preposition. Although etymologically the word *preposition* itself means “placed before,” prepositions need not always be placed before their objects in a sentence. Most times they are, but in some instances, a preposition must come *after* its object and in others the preposition can be placed either before or after the object. There are governing rules, but it is best to rely on the ear in this matter. For example, “What are you sitting on?” sounds a lot better than “On what are you sitting?” The record for the most prepositions strung together at the end of a sentence is the protest of a child against an Australian bedtime story book: “Mommy, what did you bring that book which I didn’t want to be read to out of from about ‘Down Under’ up for?” Angry at a critic who corrected one of his sentences on the basis of the old bromide that a preposition should not end a sentence, Winston Churchill wrote to him: “This is the kind of nonsense up with which I will not put.” British author Joseph Addison liked to end sentences with prepositions—at least he wrote a good many of them that way—and sentences ending with prepositions are therefore said to have Addisonian terminations. Interestingly, Richard Hurd, the testy critic who coined that term, is heard of no more today, while Joseph Addison, dangling prepositions and all, remains a much-read author.

preposterous. See PUT THE CART BEFORE THE HORSE.

prequel. A book, play, or movie that portrays events happening *before* those described in an existing work. Obviously a combination of *pre* and *sequel*, the word has been claimed as a coinage by several authors, without sufficient proof. The word seems to have been used more frequently every year since it was first recorded in 1973. See PREBUTTAL; PREPONE.

Presa Canario. A large breed of dog, up to 150 pounds, said to be trained to track and kill pit bull dogs. This breed was largely unheard of until, in 2002, the California owner of a Presa Canario was convicted on counts of second-degree murder and involuntary manslaughter when her dog got loose from its leash and killed a neighbor in her apartment house hallway. There are only a handful of such murder convictions in U.S. legal history.

Presbyterian Church. Established in the 15th century by John Calvin and so named because each congregation is governed by an elected group of presbyters (elders).

president. The first Senate of the United States selected “His Highness” as the title of the president of the U.S., the full title decided upon being “His Highness the President of the United States of America and the Protector of the Rights of the Same.” However, the House of Representatives voted the title down and the president was referred to as the more democratic *Mr. President*. The first president’s wife, however, was called Lady Washington during his terms in office. President Washington himself objected to terms like “Your Majesty.” The word *president*, also deriving from the Latin *praesidere*, to preside, govern, was used as the title of the highest officer in an American colo-

ny, a practice that began in Jamestown. William Howard Taft, a president handpicked for the position by his predecessor Theodore Roosevelt, once said that whenever he heard someone say “Mr. President” while he was in office, he looked around for Teddy. See PRIME MINISTER.

presidential daily brief. A little-known report that is delivered every morning to the U.S. president and is usually abbreviated to PDB.

presidential nicknames. George Washington was of course the *Father of His Country*; John Adams, who loved to eat, was called *His Rotundity*; while tough old Andy Jackson was known as *Old Hickory*; Abraham Lincoln was widely called *Honest Abe*, and the *Great Emancipator*; Calvin Coolidge was *Silent Cal*; *Ike* was Dwight Eisenhower; and the *Great Communicator* was Ronald Reagan. Among other less famous nicknames were *Long Tom*—Thomas Jefferson, *Old Veto*—John Tyler, *Old Rough and Ready*—Zachary Taylor, *Lemonade Lucy*—Rutherford Hayes (he didn’t drink the hard stuff), *Ten Cent Jimmy*—James Buchanan (because of his small stature and terrible bearing), *the Beast of Buffalo*—Grover Cleveland (he was rumored to beat his wife), *George W.* (or “W”)—George W. Bush (humorous, or to distinguish him from his father, Geogre Bush, who served as president eight years before him). The president with the most nicknames, virtually all of them derogatory, was Martin Van Buren, who was called, among other nasty things: *Little Van the Used Up Man*, *the American Tallyrand*, *Motley Van*, *Old Kinderhook* (his birthplace was Kinderhook, New York), *the Sage or Wizard of Kinderhook*, *the Little Magician*, *the Red Fox*, *the Enchanter*, *Petticoat Pet* (for his foppish dress), and *Martin Van Ruin* (for the depression he helped cause). It should be noted that two women married to presidents (Abigail Adams and Woodrow Wilson’s wife) were called *Mrs. President*. Wilson’s wife was also called *Presidentress of the United States*. See HANDSOME; OK.

press gangs. *Impressment* became prominent in American vocabularies before the War of 1812, when British sailors forcibly removed British seamen from American vessels, claiming this was their right, and impressed American seamen into British service at the same time, always explaining later that they took the Americans by mistake. Press gangs were the hired thugs who impressed seamen for service aboard British ships during the War of 1812 and had indeed done so since the late 17th century.

press notice. *Press notice*, meaning praise in the newspapers for an actor’s performance, a writer’s book, etc., dates back to about 1885, when the term *press agent* is first recorded, and is still heard in good advice such as “Don’t believe your press notices.” It may have been coined by Mark Twain, who first used the term. A prolific word inventor, Twain is said to have coined or popularized barbed wire, billiard parlor, cussword, dust storm, ex-convict, Wild West, forty-niner, hayride, and race prejudice, among other words and phrases. But Twain also coined a number of losers, words that are rarely if ever used today, including: disenthuse, human-beingship, jumbulacious, mental telegraphy, perhapser, psychologizes, Shakesperiod, type girl, uncledom, and vinegarishly.

pretty-by-night. One Victorian horticulturist said that *pretty-by-night* and other flower names beginning with *pretty* were “used only by the vulgar,” but folks knew better, and all are still in use, although sometimes little known. *Pretty-by-night* is an alias of the common “four-o-clock,” also known as marvel-of-Peru, which lives up to its name when its handsome tubelike flowers open very late in the afternoon. The botanist who first classified the species thought it wonderful, too, for he christened it *Mirabilis jalapa*. It signifies “timidity” in the language of flowers. Pretty Face is a showy salmon or salmon-yellow flower streaked with dark purple that is common in southern California. A lily with slender grasslike leaves, it is known botanically as *Brodiaea ixiodes*, the group named for Scottish botanist James Brodie.

pretzel. There is no proof that pretzels are twisted to represent “the folded arms of praying children,” as is often claimed, and they certainly don’t take their name from the Latin *pretiola*, “little reward,” because they were given by monks to religiously faithful children. Why they are twisted no one really knows, and the word *pretzel*, first recorded here in 1824, in a reference to pretzels eaten by the Dutch, derives from the German word for “branch,” in reference to the branches of a tree that the “arms” of the pretzels resemble.

prevarication. Roman farmers who ploughed crooked ridges in Rome were called *praevaticors*, their name deriving from the Latin verb for “to go zigzag or crooked.” The next step was to apply the word to men who deviated from the straight line and gave crooked answers in courts of law, which gave us our word *prevarication*, or “lie.” See also DELIRIUM.

priapus. The name of the Greek and Roman god Priapus has come to mean a representation of a phallus, and the adjective *priapic* means “relating to or overly concerned with masculinity.” Originally, however, Priapus, said to be the son of Aphrodite and Dionysus, was a fertility god of gardeners whose statue was often placed in home gardens. Represented as a grotesque, deformed creature with a huge penis, he was thought by the Roman poet Virgil to be “little more than a venerable scarecrow” used to keep birds and thieves away from the fruits and vegetables.

prick song. In ancient times prick songs were songs whose notes were pricked, or written down, unlike common songs, which weren’t recorded and were preserved by memory. The expression is first recorded in 1463, in the form of *pricked song*.

pride goeth before a fall. Since the early 16th century the saying has usually been something similar to *pride goeth before a fall* in English. But the biblical proverb (Prov. 16:18) this is based upon uses the words “Pride goeth before destruction, and a haughty spirit before a fall.”

prime minister. The term is recorded as early as 1646, but the first English prime minister generally recognized as such was Sir Robert Walpole (1676–1745). Walpole rejected the title because he considered it an abusive term; indeed, as the *OED* notes, quoting a 1733 magazine: “In Countries where Royal Prerogative is limited by Laws, the name of prime Minister has

always been odious.” In any case, *prime minister* was at first only a descriptive designation; it did not become an official title in England until 1910. A masterful politician with great influence over George II and Queen Caroline, Walpole is said to have spent over 50,000 pounds annually in subsidizing newspapers and magazines that supported his political beliefs. He was also the first chief minister to reside at NO. 10 DOWNING STREET. See PRESIDENT.

primrose; primrose path. The primrose path is the path of pleasure, the path strewn with flowers, the lazy, self-indulgent way. The expression is first recorded in *Hamlet*: “Shew me the steepe and thorny way to Heaven; Whilst like a puft and reckless Libertine Himselfe the Primrose path of dalliance treads.” The flower called a primrose is not a rose and not one of the first flowers of spring, as its name implies. It is said to be so named due to “a popular blunder.”

Prince Albert coat; Albert chain, etc. Queen Victoria married Albert Francis Charles Augustus Emmanuel, prince of Saxe-Coburg-Gotha in 1840, despite many objections, loved him deeply, and mourned him in seclusion many years after his untimely death in 1861, aged 42. A man of great character and culture, the royal consort was much loved by the British people, one token of their esteem shown by the heavy gold watch chain presented to him by the jewelers of Birmingham in 1849. The prince consort wore this watch chain from one pocket to a button of the waistcoat, setting a fashion named the *Albert chain* or *albert* in his honor. Also named for Albert are Lake Albert, or Lake Albert Nyanza, in central Africa, discovered by Samuel Baker in 1864, and, oddly enough, the alberts or rags that Australian tramps wear in place of socks. The Prince Albert, a long double-breasted frock coat, is named for the royal consort’s eldest son, Albert Edward, Prince of Wales (1841–1910), who became Edward VII in 1901.

prince of physicians. See GALENICAL.

Prince Rupert; Prince Rupert’s drops, etc. General of the Royalist armies against Cromwell during the Civil War, and admiral of the British navy in the Dutch Wars, Prince Rupert (1619–82), grandson of England’s James I, was a multitasking military man also strongly interested in art and science. One of the earliest mezzotinters, his *Head of St. John the Baptist* is justly famous, and he experimented with guns, shot, and gunpowder. Prince Rupert invented the modified brass called Prince Rupert’s metal, the alloy resembling gold and consisting of 60 to 80 percent copper and 15 to 40 percent zinc. Prince Rupert’s drops, which he also devised, are toys made by dropping molten glass into water, the glass forming small tadpoles which explode into dust if their tails are nipped off. The port of Prince Rupert in British Columbia bears the prince’s name also, as does Rupert’s Land, once the name for all the land in Canada that drained into Hudson Bay, Prince Rupert having been the first governor of the Hudson’s Bay Company when it was formed in 1670.

Princess of Parallelograms. A name Lord Byron invented for his wife, Annabella, whom he later abused and abandoned, according to Fiona MacCarthy’s *Byron, Life and Legend*. The princess was “plain and adept at math.”

principal and principle. A tailor dunned British wit Richard Brinsley Sheridan (1751–1816) for at least the interest he owed on a bill. Replied Sheridan: “It is not my interest to pay the principal, nor my principle to pay the interest.” See FURNISHED ROOM; LAST ROSE OF SUMMER; ROSES HAVE THORNS.

a priori. Latin for “based on a hypothesis or theory rather than experience or experiment.”

prithe. An archaic word readers sometimes come across and can’t find the meaning of. Deriving from the earlier *preythe*, it means “pray thee.”

privateer. Privateers operate with the consent of a government, usually their own. Privateers were privately owned vessels that in England were licensed under Letter of Marque and Reprisal to capture enemy ships in time of war. A captain who had such authorization would not be charged with piracy. Perhaps the most famous privateer in history was the British Sir Francis Drake, who preyed on Spanish shipping in the 16th century as captain of the *Golden Hind*. See CORSAIR.

private eye. Mystery writer Raymond Chandler popularized this term, for “a private investigator,” but it has its origins in the “We Never Sleep” motto of the Pinkerton Detective Agency, which was printed over an open eye. See PINKERTON.

privet. Weekley dates privet back to the 16th century but isn’t sure of its origins. The current form, he believes, “is no doubt due to private, the plant’s only use being to furnish a good screen.” See also PRIVY.

privy. An outhouse, or latrine, the word deriving ultimately from the Latin *privatus*, private. The privy council in England dates from the early 14th century. See also CHIC SALES.

Prix Goncourt. The French brothers Goncourt (Edmond and Jules) are still remembered for their gossipy histories, art criticism, realistic novels and plays, as well as for the esteemed Prix Goncourt literary prize established in 1896. The money prize, founded under Edmond’s will, is for imaginative prose and is awarded annually by 10 men or women of letters. See NOBEL PRIZE; PULITZER PRIZE.

pro. One dictionary says the short form *pro* for a professional is first recorded in about 1850, so it could have originated in baseball, though there is no proof of this nor of any other origin. The first recorded mention of professional players in baseball is in 1867, when the Rockford, Illinois team began paying salaries to expert players, prompting amateur “gentlemen players” all over to complain about the practice. But by 1869 baseball’s first professional team, the Cincinnati Red Stockings, was touring the country and a new age in the sport had begun. See also AMATEUR.

pro bono. Latin for “done without charge,” as in “The lawyer did all the work *pro bono*.”

Proctophilus winchilli. While they were fishing in the Gulf of California, Nobel Prize winner John Steinbeck and his

friend Doc Ricketts noticed a little fish that lived in the cloaca of the sea cucumber and that kept darting in and out of the creature’s anus. They named the hitherto unrecorded fish *Proctophilus winchilli*, after gossip columnist Walter Winchell.

prodigy. The Roman word *prodigium* was used to denote an incident of an extraordinary nature to be taken as a prophetic sign, bad or good, by the entire nation. When adopted in English as *prodigy*, the term at first meant the same, but later became applied to an extraordinary person or animal, one with great intelligence or talent, and then to a child possessing these qualities. Since the early 16th century, society has known thousands of child prodigies.

profane. From the Latin *pro*, “before” and *fanum*, “temple.” Those within the Roman temple were considered holy, while those outside the temple, *pro fanum*, were unholy, or *profane*.

profile. Like many innovations, this word in its recent usage is first recorded in *The New Yorker*. It derives from the Italian *profile*, which is composed of the Latin *pro* (forward) and *filau* (draw a line). The light, often entertaining, profile is now found in many magazines.

a prolific publisher. Horace Liveright, publisher of Sherwood Anderson, Theodore Dreiser, T. S. Eliot, Ezra Pound, Dorothy Parker, Edgar Lee Masters, Robinson Jeffers, Bertrand Russell, and so many other greats, was a serious and generous man when it came to literature, but his editorial offices were called “the asylum” by people who worked there. To set the tone, Liveright—who lived up to his name—had in his office a hidden bedroom where he conducted his daily affairs, a bed all done up in lace. He found this necessary to keep his affairs secret from both his wife and his mistress.

Promethean. Anyone resembling Prometheus in spirit or action, or anyone creative or boldly inventive can be called Promethean. Prometheus of Greek mythology was put to work by Zeus to create men from mud and water. But Prometheus stole Olympian fire for his miserable creations and an angry Zeus chained him to a rock in the Caucasus, exposing him to the fierce vultures there, until Hercules released him.

Promised Land. See CANAAN.

promnesia. *Promnesia* is a little-known but useful word from the Greek, meaning roughly “memory of the future.” It was apparently coined by a psychologist in 1903 and defined as “the paradoxical sensation of recollecting a scene which is only now occurring for the first time; the sense of the *déjà vu*.” Science fiction is usually cited as the literary genre where near-perfect examples of promnesia are most often found. But it would be hard to find a better example of fiction’s becoming reality than popular novelist Morgan Robertson’s novel *Futility* (1898). Published 14 years before the *Titanic* sank in history’s most famous marine disaster, it told of a great “unsinkable” luxury liner named the *Titan* that sank on its maiden voyage after hitting an iceberg, with the loss of almost all passengers because there

weren't enough lifeboats aboard. There were at least 10 other similarities in the novel to the real tragedy.

pronghorn. The pronghorn (*Antilocapra americana*) of the western plains is of a separate family that differs widely from the Old World antelope; nevertheless, it has been called an antelope since it was so named in the journals of the Lewis and Clark expedition in 1804.

propaganda. Pope Gregory XVIII organized a *congregatio de propaganda fide*, a congregation for propagating the Christian faith, in 1622, and over the years this organization became the basis for the word *propaganda*, meaning deliberately to spread rumors, lies, or information to harm or help a cause.

props. Black slang for “respect” that is apparently a new coinage or is not yet recorded in any slang collection.

proselytize. *Proselytize* means to convert someone to a religion or point of view. The word derives from the Greek *proselutos*, “one who has come to a place, or a convert.” The first proselytes were apparently Greek converts to Judaism, some of whom accepted the religion wholly and some of whom only agreed to refrain from working on the Sabbath and making sacrifices to heathen gods. *Proselyte* is first recorded by John Wycliffe in 1382.

prose . . . poetry. See MOTIVE-HUNTING.

Prosit! The German *Prosit!* has been adopted as an English drinking toast. The German word (and the similar Dutch *Proost*) comes from the Latin *prosit*, “may it do good.”

prospect. *Prospect*, as a synonym for a salesman's potential customer, is a term that became common only in the past half-century or so. *Prospect* has its roots in the Latin *prospecto*, “to look forward,” which in the 15th century was altered to *prospect* and came to mean a landscape viewed from a distance. About 400 years later the word was finally extended to mean looking forward figuratively when it was applied to a possible customer.

prospector. Someone who explores an area for gold, silver, oil, or other valuables. Though *to prospect* for minerals is recorded as early as 1400 in England, *prospector* is an Americanism dating back to about 1846.

prostaglandins. This “family of hormones with a wide array of biological functions” was named prostaglandins in the 1930s, when they were thought to come from the prostate gland. Though they were named mistakenly, their name has never been changed.

prostitute. *Prostitute* came into English early in the 16th century, but the word derives ultimately from the much older Latin *prostiture*, “to expose for sale.” The best-known prostitute, at least of repentant prostitutes, is St. Mary Magdalene, who is also the patron saint of reformed prostitutes. She was cured of evil spirits by Jesus (Luke 8:2) and later was the first to see Jesus

rise from the tomb after his crucifixion (John 20:1–18). For some unfathomable reason *prostitute* is regarded by some people as an obscene word. According to William Safire's *Coming to Terms* (1991), the U.S. State Department euphemistically refers to these ladies of the night as “available casual indigenous female companions.”

protean. *Protean*, for “something that is constantly changing, or someone who assumes many roles,” derives from the name of Proteus, herdsman of Neptune, Greek god of the sea. Wise old Proteus lived in a huge cave tending his herd of sea calves, and no one was able to catch the great prophet because he could rapidly change himself into different shapes.

protest; protestant. See TESTICLES.

prothonotary warbler. A small colorful North American bird whose bright, intensely yellow plumage suggested the golden robes worn by Catholic officials at important church functions. Its scientific name is *Protonotaria citrea*.

protoplasm. Czech physiologist Jan Evangelista Purkinje first gave the name *protoplasm* to the living material within the cell, in 1839. He referred specifically to the gelatinous embryonic material in an egg, this first-formed material reminding him of the word *protoplasm* used to describe Adam, the first formed man, in the Bible.

proud as a peacock. See PEACOCK.

proud as Punch. The Punch-and-Judy show originated in early-17th-century Italy, where the main character's name was Pulcinello, a vain, pompous character with a shrewish wife, Judy. When the shows came to England Pulcinello's name was corrupted to Punchinello and then shortened to Punch, but his personality remained the same, as is reflected in the old saying *proud as Punch*, being proud over a victory, as Punch was when he bested Judy.

proud as sin. As *proud as sin*, probably originating in the 19th century, can be traced back to similar *proud as . . .* phrases close to 500 years old. The earliest appears to be *as proud as Nebuchadnezzar*, recorded in 1526. Since then the *devil*, *Beelzebub*, *Scratch*, *Satan* and even the *Prince of Darkness* have also been used in this phrase equating pride with evil.

proud below the navel. “Whenever I see her I grow proud below the navel,” William D'avenant wrote in his first play *The Tragedy of Albovine* (1629). D'avenant, rumored to be Shakespeare's natural son and England's unofficial poet laureate, may have invented the phrase, which means “amorously aroused,” to put it euphemistically. Nevertheless, Partridge says the expression “borders on Standard English.” See CONTEMPLATE ONE'S NAVEL.

