actor Charles Macklin boasted that he could repeat anything after hearing it once: “So she went into the garden to cut a cabbage leaf to make an apple pie; and at the same time, a great she-bear coming up the street pops its head into the shop—What! no soap! So he died; and she very impudently married the barber; and there were present the picaninnies and the Jobilies, and the Garyuloes, and the grand Panjandrum himself, with the little round button at top.” “Old Macklin” (he lived to be 100) gave up in disgust, unable to memorize this nonsense, but the mnemonic exercise gave the language both the phrase *no soap!*, for the failure of some mission or plea, and *grand Panjandrum*, which was first used as a derogatory term by Edward FitzGerald in his translation of the *Rubáiyát*, when he applied it to a self-important local official. Foote, disliked by Dr. Johnson, once announced that he was going to do an imitation of the Great Cham on the stage. Johnson sent word that he had ordered a new oak cudgel and would be present that evening to correct any faults in the impersonation with it. Foote canceled the show.

no speaka da English. A disparaging phrase directed against immigrants, especially Italians. Coined in 1920 or earlier, and heard in the United States, Australia, and Britain as well.

nostalgia. One source claims that philosopher Johannes Hofer coined *nostalgia* in 1668, but the *Oxford English Dictionary* only traces the word back to 1780. *Nostalgia* means a wistful desire to return to one’s home or homeland, to a former time or place in one’s life. It is made up of the Greek *nostos*, “a return home,” and *algos*, “pain.” In a *New York Times* (5/19/01) article Edward Rothstein writes that Hofer, a Swiss doctor, invented the word “to describe the lingering malady that afflicted Swiss soldiers away from home . . . Soldiers would be severely overcome with nostalgia when drinking and hearing Alpine folk melodies; the prescribed cures included leeches, opium and a return to the Alps. In 1733 the Russian Army apparently found an effective method for preventing the illness in the first place. Anyone who exhibited any symptoms would be buried alive.” *Nostalgie de la boue* (“mud nostalgia”) refers to nostalgia for degradation, the

expression invented by 19th-century French dramatist Emile Augin in one of his plays.

Nostradamus. *The Centuries* of Nostradamus, a book of rhymed prophecies, was published in 1555. The French doctor and astrologer gained a reputation as a seer when some of his predictions came true and as a result he won an appointment as personal physician to Charles IX. His real name was Michel de Nostredame, and his book, divided into centuries, was drawn from the whole body of medieval prophetic literature. Nostradamus was 63 when he died in 1566. The papal court condemned his prophecies in 1781, but they have enjoyed wide attention since on a number of occasions, one generation or another applying them to contemporary situations. Detractors claim that the prophecies are so ambiguously worded that they could mean anything, and when *Nostradamus* is used for a seer or prophet it is generally employed in a contemptuous sense. See MOTHER SHIPTON.

not a dry seat in the house. The drama critic’s cliché *there wasn’t a dry eye in the house*, to describe a moving play, suggested this humorous expression, which has been fairly common in England since about 1930 for a play or movie so funny that the audience was helpless with laughter—in fact, wet their pants laughing.

not all there. See PLAY WITHOUT A FULL DECK.

no taxation without representation. See LONGSHANKS.

not by a long shot. Whether it was suggested by a difficult long shot attempted in archery or shooting isn’t known, but the expression *a long shot* first arose in British racing circles some 128 years ago as a bet laid at large odds, a bold wager. *Not by a long shot* therefore means hopelessly out of reckoning. Attempts have been made to derive the saying from the slightly earlier *not by a long chalk*, which comes from the use of chalk for reckoning points in tavern games. But *not by a long chalk* means “not by much,” so it seems that the phrase derives from either archery or shooting.

not by bread alone. This ancient expression, meaning that a person’s spirit must be cared for as well as his body, comes from the Bible (Deut. 8:3): “Man doth not live by bread alone, but by every word that proceedeth out of the mouth of the Lord doth man live.”

notch. A mountain pass. Used in place-names such as Franconia Notch. For the best lengthy description I know of the *notch*, see Hawthorne’s story “Sketches From Memory” (1835).

not dry behind the ears. Used to describe someone totally innocent, or very naive, the old expression refers to newborn animals and the small depressions behind their ears that are the last places to become dry after birth. The similar phrase *wet behind the ears* is also heard today.

No-tel Motel. Over the last decade or so “hot pillow joints” (the pillows are still warm from the last occupants when you

get the room, so rapid is the turnover) have sprung up all over America. These swingers' motels usually offer rooms with porno films on closed-circuit TV, water beds, mirrored ceilings, etc. They often advertise on billboards ("Special Two-Hour Rates \$11.95 Only") and are of course usually places of sexual assignation for businessmen and housewives, which is why they have been humorously dubbed *No-tel Motels*. See also MOTEL.

not for love or money. Not at any price or by any means. The phrase is recorded as early as A.D. 971 and has been commonly used ever since, almost always in this negative form. Swift used it in his *Journal to Stella* (1712).

nothing in excess. See SEVEN SAGES OF GREECE.

nothing is certain but death and taxes. The widely quoted saying is attributed to Benjamin Franklin, who wrote in an 1789 letter: ". . . in this world nothing is certain but death and taxes."

nothing like it to keep your ears pink. I've heard this phrase more than once but haven't yet found it in any reference work. It is almost certainly a variation on in the pink (qv) and possibly refers mainly to an outdoor activity that will keep you healthy.

nothing on the ball. A baseball pitcher who is pitching poorly (giving up hits) is said to have *nothing on the ball*, the expression dating back to at least 1912, when it is first recorded. Conversely, a pitcher with *something* or *a lot on the ball* is pitching well. The first expression is used generally to describe someone who is incompetent, while the latter means someone who has the ability to succeed.

nothing to fear but fear itself. Franklin D. Roosevelt is often cited as the originator of "The only thing we have to fear is fear itself" in his first inaugural address, when the country was at the bottom of the Great Depression. F.D.R., however, had many ghostwriters past to help him:

- "The only thing I am afraid of is fear."—Duke of Wellington
- "Nothing is so much to be feared as fear."—Thoreau
- "Nothing is terrible except fear itself."—Francis Bacon
- "The thing of which I have most fear is fear."—Montaigne
- "Be not afraid of sudden fear."—Proverbs 3:25

no tickee, no washee. People have always had a hard time getting their wash back from the laundry without having the receipt for it. This expression was common among Chinese laundrymen starting in the late 19th century or earlier and is still occasionally heard. The words have taken on the new, wider meaning of "no credit without collateral."

not in the same league with. Not nearly comparable with, nowhere near as good as someone or something else. This American expression comes from baseball, in which someone

in the major leagues is generally a far better player than someone in the minor leagues. The British use the phrase *not in the same street with* to mean the same thing. Said San Francisco Giant's first baseman J. T. Snow recently (4/3/02) of his teammate home run king Barry Bonds: "The guy's in another league. . . . I think the rest of us feel like we're Little Leaguers. . . . He does things others can't do."

not just another pretty face. See JUST ANOTHER PRETTY FACE.

Notre Pierre. French workingmen so idolized the Russian anarchist Peter Kropotkin (1842–1921) that they called him *Notre Pierre*, Our Pierre. The French government, however, imprisoned him for three years before Clemenceau and others secured his pardon. As a young man in Russia, Prince Kropotkin had renounced his title and been imprisoned for two years before escaping. After the revolution, Kropotkin returned to Russia, where a street and a museum are named after him.

not right. Mentally unfit, crazy. "My father's brother wasn't right. They kept him locked up for years back there at the old farm."

not so hot. *Not so hot* is often denoted as an American slang expression dating back to the Roaring Twenties, but Shakespeare used and possibly invented this expression meaning "not very good."

not the only pebble on the beach. See YOU'RE NOT THE ONLY PEBBLE ON THE BEACH.

not to be sneezed at. At the beginning of the 19th century the expression *to sneeze at* meant to consider something unimportant or boring. "It's the sort of thing a young fellow of my expectations ought to sneeze at," said the first writer who used the saying in print. This is guesswork, but the expression may have been suggested by the habit of snuff-taking common among the upper classes at the time. Snuff, also called "sneeze," was a mixture of tobacco, a little pepper, and other ingredients, snuffed into the nostrils to induce a hearty sneeze, which was considered exhilarating. Since a gentleman bored with a conversation might resort to snuff-taking and sneezing, perhaps the phrase *to sneeze at* and its opposite *not to be sneezed at* arose from the practice.

not to care a straw. Not to care at all. The straw that is left after grain has been separated from a crop is worth very little compared with the grain, and a single straw has almost no value. People have known this since earliest times, which is why *not to care a straw* is probably much older than even its earliest recorded use in 1290. Among other great English writers, Chaucer and Shakespeare used the phrase or one of its variations such as *not to care two straws*, or *not to care three straws*.

not to get the bat off one's shoulder. These words mean not to get a chance, as in, "He had big plans for the company but was fired before he could get the bat off his shoulder." The common expression, first recorded in the 1920s, is obviously from

baseball, referring to a batter who takes a strike without even swinging at the ball.

not to know beans. The nationally used not to know beans may initially have been a Boston expression, suggesting that anyone who didn't know how to make baked beans in Boston, "the home of the bean and the cod," would have to be incredibly ignorant.

not to know beef from bulls' foot. A phrase meaning to be exceedingly dumb; also not to know B from bull's foot, not to know bees from bull's foot, and not to know beeswax from bull's foot.

not to know if one is coming or going. Used to describe a very confused, ignorant, or stupid person, this American expression dates back to at least the early 1920s.

not to know one's ass from one's elbow. An American phrase probably dating back to the late 1890s and meaning to be abysmally stupid or ignorant. Not to know one's ears from one's elbows is a euphemism that Partridge traces to England, about 1940. Another common synonym is not to know one's ass from a hole in the ground.

not tonight, Josephine. Napoleon Bonaparte is often credited with this phrase, which means "We shall not have sex tonight, dear" and has been around since the late 1800s. *See also* NAPOLEON.

not to turn a hair. Not to show any signs of distress, to be unruffled, unaffected by exertion or any agitation. This is a "horsey" term from the stables, where the first sign of distress in a horse is sweating, which roughens the animal's coat, his hair remaining smooth and glossy as long as he keeps cool. Jane Austen first recorded the expression in *Northanger Abbey* (1797), writing of a horse: ". . . he had not turned a hair till we came to Walcot church."

not to worry. *Not to worry*, "don't worry, there isn't anything to worry about," became very popular in the late 1950s, but probably dates back earlier as British army slang. Some scholars trace it to the Italian *non tormentarsi* and others suggest a Maltese connection, but *not to worry* is more likely simply a shortening of the British "You are not to worry."

not what it's cracked up to be. Martin Van Buren, not a very popular president, though he gave us the expression O.K., was once disparaged by Davy Crockett, who said he "is not the man he is cracked up to be." The expression, meaning "not what he is generally believed to be," is apparently an Americanism dating back to the 1830s, but it may have British roots that go back much further, for *cracked* here has the old meaning of to boast or brag, a usage that dates back to at least the 16th century.

not worth a bean. One of the oldest expressions in English, recorded as early as the 13th century and colloquial since at least 1400. Beans have little commercial value compared to

other foods because they are so easy to grow and prolific, even the garden "hill of beans" in the American version of the English expression. The hill in "not worth a hill of beans" was a common term a century ago when the saying was born. It means not an actual hill but a group of bean plants planted close together in a circle. Because most people plant beans in straight rows now and the meaning of hills is unclear to many, the phrase used today is usually not worth a row of beans.

not worth a continental. Before the U.S. Constitution was adopted, the Continental Congress had no power of taxation to raise revenue. The Congress issued bills of credit called continentals, the dollar bills of the time, printing bills with a face value of more than \$250 million though there was virtually no bullion or specie in the treasury with which to redeem them. To make matters worse, the British and Tories circulated immense amounts of counterfeit continentals, selling them for the price of the paper they were printed on and sending the fake currency out of New York City by the cartload with persons going into other colonies. By 1790 continental dollars were worth so little that it took 40 paper dollars to buy a dollar in silver and the expression *not worth a continental*—worthless—had become part of the language.

not worth a Hannah Cook. Worthless, of no account, as in "He's not worth a Hannah Cook." The expression originally was nautical, but no one has identified a real no-account Hannah Cook behind the phrase. It may be folk etymology for *hand* or *cook*, hands and cooks aboard ships making less money than other seamen and thus having lower status.

not worth a rap. This *rap* isn't a knock, as many people believe. The rap in the phrase was a half-penny circulated in Ireland in 1721; worth very little, it gave rise to our expression *not worth a rap*, "worth nothing at all."

not worth a red cent. American pennies—once made with more copper, and thus redder—were formerly called reds, which is what a Californian describing a card game in 1849 meant when he observed, "Silver is not plenty . . . on the tables and anybody can . . . bet a red on any card he chuses." This accounts for the expression *not worth a red cent*, which has roots in the British "not worth a brass farthing" and which remains a good descriptive phrase because the penny still has enough copper in it to appear reddish.

not worth a row (hill) of beans. The meaning behind this phrase is that beans have little value compared with other crops because they are so easy to grow and prolific. *Not worth a bean* is one of the oldest expressions in English, recorded as early as the 13th century and colloquial since at least 1400. The *hill* in *not worth a hill of beans*, in the American version of the English expression, was a common term a century ago when the saying was born. It means not an actual hill, but a group of bean plants planted close together in a circle. Because most people now plant beans in straight rows and the meaning of hills is unclear to many, the phrase is usually *not worth a row of beans* today.

not worth a tinker's damn (dam). There are numerous old expressions, some dating back over 400 years, indicating the profanity of tinkers in general. The tinker, who takes his name from “tink,” the sound of a hammer on metal, is remembered by *to swear like a tinker* and *not worth a tinker's curse*, among other sayings. Obviously he threw “damns” around so casually that they became meaningless, worthless, giving us the expression *not worth a tinker's damn*. There have been attempts, however, to link the phrase to the little temporary “dams” tinkers fashioned to hold solder in place when they repaired pots and pans.

not worth his salt. See SALT.

not written in stone. An expression usually heard in the negative, telling the listener that some plan is not absolutely certain or required, not very difficult to change. It may refer to the two stone tablets engraved with the Ten Commandments delivered to Moses on Mount Sinai (Ex. 20: 1–17), or might refer to the finality of a gravestone, among other possibilities. Variations are the expressions *not set in stone*; *not carved in stone*; *not set in tablets of stone*; and *not carved in tablets of stone*.

Nova. Chevrolet, a division of General Motors, named one new model the *Nova*, hoping that *nova* and *new* would do the job. No such luck in the Spanish market, where the word *no-va* means “it doesn't go.”

Nova under snow on a sled. One of the most colorful diner expressions, translating as “Nova Scotia smoked salmon or lox smothered with cream cheese on an English muffin or bagel.”

novella. A novella is most simply a tale of the type Boccaccio wrote, or it can be a short story. But many writers don't like the name, or label, novella. “I beg the reader one gentle favor for which he may be sure of my perpetual gratitude,” wrote Katherine Anne Porter in the introduction to her *Collected Stories*. “Please do not call my short novels *Novelettes*, or even worse, *Novellas*. Novelette is classical usage for a trivial, dime-store sort of thing. Novella is a slack, boneless, affected word that we do not need to describe anything. Please call my works by their right name: we have four that cover every division: short stories, long stories, short novels, novels.”

a novel novel. The Polish author Jerzy Andrzejewski's *Gates of Paradise*, a novel about the *Children's Crusade*, appears to be the longest literary work written without punctuation. The novel amounts to one long sentence with no punctuation for the first 40,000 words.

November. See SEPTEMBER.

now Barabbas was a publisher. These lines are often attributed to Lord Byron. Byron supposedly received a lavish copy of the Bible from publisher John Murray in gratitude for a favor, only to return it with *thief* changed to *publisher* in John 18:40. English poet Thomas Campbell (1777–1844) had earlier made

a similar quip after Napoleon had had German publisher Johann Pal put to death for printing subversive pamphlets. At an authors' dinner, Campbell proposed this toast: “To Napoleon. [Voices of protest] I agree with you that Napoleon is a tyrant, a monster, the sworn foe of our nation. But, gentlemen—he once shot a publisher!”

Now I lay me down to sleep. . . . The first line of a prayer known to millions of Americans through its inclusion for centuries in the *New England Primer*, though the first verse of the prayer is the *Enchiridion Leonis* (1160). The full prayer goes:

Now I lay me down to sleep,
I pray the Lord my soul to keep
If I should die before I wake,
I pray the Lord my soul to take.

Ernest Hemingway used part of the first line as the title for his short story “Now I Lay Me,” in which the wounded narrator (based on the author) feared that “if I ever shut my eyes in the dark and let myself go, my soul would go out of my body . . . and [I] said my prayers over and over and tried to pray for all the people I had ever known.”

now-now girl. In the southern African republic of Zimbabwe, where English is the official language, there are many English usages common only to that country. *Now-now girl* in Zimbabwe, for example, refers to a pretty, up-to-date, modern, and stylish young woman.

nuclear fission. British physicist Otto Trisch and Austrian-Swedish physicist Lise Mitmer invented the term *nuclear fission*, in which an atomic nucleus splits into fragments, usually two fragments of comparable mass.

nudge. See GUNCH.

nudnik; Phudnick. A *nudnik* is a man “whose purpose in life is to bore the rest of humanity,” according to poet Morris Rosenfeld's essay on the subject. *Nudnik*, indeed, derives from the Russian *nudna*, for “a bore.” Leo Rosten's *The Joys of Yiddish* says the recently coined *Phudnik* is “a nudnik with a Ph.D.”

nuke. *Nuke* is relatively new American slang for a nuclear weapon, being first recorded in 1964 in a *Time* magazine article, which discussed the possibility of using nuclear bombs to dig a new canal in Panama. *Nuke* as a verb, “to attack with nuclear weapons,” is first recorded in a July 4, 1970 *New Yorker* interview with Eugene V. Rostow.

null. Null, as in the well-known phrase null and void, means having no legal force. The word derives from the Latin *nullus* meaning the same.

number. *Number* derives from the Latin *numerare*, meaning the same. It is often forgotten that the word *number*, in addition to its common uses, can also refer to poems (poetry), verses, or

metrical feet in a poem. Shakespeare, for example, uses number to mean poems in his 17th Sonnet:

If I could write the beauty of your eyes
And in fresh numbers number all your grace.

See also RETIRING A NUMBER.

number, please. Telephone operators had been advised by Thomas Edison to greet callers with AHOY instead of *hello*, but operators fell into the habit of opening with a curt “What number?” However, according to Stuart Berg Flexner’s *Listening to America* (1982), by 1895 the city manager of the Chicago Telephone Company, one J. W. Thompson, issued the following instructions to the company’s chief operator in a memorandum: “In answering calls the query ‘Number Please?’ spoken in a pleasant tone of voice and with rising inflection must be invariably employed.” Within 10 years all of the Bell System followed suit.

Number (No.) 10 Downing Street. See PRIME MINISTER; DOWNING STREET.

number is up. One is about to die; one has been caught in some criminal activity. This phrase may derive from the British and American military expression *lose the number of one’s mess*, meaning one has been killed. But the first (British) printed mention of the term in 1806 associates it with a lottery, which suggests that one’s death is a matter of luck, like a number coming up in a lottery.

number one; number ten. *Number one*, in the sense of “best, excellent, first-rate,” dates back to early 19th-century America, soldiers later carrying it overseas to Asia, where it entered the vocabulary of pidgin English. *Number ten*, on the other hand, was first recorded during the Korean conflict in 1953. It means “worst” or “bad” and was often used in the stronger expression *number hucken (fucking) ten*. In the same war *number sixty-nine* (the number deriving from the name of the sex act) was stronger still. The inflationary expression *number ten thousand*, or *number ten thou*, was pidgin in Vietnam, though I heard it in Korea (ca. 1952). *Number one* can also mean “oneself,” this sense recorded earlier than any of the other phrases, in 1704. *Number one* and *number two* can be euphemisms for the acts of urination and defecation, first recorded in the 1930s but probably much older.

numps. The *OED* says this word of obscure origin is obsolete, but since it was used recently on a TV program (in which a character found *numps* in a dictionary for a word game he was playing) it cannot truly be caught in the cobwebs of antiquity. *Numps*, always used in a humorous way, means “a foolish, silly person.” It was first recorded in Francis Beaumont’s most successful play, *The Knight of the Burning Pestle* (ca. 1607), a comedy that owes much to Cervantes’s *Don Quixote*. It is also spelled *nump* and *numph*. Beaumont was once thought to have written the play with his longtime collaborator, John Fletcher, but now it is known to be his alone. This is the same writing team of whom biographer John Aubrey wrote in *Brief Lives*: “There was a wonderful consimilarity of fancy. They lived together not far

from the playhouse, had one wench between them, the same clothes and cloak, & C.”

nut. Due to the round shape of many nuts, *nut* has long been slang for “head,” which led to the expression, *he’s off his nut* meaning “he’s crazy,” which in turn gave us *nuts* for “crazy” and *nut house*, meaning “insane asylum.” The word *nut* can be used for a sum of money, and figures in many other expressions as well, including a *hard nut to crack* (a tough problem to solve) and *from soup to nuts*, meaning “complete.” To give someone a brief summary of something is *to put it in a nutshell* and obviously refers to the small size of a nutshell. The phrase has been with us at least since Pliny reported that the *Iliad* had been copied in so small a handwriting by a contemporary of his that the whole work fit in a walnut shell. This feat has been duplicated several times over the years. Since there are no nuts to be gathered in May, the old children’s song with the words, “Here we go gathering nuts in May” seems to make no sense—and indeed, it may have been intended as a nonsense song. But “the nuts” in the phrase has been explained as being “knots” of May, that is, bunches of flowers. In Elizabethan England, Queen Elizabeth herself gathered knots of May in the meadows, one author tells us, and this is a plausible explanation even though there are no recorded quotations supporting the use of *knots* for “flowers,” except possibly the English *knot garden* of herbs.

Nutmeg State. A nickname for Connecticut (see DON’T TAKE ANY WOODEN NICKELS). Also called the Wooden Nutmeg State, the Land of the Wooden Nutmegs, the Blue Law State (see BLUE LAWS), the Mother of States, the Constitution State, the Brownstone State, the Freestone State, and the Land of Steady Habits.

Nutmeg Stater. A resident of Connecticut, the Nutmeg State. As John Updike put it in *The Afterlife* (1994): “Driving down Route 86 into the blinding splinters of a sunset. He heard the disc jockey crow, ‘Get your long johns out of the mothballs, Nutmeg Staters, we’re going to flirt with zero tonight!’”

Nuts! When Brigadier General Anthony McAuliffe, known as Old Crock to his troops, was asked to surrender Bastogne during the Battle of the Bulge in World War II, his 101st Airborne outnumbered four to one, he reportedly replied “Nuts!” to the German officer who awaited a reply. There are those who believe that McAuliffe, a tough airborne officer, after all, said something much stronger—“Shit!” to be exact—but no proof has been offered. In any case, he meant “Go to hell!” and *Nuts!* has become immortal. See also THE GUARD DIES BUT NEVER SURRENDERS!

nut tree. The southwestern pine tree (*Pinus edulis*), so named for its edible nutlike seeds, which are also called piñon nuts.

nylon. Though it was first mass-produced during World War II and hurt our enemy Japan’s silk industry, *nylon* is not an acronym of “Now You Lousy Nips,” as the old story goes. Formerly a trademark, *nylon* is an arbitrary name with no meaning, though the symbols NY in its chemical formula

may have suggested the word. There also could have been a link with the earlier *rayon* or even with *cotton*. In any case, the Du Pont company coined the word in 1938. The most popular use of the word has been in women's nylon stockings. Somehow the English word *nylon* has taken on a disreputable meaning among Serbo-Croatians, as Bill Bryson asserts in *The Mother Tongue* (1990), "so that a *nylon hotel* is a brothel." See RAYON.

NYSE; AMEX. *NYSE* is the abbreviation for the New York Stock Exchange, which was originally named the New York Stock and Exchange Board (1817), taking its present name in 1863. The American Stock Exchange (AMEX), which took its present name in 1963, was formed as the New York Curb Exchange in 1842, because it was composed of curbstone brokers who were not members of any exchange and conducted business outside on the curb.

O

O. Of all 26 letters in the alphabet *O* has, perhaps, the most interesting and best-documented story. The oldest of letters began as a pictograph common to many languages describing the human eyeball within its protected socket; some drawings of it in ancient alphabets even give it a dot in the center for a pupil. In time the socket and pupil were eliminated from the pictograph and we find it in North Semitic as a plain, full circle that was called “the eye.” From there it passed into the Greek alphabet. Unlike any other letter, it has undergone no other major structural change in over 2,700 years. In Anglo-Saxon *O*’s name was *oedel*, “home.” It later became probably the only English letter to have a poem written about it by a philosopher (Dr. William Whewell). *O* is also the commonest single-letter surname, there being 13 in the Brussels telephone directory alone. But there is no evidence of an *O* residing in the Japanese town of *O*. See also GIOTTO’S *o*.

o. The popular name for the humuhumunukunukuakuaa, “the world’s littlest fish with the longest name.” The fish won fame in the 1930s song “My Little Grass Shack in Lkealakekua,” which has a verse that mentions it. By popular vote the little creature became Hawaii’s official state fish in 1984.

o. *O* that your face were not so full of *o*’s! Shakespeare referred to marks left by the smallpox when he used this line in *Love’s Labour’s Lost* (1595). “A pox on that jest,” the French princess replied.

O’ The *O*’ common in Irish names such as O’Connor, O’Reilly, etc., derives from the Gaelic *ogha* or the Irish *oa*, both meaning “a descendant.” Denis O’Connor strictly means “Denis, a descendant of Connor.” According to a good story, in the past the *O* was taken away from the name of any family that didn’t wholly support the Irish Republican cause, leaving us with Connors instead of O’Connors, etc. Much as it appeals to the storyteller in me, I can find no proof of the practice. In Gaelic, women prefix the family name with *Ni*, not *O*. Playwright Richard Brinsley Sheridan once remarked to his son Tom that their family was descended from the kings of Ireland and that their rightful

name was O’Sheridan. His poet son replied to the brilliant but ever-impoorished playwright: “Yes, that is true, for we owe everybody.”

oaf. *Oaf* is a corruption of the Old Norse *alfr*, which became *aulf* and *ouph* in Old English and was recorded as *oaf* by 1625. An *alfr* was a child supposedly left by fairies in exchange for a child they had stolen, the changeling held to be an idiot, an abnormal child worse than the stolen one. *Oaf* softened in meaning over the years until it came to refer to a clumsy, foolish, or stupid person, most commonly used in the expression *a big oaf*.

oak. Oaks, venerated by the Druids, were regarded as sacred to the god of thunder in ancient times because the trees were believed to be more likely to be struck by lightning than any other kind of tree. The origins of the oak’s name are lost in history; the word was first recorded in the sixth century, but it is undoubtedly much older. One oak still standing in England is said to be 1,600 years old. In case you’ve ever wondered, a large oak has about 250,000 leaves, so if you have four on your property, you have a million leaves to admire and rake up every fall. “Charles’s oak” is a historically famous old oak that grew near Boscobel House in England. When Charles II fled the Parliamentary army after the Battle of Worcester on September 3, 1651, he climbed down into the hollow tree and hid there with a colonel of the royal guard until it was safe to proceed; his supporters lowered food and drink to him. If the oak leaves out in spring before the ash tree, it will be a good, abundant year, according to the old proverb: “Oak before ash, in for a splash; Ash before oak, in for a soak.” But if the ash leaves out before the oak, there will be flooding in the summer and a poor fall harvest. An oak winter is a cold spell in the spring that occurs after small leaves have appeared on the oak trees.

oarfsh. Often mistaken as a “sea monster,” the very real oarfsh (*Regaleus glesno*) is really a gentle creature that doesn’t even bite, feeding instead by slurping up little animals with its small mouth. However, it isn’t hard to understand how the

oarfish might be taken for a sea serpent. The narrow fish—about as wide as a ribbon—is a silverfish color and has what appears to be a bright crimson mane (actually its dorsal fin), with trailing pectoral fins that give it its name. It grows up to 50 feet long. Weaving through the surface waters, it could easily be mistaken for a sea serpent from a distance. The oarfish, which doesn't ever use its oarlike pectoral fins, really spends more time trying to evade pursuers than chasing prey like any self-respecting sea serpent. To escape sharks and other true monsters, it lets predators bite off a section of its manelike tail or dorsal fin and escapes while its enemy is chewing on it. This may or may not be an intentional defense mechanism, but the shorter oarfish seems to function just as well as when it was a few feet longer. *See* LOCH.

oater. A humorous name for a horse.

obeah. An old term of African origin for a form of belief involving sorcery. According to *Harper's Magazine* (March, 1972) "Obeah is a kind of witchcraft, and is practiced by 'obeah men' by putting horsehair, fowl's feet, fish's bones, coneyskins, and other stuff into a pot, and burying the pot in the ground or near the house of the person against whom the necromancy is to be employed."

O-be-joyful. A humorous American historical term for hard liquor dating back to the 1860s.

Oberammergau Passion Play. *See* PASSION PLAY.

Oberon. *See* URANUS.

obese. *Obese* means very fat indeed, but the word comes from the Latin *obesus*, which is, ironically, the past participle of *obdere*, "to gnaw, to eat away, to thin." It is first recorded in the early 17th century.

Obies. Since 1955 the New York weekly *Village Voice* has presented Off-Broadway awards, popularly called Obies, honoring the best Off-Broadway productions. A different panel of judges each year is picked to select the best play, playwright, actor, director, composer, designer, etc. Other annual awards for outstanding Off-Broadway achievement include the Lucille Lortel awards. *See* TONY.

oblate spheroid. A scientific description of planet Earth, which isn't a perfect ball or sphere but is slightly flattened on the top and bottom.

obscene. According to one theory, *obscene* originally meant "off the stage" in ancient Greek drama, deriving from the Latin *ob*, "against," and *scaena*, "stage." What was kept off the stage in Greek drama was violence (always reported by messenger), not sex, of which there was plenty in comedies and satyr plays complete with actors fitted with huge artificial phalluses. Obscenity wasn't associated with sex until the word made its appearance in England toward the end of the 17th century. However, *obscene* is of obscure origin, and another theory,

less likely, derives the word from the Latin *caenum*, "mud." Shakespeare was the first to use *obscene* in the sense of offensive to the senses, that is, disgusting, filthy, foul, etc., in *Richard II*: ". . . so heinous, black obscene a deed." The Bard probably based the word on the French *obscene*, meaning the same, which came from the Latin *obscenus*. Within five years or so, *obscene* was being used to mean "indecent and lewd" as well.

obsidian. Obsidian is a glasslike rock of volcanic origin formed by the rapid cooling of lava on the earth's surface. Usually it is a bright, glossy black, but some examples are gray, green, brown, or red, ranging from opaque to translucent. Usually sharp-edged, the rock was often used for arrowheads and other weapons by the ancients. Pliny the Elder tells us in his *Natural History* that obsidian was named for its discoverer Obsius, who first found it in Ethiopia. In early editions of his work Pliny's *obsianus*, for the mineral, was misprinted as *obsidianus*, this explaining the mysterious "d" in the word.

Occam's razor. Occam's razor, the philosophic principle of economy or parsimony, holds that universal essences should not be unnecessarily multiplied, which means simply that a scientific explanation should contain only those elements absolutely necessary. The axiom is named for William of Occam (ca. 1280–1349), an English philosopher and Franciscan who was a pupil of Duns Scotus and who dissected every question as with a razor. Occam became general of the Franciscan order and his philosophy helped pave the way for pragmatic Renaissance science. He and his followers held that the existence of God and immortality are not capable of philosophical proof and must be accepted on faith alone. His name comes from the town of Ockham in Surrey, where he was probably born. "The Invincible Doctor," as he was called, so formidable was he in debate, he opposed Pope John XXII over a question of monastic poverty, which led to his imprisonment and excommunication.

occasional verse (prose). Verse written for a particular occasion is called "occasional verse," it is not verse written occasionally (once in a while). Such poems can be light or serious. Celebrated examples include Milton's *Lycidas* (1637); Tennyson's *Charge of the Light Brigade* (1854); Yeats's *Easter 1916*; and Auden's *September 1st 1939*. England's poet laureate is expected to write some occasional verse.

Occident. *See* GO WEST.

occupy.

All you that in your beds do lie
Turn to your wives and occupy,
And when that you have done your best
Turn arse to arse, and take your rest.

The old song, quoted in John S. Farmer's *Vocabula Amatoria* (1890), shows that *to occupy* was once a synonym for cohabitation. In fact, as Joseph Shipley points out in an article in *Maledicta* (to which I owe most of the information in this entry) the word *occupy* in all its senses became increasingly rare

throughout the 17th and 18th centuries, when the verb took on this meaning. People ceased to use it, even Shakespeare commenting on this in *Henry IV, Part II*: “A Captaine? Gods light, those villains will rake the word as advises as the word occupy, which was an excellent good word before it was ill sorted.” Luckily, *occupy* survived the puritanical onslaught. Other words haven’t. The “cock,” for example, is now almost always the “rooster,” the “ass” is the “donkey,” “haycocks” are “haystacks,” “weathercocks” are “weather vanes,” and “apricocks” are “apricots.” Old Bronson Allcox even changed his name to Alcott, so that the author of *Little Women* isn’t known as Louisa May Allcox.

ocean. *Ocean* came into English later than *SEA*, being first recorded in about 1290. The word ultimately comes from a Greek expression meaning “the great stream or river,” which became the Latin *oceanus*. The Greeks personified this water encompassing the disk of the earth as Oceanus, “the god of the great primeval water.” In early times, when only the eastern hemisphere was known, the ocean was “the Great Outer Sea of boundless extent everywhere surrounding the land, as opposed to inland sea.”

oceanaut. See AQUANAUT.

October. See SEPTEMBER.

octopus. Octopuses “walk” on eight arms, not eight legs, so they should *not* really be named from the Greek *oktopous*, eight-footed. Apparently, the ancient Greeks reasoned that since the beast walked on the eight appendages, they should be called feet, not arms. In the Polynesian kingdom of Tonga, fishermen caught their octopus by using a lure fashioned into the shape of a rat. The Tongans believed that the rat was the octopus’s worst enemy, their legend having it that an octopus once gave a drowning rat a ride to shore, whereupon the ungrateful rat alighted and called out: “O octopus, feel of your head; see what I have left there.”

od; odic force. Though only an odd term today, *od* was once supposed to stream from female fingertips, “burning blue.” It was a natural force said to pervade all nature, especially manifesting itself in persons of sensitive temperament, and the *odic* force was a basic force underlying many natural activities—including magnetism and chemical reactions. The word was an arbitrary coinage of German scientist Baron von Reichenbach, who proposed the *odic* theory in 1850.

the Oddfather. A nickname bestowed upon Mafia boss Vincent Gigante (1928–2005) whose strange behavior was adopted to convince New York law enforcement agents that he was a harmless disturbed person. The Oddfather’s nickname was Chin among mobsters. He was also called the Enigma in a Bathrobe, after his practice of shuffling through the streets of Greenwich Village late at night wearing pajamas, bathrobe, and slippers.

oddwoman; oddsmán. The Scottish oddwoman, common during the 16th century, was a female arbiter or umpire who helped settle disputes and was chosen by both parties to the conflict. Her male counterpart was called the oddsmán. Both

took their names from the term *odd man*, the third or fifth man on a committee of arbitrators, the one who in the event of a tie vote cast the deciding ballot.

ode on a Grecian urn.

Thou still unravished bride of quietness,
Thou foster-child of Silence and slow Time . . .

No one would argue that Keats’s poem isn’t among the most beautiful and best known of all time, but the vase that he wrote about might be called kitsch today. The story begins with the great English potter Josiah Wedgwood (1730–95), who achieved his fame despite the fact that a childhood illness had caused the amputation of his right leg, barring him from using the potter’s wheel. Wedgwood, the grandfather of Charles Dickens, was already renowned as a potter when he began to make the ubiquitous blue and white vases that still bear his name. These he copied from the famous “Grecian” Portland vase that Sir William Hamilton, husband of Lord Nelson’s great love, Emma, purchased when he served as ambassador to Naples, and sold to the Duchess of Portland, for whom it is named, before she donated it to the British Museum in 1784. The Portland vase, however, wasn’t a Greek vase as everybody thought, but a Roman imitation from the time of Augustus. The vase that John Keats saw and that inspired him to write his poem was probably a Wedgwood copy of a Roman copy of a Greek vase—a doubly fake Grecian urn:

Beauty is truth, truth beauty—that is all
Ye know on earth and all ye need to know.

ode on tooth diseases. Not many, and probably not any poets have published an *Ode on Tooth Diseases*. But in 1840, New York dentist Solyman Brown wrote and published a long ode, *Dentologia: A Poem on Diseases of the Teeth in Five Cantos*. One of the strangest of literary works, it gives after the poem a list of 300 qualified American dentists of the time.

O’Donohue’s white horses. Every seventh May Day, the Irish chieftain O’Donohue returns to the Lakes of Killarney riding his great white steed, gliding over the waters to sweet unearthly music, a host of fairies preceding him and strewing his path with spring flowers. Foaming waves on a windy day are thus known as *O’Donohue’s white horses*. Legend has it that more than one beautiful young girl believed so strongly in O’Donohue that she threw herself into the water so that he would carry her off to be his bride.

odor of sanctity; odor of iniquity. In medieval times people believed that the bodies of saints or holy people gave off a sweet fragrance after death, an odor of sanctity; and that the bodies of evil people smelled to high heaven, an odor of iniquity. The followers of Emanuel Swedenborg, called the Swedenborgians, later attributed the delightful fragrance to the angels present at a saintly person’s deathbed. At any rate, the odor of iniquity never took on a figurative meaning, but an odor of sanctity came to mean “a reputation for holiness.”

odyssey. Any long, pioneering voyage or journey filled with adventures, usually to many places and peoples. It is so named after Homer’s *Odyssey*, the epic poem that takes his Greek hero,

Odysseus, on 10 years of wandering before he comes home to Ithaca. Odysseus's Latin name is Ulysses. Among his many adventures he fought bravely in the Trojan War and conceived the immortal scheme of the TROJAN HORSE. James Joyce said the theme of the *Odyssey* was "greater, more human than *Hamlet*, *Don Quixote*, *Dante*, [and] *Faust*" and based his great novel *Ulysses* upon it. See HOMERIC LAUGHTER.

oersted. The Danish physicist and chemist Hans Christian Oersted (1777–1851) founded the science of electro-magnetism when he discovered that direct electric current causes a magnetic needle to take a position at right angles to the wire carrying it. This basic fact of electromagnetic induction was the starting point for all future work in the field. Unlike many scientific discoveries, the Copenhagen professor's attracted immediate and widespread attention when he published a Latin monograph describing it in July 1820, about a year later. The scientist's name in Danish is actually Orsted, but has become anglicized to Oersted. The *oersted* honoring him is a unit of magnetic field intensity.

oesophagus. When Mark Twain wrote his satire on Sherlock Holmes's stories called "A Double-Barrelled Detective Story," he began the tale as follows:

It was a crisp and spicy morning in early October. The lilacs and laburnums, lit with the glory-fires of autumn, hung burning and flashing in the upper air, a fairy bridge provided by kind Nature for the wingless wild things that have their homes in the tree-tops and would visit together; the larch and the pomegranate flung their purple and yellow flames in brilliant broad splashes along the slanting sweep of the woodland; the sensuous fragrance of innumerable deciduous flowers rose upon the swooning atmosphere; far in the empty sky a solitary oesophagus slept upon motionless wing; everywhere brooded stillness, serenity, and the peace of God.

The "solitary oesophagus" in the passage was solitary all right, for it never existed outside of Twain's teeming imagination. He had of course invented the bird—which know-it-alls were quick to describe to friends—and later remarked that few readers ever questioned him about it.

of. An auxiliary verb is a "helping verb" (*have, be, may, do, shall, can, must, etc.*) that is combined with other verbs. But the preposition *of* can be an auxiliary verb, too, at least in American vernacular. Some say the humorist Ring Lardner was the first to recognize this in his characters' conversational speech. One critic goes so far as to say that "until Lardner wrote *You Know Me, Al* (1916) no one ever considered *of* to be an auxiliary verb. *Who would of thought of it* but the man with the phonographic ear for American speech."

ofay. See PIG LATIN.

off base. Someone off base in today's slang is wrong or badly mistaken. The term refers to a runner in baseball taking a lead so far off the base that he is caught and tagged out. See OFF ONE'S BASE.

Official Monster Raving Loony Party. An Englishman named Screaming Lord Sutch (1941–99) founded this political party in the 1960s, and it has to have the most unusual name of any political party in history. Screaming Lord Sutch himself legally changed his name from David Sutch in the 1970s. He and his party never won an election, out of the record-holding 40 in which Sutch and his cohorts ran. Dressed in his trademark top hat and gold lamé jacket, Screaming Lord Sutch campaigned under the banner of "Vote For Insanity—You Know It Makes Sense," offering such proposals as cheap electricity powered by joggers put to work running on treadmills instead of in the street. He threatened to change his party's name to the Raving Sensible Party because by comparison with Margaret Thatcher's ministers, his followers weren't loony at all. See NORFORK HOWARD; ZIPPITY DO-DAH.

off one's base. To be off one's base is to be crazy, mentally unbalanced. Americans have been using this slang term since at least 1912. It has its origins in baseball, suggesting a base runner blithely hanging far off base without any thought of being picked off. See OFF BASE.

off one's trolley. To be crazy; frenetic. Possibly coined by someone watching a trolley motorman repeatedly fixing something on the trolley, fixing it once and then stopping to do the same thing, getting off and getting on, over and over again. *Trolley* itself comes from the Old French *troller*, to search or wander.

off the cuff. See ON THE CUFF.

off the wall. Many sports, including handball, squash, and racquetball, could be the source of this recent expression meaning "crazy, eccentric, highly unusual, outrageous"—as balls often bounce erratically off walls in all of these games. On the other hand, the term may be related to the earlier expression *bounce off the walls*, referring to the behavior of psychotic patients in mental hospitals.

of the same kidney. Of the same sort, or disposition. This expression was British slang in the early 18th century, its use deplored by Jonathan Swift along with words like banter and bamboozle. All have since become standard English. The expression has its origins in the ancient belief that the kidneys were "the seat of the affections" and thus largely determined one's personality or temperament.

o-grab-me acts. The Embargo Act of 1807, and acts of following years, restricted American ship departures to prevent hostilities on the seas. But since it hurt our British and French enemies less than American shipowners (the policy having the reverse effect than the one intend), shipowners began spelling *embargo* backward and called the acts the *o-grab-me acts*.

ogre. The Magyars were a fearsome Asian people who invaded Europe in about A.D. 900 and eventually settled in what is now Hungary. In fact, another name for them was Ugurs or Ugrians, which, with the addition over the years of an initial *H*, an *n*, and an *a* became *Hungarians*. But because these savage

invaders were so feared, Uigur also became *ogre*, which is still the word for “a terrible man-eating monster” in many languages. At least so goes the apocryphal story most often told about *ogre*’s origin, which, unfortunately, is historically unfounded. *Ogre* was in fact coined by French author Charles Perrault in his *Contes* (1697) as the name for a race of hideous man-eating giants, Perrault possibly constructing the word from the name of *Orcus*, the god of Hades. *Ogre* has come to mean a man likened to such a monster in appearance or character.

Oh! Calcutta! Kenneth Tynan’s erotic review *Oh! Calcutta!* (1969), famous for featuring nude actors and actresses at a time when this wasn’t done, has nothing to do with Calcutta, India. The title is from the French “*Oh, quel cul t’as,*” which translates roughly as, “Oh, what an ass you have.” Dada artist Marcel Duchamp once added a mustache and the legend LHOOQ to a copy he made of *The Mona Lisa*. Read aloud in French these letters sound like *Elle au cul*, or “she has a hot ass.”

Oh, Diamond, Diamond . . . There is a legend that Sir Isaac Newton’s little dog Diamond knocked over a candle on his master’s desk and started a fire that destroyed records of many years of research and scientific experiments. On seeing the disaster, Newton is said to have exclaimed, “Oh, Diamond, Diamond, thou little knowest the damage thou hast done!” See also NEWTON’S APPLE.

O. Henry ending. An immensely prolific author, O. Henry wrote tales characterized by ironic, surprise endings, “twists,” “stingers,” or “snappers” which while they aren’t supposed to be fashionable anymore are still widely used by authors and known as O. Henry endings. O. Henry was the pen name of American writer William Sydney Porter. While working as a bank teller in Austin, Texas, Porter was indicted for the embezzlement (really mismanagement) of a small amount of money and fled the country to South America. On returning to his dying wife, he was imprisoned for three years and adopted the pseudonym O. Henry to conceal his real identity when he began writing and selling the stories that would make him famous. Released from prison he pursued his literary career in New York, where he published at least 15 books of short stories, including such perennial favorites as the “Gift of the Magi,” before he died when only 48. O. Henry suffered from hypoglycemia, the opposite of diabetes, his classic summary of the condition being “I was born eight drinks below par.” His famous last words, quoting a popular song, could have ended one of his stories: “Turn up the lights, I don’t want to go home in the dark.” See HYPOGLYCEMIA.

O. Henry redux. Another story about the O. Henry pen name claims that the author was imprisoned for embezzlement and was employed in the prison pharmacy. There he used the medical reference work *U.S. Dispensatory*, which listed in its pages the name of French pharmacist Étienne-Ossian Henry. From this name he took the pseudonym O. Henry that he used to conceal his true identity when he began writing his first stories.

oh golly! Virtually no one uses this phrase anymore, but the words were once profane ones, *golly* being a compaction of “God’s body.”

Oh Henry! According to the official story about the name of this popular candy bar, the Oh Henry! was named after a fresh-mouthed boy who teased the girls on the production line at the candy factory where it was made. Reacting to his taunts or jokes, the girls would so often cry out “Oh, Henry!” that the manufacturer adopted the name. See BABY RUTH.