Provo. French *provocateur*, “one who provokes action,” is the ancestor of *Provo*, for a member of the Provisional I.R.A. However, the Provos, who favored terrorist action, breaking from the I.R.A. in 1971, seem to have borrowed the shortened French word from a Dutch political group using it at the time.

Prussian; Prussian blue; prussiate; prussic acid. Since the Franco-Prussian War of 1870, when Prussia's militarism came into full flower, *Prussian* has been a synonym for arrogant, overbearing, cruel, and excessively military. *Prussian blue*, however, has nothing to do with the military, merely having been discovered by the Prussian chemist Diesbach in 1704. It is a color ranging from moderate to deep greenish blue used in painting and fabric printing. A prussiate is a ferricyanide or ferrocyanide, which the color was made from, while prussic acid (hydrocyanic acid) is made from Prussian blue. Prussian blue is sometimes called Berlin blue, after its place of discovery.

P.S. *P.S.*, first recorded in 1757, is an abbreviation always used in place of the Latin *post scriptum* (Latin *post* "after" plus *scribere*, "to write"), meaning postscript, an afterthought added after the signature in a letter. One family is said to have named its 14th child *Finis*. A problem arose when another child came along, but it was solved by naming the 15th *P.S.*

Psalmanazar hoax. George Psalmanazar (1679?–1763) was a pseudonymous literary faker whose real name still isn't known. Psalmanazar, a Frenchman, fashioned his pseudonym from that of the biblical character Shalmaneser. Claiming to be a native of Formosa (Taiwan) and even inventing a complete "Formosan" language that he spoke, he attracted the attention of Scottish army chaplain William Innes, who saw through his imposture but became his confederate. Innes "converted" him in order to get credit for a "conversion" and in 1703 Psalmanazar went to London, where credulous authorities hired him to teach "Formosan" at Oxford and write a dictionary of "Formosan." The following year the impostor wrote *The Historical and Geographical Description of Formosa*, which described the odd customs of the "Formosans"—that they ate only raw meat, including the flesh of executed criminals, and they annually offered as a sacrifice to the gods 18,000 hearts cut from the breasts of boys under the age of nine. In 1706 Catholic missionaries to Formosa exposed Psalmanazar and after a time he confessed his fraud, renouncing his past life in 1728 and going on to become an accomplished scholar. But there remained something of the impostor in this friend of Dr. Johnson. The title of his autobiography, published posthumously in 1764, was *Memoirs of*—commonly known by the Name *George Psalmanazar*.

pshaw. Used since the 16th century and called "a natural expression of rejection" by the *O.E.D.*, this exclamation of impatience or contempt is usually pronounced *shaw*, though I often heard it spoken as *shah* when people still employed it. Oscar Wilde once asked George Bernard Shaw what title he'd give to a magazine he proposed starting. "I'd want to impress my own personality on the public," Shaw replied, banging his fist on the table. "I'd call it *Shaw's Magazine: Shaw-Shaw-Shaw!*" "Yes," Wilde said, "and how would you spell it?"

psychiatrist. One evening the Austrian psychiatrist and author Alfred Adler (1870–1937), an associate of Freud, was lecturing about his theory that people's handicaps lead to their choice of work. Stutterers often become actors, he maintained, fat boys distance runners, visually deficient people painters,

etc. "Dr. Adler," someone asked after his lecture, "wouldn't your theory indicate that weak-minded people tend to become psychiatrists?"

PT boat. PT boats were prompted by Prohibition rather than war. The little boats were originally used by rumrunners because they could outspeed the Coast Guard cutters of the day. Their inventor submitted their design to the Navy during World War II and they were introduced as *Patrol Torpedo* boats, although their size and annoyance to the enemy caused them to be dubbed *mosquito boats* as well.

Ptolemaic system. Before Copernicus scientists believed that the earth was the stationary center of the universe, a philosophy espousing the snug, smug little world where the sun, planets, and stars moved benignly around us. This theory, the Ptolemaic system, was essentially that of Ptolemy, an Alexandrine astronomer who lived from about A.D. 100 to 170. Claudius Ptolemaeus took his name from the Ptolemaic dynasty of Egypt, which reigned from the late fourth to the first century B.C. His famous work the *Almagest*, 13 books compiling his own and other astronomical findings, set forth the Ptolemaic theory. Nothing reliable is known about the great astronomer, geographer, and mathematician aside from his work, which included his famous *Geography*. His Ptolemaic system remained virtually unchanged and unchallenged until the heliocentric system advocated by Copernicus and Kepler replaced it in the 16th century. See COPERNICAN.

ptomaine poisoning. See TOMANIA.

P-town. A nickname for Provincetown used on Cape Cod. Someone called it a hardworking town where a lot of people seemed to be playing all the time.

pub crawling. A mostly British term meaning "to frequent one pub after another," drinking as you go, for at least a night, until you are reduced to stumbling if not crawling or worse. Partridge in his *Dictionary of Slang and Unconventional English* (1961) calls a *pub-crawl* "a liquorish peregrination from bar to bar" and traces its first appearance in print to about 1910.

public; pub. *Public* for people generally and collectively comes from the Latin *publicus*, meaning the same, which in turn derived from the Latin *populus*, the people. The term *pub* for a bar or tavern, used in England and much less frequently in America, is an abbreviation of *public house*. *Pub* is for some reason still called "low colloquial" by the *O.E.D.* The word isn't recorded until 1865, *public* being the contraction used before it.

public be damned. In 1882 a reporter asked William Henry Vanderbilt why the New York Central Railroad had continued to run a high-speed train from New York City to Chicago despite the fact that it was losing money. Commodore Vanderbilt told him he did it to compete with a similar Pennsylvania Railroad train. Wouldn't you run it just for the benefit of the public, competition aside, the reporter continued, and Vanderbilt roared the classic reply that has unfortunately become

associated with big business ever since: “The public be damned! Railroads are not run on sentiment but on business principles.”

public enemy number one. Al Capone was the original Public Enemy Number One, that is, the most dangerous criminal in the United States. The term was first recorded in reference to him in the *Chicago Tribune* (February 22, 1931).

public intellectual. A writer or thinker who “addresses a general audience on matters of broad public concern,” according to Rick Perlstein, writing in the *New York Times* (1/22/02). The term was coined by Russell Jacoby in his book *The Last Intellectuals: American Culture in the Age of Academe* (1987) but doesn’t seem to have made the dictionaries yet. As examples of public intellectuals Mr. Perlstein names George Orwell, Lewis Mumford, and Hannah Arendt, among others.

public relations. American publicity writer Eddie Bernays (1891–1960), a nephew of Sigmund Freud, is said to have coined the name *public relations* in May 1920 as a respectable way to describe his profession—in the wedding announcements heralding his marriage. Bernays had previously established the first firm doing such work, though the term *public relations* had been recorded as far back as the early 19th century. Since about 1942 PR has been used as an abbreviation of *public relations*.

publisher. The first recorded use of *publisher* for “one whose business is the issuing of books, magazines, etc.” dates back to 1740 in England. The first publishers, however, may have been Egyptian undertakers, who put into each burial place a *Book of the Dead*, which was a guide to the afterlife. About 550 publishers in the United States bring out over 50,000 new titles every year, but a nonprofit publisher, the U.S. Government Printing Office, is the largest publisher in the country, and in the world for that matter, mailing out more than 150 million items every year and publishing 6,000 new titles annually. Publishers have of course been the butt of many writers’ jokes. Said James M. Barrie in an 1896 speech: “Times have changed since a certain author was executed for murdering his publisher. They say that when the author was on the scaffold he said goodbye to the minister and to the reporters, and then he saw some publishers sitting in the front row below, and to them he did not say goodbye. He said instead, ‘I’ll see you again.’” In his *Memoirs of a Publisher*, F. N. Doubleday, dubbed Effendi by Kipling, relates Mark Twain’s “perfect recipe” for making a modern publisher: “Take an idiot man from a lunatic asylum and marry him to an idiot woman, and the fourth generation of this connection should be a good publisher from the American point of view.” Mark Twain, of course, later became a publisher himself.

publishing patron saints. The saints that watch over the publishing trade include: publishers, St. John the Apostle; editors, St. John Bosco; authors, St. Francis de Sales, St. John the Evangelist; poets, St. David, St. Cecilia, St. Columba, and St. John of the Cross. Publishers admit that even television has its patron saint—St. Clare of Assisi (1194–1253). All saints take their title ultimately from Latin *sanctus*, “holy.”

puckish. The mischievous or impish are called puckish after the sprite in Shakespeare’s *A Midsummer Night’s Dream*, Shakespeare coining the proper name Puck from *puck*, for “a malicious demon,” but creating a character far more merry and attractive. It is Puck who speaks Shakespeare’s immortal line: “Lord, what fools these mortals be!”

pudder. See GOBBLEDYGOOK.

puffery. In his play *The Critic* (1779) English dramatist Richard Sheridan created a cast of characters including the bogus, verbose critic and author Mr. Puff. Sheridan named Mr. Puff after the English word *puff*, meaning inflated, which is suggestive of the sound made by puffing wind from the mouth and was commonly applied to exaggerated newspaper ads at the time. But Mr. Puff added a new dimension to the word in Sheridan’s satire of the malignant literary criticism of the day. Puff talks with the spiteful critics Dangle and Sneer about the absurd, bombastic “tragedy” he has written called *The Spanish Armada*, pushing his play all the while, for he has reduced the art of puffery to a science. At one time he even catalogs the puff: “Yes, the puff preliminary, the puff collateral, the puff collusive and the puff oblique, or puff by implication. These all assume, as circumstances require, the various forms of letter to the editor, occasional anecdote, impartial critique, observation from correspondent, or advertisement from the party.” So absurdly does Mr. Puff overpraise or blow up his work that his name entered the language in the form of *puffery* as a word for the kind of criticism produced by literary cliques, the mutual back-scratching or logrolling that is usually subtler, but still as common today among the Sneers and Smears of literature as it was in Sheridan’s time. Thanks to Mr. Puff we also have a synonym for a BLURB.

pug. As in pug nose or pug dog, and even as short for pugilist. Also for “a short snub nose.” See PUG-NOSED.

Puget Sound. See VANCOUVER.

pug-nosed. People with short snub noses are called pug-nosed because their proboscises resemble those of apes or a breed of dogs. In the 17th century, *pug*, which derives from *puck*, a term of endearment, was a pet name for both apes and a popular type of short-haired dog. Both apes and the pug dog have blunt noses with wide bases that slope upward, which inspired some wag to dub similar human noses pug noses. Students of physiognomy believed that a pug nose was an indication of weakness; even Emerson wrote that “a squint, a pug-nose, mats of hair . . . betray character.” In fact, Charles Darwin had a snub nose and Captain Fitzroy of the *Beagle*, a devotee of the “science,” almost didn’t hire him as the ship’s naturalist because a snub nose was supposed to indicate a lack of energy or determination.

puke. *Puke* for to vomit is probably an onomatopoeic word and is first recorded in Shakespeare’s *As You Like It* (1599): “At first the infant, mewling and puking in his nurse’s arms.” *Puke* is also an old nickname, still used occasionally, for an inhabitant of Missouri. No one seems to be sure why the name was bestowed upon Missourians, though several explanations have

been given. One of the earliest references claims that the first settlers in St. Louis ate poisonous wild greens that caused a virtual epidemic of puking. *See also* SHOW-ME STATE.

pukka. Also spelled *pucka*, and rhyming with luck-a, *pukka* derives from the Hindu word *pokka*, meaning “cooked, ripe, mature.” The English brought it home from India in the late 17th century and the word has since become a workhorse adjective meaning genuine, good, substantial, permanent, reliable, and conventional.

Pulitzer Prize. Hungarian-born Joseph Pulitzer was persuaded to immigrate to America by an agent who recruited him for the Union Army in 1864. After serving until his discharge a year later, he settled in St. Louis, where he founded the *St. Louis Post-Dispatch* in 1878. But when his chief editorial aide, Col. John A. Cockerell, shot and killed Col. Alonzo Slayback during a bitter political quarrel, Pulitzer left his paper and moved to New York, where he founded the *New York World* in 1883. He proceeded to become a congressman and make his paper among the best in the world, despite the fact that he went blind at age 40. A liberal, crusading newspaper, the *World* did much to raise the standards of American journalism, employing many of the greatest reporters and columnists of the day. Absorbed by the Scripps-Howard chain in 1931, it was eventually merged out of existence. When Pulitzer died in 1911, aged 64, his will provided a fund to Columbia University, where he had established and endowed the school of journalism, which has been used since 1917 to give annual monetary awards for writing. Prizes in journalism for local, national, and international reporting; editorial writing; news photography; cartooning; and meritorious public service performed by an individual newspaper. There are also prizes for music and theater, and four traveling scholarships. *See* BOOKER PRIZE.

pull a boner. “Mistah Bones” in American minstrel shows was the end man in the line who rhythmically played a pair of bones, originally polished rib bones from an animal. It is said that “Mistah Interlocutor,” the middle man in the line, fired questions at him designed to evoke ridiculous or stupid answers, which became known as *pulling boners*. This is possible, or *to pull a boner* may simply derive from the older American term “a bonehead,” a stupid error, slang since about 1860. There is no connection between the Americanism of about 60 years’ duration and the British expression *a boner*, a sharp blow on the spine that dates back about a century and a half, or *boner*, slang for an erection.

pull a fast one. *Pull* has been slang for “to engineer a deception” for well over a century, but the expression *pull a fast one*, “to put over a trick or clever swindle,” goes back to only about 1938. Baseball seems the obvious source—a pitcher coming in hard with a fast ball after throwing a lot of “junk.” But the nod has to go to “fast-bowling at cricket,” since the expression is first recorded in England. *See* CRICKET.

pulled teeth. One’s power decreases when teeth are pulled or drawn, according to ancient belief. This may well have been literally true among primitive people when teeth were a weapon (as they were in the 1997 Tyson-Holyfield fight when Tyson

bit off a piece of his opponent’s ear). The belief is said to come from a fable about a love-struck lion who agreed to have his teeth pulled and claws clipped if a fair lady would wed him. After Leo did this, the damsel’s father slew the King of Beasts.

pullet. *See* PONY.

pulling a Crater. On August 6, 1930, colorful, well-known New York Supreme Court Judge Joseph Crater vanished from the face of the earth, never to be found again, despite countless theories of what became of him. Judge Crater (1889–?) was even said to have been killed by the mob and buried under the Coney Island boardwalk. In any event, he ranks along with labor leader Jimmy Hoffa as America’s best-known missing person, his name a synonym for *vanishing*. Another famous missing person is aviation pioneer Amelia Earhart, the first woman to make a solo flight across the Atlantic, who disappeared on July 18, 1937, while trying to circle the globe.

Pullman car. Abraham Lincoln’s assassination made the Pullman sleeping car a reality. George Mortimer Pullman (1831–97), a cabinetmaker, had experimented in building much-needed railway sleeping cars just before the Civil War but couldn’t sell his idea, even though he had made a successful test run with two converted coaches. In 1863 he invested \$20,000, every penny he had, in a luxurious sleeping car called the Pioneer that he and his friend Ben Field built on the site of the present-day Chicago Union Station. But the Pioneer, unfortunately, was too wide to pass through existing stations and too high to pass under bridges. For two years it lay on a siding, a well-appointed waste, until President Lincoln was assassinated in 1865. Every area through which Lincoln’s black-creped funeral train passed brought out its finest equipment, and Illinois, the Rail Splitter’s birthplace, could be no exception. The Pullman Pioneer was the best that the state had, and Illinois spared no expense in promptly cutting down station platforms and raising bridges so that the luxurious car could join the presidential funeral train in its run from Chicago to Springfield. The funeral party traveling in the Pioneer was greatly impressed by the car. As a result, the Michigan Central cleared the line for the big car and other railroads around the country began to follow suit. Pullman soon went into partnership with Andrew Carnegie in the Pullman Palace Car Company and his sleeping cars, or Pullmans, eventually made him a millionaire many times over.

pull one’s leg. *See* YOU’RE PULLING MY LEG.

pull out all the stops. An organist who pulled out all the stops—levers used to change the sound of the instrument—would be giving his all, the meaning of this phrase. Though the organ, or its rude prototype, originated in Greece, the expression deriving from it dates back to 19th-century England.

pull strings. This expression was inspired by puppet masters of days past, who manipulated strings or wires on their marionettes from behind a curtain. Unseen, they completely controlled the actions of their puppets, so in the mid-19th century *pulling the strings* or *wires* came to mean controlling the affairs of humans from a distance as if they were puppets.

pull the string. To pull the string is to pitch a change-of-pace ball to a baseball batter to put him off balance. The pitcher usually throws a fast ball first; his next pitch is often a slow ball, which to the off-balance batter appears to be “attached to and pulled back by a string.” Quoting Burt Dunne’s pamphlet collection *The Folger Dictionary of Baseball* (1958), in *The Dickson Baseball Dictionary* Paul Dickson tells a good story about another possible, if unlikely, derivation: “Burt Dunne says this is derived from a trick featuring ‘a trapped badger’ in a box overhead. The rookie releases the ‘badger’ by pulling the string, and says Dunne, ‘down come refuse—and worse.’”

pull the wool over one’s eyes. Most investigations of this expression trace it to the huge wigs that were the fashion in the early 19th century, when *wool* was a joking term for hair. Judges often wore these poor-fitting wigs, which frequently slipped over the eyes, and it may have been that a clever lawyer who tricked a judge bragged about his deception by saying that he pulled the wool over his eyes. Or purse-snatchers may have pulled down the wigs of gentlemen to make it easier to snatch their purses while they stumbled about. The actual source is really unknown and although the expression is first recorded in America (1839), it is thought to be of older, English origin.

pull up stakes. These stakes are boundary stakes, not the circus tent stakes that are pulled up when a circus moves to another town. The expression goes back at least to 1640 in America, where settlers who wanted better land than had been given them simply pulled up their boundary stakes and moved on to another location, resetting the stakes there.

pulse. The word *pulse* in gardening terminology usually means the edible seeds of leguminous plants such as peas, beans, and lentils, or these legumes themselves. Sometimes the word is used to characterize any herbaceous plant of the pea family, such as alfalfa, clover, and vetch. The harvest festival of the ancient Greeks called the *Pyanepsia* took its name from the cooked pulse that was offered at the festival to the god Apollo as the first fruits of the harvest and eaten by all members of the household.

puma. *Puma* is the Inca name for the American feline *Felis concolor*, also called the cougar, the jaguar, and even, rarely, the South American lion. This word for the big cat was brought back from the Andes by the Spanish conquistador Pizarro in the 1530s.

pumice. Pumice is a porous, spongy form of volcanic glass used as an abrasive or polish; there is an entire mountain of it on the island of Lipari. In 1645 one writer reported that “Italians to this day have the habit of pumicing their skin to get off the hair.” *Pumice* comes from the Latin *Pumex*, for the substance, while *pounce*, “a fine powder formerly used to blot ink on paper,” comes from the same source.

pummel. See POMMEL.

pumpernickel. When in Germany, Napoleon’s groom was supposedly offered a slice of coarse, dark rye bread and indignantly refused it, saying that it was fit only for the Emperor’s horse, Nickel. “*C’est du pain pour Nickel*,” the gourmet groom

protested (“It is bread for Nickel”), and *pain pour Nickel* stuck as the name for the bread. But scholars don’t appreciate this ingenious story that has the German bread named after a horse, though for once they do offer an interesting tale in exchange. *Webster’s* and other authorities derive *pumpernickel* from the German *pumpfern* (“to break wind”) and *Nickel* (“a goblin or the devil”), implying that *pumpernickel* is so named because it made people who eat it “break wind like the devil.”

pumping iron. Lifting weights. The expression, dating back only to the 1970s, became a household term mainly due to the efforts and example of weight lifter and movie star Arnold Schwarzenegger.

pumpkin. This member of the squash family originated in the Americas, where pumpkins were so ubiquitous among the Pilgrims that some wit wrote the following: “We have pumpkins at morning and pumpkins at noon, / If it were not for pumpkins we would soon be undone.” The pumpkin didn’t get its name because it looks “pumped up” into a balloon shape. *Pumpkin* probably comes from the Greek *pepon*, a kind of melon, literally, “a fruit cooked by the sun.” *Pepon* became the Middle French *ponon*, which became the English *pompion*, to which the diminutive suffix *-kin* was finally added. It is just another example of the many English words formed from mispronunciations of foreign words. Seneca is said to have written a satire on the deification of the Roman emperor Claudius Caesar, which he called *Apocolocyntosis*, coined from the Greek word for pumpkin and meaning “pumpkinification.” *Pumpkinification*, suggesting a swollen head the size of a pumpkin and “pumped up,” has meant pompous behavior or absurd glorification since at least the mid-19th century, when a British writer called attention to Seneca’s satire.

pumpkin head. See SAP.

pump priming. Just as a pump is primed with water to increase its water production, the U.S. economy was stimulated by U.S. spending, this tactic the brainchild of Franklin D. Roosevelt and his advisers during the Great Depression.

pun. No one has yet found the origin of the word *pun* for a play on words, and perhaps no one ever will. English author John Dryden appears to be the first to have used the word in 1662, and that is about the extent of our knowledge of it. Punning, however, goes back to Homer’s time or earlier and great English writers from Shakespeare to Joyce have used puns, though others have called them the lowest form of art. There are many synonyms for *pun*, some dating back to the 15th century. These include bull, carriwitchet, clench, crotchet, figary, flam, jerk, liripoop, quartorquibble, quibbin, quiddity, quirk, and whim.

punch. Legend has it that our beverage *punch* derives from the Hindi *panch*, “five,” because it originally had five ingredients: arrack, tea, lemon, sugar, and water. More likely the word comes from the *puncheon*, or large cask, from which GROG was served to sailors in the East India trade. In any event, the Indian beverage was a great favorite with sailors and was brought back to England in the late 1600s.

Punch and Judy. See PROUD AS PUNCH.

punch-drunk. Brain damage in boxers resulting from repeated blows to the head produces many symptoms, the most common being poor coordination, slurred speech, mental deterioration, and a broad-based gait. Old, very impaired fighters suffering this combination of effects were called punch-drunk by Dr. Harrison S. Martland in a 1928 article in the *Journal of the American Medical Association*. However, Dr. Martland probably did not coin the term, as *punch-drunk* is recorded in America as early as 1915. In the early 1940s *punchy* began to supplant *punch-drunk*.

punching bag. Someone who takes much abuse and punishment is said to be a punching bag. The term is American and comes from boxing; it is first recorded in 1897, although boxers practiced on heavy bags filled with sand long before then.

Punch it! “Punch it, baby!” Steve McQueen shouts several times to Ali McGraw as they escape from the law in *The Getaway* (1968). The classic film isn’t the origin of this phrase, which dates back at least to the 1950s, years before Ms. McGraw was punching the gas pedal with her foot to accelerate the old getaway car in the film.

Punch’s advice. *Punch’s advice* derives from the most famous joke of the British humor magazine *Punch*. The magazine announced that it would send advice to those about to marry, the advice turned out to be: “Don’t.”

punchy. See PUNCH-DRUNK.

punctuation. The word comes from Latin *punctio*, “with the point.” Gertrude Stein was one of many writers who hated punctuation, especially commas, and would have rid the world of them. However, the lack of punctuation can lead to great trouble. In one instance a district attorney introduced an unpunctuated confession taken down by a policeman that read: “Mangan said that he never robbed but twice said it was Crawford.” The prosecution contended this should have been punctuated: “Mangan said he never robbed but twice. Said it was Crawford.” The defense said the sentence should read: “Mangan said he never robbed, but twice said it was Crawford.” The last introduced a reasonable doubt, and the accused went free. Every written language has a system of punctuation, though they are not identical. In German, for example, nouns are capitalized, and in Spanish an inverted question mark goes at the beginning of a question. According to an old typesetter’s maxim for punctuation: “Set type as long as you can hold your breath without getting blue in the face, then put in a comma; when you yawn, put in a semicolon; and when you want to sneeze, that’s the time for a paragraph.” See COMMA.

pundas. This South African word is one of the few deriving from the Xhosa language. Meaning backside or buttocks (“He gave him a kick in the pundas”) the word comes from the Xhosa *impunda*, meaning the same.

pundit. The Sanskrit *pandeta* means “learned,” especially a learned scholar or teacher. Since 1816 the English *pundit*, borrowed from *pandeta*, or from the Hindi *pandit*, has meant any very learned person, or an authority on a particular subject.

punk. *Punk* was originally 16th-century slang for a prostitute or harlot, the word of unknown origin. It has since come to mean a number of things, depending on the context it is used in, and usually refers to a male. These meanings include: a male, usually young, who has been or is said to have been sodomized; a young inexperienced boy; a petty criminal; and any insignificant person. *Punk style* of dress seems to come ultimately from the dress of young hoodlums in the 1950s, while *punk* in the sense of inferior or bad is said to be of 18th-century British origin, deriving from “rotting wood” called punk.

punt. The name of this shallow flat-bottomed boat comes from the Latin *ponto* meaning the same. So does pontoon (qv) and pontecello (qv), but punt for to kick a football is of uncertain origin.

punter. *Punter* has been slang for “a gambler or a bettor” since the early 18th century. This word has its origins in the French *punter*, meaning to place a bet against the bank in the game of faro. The football *punter*, or kicker, is of different yet uncertain ancestry, perhaps being of echoic origin from the sound of the ball when kicked.

puny. The British borrowed this word from the French in the mid-15th century, misspelling their *puisne* as *puny*, but retaining its meaning of “late born,” that is, junior or subordinate. Over the years, however, *puny* took on the meaning of less than normal size or strength; weak; unimportant; insignificant; petty.

pupa. The great naturalist Linnaeus coined this technical term for “an insect in the third and usually quiescent state preceding that of the perfect insect.” *Pupa* comes from the Latin *pupa*, “little girl or doll.” The coinage has been called “a stroke of poetic genius,” one writer noting: “If you look at the underside of a moth’s pupa [you will] see the shape of its face, eyes and embryonic wings like little arms, all wrapped as if in swaddling clothes which emphasize its likeness to a doll.” See LARVA.

pupil. The smallness of the mirror images seen on the pupil of the eye led to the pupil being named after the Latin *pupilla*, “little girl.” Our word *pupil*, for “a student,” comes from the Latin *pupulus*, or “little boy,” most pupils in days past having been little boys.

puppy. Lapdogs were treated like dressed dolls or playthings by French ladies in the late 15th century, and so a lapdog was called *poupée*, “doll.” When the word came into English years later, its spelling changed to *puppy*, and it lost its associations with lapdogs, applied instead only to young dogs, especially those less than a year old.

purdah. *Purdah* (which derives from the Hindu *pardah*, “curtain”) is the Islamic custom of secluding women from the sight of all men except close relatives. It is still practiced by many Muslim women, who conceal themselves completely from onlookers when they go out into the street by wearing the *burga*, an ankle-length garment with slits for eyes.

puritan. The Puritans were originally members of a mid-16th-century Protestant reformation group that wanted to rid the English Church of all traces of Roman Catholicism. Their name means “pure of heart” and a Puritan was first defined as “an advanced reformer in the Anglican Church.” In time their theology became CALVINISM, however, and many of them were driven into exile with the accession of James I in England. Immigrating to America, they composed the bulk of the population of Plymouth Colony, Massachusetts and Connecticut. Noted for industry and intellectual intensity, among other fine qualities, they were even more noticeable for their strict morality and absolute reliance on Scripture. It was these latter qualities, often carried to fantastic extremes, that made *puritan* a synonym for a narrow-minded, excessively religious person blind to the beauty around him.

purple crown vetch. A plant (*coronilla varia*) that can be an invasive weed in the garden, but is used to prevent erosion on banks and is beautiful when flowering as a whole in meadows. An older (1555) name for it is *axseed*. See KING DEVIL WEEDS.

Purple Heart. George Washington originated the medal called the Purple Heart during the Revolutionary War. His order in 1782 explained that “the General, ever desirous to cherish virtuous ambition in his soldiers, as well as to foster and encourage every species of military merit, directs that whenever any singularly meritorious action is performed, the author of it shall be permitted to wear over the left breast, the figure of a heart in purple cloth, or silk, edged with narrow lace or binding.” Originally given for “meritorious action,” and awarded to three or four Revolutionary War soldiers, it is now granted for battle wounds.

purple prose. This term for ornate, exaggerated writing has a long history. The Roman poet Horace said that all purple patches (*purpureus pannus*) should be deleted from literary works and put away for eight years before being reedited and published—for they could never again be recalled.

purse. A New Hampshire pronunciation of “pierce,” as in Franklin Pierce (1804–69), the New Hampshire-born 14th president of the United States. “She [New Hampshire] had one president. Pronounce him Purse,” Robert Frost wrote, “and make the most of it for better or worse.”

pursuit of happiness. The Declaration of Independence (1776) famously holds that all men are entitled to the “pursuit of happiness,” but this stirring phrase wasn’t coined by the declaration’s principal author, Thomas Jefferson. British philosopher John Locke coined the words nearly a century earlier in a treatise on government, and the phrase has been used frequently since.

push (hit) the panic button. Of the many panic buttons that could be the source of this expression, meaning “to act in unnecessary haste or panic,” the original appears to be the bell system used for bailouts and ditchings in World War II bombers such as the B-17 and B-24. Often extensive damage to a plane was hard to determine and pilots sometimes pushed the button activating the bell system too soon, causing their crews to bail out unnecessarily when there was only minor damage to the aircraft. The expression is sometimes used today to demand that a job be completed rapidly and well.

push of pike. A British spectacular on the battlefield in medieval times when British soldiers used thick 18-foot-long pikes to push the charging enemy off the field.

pushover. See HIGH HAT.

puss. Irish immigrants apparently introduced *puss* to America in the early 1880s, the slang word deriving from the Gaelic *pus*, “mouth.” Not long after the expression *to make a puss*, “to pout,” became part of our vocabulary. So did *sour puss*.

pussel-gutted. Big, protuberant bellies; also pus-gutted, pussy-gutted. Perhaps derives from purse, or from the dialect term *puscle*, suggesting a swollen gut. “You durned fool, I sent word to you two days ago to get away from there before that pussel-gutted Hampton come prowling around with that surry full of deputies.” (William Faulkner, *The Hamlet*, 1931).

pussyfoot. Teddy Roosevelt seems to have either coined or popularized *pussyfoot* in about 1905. Meaning crafty, cunning, or moving in a cautious manner, it refers to the way cats can walk stealthily by drawing in their claws and walking on the pads of their feet. It’s very unlikely that the redoubtable William Eugene “Pussyfoot” Johnson, a crusading American dogooder, has anything to do with the expression. Johnson was nicknamed “Pussyfoot” because “of his catlike policies in pursuing lawbreakers” when he served as chief special officer in the Indian Territory. Later his nickname, in the form of *pussyfooters*, was applied to all advocates of Prohibition. While crusading in England, fresh from his triumph of securing the passing of Prohibition in the U.S., Johnson was blinded by a stone thrown by a crusading drunk.

put (lay) one’s finger upon. Sherlock Holmes *seems* to be the first person to have used *to lay one’s finger upon*, “to indicate with precision,” in Sir Arthur Conan Doyle’s *The Memoirs of Sherlock Holmes* (1895): “You lay your finger upon the one point . . .” But a little sleuthing reveals that the expression had been used at least five years earlier as *to put one’s finger upon*, in reference to a physician (not Dr. Watson) discovering the cause of an illness.

put a flea in one’s ear. Giving someone a hint, warning, or suspicion of something; to put an idea in someone’s head. The expression dates back to the 14th century.

put all your eggs in one basket. See EGG PHRASES.

put a sock in it. Seldom heard anymore, this phrase goes back to the days of early phonographs, first invented by Thomas Edison in 1877. The first phonographs had no form of volume control and in order to hold the volume down, teenagers were told to put a sock in the horn to mute the sound. *To put a sock in it* came generally to mean “to stop anyone from talking too much or too loudly.”

putative. The fictional author of a work, a character to which the author assigns its authorship, a *putative author* almost always narrates the story and pretends to have written it. *Putative* comes from the Latin for “to think,” because the narrator character and his readers really think he wrote the book. *Putative marriage*, for an illegal marriage but one made in good faith, is first recorded early in the 19th century.

put in a good word for someone. To say something favorable about someone, often to help that person obtain a job or some other benefit. *Good word* in this sense is hardly modern slang, dating back to the late 12th century.

put in one’s two cents’ worth. The oldest recorded use I can find for this American phrase, which means to interfere or meddle, to butt into a conversation, dates back to only 1945, but it must be much older. The similar British saying, “to put one’s oar in another’s boat,” dates to at least 1500, and the similar but little-known COME IN WITH ONE’S FIVE EGGS IS TWO OR THREE CENTURIES OLD.

put it all in the first paragraph. This maxim urging conciseness and pungency in the lead of a newspaper story has its origin in advice to a young reporter given by editor Samuel Bowles (1826–78). Bowles was the founder of *The Springfield Republic*, a liberal Republican paper.

put nothing smaller than your elbow in your ear. An old medical maxim warning people not to self-medicate an earache—and one’s elbows, of course, can’t even reach one’s ears.

put one’s best foot forward. The *best foot* in the common phrase is the right foot, it having been considered unlucky by the ancients to begin any journey or enterprise with the left foot; many English brides, for example, still put the right foot forward first when they enter the church.

put one’s foot in one’s mouth. *Every time he opens his mouth he puts his foot in it* is first recorded in the 1770s, when it was said of Dublin politician Sir Boyle Roche, who made remarks in his speeches like: “Half the lies our opponents tell about me are not true!” The expression was probably suggested by the earlier *to put one’s foot in it*. See also PUT YOUR FOOT IN IT.

put one’s oar in another’s boat. See PUT IN ONE’S TWO CENTS’ WORTH.

put on nothing but the radio. To be naked. When a reporter asked Marilyn Monroe what she wore when she went to bed, she supposedly replied, “I put on nothing but the radio.” An-

other version of the tale has her answering that she put on nothing but Chanel No. 5.

put on the dog. Lap dogs were all the rage among the new rich in America shortly after the Civil War, especially King Charles and Blenheim spaniels, rather imperious-looking dogs to the common man and certainly very distant relatives sociologically of the average American mutt, who had to work or scrounge for his supper. These snooty dogs being pampered by their snooty owners probably inspired the expression *putting on the dog*, “showing off,” which apparently arose in the 1860s as college slang at Yale University. Attempts to derive *put on the dog* from the older *put on side* all seem strained. The reasoning behind the latter is that dogs “show off” by arching out one side while moving their feet in intricate maneuvers.

put on the gloves. Since about 1847 *to put on the gloves* has meant to fight, in a ring or elsewhere, although boxing gloves only became mandatory under the Queensberry rules. Boxing gloves were used in England as early as 1734 but weren’t commonly called by that name until about 1875; prior to that, they were called *mufflers*, *gloves*, and *padded mittens*. See BELOW THE BELT.

put on the spot. The ace of spades is a symbol of death to the superstitious in many lands; in recent times Vietcong soldiers were so afraid of it that American planes “bombed” their strongholds with thousands of the cards to demoralize them. The expression *put on the spot* has its origins in this superstition, which probably derives from the old practice among pirates of sending the ace of spades, which has one printed “spot” in the middle, as a death threat to an informer or coward they intended to kill. Anyone who was sent the ace of spades was put on the spot, “in a dangerous position, slated to die.” American criminals perpetuated the expression, giving it wide currency, and early in the 20th century it took on a less sinister meaning—though someone on the spot is still someone in danger of great failure or embarrassment if he doesn’t produce successful results within a short time.

putt. According to most sports historians, *putt* is simply a Scottish pronunciation and spelling of *put*, which was first recorded in 1743. Thus to *putt* a golf ball into the hole is to put it in the hole. Those who trace the origin of golf to Holland, however, believe that *putt* derives from the Dutch word for the hole itself.

put that in your pipe and smoke it. This expression of British origin is commonly heard in the U.S. First recorded in an 1884 novel, it means, in the words of the *OED*, “digest it or put up with it if you can,” usually said by a person who has put someone else down in an argument.

put the cart before the horse; preposterous. When Cicero said these words in 61 B.C. they were already proverbial. Actually, their Latin version, literally translated, means “the plow draws the ox in reversed position,” but it conveys the same idea, that is, to get things in the reverse order. The Roman proverb was first translated into English in 1279, and over the years the

ox became a horse and the plow a cart. The proverb is ancient in French, German, and Italian as well as English. *Preposterous* conveys a similar idea. It is from the Latin *prae*, “before,” and *posterus*, “after,” and freely translated means “the before coming after,” which suggests its meaning of “nonsensical or absurd.” By the way, sometimes carts *were* legitimately put before horses, as when horses pushed empty carts into coal mines. American author Heywood Broun liked to tell a joke based on the old proverb: “If a philosopher lectured on Descartes in a bordello what would I say?—I would say the philosopher was putting Descartes before de whores.”

put the John D. to her. John D. Rockefeller, of course, made his great fortune in oil. Therefore, loggers used his name to mean kerosene, especially in the expression *put the John D. to her!*, that is, kindle or start a fire.

put the kibosh on. See KIBOSH.

put the pedal to the metal. To drive a car as fast as it can be driven, drive!, floor it! This Americanism has nothing to do with soft pedal, which means to deemphasize and comes from the pedal on a piano that softens notes.

put the toothpaste back in the tube. A recent saying meaning “to perform a very difficult, almost impossible task,” as in “A lot of damage has been done; it’s going to be hard to correct it, to put the toothpaste back in the tube.” Robert Baer, author of *See No Evil* (2002), used the phrase on a Fox TV interview (2/2/02).

put through the mill. Someone *put through the mill* gets rough treatment like the grain that is ground under millstones in a water mill. This is one of numerous old expressions deriving from the milling of grain. Another is the term MILL. Still another is the proverb *much water runs by the mill that the miller knows not of*: many things happen right before us about which we know nothing.

put to the pale. See BEYOND THE PALE.

put up on a pedestal. To worship, idolize, greatly admire, as in “He puts her up on a pedestal.” *Pedestal* comes from the Italian *pedistallo*, literally “foot stall,” thus a pedestal is the foot stall or base of a statue, pillar, etc.

put up your dukes. *Dukes*, for “fists,” probably honors the duke of York, Frederick Augustus (1763–1820), the second son of England’s George III. A total loss as commander-in-chief of the Army, Frederick was nevertheless popular among his subjects. As he had once dueled in public with the future duke of Richmond, his name was associated with fighting, and being an ardent sportsman, he was often seen at the racetrack and prize ring. Possibly this led boxers to nickname their fists *Dukes of York*, the phrase finally shortened to *dukes* and expressions like *put up your dukes*, “let’s fight,” becoming common. Or else *Duke of Yorks*, Cockney rhyming slang for “forks,” was associated with fingers, then hands, and finally fists, or *dukes*—with the Duke of York somewhere in mind. Another

even more ingenious explanation has it that noses were called *Dukes* because the Duke of Wellington’s nose was big—fists therefore being dubbed *Duke busters*, which ultimately became *dukes*. The Duke may have been immortalized in the language, but he ended his career in disgrace when his mistress admitted to taking bribes with his permission. To save face, he had to pension her off so that she wouldn’t publish his love letters.

put your foot in it. The old proverb “The Bishop hath put his foot in it” led to the common expression, *Now you’ve put your foot in it*. Bishop is, of course, usually an honorific, but the original proverb, used when soup was scorched, may have arisen because of the reputation of a certain bishop or bishops for burning heretics. An alternate explanation is that the saying arose when an anonymous cook stood at the window watching a procession headed by a noted bishop and blamed him for the port soup she burned. Or it may simply have been suggested by someone stepping in cow flops.

put your shoulder to the wheel. This expression refers to someone literally putting his shoulder to the wheel and pushing a cart out of the mud, as was so common on roads everywhere in the days before macadam. The expression goes back at least to Elizabethan times, when it probably was proverbial in the form of *Lay your shoulder to the wheel and push the oxen*.