Ohio. In Iroquois *Oheo* means “beautiful water,” referring to the Ohio River for which this state is named. The Buckeye State (so called for its buckeye or horse chestnut trees) was admitted to the Union in 1803 as our 17th state.

Ohm; Ohm’s Law. Unlike his contemporary Oersted, German scientist Georg Simon Ohm (1787–1854) was so poorly treated by fellow scientists that he protested by resigning his post as professor of mathematics at the Jesuit’s college in Cologne. In 1827 the physicist had published a pamphlet including what is now known as Ohm’s Law. His study of electric currents eventually became the basic law of current electricity, but was coldly received at the time. Ohm may have thought of becoming a locksmith like several generations of his family before him, but despite his humiliations he hung in there. About 10 years later, the importance of his work began to be realized and in 1841 he was awarded the Copley medal of the British Royal Society. It is said that none of Ohm’s work before or after his pamphlet is of the first order, this perhaps a reason for his initial rejection. He does appear to have been something of a scientific politician, having sent copies of his first book to all the monarchs of Germany in order to obtain his first teaching position. It was in 1893 that the International Electrical Congress adopted his name for the *ohm*, a unit of electrical resistance. See also MHO.

Oh Rinehart! It has been established that this historical expression honors James Brice Gordon Rinehart, Harvard class of 1900. In *Three Centuries of Harvard* (1936), historian Samuel Eliot Morison explained the cry: “*Oh Rinehart* began after a student of the name had been repeatedly shouted to by noisy friends. In the course of time it has become a sort of Harvard battle-cry, and the word is now used to describe any yard uproar, in which the calling of Mr. Rinehart’s undying name is an inevitable feature.”

oil of angels. A British expression that has some American currency, *the oil of angels* means money or gold, particularly money used as a bribe. The *angel* here refers to a 15th-century coin bearing the visage of Michael the Archangel. As Robert Greene wrote in 1592: “The palms of their hands so hot that they cannot be cooled unless they be rubbed with the oil of angels.”

O.K. Many word authorities believe that O.K. comes from the nickname of Martin Van Buren (1782–1862), who rose from potboy in a tavern to president of the United States. A colorful character (as vice president he presided over the Senate with dueling pistols on his desk), Van Buren was elected president in 1836. He became an eponym, however, during the campaign of 1840, when he ran for reelection in a tight race against “Tippecanoe and Tyler, too,” General William Henry

Harrison, legendary hero who fought against the Indians at Tippecanoe, and Virginian John Tyler. The election of 1840 brought with it the first modern political campaign—mostly to President Van Buren’s disadvantage. One popular advertising stunt was “to keep the ball rolling for Harrison”—10-foot “victory balls,” made of tin and leather and imprinted with the candidate’s name, were rolled from city to city for as far as 300 miles. Harrison’s followers, trying to identify Van Buren with the aristocracy, christened the general the “log cabin and hard cider candidate,” and tagged Van Buren “Little Van the Used Up Man,” “King Martin the First,” “The Enchanter,” “The Red Fox,” “The Kinderhook Fox,” “Little Magician,” and several other of the derogatory nicknames he had earned over the years. But “Old Kinderhook,” a title bestowed upon the president from the name of his birthplace in Kinderhook, N.Y., sounded better to his supporters, better even than “the Sage, Magician, or Wizard of Kinderhook.” In order to stem the tide, a group in New York formed the Democratic O.K. Club, taking their initials from “Old Kinderhook.” These mystifying initials, appealing to man’s love of being on the inside of events, became a sort of rallying cry for the Democrats. One contemporary newspaper account reported “how about 500 stout, strapping men” of the O.K. Club marched to break up a rival Whig meeting where “they passed the word O.K. . . . from mouth to mouth, a cheer was given, and they rushed into the hall like a torrent.” The mysterious battle cry spread rapidly and soon acquired the meaning “all right, all correct,” probably because “Old Kinderhook” or O.K. was all right, all correct to his supporters. But neither mystification, ruffians, nor new words did Van Buren any good, because voters remembered the panic of 1837, and Harrison defeated him in his bid for reelection. Not that victory was any blessing to Harrison; the old general contracted pneumonia on the day of his inauguration and died shortly thereafter. Scores of interesting theories had been offered on the origin of O.K. before Columbia Professor Allen Walker Read supposedly laid the ghost to rest with his *Saturday Review* article (July 19, 1941), tracing the word to the president who was O.K. Most etymologists accept Read’s explanation but fail to mention an important qualification. Read established an earlier date than the campaign of 1840 for the first use of O.K. He showed that the expression was used in the Boston *Morning Post*, March 23, 1839, in the same sense—all correct—by editor Charles Gordon Greene but claims that the word got a second *independent* start in the 1840 campaign and really owes its popularity to Old Kinderhook’s candidacy. No earlier reliable date than Read’s for the use of O.K. has been found, and so the matter is apparently settled for all time—although other scholars have recently come up with entirely different explanations that etymologists are still debating. It will prove difficult, however, to take the credit for O.K. away from President Van Buren. The word honoring his name is undoubtedly the best known of American expressions. International in use and what H. L. Mencken calls “the most shining and successful Americanism ever invented,” O.K. does service as almost any part of speech. Surprisingly, the effort to give it an antonym (*nokay*) has failed, but the expression A-O.K. has gained currency from space flights, and the older *oke-doke*, from an abbreviation of one of its forms, *okey*, is still heard in everyday speech. O.K. is used more often than *salud* in Spain, has displaced English *right-o*, and is spelled *o-ke* in the Djabo dialect of Liberia. The most universally used of all eponyms in any language since World War II, it is inscribed al-

most everywhere, from the town of Okay, Oklahoma, to the pieces of equipment marked with O.K.s that are possibly on the Moon. However, the useful little word may become even smaller and more useful. To this writer it sounds like *k* with more frequency every year, and perhaps someday that will be the spelling.

O.K. by me. In use for at least half a century or so this expression is a Yiddish one given wider currency by the media. The *by me* in the phrase comes from the Yiddish *bei mir*.

Okies. The migrant farm workers of the Great Depression called the Okies took their name from Oklahoma, where many of them originally lived before they left the Dust Bowl and began their journey west searching in vain for a golden land. They were of course immortalized in John Steinbeck’s *The Grapes of Wrath*.

Oklahoma. Oklahoma takes its name from a Choctaw word meaning “red people,” for the Indians who lived in the region. The Sooner State (so called after those “sooners” who “jumped the gun sooner” and grabbed choice land there before they legally should have) was admitted to the Union in 1907 as our 46th state.

okra. Okra was so valuable in ancient Angola that tribes made “sharp knife” raids into neighbors’ fields to steal the vegetable, killing anyone who stood in their way. *Okra* derives ultimately from the Tshi *nkruman*. The Arabs held it to be a rare delicacy fit for weddings and other special occasions, naming it *uehka*, which means “a gift.” Okra is sometimes called ladyfingers in England, this name being suggested by the shape of the pods.

Old Abe. A nickname for Abraham Lincoln, not when he was a great wrestler and rail splitter, but when he was stooped, frail, and depressed from a Civil War that seemed never to end.

old age is a shipwreck. Overhead recently in a health club. If it isn’t a proverbial saying, it should be, but I have no evidence of this. Walt Whitman’s poem “The Dismantled Ship” tells of “An old, dismantled, gray and batter’d ship, disabled, done,/ After free voyages to all the seas of earth . . . /Lies rusting, mouldering.” Writers have long used *shipwreck* figuratively. John Udall, for example, wrote in *A demonstration of the truth of that discipline which Christe hath prescribed* (1588): “. . . hee haue made shipwreck of a good conscience” (meaning he has suffered the loss of his good conscience).

old as Methuselah. *As old as Methuselah*, “incredibly old,” refers to the grandfather of Noah, who the Bible tells us lived to be 969 before he perished in the year of the Deluge. The patriarch is the oldest person mentioned in the Scriptures and is the son of Enoch, descended from Seth, son of Adam. This primeval ancestor of mankind is mentioned in Luke 3:37 as well as Genesis. To recap Methuselah’s longevity: “Thus all the days of Methuselah were nine hundred and sixty-nine years; and he died” (Gen. 5:21–28).

old as the hills. This old phrase for someone very old may have its origins in a similar biblical expression (Job 15:7): “Art thou the first man that was born?, or wast thou made before the hills?”

Old Blighty. Old Blighty became popular as an endearing name for England during World War I, but it can be traced to Englishmen in India some years before this, *blighty* itself deriving from the Hindustani *bilati*, “a distant country.”

Old Brains. Only one person in American history has the honor of being called Old Brains and he probably didn’t deserve it. Union General Henry Wager Halleck (1815–72) was a fortifications expert and able organizer, but the prestige he enjoyed for the victories of U.S. Grant and others under his command were unwarranted—he wasn’t the “old brains” behind them, as many believed, contributing little to Union strategy.

old chestnut. English playwright William Dimond’s melodrama *The Broken Sword* (1816) is all but forgotten, along with its characters, plot, and dialogue, and the author himself isn’t remembered in most guides to literature. Yet Dimond had found immortality of sorts in the expression *an old chestnut*, “a stale joke or story,” which probably derives from an incident in his play. *The Broken Sword*’s principal character is crusty old Captain Xavier, who is forever spinning the same yarns about his highly unlikely experiences. He begins to tell the following one to Pablo, another comic character:

Captain Xavier: I entered the woods of Golloway, when suddenly from the thick boughs of a cork tree—

Pablo: A chestnut, Captain, a chestnut!

Captain Xavier: Bah, I tell you it was a cork tree.

Pablo: A chestnut; I guess I ought to know, for haven’t I heard you tell this story twenty-seven times?

Fame didn’t come immediately. The lines lay at rest in Dimond’s play for almost 70 years before American actor William Warren, Jr. repeated them at a stage testimonial dinner in Boston, after hearing another speaker tell a stale joke. Other actors present adopted Warren’s *chestnut*, elaborated on it, and it became the timeworn *old chestnut*.

old coot. See COOT, TO.

old crate. See CRATE.

old dog for a hard road. An experienced person for a difficult job: “You need an old dog for a hard road on that one.”

Old Dominion State. A nickname for Virginia and the oldest of state nicknames, dating back to 1778 when first recorded. Virginia has also been called the Cavalier State, the Mother of Presidents, and Mother of States.

Old English. See ANGLO-SAXON.

older than baseball. An American expression meaning very, very old, as indeed baseball is, especially if one traces it back to

the British bat-and-ball game of rounders, which is ancient in origin. *Old* also figures in baseball’s most famous song, “Take Me Out to the Ball Game”: “For it’s one, two, three strikes, you’re out, at the old ball game.”

old field pine. Various pine trees, including the loblolly, sand and yellow pines, are called “old field pines” because they grow best on the exposed mineral soil of old farms. The term is an expression often heard in the South but has some currency in other regions as well.

old fogey. Originally a Scottish term, dating back at least to the late 18th century, *old fogey* means an old person far behind the times. Its derivation is unclear, but the *fogey* here may come from an old use of the word *fog*, for “moss-grown.”

old fuddy-duddy. A stuffy, fussy, old-fashioned person, either old or young, who often fusses over minor details. The expression was first recorded in 1904 and was mainly confined to Maine and other parts of New England, but is now heard nationally. The term’s origin is not certain, but some suggest that it derives from the English dialect word *fud* for buttocks, *old fuddy-duddy* (*duddy* added for rhyme) referring to someone who sits around on his duff doing very little, fussing with details, etc.

old geezer. This expression is something of a redundancy, because *geezer* itself means an eccentric old man. *Geezer* is a British dialect word for a mummer or masquerader who wore a disguise and often acted eccentrically.

Old Glory. The many paintings that show the Stars and Stripes flying at Valley Forge and in major battles of the Revolution are all in error, for no official stars-and-stripes flags were used by the Army until 1783. *Old Glory* was named by Captain William Driver of the brig *Charles Doggett* on August 10, 1831. Captain Driver had brought back the British mutineers of the H.M.S. *Bounty* from Tahiti to their home on Pitcairn Island, and some say that in recognition of this humane service a band of women presented him with a large American flag. Others claim that friends gave him the flag as a present. In any case, as he hoisted the flag to the masthead, he proclaimed, “I name thee Old Glory.” His ship’s flag became famous and by 1850 its name became common for the flag in general.

old goat. The male goat has since before Shakespeare’s time been noted for his lascivious nature and his name applied to men of a randy temperament. Recently, however, the comparison has mainly been used in the form of *old goat* for a lecher of advanced years.

old guard. This term for the conservative wing of a political party, or anyone who opposes change, dates back to Napoleon’s Imperial Guard, troops chosen in 1804 to be the élite of the French military. Devoted to Napoleon, they were treated better than the rest of the army and opposed any change in the status quo, the French calling them the *Vieille Garde*, or “old guard.” In their bearskin hats and colorful uniforms they made the last charge at Waterloo.

Old Harry. One of many names used for the devil, all probably dating back to the late 1700s. U.S. president Harry S. Truman was also called Old Harry, in jest. Still other old names for Old Harry are Old Nick, Old Scratch, and Old Serpent. More recently, former President Truman gave a speech at Oxford, where students cheered him with his Latinized name: "Give 'em hell, Harricun!"

old hat. Today *old hat* means out of date or not new, and it has meant this for at least a century. But back as early as 1754 it was "used by the vulgar in no very honorable sense," as Fielding put it. It then meant, in Grose's punning definition from his 1785 *Classical Dictionary of the Vulgar Tongue*: "a woman's privities: because frequently felt."

Old Hickory; Old Mad Hickory. See HERO OF NEW ORLEANS.

The Old Hundred Names. According to the *New York Times* (January 30, 2004), *The Old Hundred Names* is "the Chinese phrase for common people," often older people.

Old Ironsides. Built six months after the *Constellation*, the *Constitution* is America's oldest warship still afloat and in commission. A national historic monument today, she is moored in Boston Harbor flying the flag of the commandant of the First Naval District. The high point of her illustrious career came on August 19, 1812, when she engaged and defeated the British frigate *Guerrière* off Nova Scotia. During the battle an American sailor, watching British shots fall into the sea, cried: "Huzza! Her sides are made of iron!" and *Old Ironsides* she has been since that day. In 1830 Oliver Wendell Holmes, hearing that she was to be sold by the Navy, wrote his famous poem "Old Ironsides" in protest and she was saved.

old lady in Dubuque. Dubuque, Iowa, is named for its first settler, a French Canadian lead miner named Julien Dubuque. But what about that famous symbol of prudery, *the little old lady in Dubuque*? The phrase seems to have originated in this sense with Harold Ross, when he promised in a prospectus of the *New Yorker* that his magazine would *not* be edited for "the old lady in Dubuque." According to Brendan Gill, in his fascinating *Here at the New Yorker* (1975), Ross may have been inspired by "Boots" Mulgrew, a former Broadway musical comedy skit writer forced by drinking and financial problems to retreat from New York to his birthplace. Mulgrew soon after began contributing squibs to a widely read *Chicago Tribune* column called "A Line o' Type or Two." These pieces, describing "the provincial absurdities of Dubuque" were signed with the pseudonym "Old Lady in Dubuque" and Gill suggests that "Ross read them, admired them, and, whether consciously or not, got the old lady in Dubuque fixed in his mind as a natural antagonist." See also LITTLE OLD LADIES IN TENNIS SHOES.

Old Lady of Threadneedle Street. The Bank of England, located on Threadneedle Street in London, is called *the Old Lady* because the institution has traditionally been fiscally conservative or overly cautious. The bank was first called *the Old Lady of Threadneedle Street* in the late 18th century. The street was

originally known as "Three Needle Street," this name recorded in 1598.

Old Line State. A nickname for Maryland recalling the Maryland Line of fine soldiers in the Continental Army. Maryland has also been called the Terrapin State, the Monumental State (Baltimore, Maryland, is the Monumental City), and the Oyster State.

Old Man of the Mountain. A natural formation on a mountainside in New Hampshire's White Mountains that resembled the face of an old man and was a popular tourist attraction until its destruction by natural causes in 2003. The old man of the mountain is also a name for the founder of the Assassins cult, Hassan ben Sabah, an 11th-century terrorist who operated in the mountains of northern Persia.

Old Man of the Sea. In the *Arabian Nights* tale of Sinbad the Sailor, an old man clung to Sinbad's shoulders for many days and nights until Sinbad got him drunk and threw him off. The old man stands for any tenacious person.

the old man's friend. A name given to pneumonia because the disease can relieve the suffering of old people if left untreated. The expression was recently used in a *New York Times* op ed piece by Dr. Batton H. Lerner: "Was Mr. Reagan's pneumonia the cause of his death, aggressively treated with antibiotics, or was the disease allowed to be 'the old man's friend'?" See THE LONG GOODBYE.

Old Muddy. A nickname used for both the Missouri and the Mississippi rivers since the mid 19th century.

Old Ned. The Americanism to *raise Old Ned* means "to raise hell or start a row," *Old Ned* being recorded as a name for the devil, along with *Old Splitfoot* and *Old Scratch* as early as 1859. See OLD NICK; OLD SCRATCH.

Old Nick; Old Harry; Old Gentleman; Old Serpent. See SCRATCH.

old one-two. The old one-two, a boxing punch combination of a left jab followed quickly by a right cross, is indeed an old tactic, the expression dating back to at least 1800. Over the years it has acquired the extended meaning of "any strong combination of two persons or things," as of a football passer and receiver.

Old Philadelphia Lady. One of the most famous letters to an editor in newspaper history is one an anonymous "Old Philadelphia Lady" sent James Gordon Bennett, the publisher and editor of the *New York Herald*: "I am anxious to find out the way to figure the temperature from centigrade to Fahrenheit and vice versa. In other words, I want to know, whenever I see the temperature designated on the centigrade thermometer, how to find out what it would be on Fahrenheit's thermometer—Old Philadelphia Lady, Paris, December 24, 1899." The letter became famous after it was unintentionally reprinted the next day, a mishap that made the famously eccentric Bennett so

mad that he published it every day until he died in 1918. Readers cancelled their subscriptions, even threatened to kill the old woman, but Bennett nevertheless ran her letter for the next 18 years and five months, for a total of 6,718 continuous days in all. *See F; CELSIUS SCALE.*

Old Probabilities. Americans have been having fun with the weatherman for several centuries now. Knowing that weather forecasters always hedge their bets with a “probability” (“There is a probability of rain tomorrow”), they dubbed such prognosticators Old Probabilities in the late 19th century. The term is first recorded in 1873 for the superintendent of the weather bureau in Washington, D.C. *Old Probs* was the nickname of Cleveland Abbe (b. 1838), the first American to make daily weather predictions. Today, weather forecasters are even vaguer, generally saying “there is a possibility.”

Old Public Functionary; OPF; Old Pennsylvania Fossil; Harriet Lane. James Buchanan (1791–1868), a compromise candidate and a minority president, called himself Old Public Functionary or OPF. Buchanan served one term, from 1857 to 1861. Among the most indecisive and ineffective of presidents, he was called Old Pennsylvania Fossil by many. Another of his nicknames was Ten-Cent Jimmy, because he supported low tariffs. The only bachelor to serve a full term as president, his niece Harriet Lane served as his hostess. This golden-haired girl was immensely popular compared to her uncle—a gown, a racehorse, a flower, and even the warship *Harriet Lane* were named after her, and the song “Listen to the Mockingbird” dedicated to her. One wit observed, “There is no power behind the throne, either.”

Old Rowley. Originally *Old Rowley* was the name of a famous stallion in the British royal stables, a prodigious stud that sired many offspring. The name became even better known as the sobriquet of his master, Charles II (1630–85), the pleasure-loving English king who sired many illegitimate children. *See CHARLEY.*

old saw. A hackneyed saying, one that may or may not be true but is often refuted. *Saw* here has no relation to the saw used for cutting trees or lumber. It is an English word deriving from the Old English *sagu*, which derives from the Icelandic word that gave us *saga* for a story or narrative.

Old Scratch. This is a synonym for the devil and has been traced back to early-18th-century England, possibly deriving from the Old Norse *skratte* meaning a monster or devil. In the U.S. *Old Scratch* has been used mainly in New England and is the devil’s name for himself in the region’s best-known short story, Stephen Vincent Benét’s “The Devil and Daniel Webster” (1937), which is the basis for both a movie and a 1939 one-act folk opera of the same name by Benét and American composer Douglas Moore.

Oldsmobile. One of America’s best-known cars will soon be taken out of production by General Motors. The Oldsmobile, famed in song and fable, was named after its designer, Ransom Eli Olds, who headed the Reo Motor Car (*Reo* after his initials), which introduced the Oldsmobile in 1901. After over 100 years

all that will be left of the Olds will be memories and popular song lyrics: “Won’t you come with me, Lucille / In my merry Oldsmobile . . .”

old soldiers never die. An old song with the refrain: “Old soldiers never die, they just fade away.” After President Truman relieved him of his command in 1951, General Douglas MacArthur appeared before Congress and ended his service with the additional words: “I now close my military career and just fade away.”

Old Splitfoot. *See OLD NED.*

old stamping grounds. An interesting theory connects this Americanism, used before the Revolution, with the mating behavior of male prairie chickens, who congregated in spring on hills and performed elaborate courtship dances, stamping the hills bare. Another guess is that the stamping of stallions while they covered mares suggested the phrase. All that’s known is that *stamping grounds* were first referred to as places where horses or other animals customarily gathered. It wasn’t too long (1836) before the term became a place where people customarily gathered. The British definition of *stamping ground* as “a place for amorous dalliance,” like a lover’s lane, gives some support to the prairie chicken or stallion theories. The expression is generally used by or about males.

old tar. *See JACK TAR.*

old too soon, smart too late. A favorite saying of former boxing heavyweight champion Mike Tyson, who once liked to call himself “the baddest man on the planet.”

oligopsony; duopsony; monopsony; monopoly. The 10-dollar word *oligopsony* has no 10-cent synonym, as so many high-toned words do. It means a market condition where there are so few buyers and the actions of just one of them could drastically affect the market. Deriving from the Greek *oligos*, few, and *opsōnēs*, buyer, it is not to be confused with *duopsony*, a market condition that exists where there are two buyers only, or *monopsony*, a market condition where there is only one buyer (*monopoly* can also be used to express this last condition).

olios. *See VAUDEVILLE.*

olive. *Wine within, oil without*, was the Roman formula for a happy life, and the oil with which they anointed their bodies was, of course, olive oil. Olives themselves were believed to stimulate drinking by the Romans, whose word *oliva* for the fruit became our *olive*. So interwoven is the olive with history—Noah’s biblical olive branch the symbol of peace; some of the ancient olive trees in the Garden of Gethsemane possibly growing there since the time of Christ’s betrayal; Athens named for the goddess Athena after she gave the olive to man—that books have been written about the fruit. The olive tree, which has been known to live well over 1,000 years, was simply a staple of life, yielding both food and light (from lamp oil) and grown also for its symbolism of joy, happiness, and peace. Green olives are those picked early; the black ones are picked ripe. Both are very bitter indeed before they are soaked in a lye and salt solution and readied for market.

oliver; Oliver's skull. Oliver Cromwell's name "fairly stank" to the Royalists, which is why they dubbed their chamber pots *Oliver's skulls*. The term was popular slang in England from 1690 to 1820 and puts Cromwell in the select company of the relatively small handful of people who have been discommoded by commodes. On the other hand, Cromwell's supporters so admired the way he hammered at the Royalists that the *oliver*, a small smith's hammer, was probably named after him. Whether the British underworld term *oliver*, for "the full moon," is a compliment or an insult is uncertain, but it definitely arises from the fact that Oliver Cromwell led the Roundheads. See CRAP; FURPHY; SACHEVERELL; TWISS; VESPASIENNE.

olla. A large earthenware crock used for water storage that made its way from Mexico to Texas and California, where it was used for centuries in the same way. The Spanish word comes from Latin *aula*, a pot or jar.

olla podrida; potpourri. *Olla podrida* is Spanish for "a putrid or rotten pot" but it refers to a stew made of many kinds of meat, fowl, vegetables, and spices boiled in a large pot. Like the French *pot-au-feu*, it is made of many scraps, the "rotten" in the term referring not to its smell or taste, which is delicious, but to the way everything is cooked "leisurely, til it be rotten (as we say) and ready to fall in pieces." Since the 16th century *olla podrida* and *olio*, another word for the stew, have also meant an incongruous mixture, a hodgepodge, a farrago. *Olla podrida* isn't always used disparagingly when applied to miscellaneous collections of any kind, such as literary pieces, drawings, and musical medley. Often it just means a medley or *potpourri*, which, in fact, is the French translation of *olla podrida*. Some samples of the expression's use: "His work is an *olla podrida* of error, confusion's masterpiece"; "This *olla podrida* of a brain of mine." The nonce word *ollapodridical* means heterogeneous.

olly, olly oxen free. If you've ever wondered about the origins of this chant—used to call in all players at the end of a game of hide-and-seek—be advised that the experts only have a partial answer to your lifelong puzzlement. Word sleuths are fairly certain that the *oxen* (or *octen*) in the call is simply a childish corruption of "all in." The rest remains a mystery.

omelets can't be made without breaking eggs. See YOU CAN'T MAKE AN OMELET WITHOUT BREAKING EGGS.

O Menander, O Life, which of you imitated the other. The Greek Menander is another poet who didn't win fame until after he died, when Aristophanes wrote the above about him. He wrote some 100 plays, though only a few survived, and many famous sayings, including "evil communications corrupt good manners," and "whom the gods love die young."

omerta. There may be nothing to *omerta*, the law of silence said to be sworn by members of the Mafia for over a thousand years in Sicily. According to Mario Puzo in *The Godfather* (1969): "... the Mafia cemented its power by originating the law of silence, the *omerta*. In the countryside of Sicily a stranger asking directions to the nearest town will not even receive the courtesy of an answer." In *The Last Don* (1996) Puzo adds: "As a philosophy *omerta* was quite simple. It was a mortal sin to talk

to the police about anything that would harm the Mafia. If a rival Mafia clan murdered your father before your eyes, you were forbidden to inform the police... The authorities were the Great Satan a true Sicilian could never turn to." Richard Condon casts more light on the practice today in *Prizzi's Money* (1994): "It had almost appeared as though he had been about to violate *omerta*, the sacred oath of manhood of the Mafia with which, among other things, he had pledged in blood that he would never violate a woman of the family of a mafiosa. Everyone in the room knew that *omerta* was only a myth, something observed by the people who wrote newspaper stories and movies. But he was expected... to pay solemn lip-service to it."

on a bender. On a drinking spree; a drinking party. Some experts trace *bender* to the Scottish word *bender* for a drinker. Others say it was originally a mariner's word and dates back to the 18th century.

onanism. "Then Judah said to Onan, 'Go in to your brother's wife, and perform the duty of a brother-in-law to her, and raise up offspring for your brother.' But Onan knew that the offspring would not be his; so when he went in to his brother's wife he spilled the semen on the ground, lest he should give offspring to his brother. And what he did was displeasing in the sight of the Lord, and he slew him also." This passage from the Revised Standard Version of the Bible (Gen. 38:8–11) shows what scholars have long told us, that Onan was not a habitual masturbator as the word *onanism* suggests. It is not even clear from the biblical passage whether Onan's one such mentioned act was masturbation or coitus interruptus, and many biblical scholars tell us that his real sin was not *onanism* but his refusal to take the childless Tamar to bed, get her with child, and rear their offspring as the son of his dead brother in accordance with the law of the levirate marriage.

on a shoestring. See SHOESTRING.

once in a blue moon. Seldom, rarely, as in "We go to the movies once in a blue moon." The moon does rarely appear blue due to the actions of dust particles in the upper atmosphere. It is also said that the moon turned bluish for a time in 1883 when colored by volcanic ash from the eruption of Krakatoa in Java. Another meaning of blue moon is "The second full moon in the same calendar month," which comes to about one blue moon every three years.

once upon a time. This frequent opening to a fairy tale has been traced back to the early 17th century but may be much older. In Shakespeare's *The Tempest* (1611) it is given as when time was: "I was the Man i' th' Moon, when time was."

on cloud nine. One explanation for this expression, which only dates back to about 1950, is that meteorologists classify clouds by number, number nine being the highest clouds (the cumulonimbus). Thus if one is on cloud nine, he or she is feeling very high, very good.

on deck; in the hole. A baseball player batting next in an inning is said to be *on deck*, this obviously an old nautical term

put to use on land. So is *in the hole* for the man scheduled to bat third, this a corruption of *in the hold*—the reasoning being that the third batter is *in the hold*, or *hole*, since the second is *on deck*. No one knows just how these nautical words were transferred to baseball early in this century.

one-armed bandit. A U.S. phrase that became popular in the 1930s Great Depression. Slot machines offered a player the chance of winning a lot for a little, but more often robbed those who could least afford playing them. The machine is so named for the handle at its side.

one degree under. *One degree under* is a relatively recent expression, dating back 50 years or so, which means “feeling a bit poorly, slightly unwell.” The phrase may be modeled on UNDER THE WEATHER, but the reference is to body temperature, not the thermometer. Someone one degree under the normal body temperature would indeed be “feeling a bit poorly.”

one fishball. The popular song “One Meatball,” with its well-known line “You get no bread with one meatball,” was adapted from a New England song called “The Lay of One Fishball,” apparently written by Harvard professor George Martin Lane in 1857 or thereabouts. Lane’s line was: “We don’t give bread with one fishball!”

one foot in Charon’s ferryboat. The ancient Greeks used this term long before *one foot in the grave* was current, Charon’s ferryboat being the legendary ferryboat that transported the dead across the river Styx to the Elysian Fields. In fact, it has been suggested that the Roman emperor Julian knew the Greek phrase and used it as the basis for his coinage of *one foot in the grave* when in his old age he exclaimed “I will learn this subject even if I have one foot in the grave!” The austere Julian the Apostate (A.D. 351–363) may or may not be the speaker, but one hopes so for the story’s sake. Another story has it that this pagan Roman emperor, who had renounced Christianity, uttered as his last words, “*Vicisti Galilae*” (“You have won, Jesus”). See ONE FOOT IN THE GRAVE; ONE FOOT ON A BANANA PEEL AND THE OTHER IN THE GRAVE.

one foot in the grave. Used by Richard Burton, Swift, and other great writers, this phrase meaning “to be close to death” dates back to at least the early 17th century. The brilliant British wit Samuel Foote has the following epitaph on his grave in Westminster Abbey:

Here lies one Foote, whose death may thousands save,
For death has now one foot within the grave.

Foote, called “The English Aristophanes,” invented the term *grand panjandrum*. See also NO SOAP.

one foot on a banana peel and the other in the grave. Very old or very ill, on the brink of death, slipping away fast; or not in good health recently, though far from dying. The words are a 20th-century humorous extension of ONE FOOT IN THE GRAVE. See ONE FOOT IN CHARON’S FERRYBOAT.

one for Ripley. Cartoonist Robert Leroy Ripley traveled widely from his California home to gather bits of odd information

for his “Believe It or Not” newspaper series, books, and radio program, though much of the material he used was library researched. His name became as well known as “Believe It or Not” itself, the phrase *one for Ripley* used to describe any strange, almost unbelievable happening. Though he died in 1949, aged 56, Ripley’s series still runs in newspapers throughout the world today, along with a host of imitators. There was a Ripley “Odditorium” at the Chicago World’s Fair of 1933–34 and today seven “Believe It or Not” wax museums are doing a thriving business in the United States and England.

one good turn (deed) deserves another. Petronius Arbitr (d. ca. A.D. 66) coined or first recorded this expression in his *Satyricon*, along with such others as *beware the dog, not worth his salt*, and *my heart was in my mouth*. In direct opposition to the first saying is the cynical expression *no good deed goes unpunished*, which sounds modern, probably of recent vintage.

one-handed shot. Today one-handed shots are the rule in basketball, but in the 1930s controversy raged between those who favored the old-fashioned two-handed stationary “set shot” and the one-hander introduced by San Francisco’s Galileo High School star Angelo Enrico “Hank” Luisetti (1916–2002) in the early years of the decade. The debate was especially lively between fathers whose coaches had taught them to use the set shot and sons who had picked up the Hank Luisetti one-hander on garage and schoolyard courts. As for Luisetti, who went on to star for Stanford University, he said of his history-making shot: “Shooting two-handed, I just couldn’t reach the basket. I was lucky with my coaches in high school and college, I guess, because I made the baskets, they left me alone. . . .” The man who changed basketball forever was elected to the Basketball Hall of Fame in 1959.

one-horse outfit. At first a *one-horse outfit* was a small ranch, but today the words are applied to any small business. The term dates back to the late 19th century.

one hundred percent American. See ANANIAS.

one man’s meat. The complete saying is one man’s meat is another’s poison; that is, what is good for one person can be bad for another. A slight variation is one man’s meat is another man’s poison. American humorist E. B. White wrote the One Man’s Meat Department for *Harper’s* magazine from 1938 to 1943 and also wrote the *New Yorker’s* Talk of the Town essay columns.

one-man tango. Someone supremely self-confident, who looks like he could dance the grand tango all alone. In his autobiography *One Man Tango* (1955), actor Anthony Quinn claims Orson Welles gave him this nickname. Whether Welles invented the words or not isn’t established, but the expression does deserve to be recorded.

one meatball. See ONE FISHBALL.

One Meat Ball. A song written by Hy Zaret, one of the most prolific and successful Tin Pan Alley lyricists. Zaret died on

July 30, 2007, at the age of 99. *One Meat Ball* told a story of a poor man in the Great Depression years who had only 15 cents for a meatball. Among the many songs Mr. Zaret wrote were *So Long for Awhile*, *Unchained Melody*, *There I Go Again*; and *The Partisan*. At the time of his death he was working on *Love Song for Senior Citizens*. See also TIN PAN ALLEY.

one-name star. An expression used in sports for an athlete who is so well known that he is often thought of and called by one name, such as Michael (Michael Jordan), Tiger (Tiger Woods), Ali (Muhammad Ali), Lance (Lance Armstrong), and Pelé (the nickname, meaning “black pearl,” of Brazilian soccer star Edison Arantes do Nascimento). Only rock stars rival athletes as one-name stars. The Beatles, for example, were all known by their first names.

One never knows, do one? A saying associated with legendary black musician and composer “Fats” (Thomas Wright) Waller (1904–43), who wrote “Ain’t Misbehavin’” and “Honey-suckle Rose,” among many songs. The phrase means that a person can never predict what will happen; the unlikely or unexpected often comes true.

one over the eight. Heard more in England than in the U.S., this expression means to be drunk. It derives from the old superstition that one always becomes drunk after the eighth drink and not before!

One people, one country, one leader! How many remember that this was the slogan and rallying cry of the Nazis (German National Socialists) under Hitler? *Ein Volk, ein Reich, ein Führer!* were the German words that led to so many horrors.

One perry and one porter were too much for John Bull to swallow! A popular American slogan after the War of 1812, this punning expression refers to American naval hero Oliver Perry, whose last name means a hard cider made of pears, and David Porter, whose last name means a strong, dark beer. John Bull, of course, is the national nickname for England.

one picture is worth a thousand words. The Chinese proverb that inspired this cliché goes to greater extremes: “One picture is worth more than 10,000 words.” Pictures certainly aren’t always, or mostly, 10,000 or a thousand times more versatile than words. “If you’re not convinced,” author William Childress wrote, “fall in a lake and start gulping water—and then, instead of screaming the word HELP, hold up a picture of yourself drowning. If someone pulls you out, I lose my argument.”

One small step for a man, one giant leap for mankind. These were the words of American astronaut Neil Armstrong when he became the first man to step on the moon on July 20, 1969. Unfortunately, in Armstrong’s transmission of the words, the indefinite article *a* was inaudible and thus the words are often given incorrectly today as *That’s one small step for man, one giant leap for mankind*, which makes little sense.

one’s name is mud. See HIS NAME IS MUD.

one’s own man. Today this expression (*he’s his own man*; *I’m my own man*, etc.) generally means to be one’s own master, beholden to no one, but in the past it also meant to be fully in control of all one’s faculties and powers. The expression dates back to the early 16th century.

one swallow does not a summer make. The proverb was first recorded in English as *It is not one swallow that bryngeth in somer. It is not one good qualitie that maketh a man good* (1539). However, Aristotle recorded the Greek proverb *One swallow does not make a spring* long before this. The migratory swallow is still regarded as a harbinger of summer. The nests of some species, formed from the spawn of fish and seaweed bound together by the bird’s solidified saliva, are used for *bird’s nest soup*, among the most recherché of exotic gourmet foods. They are the subject of many legends—*e.g.*, that they mate while in flight and that they bring good luck to any house they build a nest upon. Scandinavian tradition says that swallows hovered over the cross of Christ crying *Svala! svala!* (“Console! console!”), hence their name *svalow*, “the bird of consolation.” *One swallow does not a summer make* means that all of one’s troubles aren’t over just because one difficulty is surmounted.

one thing on their minds, one hand on their things. A British sexual phrase. “All you need to know about Englishmen, Welshmen, or Germans, for that matter, is they’re all men. And you know what they say about men: one thing on their minds . . . and one hand on their things.”

one to show, one to blow. Handkerchiefs became uniform in length after Marie Antoinette issued a royal decree declaring that they should be. They then became quite fashionable and men began to wear one in the breast pocket for show, while carrying another in the rear pocket to blow their noses with. This led to the now rare expression *one to show, one to blow*, implying that “all isn’t what it seems, someone has something hidden in reserve.”

one touch of nature . . . The complete phrase is *one touch of nature makes the whole world kin* and it has come to mean that any appeal to the basic emotions of people will reveal, by their sympathetic response, the common humanity, the basic kinship of all people. Shakespeare, however, meant something quite different when he invented the line for the cynical Ulysses in *Troilus and Cressida*. There are no eternal verities of the heart, Ulysses says to Achilles; the one natural trait we all share is our preference for what’s *au courant*, or “in,” latest, no matter how superficial it may be:

One touch of nature makes the whole world kin,
That all with one consent praise new-born gauds
[gaudy novelties]
Then marvel not, thou great and complete man,
That all the Greeks begin to worship Ajax;
Since things in motion sooner catch the eye
Than what not stirs . . .

In a world where there is perpetual chasing of things in motion, Shakespeare’s meaning is far from obsolete.

one-trick pony. Said of a person who is good at only one thing, the opposite of *jack of all trades*. The phrase may have originated in the world of the circus, where ponies were sometimes taught tricks to entertain the audience, such as a pony that can “count” by stamping its foot on the ground in answer to its handler’s question.

one year’s seeding, seven years weeding. The seeding in this 19th-century proverb refers to the seeding of weeds, which if let to seed themselves will cause much trouble for the gardener.

onion. *Onion* comes from the Latin word *unio*, “oneness” or “union,” in reference to the many united layers in an onion; the Romans used the same word for the multilayered pearl; thus our pearl onion would have been a Roman *unio unio*. Onions were fed to the Egyptian laborers who built the great Cheops pyramid, dispensed by Alexander the Great to his troops to promote valor, and praised by General Grant, who once wired the War Department that he would not move his army farther without onions. The onion is believed by some to be an aphrodisiac as well as strength-giving, though as Shakespeare wrote, “Eat no onions or garlic, for we are to utter sweet breath.”

onion-fish. A little-known fish (the *Cepola rutescens*) whose pale red body peels into flakes like an onion.

only at peace when at war. A description of the most warlike of Afghan tribes, the Pashtun. It has long been said that the Pashtun are war lovers who are only at peace when they are at war.

only good Indian is a dead Indian. General Phil Sheridan is credited by *Bartlett’s Familiar Quotations* with this prejudicial remark so often quoted in old western movies. But Sheridan said, “The only good Indians I ever saw were dead,” which is a condensation of the words of the originator of the slander, Montana congressman James Cavanaugh, who earlier said: “I have never in my life seen a good Indian . . . except when I have seen a dead Indian.” Which kind of ruins the old story about Sheridan making the remark at Fort Cobb, Indian Territory, in 1869 after the Comanche chief Toch-a-way (“Turtle Dove”) was presented to him. Chief Toch-a-way reportedly said: “Me Toch-a-way, me good Indian.” Sheridan reportedly replied: “The only good Indians I ever saw were dead.”

onomastician; toponomist. An *onomastician* is a scholar of names and their origins, while a *toponomist* is a bit more specialized, being just a student of place-names.

onomatopoeia. The Greek for “making of words” is the ancestor of *onomatopoeia*, which is the term for forming a word by imitating the sound associated with the object designated. Examples of such words are bang, buzz, cackle, clatter, crackle, cuckoo, hiss, murmur, pop, sizzle, tingle, twitter, whiz, whoosh, and zoom.

on one’s high horse. See HIGH HORSE.

on one’s uppers. *On one’s uppers* refers to being impoverished, destitute, as in “He was on his uppers before he got that job.” The Americanism is first recorded in 1891 and refers to someone walking in shoes with holes in the soles, *uppers* referring to bare feet above the shoe soles.

on the back burner. Putting something on the back burner means to keep it in reserve until there is time to discuss or resolve it. The “back burner” in the phrase is the rear ring of such a stove, which doesn’t heat up as hot and quickly.

on the ball. Depending on how it is used, the expression has two different origins. *To be on the ball*, “to be alert, knowledgeable, on top of things,” probably refers to close and clever following of the ball by players in British soccer or American basketball. The phrase may have arisen independently in each sport, or it may have originated in the 1940s with the “bop and cool” jazz musicians and fans as the *American Dictionary of Slang* suggests. There is no hard evidence for any theory, but the sports analogy seems more logical. *To have something on the ball*, “to be talented or effective in some way,” is surely of American origin, a baseball term referring to the various “stuff”—curves, spin, etc.—a good pitcher can put on the ball to frustrate a batter. See KEEP YOUR EYE ON THE BALL.

on the beam. At first glance *to be right on the beam*, “to be on the right course, accurate, functioning well,” might be mistaken for an old expression connected with carpentry. The familiar phrase, however, is modern and has nothing to do with beams of wood. It probably originated in the RAF around 1938 and refers to the directional radio beams that guided planes to airfields. When a pilot is on course, the beam’s signal is loudest; when he strays off course, the signal-from the beacons along the route grows weaker.

on the boards; to walk the boards. In the theatrical profession, *boards* are the stage of a theater. “The Booths were on the boards for three generations.” *To walk the boards* means to be an actor.

on the carpet. When carpets first were used as floor coverings they were walked on only by the master or mistress of the house, and servants usually stood on them only when they were called before the gentry to be reprimanded for some misdeed. From this practice, dating to the early 1800s, came the meaning of *on the carpet*.

on the cuff. *On the cuff* apparently arose at the turn of the century. Since bartenders commonly wore starched white cuffs at the time, the theory that our term for “on credit” derives from bartenders jotting down the debts of patrons on their cuffs during the rush of business is an appealing one. *On the arm* probably derives from *on the cuff*, while *off the cuff*, unrehearsed or extemporaneous, may come from impromptu notes early Hollywood directors jotted down on their cuffs while shooting a difficult scene in a movie. These ideas, not in the script, were conveyed to the actors when the scene was reshot.

on the fritz. No one seems to have discovered where the *fritz* comes from in *on the fritz*, which means out of working order, in disrepair, worthless, or ruined. Since *on the fritz* isn't recorded before the 1920s, it may have something to do with the derogatory term "Fritz," for a German soldier in World War I. Fritz is the nickname for the common German name Friedrich, and was popularized in the nickname of Frederick the Great of Prussia—Old Fritz—long before World War I. Someone out of working order or ruined, could have been compared to the defeated Germans. Another wild guess is that *fritz* is a corruption of "frittered," in its old sense of broken or torn into pieces—as in "the sail frittered in a thousand pieces." Maybe the phrase even refers to little Fritz of the early comic strip "The Katzenjammer Kids," who along with his twin brother Hans put a lot of things on the fritz.

on the hind tit (teat). The words describe someone who isn't getting as much as all the others, as in "I'm always on the hind teat when it comes to getting overtime." The analogy is to a last pig feeding on a sow, though there is no proof that a mother pig's last teat offers less milk than any other.

on the hip. To have someone under one's control. Traced back to the 1500s by the *OED*, this expression derives from an even older wrestling term. Shakespeare used it in several plays, including *The Merchant of Venice* (1596), and Eugene O'Neill used it in *The Iceman Cometh* (1940): "That bastard, Hickey, has got Harry on the hip."

on the house. This phrase originated in English public houses, "tippling houses" as they were called in Elizabethan times. It used to be common for tavern keepers to dispense a free drink with every three or so bought, one that was on the house. Bartenders still give drinks on the house, where the law doesn't prohibit this practice, but normally after a lot more than three are paid for. The expression is now common for anything given away free.

on the lam. To be a fugitive in hiding or running away from any law enforcement authority. Also take it on the lam. First recorded in the United States in 1904.

on the level. The phrases *upon* or *on the level* and *by* or *on the square* probably originated with the Freemasons in the 14th century. Freemasons, before they accepted honorary members several centuries later, were exclusively a class of skilled workers in stone who traveled from place to place wherever buildings were being erected. From their use of the square, which drew a straight line and made you go straight, and their use of the level, which made sure a surface was true or even, came these expressions meaning honestly, truthfully, and on the up-and-up.

on the make. In mid-19th-century America, *on the make* meant only to be out for money, to be ruthlessly ambitious. During the Great Depression, interests shifted outwardly from money to sex, there being more of the latter around then than the former, and the expression acquired its second meaning of to be "out for love." The words probably are the source of to

make it with someone, "succeed in having sexual intercourse"; *make time*, "have relations," *make out* and *make-out artist*. The earlier meaning remains primarily in *to make it*, "to succeed in any endeavor, to rise to the top."

on the nail. See PAY ON THE NAIL.

on the nose. *To win by a nose* is an old horse racing expression, but *on the nose*, "exactly on time, perfectly correct, right on the button," originated in the early days of radio. Directors in their soundproof control rooms signaled their assistants on stage that the various segments of a program were running exactly on time by touching their forefingers alongside their noses. If portions of the program were running behind schedule, the director would relay other signs, and whole pages of a script might have to be cut out. The signal to cut something entirely, for example, was to saw violently at the throat with one hand. When everything was really copacetic, the director held up his thumb and forefinger pressed tightly together.

on the pad. Since the late 19th century this Americanism has referred to policemen who accept bribes, the *pad* meaning the account book in which the bagman recorded the bribes paid and the officers sharing in the split.