Pygmalion. See HENRY HIGGINS.

pyjamas. Weekley advises that pyjamas derives from an Urdu word meaning leg garment, trouser, and is thus “incorrectly used of ‘sleeping suit.’” But it is far too late for the designation to be changed.

pyow. Real monkey talk. According to the *National Geographic* (February 2001), Nigerian putty-nosed monkeys have been observed combining vocal signals to create new meanings, “the first time there has been evidence of a non-human mammal combining vocal signals to create entirely new meanings.” For example, *pyow* means a leopard is lurking in the vicinity, while *hack* means an eagle is in the area. These calls have been observed to construct “a simple sentence,” *pyow pyow hack hack hack hack*, meaning “Let’s get out of this place!”

Pyrrhic victory. After he defeated the Romans at the battle of Asculum in 279 B.C., losing the flower of his army in the action, King Pyrrhus remarked, “One more such victory and we are lost.” Other versions of his immortal words are, “One more victory and I am undone,” and “Another such victory and I must return to Epirus alone.” Pyrrhus had come to Italy with 25,000 troops two years before when Tarentum asked him to help organize resistance against the Romans, but after Asculum and several other battles he returned to the kingdom of Epirus in northwest Greece with only 8,000 men. The great warrior, a second cousin of Alexander the Great, never did live to revive the conqueror’s empire as he had hoped. He died in 272 B.C., aged 46, during a night skirmish in a street in Argos—fatally struck by a tile that fell from a roof—his name

only commemorated by the phrase *Pyrrhic victory*, a victory in which the losses are so ruinous that it is no victory at all.

Pyrrhonist. A Pyrrhonist is the ultimate skeptic, one who like the Greek philosopher Pyrrho (ca. 365–ca. 275 B.C.) believes that we have no certain knowledge of anything at all. It is said that a contemporary wrote the following mock epitaph on the philosopher:

'And oh, dear Pyrrho,
Pyrrho, are you dead?'
'Alas, I cannot tell,'
Dear Pyrrho said.

pyrzqzgl. *Pyrzqzgl* plays a rather important role in American fantasy, being the magic word coined by Frank L. Baum in *The Wizard of Oz* (1900).

python. *Python* derives from the Greek verb meaning “to rot,” not a likely source for the name of the largest living snake next to the anaconda. The first python was a huge serpent slain near Delphi by Apollo, and the monster rotted in the sun after it died. The name of the mythological serpent wasn't given to real snakes until 1836, though it had been applied in English to other mythical monsters two centuries before this.

Q

Q. Q, developed from Latin, never appears at the end of an English word and is almost always followed by *u* in English, though there are transliterated Arabic words offering exceptions: the Arabian sheikdom Qatar, for example, and *qaf*, the 21st letter of the Arabic alphabet. Another exception is *Qvoens*, “queens,” which early Finns called themselves, leading some ancient European geographers to believe that a race of Amazons lived in northern Europe. Contractions like Q-BOATS and abbreviations like *q.v.* don’t count. *See also* CUE.

al-Qaeda. The name of the terrorist organization headed by Saudi-born terrorist Osama bin Laden, which is thought by many to have destroyed the World Trade Center in New York City on September 11, 2001, by hijacking two planes and crashing them into the Twin Towers. Another plane hijacked by al-Qaeda terrorists crashed in Pennsylvania, apparently before it could accomplish the terrorists’ aim of destroying the White House, and a fourth plane struck the Pentagon, causing many deaths and much damage. *Al-Qaeda* is Arabic for “the base,” or “military headquarters.” *See* SUICIDE BOMBER.

Qatar. The name of this country on a peninsula in the Persian Gulf is usually pronounced “cutter” by radio and TV newscasters. Most dictionaries, however, pronounce it “cahtar.” Qatar has been an ally of the U.S. in the Mideast.

Q-boats. These British warships disguised as merchant ships destroyed many a German U-boat during World War II. “Panic parties,” men who abandoned ship when fired upon, were launched by these decoys, tempting the U-boats to come closer so that concealed guns manned by hidden crews could blast them out of the water. They took their name from an abbreviation of the Latin *quaere* “inquire” (which the U-boats did). Q-boats were also called hush-hush ships and mystery ships.

QE 2. Short for *Queen Elizabeth 2*, the Cunard Line cruise ship that replaced the *Queen Elizabeth* in 1967, two years after that great ship was retired. The 1,791-passenger ocean liner offers a six-continent, 108-day world cruise ranging in price from

\$24,195 to \$374,515 (yes, one suite costs \$374,515). The *QE2* is not so large as her predecessor in tonnage or length, but is the world’s largest operating luxury liner today.

Q rating. *See* NIELSEN RATING.

Q.T. A British broadside ballad (1870) contained the line “Whatever I tell you is on the Q.T.” This is the first record of *Q.T.* for “on the quiet, in confidence” recorded in English, but no one has established whether the broad-side’s anonymous author was the first person to use the initials *Q.T.* to stand for quiet. *On the Q.T.* gained more popularity when it appeared in an 1891 minstrel show number called “Ta-ra-ra-boom-de-ay.” London “went stark mad over the refrain,” which was written by Henry J. Sayers and sung by Lottie Collins. The first stanza follows:

A sweet Tuxedo girl you see,
Queen of swell society,
Fond of fun as fun can be
When it’s on the strict Q.T.
I’m not too young, I’m not too old,
Not too timid, not too bold,
Just the kind of sport I’m told—
Ta-ra-ra-boom-de-ay . . .

If you or your children grew up with “Howdy Doody,” you’ll notice the similarity between “Ta-ra-ra-boom-de-ay” and Howdy’s theme song.

Quaalude. This sedative drug, a former trademark, takes its name from a contraction of the words *quiet interlude*. The *aa* in the word, however, was taken from the well-known antacid drug Maalox, which the William H. Rorer, Inc., the manufacturer of both drugs, thought would lend prestige to the new product. Quaaludes, developed in the 1960s, are also called *ludes* and *downs*.

quack; medicine man. *Quack* is an abbreviation of the 16th-century word *quacksalver*, which meant an ignorant charlatan

who peddled nostrums and cure-all medicines in the street, the word deriving from the *quack* sound a duck makes and *salve*, medicine or ointment. In America quacks were called medicine men, after the Indian medicine men, as early as 1830. It might be said that the most famous of American fortunes began with a medicine man, or a quack, as John D. Rockefeller's father, William, would be called today. "Dr." Rockefeller was one of the traveling medicine men who put on minstrel shows featuring "Negroes in black face" to sell their wares. He called himself "Dr. William A. Rockefeller, the Celebrated Cancer Specialist," claiming he could cure all cases of cancer ("unless too far gone") with patent medicines. He once bragged, "I cheat my sons every chance I get" in order to "make 'em sharp."

quack grass. *Agropyron repens* and the other weedy grasses called *quack grass* are not so named because ducks like them or because they are used by quacks like medicine men. *Quack grass*, an Americanism first recorded in 1817, derives from the older British word, *quitchgrass*, *quitch* being an old form of "quick" and *quitchgrass* being a very quick grower and insidious spreader into places where it is not wanted. Other names for *quackgrass* include *quatchgrass*, *twitchgrass*, *couchgrass*, *couch*, and *quitch*.

quadrant. Used in astronomy and navigation since its development centuries ago, the quadrant is an instrument properly having the form of a graduated quarter circle that is used for making angular measurements, especially for taking latitudes in navigation. It takes its name from the Latin *quadrant*, "fourth part," or quarter.

quadrille. This five-part square dance for four couples is of French origin, but takes its name from the Spanish *cuadrilla*, "company or troop of soldiers," which is a diminutive of the Latin *quadra*, "square." *Quadrille* was first applied to one of four groups of horsemen taking part in a tournament, but by 1773 was being used to describe the four-couple dance that became so popular in the American South.

quad split. A name, little heard, for the division of a TV screen into four parts. Often used in covering disasters, important stories, or coverage of different aspects of the same important story.

quaff. The obsolete German word *quassen*, meaning the same, probably gives us our *quaff*, "to drink heartily." The word is spelled wrong (*quaff* instead of *quass*) because "the long *s*'s—in print exactly like *f*'s without the cross-stroke—were mistaken for *f*'s" at some unknown date.

quagmired. Hopelessly entangled in a terrible mess, bogged down. A *quagmire*, the word first recorded in 1579, is ground that appears firm but is really jellylike and swallows anyone who steps upon it. The *quag* in the word is a variant of *quake*, "to shake," while *mire* means "muddy land."

quahaug. *Venus mercenaria*, the edible hardshell clam. Indians introduced this name and the clams themselves to the first European settlers in New England. Quahaugs are usually divid-

ed into chowders, as large as four inches at the widest point; cherrystones, half-grown quahaugs; and littlenecks, the most tender and smallest of quahaugs, at two inches or so.

quai. A wharf. Hemingway wrote a story *On the Quai at Smyrna* in which women huddled on the quai wouldn't give up their dead babies, "they'd have babies dead for six days . . ."

Quai d'Orsay. See D'ORSAY PUMP.

quail. *To quail*, "to cower, to lose heart in danger or difficulty," is of no relation etymologically to the bird called a quail. Of uncertain origin, it may come from the Middle English *fael*, meaning the same, or from the Latin *coagulare*, "to curdle," which also gives us *coagulate*. *Quail* has been American slang for a sexually attractive girl since the mid-19th century and may derive from the Celtic *caille*, "a girl." However, *quail* meant a harlot or courtesan in the 16th and 17th centuries, because of the bird's supposed "inordinately amorous disposition." The term was used by Shakespeare in *Troilus and Cressida*. The Bard would have liked the alliterative *San Quentin quail*: a U.S. slang term of the 1930s meaning a sexually attractive but underage girl, one who is jailbait for any man who consorts with her, who can put a man in San Quentin prison. The bird's name *quail* is probably of Teutonic derivation and imitative origin.

quail fight. Few if any Americans had heard of the term *quail fight* before the war in Afghanistan. Men there gather at village markets to bet on such fights, which feature fighting quail that cost their owners up to \$300 for a fierce competitor, a huge sum in an impoverished land. The contests are similar to cock fights, but the little quail are only the size of a large baby chick. A photo of them can be found in the *New York Times*, 12/4/01.

Quaker. The religious Quaker group was founded by George Fox in 1650 as the Society of Friends, but readily accepted the name Quakers, derisively bestowed upon them because they bade people to "quake and tremble at the word of the Lord." George Fox claimed that he had spoken these words when being arraigned before Justice Bennet of Derby in 1650 and that the judge sneeringly called him a quaker, but there are earlier references to the term. In one London letter dated October 14, 1647, for example, the writer observes, "I hear of a secte of woemen (they are at Southworke) come from beyond sea, called Quakers, and these swell, shiver and shake. . . ." It could well be, then, that the name derives from the trembling of Friends under the stress of religious emotion, which once caused them to "quake, and howl, and foam with their mouths." Despite intense persecution, the beliefs of the Quakers persisted and spread throughout England and America. The Quakers, incidentally, forsook the use of *you* because it was at the time the second-person pronoun employed when addressing superiors. The *thou* they chose in preference to *you* was used in the 17th century to address familiars or inferiors, affirming to them the equality of mankind.

Quaker guns. Fake or dummy guns on ships have long been called Quaker guns in allusion to the Quakers' opposition to war and killing. In 1830 an American naval officer wrote: "Our

six iron six-pounders and six quakers (wooden guns), were, like millennial lion and lamb, lying down together in the hold.”

qualified man. A Mafia member who has *made his bones*, who is qualified to do a job. Also called by the Italian *qualificato*.

quandary. Etymologists have long been in a quandary about the origins of *quandary*, “a state of perplexity, the difficulty causing it.” The word is at least four centuries old. The French phrase *qu'en dirai-je?*, “What shall I say of it?” and Middle English *wandreth* have been considered as ancestors and rejected by the experts. Grose suggests “an Italian word signifying a conjurer’s circle,” without giving the word. The *O.E.D.* suggests “a corruption of a scholastic Latin phrase,” perhaps *quam dare?* or *quando dare?*

quandong tree. *Quandong* is an Australian Aborigine word that has come intact into English, making it one of our most ancient words. The quandong tree is a sandalwood bearing blue berries the size of cherries whose kernel, or “nut,” is edible. It is also called the native peach tree.

Quantrill. Any fabled gunfighter or guerrilla; after William Clark Quantrill (1837–65), who formed a pro-Confederate guerrilla band during the Civil War, more to serve his penchant for cruel bush whacking, bloodletting, and looting than out of any sympathy for the Confederacy. In 1863 he led 448 men into Lawrence, Kansas, where they slaughtered 142 Jayhawkers, or pro-Union, citizens. Quantrill died two years later after being shot in the back while trying to escape from a detachment of Union soldiers.

quantum leap (jump). A quantum leap, or jump, is a sudden, dramatic change or increase. The term is borrowed from the physicist’s field of quantum mechanics, where it refers to an abrupt transition from one energy state to another. *Quantum*, derives from the Latin *quantus*, “how much.”

quapaw. A member of a southwestern tribe of Sioux Indians. Their real name, mispronounced by settlers, is *Uquakha*, meaning “downstream people.”

quarantine. People have been quarantined in the United States for every disease from measles to the dread bubonic plague. *Quarantine* itself ultimately derives from the Italian *quaranta*, “forty,” in reference to the 40 days that travelers from other countries were isolated during the Middle Ages if they had come from a plague-stricken country.

quark. Some scientists believe that quarks, three types of elementary particles, form the basis of all the matter in the universe. The word *quark* was applied to the particles by physicist W. Gell-Mann, but he took it from a James Joyce coinage in *Finnegans Wake*. However, unlike Joyce’s *quark*, which rhymes with *dark*, Gell-Mann’s *quark* is pronounced *quork*. There is no argument, as the coiner made this clear in a 1978 letter to the editor of the *O.E.D. Supplement, Volume III*.

quarry. The quarry is now the object of any chase—the deer in hunting, the bird flown at in falconry—but it once meant something entirely different. In the Middle Ages the quarry, the word deriving from the Latin *corium*, “skin,” was the entrails of the deer placed on the animal’s skin as a reward for the hounds after a hunt. Finally it came to mean what the hounds went after. The *quarry* in *stone quarry* derives from the Latin *quadraia*, “the place where stone is squared,” or cut into blocks.

quarterback. Football’s *quarterback*, the backfield player who directs the offensive play of a team on the field, suggested this general verb meaning “to lead, direct, or manage anything.” The term has been in use for a good 70 years. See also MONDAY-MORNING QUARTERBACK.

quarterdeck. Historically, on sailing ships, a vessel’s quarterdeck is that part of a full-rigged ship abaft the mainmast on the spar deck. Today the quarterdeck is usually the part of the main deck adjacent to the starboard gangway, where distinguished visitors are received on any ship.

quarter horses. Quarter horses are named for their ability to run well in quarter-mile races, not because of their size or lineage. The term is an Americanism, first recorded in 1834, though quarter races are mentioned a good 50 years earlier as being very popular in the South. Quarter horses, usually smaller than Thoroughbred racehorses, were also called quarter nags.

quarter section. The Americanism *quarter section* of land was popularized by the Homestead Act of 1862, which said that any settler on the frontier could have 160 acres of public land free if he could raise a crop on at least 40 acres of it for five years. The 160 acres equaled a quarter of a square mile and was commonly called a *quarter section* or *quarter*. The former term, however, had been used as early as 1804, and the latter as early as 1640.

quasar. An acronym composed of letters from “*quasi*-stellar object,” *quasar* was coined by scientists in the 1960s to describe any of some 40 million celestial objects, up to 10 billion light years distant from earth, which are powerful emitters of radio waves. Quasars are also called *quasi-stellar radio sources*.

quassia; quassin. The black slave Graman Quassi gives his name to this genus of small trees. Quassi discovered the medicinal value of the bark and heartwood of a group of tropical trees common to the Dutch colony of Surinam in the South American Guianas. Using the drug he extracted to treat his fellow natives, he “came to be almost worshipped by some” and when his discovery was communicated to Linnaeus by C. G. Dahlberg in 1730, the botanist named the genus of trees in the slave’s honor. (Quassia’s name probably comes from the Ashanti dialect word *Kwasida*.) The drug he discovered is known as *Surinam quassi* today, and is effective against intestinal worms, as a tonic, and as an insecticide. The drug’s chief constituent is the bitter *quassin*, which is extracted from the nearly white wood in minute quantities.

The Queen! *The Queen, God Bless her!*, frequently abbreviated to *the Queen*, is the Loyal Toast to Her Majesty's health often made in British naval wardrooms. It is customarily drunk while seated because King William IV, "the Sailor King," is said to have hit his head on a wardroom beam while rising to make the toast.

Queen Anne's fan. Since the beginning of the 18th century, this term has stood for putting the thumb to the top of the nose and spreading out and wiggling the fingers. It is said to be named after England's Queen Anne (1665–1714), who often hid her face behind a fan. The rude gesture is also called "Anne's fan," "Spanish fan," "cock a snook," and "thumb one's nose."

Queen Anne's lace. According to folklore, the beautiful wild carrot (*Daucus carota*) is named for the rather homely Anne of Bohemia, who married England's Richard II in 1382. One story tells of a ward of the queen who chose this herb's delicate flower as a tatting pattern. This little girl came to Anne's attention when she was found innocent of a childish prank and the queen discovered her pattern, which she liked so much that she gave the child permission to name it after her. Another story has it that Queen Anne challenged her ladies in waiting to a contest to see who could make embroidery most similar to the pretty flower. The queen, of course, won. In any case, the name *Queen Anne's lace* was later transferred to the wild carrot's flower and then to the herb itself. Still another tale has Queen Anne's lace named for Saint Anne, "Queen of Heaven," the mother of Mary and grandmother of Jesus. Appropriately this Anne is the patron saint of lacemakers. Tradition has it that she and her husband, Joachim, were unable to have children, and only divine intervention enabled her to conceive, which would explain why the plant named after her was long believed to have aphrodisiac properties. No matter which of these stories is correct, Queen Anne's lace will remain as beautiful as ever. It blooms as an escape on roadsides throughout America and England in late summer and is sometimes cultivated in the garden, as it well deserves to be; in fact, it was first brought to America by Virginia colonists for use in their formal gardens.

Queen Camilla. See FAST AS LADAS.

Queen cities. A good number of American cities have the nickname "Queen City." These include: Queen City of the Hills (Houston, Texas); Queen City of the Mountains (Helena, Montana, also called Queen City of Montana); Queen City of the Plains (Denver, Colorado); Queen City of the Rio Grande (Albuquerque, New Mexico); and Queen City of the West (Cincinnati, Ohio, from a time when Cincinnati was considered far west.) Perhaps the most famous of Queen cities is the Queen City of the Mississippi (St. Louis, Missouri).

Queen Dick; queer as Dick's hatband. Oliver Cromwell's son Richard (1626–1712), who ineffectually ruled England as Protector after his father, had such effeminate ways that he was widely called Queen Dick. Whether he was a homosexual isn't known, but homosexuality certainly isn't alluded to in the expression *as queer as Dick's hatband*. This means as strange as

Dick's crown, a crown on the head of such a weak, ineffectual person seeming incongruous or ridiculous to most of his subjects. Though several writers have associated "queer" with homosexual in the phrase, the slang *queer* for homosexual isn't recorded until the 1920s. See TIGHT AS DICK'S HATBAND.

Queen Mary's thistle. The national flower of Scotland was supposedly named for Mary, Queen of Scots, after attendants presented her a basket of the flowers while she was imprisoned in Fotheringay Castle by England's Queen Elizabeth. Also called the cotton thistle, *Onopordum acanthium* has a purple top and is covered with little threadlike white hairs.

Queen of Floods. An old name for the Mississippi River. "Through a vast uncultivated territory coursed the Queen of Floods and her many tributaries" began a newspaper article in 1832.

Queen of Roads. See APPIAN WAY.

Queen of the Hill Bill. I've heard this expression just once, but I'm sure it must be common in the U.S. House of Representatives, because it was used as if it were an everyday phrase there by Congressman Harold Ford during a Fox News interview (7/1/01). The Tennessee Democrat defined a Queen of the Hill Bill as the favorite bill among many on a subject, the one bill that should be discussed and voted upon. The Hill, of course, is a synonym for the U.S. Congress.

queen of the prairie. This tall plant of the rose family, *Filipendula rubra*, with branching clusters of pink flowers, was so named by American pioneers in the mid-18th century when they saw the plant growing in meadows and prairies and admired its graceful beauty. *Filipendula* is Latin for "hanging thread," alluding to the root fibers of the plant hanging together by threads.

Queen of the Seas. The Italian city of Venice was built on 118 alluvial islets within a lagoon. Between the islands are 160 mostly narrow canals crossed by hundreds of bridges, but the beautiful "Queen of the Seas," as Venice has been called, has only gondolas and other boats as means of conveyance; there is water literally everywhere. The first time he visited Venice, humorist Robert Benchley was on assignment for the *New Yorker*. "Streets full of water," he wired his editor Harold Ross, "please advise."

queen's (or king's) peace. The queen's peace is the peace or protection of all law-abiding British subjects, though in past times it applied only to those in the royal employ. The term is used in *Blackstone's Commentaries*.

Queensberry rules. See BELOW THE BELT.

Queens County, N.Y. See KINGS COUNTY.

queen's taste. *To the queen's taste* means completely, thoroughly, utterly. The queen's taste, the most discriminating in

the land, would demand the best, something completely or thoroughly done. No one has been able to connect any specific queen with this phrase, which is, oddly, an Americanism and not British in origin, dating back to the late 19th century.

queen's tears. An English term used in South Africa for any strong, powerful drink, especially gin. One story contends that the words derive from Queen Victoria's crying after the Zulus defeated the British at Isandhelwana.

queen's weather. Queen Victoria was fortunate in having good weather most of the times she appeared in public. Her good luck led to the British expression *queen's weather*, for "a fine day for a public occasion, an outing, a party, etc." First recorded in 1899, the phrase is probably 20 years or so older.

queer. The German *Quere*, "oblique, adverse, perverse, wrongheaded," may be the source of *queer*, but the word is of uncertain origin. *Queer* is first recorded in 1508 with the meaning of strange, odd, or eccentric in appearance or character, taking on many other meanings over the years both in standard English and slang. See QUEEN DICK.

queer as a three-dollar bill. *Queer* has meant counterfeit money since at least 1810, but *queer as a three-dollar bill* is obviously an Americanism, there never having been an American three-dollar bill. The expression dates back to the 1920s and usually means anything strange, unusual, or suspicious, though it can also mean a homosexual.

queer as Dick's hatband. See QUEEN DICK.

queer plunger. *Queer plungers* were men who faked drowning in order to be "rescued" by their accomplices, who "carried them to the Humane Society, where they are rewarded by the society with a guinea each." The expression is first recorded in 1758. W. C. Fields did the same as a young man; he was hired by concessionaires to pretend that he was drowning so that crowds would gather and they would sell more food. He called himself a drowner.

Queer Street. The *queer* in this phrase, meaning to be in financial trouble, comes from the word *query*, not from any real city street. The expression arose two centuries ago, when merchants commonly put a query, or question mark next to the names of customers whose financial solvency was dubious.

quell. *Quell*, from the Anglo-Saxon *cwellan*, originally meant to kill or slaughter an enemy. But by about the early 1700s it had taken on the sense of to subdue or quiet, possibly to some extent because of its resemblance to *quiet*. It is heard mostly today in the expression *to quell a riot*, to subdue or suppress it, not necessarily with any violence.

querencia. Texans in the 19th century often used *querencia* to mean the place where a Longhorn calf was born, and there are tales of Longhorns persistently returning to such spots. But *querencia* also meant the place where anyone was born. The word derives from the Spanish *querer*, "to love."

question mark. The question mark, interrogation mark, or interrogation point, one tradition has it, was formed from the first and last letters of the Latin *quaestio* ("a seeking") which was first contracted to Q and finally became ?. Some authorities claim, however, that it originated as the Greek semicolon—upside down. Another kind of question mark is a butterfly (*Polygonia interrogationis*) with two silver spots shaped like question marks under each wing. When Victor Hugo wanted to know how his publishers liked *Les Misérables* (1862), he wrote them simply: "?" His publishers shortly responded with a brief "!" completing the briefest correspondence in history. See EXCLAMATION MARK.

queue up. People "standing in (or on) line" in America are *queuing up* in Great Britain. The latter term is little heard in the U.S. and derives from the French word *queue*, for "pigtail or tail," which in turn comes from the Latin *cauda*, "tail."

quey calves are dear veal. A quey is a female calf, that is, a valuable calf that will one day give milk. To kill such a calf for veal would be foolish, which gives us this old saying similar to *killing the goose that lays the golden egg*.

quibble. The obsolete English word *quib* probably derived from the Latin *quibus* "who, which," which appeared on many legal documents and came to be associated with odd quirks of the law. In any case, *quib* came to mean an ambiguous or petty argument and may be the source of *quibble*, meaning the same, as well as petty carping criticism. *Quibble* is first recorded in the 17th century.

quiche. A quiche is a pie-like dish made of custard flavored with cheese, onion, bacon, or other ingredients that are baked in an unsweetened pastry shell. The word came into French from the German *Kuche*, "little cake," and seems to have been first recorded in English late in the 19th century.

Quichua. See NAHUATL.

quick. *Quick*, spelled *cqicu* or *cwic*, originally meant "the presence of life," or "living" in Old English. Therefore, livestock was once called *quickstock*, "living stock," *quicksilver* was so named because it seemed alive, a *quick fence* was a living hedge of plants, the sensitive flesh under a fingernail was known as the *quick*, and a *quick wine* was a lively, sparkling one. The old use of the word also figures in several common phrases. A woman *quick with child* is carrying a baby that has begun to show signs of life, that is "kicking." *The quick and the dead* just meant the living and the dead before it acquired its present double meaning. As for *stung to the quick*, this simply means that a person is stung deeply in living tissue where it really hurts. Today's use of *quick* as "swift" probably derives from early train conductors telling people to "be quick" or "step lively." See also CUT TO THE QUICK.

quick and the dead. See CUT TO THE QUICK.

quick as (or before) you can say Jack Robinson. Jackie Robinson, the major leagues' first black player, was one of the

quickest base runners in baseball history, but he has nothing to do with the old expression *as quick as you can say Jack Robinson*. The phrase goes back to 18th-century England, where there may have been, as Francis Grose suggested in *A Classical Dictionary of the Vulgar Tongue* (1795), a certain Jack Robinson who was in the habit of paying extraordinarily quick visits to his friends—and leaving even before his name could be announced by the butler. *Jack Robinson* was much more likely used in the phrase because it is easy to pronounce and is a very common name in England.

quick as a dog can lick a dish. Rapidly, very quickly. Erskine Caldwell wrote in *Jenny by Nature* (1961): “There’s not a female alive who can be trusted when they’ve got man fever—they’ll take a man away from you quick as a dog can lick a dish.”

quick as a wink. Very quick, almost like the blink of an eye. The phrase goes back to the early 19th century, first recorded in 1836. See FORTY WINKS.

quick as greased lightning. *Quick as greased lightning* is an Americanism dating from about the 1840s, but is a typical western exaggeration of the British *quick as lightning*, first recorded 100 years earlier. *Quicker than hell can scorch a feather* is a similar Americanism from the mid-19th century.

quick-change artist. Someone good at changing from one thing to another, from changing a topic to changing a costume during a performance. The term probably derives from the latter use and was first recorded in print about 1885.

quick draw. A contest in which the winner is the quickest contestant to draw a gun from a holster, fire it, and hit a target. The Western term is now used throughout the United States.

quicker’n a snake goin’ through a holler log. An old U.S. phrase describing any rapid movement made by someone.

quicker than hell can scorch a feather. Davy Crockett is given credit for this Americanism, as well as for *singing psalms to a dead horse*, *ripsnorter*, *sockdollager*, and *fine as silk*. He did not of course coin *a Crockett*, for “a violent person,” or *a sin to Davy Crockett*, “anything extraordinary.”

quicker than you can cook asparagus. Some old-timers still call asparagus *grass*, from the homely expression *sparrow-grass* commonly used as a name for the vegetable over the last three centuries. Asparagus is a Latin word formed from the Greek for sprout or shoot. The Romans cultivated it as early as 200 B.C., growing some stalks at Ravenna that weighed a full three pounds and gathering stems in the Getulia plains of Africa that were actually 12 feet tall. The most flavorful “grass,” however, is thin and tender and should be cooked in as little water and as rapidly as possible. Even the Romans knew this, and their Emperor Augustus originated the old saying, *quicker than you can cook asparagus*, for anything he wanted done within a few moments. Asparagus has been regarded as a phallic symbol since earliest times, but this certainly isn’t why perennial patches of it are called *beds*, which is just a common garden term. There is

an interesting true story about blanched white asparagus, however. Reported a *New York Times* correspondent at a recent Bonn dinner party: “A certain guest complimented the elegant German hostess and said, ‘This white asparagus is as beautiful as an undressed woman,’ thereby probably becoming the first asparagus eater to have noted a resemblance between asparagus and the attributes of the *female sex*.”

quickie. *Quickie* was originally late 1920s Hollywood slang for a Grade B movie, a film comparatively cheap and quick to produce. By the 1930s the term was being used to mean a quick act of sexual intercourse. *Quickie* is also slang for a full-length book, usually based on fast-breaking news events and written, edited, and printed within a matter of days or hours. *Miracle on Ice*, the story of the U.S. Olympic hockey upset victory, was written by a team of *New York Times* reporters and “was received, printed and on its way to distribution in 46 hours and fifteen minutes.” Since then 2,000 bound copies of another book have been printed in 5 hours and 23 minutes, the world record.

quick mettle. High-spirited. Heard no more except on the stage, but used by Shakespeare in *The Tragedy of Julius Caesar* (1599). Brutus says it of the conspirator Casca: “He was quick mettle when he went to school.” *Mettle* is used today in the phrase *on one’s mettle* (accept any challenge and do one’s best).

quicksand. *Quicksand*, first recorded in 1275, may not be so named because it quickly sucks down anyone stepping on it. In fact, people caught in the treacherous sands can last for hours if they don’t panic. Quick action may account for its name, but *quicksand* could just as well derive from the “lively” meaning of *quick*, because the loose wet sand shifts in its place as if it were alive. It is dangerous because it yields easily to any presence upon it.

quicksilver. The Romans called this metallic element, mercury, by the name *argentum vivum*, “living silver,” because of its liquid mobile form at ordinary temperatures. “Living silver” was translated as *quick silver* (*quick* meaning “living”) into a number of languages, coming into English as *cuceolfor* by about the year 1000.

Quick time, march! A familiar U.S. Army command dating from the 19th century. It specifically means marching 120 paces of 30 inches per minute, but has come to mean any fast march in general use.

Quick, Watson, the needle. See SHERLOCK HOLMES.

quick with child. See CUT TO THE QUICK.

quid. British slang today for a one-pound note and formerly meaning a sovereign or a guinea, *quid* is of uncertain origin. First recorded in Thomas Shadevell’s *Squire of Alsatia* (1688) it may come from the Latin *quid*, “what,” for “the wherewithal.”

quiddity. *Quiddity* can mean the “essence of a thing, its essential nature,” or be a “trifling subtle distinction in an

argument.” It was probably first used (though not recorded) in the former sense, deriving ultimately from the Latin *quid*, “what.” But scholastics in the 16th century argued so much and so subtly about the *quiddity*, or essence, of things that *quiddity* came to mean a quibble as well.

quidnunc. A quidnunc is a busybody, a prying gossip who wants to know everything that’s going on. The word is quite appropriately formed from the Latin *quid nunc?* “what now?”—because such people constantly ask “What now?” “What’s the news?” “What’s happening?” Steele first records the term in a 1709 issue of the *Tatler*.

quid of tobacco. Most authorities say that *quid*, for “a plug of tobacco,” comes from the Old English *cuidu*, “cud,” which makes sense except for the late date when it is first recorded (1727). One old story traces the word to 19th-century Dublin plug manufacturer and tobacconist Lundy Foot, who had the Latin *Quid rides?* (“What are you laughing at?”) inscribed on his carriage. Most people who saw the inscription had no Latin and read the “witticism” as English: *Quid rides*. They figured that since Quid was riding, his product might as well be known by his name as well.

quid pro quo. *Quid pro quo*, Latin meaning “something for something,” means in English “one thing in return for another, an equivalent, tit for tat, a Roland for an Oliver.” Shakespeare used a similar expression in *Henry VI* (1591): “I cry you mercy, ’tis but Quid for Quo.”

quiet American. An American working undercover in a foreign country who is thought to be a spy. The term comes from British author Graham Greene’s novel *The Quiet American* (1955) and the movie made from it.

quietus. *Quietus* derives from the Latin *quietus est*, “he is quiet.” The word originally applied only to the discharge of any financial account, or the settlement of obligation. But *quietus* came to apply to the discharge of life itself, as Shakespeare used it in *Hamlet*:

Who would fardels [burdens] bear . . .
When he himself might his quietus make
With a bare bodkin [dagger]?

See BODKIN.

qui-hy. The Hindi *Koi hai*, meaning “is anyone there?” is a cry used in India to summon a servant. These words, in the form of *qui-hy*, were used by the British when they occupied India to mean an Anglo-Indian, especially one living in Bengal. It also had some British military use in the sense of a summons to a servant.

quillet. A quillet is an evasion, the word probably deriving from the Latin *quidlibet*, “anything you choose.” Wrote Shakespeare in *Love’s Labour’s Lost*: “Oh, some authority how to proceed;/Some tricks, some quilllets, how to cheat the devil.”

quim. Henry Miller uses *quim* for “the female pudend, a woman’s private parts” in several of his books. The term is first

recorded in 1785 by Grose, who suggests that it may derive from the Spanish *quemar*, “to burn.”

Quinapalus. In Shakespeare’s *Twelfth Night* the clown invents a character called *Quinapalus* as the authority for a saying of his own. The name can thus be used for an apocryphal source, just as BEN TROVATO is.

quince. *Quince* may come from the Greek *kydonion* (“melon”), named for Cydonia in Crete. *Kydonion* became *cydoneum* in Latin, this becoming *coin* in Old French, then *quoyne* in Middle English, with *quince* deriving from the plural of the Middle English *quoyne*, which is *quine*.

quincunx. An old Roman coin of little value called the *quincunx* had five dots or dashes on its face (one in each corner and one in the center), indicating that it was worth five-twelfths of an *as*. Any like arrangement of five objects, especially trees in a square or rectangle, is also called a quincunx, after the markings on the ancient coin.

quinsy. *Quinsy*, a suppurating (pus-producing) inflammation of the tonsils, or suppurative tonsillitis, comes to us from the Latin *quinancia*, which, in turn, derives from the Greek *kunanche*—which means, simply, “a sore throat.” The Greek *kunanche* comes from *kuon anche*, “dog strangulation,” because people suffering from the malady “throw open the mouth like dogs, especially mad dogs.”

quintessence. Pythagorean alchemists, like everyone before and since, failed in their efforts to find a fifth element other than earth, air, fire, and water. But they *thought* that they had found this *quinta essentia*, or “fifth essence,” in the form of ether, which they believed was the rarest and most pervasive of all the elements and formed the substance of the heavenly bodies. Since in a figurative sense fifth essences have been discovered, however, the word *quintessence* (from the Latin *quinta essentia*) means the most essential part or principle of a substance, the rarest distillation of a perfume or an idea.

quinzhee. Minnesotans commonly use this Ojibwa word for a round snow shelter. Trekkers in snow country often built the igloo-like quinzhees for shelter through the night.

quip. The best anyone can come up with for the origin of *quip* is that the word is a variant of *quippy*, also meaning a sharp, biting, or clever remark, and that *quippy* may come from the Latin *quippe* meaning “indeed, forsooth (with sarcastic force).” Both words are first attested early in the 16th century.

the quip modest. Shakespeare seems to have invented this expression, which Touchstone defines in *As You Like It*, as “it was done to please myself” If a person was told that his beard was cut badly and he replied that he cut it to please himself, Touchstone says, this would be *the quip modest*, “six removes from the lie direct.”

quiring. An archaic word for choiring, used beautifully by William Faulkner in “Barn Burning” (1939): “He went on down

the hill, toward the dark woods within which the liquid silver voices of the birds called unceasing—the rapid and urgent beating of the urgent and quiring heart of the late spring night.”

quirk of fate. A sudden twist or turn of fate, as in “He lost his fortune by a quirk of fate.” The word *quirk* is of uncertain origin, but may have originally been an English western dialect word for a sudden flourish or curve in drawing or writing. It also came to mean a peculiarity in action or behavior (Shakespeare used it in this sense), and an evasion or quibble.

quirly. This odd Americanism had some currency into the early 20th century. It was originally a cigarette rolled in a corn shuck instead of paper, but came to be a cowboy word for any cigarette. Its origins are unknown.

quisling; quisle. Of the men and women whose names have become synonyms for traitor only Vidkun Quisling’s has shed its capital letter in the dictionaries. A *quisling* is universal for “a traitorous puppet of the enemy” and was one of the most quickly adopted of modern additions to the language, even inspiring the little-used verb *quisle*, which means “to betray one’s country.” Maj. Vidkun Quisling (1887–1945) earned his rank in the Norwegian army, having served as military attaché in Russia and Finland. An ardent fascist, he formed the National Unity Party shortly after Hitler came to power in 1933, but never attracted more than a minuscule following, most Norwegians considering him mentally unbalanced. Then the Nazis invaded Norway on April 8–9, 1940, and the ridiculous lunatic of the right came into power. Brutally suppressing all opposition, he assumed King Haakon’s throne in the palace and drove around in a bulletproof limousine presented to him by Hitler. A megalomaniac who ordered pictures of himself hung everywhere and refused to eat off anything but gold dishes, he was so paranoid that 150 bodyguards accompanied him at all times and every scrap of food he ate was sampled by someone else first. After the war, he was tried for treason, murder, and theft, found guilty on all counts, and shot by a firing squad, Norway changing its law against capital punishment for this purpose.