on the pig's back. *On the pig's back* is a mainly Irish expression meaning "to live a prosperous life," the same as TO LIVE HIGH ON THE HOG.

on the qui vive. French sentries once shouted "*Qui vive?*" literally "who lives?" as a challenge to discover to which party the person challenged belonged—appropriate answers being [*vive*] "*le roi* [king]," "*la France*," etc. Thus to be on the *qui vive* is to be watchful (like a sentry), to be on the alert for something. The expression is first recorded in English by Jonathan Swift in 1726.

on the rocks. The allusion here is to a ship grounded off a rocky coast, battered by waves and ready to sink, and the expression arose among seamen, as would be expected. The figurative use of rocks for a symbol of destruction or ruin dates back to at least the early 16th century, but it wasn't until 300 years later (1889) that the phrase *on the rocks* appeared or is first recorded. When we use the expression today we always refer to ruin or impending disaster. Someone *on the rocks* can be stone broke, or bereft of sanity. A marriage *on the rocks* is wrecked and about to be sunk unless it is saved at the last minute. *On the rocks* is also a drinking term, meaning a drink served with ice in the glass, the expression dating back to the 1920s.

on the ropes. The allusion here is to a weary, exhausted boxer who is pinned against the ropes in a prizefight and just a punch or two away from being knocked out. The expression dates back long before Muhammad Ali's "rope-a-doping," in which he used the ropes to his advantage, and figuratively means to be on the edge of ruin. It is first recorded in 1924 but may be much older, for boxing rings have officially been enclosed by ropes since about 1840.

on the same sheet of music with. In agreement with. U.S. Secretary of Defense Donald Rumsfeld recently used and defined the expression: “I know that the interim [Afghanistan] government is right on the same sheet of music with us. They want the Taliban caught. They agree with us. They want the Al Qaeda the dickens out of their country.”

on the shady side of 40. As the sun sets, shadows lengthen. Thus the allusion in this 19th-century expression is to late life, when one has become part of the shadows.

on the side of the angels. The phrase has long been used for someone who takes a spiritual view of things, or for someone who is on “our” side. Benjamin Disraeli coined it in 1864, before he became Britain’s prime minister, in a speech he made at the Oxford Diocesan Conference opposing the Darwinian theory of organic evolution proposed in *On The Origin of Species*. “The question is this,” he asserted. “Is man an ape or an angel? I, my lord, am on the side of the angels.” Two years later Disraeli gave us another famous quotation. “Ignorance,” he told the House of Commons, “never settles a question.”

on the spot. See PUT ON THE SPOT.

on the spree. See SPENDING SPREE.

on the square. See ON THE LEVEL.

on the tip of my tongue. A phrase often used by someone who is trying to recollect something that he can’t quite remember: “What’s her name? It’s on the tip of my tongue!”

on the town. “On the Town” has been the title of several society columns over the years, the expression meaning “in the swing of fashionable life, pleasure.” Steele first recorded the phrase, in *The Spectator* in 1712.

on the wagon. The original version of this expression, *on the water wagon* or *water cart*, which isn’t heard anymore, best explains the phrase. During the late 19th century, water carts drawn by horses wet down dusty roads in the summer. At the height of the Prohibition crusade in the 1890s men who vowed to stop drinking would say that they were thirsty indeed but would rather climb aboard the water cart to get a drink than break their pledges. From this sentiment came the expression *I’m on the water cart*, I’m trying to stop drinking, which is first recorded in, of all places, Alice Caldwell Rice’s *Mrs. Wiggs of the Cabbage Patch* (1901), where the consumptive Mr. Dick says it to old Mrs. Wiggs. The more alliterative *wagon* soon replaced *cart* in the expression and it was eventually shortened to *on the wagon*. *Fall off the (water) wagon* made its entry into the language almost immediately after its abstinent sister.

on the whole I’d rather be in Philadelphia. A mock epitaph first printed as a joke in *Vanity Fair* in the 1920s. It was not coined by W. C. Fields and is not inscribed on his tomb as is frequently stated. See MOCK EPITAPH.

on the wrong side of the door when brains were handed out. A brainless, stupid, or very dull person. Coined toward the beginning of the 19th century, the British phrase was originally *on the wrong side of the hedge*.

on tick. *Tick* here is just an abbreviation of *ticket*. First recorded as early as 1648, *on tick* originally meant a written I.O.U. or “ticket,” then came to mean “on credit.”

on velvet. In the game of faro, money won from the house was called *velvet* and any player who won a lot of money was said to be *on velvet*. From these early-19th-century beginnings *on velvet* passed into general use as a synonym for “an unusual, unexpected profit or gain.”

on your own hook. In the 19th century, fishermen on boats fishing the Grand Banks were paid according to what they caught individually on their own hooks and lines. To this practice we owe the expression to *be on your own hook*, “to be on your own.”

oo. Sometimes called Bishop’s oo (*Moho bishopi*), this most unusually named bird is a member of the honey eater family, birds that can eat nectar and flowers as a part of their diet. The *Bishop* of the bird’s name honors no churchman, but American Charles Reed Bishop (1822–1915), who married a Hawaiian princess and became powerful in the islands’ business and political affairs. *Oo* is simply the Hawaiian word for unknown, perhaps because so little was known about the bird before it was named.

oof. A slang term that can mean money, or, in boxing circles, strength or power. Said to be an abbreviation of Yiddish *offtish*, which in turn comes from Yiddish *off tish*, “on the table.”

oomph. Movie actress Ann Sheridan (1915–67) was dubbed the “Oomph Girl” for publicity purposes in 1939, making this word for sex appeal familiar to millions of Americans. But *oomph* goes back at least 40 years, first recorded by poet Paul Laurence Dunbar in *Gideon* (1900). The word is an echoic coinage that, according to Dr. Robert Chapman, suggests “the gasp of someone hit hard by . . . a transport of desire.”

op-ed page. *Op-ed page* means “opposite the editorial page.” The term was coined by Herbert Bayard Swope, editor of *The New York World* in the 1920s, to describe the page in a newspaper opposite the editorial page, where columnists and other contributors can present their own views, often different from the newspaper’s editorial policy.

open and shut. First recorded in 1848, *open and shut* probably didn’t originate in a lawyer’s office. A good bet is that it had its origins in some card game, probably either poker or faro. Simpler versions of these games didn’t allow complicated betting but shut the pot after the ante was put in it. The term could have passed into general use from the card tables to take on the meaning of “easily decided or immediately obvious,” as in an open-and-shut case of murder.

open sesame! Ali Baba, of course, overheard the robbers use these magic words to open the door of their cave of riches in the tale of “The Forty Thieves” from the *Arabian Nights*. Sesame is a common herb producing an oily seed long important in cooking and soapmaking in the lands of the *Arabian Nights*, so its use by the robbers is logical. If sesame is also a laxative, as several reference books say, then the thieves were also remarkable punsters.

opera. An Italian word that comes from Latin *opera* meaning “work.” It is a 17th-century borrowing that seems to have first been recorded by British author John Evelyn: “They sometimes entertain the people [of Sienna] with ‘operas’ as they call them.” Opera has been with us since the end of the 16th century, the first opera house built in Venice in 1637. This combination of drama and music is sometimes melodramatic and may never seem sensible to some, for, as Auden said, “in sensible situations people do not sing.”

opera isn't over until the fat lady sings. Things aren't finished until they're finished, other possible actions remain. The fat lady here is the usually substantial singer who appears in the opera and sings in the final act. No one seems to have dated this common proverb before the late 20th century.

to oppose Preston and his mastiffs. This mainly British expression, meaning to take reckless action, is one of the oldest of eponymous phrases. It honors Christopher Preston, a late-1600s entrepreneur who opened a bear garden (a place where bears were baited for the amusement of his customers). Preston kept a pack of huge vicious mastiffs to protect his business from potential thieves and troublemakers, and it soon became known that no one could oppose Preston and his mastiffs. Preston himself was crushed to death by one of his bears.

Oprah. *Oprah* has almost become a synonym for a television talk show host, referring to Emmy Award-winning Oprah Winfrey (b. 1954), American talk show host, actress, and producer, whose show has become a most influential entertainment. The actress also received a best supporting actress Oscar nomination for her performance in the film *The Color Purple* (1985).

opsimath; opsigamy. A rare word that should make a comeback with recent interest in the aged and the problems of growing old. An *opsimath* is a person who begins to learn or study late in life, the word deriving from the Greek for “late in learning.” Formerly, the word was often used in a derogatory sense, to suggest a laggard, but there is no reason why it shouldn't be applied to old people learning new things in new fields. *Opsigamy*, a rare related word, is marriage late in life, an act that the Spartans punished with flogging but which is common today judging by all the *opsigamists* around.

oral days. When old horse-racing buffs talk of the *oral days* they mean the good old days—before the time of totalizer machines—when bets were made by word of mouth. The expression seems to have almost passed out of use, but it is worth remembering.

orange. The Sanskrit word *narange* became the Latin *aurangia*, “golden apple,” from which our *orange* derives. *Portugals* is a name still used for sweet oranges in Greece, Albania, Italy, and the Middle East, for bitter oranges were the only oranges known in Europe until Portuguese ships brought sweet oranges back from India in 1529. Later, in 1645, still-sweeter Chinese oranges reached Lisbon, and they are responsible for the scientific name for the modern sweet orange, *Citrus sinensis* (*sinensis* is Latin for “Chinese”). Sweet oranges were a luxury enjoyed mainly by royalty until the mid 19th century. Thousands of varieties of fruits are named after their developers, and in this regard the orange is no exception. The best-known eponymous orange variety is the *Temple*. Others include the *Murcott Honey* orange, named for Florida grower Charles Murcott Smith, and the *Parson Brown*, which honors Nathan L. Brown, a Florida clergyman. The United States is by far the largest grower of oranges, producing more than 25 billion a year. An orange's color, incidentally, has nothing to do with its ripeness. Oranges turn orange only as a result of cold weather, which breaks down a membrane protecting their green chlorophyll. This is why summer oranges are often dyed and stamped with the words “color added.” Long the traditional decoration for a bride in England, the orange blossom is said to indicate purity because of its whiteness, and fruitfulness because the orange tree is so prolific.

orangutan. One story claims that this ape native to Borneo looked so much like a man to the natives there that they named it from the Malay *orang*, man, and *hutan*, forest or jungle. On the other hand, it may be that Europeans mistakenly applied the Malay word for wild man, *orangutan*, to the ape, the word actually describing a tribe of the Sunda Islands.

orchard. *Hortyard*, one of the old spellings of *orchard*, best explains its origins. The word originally meant “a garden yard,” deriving from the Old English *geard*, “yard,” and the Latin *hortus*, “garden.”

orchid. *Orchids* were once called *ballocks stones*, dogstones, and similar names—all because their tubers resemble human testicles. Indeed, the name *orchid* derives from *orchis*, the Greek for “testicle.” An *orchotomy* is, in fact, medical castration.

orchis. The identity of the prodigious true male orchis of the Greeks and Romans has never been established. Mystery still surrounds this magic plant whose root was dissolved in goat's milk by the ancients. One drink of this solution, wrote an incredulous historian, and a man could perform sex as many as 70 consecutive times. Orchis is supposed to have been the main ingredient of *satyrion*, the love food of those lecherous satyrs of Greek mythology. It is a Greek word meaning “testicle,” supposedly used because of the root's resemblance to that male organ. The orchid, the Turkish *Orchis morio*, the truffle, the mandrake, and several other plants have been credited with being the male orchis of the ancients, but the true identity of *satyrion* is probably lost for all time. See also ORCHID.

ordeal of battle; ordeal of fire, etc. *Ordeal* here comes from the Anglo-Saxon *ordel*, “to judge.” In these ancient practices,

outlawed since the 13th century, guilt or innocence was supposed to be left to supernatural decision: God would defend the just, even by miracle if necessary. In *ordeal of battle* the accused (if a noble) was allowed to fight his accuser, with the winner presumed right. *Ordeal of the bier* consisted of the accused touching a corpse, whose blood would start to flow if he was guilty. In the *ordeal of the eucharist* the eucharist would choke a guilty person trying to swallow it. *Ordeal of fire* had the accused holding his hand over red-hot irons or walking barefooted and blindfolded among nine red-hot ploughshares, his innocence established if he emerged unharmed. *Ordeal of water* consisted of ordeal by hot water and ordeal by cold water. In the former the accused plunged his arms to the elbow in boiling water—if his skin wasn't injured, he was innocent. In the latter the accused was bound and thrown into a river—if he floated he was a witch; if he sank he was innocent and lived, that is if he survived the sinking. Nobles, incidentally, could use stand-ins for their ordeals! *See also WHIPPING BOY.*

Order of the Garter. *See* BLUE RIBBON.

oregano. An aromatic herb also called pot marjoram and joy of the mountain, when gathered wild. Widely used as a cooking seasoning.

Oregon. *Oregon* may come from the Spanish *oregones*, meaning “big-eared men” and referring to Indians who lived there. Other possibilities are the Algonquian *Wauregan*, “beautiful water,” for the Colorado River, and an unclear Indian name possibly meaning “place of the beaver” that was misspelled on an early French map. The Beaver State was admitted to the Union in 1850 as our 33rd state.

Oregon Trail. A 2,000-mile-long route from Missouri to Oregon much used during the 1840–60 westward migrations and called “the longest unpaved highway in the world.” Over half a million pioneers used it.

Oreo. *See* APPLE.

organdy. The silk dress fabric called organdy, first recorded in 1835, takes its name directly from the French *organdi*, meaning the same. But its roots are ultimately in the ancient town of *Urgendi* in Turkestan, a place renowned for its weaving.

organize! Short for the last words of Swedish immigrant Joe Hill (1879–1915), a member of the Industrial Workers of the World—the Wobblies. Joe Hill was executed by a firing squad in Utah for a grocery store stickup and killing, a crime his supporters claimed he was framed for. His last words were to labor legend Big Bill Hayward and the full quote was “I will die like a true-blue rebel. Don't waste any time in mourning. Organize!”

organoleptic analysis. Decomposition of shellfish is detected by *organoleptic analysis*, the federal Food and Drug Administration reported recently. Pressed for a definition the *FDA Consumer* explained that this meant “by smelling the product with the nose.” *See* GOBBLEDYGOOK.

orgasm; climax. The *OED* nicely defines *orgasm* as “the height of venereal excitement in coition” and traces this first use of the word in this jolly sense to 1771 as a “spasm of the vitals.” But although *orgasm* was originally a scientific term, deriving from Greek *organ*, “to swell, be excited,” it is probably more commonly used than its synonym, the more modern *climax*, which British eugenicist and birth control advocate Marie Stopes first used in this sense in 1918. The slang expression *to come*, dating back to about 1600, is certainly used more than either of the two and is found in the work of many modern writers, including Joyce's *Selected Letters*.

orgy. Every orgy, or drunken, licentious feast, takes its name from the secret nocturnal festivals the ancient Greeks and Romans held in honor of Dionysus or Bacchus, the god of wine. These ceremonies, called the *orgia*, featured wild drinking, dancing, and sexual license.

oriflamme. The early kings of France carried the red banner of the abbey of St. Denis, near Paris, as a military ensign. The flag, called the oriflamme, was crimson, cut into three pennants to represent tongues of fire, and carried on a gilded staff. Legend had it that men were blinded by merely looking on the oriflamme, but it was replaced by the *fleurs-de-lis* in the 15th century. It took its beautiful name from the Latin for “golden flame.”

origami. The art of paper folding, which became popular in the 1930s. It was energized by Spanish author Miguel de Unamuno, who recommended it for a hobby, but was first a traditional Japanese art form. *Origami* is composed of *ori*, fold, and *kami*, paper.

Orlando, Florida. The site of Disney World in Florida has an interesting etymology. It was originally named for its first settler, Aaron Jernigan, but rechristened Orlando in 1857 in memory of Orlando Reeves, who had been killed in a skirmish with Indians.

orrery. All planetariums can trace their ancestry to the first *orrery* invented in about 1700 by George Graham. This complicated mechanical device showed the movements of the planets and satellites around the sun by means of rotating and revolving balls. Graham sent his model to instrument maker John Rowley, who made a copy that he presented to his patron Charles Boyle (1676–1731), fourth earl of Orrery, the apparatus being named in the earl's honor. Orrery, who used the device to help educate his children, was a noted patron of science and a descendant of the physicist Robert Boyle.

orthodoxy; heterodoxy. *Orthodoxy* refers to the quality or state of adhering to traditional or established faith, while *heterodoxy* is the condition or quality of being not in agreement with widely accepted beliefs. Wiser definitions, however, may be found in Bishop William Warburton's reply when Lord Sandwich asked him in a parliamentary debate to define the two words. Replied the bishop: “Orthodoxy is my doxy; heterodoxy is another man's doxy.”

Osage. The name of these Sioux Indians derives from their tribal name *Wazhazhe*, meaning “war people.”

Osage orange. See BODOCK.

Oscar. Hollywood’s gold-plated Oscars remained nameless for years after the Academy of Motion Picture Arts and Sciences first awarded them in 1927. Called simply the Statuette, the 10-inch-high trophy was designed by Cedric Gibbons, weighed about seven pounds, was bronze on the inside, and originally cost about \$100. The statuette quickly became a symbol of film fame, but not until 1931 did it get a name. At that time Mrs. Margaret Herrick, librarian of the Academy, was shown one of the trophies and observed, “He reminds me of my uncle Oscar.” As fate would have it, a newspaper columnist happened to be in the room and soon reported to his readers that “Employees of the Academy have affectionately dubbed their famous statuette ‘Oscar.’” The name stuck. Mrs. Herrick’s uncle Oscar was in reality Oscar Pierce, a wealthy Texan from a pioneer family who had made his fortune in wheat and fruit and migrated to California, where he could now bask in glory as well as the sunshine. Did any real Oscar ever *win* an Oscar? The answer is: Oskar Homolka, Oscar Brodney, Oscar Werner, and Oscar Hammerstein II were all nominated for Oscars, but the only Oscar ever to win an Oscar was Hammerstein. In fact, Oscar Hammerstein II won two Oscars for best song. In 1941 he and composer Jerome Kern won for “The Last Time I Saw Paris” from *Lady Be Good*. In 1945 he and composer Richard Rodgers won an Oscar for “It Might As Well Be Spring” from *State Fair*.

Oscar Asche. Another famous OSCAR is the Australian Oscar Asche (1872–1936), a musical comedy star who made a tidy fortune on the stage and whose full name became Australian rhyming slang for cash. “*Oscar Asche* for cash” was eventually shortened to *Oscar*, making him the only man whose prenominal means money in a generic sense. See BLUNT.

oscillate. To swing back and forth. The word derives from the custom Roman farmers had of hanging little masks representing Bacchus, the god of wine, from their vines. These little masks, called *oscilla*, would sway back and forth in the wind.

oslerize. In a widely reported speech, Canadian-born physician Sir William Osler (1849–1919) opined that all business and professional men should retire at 60. He mentioned Anthony Trollope’s novel *The Fixed Period*, the plot of which “hinges upon the admirable scheme . . . into which at 60 men retired for a year of contemplation before a peaceful departure by chloroform.” Generally misinterpreted in the press, Osler’s plan enraged more than half of the population when his plan was interpreted as meaning that all men over 60 should be put to death as useless. His scheme actually provided for retirement at 60 on a generous pension, but the misconception prevailed and from 1905 on *to oslerize* implied just the opposite of “life begins at 40.” It is interesting to note that Dr. Osler made some of his most valuable scientific contributions *after* he turned 60, his proposed date for compulsory retirement.

osprey. The osprey, or fish hawk, takes its name from Latin *ossifraga*, “bone-breaker.” However, this bird does not break

bones and eat marrow from inside them as its name suggests. Somehow over the centuries the dining habits of this fish eater got confused with those of the lammergeier, a large vulture that does drop bones on rocks to open them (much as gulls break clams and mussels). Due to this confusion the fish hawk has since early Roman times been called the osprey.

os sacrum. The *os sacrum*, “the triangular bone situated at the lower part of the vertebral column,” is said to be so named because it was the sacred part used in ancient sacrifices. In rabbinical lore (where it is also known as the *luz*) the *os sacrum* is said to be called sacred because it resists decay and “will be the germ of the ‘new body’ at the resurrection.”

ostracism. *Ostracism*, “to banish socially,” derives from *ostrakon*, the Greek word for oyster shell. It seems that a vote of banishment in ancient Athens had to be a written one, for it was, of course, a serious matter to send a person into exile for crimes against the state. Because paper was scarce, the banishment ballot was written on pieces of tile called *ostrakon*, this name having first been applied to the shell of the oyster, which the tile resembled. It followed that the name *ostrakismos* was bestowed upon the act of banishment itself, which gives us our word for “to banish socially”—to *ostracize* or “oyster shell.”

ostrich; to hide one’s head in the sand. The largest living bird can weigh over 300 pounds and reach a height of eight feet. Unable to fly, it runs at high speeds when pursued, but it doesn’t hide its head in the sand, an attribute that inspired our saying to hide one’s head in the sand. Instead, it lies flat on the ground, making for a harder target, or thinking that it does. The emu and rhea are not true ostriches. See LARK; WAR OF THE STRAY DOG.

ostrich stomach. *Ostrich stomach* was the name for vitriol in medieval alchemy, because people believed at the time that the ostrich had vitriolic stomach juices that digested all the many things it was thought to swallow. The ostrich was considered a monstrous bird that could eat anything, often so insatiable that it plucked the iron shoes off horses. In heraldry it was represented chewing a horseshoe.

otaku. One of the latest Japanese words to enter into English, *otaku* literally means “your house” and is used to describe young people so obsessed with computers that they seldom leave their homes or offices where their computers are based. Since about 1990 the word has had the same meaning in the U.S. See JAPANESE WORDS IN ENGLISH.

o-tay! A catchphrase coined by the Porky character in the *Our Gang* comedies of the 1930s. Porky was played by the two-year-old Gordon Lee (1933–2005), his costar the popular character named Buckwheat. He appeared in the short subject *Bored of Education* (1937), which won an Oscar.

other fish to fry. To have other, often more important, things to do. A variation is to have bigger fish to fry. The first recorded use of the expression is in British author John Evelyn’s *Memoirs* (1660): “I fear he hath other fish to fry.”

the other half. Reformer Jacob Riis, a Danish immigrant, popularized this synonym for the poor. Riis used the phrase as the title of his book *How the Other Half Lives* (1890), though he may not have invented it. *Jacob Riis Park* in New York's Rockaway Beach is named in his honor.

other people's bread tastes better. The grass is always greener on the other side of the fence. A Pennsylvania Dutch proverb.

otorhinolaryngologist. Here you have an ear (*oto*), nose (*rhino*), and throat (*laryngo*) medical specialist, an ear, nose, and throat physician. The word, all 21 letters of it, is made of Greek components. See MÉNIÈRE'S DISEASE.

ottoman. Osman I (1259–1326) would not appreciate the fact that many readers are resting their feet on him, or his name-sake, while reading this. But the ottoman, a stuffed footstool more often called a hassock, its Old English designation, is definitely named for him. Osman, sometimes called Othman, led his Muslim followers farther west from Asia Minor in the late 13th century to found the Ottoman Empire, principally what we know as Turkey today. Tales of this great empire, which lasted until its dissolution in 1918, excited the imagination of Europeans and toward the end of the 18th century merchants saw that there was a ready market in Europe for items of Eastern luxury, for the carpets, pillows, and divans that people imagined sultans lounged upon in their luxurious harems. These included a small, backless couch for two that the French called the *ottoman* because they imported it from the Ottoman Empire, ignoring its Turkish name. The couch or divan eventually became both the overstuffed English ottoman sofa, acquiring a back in the process, and, in a much smaller form, the ottoman footstool.

Ouch! Critic Wolcott Gibbs is often credited with the shortest dramatic criticism in theatrical history. Reviewing the Broadway farce *Wham!*, he wrote only “Ouch!”

oud. A pear-shaped lute often heard in melodic music of the Middle East and northern Africa. It has a thin, sweet tone.

ought to be bored for the hollow horn. Said of a seemingly feeble-minded person. This Americanism was suggested by the hollow horn disease in cattle, which made cattle ill and feeble and was supposedly cured by drilling a hole in the horns.

ought to be bored for the simples. An old-fashioned phrase said, often fondly or humorously, of a dimwitted person whose mind might be improved by boring a hole in his or her head to let some of the stupidity drain out. “Old Johnson ought to be bored for the simples; he's seen better days.” The expression dates back to the late 19th-century or earlier.

ouija board. The ouija board (pronounced “wee-jee board”) was apparently intended to answer most questions put to it in the affirmative. Its name is simply a combination of the French *oui*, “yes,” and the German *ja*, “yes.” Obviously its inventor

intended to stress the positive, to stress hope, whether the player be of French or Teutonic background.

an ounce of prevention is worth a pound of cure. See SNUG AS A BUG IN A RUG.

our bread is buttered from the same plate. Our interests are the same. An old proverb that seems to have originated at least in the 18th century but isn't used much today.

our cake is dough. This expression, for “miscarried plans and disappointments,” goes back before Shakespeare, who used it in *The Taming of the Shrew*. It is first recorded in Thomas Beacon's *Prayers* (1559): “Or else your cake is dough, and all your fat lie in the fire.”

our country right or wrong. At an 1816 dinner honoring him in Virginia, U.S. naval hero Stephen Decatur gave the toast: “Our Country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong.” This seems to be the origin of the saying *our country right or wrong*, which is also heard as *my country right or wrong*. U.S. Senator Carl Schurz paraphrased the expression in an 1872 speech: “Our country right or wrong! When right, to be kept right; when wrong, to be put right.”

our Lord's candle. Margaret Armstrong and John Thornbec describe this striking American plant in their *Field Book of Wild Flowers* (1915): “The flowers of *Yucca whipplei*, one of the most beautiful of all Yuccas, are of a lovely golden hue, glowing in the bright sunlight like lighted candles before the altar, and known as ‘Our Lord's candle’ . . . After they have blossomed the tall, white stalks remain standing for some time, so that the hills look like they have been planted with numbers of white wands.”

Our Perry and our Porter were too much for John Bull to swallow! A popular Yankee slogan after the War of 1812, this punning expression refers to American naval heroes Oliver Perry, whose last name means a hard cider made of pears, and David Porter, whose last name means a strong, dark beer. John Bull, of course, is the national nickname for England.

out. According to American historian Frederic D. Allen (1890–1954): “Along the [New England] seaboard, the wind is ‘out’ or ‘has got out’ when it blows from the sea. The expression is known in Portsmouth, Salem, and Plymouth. I do not think it is common in Boston.”

out at the elbows. See ELBOW.

outcome. See FECKLESS.

outfit. Workhorse slang used as a name of a group of cowboys; a military unit; and a criminal gang such as the Mafia, Cosa Nostra, Brotherhood, or Syndicate. Recently, the Outfit have been revealed as another name for the CIA (Central Intelligence Agency). See BROTHERHOOD; COSA NOSTRA; MAFIA.

out-Herod Herod. Shakespeare used this in *Hamlet*: “It out-Herods Herod: pray you avoid it,” Hamlet says to the actors. The reference is to a king infamous for his barbaric cruelty. Herodes or Herod, King of Judea in 4 B.C., ordered all Bethlehem’s infants to be killed (Matt. 2:16). The expression means, of course, to outdo the worst tyrant in wickedness and violence.

outhouse; latrine. Outhouse for a small enclosed building serving as an outdoor toilet dates back to at least the early 16th century. Today most outhouses are portable and used on construction sites, public fairgrounds, etc. During World War II, the number of enemy outhouses (called latrines) identified by U.S. planes on Pacific islands gave intelligence a good idea of how many enemy troops were on a particular island. See CHIC SALES.

outlaw. A badman or desperado. *Outlaw* did not originate in the wild and woolly West, though it had much use there. It derives ultimately from an Old Norse word meaning “outlawed or banished.” The Old Norse word became *utlaga* in Old English and was applied to criminals in general, *utlaga* eventually becoming *outlaw*.

out of heart. Downhearted, discouraged, downcast. A poetic phrase first recorded in about 1925.

out of kilter. Many have tried to explain the origins of *kilter* in this expression meaning to be out of order, out of whack, but no one has succeeded. The best suggestions, I think, are the *kilter*, meaning a “useless hand in cards,” the dialect *kilt*, “to make neat,” and the Dutch *kelter*, “stomach,” because stomachs are often “out of order” with digestion problems. We only know that the expression is first recorded in 1643, as *kelter*.

out of left field. Since left field is not any more odd or less active a position than right or center field in baseball, it is hard to understand why it is featured in this common slang expression meaning “very unorthodox and wrong, weirdly unconventional, even crazy.” In fact, anyone who has ever played sandlot baseball knows that the most inept (and therefore a little odd, to kids) fielders were relegated to *right* field, because there were fewer left-handed hitters to pull the ball to right field. It has been suggested that the phrase refers to the left field seats in Yankee Stadium that are far away from the coveted seats near Babe Ruth’s right field position. Another suggestion links the phrase to the Neuropsychiatric Institute flanking left field in Chicago’s 19th-century West Side Park, though there are no references to the expression at that time. I would suspect that the words simply refer to the relative remoteness of left field compared to all other positions except center field and that left field is used instead of center field in the expression because *center* by definition means in the middle (of things) and *left* has long had negative associations of clumsiness, awkwardness, and radical or eccentric behavior. The expression *from out of left field*, meaning from out of nowhere unexpectedly, lends credence to this remoteness theory. The term *left field* itself was in use by the mid-1860s, along with the names for the other outfield positions, following by 20 years the first recordings of the names for the infield positions.

out of sight, out of mind. See ABSENCE MAKES THE HEART GROW FONDER.

out of sorts. Not feeling well, not feeling one’s usual self. The expression may derive from the sorts or kinds of type printers work with. A printer who ran out of sorts in the midst of a job would certainly not feel good about it.

out of the ballpark. See BALLPARK FIGURE.

out of the frying pan into the fire. A 16th-century saying that means one has escaped from one danger into an even worse one.

out of touch. Military drills of the late 18th century employed tight formations where every soldier in the ranks had to be close enough to the man on the left and right of him so that his swinging elbows brushed against his companions’. A soldier who failed to do this and caused a gap in the line was said to be *out of touch* and the military use of this expression yielded the civilian saying, meaning “to lose contact with a situation.”

Outta sight! Often regarded as original college slang of the 1960s, *outta sight*, for “something remarkable or wonderful,” has been part of the language since the 1840s, in the Bowery expression *out of sight*. Stephen Crane used it in his first novel *Maggie: A Girl of the Streets* (1896): “I’m stuck on her shape. It’s outa sight . . .”

outten the light. An American expression meaning turn off the light, or put out the light, that is still heard in such places as South Carolina.

out to lunch. Used since the early 1950s to describe someone so stupid or inattentive that he or she isn’t even there for all intents and purposes. This can be a temporary condition, however, the person being out to lunch, for example, only in the course of a conversation.

ovarimony. See TESTICLES.

over a barrel. Here the person over the barrel is in the other person’s power or at his mercy. In the days before mouth-to-mouth resuscitation and other modern methods of lifesaving, lifeguards placed drowning victims over a barrel, which was rolled back and forth while the lifeguard tried to revive them. Victims were certainly in the lifeguard’s power, and the process is probably the origin of the Americanism *to have someone over a barrel*.

overcoat. A U.S. term for a long, warm winter coat. Someone wrote of Gogol’s story “The Overcoat:” “All of modern Russian literature came out of Gogol’s ‘Overcoat.’”

over in one’s book. Getting old, near the last chapter or pages of one’s life. “I’m getting over in my book and want to thank everyone now—wouldn’t have lasted this long without a lot of understanding folk.”

overpaid, oversexed, and over here. A British estimate, especially by British troops, of Yanks serving in Great Britain during World War II. The Yanks, according to Paul Fussell's *The Boy's Crusade* (2003), countered with this evaluation of the Brits: "underpaid, undersexed, and under Eisenhower."

Over-sexed Weekly. A nickname for the U.S. military newspaper the *Oversea's Weekly*, alluding to its pinups and lively, lurid stories. It was not published during World War II and thus has no connection with the anonymous British saying about Yank servicemen: "They're overfed, oversexed, overpaid and over here." The paper began publication in the 1960s.

overshoot the mark. *Overshoot the mark* is an old phrase dating from the late 16th century even in its figurative sense of exceeding limits, being irrelevant or inappropriate. Its source is probably archery, which was a popular sport for a thousand years in England. See WIDE OF THE MARK.

over-the-counter stocks. In the days before stock exchanges, banks used to sell securities over the counter. It is from this practice that we derive the term *over-the-counter* stocks. Today over-the-counter stocks are those not sold on the New York and other major stock exchanges, usually being those of smaller companies.

over the hill. See AGEISM.

over the top. A very popular expression in the U.S. lately, when reality itself often seems over the top. It means "excessive, exaggerated, even gross," and may come from the name of the British television series *Over the Top*, which premiered in 1982. It apparently has no connection with the World War I expression over the top, meaning "to climb out of trenches and attack the enemy." Rather, it seems to refer to a container that is filled to overflowing. In just one instance of the wartime *over the top*—on the first day of the battle of the Somme in World War I—over 21,000 men were slaughtered by machine gun fire as they charged out of the trenches. See MAXIM.

over the transom. Literary work that is not solicited, unaccompanied by even an agent's letter. Instead of being delivered to a certain editor, such work is said to come in over the transom, delivered along with all the mail in an office, including junk mail.

overwhelm. Overwhelm means essentially the same thing as *whelm*, "to be completely overcome by something," but *overwhelm* is a more emphatic term. *Whelm* has its roots in the Middle English *whelven*, meaning to capsize or turn a vessel upside down. The English *whelm* was first recorded in the 13th century and soon took on the sense of turning a vessel upside down "so as to cover it" with water, which led to its modern meaning.

owl; drunk as an owl. The owl takes its name from the imitation of its cry. In Anglo-Saxon its name was *ule*, while in Latin it was *ulula*. The saying drunk as an owl, Weekley maintains, refers to the "blinking solemnity" of the bird. The owl symbolizes wisdom. So soft and fluffy is its plumage that its flight is almost

soundless, although species like the screech owl have a piercing, wailing cry.

oxygen. French chemist Antoine-Laurent Lavoisier coined the word *oxygene*, which became our *oxygen*, in the late 18th century. At the time, the element was mistakenly thought to be a component of an acid and Lavoisier misnamed it, forming *oxygen* from Greek words meaning "acid producing." His misnaming has endured for over two centuries, however, and *oxygen* will always go by the wrong name.

oxymoron. Deriving from the Greek for "pointedly foolish," an *oxymoron* is a figure of speech in which incongruous and apparently contradictory words are combined for a special rhetorical effect by paradoxical means. A well-known example is Tennyson's "Lancelot and Elaine":

The shackles of an old love straiten'd him
His honour rooted in dishonour stood,
and faith unfaithful kept him falsely true.

Many famous English writers have used this device. Other *oxymora* include the phrase *an eloquent silence* and the word *sophomore*, which derives from two Greek words meaning "wise" and "foolish."

Oy! A Yiddish expression that is uttered by Americans of dozens of religions, races, and former nationalities. "Oy is not a word," Leo Rosten writes in *The Joys of Yiddish* (1968). "It is a vocabulary. It is uttered in as many ways as the utterer's histrionic ability permits. It is a lament, a protest, a cry of dismay, a reflex of delight. But however sighed, cried, howled or moaned, *oy!* is the most expressive and ubiquitous exclamation in Yiddish." *Oy vay!*, a shortening of *oy vay iz mir*, is also used as an "all-purpose ejaculation," Rosten notes. He doesn't list *oy gevald*, which Henry Roth used as "a cry of alarm, concern or amazement" in *From Bondage* (1996). However, he does list *gevalt* or *gevald* alone as the same kind of cry and cites the folk proverb, "Man comes into the world with an Oy!—and leaves with a gevalt."

Oyez! Oyez! Oyez! This call made by a court officer is the French second-person plural imperative of *oyer*, "to hear," meaning "hear ye! hear ye! hear ye!" and was introduced to England by the Normans. It was formerly used by town criers, and Shakespeare rendered it as *O yes!*

Oy! Oy! Oy! A common cheer or cry heard at the 2000 Olympics in Sydney, Australia. No relation to Yiddish oy!

oyster "r" myth. See R MONTHS.

oysters Kirkpatrick. Oysters Kirkpatrick was named in honor of James C. Kirkpatrick, manager of San Francisco's Palace Hotel in the late 19th century. The Palace Hotel, born during the gold rush of 1849, destroyed in the earthquake of 1906 and rebuilt to become one of America's greatest eating places, offers the following simple original recipe for the delectable dish: "Open oysters on deep shell, put in oven for about 3 or 4 minutes until oysters shrink. Pour off the liquor, then add

small strip of bacon and cover with catsup and place in very hot oven for about 5 to 6 minutes until glazed to a nice golden brown.”

Oysters Rockefeller. Oysters broiled with a puree of spinach and seasonings on a bed of rock salt probably originated in 1899 at Antoine’s, the famous New Orleans restaurant still in business. The first customer to taste the fabulous dish is supposed to have said, “It’s as rich as Rockefeller,” the name appearing on the menu shortly afterward. See RICH AS ROCKEFELLER.

Oy vay! A common Yiddish expression. Albert Einstein is said to have cried “Oy vay!” when told that the first atomic bomb, which he did not know was being built, had obliterated Hiroshima on August 6, 1945. Literally, the words mean “oh, pain,” *vay* deriving from German *Weh*, meaning “woe.” Leo Rosten in *The Joys of Yiddish* (1968) goes on to list fully 29 uses of the workhorse exclamation. See OY!

Ozarks. The Ozark Mountains in Missouri, Arkansas, and Oklahoma, ranging up to 2,300 feet high, cover an area of 50,000 square miles, and are noted more for their beautiful

scenery and mineral springs, which make them a resort area, than their rich deposits of lead and zinc. The Ozarks are named for a local band of Quapaw Indians who lived in the Missouri and Arkansas region of the mountains. “The French were in the habit of shortening the long Indian names by using only their first syllables,” an article in the *St. Louis Globe-Democrat* explains. “There are frequent references in their records to hunting or trading expeditions ‘aux Kans,’ or ‘aux Os,’ or ‘aux Arcs,’ meaning ‘up into’ the territory of the Kansas, Osage, or Arkansas tribes.” This *aux Arcs* seems to be the more likely explanation for *Ozarks*, although the local Arkansas band may have been named from the French *aux Arcs*, meaning “with bows,” which could also have been corrupted to *Ozarks* and later applied to the mountains where the Indians lived.

ozone. Although *ozone* means “fresh, pure air” in everyday speech (the reason for place-names like Ozone Park, New York), it translates as “stinking air,” deriving from the Greek *ozein*, “to stink.” German chemist Christian Friedrich Schonbein coined the name of this stable, pale bluish gas in 1840. Schonbein wrote that he named this most reactive form of oxygen (O₃) “ozone because of its strong smell,” which he thought was similar to chlorine.

P

P. The ancient Phoenicians and Hebrews called our 16th letter *pe*, “mouth.” *P.* in music means “piano,” while *the five P’s* is Englishman William Oxberry (1784–1824) who was for his all too brief 40 years a printer, poet, publisher, publican, and player (actor). The 16th-century Dominican monk Placentius wrote a poem of 253 verses called *Pugna Porcorum* in which every word begins with a *p*, the first line translating as “Praise Paul’s prize pig’s prolific progeny.”

pabulum. *Pabulum* was a trademark name for a specific infant’s cereal, although the word has become generic and is used to mean childish or insipid ideas. The trademark was coined from the Latin *pabulum*, food or fodder, early in this century.

pachyderm. Its thick skin gives the elephant its Latin name (*pachy*), as it does the rhinoceros, hippopotamus, and other animals and plants, too. A pachyderm can also be a thick-skinned person. Wrote John Keats: “A man cannot have a sensuous nature and be pachydermatous at the same time.” See ELEPHANT.

Pacific Ocean. Portuguese explorer Ferdinand Magellan gave this great ocean its name in 1520, because of the calm, peaceful weather he enjoyed on it after a stormy passage in adjoining straits.

package-goods store. Liquor stores are so named not because liquor is sold in packages in such stores, but because of the quest for euphemisms after Prohibition was repealed. State legislatures did not want to offend “drys” at the time, or wanted to offend them as little as possible, and, in making liquor stores and saloons legal again, referred to them by such names as package-goods stores and taverns.

pack a jury. According to Weekley, pack here comes from the obsolete pack meaning “to make secret arrangements” serving one’s own purpose. The obsolete word was, however, originally pact and became pack by mispronunciation. This same pack, first recorded in 1530, is used in the expression to pack a deck of cards.

pack rat; trade rat. A *pack rat* is a person who compulsively saves things, almost everything. He or she takes this name from the eastern pack rat (*Neotoma floridiana*), a plague carrier, which lives at virtually every altitude over a range from northern Canada to the Florida Keys. No other animal carries thievery to such extremes, and its name has also become a synonym for a kleptomaniac or junk-picking miser. The capacious nest of the pack rat is usually a large, globe-shaped “castle” made of sticks, leaves, and grasses up to six feet high, resembling a small beaver lodge, but the nest can also be built in hollow logs, caves, abandoned cabins, openings of trees, and even under cactus plants in the desert. In its museum or treasure-house nest are found every bright shiny thing one can imagine, as well as some not-at-all shiny objects, including (all these stolen objects have been documented) keys, eyeglasses, coins, currency, belt buckles, pens and pencils, lipsticks, watches, tinfoil, china, rags, socks, cartridge cases, bleached bones and skulls, sets of false teeth, and even mousetraps. The pack rat has been known to steal coins from the pockets of sleeping campers. A legend persists that it will leave something in return for what it takes, but less romantic observers theorize that the little creature probably is passing by with something in its mouth when it comes upon a brighter trinket and drops whatever it is carrying to claim the glittering prize that some strange compulsion commands it to possess. Nevertheless, the legend persists, which accounts for the pack rat also being called the “trade rat.” See RAT PACK.

paddleball. A fast-growing amateur sport today, paddleball is played with the same basic rules as handball but with short-handled, perforated paddles, and a tennis-like ball. The sport was invented in 1930 by University of Michigan physical education teacher Earl Risky. Risky even invented the ball and paddle for the game, and along with James Naismith (of basketball fame), William Morgan (the inventor of volleyball), and the Reverend Frank P. Beal (who invented paddle tennis), is one of the four people who are known to have invented a popular sport.

paddle your own canoe. See CANOE.

paean; peony. The gods wounded in the Trojan War were cured by the physician Paeon, according to Greek mythology. Thus many plants once prized for their curative powers were named for Paeon, including the beautiful flower called the peony with its hundreds of varieties. The species of peony called the tree peony (*Paeonia suffruticosa*) is called the “king of flowers” by the Chinese and is widely regarded as one of the most beautiful of all garden plants. Because they believed the god Apollo often disguised himself as Paeon, the Greeks sang hymns of thanks and tribute to him that came to be called *paean*s; these are the source for our expression *paean*s of praise. See also MANDRAKE.

pagan. Pagans are followers of polytheistic religions like the ancient Greeks and Romans; heathens, people professing no religion; or irreligious or hedonistic people. Pagans are *not* atheists or Satanists.

Paget’s disease. See BRIGHT’S DISEASE.

Pago Pago. *Pango Pango* should be the name of this Pacific island, the chief harbor of American Samoa, and that, in fact, is the way the locals pronounce the name. An old story, which may be true, explains that the island is called Pago Pago because missionaries transliterating the local speech into the Latin alphabet found that there were many sounds that had to be “represented by *n* in combination with a following consonant.” So many, in fact, that there weren’t enough *n*s in their type fonts to enable them to set all such words in type. So they quite arbitrarily eliminated the *n* from some words—leaving us with *Pago Pago* instead of *Pango Pango*.

pain in the ass. An Americanism of the 20th century which has several euphemisms that often have slightly different meanings. A *pain* is a person who is mildly annoying, while a *pain in the neck* is more so and a *pain in the ass* is someone really obnoxious.

to paint a house. To kill or assassinate someone. The expression is used as the title of Charles Brandt’s expose “*I Heard You Paint Houses*”: Frank “the Irishman” Sheeran and the Inside Story of the Mafia, the Teamsters, and the Last Ride of Jimmy Hoffa (2004). The book’s title, in fact, comes from the first words Sheeran says Hoffa ever spoke to him. “To paint a house,” Sheeran explains, “is Mafiaese for killing someone, from the blood that splatters all over the wall . . .”

painter. A panther, mountain lion. In recent years they have become dangerous in mountain areas, attacking joggers, climbers, and others.

paint the town red. If Indians burning down a town suggested this phrase meaning to go on wild sprees, to make “whoopee,” no one has been able to find the actual culprits. More than one scholar does nominate the flames Indians on

the warpath often left behind for the “red” in the phrase, and the expression did originate in the American West, where it was first applied to the wild partying of cowboys in about 1880. Another good guess suggests a link with the older expression *to paint*, meaning “to drink,” which, coupled with the way a drunk’s nose lights up red, may have resulted in the phrase. Or *red*, a color commonly associated with violence, could have derived from the way the “painters” did violence to the town or to themselves.

paipu katto. One of the most humorous of Japanized expressions comes from the English words *pipe cut*. The Japanese use the expression to mean “vasectomy.”

paisano. (1) A Spanish word used in the Southwest meaning a fellow countryman. (2) The roadrunner bird, often domesticated by Mexicans to rid homes of mice. Its spindle legs carrying the bird at an incredible speed. Paisano, the Mexicans call it; chaparral is the name the Anglos prefer.

pajamas. Pajamas were first simply loose pants or trousers, as is shown by the word’s roots—Hindi *pae*, “leg,” and *jama*, “clothing.” Muslims in India were the first to wear them, and in the early 19th century British men in India adopted the habit and added the jacket.