Quisqualis. Like MAHERNIA, the name of the plant genus *Quisqualis* is another joke played by the pioneer botanist Linnaeus. *Quisqualis*, the genus containing a few woody vines from Malaya and the Philippines, is grown today in southern Florida for its showy pink or red flowers. When Linnaeus examined the plant, he did not know how to classify it or for whom he could name it. He therefore called the genus *Quisqualis*, which in Latin means, literally, “who or what for.” Although *Quisqualis* (kwis-kwal-is) is not eponymous, it clearly shows that the naming process is not always so serious a mat-

ter; it might even be called an anonymous eponymous word, or a word in want of an eponym. See MHO.

quixotic. Don Quixote de la Mancha, the lofty-minded but impractical hero of Cervantes’s novel of the same name (1605–15), gives us this adjective embodying his characteristics. One of the great characters of literature, Don Quixote wanders the world with his squire Sancho Panza and his horse Rosinante searching for adventures in which he can be chivalrous. When he tilted with his lance at windmills, imagining them to be enemies, he added still another expression of frustration to the languages of many nations. See TILT AT WINDMILLS.

quiz. A short test. The tale may be apocryphal, but it’s said that in the late 18th century Dublin theater manager James Daly bet that he could invent and introduce a new meaningless word into the language almost overnight. He proceeded to pay Dublin urchins to chalk the word *quiz* on every wall in town. By morning almost all Dubliners had seen the word, and because no one knew what it meant, the meaningless *quiz* became the word for “a test of knowledge.”

quoddy boat. Quoddy boats, double-ended keelboats with a gaff mainsail and sometimes a jib set on a detachable bowsprit, take their name from the Pasamaquoddy Bay between New Brunswick, Canada and Maine, where they first were built. They were long used for lobstering and fishing along the Maine coast.

quonset hut. The quonset or quonset hut is a prefabricated corrugated metal building shaped like a tunnel that is named for its first place of manufacture, Quonset Point, Rhode Island, during World War II. Virtually the same thing by another name is the Nissen hut, designed by British engineer Lt. Col. Peter Nissen in 1930.

quotes; quotation; quotation mark; quote. The word *quotation* comes from the Latin *quotation*, meaning the same, and dates back to about 1525, while the term *quotation mark* was first recorded in 1880. *Quote* as the statement of the current price for a commodity or stock was not recorded until about 1810. In the past few years speakers have increasingly used a sign made with the first two fingers of each hand to indicate that a word or phrase they have spoken should be in quotation marks or quotes (as the word or phrase would be written). The speaker usually holds up his or her fingers near each side of the head.

quotidian. Meaning “daily, or everyday, ordinary” *quotidian* is first recorded by John Wycliffe in about 1380. It came into English intact from Latin and can also mean, as a medical term, a certain fever that recurs daily.

R

R. Since Roman times *R* has been thought of as the “dog’s letter,” or the snarling letter, because its sound resembles the snarling of a dog—*r-r-r-r*. Ben Jonson, in his *English Grammar Made for the Benefit of All Strangers* (1636), put it this way: “*R* is the dog’s letter, and hurreth in the sound; the tongue striking the inner palate, with a trembling about the teeth.” Shakespeare has Juliet’s nurse in *Romeo and Juliet* call *R* the “dog-name,” when she tells Romeo that his name and rosemary, an herb associated with weddings, both begin with an *R*. In parts of America, especially the Midwest, *R* is still pronounced as the dog letter, while in other regions, particularly parts of New England and the South, it is pronounced as *ah*.

Ra. The ancient Egyptian sun god, the supreme deity depicted as a man with the head of a hawk crowned with a solar disk. Ra is also called Mantu and Atmu. His children were Athor, Moat, Mu, and Shu. An old poem by Keith Preston mentions Ra: “The great god Ra whose shrine once covered acres / Is filler now for crossword puzzle makers.”

rabage. This unfortunate vegetable is quite real but won’t be found in any gardening books or seed catalogs. The rabage (*Raphanobrassica*) is a cross between a radish and a cabbage developed by a Soviet geneticist named Alexi Karpenchinko in 1924. What was expected was a plump head of cabbage on an edible round root of radish. Sadly, what developed was a head of scraggly radish leaves and the thin, useless roots of a cabbage. See RADISH.

rabbi. Meaning “my lord” or “master” in Hebrew, *rabbi* of course refers to a teacher and scholar of Jewish law who usually heads a synagogue or temple. In police jargon one’s rabbi is a person who can help further one’s career, the person so called because he has influence with higher-ups—just as a rabbi has influence with the ultimate higher-up.

rabbit. Some animal names incorporate human names, as in *jackass* and *jackdaw*. An excellent and little known example of

this is *rabbit*, which comes ultimately from the Dutch name *Robert*, Robert.

rabbiteye blueberry. The rabbiteye blueberry is a blueberry bush native to the southern U.S. and widely grown there. It is so called because to some the berries on the tall (up to 20-foot-high) plants resemble rabbit eyes.

rabbit tobacco. Rabbit tobacco, or “rabbit terbarker,” as Uncle Remus called it, is balsamweed, a plant used as a tobacco substitute by youngsters and others, despite its bad taste. It takes the name “rabbit” because it grows wild, often in fields where rabbits run.

Rabelaisian. See GARGANTUAN.

raccoon; raccoon-eyed. An Algonquian Indian dialect word is the basis for *raccoon*, which dates back to the first settlers in America. Dr. Johnson said of the clever creature: “The rackoon is a New England animal, like a badger, having a tail like a fox, being clothed with a thick and deep furr: it sleeps in the day time in a hollow tree, and goes out a-nights, when the moon shines, to feed on the sea side, where it is hunted by dogs.” *Raccoon-eyed* means someone with deep rings under his or her eyes from illness or lack of sleep, the face resembling the “masked” raccoon’s. See COON’S AGE.

the race is not to the swift. “The race is not to the swift, nor the battle to the strong,” according to Ecclesiastes 9:11. The biblical phrase has become proverbial over the past 400 years and has several humorous variations, including American humorist Franklin Pierce Adams’s much-quoted “The race is not the swift, nor the battle to the strong; but the betting is best that way.”

rachel. Discovered singing for pennies in the streets by the famous voice teacher Alexandre Choron, Élixa Félix, the daughter of poor Parisian peddlers, was trained for the stage and

made her debut at the Comédie Française just before her 17th birthday. Éliisa took the stage name Rachel, and her genius as a tragic actress, especially in the plays of Racine and Corneille, was acclaimed throughout Europe. “Rachel the immortal” ranks second only to Sarah Bernhardt among French actresses. While at the height of her fame in such roles as Phèdre in Racine’s play of that name, the fawn-colored Rachel face powder, sometimes called *rachel* for short, was named in her honor by a Parisian cosmetic specialist. On a visit to America Rachel contracted tuberculosis, which led to her death three years later, in 1858. She was only 38, her tragic last illness and death the theme of a poem by Matthew Arnold.

Rachmanism. The practice of driving out low-paying tenants by harassment in the manner of London landlord Peter Rachman (1920–62), a Polish immigrant whose ruthless practices included the use of strong-arm thugs. This slum lord became notorious in the late 1950s and early 1960s before his death from a heart attack.

rack and ruin. A person gone to rack and ruin, “to destruction, utter destitution,” may feel as though he’s being stretched on the infamous rack, but the word *rack* in this centuries-old expression is only a misspelling of the word *wrack*. Even before Elizabethan times *wrack* was a variant form of *wreck*, and since the *w* in it is almost silent, writers took to spelling it *rack*. And so we have the phrase *rack and ruin*, which should really be *wreck and ruin*.

racket; racketeer. English pickpockets, once the best of the breed, invented the ploy of creating disturbances in the streets to distract their victims while they emptied their pockets. This practice was so common that a law was passed in 1697 forbidding the throwing of firecrackers and other devices causing a racket on the city streets. From the common pickpocket ploy the old onomatopoeic English word *racket*, imitative like *crack* or *bang* and meaning a disturbance or loud noise, took on its additional meaning of a scheme, a dodge, illicit criminal activity. Before 1810, when it first appeared in print, the word had acquired this slang meaning in England, though it was later forgotten and the word *racket* for a criminal activity wasn’t used again there until it was reintroduced from America along with the American Prohibition invention from it, *racketeer*. The only other, improbable, explanation given for the word is that it was originally the name of an ancient, crooked dice game. In tennis and similar games, the ball was originally hit with the palm of the hand, which was called *raquette* in Old French, deriving ultimately from the Arabic *rahaḥ* meaning the same. In the evolution of tennis, various gloves were used next, then boards, then a short paddle, and finally the long-handled instrument employed today. All were called by the name *raquette*, which became the English word *racket*. The French still call tennis *le jeu de paume*, the palm game.

rack one’s brains. This phrase does have its origins in the *rack*, that old instrument of torture introduced into the Tower of London by the duke of Exeter in 1470 and often called “Exeter’s Daughter” at the time. The machine was called the *rack*, or *reck*, from the German *recken*, “to stretch or draw out,” and was usually a wooden frame (adapted from those used in leather factories), with rollers at each end. The victim was fastened to

the rollers by the wrists and ankles and the joints of his limbs were stretched by their rotation, sometimes until they were torn from their sockets. The rack was abolished in England by 1640, but its memory lived on in many vivid uses of the name. The powerful image of someone racking—stretching or staining—his brains or wits to find the answer to a question is found in the language as far back as 1583, at a time when the real rack was still being used.

radar; laser. These are among the most widely used and lasting of scientific acronyms. *Radar* was coined from *radio detecting and ranging* during World War II, while *laser* came after the war, from *light amplification by stimulated emission of radiation*. The English alphabet can produce 456,976 acronyms composed of four letters and hundreds of thousands more if either additional or fewer letters are used. See QUASAR.

radio. *Radio* is an Americanism that came into the language in about 1910, as a shortening of *radiotelegraph*. The *radio* in radiotelegraph derives from the Latin *radius*, beam, ray. See TELEGRAPH; TELEPHONE; TELEVISION; WIRELESS.

radish. The easy-to-grow radish (*Raphanus sativus*) takes its scientific name from its Greek name, *raphanes*, “easily reared.” *Radish* itself comes from the Latin *radix*, “root.” The Greeks so valued the radish that they made small replicas of radishes in gold, while creating images of their other vegetables in lead or silver. The French call the radish by the poetic name *roses d’hiver*, “roses of winter.” See RABAGE.

Raffles; Raffles Hotel; Rafflesia. Naming the genus *Rafflesia* after English administrator Sir Thomas Stamford Bingley Raffles (1781–1826) could be interpreted as either a compliment or an insult. On the one hand, the species *Rafflesia arnoldi* has the largest single flower known to man—its bloom measuring up to six feet in diameter, three-quarters of an inch thick and attaining a weight of 15 pounds. On the other hand this same bowl-shaped, mottled orange-brown-and-white flower is commonly called the stinking corpse lily. A parasite that grows on the roots of vines in its Malaysian habitat, only the plant’s bloom is visible above ground, the rest being a fungus growing beneath it, and its smell of decaying flesh attracts the carrion flies that pollinate it. On balance it seems that Sir Stamford would have been better off if he had only had the world-famous Raffles Hotel in Singapore named for him, but since he discovered the plant genus, he really had no one to blame but himself; he should have kept quiet about it. Raffles gained no gratitude from the British powers that were, either. An able colonial administrator in the East Indies, he did much to suppress the slave trade, was conspicuous for his liberal treatment of his subjects, zealously collected much historical and zoological information, and secured the transfer of Singapore to the East India Company in 1819. But he was censured for freeing slaves, and after his death his wife had to pay the costs of his mission to found Singapore. *Raffles* for “a gentleman burglar” comes from the name of a suave character created by Australian writer Ernest W. Hornung in a collection of stories published in 1899.

ragamuffin. Until recently *ragamuffin* for a shabby, dirty child was thought to derive from the name of a demon in the

14th-century allegorical poem *Piers Plowman*. Recent research, however, has found that the word was used as a real person's last name before this and probably derives ultimately from the Middle English *raggi*, ragged, and the Middle Dutch *muffe*, mitten.

ragged robin. This is the colorful name for *Lychnis flos-cuculi*, also called the cuckooflower. Tennyson compares the flower to a pretty maid in ragged clothes in *Idylls of the King*. The genus name *Lychnis* comes from the Greek *lychnos*, "a lamp," in reference to the glowing flowers.

raglan sleeve. "I say, bring back my arm—the ring my wife gave me is on the finger!" Lord Raglan is supposed to have said something to this effect immediately after field surgery when surgeons cut off his badly wounded sword arm at the Battle of Waterloo. In any case, Fitzroy James Henry Somerset (1788–1855), first Baron Raglan, was renowned for his courage. Raglan served as aide-de-camp and secretary to the duke of Wellington, whose niece he married, succeeding him on his death as commander of all British forces. During the Crimean War, Raglan was a familiar figure on the battlefields, dressed in his raglan overcoat, a loose-fitting coat with sleeves extending to the neck. The raglan had been named for him at about this time, and today the loose raglan sleeve is still a popular fashion. He died soon after the siege of Sevastopol, in which 1,500 British troops were lost, and his men blamed him for the rout. Raglan's doctors claimed he died of a broken heart; the official report cited cholera.

to railroad. Americans built railroads in a hurry in the 19th century, and the mountains, rivers, and forests that stood in their way as they crisscrossed the continent were unfortunately regarded as mere obstacles blocking the right of way. The speed with which lines were built and the railroad builders' disregard for anything that stood in the way of "progress" inspired the term *to railroad* by the 1870s. At first it meant to send a person speedily to jail without a fair trial, or by framing him, and then it took on the additional meaning of rushing important legislation through Congress without regard for opposition to it and in disregard of regular procedures.

rain before seven, fine before eleven. A weather saying dating back at least to the middle of the 19th century.

rainbow chaser. Ancient legend, its source unknown, had it that a pot brimming with gold was waiting to be found if a person dug at the exact spot where a rainbow touched the ground. Anyone who daydreams, who is a visionary, who puts nothing aside for a rainy day, who chases that pot of gold at the end of the rainbow is called a "rainbow chaser." The term, in turn, inspired the song "Over the Rainbow" by Harold Arlen and E. Y. Harburg that Judy Garland immortalized in *The Wizard of Oz* (1932), as well as the song "I'm Always Chasing Rainbows," whose title has become a popular phrase itself.

Rainbow Division. A celebrated army division commanded by Douglas MacArthur during World War I and so named because it consisted of troops from 26 U.S. states.

rain check. An old story says the rain check—the detachable part of a ticket that a spectator uses to gain admission to a future baseball game if the current game is postponed because of rain—was invented by Abner Powell of the minor league New Orleans Pelicans in 1888. Powell conceived the idea, according to the tale, because when his club's games were rained out, people who hadn't attended the cancelled game lined up to get replacement tickets for the next game, costing him a lot of money. The story sounds good, but the term *rain check* is first recorded four years earlier in St. Louis. Rain checks aren't common these days, as tickets usually list the rain date. The term is widely used today to mean an offered or requested postponement of an invitation until another time. When sale items (groceries, etc.) scheduled for a certain day are sold out on that day, customers are often given rain checks to buy them when they are back in stock.

raining cats and dogs. A literal explanation for *raining cats and dogs* is that during heavy rains in 17th-century England some city streets became raging rivers of filth carrying many dead cats and dogs. The first printed use of the phrase does date to the 17th century, when English playwright Richard Brome wrote in *The City Witt* (1652): "It shall rain dogs and polecats." His use of "polecats" certainly suggests a less literal explanation, but no better theory has been offered. Other conjectures are that the hyperbole comes from a Greek saying, similar in sound, meaning "an unlikely occurrence," and that the phrase derives from a rare French word, *catadoupe* ("a waterfall"), which sounds a little like *cats and dogs*. It could also be that the expression was inspired by the fact that cats and dogs were closely associated with the rain and wind in Northern mythology, dogs often being pictured as the attendants of Odin, the storm god, while cats were believed to cause storms. Similar colloquial expressions include *it's raining pitchforks*, *darning needles*, *hammer handles*, and *chicken coops*. See FISHFALL.

raise cain. *Raising cain*, "to cause much trouble or a loud disturbance," is probably a synonym for "to raise the devil," for whom the biblical *Cain* was an early euphemism. The first recorded use of the expression, in a joke printed in the *St. Louis Pennant* in 1840, shows that it was well-known at the time: "Why have we every reason to believe that Adam and Eve were both rowdies? Because . . . they both raised Cain."

raise hob. *Hob* was the nickname of Robin Goodfellow, the mischievous household spirit of English folklore. *To raise hob* has for centuries meant to act devilishly like him, to be mischievous.

raise Old Ned. See OLD NED.

rally 'round the flag, boys. Andrew Jackson is said to have coined this phrase during the Battle of New Orleans in 1812. General Jackson, or Old Hickory, as he was called, may be the inventor, but the expression only gained widespread use during the Civil War after the publication of George Root's song "The Battle Cry of Freedom":

Rally 'round the flag, boys,
Rally once again,
Shouting the battle-cry of freedom.

RAM. See ROM AND RAM.

ramada. A word in the American Southwest for an open porch. It is also a kind of trellis over a walkway, on which flowers are trained to grow. Ramada derives from the Spanish *rama*, branch. A U.S. chain of motels is called the Ramada Inn.

Ramayana. See MAHABHARATA.

ramrod rolls. Margaret Mitchell described this military ration in *Gone With the Wind* (1936). "The men added as desert some 'ramrod rolls' from their knapsacks, and this was the first time Scarlett had ever seen this Confederate article of diet about which there were almost as many jokes as about lice. They were charred spirals of what appeared to be wood. The men dared her to take a bite and, when she did, she discovered that beneath the smoke-blackened surface was unsalted corn bread. The soldiers mixed their ration of corn meal with water, and salt too when they could get it, wrapped the thick paste about their ramrods and roasted the mess over camp fires. It was as hard as rock candy and tasteless as sawdust . . ."

ramshackle. *Ramshackle* is one of the relatively few words Icelandic has contributed to English, if it does come from that language, as some scholars believe. *Ramskakkur*, "very twisted," is the possible Icelandic source for our word meaning "loosely made or held together, rickety, shaky," but there are other suspects, including *ranshacle*, "to wreck or destroy by plundering"—which would make something *ramshackled* "wrecked or destroyed by plundering." The word is first recorded in 1675.

R & R. In World War II, and during the Korean conflict, R & R meant a rest and recuperation leave, though in Korea it was extended to rear-echelon units as well as front-line outfits and the initials were generally thought to mean rest and recreation.

rankle. *Rankle* derives from Latin *dracunculus*, "little snake or dragon." It came to mean "festering sore" in French, perhaps because such sores sometimes resemble a little snake, or a coiled little snake, or the bite of a snake. In any case, *raoncler*, an alternative form of French *draoncles*, "to fester," passed into English about 1200 and over the years changed in spelling to *rankle*. *Rankle* held on to its literal meaning of "to fester" but also came to mean "to cause persistent irritation or resentment."

rap. *The New Dictionary of American Slang* (1986) suggests that *rap*, "to converse," dates from the 1960s, but it seems from the context of Damon Runyon's "Madame La Gimp" (1920) to have been used about a half century before then: "I got to the Marberry . . . and who opens the door of Madame La Gimp's apartment for me but Moosh, the door man. . . I wish Moosh a hello and he never raps to me but only bows, and takes my hat." If this example of *rap* means "talks," then it may be the first use of the word *rap* in this sense, a theory that apparently hasn't been proposed before. *Rap* could have entered black English as "impromptu repartee or discussion," a meaning first recorded

in 1965, and may have finally become the name of the rap style of popular music developed by blacks, a term first recorded in 1979. See RAP MUSIC.

rapeseed. The name of seed of rape (*Brassica napus*) of the mustard family derives from the Latin *rapum* for "turnip." It is used to make rape oil, a brownish yellow oil used chiefly as a lubricant and illuminant, and in the manufacture of rubber substitutes. In 1981 more than 600 Spaniards died in the largest recorded accidental mass poisoning in history from using a commercial cooking oil made with "denatured" industrial oil from rapeseed. Rape is used as a cover crop in the United States. See MUSTARD.

rap music; flyting. *Rap music* refers to popular music dating from the 1970s in which the beat provides the background for rapid, boasting, rhyming patter intoned by a singer. Though the music was mainly developed by black youths in the ghetto, one aspect of it—the insult rhymes the vocalists direct at one another—dates back at least five centuries. In times past these poetic insults were called *flytings*, a word meaning "word fighting." *Flytings* (from Old English *flyte*, "to contend or jeer") were contests held principally by 16th-century Scottish poets in which two persons "assailed each other alternately with tirades of abusive verse." Following is one of fully 32 stanzas directed at Scotland's James V by his former tutor, poet Sir David Lindsay (1490–1555). Bear in mind that this vitriolic diatribe lost the flyting contest:

Purse-peeler, hen stealer, cat-killer, no I qyell thee;
Rubiator, fornicator by nature, foul befall thee.
Tyke-sticker, poisoner Vicar, Pot-licker, I mon pay thee.
Jock blunt, dead Runt, I shall punt when I slay thee.

See RAP

raptor. Birds of prey such as hawks, owls, and ospreys. These raptors take their name from the Latin "to seize by force and carry off." Their species number anywhere from 450 to 482.

rara avis; rare bird. A rare person or thing, someone out of the ordinary, *rara avis* is the Latin for "a rare bird" and the expression was first used figuratively by the Roman satirist Juvenal. "A bird rarely seen on earth, and very like a black swan," Juvenal called one of his fellow Romans ("*Rara avis in terris nigroque simillima cygne*"). He chose a black swan for his comparison because black swans, native to Australia, were unknown at the time.

rasher of bacon. The *rasher* in this British term, sometimes heard in America, means a slice and probably didn't get its name because it is cooked *rashly* or "quickly." *Rasher* here is more likely a corruption of *rasure*, "a thin slice or shaving."

Rasmussen's laugh. In Icelandic legend the story is told of a clergyman named Paul Rasmussen, whose son was kidnapped by English raiders. Acting impulsively, Rasmussen picked up three shells from the beach, each representing an English ship, and made black magic with them. When the shells sank in the water, so did the real ships out on the horizon. Rasmussen only

realized that his son had been on one of the ships when the boy's body washed up at his feet, delivered by a huge breaker. He began laughing a horrible ironic laugh that did not stop even after he died, a laugh that superstitious sailors say is really what you hear when you think sea birds are calling in the distance.

raspberry. Known to the Romans as the “Red Berry of Mount Ida” (hence the name of the British species *Rubus idaeus*) for Mount Ida in Greece, the raspberry takes its name from the English *rasp*, “to scrape roughly,” in reference to the thorned canes bearing the berries. Raspberries have not been cultivated for nearly as long as fruits like apples, peaches, and pears. Called a brambleberry or hindberry and considered a nuisance in England, it was not until about 1830 that the delicate, delicious fruit began to be developed in America. The *Fanny Heath* variety is a tribute to a determined pioneer woman who immigrated to North Dakota in 1881. This young bride had been told that she could never grow anything on the barren alkaline soil surrounding her house, but 40 years later her homestead was an Eden of flowers, fruits, and vegetables. After her death in 1931, the black raspberry she developed was named in her honor. A red raspberry variety honoring a famous person is the *Lloyd George*, named after British prime minister David Lloyd George (1863–1945), who led Britain to victory in World War I and dominated British politics in the first quarter of the 20th century. *Raspberry* meaning a BRONX CHEER, a rude vibrating of the lower lip, derives from British rhyming slang *raspberry tart*, which means “fart” and is at least a century old.

Rastafarian. Long, plaited hair known as dreadlocks mark the outward identity of Rastafarians, who are members of a religious and political group called the Ras Tafari, which in turn takes its name from a title (*Ras* “King” “Royal Prince,” or “Duke”) and a family name (*Tafari*) of Ethiopian emperor Haile Selassie (1892–1975). Originating in Jamaica during the 1920s, the group immigrated mainly to the U.S. and Europe. They believe that they are the chosen people, that Haile Selassie was their messiah, and that in time they will return to Africa.

rat. The word derives from the Anglo-Saxon *raet*, meaning the same. For much more about the amazing rat, see the author's *More Cunning Than Man, A Social History of Rats and Men* (1985).

Rat Catcher. A little-known nickname of Winston Churchill during World War I, because he said of the German fleet: “If they do not come out to fight, they will be dug out like rats from a hole.” Churchill was first lord of the Admiralty at the time the war broke out but lost his cabinet post after the failure of the Dardanelles campaign, which he had supported.

rat cheese. An American term for a cheap cheese, first recorded c. 1935, fit only for ratttraps.

ratfink. See FINK.

rat hole. A hole made by a rat, often leading to food. It is said that a large Norway rat with a body 12 inches long or more (not counting the tail) can squeeze itself through a hole the size of a quarter.

Rat Islands. An island group in southwest Alaska. Rat Island (singular) and Kiska are part of the group.

Ratkiller. The ancient Greeks placed great faith in their god Apollo Smintheus as a ratcatcher, calling him Ratkiller. He earned this sobriquet when he sent a swarm of rats against his priest Crenis because Crenis had neglected his duties. When the priest repented, seeing the rodent invaders coming, Apollo forgave him and with his far-reaching arrows killed the swarm of rats he had sent. Some authorities, however, say that Apollo should be called Mousekiller (his name Smintheus meaning a mouse) and was the god who protected Greek farmers against mice.

rat king. The famous *Rattenkonig*, or “rat king,” occurs when young rats close to one another in the nest get their tails entangled and become a living Gordian knot glued together by dirt-encrusted wounds and the like. When they try to pull apart, the tails are pulled tight, and the knots strengthen, knitting the rats together. As many as 32 rats have been trapped in these knots and have died as a result of being unable to forage for themselves. However, they are often unselfishly fed for life by other family members. There is no doubt that rat kings exist; 60 or so have been reported in Europe since 1564 and about 40 (most of them found alive) have been authenticated, the latest in 1963. Rat kings have frequently been preserved, painted, and photographed, and in 1774 a 16-rat king was examined by a Leipzig court in connection with a charge that a miller's apprentice had cheated his master by stealing the king from him and pocketing a tidy sum by exhibiting it. The name *rat king* may come from the old superstition that an aged wise rat sat on the entangled tails of rats and was treated as royalty by the pack.

Rat Man. Sigmund Freud's famous Rat Man, readers will remember, didn't resemble a rat in any way; he, rather more simply, had an obsessional neurosis about rats. This Rat Man consulted with Dr. Freud sometime after he had been told by a fellow army officer of a Chinese torture in which a pot filled with rats was strapped onto a criminal's buttocks and the trapped rats bored their way into his body through the anus. Overwhelmed with the story, the patient began imagining the torture applied to two people very close to him. Freud discovered why he did this in an attempt to cure the man.

rat mother. This common gangland curse is a shortening of “rat motherfucker,” meaning a despicable person. “Them rat mothers will get what's coming to them.”

rat pack. The term *rat pack*, referring to humans, was first applied to singer Frank Sinatra (1915–98) and his close friends (Dean Martin, Peter Lawford, Sammy Davis, Jr., etc.) by Republicans angry at Sinatra for the help he gave John F. Kennedy in the 1960 presidential campaign. Later, angry at Kennedy, Sinatra supported Nixon, Reagan, and the Republicans. Sinatra (“Chairman of the Board,” “The Voice,” “Frankie Boy,” “Old Blue Eyes”) was a legend in his own time. The singer won an Oscar for his portrayal of Maggio in *From Here to Eternity*. Sinatra himself called the rat pack his “pallies.” See PACK RAT.

rat packing. A tactic of juvenile gangs using cell phones, computers, etc., to lure potential victims out into the street, where they can be robbed, beaten, or killed.

rat race. *Rat race* originated in the 1930s among jazz musicians and fans as the name of a certain fast dance. It came to mean any difficult, tiring, often meaningless activity in which one struggles to keep up with or ahead of the competition. Today it also means the everyday world of work.

rats desert a sinking ship. That rats are the first to desert a sinking ship can be explained by the fact that water begins entering a sinking ship belowdecks, where they make their homes. An old American proverb instructed “When the water reaches the upper deck, follow the rats.” In both America and England, *to rat* has long meant “to forsake a losing side for the stronger party” (a “ratfink” would do this today), or to desert one’s party, an allusion to rats forsaking unseaworthy ships. Jonathan Swift wrote in “Epistle to Mr. Nugent”: “They fly like rats from sinking ships.”

the Rat, the Cat, and Lovell the dog. Probably the author who got in the most trouble for the slightest trifle was English poet William Collingham, who wrote:

The Rat, the Cat and Lovell the Dog
Rule all England under the Hog.

In this couplet the “Rat” was royal adviser Sir Richard Ratcliff, the “Cat” Sir John Catesby, the “Dog” Viscount Francis Lovell, and the “Hog” Richard III, whose crest was a boar. Collingham was executed for his witty rhyme.

Rattlesnake Buttes. A landmark in Colorado infested with myriad poisonous snakes. “Rattlesnake Buttes!” James Michener wrote in *Centennial* (1974): “A thousand westward travelers would remark about them in their diaries: ‘Yesterday from a grate distance we seen the Rattlesnake Butes they was like everybody said tall like castels in Yurope and you could see them all day and wundered who will be bit by the snakes like them folks from Missouri?’”

rattlesnake master. A plant (*Eryngium yuccifolium*) called “master” because it is believed to be effective against rattlesnake venom. The plant was discovered and named in the United States in about 1800.

ratzi. A coinage by Walter Winchell which is of course a play on Nazi and is mostly a historical expression today. See NAZI.

rave. Originally any boisterous or lively party. In time raves, the word first recorded in 1960, became large parties with dancing to fast electronic music and drug use.

ravelled sleeve of care . . . According to Ernest Weekley, who was right about so much, *ravel* comes from the Dutch *rafelen*, to tangle, to unwind. In *Macbeth* Shakespeare writes of “Sleep that knits up the ravelled sleeve of care.”

raven. The best-known bird in American literature takes its name from Old Norse *hrafn* for this member of the crow family

(*Corvus corax*). We are all familiar with the bird in Edgar Allan Poe’s “The Raven” (1845) who visits a student in his room and can speak only the single word “Nevermore.” This poem was recognized as a work of genius when it first appeared. Nevertheless, Poe looked so bad when he personally submitted the manuscript to *Graham’s Magazine* that although the editors rejected it they took up a collection of \$15 to give him; he eventually got \$10 for “The Raven” but had to wait a year and a half for payment from the *Daily Mirror*. Ravens have been taught words since earliest times. They have generally been considered a bird of ill-omen, however, as in the old saying “The croaking raven bades misfortune.” But ravens have also been helpful to humankind. While they were sailing west, Viking navigators released ravens into the air. If the birds flew back on the same course, the Viking boats continued their westward course, but if the birds flew in any other direction, the Vikings followed them to new lands and new conquests.

ravine. *Ravine* is Middle English for “torrent of water,” dating back to the 14th or 15th century. It was first used in America to mean a deep gorge or a narrow valley frequently eroded by running water. George Washington first employed it in this sense in a 1781 entry in his diary.

ravishing. In the “Winners & Sinners” bulletin he distributed to the *New York Times* staff, Theodore Bernstein (1904–79) criticized a *Times* headline that read ELM BEETLE INFESTATION RAVISHING THOUSANDS OF TREES IN GREENWICH. “Keep your mind on your work, buster,” the editor wrote. “The word you want is ‘ravaging.’” He titled the piece “Insex.”

raw deal. Very unfair or harsh treatment, the *Oxford English Dictionary of Slang* (1912) defines it as “a bare-faced swindle,” which seems to be its earliest recorded mention. The expression is widely used in the United States, especially in its sense of “very unfair treatment.” The “raw” in the phrase suggests that someone so treated feels unclothed, naked.

rayon. A committee chose the name for this fabric, which was once known as *artificial silk*. The National Retail Drygoods Association committee coined *rayon* in 1924 from *ray*, as in a ray of light, and possibly from *on* in cotton. Never a trademark, *rayon* doesn’t have to be capitalized. See NYLON.

razor. From the Latin *radere*, to scrape. In *Love’s Labour’s Lost* (1595), Shakespeare writes of “the razor’s edge invisible.” But several critics claim that W. Somerset Maugham’s novel *The Razor’s Edge* (1944) takes its title from the *Katha Upanishad*.

razorback. A wild hog common in the southern U.S. that people often tamed and let roam free to forage for its food. The Americanism, traced back to about 1815, was inspired by the hog’s ridge-like back. It was an argument over the ownership of a razorback hog that initiated the bloody Hatfield-McCoy feud that lasted from about 1873 to 1890 in the mountains of Kentucky and West Virginia. A *Hatfield-McCoy feud* itself became a synonym still occasionally used for any feud between families or neighbors. In fact, the Hatfields and McCoy’s are still feuding, though in a less violent way. A recent news item (12/23/01) advises that “In Pikesville, Ky., descendants of the Hatfield and

McCoy clans, which battled each other in a famous, bloody feud from 1878 to 1890, are apparently still sore. In a lawsuit, the McCoy's claim the Hatfields control access to a cemetery and won't let them get in." Like many Americans, they're getting more litigious.

read between the lines. Cryptographers commonly used a code whereby the secret message in a letter or other document could be discerned only by reading its alternate lines. This practice, and possibly the use of invisible ink to write messages between the lines of a letter, suggested to *read between the lines*, which by 1865 meant to discern the underlying fact or intention in any document or action.

read 'em and weep. A common cry of a cardplayer or crap shooter after a good hand or roll of the dice. The American expression is now used generally to mean "here's some very unwelcome information for you, information that will benefit me."

read my lips. In accepting the Republican nomination for president in 1988, George H. W. Bush (b. 1924) declared that he would not raise taxes: "My opponent won't rule out raising taxes but I will. And the Congress will push me to raise taxes, and I'll say no, and they'll push again. And I'll say to them, *read my lips*, no new taxes." Bush (who did eventually raise taxes) certainly popularized the phrase *read my lips*, but he didn't coin it. Neither did his speechwriter Peggy Noonan. *Read my lips* dates back at least to the 1970s, when it was the title of several popular songs. It means "Listen to me carefully, intently, so you hear exactly what I'm saying."

read the riot act. If you were actually reading the Riot Act to someone, here's what you'd proclaim: "Our Sovereign Lord the King chargeth and commandeth all persons being assembled immediately to disperse themselves, and peaceably to depart to their habitations or to their lawful business, upon the pains contained in the act made in the first year of King George for preventing tumultuous and riotous assemblies. God save the King." This is the opening section of the Riot Act of 1714, which a justice of the peace or other authorized persons was required by the Riot Act itself to read to rioters. The "pains" or penalty, provided by the act was death, later changed to terms in prison ranging up to life. These were certainly severe penalties, much more severe than those a parent has in mind when threatening a child with punishment if he doesn't cease and desist from a certain activity. But our expression *to read the riot act*, "to severely scold or warn someone," is nonetheless an allusion to the real Riot Act of 1714, designed to control the English middle class and prevent sedition.

Reaganomics. A term coined in 1980 describing the economic theories and plans of Ronald Reagan, who served as U.S. president from 1981 to 1989. Reaganomics was marked by tax cuts and free market policies. The word construction Nixonomics preceded it and Clintonomics came after it. See THE GREAT COMMUNICATOR.

real McCoy. Kid McCoy happened to hear a barroom braggart claim that he could lick any of the McCoy's around—any

time, any place. The Kid, then at the top of his boxing division, promptly delivered his Sunday punch in person. When the challenger came to, he qualified his statement by saying that he had only meant that he could beat any of the other fighters around who were using the Kid's name, not the real McCoy himself. In another version of the story, which also takes place in a saloon, a heckler sneers that if the Kid was the real McCoy, he'd put up his dukes and prove it. McCoy does so and the heckler, rubbing his jaw from his seat in the sawdust, exclaims, "That's the real McCoy, all right." But there have been numerous, unproved explanations for the origin of *the real McCoy* for "the genuine, the real thing." Still another is that advertisements of Kid McCoy's fights proclaimed that the real McCoy, and not some imitation, would appear. The fabulous Kid McCoy won the welterweight title in 1896, but outgrew his class; he was once ranked by *Ring Magazine* as the greatest light heavyweight of all time, though he never held this title. It is possible that the cachet of his name may have been strengthened by the ring exploits of Al McCoy, who held the middleweight title from 1917 to 1919. Certainly there were a lot of McCoy's around in the early days of boxing, among the myriad Mysterious Billy Smiths, Dixie Kids, Honey Melodys and Philadelphia Jack O'Briens. But which McCoy is the real McCoy remains open to debate; he may not even have been a boxer. For example, another tale has it that the real McCoy was African-American inventor Elijah McCoy, whose machine for lubricating the parts of a steam train engine was widely popular and inspired many inferior knock-offs.

a real star is born. An actor who really had a bad voice for the early sound films was leading man John Bowers. Bower's death, in fact, was the model for Norman Maines's suicide in *A Star is Born*. Despondent because he couldn't make the transition to talkies, Bowers took off his shoes and bathrobe and swam out into the Pacific, never to be seen again.

ream. Meaning a standard of paper, usually 500 sheets, *ream* comes from the Arabic *risma*, "a bundle of clothes." The explanation for this seemingly odd derivation stems from the fact that the Arabs learned from the Chinese how to make paper out of rags instead of papyrus and passed the technique and the word on to Europe.