Pakistan. Pakistan is probably the only country whose name was constructed as an acronym, its letters standing for the the regions that make up the nation: *P* for Punjab; *A* for Afghani border tribes; *K* for Kashmir; *S* for Sind; and *tan* for Baluchistan. A number of other place names are acronyms. Pawn, Oregon, for example, is composed of the first letters of the names of the men who founded it—Poole, Aberley, Worthington, and Nolen.

pal. Recorded in late 18th-century England for an “accomplice,” *pal* came within 50 years or so to mean a chum or friend. Originally a Gypsy word, it derives from the Romany *pal*, “brother, or mate,” which comes from the Turkish Gypsy *pral*, meaning the same.

palace. Augustus Caesar, the first Roman emperor, built his home on the most imposing of the seven hills of Rome, the Mons Palatinus, so named for the fence of stakes (Latin, *palus*) around it. His royal mansion was called a *palatium*, which became the French *palais* and finally the English *palace*, for the same.

palaver. The Portuguese *palavra* journeyed to Africa before it came to England in the form of *palaver*. Meaning “word,” *palavra* was used to mean “talk” by Portuguese traders in East Africa when they bargained with natives in the area. By the early 18th century, English sailors had adopted the word and brought it back home in the form of *palaver*.

pale. The word *pale* for “stake” or “picket” comes from the Latin word *palus*, “stake,” while the word *pale* for “colorless” or

“whitish,” lacking intensity of color, derives from the Latin word *palledus* meaning the same. One of the great uses of the latter *pale* came during the battle between the U.S.S. *Constitution* and the French frigate *Insurgente* in 1799. An officer on the victorious *Constitution* ran through a seaman who was fleeing his post. “We would put any man to death for looking pale on this ship,” he said later.

paleface. Various American Indian tribes did use *paleface* as a general term for whites, but they also employed more specific insulting words, including *pale-colored-and-scrawny*, and *spirit-white-and-thin*, this last term comparing whites to ghosts. Some writers claim, however, that the word was invented by James Fenimore Cooper (1789–1851), who certainly did popularize the term in his novels. *Paleface* has also been applied to whites by blacks, and The Palefaces was an organization similar to the Ku Klux Klan that thrived during Reconstruction.

Palestine. An ancient designation from biblical days, the name *Palestine* derives ultimately from *Philistia*, meaning “land of the Philistines.” The Romans borrowed *Philistia* as the basis for *Palestina*, the name of a Roman province. This word later became *Palestine*.

palindrome. So scurrilous in his satires was Sotades, a Greek poet of the third century B.C., that Ptolemy II had him sewn up in a sack and thrown into the sea. But his coarse, vile verses must have been clever, for Sotades is reputed to have invented palindromes, which are sometimes called Sotadics in his honor. Palindromes take their more common name from the Greek *palin dromo*, “running back again,” and they are simply anagrams that read the same backward as forward. Making palindromes has been a favorite word game at least since early Grecian times, but English, with the largest and most varied vocabulary of all languages, offers the most fertile ground for the creator of palindromes. It’s said that Sir Thomas Urquhart even invented a universal language based entirely on palindromes. Probably the longest common English palindromic word is *redivider*. The longest halfway sensible palindrome is one coined by an anonymous 19th-century English poet: *Dog as a devil deified/Deified lived as a god*. Another famous palindrome is the one English author Leigh Mercer wrote for Ferdinand de Lesseps, the man who began the Panama Canal: *A man, a plan, a canal: Panama!* See NAMBY-PAMBY; TATTARRATTAT.

palma Christi. The castor-oil plant (*Ricinus communis*) is called *palma Christi* because its leaf shape resembles the palm of the hand and in early times it brought to mind an image of Christ’s hand nailed to the cross. The name is first recorded in a herbal published in 1548, but is certainly older.

Palmetto State. A nickname for South Carolina, after the palm tree called a palmetto that commonly grows there. South Carolina has also been called the Gamecock State (in honor of fiery Revolutionary War general Thomas “Gamecock” Sumter, after whom historic Fort Sumter is named), the Rice State, and the Swamp State. It is called the Sandlapper or Sand-hiller State

after poor people in its sandy regions who ate aluminous earth to fill their stomachs. See CLAY-EATER.

palm of the hand; palm tree. Palm trees take their name from the Latin *palma*, “palm of the hand,” because the tree’s fronds resemble a spread hand. Palm Sunday, the Sunday before Easter, is named after Christ’s triumphant entry into Jerusalem, when people strewed his way with palm branches and leaves. The palm was a symbol of victory in Roman times, and to bear the *palm* meant to be the best, after the Roman custom of awarding a palm branch to a victorious gladiator. This led to the expression *palmy days*, “prosperous” or “happy days,” as those days were to a victorious gladiator when he received a palm branch. Incidentally, the palm of the hand had its own Old English word, *folm*, which was used until medieval times even while *palm* was used for the palm tree. It wasn’t until then that the French *paume*, a derivative of the Latin *palma*, was borrowed, altered slightly to *palm*, and began to mean the palm of the hand in place of *folm*.

palomino. Palomino comes from the Spanish *paloma* (dove), the word first used to describe horses of a dovelike color. Palomino is the color of a horse, not a breed, and today describes a horse with a golden coat, white mane and tail and often white markings on the face and legs.

palooka. See HIGH HAT.

pampero. *Pampero* literally means “of the pampas.” Since the early 19th century the word has been the name of the cold but dry southwesterly wind that blows from the Andes over the tall, grassy pampas of Argentina.

pamphlet. *Pamphilus, seu de Amore* was the title of an erotic love poem of the 12th century; nothing is known about its author Pamphilus except his name in the title. No more than a few pages in length, the Latin verses became very popular during the Middle Ages, the best-known love poem of their time. Just as the small book containing *Aesop’s Fables* came to be familiarly called *Esopet* in French, the little poem became known as *Pamphilet*, the English spelling this *Pamflet*, and eventually *Pamphlet*. By the 14th century any small booklet was called a pamphlet and within another 300 years the word had acquired its sense of “a small polemical brochure,” the transition completed from sensuous love poem to political tract. Generally, a pamphlet is defined as a paperbound or unbound booklet of less than 100 pages.

to pan. Apparently the parent of this is the expression *it didn’t pan out*. American prospectors long before the California gold rush were expert at using metal mining pans to separate gold from the sand and gravel they scooped from a stream bed. When gold wasn’t found after the pan was shaken, miners would say that it hadn’t panned out. Similarly, when any effort, say a stage play, didn’t pan out, it didn’t succeed. After enough literary critics had said plays or books didn’t pan out, to criticize a production severely came to be known as panning it. Another suggestion is that *to pan* derives from the head, or “pan,” of a tamping bar, which receives the blows of a sledgehammer,

but the first recorded use of the word in this sense contains several allusions to mining processes, including panning.

Panacea. A daughter of Aesculapius, the Greek god of medicine, Panacea (her name formed from the Greek *pan*, “all,” and *akeisthai*, “to heal”) could cure any ailment. Over the years her name came to mean a cure-all, a panacea now being a remedy that will cure any problem, medical or otherwise.

panama hat. Made from plaited leaves of a palmlike plant (*Carludovica palmata*) of South America, the panama hat, or panama, is something of a misnomer. The hats originated in Ecuador, but have been called panama hats since they were first recorded in English in 1833—probably because Panama was the major distribution center for them.

panda. See POLO.

pandemonium. English poet John Milton gave us this word for wild lawlessness, tumult, or chaos when he dubbed the capital of hell *Pandaemonium* in *Paradise Lost*. He coined the word from the Greek for “all demons.”

pander. Boccaccio, Chaucer, and Shakespeare all wrote about Pandarus, who in classical legend helped the Trojans in their war against the Greeks. In his poem *Il Filostrato* (1374) Boccaccio gives Pandarus the role of go-between for the lovers Troilus and Criseyde, a role that Chaucer and Shakespeare also presented in the former’s long poem *Troilus and Criseyde* (1380?) and the latter’s play *Troilus and Cressida* (1602). Shakespeare has Pandarus say: “Let all pitiful goers-between be called to the world’s end after my name; call them all Pandars.” So they are still called, with a slight change in spelling, but besides its meaning of a go-between in sexual intrigues, or procurer, *pander* has also come to mean to cater to the lower tastes and desires of others.

panegyric. A speech or poem praising an individual or a group of people, the word from the Greek meaning “pertaining to public assembly.” Marc Antony’s “Friends, Romans, countrymen . . .” speech (44 B.C.) at Caesar’s funeral (in Shakespeare’s *Julius Caesar*) is so successful a panegyric that it stirs the Romans to fury against the conspirators, who were driven from the city.

panetella. A long, slender cigar that takes its name from American Spanish *panatela*, a long slender bread or biscuit. The word can be spelled (correctly) three different ways: *panetella*, *panetela*, and *panatela*.

panga. A large broad-bladed knife similar to the machete that is used in Africa as a weapon or for agricultural purposes, including cutting brush. This Swahili word is first recorded in the United States in about 1930. As Ernest Hemingway’s son Patrick wrote in *True at First Light* (1997): “The most common agricultural implement in the country was called in Swahili a panga, a heavy-bladed, single-edged sword, stamped from sheet steel in the English Midlands, able to cut brush, dig holes and kill people under the right conditions.”

Pango Pango. Pango Pango should be the name of the Pacific Island Pago Pago, the chief harbor of American Samoa. That, in fact, is the way the locals pronounce the name. An old story, which may be true, explains that the island is called Pago Pago because several unknown missionaries transliterating the local speech into the Latin alphabet found that there were many sounds that had to be “represented by *n* in combination with a following consonant.” So many, in fact, that there weren’t enough *n*s in their type fonts to enable them to set all such words in type. So they quite arbitrarily eliminated the *n* from some words—leaving us with *Pago Pago* instead of *Pango Pango*.

pangram. A pangram, from the Greek *pan*, all, plus *gramma*, something drawn, is a sentence containing all the letters of the alphabet. Many logolepts would take issue with *The Guinness Book of World Records*, which says that the shortest English sentence containing all twenty-six letters of the alphabet is: “Jackdaws love my big sphinx of quartz.” That’s 31 letters. “Frowsy things plumb vex’d Jack Q.” has only 27 and there are certainly others just as short.

panhandler. *Panhandler* is said to derive from the Spanish *pan*, meaning both bread and money (just as the American slang *bread* does today). But though it is supposed to have been first recorded in 1890, the earliest quotation I am able to find for it is in humorist George Ade’s *Doc Horne* (1899): “He had ‘sized’ the hustler for a ‘panhandler’ from the very start.” However, the fact that Ade put the word in quotation marks probably indicates that he did not invent it, as has often been claimed. See TIGHTWAD; GLADHANDER.

Panhandle State. A nickname for West Virginia, after its long “panhandle” of land between Ohio and Pennsylvania. West Virginia is also called the Mountain State, the Switzerland of America (like four other states) and, by its proud residents, West by God Virginia.

panic. All panics can be linked with the great god Pan of the dark forests and fields—etymologically at least. The word *panic* derives from the name of Pan and the Greek term *panikon deima*, “the panic fear,” a fear of the woods on a dark evening when eerie frightening sounds are heard.

panic button. See PUSH (HIT) THE PANIC BUTTON.

panic doors. Panic doors in today’s theaters that open outward from slight pressure on a bar were inspired by the loss of life in Chicago’s Iroquois Theater tragedy in 1903, America’s worst theater fire. Panic resulted when it was found that all the exit doors were locked and opened inward so that they were blocked by the people around them. No one succumbed to the flames; all of those who died were trampled to death by the stampeding crowd. It took only eight minutes for 589 people to die.

pansy. The French *pensée*, “thought,” is the source of this flower’s name, some poet in ancient times believing that the flower had a thoughtful, pensive face. The flower was called

pensee in English during the early 16th century, but changed gradually in pronunciation and spelling to *pansy*. Other fanciful names for the *pansy* (*Viola tricolor hortensis*) have included heartsease, call-me-to-you, three-faces-under-a-hood, love-in-idleness, and kiss-me-at-the-garden-gate. *Pansy* has been a derogatory term for homosexuals since about 1930, this expression originating in England.

pantomime. Rome's only original contribution to Western theater was pantomime, a silent individual performance by a pantomimus, an actor who danced or acted in mask and cloak and did not speak a word, unlike the earlier Greek *mimi*, who spoke and sang while performing. This purely Roman creation was a favorite of audiences in Rome, who idolized the *pantomimi* and often made them rich. Just one *pantomimus* played each of the roles in a play, wearing a different mask for each character, while all the words were sung by a choir. Pantomime became so popular in Rome that it drove both tragedy and comedy from the stage. One of its most accomplished practitioners was Bathyllus, whose name came to be used for any pantomime actor. Paris was the name of two Roman pantomime performers. The first remained the emperor Nero's favorite until he was executed by Nero for beating him in an acting contest. The second took the first Paris's name and ironically met the same fate 20 years later in A.D. 87, when the emperor Domitian had him put to death.

pants; panties. *Panties* has become acceptable only in relatively recent years, despite the fact that the word has its roots in the name of a saint. St. Pantaleone, a Christian doctor who treated the poor without charge, was condemned to death by the Romans in A.D. 305, and miraculously survived six execution attempts before his persecutors finally beheaded him. The courageous saint (*Pantaleone* means "all lion") became patron saint of doctors and a martyr revered by the Venetians, his name all the more popular because so many boys were baptized in his honor. Probably for this reason, and because it was considered comical to call a foolish character "all lion," the saint's name attached itself to the buffoon in the 15th-century *commedia dell'arte*, in which an emaciated, bespectacled old man called Pantaloon wore slippers and one-piece, skintight breeches that bloused out above the knees and came to be known as *pantaloons*. Pantaloons later came to be a designation for trousers in general, the word introduced to America in the early 18th century and soon shortened to *pants*. *Pants* quickly replaced *trousers* in American speech and its diminutive form, *panties*, was used to describe women's underwear. In Britain, however, *pants* refers to men's underwear and is not a synonym for *trousers*.

paparazzi. This word is usually encountered in the plural, like the swarms of free-lance, celebrity-chasing photographers that it describes. Few people know that the Italian word comes directly from the name of Signore Paparazzo, a photographer in Federico Fellini's film *La Dolce Vita* (1960). The fictional character's name, in turn, came from an Italian dialect word for a particularly noisy, buzzing mosquito. Fellini had known a boy nicknamed Paparazzo (Mosquito) during his school days and the restless boy's fast, buzzing talk and constant movement put the director in mind of the photographer to whom he gave his name.

papaya. The versatile *papaya*, or tree melon, is a staple food in many parts of the world, and its enzyme *papain* aids in the digestion of food, one reason why its leaves are used as a meat tenderizer in some countries and the fruit is the basis for commercial tenderizers. Indians of Central America gorge themselves with *pawpaw* so that they can eat large quantities of food at their feasts without becoming ill. The word *papaya* is a corruption of the Carib Indian *ababai*. In Cuba and some other Spanish-speaking countries the large fruit (it sometimes weighs up to 20 pounds) is called *fruta bomba*, or "bomb fruit." *Papaya* itself has come to be slang for "the female fruit," or breasts, in Cuba, but isn't used in polite conversation.

paper. In ancient times paper was made from the pith and stem of the Egyptian papyrus plant soaked in water and pressed into sheets. The Latin *papyrus*, for the plant, came to mean paper and passed into French as *papier*, which gave us the English word *paper*.

paper bleeds little. A rare but useful Spanish proverb that speaks of the difference between written plans, especially military plans, and the consequences of carrying them out in reality. Hemingway used it in *For Whom the Bell Tolls* (1940): "'Paper bleeds little,' Robert Jordan quoted the proverb."

paper chase. Thanks to a film and television series about the trials of Harvard Law School, *the paper chase* has since the late 1970s had currency as a synonym for the hectic, often self-defeating chase after good grades in school as a means for advancement in life. The phrase apparently derives from the ancient game of hares and hounds, also called the paper chase, in which some players (hares) start off in advance on a long run scattering pieces of paper called "the scent" behind them, with the other players (hounds) following the trail and trying to catch the hares before they reach a designated place.

paper tiger. Someone who appears much more ferocious and formidable than he or she is. The term was invented by communist Chinese leader Mao Tse-tung (1893–1976), who used it to describe the U.S. Mao is also remembered for the Mao jacket, a plain, high-collared, shirtless jacket customarily worn by him and the many Chinese who emulated him.

papist. Usually a hostile or opprobrious term, *papist* means an adherent of the pope, one who advocates papal supremacy; or, simply, a member of the Roman Catholic church. Appropriately enough, Martin Luther coined the word from the Latin *papa*, "pope," also coining the obsolete variants *papastres*, *papanos*, and *papenses*. Luther also invented the term *Romanist*, for a Roman Catholic. The words came from German into English, unchanged, in the early 16th century. See LUTHERAN.

papoose. An Algonquian word for a child or baby that was used by colonists as early as 1633, long before the West was settled.

Pap test. This simple test can detect cancer of the womb in its early stages, enabling it to be treated before it is too late. Best known as the *Pap test*, although the more accurate *Papanicolaou's stain* and *Pap smear* are also used, the procedure involves

no more than the insertion of a small wooden spatula into the vagina to remove fluid mixed with uterine cells. This fluid is then dyed, spread on a glass slide and examined under the microscope. Few people know that Greek-born American physician George Nicholas Papanicolaou (1883–1962) invented the Pap test, his rather difficult name corrupted to the shortened form and obscuring the fame he so richly deserves. Pap smears can be taken of respiratory, digestive, and genitourinary secretions, too.

par. See UP TO PAR.

Paracelsus. A nervy name change. The Swiss physician and chemist Theophrastus Bombastus von Hohenheim (1493?–1541) believed that his work and learning were far superior to that of the first-century Greek physician Celsus. So much so, in fact, that he changed his name to Paracelsus, from Greek *para*, “beyond,” and the name Celsus, making himself “beyond Celsus.” His full new name was Philippus Aurealus Paracelsus. Famous in his day, he introduced opium, arsenic, mercury, and other early medicines, though his egotism and hot temper made him the enemy of many learned men of his time.

paradise. The extensive parks and pleasure gardens of the Persian kings were the first *paradises*, for the word comes to us from the Greek *paradeisos*, meaning “park,” “orchard,” or “pleasure gardens,” which the Greeks borrowed from a similar Persian word. Such gardens, and the word for them, were known more than 3,000 years ago in the Near East, where they were such prized retreats that they took on religious significance. The Septuagint translators of the Bible adopted the word as a name for the Garden of Eden, and later it was used by early Christian writers to mean heaven itself. See also GARDEN OF EDEN.

paradise shoots. Legend has it that paradise shoots (genus *Burera*) is the only plant left from the Garden of Eden. When Adam left Paradise he took a shoot of this tree with him and it has since been prized for the pleasant aroma of its wood. It is also called the East Indian aloe tree and the legin aloes.

paraphernalia. *Paraphernalia*, which comes from the Greek *para*, beside, and *pherne*, dowry, originally meant all that a woman could claim (beyond or besides her dowry) at the death of her husband. Since this included her jewelry, clothes, etc., the word came to mean personal belongings, and then equipment or furnishings used for a particular activity.

parasite. In ancient Greece a parasite was a person who received free meals at someone’s table in exchange for making brilliant conversation, or in any way entertaining and flattering his host; the word, in fact, derived from the Greek *parasitos*, one who eats at another’s table, or at another’s cost. No one really knows why over the centuries *parasite* took on the meaning of someone who contributed nothing to a relationship, just living off his host without “singing for his supper” or “dining out on a story.” It may have had something to do with the flatterer attaching himself to his host like a leech, but by the 16th century we find the word used to describe “smelle-feastes” who feed themselves free at other people’s tables. Today when a relation-

ship is mutually beneficial, it is called *symbiotic* (Greek *sym*, “together” + *bios*, “life”).

parchment. Parchment, “animal skins prepared for writing,” is said to have been developed at the great ancient library in Pergamum, Asia Minor, when Ptolemy, a rival book collector, refused to export Egyptian papyrus to Pergamum. The Romans called the writing material *pergamena charta*, “paper of Pergamum,” which became the French *parchemin*, this yielding the English *parchment* in the early 14th century.

pardon my French. This very common expression, usually prefacing a “bad” or “dirty” word, seems to have been invented a century ago by the British. It conveys the absurd idea that there are no “bad” or “dirty” words in English.

parentheses. First recorded in 1568, *parenthesis* comes from a similar Latin word meaning the same. A parenthesis is a word, phrase, or clause inserted in a sentence that is grammatically complete without the insertion. The device goes back to at least the 16th century, when the parentheses, or “upright curves” themselves (the marks enclosing these words), were sometimes called “halfe circles” and “round brackets.” Parenthetical remarks, however, can be made between dashes and commas as well as within parentheses. Mark Twain had the last word on parentheses. “Parentheses in literature and dentistry are in bad taste,” he wrote, comparing parenthetical expressions “to dentists who grab a tooth and launch into a tedious anecdote before giving the painful jerk.”

par for the course. *Par* is an American golfing term dating back to 1898 and deriving from the Latin *par*, “equal.” It means the score an expert is expected to make on a hole or course, playing in ordinary weather without errors. The expression *par for the course*, meaning just about normal or what one might have expected, owes its life to the golfing term and dates back to about 1920.

pariah. The Indian class called the Paraiyar in Tamil are not outcasts at all. The Paraiyars were forced into menial positions with the Aryan invasion some 2,000 years before Christ and now form one of the lower castes in southern India, but, although they are regarded as “untouchables” by the Brahmins, they are not the lowest Hindu caste. Their name derives from *parai*, “a large drum,” for their duty was to beat the drum at certain religious festivals. Eventually the Paraiyars became field workers in the Tamil country of Madras; however, when the British came to India they employed most of their household servants from that class, whose name they corrupted to *Pariah*. Believing that they were the lowest caste or had no caste at all, many British and other Europeans began to use *pariah* for the lowest of the low, an utter social outcast among his own kind—unjustly degrading the Paraiyars in language just as their countrymen degraded them in life.

Paris. The French still use the names *Lutetia* and *Lutece* for Paris, and though the words are considered poetic today, they actually serve to remind us that the beautiful city was once little more than a swamp. For *Paris* is simply a shortening of the Latin *Lutetia Parisianorum*, meaning “mud flats of the Parisi

tribe,” the longer name not dropped until after the Roman occupation.

Paris green. A brilliant emerald green color that contains arsenic and is extremely poisonous. Once used in making wallpaper and as an insecticide; it is also called Schweinfurt green.

parka. Another of the several words in English that derive from an Eskimo language. The parka, a long, warm jacket with a hood, takes its name from the Aleutian Eskimo *parka*, an outside garment made of skins; it came into the language in early 19th-century Alaska.

parking meter. This expression became common only after July 16, 1935, when the world’s first parking meter was installed in Oklahoma City, Oklahoma. However, two Oklahoma State University professors developed the first Park-O-Meter in 1933 and it had been suggested by journalist Carl C. Magee a year or so before that. Park-O-Meter No. 1 is now on display in the Oklahoma Historical Society. It originally cost five cents for one hour’s use and the first person to be arrested for a meter violation was a minister.

Parkinson’s disease. English surgeon and paleontologist James Parkinson (1755–1844) first described this common neurological disease in 1817, and it quickly was named after him. It is also called Paralysis agitans, shaking palsy, and parkinsonism. PD, its popular shorthand name, generally affects people over 60, but many younger people are afflicted with the insidious disease, including those with Parkinson’s syndrome, which commonly affects boxers. Both diseases show the same symptoms, including tremors of the hands and legs, difficulty swallowing, a shuffling gait, muscular rigidity, slow speech, and a masklike facial expression; this last called a Parkinsonian mask. Parkinson’s is thought to be caused by the deterioration of the brain cells that produce dopamine and can be alleviated somewhat by drugs like L-dopa. It is little known that James Parkinson was a suspect in the Popgun Plot, an attempt in 1794 on the life of King George III in which the king was to be assassinated by a poisoned blow dart while attending the theatre. The plot failed, as did all efforts to involve Parkinson, who was even examined under oath before the Privy Council.

Parkinson’s Law. Parkinson’s Law (1957), formulated by and named after C. Northcote Parkinson, distinguished British author and scholar, puts down succinctly what employers have known for generations: “Work expands to fill the time allotted to it, or, conversely, the amount of work completed is in inverse proportion to the number of people employed.”

parlay. *Parlay* is an Americanism first recorded in 1828, but probably used before then, that means to wager money on a horse race, cards or other sports event, and continue to bet the original stake plus all winnings on the next race, hand, or the like. The word derives from the Italian *paro*, meaning equal. It has since been extended to mean to use one’s money, talent, or other assets to achieve a desired objective, such as spectacular wealth or success: “He parlayed his small inheritance into a great fortune.”

Parliament. The British Parliament, where so many debates are heard, takes its name from the French *parler*, “to talk.” In fact, the word came into Middle English as *parlement*. A *Parlement* under the old régime in France was the sovereign court of justice, a kind of Supreme Court that had some administrative powers.

parliamentary language. Language that is restrained, like the language generally heard in the British Parliament; a civil and courteous way of speaking or arguing. *Parliamentary language* is first recorded in 1818 and *unparliamentary language* probably made its appearance shortly afterward.

parlor. From the French *parler*, “to talk”, “to converse.” The parlor was traditionally the room in which general conversation took place. Such reception rooms were originally found in monasteries, where talking might be forbidden elsewhere on the premises.

Parmesan cheese. *Parmesan* is simply English for the Italian word *Parmigiano*, of Parma, and thus the latter word should be the name of the hard, often grated cheese. *Parmigiano* was once made mostly from milk from the old Italian duchy of Parma.

Parnassus; to climb Parnassus. The 8,000-foot-high Greek mountain Parnassos, called Parnassus by the Romans, had one of its summits consecrated to Apollo, the god of music, and thus the mountain near Delphi became associated with poetry and music in particular, and literature in general; all literary effort was connected with Parnassus—some in the foothills, some at the summit. *To climb Parnassus* means “to write poetry.”

parrot. Parrots (their name believed to derive somehow from the French proper name *Perrot*, a diminutive of *Pierre*) reproduce human sounds with great accuracy and have been known to have “vocabularies” of over 100 words, but they of course speak by imitation, without understanding. Parrots have been called Pollys since the early 17th century, when Ben Jonson first recorded the word. Myna birds (from the Hindi *maina*) mimic human speech more precisely than parrots but have smaller vocabularies. See CHIMPANZEE; DOLPHIN.

parsley. “Parsley grows for the wicked, but not for the just,” according to an old English proverb. Parsley takes its name ultimately from the Greek *petroselinon* for the herb. This member of the celery family began earning its shady reputation even before the Romans, who wore curly-leaved parsley garlands in their hair not only because they were attractive but because they believed that nibbling on parsley sprigs enabled one to drink more wine without becoming drunk. The Greeks crowned winning athletes with parsley at their Nemean and Isthmian games, and used the herb as a flavoring. The Romans fed it to their horses on the theory that it made them swift. The plant is described by Seneca, who notes that the tempting sorceress Medea gathered parsley and other forbidden herbs by moonlight.

parsnip. *Parsnip* derives from the Latin words *pastinare*, “to dig or trench the ground,” and *napus*, “turnip,” in reference to

the fact that it was thought to be a kind of turnip that the ground had to be trenched for (so that it would grow straight). Incidentally, the Russian word for parsnip is *pasternak*, so the Nobel Prize-winning Russian poet's name translates as Boris Parsnip! The proverbial saying *fine words butter no parsnips* (words can't change anything) is quoted by Sir Walter Scott in his novel *A Legend of Montrose* (1819): "But my lord, there is a Southern proverb—fine words butter no parsnips." However, Weekley traces the saying far back to the 17th century, quoting John Clarke's *Paroemiologia* (1639), which makes the proverb *fair words butter no parsnips*.

Parson Brown orange. See ORANGE.

parson's nose. The walnut-size protuberance on the end of a turkey or other fowl that is actually the bird's tail (minus the feathers) and is also jocularly called "the part that went over the fence last."

Parsons table. No old parson or any other clergyman invented the durable, easy-to-make Parsons table. It was an innovation of Manhattan's Parsons School of Design in the early 1930s.

Parthenon. See PORNOGRAPHY.

Parthian shot; Parthian arrow, etc. See PARTING SHOT.

parting shot. The Parthian soldiers of antiquity were famed as deadly mounted archers. These mail-clad horsemen would ride furiously to the attack, pour a shower of arrows on their enemies and then evade any closer action by rapid flight, withdrawing according to plan and firing their shafts backwards from their horses while galloping away. Such tactics made Parthia, located in what is now northwest Iran, a world power that even defeated the Romans under Mark Antony when he attempted to invade their country in 36 B.C. *Parthian glance*, for a very keen backward glance, became proverbial, as did *Parthian arrow* or *shaft* or *shot*, the last by extension giving us the expression *parting shot*. Thus when you get in the last word in an argument, a *parting shot*, you are shooting a Parthian arrow.

See SAW.

partridge; partridge, always partridge. Trace the roots of the word *partridge* back to the Greek *perdika*, "a partridge," and you'll find one of the oddest and most expurgated of bird name derivations. For the source for *perdika* is probably *perdesthai*, "to fart," the Greeks most likely naming the game bird for the sound the whirring wings of the rising bird made, which they thought resembled the breaking of wind. *Partridge, always partridge* (*perdrix, toujours perdrix*) means "too much of the same thing." It's said that the confessor of a French king admonished him for infidelity, and the king asked him what his favorite dish was. "Partridge," the priest said, and the king ordered him to eat only partridge every day. "How were your meals?" the king asked after a few weeks, and the priest replied, "Very good, but partridge, always partridge." "Ah, yes," said the amorous king, "and one wife is all

very well, but not 'partridge, always partridge!'" Of the late brilliant lexicographer and etymologist Eric Partridge, an especially indefatigable worker who took on jobs few others would consider tackling, it was once said, "Partridge is always game." See SAW.

parts of speech. An old anonymous poem nicely defines these:

Three little words you often see
Are ARTICLES, a, an and the.
A NOUN'S the name of anything;
As school or garden, hoop or swing.
ADJECTIVES tell the kind of noun;
As great, small, pretty, white, or brown.
Instead of nouns the PRONOUNS stand;
Her face, his face, our arms, your hand.
VERBS tell of something being done;
To read, count, sing, laugh, jump or run.
How things are done the ADVERBS tell;
As slowly, quickly, ill or well.
CONJUNCTIONS join the words together;
As men and women, wind or weather;
The PREPOSITION stands before
A noun, as in or through a door.
The INTERJECTION shows surprise;
As oh! how pretty! ah! how wise!
The whole are called nine parts of speech,
Which reading, writing, speaking teach.

part that went over the fence last. See PARSON'S NOSE.

party crasher. See CRASH.

party line. See SPOILS SYSTEM.

party machinery. See SPOILS SYSTEM.

pasquinade. The first *pasquinades*, witty lampoons or satires, especially those posted in a public place, were hung upon an ancient statue unearthed in Rome in 1501 and reerected near the Piazza Navona by Cardinal Caraffa. The mutilated old statue, possibly a likeness of Ajax, Menelaus, or some unknown gladiator, was dubbed Pasquino—either because that had been the name of the Roman gladiator represented or more probably because it stood opposite quarters where a sharp-witted, scandal-loving old man named Pasquino had lived. Pasquino, variously described as a barber, tailor, cobbler, and schoolteacher, had died some years previously. But it became customary on St. Mark's Day to salute and mockingly ask advice from the statue named for the caustic old man, such requests being posted on the statue after a while. These written Latin verses soon took the form of barbed political, religious, and personal satires, often upon the Pope, which were called *pasquinade*; a book of such squibs was published in 1509.

passel. *Parcel* has been pronounced "passel," without the *r*, since at least the late 15th century. But the use of *passel* as a collective noun indicating an indefinite number dates back to 19th-century America. Wrote Mark Twain in *Adventures of*

Huckleberry Finn (1884): “[They] just kept a-smiling and bobbing their heads like a passel of sapheads.”

passenger. Originally *passenger* referred only to a passenger on a ship, deriving from the Old French *passager*, meaning the same, which came from the Latin *passare*, right of passage aboard a ship. The term came ashore in about the 14th century.

passion flower. The passion flower was so named in medieval Spain because its parts are said to resemble Christ’s instruments of passion, its corona being the crown of thorns, the five sepals and five petals representing the ten apostles (Peter and Judas not counted), etc. A list of these similarities follows:

- Leaf—symbolizes the spear
- Five anthers—the five wounds
- Tendrils—the whips
- Column of the ovary—pillar of the cross
- Stamens—hammers
- Three styles—three nails
- Fleshy threads within flowers—crown of thorns
- Calyx—the glory or nimbus
- White tint—purity
- Blue tint—heaven

passion for anonymity. Not a man who liked to be upstaged by his staff, Franklin D. Roosevelt announced midway through his first term in office that he was going to appoint several new assistants “with a passion for anonymity.” Possibly he was weary of all the newspaper coverage given his “brain trust.” Anyway, he did manage to appoint several assistants so self-effacing that nobody remembers them today—and contributed a new phrase to the language as well.

passion gap. Some South Africans swear by the “passion gap,” the gap in the gums left when the four top middle teeth are missing. Believing this love gap, an alternative term, increases the erotic appeal of a kiss, they often have these teeth pulled by dentists.

passion killers. During World War II, the British Wrens (Women’s Royal Navy Service) were issued long, plain, unstylish black knickers (underwear) that they or other interested parties promptly dubbed “passion killers,” at least getting even with the powers-that-were by way of the King’s English. See WRENS.

passion play. The world’s longest-running play, an entirely amateur production, has been playing for more than three centuries, longer than any modern-day professional play. The record holder is the Oberammergau Passion Play, portraying Christ’s last days, his suffering and death in Jerusalem. In 1633, the villagers of Oberammergau, in Germany’s Bavarian Alps, vowed that if God would spare them from the terrible plague raging through Europe, they would enact Christ’s last days on Earth every 10 years “until the end of time.” Since then the Oberammergau Passion Play, performed 38 times out of its 354-year history, has become synonymous with *passion play* itself. More than half a million people visit Oberammergau every

year the passion play is presented, watching from hard seats in a 5,200-seat theater whose stage is out in the open against an Alpine backdrop. Twice as many usually have to be turned away.

pass the buck. See BUCK.

pass under the yoke. After the Romans defeated an enemy they constructed a yoke of three long spears—two upright and one resting horizontally on them—making each vanquished soldier lay down his arms and pass under this archway. From this practice comes the expression *to pass under the yoke*, “to suffer a humility, or defeat, to be disgraced.”

pasta. There are some 500 Italian words describing various types of pasta. *Pasta* is simply Italian for dough and can be anything from CAPPELETTI to ZITI. See SPAGHETTI.

pasta fazool. There is no such Italian dish—not spelled this way. *Pasta fazool* is the Neapolitan-American pronunciation of *pasta e fagioli*, a soup containing beans (*fagioli*), other vegetables, and little *ditalini* pasta.

pasteboards. See DEVIL’S PICTURE BOOK.

pastern. This is the noted word that Dr. Johnson defined as the knee of a horse in his great dictionary. When a lady asked him why, he replied, “Ignorance, madam, sheer ignorance.” *Pastern* actually means the part of a horse’s foot between the fetlock and the hoof.

pasteurize. We remember Louis Pasteur for the germ-free pasteurized milk that we drink in safety today, but we often forget that his well-known discovery arose out of experiments with France’s national beverage—wine. In the 1850s the immortal French chemist first discovered that certain bacteria caused rapid “artificial” fermentation of wine, then that fermentation could be prevented if the wine was exposed to high temperatures—which led to the method whereby milk and other foods could be sterilized by heating and rapid cooling. A mediocre student in chemistry, just as Einstein was in math, Pasteur made many brilliant discoveries in his field. This compulsive worker—“I would feel that I had been stealing if I were to spend a single day without working”—proved that the spontaneous generation theory of disease was a myth, his most revolutionary scientific contribution. The Pasteur treatment honors his cure for rabies, which has reduced the death rate from hydrophobia to less than 1 percent.

pastrami; pistol. Pastrami is a highly seasoned, smoked shoulder cut of beef, its name deriving from the Rumanian *pastrama*. U.S. deli workers may call pastrami pistol (“Pistol-shoot it all the way!”) because, as the *New Dictionary of American Slang* humorously suggests, the eater of a hot pastrami sandwich “feels as if shot in the stomach soon after eating it.”

Patagonian. *Patagonian* generally refers to “a native of Patagonia,” but the word was in frequent literary use to mean a

gigantic specimen, a great soul, an immense figure in a field, up until the beginning of the 20th century. It is still effectively used that way today. Patagonia is a regional name applied to extreme southern South America, specifically the area south of the Colorado River in Argentina, which, incidentally, includes part of the Argentinian province Eva Perón (once La Pampa), named for the wife of the former dictator. The original inhabitants, now virtually extinct, were the Tehuelches, whom the Spanish called the Patagonian giants when they attempted settlements in southern South America in the 16th century. Early travelers had described these natives as being almost giants and they were named Patagonians from the Spanish *patagon*, “a large, clumsy foot.”

pater. Few, if any, of us have ever heard the word *pater* used for father, except in old movies about Britain over a century ago. *Pater* is Latin for father, used in English as early as the 14th century but heard only humorously today.

paternoster. See PATER.

pathfinder. A person who makes a path for others to follow, one who finds a way. The word derives from the name of a fictional character created by American novelist James Fenimore Cooper, not the other way around. *Pathfinder* is the name Cooper coined for his colorful character Natty Bumppo in his novel *The Pathfinder* (1840), because of Bumppo’s skill in finding his way through the wilderness. Before long the word was being used generally.

pathography. Based on *pathology*+*biography*, the word dates back to the 1970s. *New York Times* book critic Michiko Kakutani in a May 17, 2005, review defined it as “a mean spirited voyeuristic genre of biography that Joyce Carol Oates once observed dwells on ‘dysfunction and disaster, illnesses and pratfalls, failed marriages and failed careers, alcoholism and breakdowns and outrageous conflict.’”

pathos; bathos. *Pathos*, which derives directly from the Greek word for suffering, is the quality or power in any of the arts to evoke feelings of tender pity, compassion, or sadness, and gives us characters in literature like Ophelia in *Hamlet* or even Dickens’s Little Nell. *Bathos* means quite the opposite and was coined by Alexander Pope from the Greek word *bathos*, “depth” (not related to our English word “bath”), to indicate a descent from the sublime to the depths of the ridiculous. Pope and other writers of the early 18th century, including Swift, Gay, and Arbuthnot, made a sport of parodying contemporary writers. Out of this game of wits came Pope’s satire “Bathos, the Art of Sinking in Poetry” (1727), in which he invented the word because no similar one existed in English to express the idea.

paths of glory. The antiwar film *Paths of Glory* (1957) has been named by the National Film Registry, administered by the Library of Congress, as one of the 200 or so films up to this date to be preserved in the National Library because of its “historical, cultural and aesthetic significance.” The film’s title, as well as the commonly used phrase, comes from a line in British poet Thomas Gray’s “Elegy Written in a Country Churchyard”

(1750): “The paths of glory lead but to the grave.” Another line reads “Forbade to wade through slaughter to a throne.” See FAR FROM THE MADDING CROWD.

patience of Job. See JOB’S COMFORTER.

patio. An open inner court or garden; the word, borrowed from the Spanish, was first used in California and the Southwest before becoming popular throughout the U.S.

Patriots Day. The third Monday in April. A legal holiday marking the anniversary of the battle of Lexington on April 16, 1775; celebrated in Massachusetts and Maine since 1894.

patrol. Infantrymen do a lot of slogging through the mud. French soldiers in the 17th century were no exception, as their slang word *patrouiller*, to paddle with the feet in the mud, clearly shows. The word was so commonly used that it came to mean “to pass around or through a specified area in order to maintain order and security.”

patsy. *Patsy*, American slang for a dupe or sucker since at least 1909, may derive from the Italian *pazzo*, “foolish or crazy,” brought to America by Italian immigrants. *Pazzo*, in turn, could derive from the Italian expression *uno dei pazzi*, “one of the fools or crazies,” which may come from the name of the much ridiculed Pazzi family of 15th-century Florence, who were foolish enough to oppose the powerful Medici and were slaughtered.

patter; paternoster. Fast talk, often a salesman’s or con man’s spiel, is called *patter* after *paternoster*, the Lord’s Prayer, so named from its first two words (*Pater Noster*, “Our Father”) in Latin. When saying the Paternoster, priests recited it rapidly at the start of the prayer, giving us this synonym for rapid talk as early as the 14th century.

patza. A casual, amateurish chess player, often one who plays chess in parks and other public places. The word, which has only been traced back to about 1955, derives ultimately from German *patzer*, “bungler.”

Paul Bunyan. A legendary giant lumberjack in many folk tales, an American folk hero of the Pacific Northwest. Originally, the tales described a French Canadian, Bon Jean. Among the prodigious feats credited to Paul Bunyan are the creation of the Grand Canyon, and the invention of the double-bitted ax. When his crews and his huge blue ox Babe logged winters on the Big Onion River it was “so cold that cuss words froze in the air, thawing out the next Fourth of July with a din.” See SOCK SAUNDERS.

Paul Jones dance. A popular square dance featuring promenades and numerous changes of partners that was named for American naval hero John Paul Jones during the Revolutionary War, one of the few honors awarded his name at the time.

Paul Pry. A meddling idler with no business of his own except everybody else’s is called a *Paul Pry*, after the character of

that name in British playwright John Pool's comedy *Paul Pry* (1825).

Pavlovian response. Another name for a conditioned reflex. Russian scientist Ivan Petrovich Pavlov (1849–1936) made the term famous with his experiments with dogs showing that their saliva can be stimulated not just by food, but by the sound of a bell that the dogs were conditioned to hearing before being served the food. Pavlov won the Nobel Prize in 1904, the first Russian to do so, but the award was given for his work on the nature of digestion. Today *Pavlovian response* or *reaction* generally means any response made without thinking, a knee-jerk reaction, one strongly influenced by others.

Pawn, Oregon. See PAKISTAN.

pawnbroker. Long before their common name was coined in medieval days, pawnbrokers operated under the familiar three golden balls still hanging over many of their shops. It was the Medici family who contributed the symbol of their profession, for Charlemagne made this the family coat of arms long before the Medici family became moneylenders, as a reward to one of their forebears for using a weapon made of three golden balls to kill a fearsome giant who attacked him. *Pawnbroker* itself has a more prosaic origin, deriving from *pawn*, “a pledge,” and *broker*, “agent,” and was first recorded in 1678.

payador. See GAUCHO.

paydirt. One authority traces this expression to the Chinese *pei* (to give) used by Chinese miners in California, *pay dirt* thus meaning “dirt that gives gold.” However, it more likely derives from the fact that it is dirt containing enough gold dust to pay for working it. The expression is first recorded in 1856.

payoff. See HIGH HAT.

payola. Entering the American lexicon in 1960, when it was found that disc jockeys in New York, Chicago, and other cities accepted payments from record companies in return for airing their records, the coinage *payola* is a contraction of *pay* and *Victrola*. The word came into the news again in 1974 and 1985 with similar scandals in the record business, but *payola* is also used to mean bribes paid to anyone.

pay on the nail. In medieval times a *nail* was a short pillar used as a counter in marketplaces. Accounts were settled at these nails, all money placed on them so that payment was quick and out in the open. This practice led to the expression *to pay on the nail*, for “prompt payment.” See CASH ON THE BARRELHEAD.

pay the fiddler. This is an American expression that apparently arose in the early 19th century, based on the old English expression “to pay the piper,” which dates back to 1681: “After all this Dance he has led the Nation, he must at least come to pay the Piper himself”—Thomas Flatman, *Heraclitus ridens*.

pay through the nose. Gamblers in the 17th century coined the expression *to bleed* a victim. “They will purposely lose some small sum at first, that they may engage him more freely to bleed as they call it,” a contemporary writer on cardplaying noted. He also observed that these same gamblers would “always fix half a score packs of cards” beforehand whenever they intended to bleed a dupe. Once the “coll” had *paid through the nose*, lost all his blood through the nose, he was “bled white,” weak and helpless, until he had nothing left to lose. These last expressions arose later but they clearly derive from the gambling term, which was used to describe extortion or blackmail at about the same time. The bloodletting that physicians and barbers commonly used to treat so many diverse illnesses certainly suggested the expression to the gamblers. Bleeding patients not only made them pale, weak, and helpless but often killed them, as it did Lord Byron.

PB & J; peanut butter; jelly. PB & J is recent shorthand, written and verbal, for a peanut butter and jelly sandwich. *Peanut butter* itself is first recorded in about 1890 as the health food invention of a St. Louis dentist, while the word *jelly* dates back to the 14th century. See PEANUT.

P.D.Q. P.D.Q. stands for “pretty damn quick,” as in “you’d better get started P.D.Q.” Its origin hasn’t been established beyond doubt, though it has been attributed to Dan Maguinnis, a Boston comedian appearing about 1867–89.

pea. The word *pea* comes indirectly from the Latin *pisum*, “pea”; the early English singular for pea was *pease*, hence the old rhyme “pease-porridge hot, / Pease-porridge cold, / Pease-porridge in the pot, / Nine days old.” Quite a mania for peas existed in 17th-century France. Madame de Maintenon, Louis XIV’s mistress, called it “both a fashion and a madness,” and it was at this time that the celebrated *petits pois à la française* was invented. Incidentally, it was quite proper at the time to lick green peas from their shells after dropping the whole pod in a sauce, so eating peas off a knife isn’t so bad after all. Chinese sugar or snow peas, eaten pod and all, are sometimes properly called *mangetout* (“eat all”). *Till the last pea’s out of the dish* is a southern Americanism meaning “till the end,” or “a long time.” Red Barber popularized the southern expression *tearing up the pea patch* for “going on a rampage” when he broadcast Brooklyn Dodger baseball games from 1945 to 1955, using it often to describe fights on the field between players. Barber came from the South, where the expression is an old one, referring to the prized patch of black-eyed peas, which stray animals sometimes ruined. “English peas” is a term used in the South for green peas to distinguish them from the black-eyed or brown-eyed varieties. See BLACKED-EYED PEAS.

peabody bird; peverly bird. This little sparrow is said to sound like it’s singing, “Old Sam Peabody, Peabody, Peabody,” hence *peabody bird*. As for *peverly bird*, an old story has it that a Mr. Peverly, a New England farmer, was walking in the fields one early spring day trying to decide whether he should plant his wheat yet. A little sparrow in the adjacent woods seemed to sing, “Sow wheat, Peverly, Peverly, Peverly!” so Mr. Peverly went ahead and did so, reaping an abundant harvest that fall. Ever after the little sparrow was called the *peverly bird*.

peace at any price. When British Quaker statesman John Bright (1811–89) opposed the Crimean War he was contemptuously called a *peace-at-any-price man* by Lord Palmerston. He resigned from public life in 1882 when British warships bombarded Egypt.

Peace Corps. A government organization formed in 1961 during the Kennedy administration under the Peace Corps Act. Initially about a thousand volunteers were chosen to teach their skills in 15 foreign countries, living like the people they help. Today Peace Corps volunteers work in about 100 countries.

peaceful coexistence. Lenin apparently coined the term *peaceful cohabitation* in February 1920, when he referred to “peaceful cohabitation with the workers and peasants of all nations.” Two years later a resolution of the Ninth All-Russian Congress of Soviets used the term “peaceful and friendly coexistence [*sosushchestvovaniye*]” between nations. Unfortunately, the term has always been more a propaganda slogan than a sincere policy of any state.

peace in our time. British prime minister Neville Chamberlain used this expression after his return from Munich on September 30, 1938, after he had caved in to Hitler. He believed that his actions had averted war, but the Nazis saw them as a sign of weakness, war ensued, and Chamberlain’s words became a symbol of the worst kind of appeasement.

Peacemaker. Swedish engineer John Ericsson was responsible for the first screw propeller warship, the *Princeton*, which embodied his ideas when built at the Philadelphia Navy Yard in 1843. A year later, another of Ericsson’s ideas was incorporated in a big gun for the *Princeton*. It was called the Peacemaker, and its breech was strengthened with wrought iron. However, the Peacemaker, unlike the screw propeller, became one of the most famous guns in U.S. naval history because it was a failure. In February 1844 President John Tyler and some 200 prominent guests took a cruise down the Potomac aboard the *Princeton* to witness the highly touted gun being tested. When it was fired, the *Princeton* exploded its breech, killing the secretary of state, the secretary of the navy, and three others. President Tyler escaped only because he was dining below decks with his fiancée.

the peacemaker. This was the nickname of one of the most famous weapons in American history, the Colt Revolver Model 1873, the name being adopted because it helped lawmen keep the peace in the American West. As an extra benefit, its .44 ammunition could be used in the 1873 Winchester rifle.

peace with honor. The great British statesman Lord Beaconsfield (Disraeli) made this phrase popular in a speech he gave after returning from the Congress of Berlin in 1878, which Bismarck chaired as “the honest broker” (his own phrase). Said Disraeli: “Lord Salisbury [the foreign minister] and myself have brought you back peace—but a peace I hope with honour, which may satisfy our Sovereign and tend to the welfare of the country.” Similar words, however, had been used by Shakespeare in *Coriolanus* almost 300 years earlier.

peach. Peaches were the “Persian apples” of the ancient Romans. Their name, *Persicum*, became *pessica* in Late Latin, *pêche* in French, and finally came into English as *peach*. The fruit, luscious to look at, touch, and taste, has described a pretty young girl at least since the ancient Chinese used it as slang for a young bride centuries ago. But the Chinese, and the Arabs, too, also regarded the peach’s deep fur-edged cleft as a symbol of the female genitalia and used *peach* in a number of slang expressions referring to sexual love, such as *sharing the peach*, a euphemism for sodomy. In Europe the French have used their word *pêche* in similar sexual expressions and a *peach house* was once common in English slang as a house of prostitutes. “Venus owns this tree . . . the fruit provokes lust,” English herbalist Nicholas Culpeper wrote in 1652 and language reflects that people around the world shared his opinion. The *Elberta peach*, the most widely sold of American peaches, was probably imported from Shanghai in 1850, but more than one source records a story that shows more imagination. According to this tale, Samuel Rumph of Marshallville, Georgia, received peach-tree buddings from a friend in Delaware, planted them, and eventually harvested a good crop. His wife, Elberta, accidentally dropped a few pits from these peaches in her sewing basket and when their grandson wanted to start an orchard 10 years later, she dug them out and asked her husband to plant them. By 1870 trees from the pits were flourishing, and by an accidental cross-pollination a new golden variety resulted, which Rumph named for his spouse. Elbertas, however, aren’t considered great eating peaches by those who know their peaches.

peach melba. See MELBA TOAST.

peach on someone. Once common in the jargon of criminals, *to peach on someone* means to inform or “rat” on him. The word is not related to the fruit, deriving instead from an obsolete English word *appeach*, “to accuse.” The expression has been used at least since Shakespeare’s time.

peacock. Although the word is now used for both male and female of the species, the peacock is strictly speaking the male of the peafowl, distinguished by the long, green iridescent tail that it spreads out like a fan. The name derives ultimately from the Latin *pavo* for the peafowl, plus the Old English *coc*, cock. The male peacock’s beauty and bearing led to its name becoming a synonym for a vain, self-conscious person and to the expression *proud as a peacock*. Britain’s George III, during one of his attacks of insanity, insisted on ending every sentence in all of his speeches with the word *peacock*. His ministers cured him of this by telling him that peacock was a beautiful word but a royal one that a king should whisper when speaking before his subjects so they couldn’t hear it. As a result the speeches of George III were less absurd.

pea jacket. *Pea jacket* did not originally refer to a P.-jacket (an abbreviation of *pilot’s jacket*), but derives from Dutch *pijjecker*, a short double-breasted coat very similar to the pea jacket of today, which was worn by Dutch sailors as early as the 15th century.

Peaked Hill Bars. A dangerous reef off Cape Cod. The Peaked in the name is pronounced *pick-ed* or *picket*.

peanut; peanut gallery. Peanuts take their name from their resemblance to peas in a pod. They go by numerous descriptive aliases, including *monkey nuts* and *ground peas* or *nuts*, but their most common synonym, *goober*, is a corruption of *nguba*, a name plantation slaves gave to the peanut and one of the few African words still retained in English. Peanuts are used in hundreds of products. Peanut butter, for example, is an easily-digested, high-protein food that nutritionists say provides an adequate survival diet when combined with a citrus fruit like oranges. Four out of five American homes are said to stock a jar of it in the pantry. Americans aren't as partial to peanut butter soup, or to the dish called Young Monkey Stuffed with Peanuts invented by futurist chef Jules Maincave during World War I. The peanut gallery, usually the cheapest seats in the house, was the gallery, or "second balcony," high up in Gay Nineties theaters, so high up that the crowd seated there were sometimes called the gallery gods. Peanuts were the movie snack of the day and the occupants of these cheap seats often rained peanut shells on performers who displeased them. See PB&J.

Peanuts, Cracker Jack! Vendors have been crying "Peanuts, Cracker Jack!" in ballparks (and at circuses and carnivals) at least since the early 1900s. Cracker Jack, now a trademark of the Borden Co., was first sold, under another name, in 1893. The cry is often heard as "Peanuts, popcorn, Cracker Jax" [Jacks]!" The words have been inextricably linked with baseball since 1908, when the song "Take Me Out to the Ball Game" was published, its lyrics including the line "Buy me some peanuts and Cracker Jacks; I don't care if I never get back." Over 250 million boxes of Cracker Jacks are sold every year.

pear. One of the earliest cultivated fruits, pears are among the few fruits that ripen better after being picked, and the Chinese often ripened them in rooms filled with incense. The fruit, shaped like a Rubens nude, goes incomparably well with cheese desserts, Rabelais writing that: "There is no match you could compare/To Master Cheese and Mistress Pear." The old French *piere*, derived from the Latin *pirum*, gave us our word *pear*. Of the over 3,000 pear species, the Bartlett is perhaps the best known in America, representing 70 percent of this country's crop. It is a soft, late-ripening European-type, as opposed to earlier hard varieties like the Seckel, which is named for the Philadelphia farmer who first grew it, during the Revolution. The Bartlett wasn't, in fact, developed by Dorchester, Massachusetts merchant Enoch Bartlett, as is generally believed. Bartlett only promoted the fruit after Captain Thomas Brewer imported the trees from England and grew them in his Roxbury farm. The enterprising Yankee eventually purchased Brewer's farm and distributed the pears under his own name in the early 1800s. They had long been known in Europe as Williams, or William Bon Chrétien pears.

pearls before swine. This famous modern-day quip wouldn't have been possible without a biblical injunction over four centuries ago. One version of the origin of this quip has Clare Boothe Brokow, who later became Clare Boothe Luce, encountering Dorothy Parker in the lobby of *Vanity Fair* headquarters one morning. "Age before beauty," said the sharp-tongued Clare, holding the door open. "Pearls before swine," said the sharper-tongued Mrs. Parker, entering first.

Luce later denied this story, and a similar quip was used in one of Alexander Woollcott's pieces, but it has nevertheless become part of the Parker legend. It may be true, though. Recalled Mrs. Robert Benchley when she was 80 years old: "I was right there, the time in the Algonquin [hotel] when some little chorus girl and Dottie were going into the dining room and the girl stepped back and said, 'Age before beauty,' and Dottie said very quickly, 'Pearls before swine.' I was right there when she said it."

pease porridge. See PEA.

pea souper; pea soup fog. These terms originated in England toward the end of the 19th century. They describe a dense, yellowish fog or any very thick fog through which a fisherman can barely see the end of his outstretched arm.

peat. The word *peat* was first applied to the small bits of this substance used as fuel in peat fires. Keeping this in mind, it is easy to see the derivation of *peat*, from the English *piece*, which may come from the Latin *pecia*, "a bit." Peat, of course, is an organic material found in marshy ground, composed of partially decayed vegetable matter and is much used by gardeners in improving garden soil.

peckerwood. A poor Southern white (though its earliest meaning was "a redheaded woodpecker"). The derogatory term is often used in a joking way today.

pecking order. The famous study made by biologist W. C. Allee in the 1920s establishes that the pecking order among hens has a definite prestige pattern: hens, like many humans, freely peck at other hens below their rank and submit to pecking from those above them. Hens rarely peck at roosters in the barnyard, where the rooster is cock of the walk, but it was widely believed in the 17th century that they often pulled feathers from roosters below them in the pecking order. See HENPECKED.

Peck's bad boy. This expression for a boy, or any person who annoys or embarrasses other people, is still heard today, if infrequently. It is the creation of American humorist George Wilbur Peck (1840–1916) who, among many writings, published very popular newspaper sketches about a mischievous boy who played pranks on his father, these published in book form as *Peck's Bad Boy and His Pa* (1883). Peck later was elected governor of Wisconsin, making him one of the few authors to hold public office (among them Dante, Yeats, Sir Thomas Malory, Victor Hugo, Ignatius Donnelly, John Greenleaf Whittier, Richard Sheridan, Hilaire Belloc, John Buchan, and Vaclav Havel).

Pecksniff. An arch hypocrite who cants moral homilies even while acting immorally, any *Pecksniff* takes his name from Mr. Pecksniff, the hypocritical architect in Charles Dickens's *Martin Chuzzlewit* (1843–44). See GAMP.

Pecos. (1) An Indian tribe once occupying the town of Pecos near Santa Fe, New Mexico. (2) Western slang meaning to

shoot someone and then roll his body into the river (at first the Pecos River in Texas).

Pecos Bill. A legendary folk hero of the Southwest, whose range-riding cowboy exploits rival the exploits of Paul Bunyan in the Northwest lumber camps.

pecuniary. *Pecu* is the Latin for cattle, and since cattle were once a common means of barter, the ancients often expressed an estate's value in terms of the number of cattle it was valued at, which gave them the word *pecunia*, for "money or property." *Pecunia*, in turn gave birth to numerous English words, such as *pecuniary*, "pertaining to money"; *impecunious*, "without money"; *peculate*, "to embezzle"; and *peculiar*, "pertaining to that which is one's own," that is, one's own cattle.

peddler. *Peddler* derives from the Old English *ped*, "a pack in which articles were stored to be hawked about the streets." In early America *Yankee peddlers* generally had a bad name, being "proverbial for their dishonesty," according to one early observer, and Northerners probably got the name *damn Yankee*, coined long before the Civil War, from Yankee peddlers who worked the rural South. There are nevertheless many notable exceptions. Among famous Americans who started as peddlers are Parson Weems, the biographer of Washington; Stephen Girard, the Philadelphia banker who helped America finance the War of 1812; Donald Alexander Smith, the Canadian fur trader who later headed the giant Hudson's Bay Company; William Rockefeller, John D.'s father; Abraham Lincoln's father; Bronson Alcott, father of Louisa May; and inventors John Fitch and Thomas Edison. Department stores vehemently oppose peddling today, but, ironically, at least 15 great department stores were started by former peddlers, including Gimbel's, Rich's, Saks, and Goldwaters. See YANKEE; EMPORIUM.

pedigree. A wavering three-line symbol used by medieval genealogists in denoting the line of descent of families they were tracing was thought by some observant scholar to resemble the imprint of the bony foot of a crane. In French, the court language in many kingdoms, "foot of the crane" was *pied de grue*, which came to be both the name for the genealogical symbol and the name for the line or genealogical table itself. Introduced into English in the 15th century, *pied de grue* became through distorted spelling *pee de grew*, *petiegrew*, and *peti degree*, among many other versions, before settling down here as *pedigree*.

pee gee hydrangea. A popular pinkish hydrangea that takes its common name (pee gee hydrangea) from the first letters of its botanical name (*Paniculata grandiflora*).

peekaboo! This popular game played with babies or very young children is recorded at least as far back as 1599 in England. Also called bo-peep, it typically involves an adult covering her or his face and then suddenly uncovering the face and calling *peekaboo!*, the child usually laughing or smiling.

peekaboo wave. Movie star Veronica Lake's famous "peeka-boo wave," her hair partially covering one side of her face, was

possibly the best-known hairstyle of the early 1940s. However, the peekaboo caused trouble when America went to war and women in large numbers began working in defense plants. Serious injuries became common because women often caught their long hair in the machines they were operating. The U.S. government asked Paramount to help by changing Lake's hairstyle, which the studio was glad to do for the war effort. It hasn't been popular since.

Peekskill. New York's city of Peekskill on the east bank of the Hudson is named for the nearby Peeks Kill Creek, which would strictly be Peeks Creek if translated completely, as *kill* is from the Dutch *kil*, meaning "creek." The word *Peek* in Peeks Kill Creek is from the name of trader Jan Peek, who discovered the creek in 1685.

Peelers. See BOBBY.

Peel me a grape. This humorous request or command stems from an early Mae West movie in which the "Screen's Bad Girl" tells her maid (Louise Beavers) to do same: "Peel me a grape, Beulah." There is a 2002 song "Peel Me A Grape," a favorite of sexy singers. See MAE WEST.

Peeping Tom. According to a later version of the original story, Lady Godiva had but one admirer when she rode nude through the streets of Coventry. The earlier story has everyone in town feasting their eyes on Godiva, but here the plot thickens. Our later version says that a more cunning Lady Godiva issued a proclamation ordering all persons to stay indoors and shutter their windows, so that she could ride naked through Coventry, Lord Leofric would remit the town's oppressive taxes, and she could remain modest as well. But enter stage left Peeping Tom, the unfortunate town tailor, or butcher. We say "stage left" because Peeping Tom must have lived on the left-hand side of Hertfords Street—assuming that Lady Godiva rode sidesaddle. At any rate, Peeping Tom peeped, ruined Lady Godiva's plan, and was struck blind for his peeping—cruel and unusual punishment for merely being human and living in a strategic location. See LADY GODIVA.

peep of dawn. Although *at pype* was recorded in 1530, British poet Thomas Gray coined the term *peep of dawn* in his poem "Elegy Written in a Country Churchyard" (1750). It means the "first appearance of light at dawn," a tiny speck of light. *Peep o'day* is an Irish variation on the term, and the Peep O' Day Boys was an Irish faction of Protestants in the 1780s who raided their opponents' homes at dawn to catch them by surprise. See FAR FROM THE MADDING CROWD.

Peeps. The name of those yellow marshmallow chicks that are almost always found in childrens' Easter baskets. Originally made by the Rodda Candy Co., they have since 1954 been the property of Just Born, Inc., in Bethlehem, Pennsylvania. Some 1.5 billion of them are produced every year, each thickly coated with sugar and costing the consumer 32 calories. Recently they are being made in other colors and shapes besides yellow chicks.

The Peg. A popular nickname for Winnipeg, the capital of Manitoba, Canada. It is also called *Winterpeg*.

Pegasus. The famous winged horse of Greek mythology. Pegasus sprang from the blood of the Gorgon Medusa when the hero Perseus, a favorite of the gods, cut off her head. Hippocrene, the sacred fountain of the Muses on Mt. Helicon, arose from a stamp of the hoof of Pegasus. *Hippocrene* literally translates as “fountain of the horse” and can mean poetic inspiration, as in Keats’s “Ode to a Nightingale.” See MEDUSA.

Pelé. This is the nickname of retired Brazilian soccer star Edison Arantes do Nascimento, who is possibly the world’s best-known athlete. In his homeland, Pelé, who was born in 1940, is known as the Black Pearl, *Perola Negra* in Portuguese, which is shortened to Pelé throughout most of the world. A popular Brazilian coffee is among the several things named after the colorful athlete. And on one occasion a daylong truce was declared in a war between Nigeria and Biafra so that everyone could see Pelé play in a scheduled game.

pelican. The pelican is no woodpecker, but in his famous translation of the Bible, St. Jerome, thinking it pecked wood like a woodpecker, named the bird *pelican*, from the Greek word *pelekys*, or “ax beak.” This name stuck, as did many legends about the bird, including one that it resurrected its dead young by feeding them its blood, which Shakespeare alludes to in *King Lear*. Wrote Dixon Lanier Merrith in his poem “The Pelican” (1910): “A wonderful bird is the/pelican/His bill will hold more than his/belican./He can take in his beak/Food enough for a week,/But I’m damned if I see how the/helican.”

pelican in the wilderness. A lonely person, a recluse. The term comes from the Bible: “I am like a pelican of the wilderness, / I am like an owl of the desert. / I watch and am / As a sparrow alone upon the housetop.” (Ps. 102:6–7) It is used in the title of a recent book by Isabel Colegate: *A Pelican in the Wilderness: Hermits, Solitaires, and Recluses* (2002).

Pelican State. A nickname of Louisiana, after the pelicans plentiful on its Gulf Coast and the pelican that appears on the state seal. Louisiana has also been called the Creole State.

pell-mell. Pall-mall was an early 16th-century British game “wherein a round box ball is struck with a mallet through a high arch of iron, which he that can do it with the fewest blows, or at the number agreed upon, wins.” Apparently pall-mall players thrashed about trying to strike the ball and tripping each other up, this resulting in the now obsolete game giving us the word *pell-mell*, meaning “headlong, in reckless confusion.”

pemmican. Dried buffalo meat pounded into a powder and sometimes mixed with berries was the staple winter diet of many Indian tribes in the American West. It was called *pemmican*, from the Konestino Indian words *pemis*, “fat,” and *egan*, “substance.”

P.E.N. P.E.N. is the acronym for the International Association of Poets, Playwrights, Editors, Essayists, and Novelists,

founded in 1921 by Catherine Dawson Scott and John Galsworthy, who set up a trust fund for the organization in 1932 with his Nobel Prize money. The organization was named P.E.N. when someone pointed out at the first meeting that the initial letters of *poet*, *essayist*, and *novelist* were the same in most European languages and could serve as the appellation.

pencil pusher; pencil-necked. Both of these are Americanisms. The common *pencil pusher*, usually a contemptuous term for an office worker, is first recorded in 1890. *Pencil-necked* is of very recent origin, and recorded here because I have heard it several times and can find it listed in no dictionary of slang or standard English. *Pencil-necked* is a contemptuous reference to relatively genteel men made by the boisterous and bullnecked. I heard it last from a huge professional wrestler with bulging muscles in his neck who declared that only “pencil-necked geeks” don’t like to watch professional wrestling. See LEAD PENCIL.

pendulum. Prolific British scientist Robert Boyle—of whom it has been said, “the monotonous acres of his work are occasionally relieved by a colorful expression”—is said to have coined the word *pendulum* in 1660 from the Latin *pendulus*, a free-swinging body. But the word had been used before this in England and in 1637 Galileo used the Italian *pendolo* for the same thing.

Penelope. Odysseus’s wife, Penelope, in Greek mythology cunningly held off a horde of suitors while her husband was absent for 10 years. Her name has become synonymous for a faithful wife.

penguin. Though the penguin has a black head, its name derives from Welsh words meaning “white head”: *pen*, “head,” and *gwyn*, “white.” Welsh sailors were responsible for this odd christening when they gave the name *penguin* to the great auk, a flightless bird with white spots on its head that was common on North Atlantic islands in the 16th century. For some unknown reason sailors in other oceans later transferred the name *penguin* to the flightless bird so named today.

Penguinize. In England *Penguinize* means “to publish or republish a book” in paperback. Penguin Books Limited, founded in 1935, specializes in paperbacks, which in days gone forever cost sixpence. No doubt the company hopes that *Penguinize*, or better yet, *penguinize*, will have currency in America, too. *Pocket book* is a term for a paperback book in America, taking its name from the firm Pocket Books, Inc., founded in 1939. There seems to be no verb equivalent to *Penguinize* here, although Penguin publishes books in the U.S. as well. Publishers speak of “bringing it out in paper” or “putting out a paperback edition,” etc., but nobody “Pocketbookizes” a book. Here is one place where the English are clearly outdoing the American love of shortcuts in language. *Penguinize* might yet fill this American language gap, unless someone at Bantam Books comes up with “Bantamize” first.

penis. Most dictionaries derive *penis* from the Latin word *penis* for the male sexual organ. The Latin *penis* probably derives

from the Latin *penes*, “within.” The word isn’t recorded in English until 1693.

The pen is mightier than the sword. It was Edward Bulwer-Lytton who coined the *pen is mightier than the sword*, in his play *Richelieu* (1839):

Beneath the rule of men entirely great,
The pen is mightier than the sword.

Long before, in his *Anatomy of Melancholy* (1621), Robert Burton had written: “The pen is worse than the sword.” Cervantes, in *Don Quixote* (1605), expressed an entirely different point of view: “Let none presume to tell me that the pen is preferable to the sword.” Curiously enough, two great writers, Sophocles and Demosthenes, were the sons of sword makers, the equivalent of munitions makers in our time.

penknife. A penknife is a small pocket knife invented as far back as the 15th century. It was originally used for making and sharpening quill pens, hence its name. See JACKKNIFE.

pennies from heaven. Prolific American songwriter Johnny Burke coined this saying, meaning unanticipated, un hoped-for benefits, as the title of his 1936 song *Pennies from Heaven*. The song was very popular during the Great Depression: “Every time it rains, it rains pennies from heaven . . .” An old proverb says “The unexpected always happens.”

Pennsylvania. *Silvania* is the Latin for woodland, and *Pennsylvania*, formed on the analogy of Transylvania (that home of monsters and werewolves in fiction), means “Penn’s woodland.” The name does not honor the Quaker William Penn, as is generally believed, but his father, Admiral Sir William Penn (1621–70). Admiral Penn, a naval hero who helped frame the first code of tactics for the British navy, had been imprisoned in the Tower in 1655 for political reasons still unknown, and the author Samuel Pepys speaks bitingly of him in his diary. The crown, however, had become indebted to the admiral, Penn having loaned Charles II 16,000 pounds. On June 24, 1680, the younger Penn petitioned Charles for repayment of this debt, asking for a 300-by-160-mile “tract of land in America. . . .” The tract was to become a colony for Protestant Quakers suffering religious persecution, and Charles repaid his debt with a charter. Penn’s account tells us that he suggested the names Sylvania and New Wales. When Charles II added the “Penn” in honor of his father, he strongly objected since Quakers are opposed to such use of personal names.

penny. *Penny* is probably from an Anglo-Saxon word related to the German *Pfenning*, though it may derive from the name of Penda, an early Mercian king. Pennies were originally called “coppers” in England, having been made of copper from 1797 to 1860 (before that they were made of silver).

Penn Yan, New York. This old New York town, settled by New Englanders, is said to have been named from the first four letters of *Pennsylvania* plus the first three letters of *Yankee*.

penny-ante. *Penny-ante* for anything or anyone of small importance is a figurative use of the poker term *penny-ante*

meaning a poker game in which the ante, the first bet in the pot, is only a penny. The term dates back to mid-19th-century America.

penny dreadful. The American equivalent of the British term *penny dreadful* is *dime novel*, which is purely a historical term today. However, the British still use *penny dreadful* for any thrilling or romantic novel that is considered trashy, even though such works sell for far more than the penny they cost in the 19th century. The original cheap penny dreadfuls and dime novels of yesteryear were replaced by pulp novels, which were themselves replaced by cheap paperbacks and television.

the penny drops. One’s understanding of something becomes apparent. The allusion is to a penny dropping into a slot machine. “After he heard that, the penny should have dropped.”

penny-farthing. Over four feet tall, this bicycle was more properly called the *Ariel Highwheeler*. Its name the *penny-farthing* was suggested by two common British coins (one suggesting the huge front wheel and the other suggesting the little rear wheel). The French *velocipede*, nicknamed *bone shaker*, suggested the design of the *penny-farthing*. See also HOBBY-HORSES.

a penny for your thoughts. A proverb first recorded in John Heywood’s *The Proverbs of John Heywood* (1546), the earliest collection of English sayings. Heywood has it a penny for your thoughts.

Penny Theaters. Small makeshift theaters that charged only a penny for admission were common in England and France during the early 19th century. These theaters held only about a hundred people and put on several shows nightly. The plays presented were usually crude, lurid melodramas catering to what were called “the lower classes.” One such play, entitled *The Red-Nosed Monster or The Tyrant of the Mountains* (c. 1850) was a kind of early Western in which the lone hero rescued the heroine from the Indians. The cast included the Red-nosed Monster (the Indian), the Assassin, the Ruffian of the Hur, the Villain of the Valley, the Wife of the Red-Nosed Monster, the Daughter of the Assassin, and of course the Hero and the Heroine. The theaters themselves might be said to be the ancestors of the little theaters (the equivalent of Off-Off Broadway playhouses) of today.

pennywise and pound foolish. Known since at least the 16th century, this proverbial saying describes someone scrupulously thrifty in small financial transactions and exceedingly careless in larger ones. It has been traced back to Robert Burton’s *Anatomy of Melancholy* (1621–51). Recently the old phrase was polished up by Jim Yardley, writing in the *New York Times* (2/18/02) of a Texas man who got the contract to clean up 7.6 million pennies (\$76,000 worth, 20 tons) belonging to the U.S. Mint. The coins had spilled in a highway accident, resulting in a huge “pudding of mud and pennies.” Mr. Yardley gave a new twist to an old chiché when writing of the Texan’s “laundering” troubles: “Mr. Massengale is uncertain whether taking on the job was pennywise or 40,000 pounds of pennies foolish.”

Pentagonese. See GOBBLEDYGOOK.

penthouse. Over the years folk etymology made *penthouse* out of *pentice*, the former word sounding more familiar to English ears even if *pentice* was correct. The *pentice* was a kind of “lean-to” attached to another building, usually a church, the word akin to “appendix.” It took several centuries for *penthouse*, first recorded in early 1500s, to become the luxurious separate apartment or dwelling on a roof of a building that it generally is today.

peony. See PAEAN.

People of the Book. Muslim words teaching that Jews, Christians, and Muslims all have the same roots and should act accordingly.

People who live in glass houses shouldn't throw stones. This old proverb dates back to the 14th century. It means don't criticize others if you have faults yourself. English poet George Herbert used a variation on it in *Jacula Prudentum* (1640): “Whose house is of glass, must not throw stones at another.”

Peoria. See PODUNK.

pepper. *Pepper* can be traced back to the Sanskrit *pippali*, for a type of condiment pepper that comes from the dried berries of a climbing shrub. Garden peppers are not related to this shrub, but received the same name when Columbus discovered hot varieties of the garden pepper in the West Indies and wrongly believed they were a new variety of the condiment pepper. See also CHILI PEPPER.

Pepsi generation. The *Pepsi generation* is used, sometimes sarcastically, to mean the now, “with-it” generation. The term comes from the Pepsi-Cola slogan *Come alive, you're in the Pepsi generation*. Recently Pepsi-Cola moved into the Thailand soft drink market and had their slogan translated. It later developed that the Thai translation it was using said: “Pepsi brings back your ancestors from the dead.” Incidentally, the word *Pepsi* in Pepsi-Cola is there because the drink's inventor, North Carolinian drugstore proprietor Caleb D. Bradham, first marketed his invention as an elixir to relieve *dyspepsia*. See COKE.

Père David's deer. This large Chinese deer (*Elaphurus davidianus*) with a long donkey-like tail and antlers whose tips point backward is named for French missionary and naturalist Père Armand David (1826–1900). It is no longer found in the wild.

the perfect word. Mark Twain said that in writing “the difference between a perfect word and a near-perfect word is like the difference between lightning and a lightning bug.”

period. See COMMA.

peripatetic. Aristotle's habit of giving his lectures in the *peripatos*, or walking place, of the Athenian lyceum gave his school of philosophy the name peripatetic, which centuries

later yielded the English word *peripatetic*, “walking about or [teaching] carried on while walking from place to place.”

peripeteia. A peripeteia is a striking reversal in a play or in life, as Oedipus's discovery of his true identity. The same word with the same meaning was used by the ancient Greeks.

periscope. See UP PERISCOPE!

Peritas and Bucephala. It is said that Alexander the Great, mourning his dog Peritas, renamed an ancient city Peritas in his honor. The tale isn't unlikely, considering that Alexander did name another city after his horse. Bucephalus was Alexander's favorite Thracian charger, a spirited stallion that only the conqueror could ride and who would kneel down to let his master mount. Alexander rode Bucephalus in his campaigns to conquer the world and “the bull-headed or bull-courage one” is said to have died of wounds or heart strain at the age of 20, after swimming the flooded Jhelum River and then carrying his master in full armor through a hard day's fighting on a hot June day. The emperor named the ancient city of Bucephala in northern India in his horse's honor, possibly even building it as the fabled charger's mausoleum, its site identified by a mound outside the modern Jhelum.

periwinkle. In Italy the periwinkle is called the *fiore di morto* because it used to be wreathed around dead infants. *Periwinkle* takes its name from the Latin *pervincire*, “to bind around,” but whether it was so named because it was used in such burials is unknown.

perk. *Perk* is simply shorthand for *perquisite*, meaning a benefit received by an employee beyond his or her salary and standard fringe benefits. Perks range from a key to the executive washroom to a key to a company car. The expression probably dates from the 1960s.

pernod. ABSINTHE was generally made from species of wormwood, *Artemisia absinthium*, the plant so named because it had been dedicated to Artemesia, Greek goddess of the hunt and moon. Long prized for its reputed aphrodisiac powers by the French, the liqueur is 70–80 percent alcohol, but the oil of wormwood in it can cause blindness, insanity, and even death. For this reason absinthe was banned in Switzerland in 1908, in the United States four years later, and outlawed by France in 1915. Pernod, a greenish-colored, licorice-flavored liqueur named for its French manufacturer, quickly took its place. Pernod does not get a person drunk as quickly as absinthe, being 40–50 percent alcohol, but, except for the anise used to replace the banned oil of wormwood, it contains all the same ingredients.

perpetual peace. This expression was first used to describe the 1502 peace between England and Scotland, concluded when Henry VII married his daughter to Scotland's James IV. The perpetual peace ended two years later at the battle of Flodden Field, in which the British defeated the Scots. Other “perpetual peaces” since then, and WARS TO END ALL WARS, have ended just the same.

perp walk. *Perp walk*, short for the rarely heard term *perpetrator walk*, has been used for more than half a century by New York City police and the city's newspaper photographers, the words describing the moment when a criminal suspect is walked out of a police stationhouse on the way to jail or court. The exit was designed to allow the police to publicize their latest catch and to shame the suspect.

Persian words in English. Persian words that became English words, usually through other languages, are: tiger, paradise, pard, scarlet, chess, checkmate, checkers, azure, salamander, taffeta, arsenic, roc, mummy, spinach, jasmine, lilac, seersucker, khaki, scimitar, bazaar, shawl, lemon, divan, and van (from caravan).

persiflage. "Upon these delicate occasions you must practice the ministerial shrugs and persiflage," Lord Chesterfield wrote in one of his famous *Letters* (1774) to his natural son Philip Stanhope. This is the first recorded use of *persiflage*, "light frivolous talk or banter," which Chesterfield may have coined from the French *persifler*, "to banter."

persimmon. See EATIN' A GREEN 'SIMMON.

persneckity. All that's known about this word, originally spelled *pernicity*, is that it's from Scotland and was first recorded in 1885. It means "overly concerned about small details, fastidious, fussy."

person. The word *person* derives from the Latin *persona*, which was the term for the mask that actors in Greek and Roman dramas wore to portray the various characters. The word came to mean the part anyone played in this world, his or her individuality, coming into English as *person*. In his article "Language Liberated" in *The University Bookman* (Spring 1976), Robert Beum considers some alternatives for sexist "man" terms in the language. Believing, as someone has said, that "the proper study of personkind is person," I've recorded a number of Mr. Beum's tongue-in-cheek suggestions below. Note his advice that "the key rule is that the root 'man,' even when it is derived etymologically from the Latin 'manus' (hand), bears the degrading connotations of sexist tradition and is to be dropped":

- personners (manners)
- personslaughter (manslaughter)
- personhandle (manhandle)
- personnuscript (manuscript)

Person overboard! Person the oars! See POLITICAL CORRECTNESS.

personal names. The most common English surname is SMITH, while the longest English personal name is the 1,055-letter first and middle names given by Mr. and Mrs. James Williams of Beaumont, Texas, to their daughter, who was born on October 5, 1984. The most poetic long personal name may be the 102-letter-long Hawaiian first name given to Miss Dawne E. Lee of Honolulu, which translates as "the abundant, beautiful blossoms of the mountain begin to fill the air with their fragrance throughout the length and breadth of Hawaii."

persona non grata. Latin for "someone unwelcome," as in "He's persona non grata around here."

person of interest. A term first used in the last two or three years meaning someone who isn't quite regarded as a suspect in a criminal case but may be in the future after more investigation.

pervert. Deriving from the Latin word for to turn, *pervert* originally meant to turn upside down. Three hundred years later, by the 17th century, it had come to be a noun meaning "one who practices sexual perversion." An old anecdote has Voltaire participating in an orgy with a group of dissolute Parisians. Invited to participate again, he replied, "No thank you, my friends. Once: a philosopher. Twice: a pervert!"

pesky. Troublesome or annoying. The word, first recorded about 1765, may come from England's Essex dialect, which also gives us *scrimp* and *snicker*. However, Ernest Weekley's *An Etymological Dictionary of Modern English* (1921) says *pesky* is an Americanism based on "pest."

pest. At first *pest* was used to describe any *pestilence* or epidemic, such as the Black Death. But by the 17th century it was being employed to describe people who are a nuisance.

pestle. See PISTIL.

Pétain. Henri-Philippe Pétain, at a cost of 250,000 dead, halted the German advance at Verdun in World War I under the famous slogan "They shall not pass!" Acclaimed a hero and made commander in chief of the French armies, "the savior of Verdun" became associated with extreme rightist political elements in later years. In World War II, when 84, Marshal Pétain was appointed chief of staff of the Vichy government, collaborating with the Nazis and turning France into an authoritarian state. After the war he was found guilty of treason and sentenced to death, but President de Gaulle, his former aide, commuted his sentence to life imprisonment. Pétain, his name long a synonym for traitor, died in 1951, aged 95.

peter. A widespread euphemism for *penis* due to its association with the word *pee* and the first syllable of *penis*. Noted etymologist Vance Randolph wrote, "Very few natives of the Ozarks will consider naming a boy Peter" because of this significance. "An evangelist from the North shouted something about the Church being founded on the rock of St. Peter," Randolph noted, "and he was puzzled by the flushed cheeks of the young woman and the ill-suppressed amusement of the ungodly. Mountain folk don't even like to pronounce names like Hitchcock or Cock." (A dislike, it should be added, that is found among some people in many areas.)

peter boat. Every Peter ever born derives his given name from St. Peter, Peter being the name Christ gave the "Prince of the Apostles," this apparently the first time the name was ever used. Peter was a fisherman of Galilee, who denied knowing Christ three times during His trial, but later repented. Tradition tells us that he was crucified in A.D. 67, head down at his

request because he said he was not worthy to suffer the same death as Jesus, and his tomb is under the high altar of St. Peter's in Rome. Many words and expressions derive from Peter's name: Eric Partridge devotes a page or so to them in his *Dictionary of Slang*. The Patron saint of fishermen and many other occupations connected with the sea gives us the standard English *peterman* for a fisherman and *peter boat* for a fishing boat with stem and stern alike. Stormy petrels also bear Peter's name, because the birds seem to be patting the waves with one foot and then the other in stormy weather, as though they were walking on water. Actually they are flying close to the waves in search of surface-swimming food like small shrimp, but the birds reminded sailors of St. Peter walking upon the Lake of Gennesareth to join Jesus (Matt. 14:29). They were thus named *peterels*, a diminutive of the English Peter, in honor of the apostle and this came to be *petrel* in time. All petrels are regarded as the protectors of sailors and the harbingers of approaching storms. It is considered bad luck to kill one, for the birds were long thought to be the souls of drowned men; whenever one died, sailors believed a crew member would soon die to take its place.

peter out. It seems unlikely that disappointed American miners during the '49 gold rush derived the expression *to peter out*, "to taper off or come to an end," from the French *peter*, "to break wind." This would indeed have been an expression of their disappointment when a mine failed to yield more gold, but there were ample American words available to express the same sentiment. Another guess is that the *peter* here refers to the apostle Peter, who first rushed to Christ's defense in the Garden of Gethsemane, sword in hand, and then before the cock crowed thrice denied that he even knew Him. Most likely the expression springs from the fact that veins of ore in mines frequently petered out, or turned to stone. The gunpowder mixture of saltpeter, sulfur, and charcoal, commonly called *peter* by miners, was used as an explosive in mining operations and when a vein of gold was exhausted it was said to have been *petered out*.

Peter Pan. Peter Pan, the boy who refused to grow up, has been familiar to readers and theatergoers for several generations and we now use his name to describe a person who retains in mature years the naturalness of spirit and charm associated with childhood, or one who absolutely refuses to escape from the comfortable irresponsibility of childhood. British dramatist and novelist Sir James M. Barrie introduced his immortal character on the stage in the play *Peter Pan* (1904), although the fantastic world of Peter Pan had previously been presented in his *The Little White Bird* (1902). *Peter Pan*, a poetical pantomime, as it has been called, charmed audiences from the night it first appeared. Peter has since been played by many great stars, ranging from Maude Adams to Mary Martin, and a statue of him stands in Kensington Gardens, London. Barrie, who described his business as "playing hide and seek with angels," named Peter for one of his nephews, for whom he wrote the story, giving the character his last name from the god Pan, "goat-footed," god of forests, meadows, flocks, and shepherds. Wendy, Peter's girl friend, also borrowed her name from a real person. This was Barrie's own nickname, bestowed upon him by the daughter of his friend, poet W. E. Henley. Little Margaret Henley called him Friendly,

then Friendly-wendy, and this ultimately became Wendy, the name he dubbed his character.

the Peter Principle. Dr. Laurence Peter and Raymond Hull's book *The Peter Principle* (1969) became famous for its premise that "In a hierarchy, every employee tends to rise to the level of his incompetence."

Peter-see-me. Partridge states that this Spanish white wine, known since the 17th century, is named after Cardinal Peter Ximenes, surely the only Catholic churchman so honored, if this is true. Other authorities say the sweet wine bears the corrupted name of grape grower Pedro Ximenes, who developed the special grape that makes the wine. Peter-see-me is called Peter for short.

Peter's Pence. For some 800 years, until Henry VIII abolished the practice in 1534, every English household paid a tax to the pope of a penny a year. The tax was called (Saint) Peter's penny, Peterpenny, and Peter's Pence, and several monarchs tried to withhold it from Rome before Henry VIII succeeded, after the pope refused to sanction his divorce from Catherine of Aragon so that he could marry Anne Boleyn.

Pete's sake! The *Pete* here is a euphemism for St. Peter, an expression of annoyance ("For Pete's sake, stop fooling around!") probably dating back at least to late 19th-century America.

petit pois. See PEA.

petrel. See PETER BOAT.

petri dish. German scientist Julius Richard Petri invented this thin glass or plastic dish with a loose cover commonly used in laboratories today. The shallow dish named for the bacteriologist, who died in 1921, is generally employed in making bacteria cultures. Petri was an assistant of the great German scientist Robert Koch when he devised his dishes in 1887. Koch—the first scientist to introduce a rationalized system of bacteria culturing—had previously grown bacteria in a gel on flat glass slides, his assistant substituting the shallow glass dishes with covers that have been used ever since.

pettifogger. A real family of financiers may have given its name to the word *pettifogger*, for "an attorney or anyone who argues over petty details with little meaning." The Fugger family, which can be traced back to Bavarian Swabia in the 15th century and who were descended from an Augsburg weaver, made their great fortune lending money to royalty, but became noted, justly or unjustly, for their petty ways. According to one theory, in time a "petty Fugger" became a *pettifogger*, the designation soon applied to people besides the Fuggers.

petunia. This popular, funnel-shaped flower is botanically related to the tobacco plant, hence its name from the Portuguese word *petum*, meaning "tobacco." The Portuguese had taken the word from the Tupi-Guarani South America Indian word *petyn*. *Petum* became the French *petin*, which passed into English as *petun*, an archaic word for tobacco. Toward the end

of the 19th century, the name of the genus *Petunia* was formed in New Latin by botanists from the French *petun* because it was so closely related to tobacco. It wasn't long before the flower of the genus was being called the petunia.

peverly bird. A name in New England for what is more commonly called the Peabody bird and white-throated sparrow elsewhere. The little sparrow is said to sound like it's singing, "Old Sam Peabody, Peabody, Peabody," hence *Peabody bird*. As for *peverly bird*, an old story has it that a Mr. Peverly, a New England farmer, was walking his fields one early spring day trying to decide whether he should plant his wheat yet. A little sparrow in the adjacent woods seemed to sing, "Sow wheat, Peverly, Peverly, Peverly!" so Mr. Peverly went ahead and did so, reaping an abundant harvest that fall. Ever after the little sparrow was called the *peverly bird* in New England.

Phaedo. It's said that the philosopher Cleombrotus killed himself after reading Plato's *Phaedo* "so that he might enjoy the happiness of the future life so enchantingly described." The *Phaedo* is a dialogue narrating the discussion that took place between Socrates and his friends during the last hour of his life. This work also influenced the Roman Stoic philosopher Cato, Caesar's chief political rival, when he committed suicide by falling on his sword after realizing that his cause against the Caesarians was hopeless. Cato had spent all of the last night of his life reading Plato's *Phaedo*. Eighteenth-century English poet Eustace Budgell was indirectly influenced by the *Phaedo* when he committed suicide by drowning himself, for he left behind a note reading: "What Cato did and Addison approved cannot be wrong."

phaeton. Rooted in Greek mythology, this light horse-drawn four-wheel carriage takes its name from Zeus's son Phaeton, who took his father's chariot for a ride to the sun one day and drove so wildly that he nearly set the world on fire, before Zeus stopped him with a thunderbolt.

Phaff's Cellar. Journalist Henry Clapp, writing under the pen name Figaro, reigned as the "King of Bohemia" at Phaff's Cellar located on Broadway above Bleecker Street, the intellectual watering hole of the 1850s, where Walt Whitman, Fitz-James O'Brien, Ada Clare (Clapp's mistress), and many other celebrities could be seen.

phallus. See BULL.

phantasmagoria. The word is defined as "a shifting series of phantasms, illusions, or deceptive appearances, as in a dream or created by the imagination," but it can also mean "a changing scene made up of many elements." It was apparently coined in 1802 by a London showman named Philipstal to describe his magic-lantern exhibition of optical illusions. The word may be based on *phantasm* or *phantom*, but "the inventor of the term probably only wanted a mouth-filling and startling term . . ." and no clear etymology is known.

pharaoh. Egyptian pharaohs took their name from the palaces or big houses, *per-o*, where they resided. The title is first recorded in English in about 843.

pharisee. See A THORN IN ONE'S SIDE.

pharos. *Pharos* has become a synonym for "light-house," but it was originally one of the Seven Wonders of the World, a light-house built by Ptolemy II on the island of Pharos off Alexandria, Egypt, that was 200 to 600 feet high and could be seen 42 miles away. See PHARAOH.

phat. The expression *phat*, first recorded in 1992, means excellent, which is fast becoming a common slang expression for great itself. A number of origins have been suggested for *phat*, most of them sexual in nature (such as the first letter of *pussy*, *hips*, *ass*, and *tits*), but the word *emphatic* is probably the father or mother of the term, *emphatic* here being the decidedly emphatic appearance of a very sexy woman. See PHATIC SPEECH.

phatic speech. A term coined in 1923 by anthropologist Bronislaw Malinowski meaning speech employed to express good will or sociability rather than give information. The author and critic Anatole Broyard called phatic speech "a friendly noise." The word *phatic* comes from Greek *phatos*, "spoken." Malinowski's exact coinage was *phatic communion*.

Ph.D. The abbreviation of the Latin term *Philosophiae Doctor*, doctor of philosophy. According to Mitford Mathews's *Dictionary of Americanisms*, "Ph.D. was known in British academic circles before it made its appearance in American use. British holders of the degree secured it from Germany. It was probably from Germany that the practice of granting such degrees came to be an established procedure in American education, and the use of *Ph.D.* appears to have a German rather than a British background." Yale probably granted the first U.S. Ph.D., and the first mention of *Ph.D.* in print seems to have been in 1869.

pheasant. The bird's name came into English from the Old French, *faisant*, but it goes back to the Greek *phasianos ornis*, "the Phasian bird," because the Greeks first found the bird in the region of the Phasis river where it flows into the Black Sea.

phenom. *Phenom* is short for any exceptionally gifted (or phenomenal) person. The expression first came into use in baseball in the late 19th century, when excellent players were called phenoms. Soon after it crossed over into general use to mean any gifted person.

Phi Beta Kappa. A U.S. national honor society whose lifetime members, both college undergraduates and graduates, are chosen on the basis of high academic achievement. The letters constituting the society's name are from Greek *philosophia biou kubernetes*: philosophy the guide of life. Founded in 1776 at the College of William and Mary in Virginia, Phi Beta Kappa is the oldest Greek-letter society. It was originally a secret social society at the college but soon became a scholarship honorary society.

Philadelphia lawyer. Folklore has it that when Andrew Hamilton successfully defended New York printer John Peter Zenger against libel charges in 1735, establishing the right of

freedom of the press in America, observers noted that it took a *Philadelphia lawyer* to get the printer off. But the term is first recorded more than 50 years later, in 1788, in the form of “It would puzzle a Philadelphia lawyer.” Another theory claims the words come from the New England saying “any three Philadelphia lawyers are a match for the devil.” Philadelphia at the time was the intellectual and literary center of America, and it was only fitting that a very clever lawyer, versed in the fine points of the law, should be named for the city.

philander. Our word for a male flirt who makes love without serious intentions comes from the name given to lovers in various medieval romances, but certain marsupial animals also bear the name *Philander* and these are named for the Dutch naturalist Kornelius Philader de Bruyn. Philanders, whose males may or may not be philanderers, include the small wallaby (*Macopus brunmii*), first described by de Bruyn in about 1700, the Australian bandicoot (*Perameles lagotes*), and the South American opossum (*Didelphys philander*). The name *Philander* comes from the Greek *philandros*, “one who loves.”

philanthropy. *Philanthropy* clearly has its roots in the Greek *philos*, “love,” and *anthropos*, “mankind,” and means a love for mankind, especially as manifested in donations of money, property, or work to needy persons or socially useful purposes. It is first recorded by Bacon in 1607 and he refers to it as an ancient Greek term.

philippic. Incomparable orator that he was, Demosthenes’ eloquent words could not triumph over the military might of Philip of Macedon (382–336 B.C.). Eventually, Philip II, father of Alexander the Great, defeated the Athenians, imposing a very generous peace settlement on them so that he could employ them as allies in his future plans for conquest. But Demosthenes had made such brilliant denunciatory orations against Philip over a period of seven years that these speeches are still known in history as *philippics*. The *philippics* were specifically a series of three passionate invectives against the Macedonian monarch’s plan to weld Athens into his kingdom and they comprised a great defense of Athenian liberty, taking their name from the target of their fire.

the Philippines. The Spanish took control of these islands in 1571 and named them for Philip II of Spain.

Philistine. The original Philistines made their home in Philistia on the southwest coast of Palestine. These peoples were Israel’s worst enemy, even capturing the sacred ark at one time, until Saul and David, the first Israelite kings, decisively defeated them in battle. They were considered a crude, avaricious people but their name did not come into the language until centuries later, in 1689. At that time a town-and-gown battle in the German university city of Jena had resulted in the death of several people, and a local preacher gave a sermon on the values of education to the ignorant townspeople, choosing as his text “The Philistines be upon thee . . .” from Judges 16. The German word for *Philistine* was *Philister* and students began calling ignorant townspeople opposed to education by this name. Almost two centuries later, in 1869, English poet and

critic Matthew Arnold used the German slang in his book *Culture and Anarchy*, translating it from *Philister* to *Philistine* and giving the word its present meaning. Wrote Arnold: “The people who believe most that our greatness and welfare are proved by our being very rich, are just the very people whom we call Philistines.” Since then *Philistine* has meant a materialistic, uncultured person.

philodendron. In its tropic homes our common houseplant the *philodendron* is a tree-climbing plant. Noticing this, the first botanists to observe the plant named it after the Greek *philos*, “loving,” and *dendron*, “tree.”

Philomela. After Procne discovered that her husband, Tereus, had cut out her sister Philomela’s tongue and imprisoned her for years, Procne chose a terrible revenge. She killed their infant son Itys and served him to her husband for dinner. Tereus went into shock when told what kind of stew he had eaten, enabling Procne to escape with her sister, but Tereus eventually caught them. He was about to dispatch the sisters when the gods intervened and turned Philomela into a swallow because she had no tongue and swallows cannot really sing, while Procne was turned into a nightingale because the nightingale sings the saddest of songs and Procne was condemned to always sing sadly of the son she had killed so cruelly. Nevertheless, since Roman times poets have confused the Greek myth and made *Philomela* or *Philomel* a universal poetic name for “nightingale,” when clearly the word should be *Procne*—though one must admit that a *procne* sounds prosaic at best and asinine at worst. T. S. Eliot is the latest great poet to make this mistake, in *The Waste Land*.

philosopher. The Greek Pythagoras is said to have coined the word *philosopher* from the Greek words for love and wisdom. Up until this time philosophers were called sophists, “wise men.” Said Pythagoras: “No man, but only God is wise. Call me rather, a philosopher, a lover of wisdom.”

phlogiston. From the 17th to the 19th century scientists searched for *phlogiston* (from the Greek word for “inflammable”), which was supposed to be the substance within all materials that burned. Great scientific investigators believed in the substance. Joseph Priestley, in fact, named oxygen *dephlogisticated air* when he isolated it in 1774. But by 1800 belief in *phlogiston* was largely abandoned and the word deleted from the lexicon of science, if not fable.

pho. A new word, unrecorded in any dictionary, that entered the language with Vietnamese immigrants to the U.S., *pho* is a noodle soup with beef that is becoming more popular every year. It is said that along Garden Grove Boulevard in Orange County, California, “it is easier to lunch on *pho* . . . than on a hamburger.”

phoebe. Named in imitation of the bird’s cry—a long-held “phee-bee pheebe” that strongly resembles the female name *Phoebe*—this flycatcher (*Sayornis phoebe*) has been known since colonial times. Theodore Dreiser’s “The Lost Phoebe,” (1929), about the love and loneliness of a bereaved old farmer, is among the most beautiful of American short stories.

phoenix. This fabulous bird of great beauty was said to live some 600 years in the Arabian wilderness, then burn itself on a funeral pyre and rise again from its ashes, becoming a symbol of immortality. It was named, indirectly, after the ancient Phoenicians, its color being purple-red, which the Greeks called *phoenix* because the Phoenicians had invented a dye of this color. See PHOENIX TREE.

phoenix tree. *Phoenix dactylifera*, the date palm, is called the *phoenix tree* because of the ancient belief, mentioned in Shakespeare's *The Tempest*, that if it burns down or falls from old age it will spring up fresher than ever from its ruins.

phony. Mencken suggested that a mendacious maker of fake jewelry named Forney is the eponym behind this word, but no one else seems to agree with him. The majority opinion is that *phony* is an alteration of *fawney*, British slang for a worthless ring, which itself derives from an Irish Gaelic word. The word, first recorded in 1890 or so, probably comes specifically from the *fawney rig*, a confidence game in which a worthless ring is planted, and when someone "finds" it he is persuaded by a "bystander" that he should pay the bystander for his share in the "find."

phony as a three-dollar bill. Very false, far from genuine, there never having been a U.S. three-dollar bill. A humorous exaggeration of this (heard in the movie *The Eiger Sanction*, 1970) is "He looks like he could change a nine-dollar bill in threes."

phooey. *Phooey*, as an expression of disgust, is first attested to as recently as 1929 in America and derives from the German-Yiddish *phui*, which seems to be an imitation of the sound of spitting. Most languages have similar throat-clearing sounds for words expressing disgust, these foreign *phooey* synonyms including the Italian *uffa*, the French *pfutt*, or *fi*, and the Spanish *hay*. For some reason the ancient Romans employed *pro*.

photography. See DIORAMA.

photo-op. White House press secretary Ronald L. Ziegler (1940–2003) coined this common term when serving as President Richard Nixon's press secretary, first using it as *photography-opportunity*. It means "a news event staged to produce flattering photographs," as the *New York Times* (2/12/03) put it. Ziegler was also noted, wordwise, for his description of the Watergate break-in as a "third-rate burglary."

Photostat. Surprising to many, *Photostat* is a proprietary name and must be capitalized. The photography machine that makes Photostats has been a U.S. registered trademark since 1911, its name, from Greek, literally meaning "making light stationary." See XEROX.

Phryne. *Phryne* is a synonym for a prostitute, and a rather complimentary one considering its source. It refers to the Athenian courtesan Phryne, who lived and loved memorably in the fourth century B.C. There was a gold statue of Phryne at

Delphi dedicated by her admirers. Her real name was Mnesarite, but the hetaera was commonly called Phryne, "toad," because of her smooth complexion. Born in Boeotia, the country girl made good at her trade in Athens, where her beauty earned her a fortune so great that she once offered to rebuild the walls of Thebes if the words "Destroyed by Alexander, restored by Phryne the courtesan" were inscribed upon them. (There were no takers.) That her body was the most beautiful of her time, or perhaps any other, is illustrated by Praxiteles' statue called *Aphrodite of Cnidus*, which she is said to have posed for. During a festival of Poseidon at Eleusis, Phryne took off her clothes, let down her hair, and in full view of the crowd stepped into the sea, inspiring Apelles to paint his great *Aphrodite Anadyomene*, for which she modeled. But there is no better story about Phryne than that of her trial for impurity. One of her lovers, the great orator Hyperides, defended her. Just when it seemed that she would lose her case—and her life was at stake—Hyperides pulled the courtroom stunt of all time. Ripping open her robe, he exposed her breasts to the jury, who agreed with him that something so good could not be all bad and let Phryne go free.

Phudnick. See NUDNIK.

pianolo. A Hawaiian cowboy. In 1832 King Kamehameha III hired three Mexican cowboys to manage a herd of longhorns. The name of these *espanoles* (Spaniards) became corrupted to *pianolos* and is still used to describe all the cowboys riding Hawaii's range today.

picaresque. A picaresque novel is a novel that deals with rogues and knaves, often satirizing society through their experiences. The word *picaresque*, in fact, derives from the Spanish *pícaro*, "rogue." Alain-René Lesage's *Gil Blas* (1715), Daniel Defoe's *Moll Flanders* (1722), and Thomas Mann's *Confessions of Felix Krull* (1954) are good examples of this type of novel, which is called *Räuberroman* in German.

picayune. In early 18th-century Louisiana both an old French copper coin and the Spanish half-real were called picayunes. *Picayune* itself probably derives from the Spanish *Pequeña*, "little," and the coin influenced the popularity of the contemptuous use of *picayune* for anything small, mean, or insignificant.

pickaninny. An old, offensive word for a black child that appears to have derived from African slaves' pronunciation of the Portuguese *pequenino* (small child).

picked too soon (early). Some fruits (pears, peaches, strawberries, etc.) ripen after they are picked, but not if they are picked before a certain time—if they are so picked they will never ripen. This may well be the origin of the old expression *picked too soon* or *early*, referring to a child who is forced to excel at something he or she may be good at but isn't ready to pursue, unable at the time to be anything but a child. See PRECOCIOUS; PRODIGY.

Picketwire. James Michener explains this river's colorful name in *Centennial* (1974):

“At the end of the first full day in Colorado they came to the Picketwire, the western river with the most delicate name. It was properly El Rio de Las Animas Perdido en Purgatorio. In Coronado’s time three difficult and greedy Spanish soldiers had revolted and struck out on their own to find the cities of gold. Sometime later the main body of explorers came upon them, naked and riddled with arrows, and one of the priests explained solemnly, ‘God struck them down, using Indians as his agents, and for their disobedience their souls remain in purgatory.’ The River of the Souls Lost in Purgatory! French trappers had shortened it to Purgatoire, and practical men from Indiana and Tennessee, adapting the sound to their own tongue, called it Picketwire.”

pickle. See IN A PRETTY PICKLE.

Pickle Factory. A little-known nickname of the CIA, among its members, in the Central Intelligence Agency’s early days of the late 1940s and 1950s. The CIA is also called the Company.

Pickwickian; Pickwickian sense; Pickwickian syndrome. Generally, *Pickwickian* means jolly, plump, and generous, after Mr. Samuel Pickwick, Esq., in Charles Dickens’s *The Pickwick Papers* (1836–39). Dickens, as noted in the novel (chapter 35), took the name from a Bath coach proprietor, whose name derives from the village of Pickwick in England: “As Sam spoke, he pointed to that part of the coach door on which the proprietor’s name usually appears; and there, sure enough, gilt in letters of a good size, was the magic name of PICKWICK!” The immortal Pickwick’s name is also remembered by *Pickwickian sense*, meaning a word used in a different than usual sense in order to avoid offending someone (see *The Pickwick Papers*, chapter 1, for a much fuller explanation). *Pickwickian syndrome* is a medical term for “an abnormality characterized by extreme obesity accompanied by hypoventilation and polycythemia.” The character Joe in *The Pickwick Papers* suffers from the disease.

picnic. First recorded in Lord Chesterfield’s *Letters* (1748), the word *picnic* comes to us from the French *pique-nique*, which is a century or so older. *Pique-nique* itself is a reduplication on *piquer*, “to pick.”

Picts. These ancient people who settled in Ireland and Scotland in about 100 B.C. were so named by the Romans, who called them *Picti*, from the Latin *pictor*, “painter,” because they tattooed and painted their bodies.

a picture is worth a thousand words. See ONE PICTURE IS WORTH A THOUSAND WORDS.

pidgin English. Pidgin English, originally developed by British traders in China, takes its name from the way the Chinese pronounced “business”—“bijin.” It combines English and Portuguese, as well as German, Bengali, French, and Malayan. There is even a magazine, *Friend Belong Me* (“*My Friend*”), published in pidgin by the Catholic Mission in New Guinea. See PIDGIN LANGUAGE; GUBMINT CATCHUM FELLA.

pidgin language. A pidgin language has no native speakers, is a second language, that is, a language developed as a means of communication among speakers of various languages. A creole language, on the other hand, does have native speakers. It is simply defined as a pidgin language that has been passed on to succeeding generations as a native tongue. In the U.S. Gullah is an example, as is, of course, the creolized French language of the descendants of the original settlers of Louisiana, which is often called Creole or Cajun. Creole derives from the Portuguese *criollo*, “native,” while *pidgin* is probably from the Chinese pronunciation of “business.” See also PIDGIN ENGLISH.

pie. Pie is an old English word of obscure origin, first recorded in 1275. Wrote Harriet Beecher Stowe in *Old Town Folks* (1869): “The pie is an English institution, which, planted on American soil, forthwith ran rampant and burst forth into an untold variety of genera and species. Not merely the old traditional mince pie, but a thousand strictly American seedlings from the main stock, evinced the power of American housewives to adapt old institutions to new uses. Pumpkin pies, cranberry pies, huckleberry pies, peach, pear and plum pies, custard pies, apple pies, Marlborough-pudding pies—pies with top crusts and without—pies adorned with all sorts of fanciful flutings and architectural strips laid across and around, and otherwise varied, attested the boundless fertility of the feminine mind, when let loose in a given direction.”

piece. *Piece*, for “a woman,” especially in a sexual sense, has been used since the early 14th century, when it was standard English. Grose defines the word as: “A wench. A damned good or bad piece, a girl who is more or less active and skillful in the amorous congress. Hence the Cambridge toast, ‘May we never have a *piece* (peace) that will injure the Constitution.’” The sense of *piece* today is generally “a sexually attractive woman,” though the term is considered a sexist one by many. *Hunk* is its male counterpart, this a relatively recent coinage dating back only to the 1940s.

pieces of eight. Famous as pirate booty, pieces of eight were Spanish silver coins worth about a dollar, though they were frequently cut into *bits* to make smaller coins. Other famous Spanish coins were half doubloons, quarter doubloons (pistols), one-eighth doubloons, and cobs, silver coins of various worth irregularly cut from a silver bar, which were heated and stamped with the royal arms.

Piedmont rice. An old story holds that Thomas Jefferson stole seeds of Piedmont rice while traveling in the Piedmont region of Italy and smuggled them home in his pockets, despite the fact that Italy wanted to continue its monopoly on this type of rice and had made the crime of stealing the seeds punishable by death. Jefferson’s introduction of the rice was important because Piedmont rice can be grown without irrigation. See CAROLINA RICE; WILD RICE.

pie in the sky. An empty wish or promise. The expression may have originated with a song written by IWW (International Workers of the World) organizer Joe Hill, whose real name was Joseph Hiltstrom, in the years before World War I. Called “The Preacher and the Slave” four of its lines went:

“You will eat, by and by,
In that glorious land above the sky (way up high!);
Work and pray, live on hay,
You’ll get pie in the sky when you die.” (That’s a lie!)

Pierian Spring. A spring in Greek mythology that the MUSES were said to hold sacred. The spring conferred inspiration and learning on anyone who drank of it.

a pier six brawl. A pier is a platform built over the water and supported by pillars. It can be used for shipping or for entertainment of various kinds. Where the *six* in the American phrase comes from is unknown, but a *pier brawl* can do a lot of damage to both ships and men.

piffle; piffing. Piffle is twaddle, nonsense, idle talk. There have been many suggestions concerning the term’s origins, including the words *puff*, *pitiful*, and a combination of *piddle* and *trifle*. The word is first recorded in this sense in 1890.

pig. Partridge notes that *pig* was slang for “a British policeman” in 1811, while Farmer advises that it was American criminal slang for “a policeman” in 1848. But the designation died out in both England and America by the 20th century. It didn’t surface again until American student demonstrations of the 1960s, which suggests a second, independent coinage of the term at that time.

pig and whistle. All taverns called the Pig and Whistle take their name from an old English tavern that originally had the Norse name Piga Waes Hael. This name, meaning “Hail to the Virgin” was corrupted in speech to *Pig and Whistle*.

pigboy. “Before there were ever cowboys in America, there were pigboys, herding up pigs on horseback and setting them loose to forage,” states Dr. Frederick V. Hebard of the American Chestnut Association, speaking of pigs that once fed on the huge crops of chestnuts that the now extinct American chestnut tree used to produce. I’ve been unable to find the term recorded anywhere outside the *New York Times* article (2/5/02) quoting Dr. Hebard, but even if it isn’t in print, *pigboy* is a good coinage.

pigeonhole. In the mid or late 19th century side-by-side compartments in old-fashioned rolltop desks were called *pigeonholes* because of their resemblance to the holes in dove-cotes or pigeon houses, which were made to enable pigeons to walk in and out. Since papers were filed in these compartments, *to pigeonhole* became a way of saying “to file away for future reference.” But papers filed away in pigeonholes were often ignored because they presented a problem or the prospect of too much work, so the term *to pigeonhole* was humorously extended to mean filing something away with the intention of forgetting about it or doing nothing about it.

piggyback. The correct word is *pickaback*, but virtually no one calls it that. *Pickaback* dates back at least to the late 16th century, when it is first recorded to mean carrying a person, especially a child, on one’s back. The term may have its origins in

a *pack* that is *picked* (pitched, thrown) on someone’s shoulders, but no one knows for sure. The term wasn’t corrupted to *piggy-back*, or *pigback*, until the late 18th century.

piggy bank. Though *piggy bank*’s popularity over the years probably has something to do with the relation between hoarding or saving money and the pig’s supposed greediness, the main reason the child’s bank is called a piggy bank is simply because so many of the banks are made in the shape of pigs. They have been made in such shapes since at least 1909, though the first recorded use of the term *piggy bank* is in 1945.

pig in a blanket. A small cocktail frank wrapped and baked in dough, often served as hors d’oeuvres. Sometimes called *dog* (or *frank*) *in a blanket*, a description first recorded in the late 19th century. See HOT DOG.

pig latin; hog latin; dog latin. *Ixnay* (“nix”), *amscray* (“scram”), and several other slang words come to us directly from pig Latin. First known as *dog Latin*, the little language commonly used by schoolchildren can be traced back to at least mid-18th-century England, when there was a *dog Greek* as well as a *dog Latin*. The *dog* in the term means the same as it does in *doggerel*, something bad, spurious, bastard, mongrel. *Dog Latin* probably came to be called *pig Latin* and *hog Latin* because its sound resembles the grunting of hogs. The lopped language was at first a combination of Latin and English. Today it is basically formed by taking the first letter of a word, putting it as the rear of the word and adding to it an *ay*. For example, “you can talk pig Latin” is “Ouyay ankay alktay igpay Atinlay.” One of the most interesting pig Latin words is *ofay*, a derogatory term among blacks for a white person, which is said to be pig Latin for the word *foe*.

pigs get slaughtered. This is an old Wall Street adage that I’ve never seen recorded anywhere. It probably dates back to the 19th century and describes speculators who hold onto a stock after they have seen a good profit on it, hoping to make more and often losing their shirts when the stock drops sharply. A longer variation is *bulls make money, bears make money, but pigs get slaughtered* (or *die broke*)

pigskin. Though animal bladders were once kicked around in various games of football, pigskin was never used to make a football. Nevertheless, *pigskin* has been a word for a football since at least 1894, when the term was used by Amos Stagg’s University of Chicago Maroons, the great football team of that era. Footballs are made of a rubber bladder covered with a casing of leather.

pigtail. The word *pigtail* did not appear first in English as the name for a twisted plait of hair. *Pigtail* was first used in the 16th century to describe tobacco twisted into a thin string like a pig’s tail.

Pig War. According to the San Juan Island National Historical website: “On June 15, 1859, an American farmer named Lyman Cutler shot and killed a Hudson Bay Company pig rooting in his San Juan Island potato patch. By so doing he

nearly started a war between the United States and Britain. Cutler's act drew the ire of the Hudson Bay Company, which then compelled U.S. Army Department of Oregon commander Brigadier General William S. Harney to dispatch a company of the 9th U.S. Infantry, under Captain George E. Pickett, to San Juan on July 27. British Columbia Governor James Douglas responded by sending a warship under Royal Navy Captain Geoffrey Phipps Hombly to dislodge Pickett, but to avoid an armed clash if possible. The two sides faced off on the Cattle Point peninsula for more than two months with the opposing forces growing to nearly 500 U.S. soldiers, plus artillery, and three British warships. When the home governments learned of the crisis, leaders on both sides took positive steps to maintain the peace. The joint occupation ended 12 years later when, on October 21, 1872, Kaiser Wilhelm I of Germany, acting as arbitrator, settled the dispute by awarding the San Juan Islands to the United States. So ended the so-called war in which the only casualty was a pig." See WAR OF THE STRAY DOG.

pike. The *pike* takes its name from its *pike*, or pointed head. After Christ's crucifixion all fishes but the pike were supposed to have dived under the water in terror. Out of curiosity the pike lifted its head from the water and observed the whole scene. Thus parts of the crucifixion are said to be recognizable on a pike's head, especially the cross, three nails, and a sword.

piker. *Pikers*, or *Pikies*, were settlers who migrated to California from Missouri's Pike County during the 1849 gold rush. Like the "Okies" of the 20th century, the *pikers'* nickname, justly or not, became a synonym for poor, lazy good-for-nothings because they created such an unfavorable impression. Their name seems to have combined with the older English word *piker*, meaning a tramp or vagrant, to give us *piker* in its present sense of cheapskate, which was first recorded in 1901. The English word derives from *turnpike*, because many tramps traveled by foot along turnpikes, toll roads that took their name from the rotating barriers made of pikes, or sharpened rods, at their entrances. See PIKES PEAK OR BUST.

Pikes Peak or bust. Long a Colorado landmark, Pikes Peak became a guidepost for traders in the early 19th century, and by the time of the California gold rush of 1849 Indians in the area had begun to tell of gold deposits on the mountain. Thousands of people headed West to answer the call "Pikes Peak or Bust." However, gold wasn't found high in the hills until 1860, a year after the height of the Colorado gold rush. The fortunes made from the pockets of gold deposits found in the soft quartz and sandy fillings of what was called PAYDIRT established Colorado as the successor to California in gold mining, but crime, violence, hardship, and death proved to be the common lot of the prospector, and most headed back home bitterly disappointed—having experienced elation going up and grim desolation coming down the mountain. In fact, many of the '59ers returned home with the words "Busted, By Gosh!" scrawled on their wagons. Pikes Peak was discovered in 1806 by Zebulon Montgomery Pike, who had been chosen to map the northern part of the Louisiana Purchase, but his badly equipped party failed to reach its summit. The explorer and army officer seems to be irrevocably associated with rocks. During the War of 1812, he was killed while leading a charge against the British garrison at York (Toronto), Canada. The

retreating British set fire to their powder magazine, which exploded and loosed a piece of rock that fell on his head. See PIKER.

pilcrow. *Pilcrow* is an old name for a paragraph mark or drawing of a hand pointing, which are printing marks used to attract attention—a paragraph sign in the first case and a direction in the other. The word is apparently a corruption of the word *paragraph*. *Webster's* gives *pilcrow* as an obsolete name for a paragraph mark. But since there are no other names for the two signs above, *pilcrow* ought to be rehired.

pile on the agony. An old phrase, not much used anymore, that means "theatrical or extremely exaggerated emotional behavior," as in, "No one piles on the agony like she does; she belongs on the stage." Also *pile up the agony*.

pile Pelion on Ossa. Homer writes in the *Odyssey* of how when the giants Otus and Ephialtes attempted to climb to heaven and overthrow the gods they tried to pile Mount Pelion on Mount Olympus and Mount Ossa on Mount Pelion for a ladder. The giants were destroyed by Zeus, but their plan became synonymous for piling one difficulty on another until a whole plan becomes ridiculous. The two wooded mountains near the coast of Thessaly are now known as Mount Zagora and Mount Kissavo, but no one says "to pile Zagora on Kissavo."

pilgrim. As a name for the early settlers in America, *Pilgrims* is little more than a century and a half old, having come into common usage in about 1840. According to George Williams's *Saints and Strangers* (1945): "The Pilgrims had no name for themselves as a group. For generations they were known to their descendants merely as the Forefathers, a name preserved in the only holiday officially dedicated to this memory, Forefathers' Day, tardily instituted in Massachusetts in 1895 . . ." Williams adds that the name "Pilgrims" for the "Forefathers" or "First Comers" was first employed by Governor William Bradford in 1630 when he used the phrase "they knew they were pilgrims" in his manuscript chronicle *Of Plimoth Plantation*, which wasn't widely available for more than two centuries. The story of the 102 Pilgrims who founded Plymouth Colony is too well known to bear repeating here, except to say that these Pilgrim Fathers landed on Plymouth Rock instead of in Virginia, as planned, because bad weather had kept them too long at sea and they had run out of beer, among other supplies. The word *pilgrim* means a wanderer, a traveler, a person who journeys a long distance to a sacred place. It has an interesting history, coming from the Latin *peregrinus*, meaning a stranger. This came into English as *pelegrin* in about 1200, but dissimilation and slothful pronunciation over the years eventually made *pilgrim* out of *pelegrin*. Thus, the Pilgrim Fathers, a proverbially industrious group, take their name from a lazy man's word.

pill. See BITTER PILL TO SWALLOW.

pillarbox. See MAILBOX.

pillar to post. At first this expression was *from post to pillar*, a figure of speech drawn from the old game of court tennis in the 14th century or earlier. Court tennis, played indoors,

differed in many ways from today's lawn tennis, but volleys were even then crucial to the game. One popular volley was from post to pillar, from a post supporting the net or rope to one of the rear pillars supporting the tennis gallery. Apparently players commonly sustained long volleys between these two points, for by the early 15th century Englishmen were regularly using the expression *from post to pillar tossed* outside the game of tennis. In another century the phrase had been reversed to *from pillar to post*, but it still meant the same: "to and fro, hither and thither, from one thing to another without any definite purpose." Modern use of the expression in the sense of going monotonously or fruitlessly from one thing to another is just a logical extension.

pillow book. Little is known about the Japanese court lady Sei Shonagon (b. 965) except that she served as lady-in-waiting to Empress Sadako and wrote *The Pillow Book* (*Makura no Soshi*), which is the first example of the Japanese genre called *zuihitsu* (random notes), a huge collection of notes, lists, descriptions, sketches, and anecdotes. Its title is probably a generic term describing an informal book of notes people recorded their thoughts in before retiring and kept in the drawers of their wooden pillows.

pill-pusher. See BITTER PILL TO SWALLOW.

pilot weed. See COMPASS PLANT.

Pimm's. The gin-based British drink was named for London bartender James Pimm after he invented it in 1840. There are now several variations on the original, which is called Pimm's No. 1. All are often mixed with ginger ale or lemonade and served with ice.

pimp. Samuel Pepys (pronounced *Peeps*) was the first to record *pimp*, for "a procurer," in his famous *Diary* (1666). The word possibly derives from the French *pimpant*, "seductive," which may come from the Latin *papare*, "to chirp." For the unlikely connection between procuring and chirping, see CHIPPY. In Britain today a pimp can also be a bundle of kindling used to get a fire started. A *pimping shed* is simply a woodshed. In South Africa a *pimp* is black slang for any spy or informer, in or out of prison.

pince-nez. Since about 1875 eyeglasses that are clipped to the nose bridge have been called *pince-nez*. They take their name from the Old French *pincier*, pinch, plus *nez*, nose.

pinch a loaf. A euphemism for the euphemism *to have a bowel movement*. It is used in the film *The Shawshank Redemption* (1994), based on Stephen King's story of the same name, but I haven't seen it recorded elsewhere in any slang dictionary.

pinch an inch. A term used by American runners since the beginning of the running craze, starting in about 1975, for the amount of flesh that should be on a runner's frame. Anyone who can pinch more than an inch of flesh in any one place on his/her body, according to this extreme formula, is not in good condition.

pinchbeck. Watch and toy maker Christopher Pinchbeck (1670–1732) died the same year that he introduced the pinchbeck alloy of 15 percent zinc and 85 percent copper, a gold-colored alloy for the imitation gold watches and jewelry he sold in his shop on London's Fleet Street. Pinchbeck did not live to see pinchbeck become another word for "false or counterfeit, a cheap imitation." The term caught on probably because its first syllable suggests "cheap," which the alloy was, compared with gold, but whatever the reason, the word has survived. Anything spurious but resembling the genuine article is still called pinchbeck.

pinch hitter. An old story has the 1905 New York Giants manager John J. McGraw using one Sammy Strang as baseball's first *pinch hitter* and apparently inventing the term himself. However, this phrase—for a player who bats in a pinch for someone else—had been recorded three years earlier. The expression has wide general use for any substitute or understudy in any endeavor.

pineapple. The Spanish conquistadores named this fruit *piña* because of its pine-cone shape and the English translated *pina* to *pineapple*, which they also called the cones of the pine tree.

Pine State. A nickname for Georgia first recorded in 1843. Georgia has also been called the Cracker State (see CRACKER), the Buzzard State, the Goober State (after its peanut crop), the Peach State, and the Empire State of the South. See EMPIRE STATE.

pine-tree shilling. One of the earliest coinages in America, a Massachusetts coin with a pine tree as an emblem first issued in 1652. In his story "The Great Carbuncle" (1837) Nathaniel Hawthorne wrote of "a weighty merchant and selectman . . . Master ("Ichabod") Pignort [who] was accustomed to spend a whole hour after prayer time, every morning and evening, in wallowing naked among an immense quantity of pine-tree shillings."

Pine Tree State. A nickname for Maine dating back beyond its first recorded use in 1860. Maine, also called the Lumber State, has a pine tree on its state seal.

Ping-Pong. Ping-Pong is a trademark name used for table tennis, and was probably derived from the sound of the ball being hit during the game. *Ping-pong* also means "to move back and forth rapidly from one thing to another," as in "He was ping-ponged from one doctor to another," this suggested by the rapid volleys in the game.

pink. Several plants of the *Dianthus* genus, including the carnation, are popularly called pinks, because the edges of the flower petals are pinked or notched, as if clipped by pinking shears. The designation has nothing to do with color. See CARNATION.

Pinkerton. When he came to America from Glasgow in 1842, Allan Pinkerton opened a cooper's shop in West Dundee, Illinois, his shop becoming a station in the underground

railroad smuggling slaves north. Later he captured a ring of counterfeiters, this leading to his appointment in 1850 as the first city detective on Chicago's police force—a one-man detective squad. In Chicago Pinkerton also organized a detective agency to capture railway thieves, which became Pinkerton's National Detective Agency in 1852. But he achieved national prominence in February 1861, upon foiling a plot to assassinate President-elect Lincoln when his train stopped in Baltimore on the way to his inauguration in Washington. Pinkerton died in 1884, aged 65, but his sons Robert and William continued the agency. It is from this period on that Pinkerton's was chiefly engaged by industry as spies and strikebreakers, earning the bitter condemnation of labor, especially for its role in suppressing the Homestead Strike in 1892. A *Pinkerton* or *Pinkerton man* came to mean either a private detective or, in the opinion of many working men, something lower than a fink. In 1937 the agency was subjected to congressional investigation during industrial disputes over the rededication of unions. See FINK; PRIVATE EYE.

pink slip. No one knows why *pink slip* is synonymous with the discharge notice a worker gets when he is fired. The best guess is that the term originated in the late 19th to early 20th century when some unknown company issued pink slips to discharge employees; perhaps the practice then spread to other companies.

pinky; pinkie. We find this word for the smallest and last finger on the human hand first recorded in 1808, when it was defined as a term used by children that derives from the Dutch *pink*, small. It is also called the *little finger* and was once called the *little man*. See THUMB.

pin money. Metal pins, invented in about the 14th century and later manufactured by a monopoly under grants from the British Crown, were so costly and scarce at first that there was a law forbidding their sale except on the first two days of January in every year. About that time of year husbands customarily gave their wives pin money to buy all the pins they would need for the months ahead. When pins became less expensive, the expression *pin money* was still used for this annual stipend and came to mean a personal allowance given to a wife by her husband. These were not the pins with solid heads that we know today (which were first called Poughkeepsie pins because they were invented in that New York city in 1839), nor safety pins, which were the brainchild of another American 10 years later.

pinnacle. This little, light, usually two-masted sailing vessel takes its name from the Latin *pinus*, "pine tree," which it was generally made of in days past. The word is recorded as early as 1521.

pinstriper. There is no truth to the old story that the New York Yankees adopted their pinstriped uniform because it made the big-bellied Babe Ruth look thinner. The team was actually wearing pinstripes years before Ruth had his problems with hot dogs, soda pop, and beer. The Yankees are sometimes referred to as the Pinstripers, though nowhere nearly so often as they are called the Yankees, Yanks, Bronx Bombers, and even

the Bronx Zoo. In baseball's early days they were first called the Highlanders and then the Hilltoppers.

Pinteresque. A word honoring British playwright Harold Pinter (b. 1930), who won the Nobel Prize in literature in 2005. Wrote Sara Lyall in the *New York Times*: "So precise and pared down is his prose, so artful his use of pauses and omissions to invoke discomfort, foreboding and miscommunication that he has his own adjective, *Pinteresque*, signifying a peculiar kind of atmospheric unease."

pinto. A spotted horse or pony. The word, first recorded in 1860, is from the Spanish for "spotted" or "painted." A cowboy who rides such a horse often calls it "Paint."

pinup girl. During World War II, U.S. servicemen commonly decorated barracks walls with pictures of scantily clad film stars, the most popular of which showed Betty Grable wearing a one-piece bathing suit (see also GRABLE-BODIED SEAMEN). This practice led to the term *pinup girl*, which is still occasionally used for any attractive woman, while *pinup* alone can refer to an attractive woman or man.

pin your ears back. A phrase threatening physical or verbal violence on someone: "That wise guy should have had his ears pinned back long ago." Pinning its ears back by tying them with a cord and stick that could be controlled was apparently a method used to break wild horses in the 19th-century American West. The phrase may have then become a threat to other cowboys and finally to anyone at all. However, I can find no well-documented place of origin for the expression and one source traces its first recorded use to the 1930s.

piou-piou. The name in French slang for an English infantry soldier during World War I. This historical term was replaced by *poilu* after the war. Also called *Tommy* or *Tommy Atkins*.

pip. *Pip* is a shortening of *pippin*, which is used for an apple of good quality, hence the phrase *It's a pip!* The English word has its immediate roots in the French *pepin*, which probably comes from the French *petit*, "small." Sometimes pip is used as a nickname for a small boy, as it was for the cabin boy in Herman Melville's *Moby Dick*. See also APPLE.

pipe-burial. An unusual custom practiced in England by the Romans that was intended to bring one of the joys of life to the dead. As the *OED* defines it, *pipe-burial* refers to "a burial in which a pipe (usually of lead) passes from the coffin or tomb to the surface of the ground to permit the pouring of libations."

pipe down. *Pipe down* began life as a dismissal command given a ship's crew to go below decks after a task was completed or a formation had ended. This command was transmitted by the bos'n's pipe or whistle, on which the bos'n could sound notes representing many orders. *Pipe down* came in the late 19th century to mean "shut up," because it got much quieter on deck when the crew obeyed the order to go below and because the phrase *pipe down* itself suggested someone piping down or making less noise.

pipe dream. The opium pipe is the source of this phrase, for “a fantastic notion or story, an illusion.” First recorded in Wallace Irvin’s *Love Sonnets of a Hoodlum* (1901), the term probably dates back to the 1890s. The expression *pipe*, used by O. Henry, among others, once meant the same.

pipeline. The first pipelines to convey oil were conceived in about 1862 and with them came the obvious word describing them, which has over the years also become slang for a rich source of anything valuable. The best-known oil pipeline of the millions of miles of them in America is The Big Inch, which is actually a 24-inch pipe that conveys oil 1,341 miles from eastern Texas to New Jersey.

piping hot. An old phrase said of very hot food or drink—as hot as boiling water that pipes or sings in the kettle.

pipsqueak. By 1900 American hoboes were contemptuously calling young punk hoboes pip-squeaks, perhaps from the little pips on playing cards, or the pips that were small seeds, and *squeak* for their squeaky adolescent voices. Although these derivations are only guesses, *pipsqueak* did mean a little, worthless, insignificant person in hobo talk, whence it passed into general use. The term passed into British English by 1910, and during World War I, British soldiers called a small, high-velocity German artillery shell a pipsqueak. Use of *pipsqueak* for the shell reinforced the earlier meaning, which became a common expression on both sides of “the big pond,” as the Atlantic still was called at the time.

piranha. The piranha takes its name from a Tupi Guarani Indian word meaning “tooth fish,” and it couldn’t be more aptly named. Piranha teeth are formidable indeed—razor sharp, triangular affairs that with each bite can sever a chunk of flesh the size of a quarter as cleanly as a scalpel. In 1976, when 38 Brazilians were skeletonized by a school of piranhas after a bus overturned in the Urubu River, the world knew without a doubt that these vicious little fish were indeed man-eaters. Americans had suspected as much since 1914, when Teddy Roosevelt came home from a hunt with an incredible tale about a man and his mule stripped to bones in moments while fording a Brazilian stream. Ever since that time, the piranha has been featured as the villain in as many jungle films as the crocodile or the boa constrictor.

pirates. Pirates, who have been so called since the 14th century, take their name from the Latin *pirata*, meaning “to attack.” They are sea raiders who operate without any authorization except that of their own greed. See BUCCANEER; PITTSBURGH PIRATES; PRIVATEER; SWASH-BUCKLER; WALK THE PLANK.

pirogue. The Caribs, a fierce Caribbean tribe, called their dugout canoe *piraguas*, a word that French explorers changed slightly to *piroque* in the 17th century and passed on to the English, who called the canoe a *pirogue*.

piss. *Piss* is a fine old echoic word, echoing the sound of a bladder being voided, and is similar to several foreign words

etymologically unrelated but meaning the same, including the Hungarian *pisalni*. The English word derives from the Latin *pissare*, “to piss,” just as does the Italian *pisciare* and the French *pisser*. “Urinate” derives from the Latin *urinare*, which is what the cultured Romans called the same thing that the common man called *pissiare*.

pissabed. Dandelions were called *pissabeds* because of the old folk belief that they made people urinate, a belief perhaps associated as much with their golden color as their diuretic property. Gerard recorded the word first, in his 1597 *Herbal*.

pistil. Apothecaries in ancient times used a club-shaped instrument called the *pistillum* to pound herbs and drugs in their mortars. Eventually, the name of this instrument was abbreviated to pestle, but when botanists named the similar-shaped female organs of flowers after it, they more carefully followed the old Latin name and called the female organs *pistils*.

pistol. The *pistolet* was originally a 15th-century dagger made in Pistoia, Italy, from which it took its name. Later small guns were made in that metalwork and gun-making center and were given the name *pistolet*, too, this subsequently shortened to *pistol*. The word has several meanings besides its use as a synonym for a hand gun. Among waiters and counter-men in New York delis, *pistol* can mean pastrami, as when a waiter shouts to the cook, “One pistol on rye.” Among Maine lobstermen *pistol* means a lobster with only one claw or none at all.

pistol-whip. This was not originally a gangster expression. *Pistol-whip* is first recorded in the U.S. West in 1940 where it meant to beat someone with the barrel, not the butt, of a gun—it took too long to get a grip on the barrel in a fight.

pit. As the term for the stone of a fruit, *pit* isn’t of ancient origin, as one would suppose. It is an Americanism that came into the language midway into the 19th century from the Dutch *pit*, meaning the same, though it may have been in New York State use long before this.

pit bull. Dogs of several different breeds—all crosses of bulldogs and terriers—are called pit bulls. So is a mongrel-type dog conforming to these general types. All were originally bred for the “sport” of bull-baiting (see BULLDOG) and are now used in the cruel blood “sport” of dogfighting. In a small pit or arena, the dogs are paired against each other in a fight to the death while spectators bet on the contest. Such vicious and fearless dogs, noted for their powerful, tenacious bites, have also been used as personal guard dogs in recent times and caused much trouble. One study shows that of 29 people killed by dogs in the U.S. over a four-year period, 21 were victims of pit bulls. Lately, the term *pit bull* has been extended to mean any very aggressive, mean person who is looking for a fight.

pitch. Every sales pitch, or presentation, harks back to the spiel of a carnival pitchman in the early years of this century. The pitchman, in turn, got his name from the pitch, or stand, that he worked from. And *pitch* itself originally meant land se-

lected by a settler in colonial America, the expression recorded as early as 1699. Long before *to make one's pitch* meant to give a sales talk, it meant to settle down on one's land.

pitch, pitch-black. The dictionary definition of *pitch* is “any of various thick, dark, sticky substances obtained from the distillation residue of coal tar, wood tar, or petroleum and used for waterproofing, roofing, caulking, and paving.” But there are many other uses for the word *pitch*. For example, *pitch-black* and *pitch-dark* mean extremely dark, each expression commonly used today. *Pitch and pay* means to pay up immediately, while *to pay a ship* means to cover it with pitch.

pitched battle. Pitched battles were first carefully planned, even gentlemanly, battles where the battleground was chosen beforehand and tents were pitched near it by the opposing armies at least several days before any fighting took place. They were called such as early as 1549, in contrast to skirmishes or chance encounters, but this term for a planned battle, where complete preparations have been made, came to mean a battle in which the opposing forces are completely and intensely engaged, this latter meaning far more common today.

pith. Well known as the part of the stem of a plant, but figuratively it is used to express strength and courage.

Pitman. Sir Isaac Pitman devised his shorthand system in 1837, basing his simpler phonetic shorthand on an earlier method. The former clerk and schoolteacher lived to see almost universal acceptance of his invention, which his brother Benn helped popularize on the other side of the Atlantic when he immigrated to the United States in 1852 and established the Phonographic Institute in Cincinnati. The phonographer died in 1897, aged 84, when the even simpler GREGG SYSTEM was replacing Pitman.

the pits. See IT'S THE PITS.

pittance. During medieval times pittances were rather large bequests to the church, usually to religious orders, their name deriving ultimately from the Latin *pietas*, “piety.” Over the years, however, these traditional bequests became smaller and smaller, a pittance finally becoming synonymous with a meager amount.

Pittsburgh, Pennsylvania; Pittsfield, Massachusetts; Pitt's pictures. The great English statesman William Pitt, the Elder (1708–78), is one of the few people to have two U.S. cities named after him. (Pittsburgh, however, was named after Fort Pitt, which had been named in his honor.) Pitt, the Younger (1759–1806), is remembered for the historical Pitt's pictures, blind windows that were blocked up because as prime minister he augmented England's “window tax” in 1784 and 1797. Rather than pay the tax, people boarded up their windows.

Pittsburghese. Pittsburgh, often called Pixburgh and D'burg, doesn't seem the ideal place for an extensive regional vocabulary, but the Steel City has one of the most colorful. For example, *yinz* is the Pittsburgh way to say *y'all*, and a *yinzer* is a *Pix-*

burger with a strong local accent. Among others, *neb* means to stick one's nose in somebody else's business, a *poke* is a bag, *gum band* is a rubber band, *sputzie* is a sparrow, a *roller* is a ruler, and *Mon* is the Monongahela River. See Y'ALL.

Pittsburgh Pirates. The baseball team takes its name from the nickname of its first president, J. Palmer “Pirate” O'Neill, who was so called because he signed a player from another club, pirating him away rather unscrupulously. See PIRATE.

Pity the poor sailor on a night like this! A saying à propos of a stormy night, this expression dates back to late-19th-century England and is still heard today.

pixilated. Although the British have used the term *pixy-led* for “enchanted by a pixie or fairy,” *pixilated* is an Americanism dating back to about the mid-19th century. A combination of *pix(ie)* and *(tit)illated*, it means slightly eccentric, or amusingly whimsical, silly. The word also has the meaning of “drunk” in American slang.

pizza. One of America's favorite foods, pizza is also one of its most recent treats, the word *pizza* not recorded in the U.S. until 1935. Pizza's ultimate origins are unknown. One theory holds it comes from Italian *pizza* (or *pitta*) for the same, with the Italian word deriving from an unknown Greek word. Another theory has *pizza* coming from Italian *pizzicare*, “to pinch or pluck,” in reference to the making of a pizza pie. The term *pizzeria* was first recorded in 1943, while *pizza parlor* appeared in print about five years later. In some regions, including New York, *slice* is the word to use when ordering a piece of pizza. Other places use *piece* exclusively. A *Neopolitan* pizza is the classic thin-sliced pizza, while a *Sicilian* pizza is a square, thick pie. In England a pizza parlor is called a *pizza bar*.

pizzaz. Energy, zest, power, and vitality are suggested by this invented word whose inventor is unknown and whose origins are unclear. *Pizzaz*, first recorded in 1937, is still heard today. Some word detectives say it was coined to capture the feeling of zestfulness, while others derive it from the older expression *piss and vinegar*, as in “He's full of piss and vinegar.”

a plague of mice. According to a tradition preserved in the *Magdeburg Centuries*, in the 10th century Archbishop Hatto of Mainz, a noted statesman “proverbial for his perfidy” was devoured by mice. In 1970, so the story goes, there was a great famine and Hatto, councillor of Otho the Great, decided that there would be more food for the rich if he got rid of the poor. Assembling all the poor in a great barn at Kaub he burned them alive, remarking, “They are like mice, only good to devour the corn.” The legend claims that “God sent against Hatto a plague of mice,” and to escape the mice he retreated to a town on the Rhine near Bingen. But the mice army swarmed upon his tower by the hundreds and thousands and “at last he was miserably devoured.” A tower still stands near Bingen today and is called the Mouse Tower. In reality, however, it was built by Bishop Siegfried 200 years after Hatto died, as a toll house for the collection of duties. The German word *Maut* means “toll,” while the German mouse is *Maus*, the similarity of the words probably giving rise to the tradition of the tower.

A plague on both your houses! Shakespeare probably coined this curse in *Romeo and Juliet* (1595) when Romeo's friend Mercutio is killed by Tybalt of Juliet's Capulet family. As he lays dying, he cries out, "A plague o' both your houses!" referring to both the Capulets and Romeo's Montague family. Today the words are often said by voters of America's two major political parties.

plain as the nose on your face. Shakespeare used the gist of this expression in *Two Gentlemen of Verona* (1591), but the full phrase wasn't recorded until 1655 in a work by British author Henry More: "As plain as the nose on a man's face." This phrase has been commonly used to describe anything that is perfectly obvious, the nose standing out farther than any other feature of the face.

plain brown wrapper. The designation *plain brown wrapper*, often used to describe how sexually explicit material will be sent through the mail, has its origins in the mail-order wars of the 1890s and at first had nothing at all to do with sex. Mail-order companies like Montgomery Ward (the beloved "Monkey Ward" of rural dwellers) and Sears, Roebuck sent their catalogs and goods in unmarked "plain brown wrappers" to protect customers from the wrath of local merchants and their allies, who wanted to see the mail-order firms go out of business from the time Aaron Montgomery Ward founded the first great national mail-order company in 1872.

plain sailing. In technical nautical language *plane sailing* means determining a ship's position on the assumption that the earth is flat and the ship is on a plane; this is a simple, straightforward method of computing distance. But in the 19th century, the words entered general use as an expression meaning "perfectly straightforward action, a course of action that there need be no hesitation about." The word *plane* came to be spelled *plain* and has remained that way ever since.

planet-struck. This medical term for "a tree struck by blight" stems from the old belief that malignant aspects of the planets caused death and suffering on earth. When plants and animals died or fell ill inexplicably they were said to be planet-struck. The term is first recorded in 1600.

plankton; plankter; nekton. Because it is the ocean's basic food, plankton is often called the pasture or grass of the sea. The word derives from Greek *planktus*, meaning "wandering or drifting." The term *plankton* collectively describes all the one-celled drifting life of the oceans, as opposed to *nekton*, which refers to strong swimmers such as fish, crabs, and whales (and even man in some cases). Possibly the most ingenious planktonic creature is the little animal called *Oikopleura*, which builds itself an underwater "glasshouse." The *Oikopleura* creates an envelope around itself, inflating it with a flow of water by moving its tail. This razor-thin jelly house traps the creature's food, water flowing through openings at both ends and being filtered through mesh nets that filter out minute plankton for *Oikopleura* to eat. Each resourceful *Oikopleura* plankter (the name for individual planktonic organism) has an emergency escape hatch at the rear of the house that is used when the fine-meshed nets become clogged and it has to leave home to build a dwelling elsewhere.

plant; plantation. Seeds and saplings were tucked into the soil and then stamped down into the ground with the sole of the foot by early Roman farmers, just as they are by gardeners today. From this process grew the word *plant*, which derives from the Latin *planta*, for "sole of the foot." The Latin word *plantatio*, "propagation of a plant, as from cuttings," is the source of our word *plantation*, used to describe a large estate or farm, or any area under cultivation. *Plantation* used in the sense of the early American "Plimoth Plantation" extended the word to mean the planting of a colony in a new land or country. See also PLANTAIN; PILGRIM.

plantain. One of our worst lawn and garden weeds, plantain takes its name from its leaves, which resemble the sole of the foot (the Latin word for "sole of the foot" is *planta*). The banana-like fruit called plantain doesn't share this derivation; its name is a corruption of the native West Indian word for the fruit. The eastern plane tree, however, does have broad leaves and takes its name from the Greek *plantanos*, "broad." See PLANT.

planter's wart. A good example of folk etymology (popular etymology as it is sometimes called) which, as Tom McArthur states in *The Concise Oxford Companion to the English Language* (1996) is the thoughts of "non-academic people about the origins, forms and meanings of words, sometimes resulting in changes to the words in question." Thus, the term *planter wart*, a wart on the sole of the foot (*plantar*, Latin for sole of the foot) was changed by folk etymology into *planter's wart*.

plantocracy. A historical name, based on *aristocracy*, for the class of wealthy Southern planters before the Civil War, especially in South Carolina, where their huge plantations grew cotton, indigo, and rice as their major crops. Many of the "plantocracy" or "planting aristocracy" made their money on rice, a packet of which Captain John Thurber, a Yankee shipmaster, had presented to one of the early settlers on putting into Charleston Harbor late in the 1680s. The settler planted this Madagascar rice rather than dining on it, and after it sprouted, he gave seeds to his friends, who in turn raised rice on their fertile land. Charleston and the Carolina Low Country soon became the "Rice Coast," rice fortunes building Charleston and marking the beginning of a plantocracy considered by many at the time to be the New World aristocracy.

plaster of Paris. Calcined gypsum has had this name since the 14th century, when English artisans imported what they thought was the best quality gypsum from Montmartre, then outside Paris. Today the name is used no matter where the plaster of Paris comes from.

platonic love. Such love, devoid of anything sexual, was first described by Plato in his *Symposium*, where he tells of the pure love of Socrates for young men, a love unusual in its day. Later, in about 1626 in England, the Latin *amor Platonicus* was translated and applied to similar love between man and woman, the words often heard today in phrases like *platonic love*, a *platonic relationship*, and the like. The rare *platonic* is simply talk between *platonic lovers*.

play a hunch. Gamblers once believed that rubbing a hunchback's hump brought good luck. Although the superstition is fortunately all but dead, the expression *to play a hunch*, "to have a lucky notion or premonition," is still frequently heard. The belief that deformed people have special powers or links with the devil is an ancient one. Hunchbacks in particular were believed to share with the devil the ability to see into the future.

play ball. *Play ball* has come to mean to cooperate or collaborate, and also to begin. The words are from baseball, where *Play ball!* has been the plate umpire's command to begin play since at least 1901, when the term first appears in print.

play both ends against the middle. In faro, America's favorite game after poker in the 19th century, *playing both ends against the middle* described the way the dealer provided for a double bet by a player. The phrase came into general use soon after, meaning to use each of two sides for your own purpose.

playboy. A man, usually rich, devoted to the pursuit of pleasure. The term was not invented by Hugh Hefner with his magazine of that name. *Playboy* actually dates back to about 1620 in England. The word fell into disuse for a long period of time and was revived in New York City in about 1900 as a synonym for a bon vivant, a man about town.

play-by-play account. A detailed, sequential account of any event is called a play-by-play account or just a play-by-play. The term has been traced back to 1912 in baseball where it originated; radio play-by-play broadcasts of baseball games popularized the phrase.

play catch-up ball. *Play catch-up ball* means to play desperately toward the end of the game when one is losing. Common in the last 30 years or so, the phrase was suggested by the last-minute efforts of college football teams to pull victory from the jaws of defeat, to catch up with their opponents by throwing long, desperate passes (often called "Hail Marys"). The phrase has wide general use, especially when companies approach the end of each fiscal year.

play close to the vest. A cautious cardplayer often holds the cards close to the vest or chest to conceal them from possible cheaters. This old practice suggested the expression *play close to the vest* or *chest*, meaning "to be secretive or uncommunicative about something."

play fast and loose. This expression for "not being trustworthy or honest, promising one thing and doing another," probably derives from an old con game played by sharpsters at country fairs. In this obsolete game, its exact details long lost, the operator arranged a belt so that a spectator believed he could insert a skewer through its intricate folds and fasten the belt to the table. But the operator had cleverly coiled the belt so that it only appeared to have a loop in its center and he always pulled it loose from the table after the dupe thought he had skewered it. Metaphorical use of the phrase *play fast and loose* has been

traced back to 1547, so the con game was probably being played before the 16th century.

play footsie. Since at least World War II, *play footsie* referred to expressing amorous interest in someone by furtively rubbing a bare foot against that person's body. It can also mean to pass signals under a card table to a partner and to cooperate or curry favor with someone in a sly, devious way. "Whatsa matter with ya, playin' footsie with the Commies," Thelma Ritter says in the movie *Lo* (1946).

play for fun. This term meaning to play for the enjoyment of a game, not for money or with the goal of winning, was originally *to play for love*. It first referred to games of cards played without stakes, the words probably British in origin and dating back to the 19th century. See also AMATEUR; PLAY FOR THE LOVE OF IT.

play for keeps. No one really knows the age of this expression, from the game of marbles. It refers to a marbles game in which players keep the marbles they win; they don't give them back to the loser. In general slang, *to play for keeps* has come to mean to be intent and serious to the point of callousness or to play rough. See PLAY HARDBALL.

play for the love of it. There's nothing new about this expression, meaning to play a game without stakes, for the pleasure of playing. It has its origins in Samuel Butler's satire *Hudibras* (1678), which tells of those who "play for love and money, too."

play hardball. Baseball was popularly called hardball in the early days of the game. A change in the rules—so that runners were tagged to be declared out rather than being hit with the ball—prompted a change from the soft ball formerly used to a hard one. There was never an official game called hardball, but, at least from the 1930s to 1960s, the term was common among kids in the Northeast and other areas to distinguish baseball from the game called softball. Softball is played with a larger ball (not nearly as hard on the hands for kids catching barehanded) that can't be hit as far; it is also officially played on a smaller field and the ball is pitched underhanded. Perhaps the term *hardball* we now use was born in the sandlots, but that is not certain. In any case, it gave birth in about 1944 to the expression *play hardball*, which means to act or work aggressively, competitively, or ruthlessly, to PLAY FOR KEEPS. Demeaning as it is to softball players, who can be just as serious and competitive as their "hardball" compatriots, the phrase lives on.

play hooky. There is no widely accepted explanation for the word *hooky*, or *hooky*. An Americanism that arose in the late 19th century, when compulsory attendance laws became the rule in public schools, *hooky* may be a compression of the older expression *hook it*, "to escape or make off," formed by dropping the *t* in the phrase. Or it could be related to the old slang word *hook*, meaning "to steal": kids stealing a day off from school. *Hooky* has so often been associated with going fishing that it may even owe its life to *getting off the hook* the way a fish can; anyway, school is often as insufferable as a hook to schoolchildren and many kids squirming in their seats all day look like they are on a hook.

playing chicken. See CHICKEN.

playing the air guitar. Miming the joyous playing of an imaginary guitar while listening to rock music. The first print use of the phrase appeared in the June 6, 1982, *Washington Post*, but it is certainly older. In the movie *Risky Business*, according to *Newsweek* (6/9/86), Tom Cruise famously “played air guitar in his underwear to ‘Old Time Rock & Roll.’”

playing the race card. Claiming that one is being persecuted solely because of one’s race. The term is a recent one, probably 10–20 years old.

playing to the haircuts. An expression used by performers for the closing act of a vaudeville bill. Such an act would still be playing as the audience was leaving—with the backs of their heads facing the performers.

play one’s cards close to the chest. To act cautiously concerning one’s cards, not to reveal one’s plans, a strategy employed by many card players.

play on words. See PUN.

play penny pool. Anyone who deals in petty, trivial matters can be said to play penny pool, like a pool player who gambles for pennies on the outcome of the game or on a shot in the game. The expression is an Americanism dating back 50 years or so.

play possum. *Opossum* is one of the earliest of Americanisms. Borrowed from Indian language, it made its first appearance as *apossoun* in 1610, was changed to *opassom* a few years later and within a century was being written as *opossum* and its abbreviated form *possum*. The animal, which Captain John Smith described as having “an head like a swine, a taile like a rat, and is of the bigness of a cat,” was known from the earliest days for the way it feigned death when threatened with capture. Trapped possums close their eyes and lay completely insufferable limp and no matter how much abuse they are subjected to, will only become active when thrown into water. Hunters knew this from the earliest days and so although the expression *play possum*, “pretend or deceive,” was first recorded in 1822 the phrase is probably much older.

play the dozens. To insult one another in a rapid exchange of insults, a phrase used by both whites and blacks, though it seems to have originated with blacks in the American South toward the end of the 19th century.

play the field. *Play the field* means to have many sweethearts, many dates, with no serious attachment. It was originally a 19th-century British racing term meaning to bet on every horse in a race except the favorite.

play the market. This expression originated in the Roaring Twenties, or the Golden Twenties as they were known on Wall Street. Other expressions that were born in the 1920s include *moneybags* for a rich person, *good times*, and finally *Black*

Thursday, October 29, 1929, the day of the stock market crash, and the start of the Great Depression.

play the sedulous ape. Robert Louis Stevenson originated the phrase in a charming essay in which he wrote: “I have played the sedulous ape to Hazlitt, to Lamb, to Wordsworth, to Sir Thomas Browne, to Defoe, to Hawthorne, to Montaigne, to Baudelaire, and to Obermann. . . . That, like it or not, is the way to learn to write.” *Sedulous*, from the Latin *sedulus*, “careful,” means diligent and persevering in application or attention, so the phrase describes anyone who slavishly imitates somebody.

play to the gallery. Like *PLAY TO THE GRANDSTAND*, this saying means “show off.” It is the older phrase, having its origins in the 18th-century English theater, where actors overacted their roles and raised their voices in order to be appreciated by the larger audience up in the gallery beyond the orchestra.

play to the grandstand; grandstanding. *Play to the grandstand* is a baseball term first recorded in 1888 and describing a show-off player who tries to make difficult catches, or make easy catches look difficult. Within a few years such players were called grandstanders, and the term was soon applied to a show-off in any endeavor.

play with loaded dice. Play with loaded dice and nothing is left to chance. Dice can be loaded with lead or other weights in such a way that a certain number will always or frequently come up. A gambler can then use them to his advantage by slipping them into a game and throwing all sevens, or by weighting them so that another player will shoot “craps” (“snake-eyes”: two ones; or “boxcars”: two sixes) on each roll. The practice is as old as the game of dice, but the expression seems to be a 20th-century Americanism.

play without a full deck. This expression, and its variant *playing with half a deck*, dates back to the 1960s, when it was first used to mean someone lacking in intelligence; that is, not having the usual allotment of brains. Besides having the obvious connection with a deck of cards, the phrase owes something to the earlier term *not all there*, for “stupid,” or mentally defective, attested to as early as 1821. *Two sandwiches short of a picnic* is a synonym, as is *two bricks shy of a load*. See also *Nobody Home*.

plaza. A word widely used throughout the United States for a public square or open space; first recorded in the Southwest, it is an American borrowing of a Spanish word meaning the same.

pleach. An ancient, useful word that lives on mainly to describe a gardening method of pruning and training trees or bushes to make a hedgelike wall. Pleached alleys, rows of pleached (or plashed) trees on each side of a path, are among the most imposing garden features, one of the finest examples being the alley made of pleached London plane trees at Vienna’s Schonbrunn Palace. But *pleach*, which means fold or intertwine, was mainly a poetic word in the past, used by Tennyson

and Swinburne, among others. Shakespeare wrote in *Antony and Cleopatra*:

Would'st thou be window'd in great Rome and see
Thy master thus with pleach'd arms, bending down . . .

pleased as a basketful of possum heads. Why does this Southern expression mean “very pleased indeed”? Apparently the words capitalize on the possum’s proverbial grin, or what seems to us a grin—a basketful of which would seem exceedingly pleased.

please tell me you’re Republicans. See THE GREAT COMMUNICATOR.

plentiful as blackberries. See BLACKBERRY.

plimp. In the early 1980s *Time* magazine predicted a new verb *to plimp*, meaning “the participatory journalism . . . in which the amateur ventures lamblike among the wolves of professional sport—and then writes about how to be a lamb chop.” Said verb is based on the name of American author George A. Plimpton, who wrote a number of books about his adventures playing with professionals in various sports. The eponymous word isn’t yet included in any major dictionary, but it has entered the language, having been noted in several books besides this one.

Plimsoll mark; plimsolls. The *Plimsoll mark* or *line*, adopted in 1876, was named in honor of maritime reformer Samuel Plimsoll’s suggestion that every vessel have a load line, a mark that indicates the limit to which a ship may be loaded. Located amidships on both sides of the vessel, it is a circle with a horizontal line drawn through it showing the water level at maximum permitted loading. This innovation reformed shipping all over the globe, making Plimsoll’s name world famous. His name is also remembered by *plimsolls*, rubber-soled cloth shoes or sneakers with the rubber extending about halfway up the shoe, the line between cloth and rubber somewhat resembling a Plimsoll mark.

plosh to a callow thistle. Librettist Sir William Schwenck Gilbert of Gilbert and Sullivan fame outraged fellow members of London’s Garrick Club by making fun of Shakespeare. “All right then,” he said when they strongly protested, “what do you make of this passage: ‘I would just as lief be thrust through a quickset hedge, as cry “plosh,” to a callow thistle.’” “Why that’s perfectly clear,” one club member said, defending the Bard. “It just means that the bird lover would rather get himself all scratched up in the thorny bush than disturb the bird’s song. What play is the passage from?” “No play,” said Gilbert. “I made it up—and jolly good Shakespeare, too.”

Plot hound. For over a century the Plotts of western North Carolina bred this bear-hunting dog named after their family. The courageous, fierce dog is said “to have bear blood in him.”

the plot thickens. “Ay, now the plot thickens,” wrote George Villiers, the second duke of Buckingham, in his farce *The Rehearsal* (1671). The phrase has been a humorous English one

ever since and has been translated into a number of languages as well.

plow. Plowing, or turning over the soil for planting with an agricultural implement, is one of the world’s oldest farming operations and the English word *plow*, in the form of *plough*, is recorded before A.D. 1000. To *plow back* is a recent term meaning to reinvest profits into a business or enterprise, while *to clean one’s plow* means to beat someone up thoroughly, badly, in a fight. The last expression originated among Ozark farmers and is used throughout the United States today, especially in the South. It probably derives from the practice of farmers cleaning their plows by running them through coarse gravel, scratching the plows up badly in the process. See also BALK; DELIRIUM.

plow the sands. To undertake an impossible endless job, to waste time and energy on such a project. Farmers have long known that crops will not grow on beach and desert sands, and the expression itself goes back several centuries, first recorded in Robert Greene’s play *Never Too Late* (1590). Greene, now best known as a detractor of Shakespeare, wrote: “With sweaty brows I long have ploughed the sands . . . Repent hath sent me home with empty hands.”

plug; not worth a plugged nickel. Since at least 1860 *an old plug*, or simply a *plug*, has meant an inferior horse, one with defects. No one knows whether this expression came from the term *plug* for a counterfeit coin, that is, a coin with defects, or one that had been hollowed out and filled with an inferior metal, which is responsible for the still common saying *not worth a plugged nickel*. In any case, *plug* for a debased coin dates from the late 17th century. *Nickel* itself fits nicely in the phrase from an etymological point of view. Once the chief constituent of the U.S. five-cent piece, nickel was christened by German miners who often found it when mining for more expensive copper. In their disappointment they named nickel after a goblin called Nicholas, whom they blamed for such small mishaps.

plug ugly. *Plug ugly* describes “a city ruffian or rowdy” or any such disreputable character. First recorded as an Americanism in 1856, the word is of unknown origin, although one early source says “it derived in Baltimore . . . from a short spike fastened in the toe of [such rowdies’] boots, with which they kicked their opponents in a dense crowd, or as they elegantly expressed it, ‘plugged them ugly.’”

plum. The Old English *plume*, derived from the Greek *proumnon* for the fruit, gives us the English word *plum*. Burbank plums are probably the most famous in America, and take their name from the noted plant breeder Luther Burbank, who developed some 60 varieties of plums besides the Burbank. The Damson plum, another favorite, is named for the place where it originated; according to tradition, Alexander the Great first brought it to Greece from Damascus, Syria; the Romans called it the plum of Damascus, *prunum damascenum*, which became *damascene plum* and finally *damson plum* in English. The renowned Greengage plum, which is actually yellow with a tinge of green, was brought from Italy to France in about 1500, where it was named the *Reine-Claude* after Claudia, *la bonne reine*, queen to Francis I. About 1725, Sir William

Gage, an amateur English botanist, imported a number of plum trees from a monastery in France, all of which were labeled except the Reine-Claude. A gardener named the unknown variety after his employer, and the Reine-Claude has been the greengage in England and America ever since. See POLITICAL PLUM.

plumb; plumber; plumb crazy, etc. A carpenter's plumb line is a lead weight on a string used to mark a true perpendicular, so that a house or floor, etc., is not "out of plumb," but corresponds to the perpendicular. *Plumb* (here pronounced "plum") derives from the Latin *plumbum*, "lead," the same word that *plumber* derives from, because a plumber works (or used to) with lead pipes. Since a plumb line is completely or absolutely perpendicular, the word *plumb* became an adverb meaning "completely or absolutely" in phrases like *plumb crazy*, *plumb mad*, and *plumb tired*. Its use is confined to informal or colloquial speech, but the expression is heard frequently. *Plumb* also means "very, completely, quite," as in "I plumb forgot about it." An old joke claims "There's a town [near Bluefield, West Virginia] called Plumnearly—plumb down in West Virginia and nearly in Virginia."

plumb the depths. Echo-sounders are now used to determine the depth of water, but in the past a piece of lead on a string (called a *plumb*) was dropped into the water to measure how deep it was. From this practice came the expression *to plumb the depths*, "to sink as low as possible in misfortune or unhappiness." The expression is first recorded in a figurative sense toward the end of the 16th century.

plumed knight speech. The famous epithet "the plumed knight" was used by Robert Green Ingersoll in his nomination of James Blaine for the presidency in 1876. But Blaine lost the election, due in large part to popular rhymes like "James G. Blaine, James G. Blaine / Continental liar / from the state of Maine." See RUM, ROMANISM, AND REBELLION.

plump. When you plump up a pillow you shake it up and make it cooler, fuller, and more comfortable. See HUSBAND.

plum pudding dog. This was once a common name for the Dalmatian, or spotted coach dog, breed. The Dalmatian pointer was called the plum pudding dog because of its mottled appearance, its spots being like the plums or raisins in a pudding; the term was first recorded in 1897.

plunder. Raiders who plundered a town or country often carried off everything, down to the last rags of a place. Thus the German word *plunderen*, to plunder, comes from the German noun *Plunder*, rags, the verb passing directly into English in the late 17th century.

plus fours. These are long baggy knickers (not the women's short underpants knickers of the British) that were once commonly worn by golfers and other sportsmen and are still occasionally seen. Introduced in about 1912, they were so named because four more inches of material were added to the length of ordinary knickers to give them their comfortable looseness.

plushed to the scuppers. A character in Woody Allen's movie *The Purple Rose of Cairo* (1985) gets "plushed to the scuppers" (drunk) but the expression is recorded in no slang dictionary. It apparently derives from the British slang *plushed*, for "drunk," first recorded in the late 19th century, and *plushed* here coming from *flush* in its sense of "level with, full to the top" (with booze in this case). Perhaps the phrase is a nautical one. *Scupper* is a nautical word for a drain at the edge of the deck that allows accumulated water to run off into the sea or the bilge. So anyone *plushed to the scuppers* would be drunk to overflowing.

plutocrat. The Greek word for wealth is *ploutos*, which yielded the name Plutus for the god of riches in Greek mythology and our English word *plutocrat* for a very rich person. Plutus's female counterpart is Irene, who is also the goddess of peace.

Plymouth Rock. According to legend, the Pilgrims stepped on this boulder when they disembarked from the *Mayflower* to make the first permanent white settlement in New England (on the coast of Massachusetts in 1620). At the start of each year at Harvard, the Swiss-born naturalist and educator Jean Louis Rodolphe Agassiz (1807–73) would tell his classes: "Gentlemen, the world is older than we have been taught to think. Its age is as if one were gently to rub a silk handkerchief across Plymouth Rock once a year until it were reduced to a pebble."

P.M. See A.M..

P.M.; spiffs. For many years, perhaps since before 1900, the first term has been common among American retailers, especially in department stores. It means "a reward paid to a salesperson for selling a particular piece of merchandise, usually a slow-moving item." The initials may stand for *particular merchandise*, or *push merchandise*, but no one seems to be sure and no one seems to know exactly where, when, and why the term originated. I would be glad to hear from any reader who can solve one or all of these minor mysteries. *Spiffs*, origin also unknown, means the same.

pneumonoultramicroscopicsilicovolcanoconiosis. The longest word listed in a general English dictionary (*Webster's*), this 45-letter giant means "a pneumoconiosis caused by the inhalation of very fine silicate or quartz dust, a miner's lung disease." But there are many specialized words longer than this. See DNA.

Pocahontas. Everyone knows one or another story about Pocahontas, among the most famous Native American women in history. But few know that Pocahontas was not her real name. Some American Indians at the time believed that knowing a person's real name gave one great power over that person. Therefore, her father Powhatan told the white settlers in Jamestown that his daughter's name was Pocahontas, when her real name was Matoaka, her parents having named her so from a word meaning "to play" because of her playful nature as a little girl. Powhatan himself was really named Wahunsonacock.

pocket book. See PENGUINIZE.

pocket borough. See BEAT THE BAND.

pocket litter. Information, usually on paper, found on the bodies of captured or dead enemy combatants. The term was apparently coined by U.S. intelligence during the war in Afghanistan in about 2001.

pocket veto. See VETO.

Podsnappery. Mr. Podsnap in Dickens's *Our Mutual Friend* (1864) is a self-important, self-satisfied man who wears blinders. His name has become a synonym for someone who refuses to admit the existence of a disagreeable situation.

Podunk. *Podunk* means "a neck or corner of land" in the Mohegan dialect of Algonquian. Originally an Indian place name used by settlers in Connecticut and Massachusetts, it came to be a derisive name for any small or insignificant, out-of-the-way place. (Peoria and Hooterville are other names generations of comedians have used for the home of the rube and the boob.)

poecilonym. According to Billy Dorming, one of the finalists of the 2007 National Vocabulary Championship, *poecilonym* is "just a synonym of *synonym*." But he did not win the competition, even though he revealed that *poecilonym* was his "favorite word."

Poes of Princeton. Edgar Allan Poe is arguably America's best-known poet. Few are aware, however, that he was an excellent athlete as well. Poe, who would hardly suggest anything but an emaciated aesthete today, long jumped 21 feet while at West Point. He was as good a swimmer as Lord Byron (who swam the Hellespont), and once swam 7 1/2 miles from Richmond to Warwick, Virginia, "against a tide running two to three miles an hour." Another time he boxed the ears of and horsewhipped a scurrilous critic. He is also remembered for the *Poes of Princeton*, football players famous in their time if now all but forgotten. They were six members of the 1899 Princeton College football team, each named Poe and each a great-nephew of the poet. All of them apparently inherited Uncle Edgar's athletic prowess, but none his poetic genius off the field. See BALTIMORE RAVENS

poetaster. Erasmus coined this word for an inferior poet in a 1521 letter to a friend. Nineteenth-century Scottish poet William McGonagall is probably the only poetaster to actually have his work collected because it is so bad. In his introduction to McGonagall's selected poems, published by Stephen Greene Press, James L. Smith writes that the poet is "unquestionably the great master of II-literature in the language." McGonagall, who never lost faith in his greatness and actually outsells Browning and Tennyson in Great Britain today, attracted audiences to his poetry readings because people who had read his poems wanted to pelt him with rotten tomatoes and eggplant. Others have produced poems with more mechanical regularity than McGonagall; present-day Indian poet Sri Chinmoy composed 843 poems within a day in 1975, and another time turned out 16,031 paintings in a day. However, no one's poetry has

been so consistently bad as the Scottish bard's, which has been called "the worst poetry ever written, in any language, at any time." A sample of his work from "The Battle of Abu Klea":

Oh, it was an exciting and terrible sight,
To see Colonel Burnably engaged in fight;
With sword in hand, fighting with might and main
Until killed by a spear thrust in the jugular vein.

poet but don't know it. See HE'S A POET.

poet coiner. British poet Thomas Hardy regarded critics as "parasites no less noxious than autograph hunters," but he did humorously admit that he might have been guilty of coining too many words. He said that "once or twice he had looked up a word in the dictionary for fear of being again accused of coining, and had found it there right enough—only to read on and find that the sole authority quoted was himself in a half-forgotten novel."

poetic justice. The first printed reference to the term, most often meaning just deserts or a fitting punishment for a crime, is found in Alexander Pope's *The Dunciad* (1742): "Poetic Justice with her lifted scale, / When in nice balance, truth with gold she weighs. . . ." At the time of Pope's invention it meant the ideal justice poets dispensed. Novelist Henry Fielding, also a British justice of the peace, wrote an article for a satirical journal demanding that there be a kind of poetic justice for the poet laureate Colley Cibber (1671–1757)—that he be tried for murder of the English language. Fielding was apparently getting even with Cibber for calling him a "broken wit."

poetic license. John Dryden called poetic license "the liberty which poets have assumed to themselves in all ages, of speaking things in verse, which are beyond the severity of prose." Poetic license is the liberty taken by any writer, especially a poet, to fit the language to his needs, to deviate from conventional form, fact, and even logic to create a desired effect. Everything depends on the end justifying the means, that is, whether the poem (or other piece of writing) "works." Luckily, Tennyson presented his poetic license after he wrote the line, "Every moment dies a man/ Every moment one is born." The literal-minded mathematician Charles Babbage had written him that "if this were true, the population of the world would be at a standstill" and urged him to change the line to: "Every moment dies a man/ Every moment 11/16 is born."

poet lariat. America has even had a "poet lariat." The venerable Bloodgood Cutter was named "poet lariat" by Mark Twain because of his "barbarous rhyme," which reminded Twain of the wild and woolly West. This self-proclaimed poet, who operated a grist- and sawmill in Great Neck, New York, wrote such stirring lines as:

The photographer in front was seen
A getting ready his machine.

poet laureate. In Greek legend Apollo fell in love with and tried to seize Daphne, the daughter of a river, and at her own request she was turned into a bay laurel tree, which became sacred to Apollo. The god ordered that laurel be the prize for

poets and victors, this leading to the belief that laurel leaves communicated the spirit of poetry (the ancients put laurel leaves under their pillows to acquire inspiration while they slept) and the tradition of laurel symbolizing excellence in literature. The first laureates were university graduates in poetry and rhetoric who were presented laurel wreaths and called “doctors laureate” and “bachelors laureate.” Before the title *poet laureate* was conferred upon any poet in England there were a number of court poets: King Henry I (1068–1135) had a Versificator Regis (King’s versifier) named Wale. Ben Jonson was granted a pension by James I in 1616 and was a poet laureate in the modern sense, and Chaucer, Skelton, and Spenser had been called laureates before him; but it wasn’t until John Dryden was appointed poet laureate by Charles II in 1668 that the position became official. Currently the poet laureate is chosen by the sovereign from a list of names submitted by the prime minister when the position falls vacant. Appointments are for life, and by custom the poet laureate composes odes for the sovereign’s birthday and New Year’s odes. Dryden was awarded a pension of 300 pounds and a tierce of canary wine as laureate, but today the annual pension is 70 pounds with 27 pounds more given instead of the wine.

poet maudit. When French poet Paul Verlaine published his first collection of essays in 1884, he called it *Les poètes maudits*. *Maudit* means cursed or miserable in French, but Verlaine was not referring to poets whose writing was miserable or accursed. He meant great poets like Rimbaud and Mallarmé, ignored or looked down upon, the victims of ignorant readers and hostile critics. His book of essays, and another of the same title in 1888, contributed the phrase *poet maudit* to French and finally to English.

a poet mountain climber. English poet Alexander Pope (1688–1744) was so frail and little that author Colley Cibber worried about him when Pope went into another bedroom in the London bordello they were visiting. As Ciber put it: “Observing that Pope had staid as long as without hazarding of his health, . . . threw open the door where I found this little hearty hero, like a terrible Tom Tit, pertly perched upon the mount of love! But such was my surprise that I fairly laid hold of his heels and actually drew him down safe from his danger.”

Poet of the D.T.’s. The nickname of author John Bartholomew Gough (1817–86), who became a temperance author and lecturer after he was saved from alcoholism by a pledge he took. His moral authority was diminished somewhat when in 1845 he was found drunk in a New York brothel after being missing for a week. No one seemed to believe his story that he had been carried to the brothel after accidentally drinking drugged cherry soda. *See also* BALTIMORE RAVENS; EDGAR; MAD POET OF BROADWAY; POES OF PRINCETON; RAVEN.

poetry publisher. Edward Moxon (1801–58) was described by poet and essayist Leigh Hunt as “a bookseller among poets and a poet among booksellers.” But his fellow writers should have looked a bit closer at Moxon’s own poetry list, surely one of the greatest England has produced. Among his friends and clients were Wordsworth, Keats, Shelley, Coleridge, Tennyson, Lamb, Browning, Clare, Southey, Longfellow, and Patmore,

among other greats of English literature. In addition to all this, his father Joseph Maxon published the first printing manual in any language.

poets are born, not made. True, untrue, or partly true, this is an ancient belief, for it is a translation of the Latin *Poeta nascitur, non fit*. In his “To the Memory of . . . Shakespeare” (1623), in which he gave us the immortal lines “Sweet Swan of Avon!” and “He was not of an age but for all time,” Ben Jonson wrote: “For a good poet’s made, as well as born.”

Poet’s Corner. Part of the south transept of Westminster Abbey, where many great authors are buried, the Poet’s Corner was so named by Oliver Goldsmith, later buried there himself; it had been called “the poetical Quarter” before then. In the corner are, among others, the tombs of or monuments to Chaucer, Spenser, Ben Jonson, Shakespeare, Samuel Butler, Drayton, Milton, Davenant, Cowley, Prior, Gay, Addison, Thomson, Goldsmith, Dryden, Dr. Johnson, Sheridan, Burns, Southey, Coleridge, Campbell, Macaulay, Longfellow, Dickens, Thackeray, Tennyson, Browning, and Hardy. In the case of Hardy, his heart is buried in his native Dorset. One of the oddest stories about the Poet’s Corner concerns Thackeray’s bust there. The novelist’s daughter had always “deplored the length of the whiskers on each side of the face of her father’s bust,” believing that the Italian sculptor Marachetti had made them far too long. Finally, as an old woman, she managed to persuade officials to let another sculptor move the bust into a secluded alcove and chip away at the sideburns until they were the right length. This accomplished, an appropriately bewhiskered Thackeray was restored to his proper niche in the nave.

Poet’s Poet. A title first given in history to English poet Edmund Spenser (1552?–99), best known for his poem *The Faerie Queen*, which was written in the Spenserian stanza he invented. Spenser served many years as secretary to the lord deputy of Ireland, until in 1598 his castle was burned down during an Irish uprising and one of his children perished in the fire. He died the following year, in London, never recovering from the tragedy.

a poet’s protection. Little Alexander Pope, all 4 feet 6 inches of him, was easily the most popular poet of his day, but not among British poets. His *Dunciad*, for example, attacked so many writers that a group of them threatened to beat his publisher if he printed any more copies. The little man felt so paranoid that he would not go out for a walk without his Great Dane and two pistols at his side.

pogonip. An icy winter fog that forms in mountain valleys, especially in Nevada, the heavy fog often blocking the sun for days and appearing like a fine snow; the Shoshonean word *pogonip* has been translated as “white death,” the fog thought to cause pneumonia.

pogo stick. A former trademark named by its inventor. It consists of a strong, thick stick with footrests and a heavy spring installed in the bottom end. The player propels himself across the ground by hopping.

pogrom. Strictly speaking, *pogrom* is a Russian word meaning a riot. Pogroms were little known before 1881, when Czar Alexander II was assassinated, and were not heard of for some 20 years after that, until they inspired the first Russian-Jewish emigration to America. There were soon numerous Russian pogroms but the Nazi *kristallnacht* has been called the worst pogrom or riot in modern history. See KRISTALLNACHT.

poikilothermia. A rare ailment that makes one extremely sensitive to cold, unable to maintain a constant body temperature. The popular fantasy and science-fiction author H.P. (Howard Phillips) Lovecraft (1890–1937) suffered from this disorder, which takes its name from Greek. Lovecraft had to wear many layers of warm clothing on the hottest days and even on moving to Florida wore a heavy overcoat during the summer.

poinciana. The tropical *royal poinciana* with its brilliant, long-clawed scarlet or yellow-striped flowers is probably the most striking of all cultivated trees. Popular in Florida and California as well as its native Madagascar, the broadheaded tree grows from 20 to 40 feet high and is sometimes called the *Delonix* (Greek for long claw) and the *peacock flower*. *Poinciana regia*, as well as the entire *Poinciana* genus, containing several showy plants of the pea family, was named by Linnaeus in honor of M. de Poinci, a 17th-century governor of the French West Indies, where the tree is also widely grown and admired. Another, more descriptive name for the tree is *flame-of-the-forest*.

poinsettia. This bright red flower, a symbol of Yuletide, could not have been named for a more fiery personality. Joel Roberts Poinsett (1779–1851) had much of the Christmas spirit in him, too, at least a great love for the oppressed and a romantic revolutionary desire to better their lives. Poinsett served as a member of the South Carolina legislature and as a congressman for a number of years, but found himself more in his own element when appointed the first American minister to Mexico in 1825. Here his revolutionary ardor was so excessive that he lasted only four years, his recall demanded first by the regime that he helped overthrow and then by the republican regime that replaced it. By this time Poinsett was a familiar public figure and when he sent specimens of the large, fiery flowers that we know so well back to this country, they were named after him. Poinsett hadn't discovered the plant, of course, and it had even been introduced to the United States before him; his popularity alone accounted for the honor. The ousted ambassador went on to become Van Buren's secretary of war, and a Union leader during the Civil War, despite his southern origins. The *Poinsettia* genus commemorating him is now considered part of the genus *Euphorbia*, but the gorgeously colored Mexican species, its tapering scarlet bracts so much a part of Christmas, is still called the poinsettia. In England it is known as the *Mexican flame-leaf*.

point-blank. A point-blank shot made by archers in 16th-century England was one in which the arrow was aimed or pointed directly at the small white, or blank, bull's-eye in the center of the target. With the advent of firearms a shot was said to be point-blank when it remained approximately straight

over a certain distance. Because close-range point-blank firing in gunnery led to brutal destruction, the term became a synonym for direct, uncompromising rejection or blunt, brutal frankness in such terms as *point-blank refusal* and *point-blank denial*.

point the finger. This expression is first recorded in Shakespeare's *Othello* (1604): "To make me the fixed Figure for the time of Scorne to point his slow, and moving finger at." It came to mean "to single out a guilty person" and ultimately gave us the expression *finger man* for a criminal who singles out a victim for a murder, robbery, or other crime, and *to finger*, the act of singling out a victim for a crime.

poke. Poke or pokeweed (*Phytolacca americana*), also called "inkberry," has highly poisonous, even deadly, roots that cause trouble because they resemble horseradish. It is a handsome plant admired for its blackish-red berries (the seeds are also poisonous) whose young foliage is eaten by some after boiling. Poke played a minor role in American politics that few are familiar with. In the presidential campaign of 1844, supporters of James Polk proclaimed their allegiance by carrying tall stalks from the pokeweed plant through the streets (because *poke* sounded something like *Polk*). Ox drivers who favored Henry Clay covered the horns of their oxen with clay, and the Polk supporters gathered poke berries and stained the horns of their own oxen with these. Polk won, of course, thanks in a small part to poke.

poke fun at; poke. *To poke fun at* has meant to ridicule since at least 1837, when it is first recorded in Barham's *Ingoldsby Legends*: "Poking your fun at us plain-dealing folk." A *poke* in this case isn't a bag (as in *a pig in a poke*), of course, but a thrust or dig with the fingers.

poker; poker face. *Poker* takes its name from the French *poque*, for a similar card game, though the rules of the Persian game *As Nas* (played with five cards) and *poque* (played with three cards) were combined to make America's characteristic gambling game. The game is mentioned as early as 1834 and probably dates back at least 10 years earlier. A *poker face*, a face that conceals all emotions, also comes from the card game, in which bluffing is an important tactic.

pokey. Someone going to jail, or the *pokey*, is doubtless often poked along by an officer with a nightstick. But while such pokes may have influenced the popularity of the word pokey, it probably has its roots in the French *poche*, "a small enclosure," or the older *pogy*, "a workhouse or poorhouse."

pokies. Australian English for slot machines. According to Bill Bryson's *In A Sunburned Country* (2000), Australia, with less than 1 percent of the world's population, has over 20 percent of the world's "pokies."

Polar Bear Club. An organization of winter swimmers based in Coney Island whose New Year's Day dip is traditionally televised every year. But the most famous of New York's cold-water swimmers didn't belong to the Coney Island group; it

was playwright Eugene O'Neill, who when he lived in Rockaway Beach swam every day through the winter.

polar plant. See COMPASS PLANT.

polecat; polecat trail; wildcat trail. Though a polecat is a kind of weasel (*Mustela putorius*) in Europe, the word is a synonym for a skunk in the U.S. Its name comes from Latin *pullus*, "chicken," plus *cat*, apparently due to the polecat's taste for chicken. In skiing, *polecat trail* refers to an easy trail for beginners, without sharp turns or pitches, the opposite of *wildcat trail*.

polecat weed. See SKUNK CABBAGE.

pole dancer. An erotic dancer who climbs up a metal pole, naked or almost naked. The word is of recent vintage but seems to be growing in popularity every day. There seems to be no widely used synonym for *pole dancer* now or in days past.

police action. Though 75,000 U.N. soldiers were killed in it and a quarter of a million wounded, the Korean war cannot officially be called a war because Congress never officially declared it one. It is officially known in history as the Korean police action, the Korean emergency and the Korean conflict. President Truman approved the coinage *police action*, after an anonymous reporter asked him if repelling a raid "by a bunch of bandits," as Truman called the North Koreans, could be termed a "police action." The reporter, however, probably got the term from a speech by Senator William F. Knowland. See FORGOTTEN WAR.

political correctness. A philosophy advocating the rejection of expressions or actions that could be considered offensive to a race, sex, class, religion, etc. American in origin, the term was first recorded in this sense in 1970 and probably dates to the 1960s. The term is often intended derisively today, due in part to extremist use of the doctrine. *Political correctness* is often abbreviated PC, first recorded in 1986. See PERSON.

political infighting. We have used this term in America since the late 1940s to mean fighting within a political party or any group. The word *infighting* dates back to 1790s England, where it originated as a method of fighting at close quarters, one generally used by lighter boxers to lessen the force of blows from heavier, stronger opponents.

political plum. When a delighted Matthew S. Quay was elected U.S. senator from Pennsylvania in 1887, he assured his supporters that he would "shake the plum tree" for them. From this promise came our expression *a political plum*, an excellent or desirable thing, a fine job. The Little Jack Horner who pulled out a plum from the pie may have contributed to the term's popularity.

political slogans. Even before "Tippecanoe and Tyler Too" swept William Henry Harrison and John Tyler into office (see CIDER), slogans played an important part in politics. Like all slogans, good political slogans are usually short and simple,

with rhyme or rhythm, and say what the electorate feels but is unable to express. Yet some great slogans have had few or none of these qualities. For example, Herbert Hoover's backers used the negative scare slogan "Rum, Romanism and Rebellion" to defeat Al Smith in 1928. The Democrats' slogan against Grover Cleveland's opponent in 1884 was: "James G. Blaine, James G. Blaine / Continental liar from the State of Maine!" Humorous slogans have also been effective, such as the Democrats' gem: "In Hoover we trusted, now we are busted." There is no space here for a complete accounting of political slogans, but below are some famous ones that may or may not have succeeded:

"We Polked You in '44; "We Shall Pierce You in '52!"—
Franklin Pierce (1852)

"A Square Deal"—Theodore Roosevelt (1912)

"He Kept Us Out Of War"—Woodrow Wilson (1916)

"A Chicken in Every Pot"—Herbert Hoover (1928)

"A New Deal"—Franklin Roosevelt (1932)

"A Fair Deal"—Harry Truman (1948)

"I Like Ike"—Dwight Eisenhower (1956)

"The New Frontier"—John F. Kennedy (1960)

"All the Way with L.B.J."—Lyndon Johnson (1964)

"In Your Heart You Know He's Right—Barry Goldwater
(1964)

"Nixon's the One"—Richard Nixon (1968)

"We Can't Stand Pat"—Pat Paulsen (1972)

See SLOGAN.

politicians, whores, and buildings all get respectable after they get old. Heard in the movie *Chinatown* (1974).

politician who is poor is a poor politician. In his obituary (*New York Times* 12/13/01) veteran Mexican politician Carlos Hank González (1928–2001) is cited as "famous for coining the phrase *a politician who is poor is a poor politician*." These memorable cynical words were uttered by a man who "used his fame as a politician to enhance his private ventures" and was "the most powerful figure in Mexican politics for thirty years."

politics stop at the water's edge. An old American maxim meaning Americans of all parties should join together when dealing with foreign powers.

polka; polka dot. At least four dances have been named for the Poles by other countries, and the most popular of them, the polka, is not even Polish in origin. *Polka* simply means a Polish woman, just as *Polak*, which gives us the slang derogatory expression *Pollock*, means a Polish man. Either the Czechs called the Bohemian dance *pulka* ("half") because of its short half-steps and this word became corrupted to *polka*, or they named it as a tribute to Polish womankind. At any rate, the lively dance—three steps and a hop in double time—took Europe and America by storm after it was introduced about 1830. The polka craze resulted in many fashionable garments and designs being named after the dance, including a close-fitting knitted jacket called the polka, and even the American dress fabric with a polka-dot pattern, introduced in 1880 or so. *Polka dot* may have been inspired by the hopping around characteristic of the polka. Its use was originally confined to the uniform, evenly spaced dots in the material, but the words *polka dot* or *polka dotted* are widely applied today.

polliwog. See TADPOLE.

Pollyanna. Pollyanna Whittier, the child hero of Eleanor M. Porter's eponymous novel *Pollyanna* (1913), was noted for playing "the glad game," in which she tried to find the bright side of even the darkest, most dire situations. She is given no credit for this trait, however, for her name has ever since been used to describe a foolish optimist, woman or man.

polo. One of the relatively few Tibetan words in English, *polo* derives from the Tibetan *pulu*, for the name of the ball hit with the mallet used in the game played on horseback. Polo probably originated in Tibet, was adopted by the Indians, and borrowed from them by British soldiers serving in India during the mid 18th century. Other English words whose ultimate ancestry is Tibetan include "panda" and "yak."

polonium. Marie and Pierre Curie named this element in 1898 after they discovered it in their work on radioactivity. The radioactive element polonium was named by the wife and husband team after Madame Curie's homeland, Polonia being medieval Latin for Poland. See CURIE.

poltroon. An abject coward. The word, heard infrequently, occasionally pops up in a historical romance or biography. It comes ultimately from Latin *pullus*, "young animal," such creatures often being easily frightened.

polyandry. The practice of having more than one legal husband at a time, the word deriving from the Greek words for "many" and "male." Kahina, an ancient queen of the Berbers, is said to be the record holder here with 400 legal husbands at her disposal at a time. See also POLYANDRY.

polygyny. The practice of having more than one legal wife at a time, the word deriving from the Greek words for "many" and "female." King Mongkut of Siam (Thailand) (hero of *The King and I*) is said to be the record holder here with 9,000 wives, 8,600 more than his female counterpart, Berber Queen Kahina, had husbands. A Mormon arguing with Mark Twain defied him to cite any biblical passage expressly forbidding polygyny. "Easy," Twain replied: "No man can serve two masters!" See POLYANDRY.

pomato. *Pomato* was first used by Luther Burbank in 1905 for the fruit of a hybrid potato, but his creation didn't catch on, and *pomato* later became the name of the potato-tomato plant, with the potatoes growing underground on the roots of the plant and the tomatoes growing above the ground on the plant branches or vines. The chief drawback for this novelty is that potatoes can transfer several diseases to tomatoes and vice-versa, which is the reason potato fields on farms are generally widely separated from tomato fields. One of the earliest experiments with tomatoes, in 1910, produced a tomato-eggplant chimera having characteristics of each parent on the same branch. Many such experiments have been made. At North Carolina State University, for example, tomatoes were grafted on tobacco plant roots. The result was a tomato with a high nicotine content. See TIGON.

pomegranate; garnet; grenade. Commonly called "Chinese apples" in America, *pomegranates*, "the fruit of the ancients," take their name from the Latin for "many-seeded apple." The thick-skinned red fruit, about the size of an orange, is divided into numerous cells inside, each containing many seeds encased in a crimson, juicy pulp. When the fruit is eaten raw, it is broken open and the red flesh is sucked out. Today in the Orient when a newly married couple reaches their new home, pomegranates are broken at the doorway, their crimson-coated seeds signifying both the loss of virginity and an omen that many offspring will come of the marriage. A number of other words derive from the pomegranate with its red skin and seeds. Our *grenade*, a weapon first used in the late 16th century, comes from the French *grenade*, a shortening of French *pomegrenade*, for pomegranate. It was originally filled with grains or "seeds" of powder and thus facetiously named after the many-seeded fruit. Today the word is used in *hand grenade*, which isn't filled with grains of powder anymore, but can create a scene of carnage as bloody as any shattered pomegranate where it explodes. The military *grenadier*, originally for a soldier who threw grenades, evolved in much the same way from the French shortening, as did the term *grenadine* for the drink made from the fruit. But the garnet stone, its color similar to the flesh of the fruit, was given its name by the Romans, the Latin *granatum* (from *Punic granatum* or Punic apple: the pomegranate) becoming *grenat* in Old French and shifting by metathesis to *garnet* in English over the years.

Pomeranian. One of the smallest dogs, the Pomeranian surprisingly counts among its ancestors the strong Spitz sled dogs of the north. The toy breed is named for Pomerania, once a German province, where it was first bred.

pommel. This saddle knob takes its name from the apple, specifically from the Latin *pomum*, apple, because of its similar shape. *Pommel*, in turn, gives us *pummel*, which originally meant to hit someone with a knob-shaped weapon, to *pommel* or *pummel* him. Today, of course, *pummel* means to hit someone with anything.

pomology. Pomona was a Roman goddess of fruit from whose name *pomology*, the science of fruits and fruit growing, derives. She was the wife of Vortumnus, a Roman god of orchards and fruit who presided over seasonal changes. Vortumnus, also called Vertumnus, courted Pomona in a variety of forms (as a reaper, ploughsman, pruner of vines, etc.). His name may derive from the Latin *vertere*, "to turn," as the god who changes his shape, or for the god of the turning or changing year. Flora, the old Roman deity of flowers and fertility was another agricultural goddess. Flora had a temple erected to her near the Circus Maximus, where a special priest was in attendance. The public games at Rome called the *Ludi Florales* were held in her honor in the Circus from April 28 to May 3. Men decked themselves with flowers and women wore colorful dresses during this time of public merriment.

pompadour. Madame de Pompadour, born Jeanne-Antoinette Poisson, is probably history's most famous courtesan. In fact, La Pompadour, who became *maitresse en titre* to Louis XV when 27 years old, had been educated at great

expense to be a royal mistress. Raised from an early age by her mother's lover, a wealthy financier who took her from her poor parents, her future had been prophesied when she was only nine by an old fortune-teller, whom Pompadour later pensioned for the accuracy of her prediction. An extremely beautiful girl, she proved to be a kind, generous, and talented woman once she had entrenched herself with the monarch. Surrounding herself with beautiful objects was her passion and she was the undisputed leader of Parisian fashions, causing many styles and costumes to be attributed to her. The most famous, historically, is the pompadour hairstyle, which was at first worn in loose rolls around the face but swept upward high above the forehead in the next century and came to be a style worn by men as well as women. The woman's dress called a pompadour, cut square and low in the neck, is also named for her. However, her name is best known as a synonym for mistress. Even on her deathbed she painted her face for the king.

pompano. A few fish of the genus *Trachinotus* bear this name, but *pompani* usually refers to *Trachinotus carolinus*, noted for its yellowish breast. Mark Twain called pompano "as delicious as the less conventional forms of sin."

pom-pom girl; pompon girl. *Pom-pom girl* is a synonym for a prostitute, having its origins in the automatic pom-pom guns that Chicago gangsters used in the 1920s. Pompon girls or pom poms are cheerleaders, so named because they originally waved pompons, a variety of chrysanthemum.

poncho. Both the blanket-like coat with the hole in the middle for one's head and *poncho*, the name for it, come from the Chilean Arucan Indians. Mexican *vaqueros* copied the coat from them and Americans adopted it early in the 19th century.

pone. The *pone* of the famous southern pone bread and corn pone is from the Powhatan Indian word *apan* (something baked). Corn pone is baked in large, flat, oval, hand-shaped cakes. A variation of the word *pone* is recorded by Captain John Smith as early as 1612.

pongo. The legendary pongo was "a cross between a tiger and a sea-shark," a huge monster that devastated Sicily before it was slain by the three sons of St. George. For centuries the name was applied not only to the terrible sea monster but also to a gorilla, of all things, probably because by some strange coincidence *pongo* is the name in Bantu dialect for a large ape.

Pontiac. The one American car named after an Indian, in this case Chief Pontiac of the Ottawa tribe, who waged Pontiac's War against the British in 1763. Though his tribe lost the war, Pontiac's name became legend in Michigan, and two centuries later Detroit's General Motors Corporation gave his name to the car and mounted his head on the hood. See SEQUOIA.

ponticello. Deriving from the Latin *pons*, "bridge," *ponticello* is an Italian word taken intact into English that means the bridge of a stringed instrument such as a violin. *Ponticello* is

also used to describe an adolescent boy's changing voice, which is a little bridge connecting puberty and manhood.

pontiff. How the title of the pope derives from the Latin word *pons* for a bridge is not completely clear. The word came into the language in the late 17th century, via French, from the Latin *pontifex*, meaning a "high priest" of Rome, and was applied to bishops as well as the pope. Some scholars believe *pontifex* is of Etruscan origin, but most derive it from Latin *pontifex*, meaning "bridge builder," the Tiber bridges of ancient Rome said to be the responsibility of its priests.

pontoon. The Greek god of the sea, Pontus, gives his name to the pontoon bridge, a floating structure, as well as to the pontoons on seaplanes and the pontoon lifeboat, a lifeboat dependent for buoyancy on a watertight double bottom. *Pontoon* is first recorded in 1591.

pony; Pony Express. The pony is related to the young chicken, though only in language. Both words have their roots in the Latin word *pullus*, "a young animal," yielding the French *poulet*, "a young fowl," this becoming the English *pullet* and the French *poulet*, "a young horse," which became the Scottish *powney* and then the English *pony*. The Pony Express, more often called simply the Pony at the time, was the common designation for the Central Overland Pony Express Company, which lasted only from April 3, 1860 to October 24, 1861, but is still operating in Western novels and films. It had 190 stations along its route between Missouri and California, riders, including "Buffalo Bill" Cody, changing swift Indian ponies at each station and riding on with the mail—often through bad weather and Indian ambushes. The record for its 2,000-mile run was seven days, 17 hours, but it couldn't beat the telegraph that connected East and West in 1861, and the Pony Express went out of business that year.

pony up. Since the early 1800s *pony up*, or *poney up*, has been American slang for "to pay up." These words may derive from the German *poniren*, "to pay," but *pony* was British slang for a small amount of money in the early 19th century, probably because a pony is a small horse (not over 14 hands high), and the term to *pony up* probably derived from this expression. Other uses of *pony* to indicate smallness include the *pony* that is a small glass or bottle of alcoholic beverage and the *pony* meaning a trot or crib—a translation used by students.

poo-bah. A politician who holds several offices, or a pompous self-important person, is called a poo-bah. In Gilbert and Sullivan's operetta *The Mikado* (1885) Pooh-Bah is the personal name of the arrogant Lord High Everything Else, this being the source of the word.

poodle. *Poodle*, first recorded in 1825, is short for the German *Puddehund*. This extremely intelligent dog, bred for over 2,000 years, was widely valued for retrieving, as is shown by the components of its name: *pudeln*, "splash in the water," and *Hund*, "hound or dog." Female poodles (and toy or miniature poodles as well) are among the smartest of dogs. Standard poodles attained their greatest popularity as pets in France, which

led to them being called French poodles, although the Germans probably developed them. They were one of the 25 or so breeds selected for training by the U.S. Army K-9 Corps during World War II.

poogye. A usual word for an unusual thing, *poogye*, or *poogyee*, a Hindi term that has come into English unchanged, stands for the Hindu nose flute, “the tubes of which are inserted into a gourd and are blown with the nose instead of the mouth.”

pooh-pooh. *Pooh-pooh* is a reduplication of *pooh*, which is probably “a vocal gesture expressing the action of puffing or blowing anything away” and is first recorded in *Hamlet*, as “puh” (“Affection, puh. You speak like a greene girl.”) By the early 19th century we find *pooh-pooh* being used to mean “to express contempt or disdain for, to make light of.” So common was the interjection *pooh-pooh* in the 19th century that a *pooh-pooh* meant “one addicted to using this expression.”

poontang. Thomas Wolfe used this word for the vagina or “a piece” in *Look Homeward, Angel*, and Calder Willingham used it more graphically in *End As a Man*. The black and southern white expression, first referring to black women and now to both blacks and whites, might be expected to have a diverting story behind it, as unusual as *poontang* sounds. But it probably comes from the French *putain*, “prostitute,” by way of New Orleans.

pooped out. Anyone *pooped out* or *all pooped* feels something like the 19th-century seamen who used the expression *pooped* to indicate what happened when they were caught on the poop or aft deck of a ship when a wave crashed down and washed over them.

poor as a church mouse. This saying, meaning poor indeed, goes back to 17th-century England, but probably was taken from similar German and French expressions that are much older. Church mice in centuries past had lean pickings, if they had any pickings at all. Churches then had no recreational facilities with well-stocked kitchens as do some of their modern-day counterparts. They were used only for religious services and prayer, and a mouse living in one would be hard put to find a crumb.

poor as Job's turkey. Though the Book of Job doesn't mention his having any turkeys, Job certainly was poor and miserable, which inspired 19th-century Canadian humorist Thomas Haliburton to coin this expression. Haliburton, whose contributions to American English were considerable, wrote in one of his Sam Slick tales about Job's turkey, which had but one feather and was so weak with hunger that it had to support itself against the barn when it wanted to gobble.

poor boy sandwich. See HERO SANDWICH.

poor Joe. The poor Joe or po' Joe, as it is called, is another name for the great blue heron, especially in the American South. No “Joe” is honored by the name. It is from the Vai language of Liberia and Sierra Leone, where *pojo* means “heron,” and was introduced to America by Vai-speaking slaves.

Poor Knights of Windsor. An elegant British name for French toast. The Poor Knights of Windsor are deserving British military officers who have apartments in Windsor Castle, a custom instituted by Edward III in 1348.

poor man's manure. Snow that falls in early spring; it is thought to provide the soil with nutrients and to be a better source of moisture because it doesn't cause erosion by running off. The old expression has its counterparts in several languages.

poormouth. Poormouthing describes the talk of a person always pleading poverty or complaining about having no money or material things. This isn't a modern expression or practice—the practice is as old as mankind and the expression, apparently a Scottish one (*to make a poor mouth*), dates back to at least the early 19th century.

poor proofreading. “Some say the reason for [so many misprints in British books today] is the increasingly liberal attitude of the Church of England. Not enough parsons are unfrocked these days. These [highly educated] unfortunates of earlier days were often happy to find themselves employment in printing houses, correcting proofs.”

-*London Daily Telegraph*
April 24, 1979

Poor Richard's Almanac. See ALMANAC.

a poor thing but mine own. Often heard as a disparagement of the speaker's own work, whatever it might be. The phrase is from Shakespeare's *As You Like It* (1599) and is actually “An ill-favored thing, sir, but mine own.”

poor white. According to W. T. Couch, in *Culture in the South* (1941): “In discriminating Southern speech, it [*poor white*] was not used to include all white persons who were poor. . . . The ‘poor whites’ were those who were both poor and conspicuously lacking in the common social virtues and especially fell short of the standard in certain economic qualities.” An old black southern rhyme goes:

My name is Sam,
I don't give a damn.
I'd rather be black
Than a poor white man.

poor white trash. Lower-class white people; similar in meaning to *poor white*, but a stronger term. The offensive term goes back at least to the early 19th century, when we find it in Francis Kimble's *Journal* (1833): “The slaves themselves entertain the very highest contempt for white servants, whom they designate as ‘poor white trash.’” Terms like POOR WHITE, RED NECK and PECKERWOOD are often slur names.

Pooterish. *The Diary of a Nobody* (1892) has long been a favorite novel of many readers and has been called “immortal.” Written by the brothers George and Weedon Grossmith, it recounts the life of Charles Pooter and his wife, Carrie, in early 1890s England. Pooter can be called many things, but when

someone is described as “Pooterish” it usually means he is a trivial, over-sensitive person who reveres the wealthy.

pop. Weekley tells us that *pop* can be a shortening (19th century) of *popular concert*. He also gives *pop* as a name for the debating society at Eton, in this case because the society originally met in 1811 at a confectioner’s. See ONOMATOPOEIA.

popcorn. Certainly known to the Aztecs, popcorn was so named by American settlers on the frontier in the early 19th century. It is a variety of small-eared corn (*Zea mays everta*), the kernels of which pop open when subjected to dry heat and has also been called “parching corn,” “popped corn,” “pot corn,” “cup corn,” “dry corn,” and “buckshot” over the years. The great quantities of it sold in movie theaters prompted some early movie house corporations to grow thousands of acres of popcorn.

pope. As Gary Wills points out in *Why I Am a Catholic* (2002), the title “*pope* was not reserved for the bishop of Rome until the 5th century,” though it applied to any bishop before then. The word *pope* comes ultimately from Greek *pappas*, father, or daddy, an infant’s word for father. There have been 263 popes of the Catholic Church.

Popemobile. In this time of assassins even the pope needs a bullet-proof vehicle to transport him from place to place. This has been the case since 1979, when Pope John Paul II became the first pope to ride in the popularly named Popemobile, with its bulletproof glass and raised viewing platform. The vehicle’s official name is Special Papal Transport, or SPT.

Popeye. A cartoon character created by Elzie Segar in his 1919 comic strip *Thimble Theatre*. Popeye the sailor’s mighty strength comes from downing cans of spinach. His girlfriend is the almost anorexic Olive Oyle. His famous catch line is “I yam what I yam an’ that’s all that I yam.”

pop goes the weasel. The children’s song “Pop Goes The Weasel” (ca. 1853) by W. R. Mandale is the source for this phrase. The refrain goes: “Up and down the City Road, / In and out the Eagle, / That’s the way the money goes—/Pop goes the Weasel.” The Eagle was a popular London pub or music hall of the day, while *weasel* referred to a hatter’s tool, and *pop* was a contemporary term meaning “to pawn or hock.”

the Popgun Plot. See PARKINSON’S DISEASE.

poplar. After destroying the monster Kakos in a cavern of Aventine, the legendary hero Hercules took a branch from one of many poplar trees growing there and bound it around his head. When Hercules descended to Hades to return Cerberus, the three-headed watchdog of the infernal regions, the heat there caused a perspiration that blanched the underside of the leaves on the poplar branch, while the smoke of the eternal flames blackened their upper surface. And that is why, according to fable, the leaves of the poplar are dark on one side and white on the other. The poplar takes its name from *populus*, the Latin name for the tree.

poplin. This finely corded material is named, indirectly, after the Roman Catholic papacy. Avignon, the French city where it was first made in the 14th century, was a papal city and a seat of the Catholic church, and the cloth was named after the pope.

poppie. *Poppie* or *poppy* is American slang for a father or a grandfather. In South African English it is a slang term for a woman of any age.

poppy. *Opium* derives from the Greek *opion*, meaning simply “poppy juice” and reflecting the fact that the drug is made from the milky juice of the unripe pods of the opium poppy (*Papaver somniferum*). The poppy and its narcotic properties have been known since prehistoric times, however, and the Egyptians used it medicinally long before the ancient Greeks. There are some 100 other species of poppies besides the opium poppy, many of these beautiful flowers grown in the home garden. In England, the artificial red flowers sold on Remembrance Day for the benefit of war veterans are called “Flanders poppies.” A 1915 poem by John McCrae seems to have been the first to connect this flower with the dead of World War I:

In Flanders fields the poppies grow
Between the crosses, row on row
That mark our place; and in the sky
The larks, still bravely singing, fly
Scarce heard among the guns below.
We are the Dead. Short days ago
We lived, felt Dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders field . . .

poppycock. *Poppycock* means nonsense, the Americanism first recorded in 1865 and deriving from the Dutch *pappekak*, which means “soft dung” and owes its life, in turn, to the Latin *pappa*, “soft food,” and *cacare*, “to defecate.”

popsicle. The popsicle might still be an “Epsicle” if Frank W. Epperson (1894–1983) hadn’t gone broke in 1929 and sold his patent for his “handled, frozen confection or ice lollipop” to a small company, which changed its name from *Epsicle* to *Popsicle*. Epperson had dubbed his successful product the Epsicle some 19 years after he accidentally invented it one cold San Francisco night in 1905, when as an 11-year-old he left a glass of lemonade on his porch and “awoke the next morning to find the drink frozen solid around a spoon that was in it.”

popskull. The word has nothing to do with pop music. *Popskull* refers to cheap, potent MOONSHINE, so named because enough of it seems to pop things inside your skull.

porcelain. Why is porcelain named for a pig? The earthenware takes its name from the Latin *porcella*, “little sow,” because the Romans believed its finish resembled a cowrie shell, which in turn they thought resembled a sow’s vulva.

porcupine. The porcupine (*Erethigon dorsatum*) of North America takes its name from Middle French *porc despine*, “thorny pig,” the medieval French apparently considering the animal a kind of pig. The spiny rodent is actually of the same

family as the guinea pig. The porcupine, well known in antiquity, was the subject of an ode by the Roman poet Claudius; its sharp quills (a mature porcupine has 30,000 of them) were once used as arrow tips and made into magic bundles and fetishes. Porklike porcupine meat, especially that of the crested porcupine, the largest species, is still eaten in Italy, Tunisia, Lebanon, Asia Minor, and South Africa, among other places. The cornered porcupine does throw its quills at enemies, though involuntarily. But the “terrible porcupine” of Shakespeare does not shoot hundreds of quills at dogs and hunters, as Aristotle and scores of cartoonists have portrayed it from early times. Many a zookeeper has been shot by a loose quill, and one farmer reported that a trapped porcupine had thrown several quills with such force that they became embedded in tree branches high above it. Despite its menacing barbed quills, large wild cats and trained dogs can overcome the porcupine. Still, the legendary animal lives longer than any rodent; a crested porcupine in India holds the record of 22 years. There has been much speculation and joking about how porcupines mate (“Carefully!”), but in reality the female simply flattens her tail against her back, and the male mounts her with his forefeet.

pore over. People often write *pour over* when they mean to think deeply about something or study something carefully, but the correct term is *pore over*. *Pore* means to read or study with steady attention, to gaze steadily, to ponder intently. Etymologists have only been able to trace the word back to the Middle English *pouren*, the same word that is the basis for *pour*, so the difference between the two words is something of a mystery.

pork barrel. Government appropriations used to supply funds for local improvements that are designed to ingratiate congressmen with their constituents have been called *pork barrel* since shortly before the Civil War. Before that the expression simply meant the total contributions to a congressman’s campaign fund. In this case *pork* is synonymous with fat, which has always signified abundance or plenty.

Pork Chop. Seattle Seahawk offensive tackle Floyd Womack may “have the most colorful nickname in sports,” according to the *New York Times* (January 24, 2006). He was nicknamed by his mother after a local Mississippi wrestler called Pork Chop Cash. By the sixth grade he was 200 pounds and was 350 pounds in college.

pornocracy. An obsolete word, meaning “the rule of prostitutes.” In his *The Word Museum* (2000) Jeffrey Kacirk quotes *The Century Cyclopedia* (1889) defining *pornocracy* as deriving from “The Pornocracy, a party which controlled the government of Rome and elections to the papacy throughout the first part of the 10th century.”

Pornographic. The Pornographic was the nickname of the long defunct New York *Daily Graphic*, a tabloid newspaper founded in 1924 that competed with the *New York Daily News* and Hearst’s *Daily Mirror*.

pornography; Porneius. *Pornography* is Greek for “writing of harlots,” the term probably deriving from the signs hung

outside Greek brothels. Such writing can be divided into *erotica*, which generally centers on “normal” heterosexual love, describing it in detail, and *exotica*, centering on so-called abnormal sex, including sadism, masochism, and fetishism. Pornography can be found in elements of the Old Testament and the plays of Aristophanes and probably goes back far beyond them. The first masterpiece of English pornography is probably John Cleland’s *Memoirs of the Life of Fanny Hill* (1749). Pornography has thrived only since the late 18th century, the English word itself first recorded in 1860, and authors of it since have been as varied as de Sade (see *SADISM*), Swinburne, and Mark Twain. An excellent reference giving details and titles is R. S. Reade’s *Register Librorum Eroticorum* (1936). *Porneius* is a character in Greek legend who has been called “fornication personified,” a good description, as his name comes from the Greek *porneia*, “fornication.” He was the son of Anagnus (in chastity), two of his brothers being Maechus (adultery), and Aselges (lasciviousness). Porneius tried to rape Athena (maidenly chastity), after whom the Parthenon (Temple of the Maiden) was named, but the “martial maid” killed him with her spear.

pororoca. A Spanish word that translates as “the mighty noise.” The *pororoca* is a huge 16-foot wave or swell that at certain times moves up the Amazon River at speeds of up to 20 miles an hour and can be heard crashing miles away. Surfers come from all over the world to ride it.

port. Over 300 years ago *port* began to replace *larboard* as the word for the left-hand side of a ship (probably because *larboard* was too easily confused in speech with *starboard*, the right-hand side). The word *port* here probably derives from port, “a harbor.” In the days when the steering gear was on the starboard (that is, steerboard) side, a vessel almost always had to tie up at the dock with her left side toward the port.

porter ale. See *PORTERHOUSE STEAK*.

porterhouse steak. Martin Morrison’s Porterhouse in New York City introduced the porterhouse steak in about 1814, according to the *Dictionary of Americanisms*. The tender steak taken from the loin next to the sirloin is an even more succulent cut than its neighbor, but has a lot of waste. In England, there is generally no distinction between it and sirloin. A porterhouse was a tavern serving the dark brown beer or ale called porter, once favored by porters and other laborers.

portholes. Half of a ship’s windows are on the starboard side. Yet all windows on a ship are called portholes. This is because in early times the only windows on a ship were the port holes for guns. When windows were later added for the comfort of sailors sleeping below, on both sides of a ship, they too were called portholes.

portmanteau word. A portmanteau traveling bag is a leather suitcase that opens flat into two parts. It gave its name to words made up of two parts like *brunch*, composed of *breakfast* and *lunch*, and *smog*, composed of *smoke* and *fog*. The traveling bag was so named from the French word *portmanteau* in the late 16th century, but *portmanteau word* was coined by Lewis Car-

roll in *Through the Looking-Glass* (1872), when Humpty Dumpty, who could be called the etymologist of the story, explains the meanings of some of its words: “Well, ‘slithy’ means ‘lithe and slimy.’ . . . You see it’s like a portmanteau—there are two meanings packed into one word.” See MOTEL.

Portuguese man-of-war. This is the common name of *Physalia pelagica*, derisively named the Portuguese man-of-war by the English in the 18th century, when the once powerful Portuguese navy had gone into a state of decline. The designation is a strange one, for small as it is, the Portuguese man-of-war can be deadly. Actually not an individual animal but a colony of highly specialized polyps, it has tentacles up to 50 feet long that discharge a toxic substance that has painfully stung, paralyzed, and even killed swimmers coming into contact with them.

Portuguese words in English. Portuguese words that came into English, often through Spanish, include: apricot, molasses, marmalade, verandah, junk (via Japanese), and cuspidor (possibly through Dutch).

port wine. This sweet red dessert wine is named port, the word first recorded in 1591, because it was first shipped to England from the town of Oporto in northern Portugal. Its types include vintage port, tawny port, ruby port, and white port (made from white grapes).

posey. See NOSEGAY.

posh. The old story says that *posh* is an acronym for “port outward, starboard home.” British civil servants traveling to India on the Peninsular and Oriental Steam Navigation Company line supposedly liked to have their accommodations on the port side of the ship leaving home and on the starboard side coming back, as these locations were shady and away from the weather. According to the tale, such first-class, or *posh*, state-rooms became a synonym for anything elegant or sophisticated. But unfortunately, the famous P & O line has no record of such an expression ever being used. This doesn’t prove that the ingenious story isn’t true, but the term is just as likely a contraction of “polished” or “polish.” *Posh* is first recorded in 1897 as meaning “a dandy” and so may also be a corruption of the slang term *pot* (“big”), a person of importance. A corruption of the Scottish *tosh*, “neat and trim” isn’t out of the question, either.

postage stamp. See CHRISTMAS CARD.

post-haste. Used in England as early as the 16th century, *post-haste* refers to the post-horse system of delivering mail in those days. Much like the American Pony Express, this earlier system stationed men with fresh horses at intervals along the road, the letters taken relay-fashion at each post and delivered to the next post in haste.

Post Toasties. Charles William Post was good at choosing names for the many food products he invented, which included *Postum* and *Grape-Nuts*. However, he made a big mistake when he marketed the breakfast cereal Elija’s Manna in 1904. This

biblical name appealed to few, and the cereal didn’t sell until he renamed it Post Toasties.

pot. As a slang name for marijuana (qv) pot is first recorded in 1938. According to Chambers’ *Dictionary of Etymology* (2003), it is probably a shortened form of the Mexican Spanish *potiguaya*, marijuana leaves.

potato. The white potato is one of the most important vegetables in the world, yet it bears the wrong name. *Potato* derives from the Haitian word *batata*, for “sweet potato,” which the Spanish found in the West Indies in 1526 and introduced to Europe. *Batata* was corrupted to *patata* in Spanish, and this altered to *potato* when first used in England. But then the Spaniards discovered the Peruvian white potato, an unrelated plant, and mistook it for just another variety of the West Indian plant. Ignoring the native name for the white potato, *papas*, they gave it the same name as the earlier tuber, and so it too became known as the *potato* in England. The only distinction between the two unrelated vegetables was that one came to be called the *sweet potato* and the other the *Virginia* or *white potato*. The white potato is called “apple of the earth,” *pomme de terre* in French, and “earth-apple,” *Erdapfel* in German. It acquired the name *Irish potato* when it was first brought to this country in 1719 by a group of Irish Presbyterians and planted in Londonderry, New Hampshire. The colloquial American name *spud* for it derives from the spade-like tool used in digging potatoes. The humorous *Murphy* derives from the wide consumption of potatoes in Ireland—where there are of course many Murphys—at a time when other European countries rarely used the tuber for anything but fodder.

potato chip. George Crum, a Saratoga, New York cook of partial American Indian descent, is said to have invented potato chips in 1853 when a patron in the restaurant where he worked complained that the potatoes he had been served were too thick and undercooked. Crum sliced some potatoes paper thin, soaked them in ice-water and fried them in a kettle of boiling oil. According to the old story, the customer raved about them, they became a specialty of the restaurant and were soon dubbed potato chips.

pot-au-feu. See POT LUCK.

potbelly. Men, and rarely women, have been afflicted with potbellies since time immemorial, but the protruding stomachs have been so named only since about 1657, when the term was first recorded, in the form of *pot-bellied*. Later, in 1714, Alexander Pope was the first to use *potbelly*, writing of “an Animal” with “bandy legs” . . . “a short neck and a pot belly.” *Potbelly* may refer to the shape of the protruding belly of a pot, or a love of food from the cooking pot, or both—no one knows for sure.

potboiler. “All men who have to live by their labour have their pot-boilers,” Hazlitt wrote, and an obscure English poet lamented: “No far’vring patrons have I got,/But just enough to boil the pot.” A potboiler is of course a literary work written to make a living, a task performed to keep the pot boiling, or to eat. Financial gain is the only object in writing one, but

sometimes genius transcends the immediate object and the result is a work of art. Dr. Johnson's "philosophical romance" *Rasselas* (1759), for example, was written over the nights of one week to meet the cost of his mother's funeral and pay off her debts. Coleridge's *Ancient Mariner* has been called "the most sublime of pot-boilers to be found in all literature," but I suspect there are even greater ones. In telling of the birth of *Sanctuary* (1931), William Faulkner observed that he was hungry. "[I began] to think of books in terms of possible money," he recollected. "I took a little time out, and speculated what a person in Mississippi would believe to be current trends, chose what I thought was the right answer and invented the most horrific tale I could imagine and wrote it in about three weeks."

pot calling the kettle black. Dating back to the 17th century, this expression describes someone who faults another for faults conspicuously his own. In ancient times, pots as well as kettles would likely be blackened over the open cooking fires of the day.

Potemkin village. Russian army officer Gregory Potemkin helped his lover Catherine the Great try to improve the country's economy. He tried to make many reforms in the Ukraine, but corrupt administrators spoiled his plans, and when Catherine wanted to see good results, he decided to trick her. Whether the allegations are true or not, it was said that Potemkin led Catherine on tours to places where conditions were best and even constructed false-front villages, transporting "contented peasants" from one of these sham villages to another just ahead of the Russian empress. As a result *Potemkin village* has become the synonym for something that looks good on the outside but really isn't, or a government plan to fool the people.

pot head. (1) In Maine this term has nothing to do with habitual users of marijuana, meaning instead someone of very limited intelligence, with a head like an empty pot. (2) In Canadian Newfoundland *pot head* is a name for the northern pilot whale, with its prominent bulbous head. See MARIJUANA.

potlatch. A ceremonial festival of American Indians of the Pacific Coast at which gifts are bestowed on the guests in a show of wealth that the guests later try to outdo.

pot likker. The rich liquid left after boiling vegetables like turnip greens with fatty meat, especially ham or fatback. Southern U.S. tradition insists it should be eaten with CORN PONE dipped or crumbled in it.

pot luck. No sirloins or barons of beef for peasants in the Middle Ages. Mostly their dinners came from the great iron pots simmering over their fires into which leftovers were tossed from day to day. Often they didn't know exactly what they were having for dinner, so when they asked a visitor to take pot luck with them they weren't trying to put him off. It was a matter of luck—what was in the pot and whether there would be enough of it to go around. The expression is first recorded in 1592 and came to mean "plain fare," nothing fancy, what we usually have, like the French *pot-au-feu* ("fire pot"), the ordinary family dinner. In Ireland the pot of hospitality always hung over the open fire ready to be dipped into by any unexpected visitor. People

who offer visitors pot luck today, however, often wind up preparing an impromptu banquet for their guests.

pot of gold. See RAINBOW CHASER.

potshot. A *potshot* was originally "a shot for the pot," that is, a shot taken at an animal in order to fill the dinner pot, without any regard for rules and from any distance, no matter how close. The earlier *pothunter*, first recorded in 1781, suggested the word, which came to mean, in both military and civilian use, a shot aimed at somebody within easy reach, without giving the person any chance to defend himself, as in an ambush. An abbreviation is *to pot* somebody.

potter's field. The first cemetery known to be used as a potter's field, "a burial place for paupers, criminals and unknown persons," was Aceldama, or "field of blood," a barren piece of land near Jerusalem. The Bible tells us that it was originally used by potters and called Aceldama because it was bought with the blood money paid Judas. Believing he had sinned and betrayed innocent blood, Judas returned the 30 pieces of silver paid him for his treachery and went out and hanged himself, the elder he chose becoming known as the Judas tree. When the priests of the temple decided it was unlawful to return Judas's silver to the treasury, since it was "the price of blood," they used it to buy a field to bury strangers in. There are other versions of the origins of the first potter's field. Since the seventh century an area called Hakked-Dumm, "price of blood," on a cliff southwest of Siloam, has been regarded as Aceldama, although the absence of clay in the area makes it an unlikely location for a potter's field.

Pott's disease. See BRIGHT'S DISEASE.

POTUS. President Of The United States. A new word coined only a few years ago, possibly by the U.S. Secret Service.

pot valor. *Pot valor* is an older name for *Dutch courage* or "whiskey courage," meaning valor or courage inspired by alcohol. *Pot valor* goes back to at least 1623, while *Dutch courage* dates to the troubles between the Dutch and British in the 17th century. *Whiskey courage* is a fairly recent Americanism.

pounamu. Greenstone or nephrite. A native Maori word recorded by the British explorer Captain James Cook in 1769 that is used by all New Zealanders today. Nephrite is a form of jade.

pound for pound. For many years Sugar Ray Robinson has been popularly called the greatest fighter in the world pound for pound. But boxing historian Bert Randolph Sugar, in his *The Greatest Fighters of All Time*, ranks welterweight champion Jimmy McLarnin 22nd and claims he was called the best fighter pound for pound years before Robinson. Jimmy "Baby Face" McLarnin beat 13 world champions over the course of a long career. He died in 2004, age 96.

pound of flesh. Shakespeare apparently invented this term for vengeance in the *Merchant of Venice* where he has Shylock lend

money to Antonio on the condition that if he doesn't repay it in time Shylock will take a pound of his flesh. If the Bard didn't invent the expression, he certainly was the first to popularize it.

pound sterling. See STERLING.

pour oil on troubled waters. To soothe or calm a situation by tact and diplomacy is the figurative meaning of the above phrase. The ancients, Pliny and Plutarch among them, believed that oil poured on stormy waters reduced the waves to a calm and allowed a vessel to ride through a storm. The Venerable Bede says in his *Historia Ecclesiastica Gentis Anglorum* (731) that Bishop Aidan, an Irish monk, gave a priest, who was to deliver King Oswy's bride to him, holy oil to pour on the sea if the waves became threatening; his miraculous oil would stop the wind from blowing. A storm did blow up and the priest saved the ship and the future queen by following this advice. Later, Benjamin Franklin mentioned the practice of pouring oil on troubled waters in a letter and it said that the captains of American whaling vessels sometimes ordered oil poured on stormy waters.

poverty grass. *Hudsonia tomentosa*, a beach grass found on Cape Cod and elsewhere. In his classic *The Outermost House* (1928), Henry Beston wove it this way: "All winter long [the carpet of] this grass has been a kind of rag gray . . . but now it wears one of the rarest and loveliest greens in nature. I shall have to use the term 'sage green' in telling of it . . ."

Powder River! Let 'er buck! A slogan of encouragement used since about 1893, when it was said to have originated as a joke by a cowboy who drove horses across the almost dry Powder River near Casper, Wyoming. It later became a battle cry among Wyoming volunteers and then all troops in the Argonne during World War I. There is controversy about the phrase, some contending that it first applied to the Platte River, not the Powder River. As a character notes in James A. Michener's *Centennial* (1974):

"The full challenge was 'Powder River, let 'er buck. A mile wide and an inch deep. Too thin to plow, too thick to drink. Runs uphill all the way from Texas. Today, wherever rodeos are held, the cowboy who draws the toughest bronco shouts as he leaves the chute, 'Powder River! Let 'er buck!' So do drunks entering strange bars . . . Wyoming is divided across the middle on this one. Those in the north are sure that the phrase belongs to the Powder; those in the south claim it for their Platte, and each side is ready to fight. My own guess is that the words go far back in history and were probably applied to the Platte years before the Powder was discovered. But I am not brave enough to say so in print."

power breakfast. A term thought to be coined by billionaire Preston Robert Tish (1926–2005) to describe the breakfast he hosted at his Regency Hotel on Park Avenue in Manhattan. There, beginning in the 1970s, famous and powerful people such as Henry Kissinger, David Dinkins, and investment broker Felix Rohatyn came to eat and socialize and often solve city and national problems.

power is the ultimate aphrodisiac. A saying that has been credited to former U.S. Secretary of State Henry Kissinger (b. 1923) in the 1970s.

power lunch. A lunch attended by at least two powerful people, often movers and shakers of society, people who can get things done. The power lunch is said to have been born in the Grill Room of the Four Seasons restaurant in New York City, or at least to have been so named there. The Four Seasons, designed by Philip Johnson, opened in 1959 and is considered an "interior landmark" of New York City.

the powers that be. The *OED* traces this phrase to the Bible (Romans 13:1) and says it means "the authorities concerned."

powwow. American Indians called the medicine man a powwow, ultimately from an Algonquian word meaning "dreamer." Early settlers used the word in the same way but were soon applying it to a ceremony or meeting where the medicine man performed his magic. It wasn't until the early 19th century that *powwow* was extended to mean any meeting or conference at all.

a pox on you. Smallpox has been wiped out in the world today thanks to universal vaccination with cowpox virus, a method introduced by Edward Jenner in 1796. But in days past the contagious disease killed thousands every year. *Pox* is an altered spelling of *pocks*, eruptive pustules on the skin that characterize smallpox and other less serious diseases such as chicken pox. A *pox on you!* was often a serious oath in the past, but the expression seems always to have been used humorously, too, as it is today. Shakespeare first recorded it as an exclamation of irritation or impatience in *All's Well That Ends Well* (1601): "A pox on him, he's a Cat [a spiteful backbiter] still."

P.P.C. Hardly anyone leaves calling cards anymore and fewer still leave calling cards with the initials *P.P.C.* on them. The practice was fairly common once, however, and should you receive one from the two or three people in the world who keep up the practice you'll be glad to know that the letters *don't* stand for "paying private call." They stand for the French *pour prendre congé*, "for taking leave," which means that the party called to say goodbye and found no one home.

practice what you preach. The King James Version of the Bible translates the idea behind this phrase as "they say and do not" (Matt. 23:3). Over the centuries these words inspired writers to devise poetic improvements upon them and in 1876 or so Rowland Howard came up with *practice what you preach*. The translators of the new Revised Standard Version of the Bible liked this so much that they changed Matt. 23:3 to "they preach but do not practice" and the phrase was in the Bible at last.

pragmatism. Though William James was the great popularizer of the philosophical doctrine of pragmatism, the word was coined in the 1870s by another philosopher, C. S. Pierce, from the Greek *pragma*, "a fact, a deed, a thing done." Stressing the

practical as opposed to the theoretical, pragmatism tests the truth and value of something by its utility and workability.

prairie dog. *Prairie dog* was one of some 1,528 names given to animals, plants, and places observed on the Lewis and Clark Expedition into the Louisiana Territory in 1803—this said to be a record in vocabulary making. Captain Meriwether Lewis had first called the animal a barking squirrel, but this probably more accurate description was changed to *prairie dog* by his friend William Clark.

prairie dogging. What happens when somebody yells or drops something loudly in an office full of cubicles and worker's heads pop over the walls to see what's going on. (Thanks to Michael J. Gelb for this humorous corporate buzzword.)

prairie oysters; mountain oysters. In a country where the prudish have called the bull “a cow's father,” “a cow creature,” “a male cow,” “a Jonathan,” and “a gentleman cow,” it is no wonder that there are so many euphemisms for bulls' testicles. In French and Spanish restaurants bulls' balls are sometimes called just that on the menus, but in America, when they are offered, they're invariably labeled either “prairie oysters,” “mountain oysters,” “Rocky Mountain oysters,” or “Spanish kidneys.” Believed to be an elevating aphrodisiac dish despite their low origins, bulls' balls are probably no more than a psychological aphrodisiac. But French neurologist Charles Brown-Dequard, who founded the much disputed “science” of organotherapy in 1889, thought differently. He claimed that both he and his patients had greatly enhanced their sexual prowess by eating bulls' testicles. The 70-year-old scientist went so far as to transplant bulls' testicles under the abdominal walls of patients, but it has since been established that testicles cannot store sex hormones such as testosterone and that when transplanted they wither and die.

prairie schooner. A type of covered wagon, similar to but smaller than the Conestoga wagon, used by settlers on the way West. Also called a fore-and-after.

Prairie State. A nickname for Illinois first recorded in 1842. Illinois has also been called the Garden of the West, the Corn State and the Sucker State (probably because land speculators often cheated the early settlers, but possibly after the catfish of the genus *Catostomus* common in the state's rivers).

prairie strawberries. See ARIZONA STRAWBERRIES.

Praise the Lord and pass the ammunition! These words, later made into a popular song by Frank Loesser, may have been spoken by Navy chaplain Lt. Commander Howell Maurice Forgy (1908–83) aboard the cruiser *New Orleans* during the Japanese attack on Pearl Harbor on December 7, 1941. Some authorities claim they were spoken by Captain William Maguire of the *New Orleans*. Still others say the words were first used in the Civil War. Whoever said them spoke to a chain of men passing ammunition to a ship's guns.

praline. César Du Plessis-Praslin, marshal of France and, later, duc de Choiseul, got heartburn from eating almonds but

couldn't resist them, one story goes. So his servant suggested that he have his chef brown the almonds in boiling sugar to make them more digestible and *voilà!*—the *praline*. But another story says that sugar-coated praline candy was named for Praslin when he had his cook prepare something special for King Louis XIV, the field marshal's dinner guest one night. More likely, pralines were invented by Praslin's man as one of the many culinary triumphs that all chefs vied with each other to produce in the 17th century. At first they were called *praslins* and in time the spelling was altered to *pralines*. The comte Du Plessis-Praslin, who put down a revolt of the nobles in 1649 and may have served Louis pralines, became Louis XIV's minister of state in 1652 and was later rewarded with the title of duke for which he had politicked so long. He died in 1675, aged 77, a silver tray of pralines, or praslins, no doubt at his side.

pratfall. A pratfall is old show business slang for a fall on the buttocks taken by a comedian to obtain laughs. *Pratts*, or *prats* is simply rogues' cant for the buttocks. No one knows the origin of the term, which dates back to the 16th century, and there seems to be no connection between it and the older *prat*, for “a trick or prank.”

Pravda. *Pravda*, once one of the two most influential Soviet newspapers, means “truth” in Russian. The other important journal was *Izvestia*, meaning “news.” A wry Russian witticism advises “There's no news in the Truth and no truth in the News.”

praying mantis. The English were calling *Mantis religiosa* the praying mantis since at least 1706, when this name for the green or brown predatory insect is first recorded. Also called the praying locust, it is so named because of the position in which it holds its forelegs, as if in prayer. It is a beneficial insect in the garden, as it eats many bugs destructive to plants.

preaching (singing) to the choir. Heard in a political debate (June 14, 2006): “The mayor is preaching to the choir with his talk of lowering property taxes.” He was obviously telling the others nothing they hadn't considered themselves long before. *Singing to the choir* means the same.

prebuttal. A new coinage deriving from *rebuttal*, which means giving a rebuttal *before* one's opponent has even presented his or her case—that is, anticipating that opponent's case and responding to it. The word may have been coined by someone in the Bush 2000 presidential campaign.

precocious. Trees and fruits that flowered or ripened early were called precocious by the English in the early 17th century, the word deriving from the Latin *prae*, “before,” and *coquere*, “to cook,” which formed *praecoquere*, “to cook beforehand.” By the end of the century writers were applying this botanical word to people, especially children who are especially mature or learned for their ages, who are “cooked before their time.”

predator. Any organism that preys upon others. From the Latin *praedator*, plunderer.

prepone. A recent coinage from India, where English (along with Hindi) is the official language. *Prepone* is the opposite of *postpone* and means to move up a meeting, not put it off.