Reaumur scale. René-Antoine Ferchault de Réaumur (1683–1757) invented the Réaumur thermometer and the thermal scale (0°–80°) on which it is based. Like the CELSIUS SCALE it was considered by some to be an improvement on Fahrenheit's invention 17 years earlier, in 1714. Réaumur has been called "the Pliny of the 18th century." Both a physicist and naturalist, his versatility involved him in researches ranging from the expansion of fluids and gases to an exhaustive study of insects. The fluid under glass in his thermometer, unlike Fahrenheit's, was four-fifths alcohol and one-fifth water.

rebate. A merchant who makes a rebate gives back part of the buyer's money. But *rebate* has taken a long, circuitous route to the meaning it has today. Once a sporting term, from falconry of all things, *rebate* meant "to bring back a bating hawk," that is, a hawk that has left its perch without being commanded to do so.

rebel yell; Texas yell. A leading expert believes that the *rebel yell*, or *yalo*, originally used in combat in the Civil War and intended to strike terror into the hearts of the enemy, came from the Creek Indians, loosely combining “the turkey gobbler’s cry with a series of yelps.” The high-pitched, blood-chilling yell was borrowed by Texans and adopted for their *Texas yell*. But others say the Texans got their yell from the Comanche Indians. In any case, everyone agrees that the “Yah-hoo” or “Yaahaaheee” of fiction writers sounds nothing like the rebel yell. Several experts believe it is a corruption of the old English foxhunting cry *tallyho!*

rebus. A picture puzzle. Here words are made by combining letters and pictures. Originally this may have been a Latin word meaning “with things” first recorded in 1512.

Recanting Settle. Bombastic Elkanah Settle (1648–1724), a dramatic rival of John Dryden in his early days, switched so often from one political side to another that he was known as Recanting Settle. He was appointed poet of the city of London in 1691.

received pronunciation. Various called *R.P.*, *BBC English*, the *King’s English*, *London English*, the *Oxford accent* and *Southern Educational Standard*, this is a pronunciation of British English reflecting the past cultural and social predominance of the speech of southern England. It was once the characteristic speech of the English public (private) schools and Oxford and Cambridge Universities, which led to its being adopted as the pronunciation used in broadcasting. It is of course no better or worse than any other pronunciation. There is no similar standard of speech in American English, though at one time the so-called Harvard accent and the General American dialect (used by American broadcasters) were touted as such. Broadcasters do, however, avoid using regional accents.

reciprocity. *Reciprocity* refers to a mutual interchange of favors or privileges, the word deriving from the Latin *reciprocus*, “alternating.” In the *Analects of Confucius*, the Chinese sage rated reciprocity highly. “Tsze-king asked, ‘Is there one word which may serve as a rule of practice for all one’s life?’ The master said, ‘Is not *reciprocity* such a word? What you do not want done to yourself, do not do to others.’” See GOLDEN RULE.

record. See LEARN BY HEART.

record album. See ALBUM.

red (bloody) hand of Ulster. The badge of Ulster, called the red (or bloody) hand of Ulster, is a sinister, or left, hand, erect, open and couped at the wrist. According to legend, during an ancient expedition to Ireland it had been decided that he who touched land first would own the land he touched. The future prince O’Neill saw another boat edging ahead of his toward shore and seemed to be beaten. But he hacked off his left hand and threw it up on land ahead of his rival, claiming all of Ulster for his own.

Red Baron. His name still comes up, by way of comparison, when the exploits of any combat pilot or daring flier are dis-

cussed. He was Baron Manfred von Richthofen (1892–1918), the top German ace who shot down 80 Allied planes in World War I until he was killed in combat. He was called The Red Baron (and the Red Knight and the Bloody Red Baron) not because of his red hair, or because he was a bloody killer, but because he flew a bright red Fokker Triplane. See IMMELMAN.

Red Cross Banner. The Confederate battle flag is the most familiar symbol of the American South but was not the official flag of the Confederacy, an honor that goes to the STARS AND BARS. The familiar Red Cross Banner was designed by General P.G.T. Beauregard following the first battle of Bull Run, after Southern troops in the confusion of battle mistook the Stars and Bars for the Union flag, which it resembled. The flag that most southerners fly today is this Red Cross Banner or battle flag, not the Stars and Bars.

red dog. Linebackers “hound” or “dog” the passer in a football red dog, crashing through the line to try to break up a play. When the tactic was invented in the 1960s, “red dog” was the signal if one linebacker was to try cracking the line, “blue dog” if two were to be used, and “green dog” if all three linebackers were to charge. Football fans, however, misused the terms and applied *red dog* to any rush through the offensive line, made by linebackers or linemen, and that is what the term means today. I’ve also heard it used outside of football for any rush on one person by a group of men.

red-eye. Cheap but potent, often dangerous, whiskey has been called “red-eye” since the early days of Prohibition because its high alcohol content and questionable ingredients caused dilation of the eye’s blood vessels.

redeye dish gravy. Made from the frying-pan juice of country ham, thickened with flour and frequently containing a little coffee for color and flavor; also called redeye gravy.

red-haired villain. As Rosalind says in *As You Like It*, “His very hair is of the dissembling color.” Villains have frequently been depicted in fiction as redheads, perhaps due to the tradition that Judas Iscariot had red hair. Redheads were once thought to be so deceitful that the fat of dead red-haired men was used as an ingredient in poisons and fish baits. Actually it’s hard to think of many murderous, lying, or unreliable real redheads aside from Judas, unless you include Salomé, Lizzie Borden, Nero, Napoleon, Henry VIII, and General Custer. Good old redheads in history include William the Conqueror, Shakespeare, Queen Elizabeth I, American Presidents Washington, Jefferson, and Van Buren (who was, however, called “the Little Magician” and worse), Emily Dickinson, Mark Twain, Sarah Bernhardt, George Bernard Shaw, Winston Churchill, Sinclair Lewis, football great Harold “Red” Grange, and Little Red Riding Hood.

red herring. Red herring are herring that have been cured and become red in color. Escaping criminals in the 17th century would drag strong-smelling red herring across a trail to make pursuing bloodhounds lose the scent. This practice inspired the popular expression *to drag a red herring across the trail* and the more recent, shortened term *red herring*, which

means confusing an issue by dragging in something irrelevant to the matter.

Red Indian. An offensive name for Native Americans, but a historical term applied by the British to North American Indians, apparently because of “their copper-colored skin” and to distinguish them semantically from the Indians of India. From *Red Indian* came the derogatory word *redskin*.

red ink; red numbers. See *INK*.

red-letter day. Holidays, festivals, and saints’ days have been marked in red ink on calendars since the 15th century. Red-letter days were memorable and usually happy ones, so the expression *red-letter day* eventually came to mean, more broadly, any pleasantly memorable day, a lucky day more important than most. Incidentally, since purple ink was also used to indicate special days in medieval times, the phrase could just as easily have been “purple-letter day.”

red-light district. Brothels once advertised their presence by burning electric lights covered with red shades or glass in their windows. This led to the Americanism *red-light district* for an area known for its houses of prostitution, the term first recorded in the late 19th century. See *BABYLON OF THE WEST*.

redneck. A poor, white, often rowdy southerner, usually one from a rural area. The word, which is sometimes derogatory, has its origins in the sunburned necks of farmers and outdoor laborers, and originally meant a poor farmer. “A redneck is by no means to be confused with ‘po’ whites,” wrote Jonathan Daniels in *A Southerner Discusses the South* (1938): “Poor white men in the South are by no means all po’ white even in the hills. Lincoln and Jackson came from a southern folk the back of whose necks were ridged and red from labor in the sun.” Another source claims that in the 1930s striking West Virginia coal miners wore red bandanas around their necks and were called “The Redneck Army.” See *POOR WHITE*.

the Red One. Also *Big Red One*. The name given to the famous American Army First Division. One story says that the Germans gave the name to the division after the red “I” on its shoulder patch. Another claims it is so named because it was the first American division in France during World War I.

red rain. An alarm shouted in marine combat artillery units when radar operators detect incoming fire from enemy mortar or artillery. This cry of *Red rain! Red rain!* was often heard in the second Iraq War (Operation Iraqi Freedom) in 2003.

Reds; Red Square. Communists are called Reds because the red flag was the national flag of the Soviet Union and was the banner of international communism before the Russian Revolution. The red flag has been a signal for battle since Roman times, and the color red in national flags usually represents the blood of the people. Before the communists used it as a symbol of revolution, red was associated with the Jacobins of the French Revolution, the “red republicans” who reportedly

dipped their hands in the blood of their royal victims and triumphantly waved them aloft, and with the red-shirted followers of Garibaldi in Italy. Red Square, adjoining the Kremlin in Moscow, is *not* named after the communists, as many people believe. Red Square was so named long before the Russian Revolution. Its name may have something to do with the color of buildings formerly in the area, or the fact that Russians believe red to be the most beautiful of colors.

Red Sea. The Romans named the Red Sea (*Mare rubrum*), but they took the designation from an old Semitic name whose meaning is not certain, so no one knows the real reason why the sea is called Red.

redskin. A term invented by white men, who are not really white, for all Indians, who are not really red, in about 1699, long before whites went West. *Red man* is first recorded in 1725 and the derogatory *red devil* in 1834, all before the West was “won.” See also *RED INDIAN*.

red tape. In the early 1900s, when the term arose, lawyers and government officials often tied their papers together with red ribbons. Because excessive formality and time-consuming, rigid adherence to rules and regulations often characterized lawyers and governmental agencies, *red tape* became a synonym for these failings. The words were popularized mainly by Thomas Carlyle, who castigated government officials for *red tapism*.

reduplicated words. Also called ricochet words, these are words containing a reduplicated or doubled element, which usually gives them an intensifying force. There are hundreds of them in English, some covered in these pages. They include chitchat, click-clack, dillydally, dingdong, drip-drop, flimflam, fiddle-faddle, flip-flop, hanky-panky, harum-scarum, helter-skelter, hobnob, hodgepodge, hoity-toity, hugger-mugger, hurly-burly, mishmash, namby-pamby, niminy-piminy, pell-mell, ping-pong, pitter-patter, razzle-dazzle, riffraff, roly-poly, shilly-shally, and wishy-washy.

reek. One meaning of the Old English word *recan*, the ancestor of *reek* meant to expose to smoke. Since smoke can smell bad, *reek* came to mean “to give off an offensive odor, to stink.”

Reflipe W. Thanuz. Early in the 19th century William Randolph Hearst’s *New York Journal* editors, suspecting that the *New York World* was ransacking its obituary columns, faked an obituary for one Reflipe W. Thanuz. The *World* promptly stole it, only to have their rival point out that Reflipe W. was “we pilfer” spelled backward and that Thanuz was a phonetic spelling of “the news.” When enough time had passed, the *World* avenged itself by planting the name Lister A. Raah in a news story. After printing it, the *Journal* learned that this was an anagram of “Hearst is a liar.”

reformatory. *Reformatory* is an old English word dating back to at least the 16th century, but it wasn’t applied to what is in effect a prison for juveniles until the Elmira, New York Reformatory was established early in the 19th century.

refrigerator. The first refrigerator was named by its inventor, Maryland farmer Thomas Moore, in 1803. Moore coined the word from the Latin *re-*, “thoroughly,” plus *frigerare*, “to cool.” His invention was actually an icebox and such devices were usually called that until the first electric refrigerator was invented in 1916. It wasn’t until the 1930s that refrigerators became inexpensive enough to begin replacing iceboxes in American homes.

refugee. French Protestants called Huguenots, who fled to England in 1685 after the revocation of the Edict of Nantes, were the first people to be called refugees. The word derives from the French *refugier*, “to take refuge.”

regatta. A regatta was initially, back in the 17th century, a race between gondolas on the Grand Canal in Venice. This Venetian dialect word translates as “a strife or contention or struggling for mastery.” The first English *regatta*, or yacht race, was held on the River Thames on June 23, 1775.

regeneration. In its biological sense of to replace or renew an organ by formation of new tissue, *regeneration* (from the Latin *regenerare*, “to replace”) is limited in humans, restricted primarily to the healing of wounds, the regrowth of tissue in internal organs, and the regrowth of hair and nails. However, among simpler animals the ability can be more extensive. The starfish is highly developed in this respect, thanks to a nervous system that one investigator has described as more complicated than the London telephone exchange. A starfish wounded in a fight has the ability to cast off its arm at any point. Not only can it grow a new arm when it loses one, but an entire new body will be regenerated if the ray cut from the old body contains a portion of the central disk. A marine biologist applied a strong electric current to a laboratory specimen and found to his amazement that all five arms walked away from the body. About 12 of 100 starfish collected will show one or more rays in the process of regeneration. *See* STARFISH.

reggae. This style of Jamaican music, combining blues, calypso, and rock ‘n’ roll was named in 1968 after Frederick “Toots” Hibbert’s song “Do the Reggay.” The word *reggay* in the song comes from the Jamaican *rege* or *strege* for a raggedy or dowdy fellow.

regicide. A regicide can be either the killing of a king or the person who kills a king. In the latter case it especially means one of the judges who condemned Charles I of England to death in 1649. After the Restoration, 41 of these regicides were executed. Their leader, Oliver Cromwell, and three others were dug up from their graves, tried for treason, dismembered, displayed publicly, and buried under the gallows at Tyburn. *Regicide* derives from the Latin *rex*, king, and was coined in the 16th century based on *homicide*. *See* CROMWELL.

a regular Trojan. Inhabitants of Troia, or Troy, an ancient city in what is now Turkey that came to be called *Troja* in Medieval Latin, the Trojans were a courageous, industrious people. Legend tells us they labored energetically and cheerfully at even the most arduous tasks. Hence the expressions *to work like a Trojan* and *a regular Trojan*, for hard work done without complaint and a high-spirited industrious worker.

rehash. Englishmen have been using the expression *hash* to mean “old matter served up in a different form” almost as long as they have used *hash* for meat cut up into small pieces, a word that derives from the French word *hache*, “hatchet.” In 1672, for instance, Andrew Marvell complained about writers serving “the Reader continually the cold Hashes of plain repetition.” It was another two centuries, however, before some wit coined the word *rehash*, meaning the same. More effective, the term suggests a hash made from leftovers that is served once, then warmed over and served at least once again.

rehoboam. *See* JEROBOAM.

Reichsautobahnen. The world’s first motorway, built by Adolf Hitler beginning in 1929. It ran from Cologne to Bonn.

reichstag; Third Reich. *Reichstag* is German for parliament. Ernest Weekley, in *An Etymological Dictionary of Modern English*, quotes a historian who regards Prussian minister Otto von Bismarck as “a man of infinite humor, who called his hound *Reichstag*.” *Third Reich* refers to Germany under the rule of the Nazis, 1933–45, one of the most vicious regimes in history. The term was coined by Arthur Moeller von der Bruck in his book *Das Dritte Reich* (*The Third Empire*, 1923).

Reign of Terror. *See* TERRORIST.

reimburse. Reimburse someone and you are putting money back into his purse, *reimburse* deriving from the Latin *re*, “back,” *im*, “in,” and *bursa*, “purse.” The word is first recorded in 1611, probably coming into English via the French.

reindeer. One might think, and many do, that reindeer are so named because they are a kind of deer which Santa Claus and others have equipped with reins so that they can pull sleds. But the word *reindeer* has nothing to do with reins. The first part of the word is simply a borrowing of a Scandinavian word for the “creature,” which derives ultimately from the Old Icelandic word *hreinn*. *Deer* derives from the Old English *deor* for beast or animal.

Reine-Claude plum. *See* PLUM.

relay. Today’s track relay races have their etymological origin in hunting, where packs of fresh hounds were held at strategic points along a hunting route so that they could relieve the hounds that tired. In fact, the word *relay* derives ultimately from the obsolete French verb *relayer*, meaning “to loose the hounds.”

relocation centers. Places to which U.S. Japanese-American citizens on the West Coast were unjustly removed by the U.S. government during World War II because they were thought at the time to be security risks, a charge totally unfounded.

remacadamized. *See* MACADAM for the meaning of this word. *Remacadamized* is given here because it is a memorable example of the many languages that have made contributions to English. Even though *macadam* is eponymous in origin, the

one word *remacadamized* is composed of Latin, Celtic, Hebrew, Greek, and English elements: *Re*=Latin prefix; *mac*=Celtic “son”; *adam*=Hebrew “man”; *Iz*=Greek suffix forming verbs; *ed*=Old English suffix.

Remember Goliard! This old war cry commemorates the battle of Goliard, three weeks after the ALAMO, when 330 Texan prisoners of war were ordered shot by Mexican General Santa Anna. See LET’S ROLL.

Remember Pearl Harbor! Sixteen ships were sunk, 2,400 American servicemen were killed, and virtually all American planes supporting the fleet were destroyed on December 7, 1941, when the Japanese launched a surprise attack from six aircraft carriers against Pearl Harbor in the Hawaiian Islands. This action at Oahu led to the expression DAY OF INFAMY and the battle cry *Remember Pearl Harbor!* that America carried into World War II. American intelligence evidently decoded a secret Japanese diplomatic note announcing the attack and sent a warning to Hawaii an hour and 25 minutes before the first enemy bombs hit. The special military communication lines to Hawaii were not working, and Washington intelligence sent the warning as a regular telegram via Western Union, which took 10½ hours to reach Honolulu. Had the warning arrived in time, the Pacific fleet might have been saved and the war provoked by Japan’s attack concluded much sooner. See LET’S ROLL.

Remember the Alamo! See ALAMO.

Remember the Maine! Relations with Spain were already strained when the U.S.S. *Maine* docked at Havana, Cuba, on a courtesy call, although no trouble was expected. Then, at 9:58 P.M. on February 15, 1898, the ship suddenly exploded, killing 258 crew members. Spanish boats in the harbor helped rescue many of the survivors, and the dead were buried in a Havana cemetery. The cause of the explosion is not clear, and while Spanish authorities attributed it to an internal malfunction, an American panel announced that it was caused by a mine. “Remember the Maine” became a rallying cry in jingoist newspapers, helping to ignite the Spanish-American War some two months later. See LET’S ROLL.

Remember the River Raisin! Kentucky soldiers cried this little-known slogan during the War of 1812 against the British. They were remembering their wounded compatriots who were scalped by Britain’s Indian allies after they were defeated trying to capture Detroit. See LET’S ROLL.

Remembrance Sunday; Veteran’s Day. *Remembrance Sunday* is the British equivalent of the U.S. Veteran’s Day, honoring those who died and served in all Great Britain’s wars. It falls on the Sunday nearest November 11th. Originally the national holiday was called Armistice Day in both countries and honored only the dead of World War I. The British also call Remembrance Sunday Remembrance Day and Poppy Day, after the artificial poppies sold that day to help needy former soldiers. Veteran’s Day, which replaced the U.S. Armistice Day in 1954, always falls on November 11th.

remora. In ancient times Roman sailors believed that the little remora (*Remora remora*) fastened itself to their sailing vessels and slowed them down, delaying them, so they named the fish *remora*, or “delayer.” In nature the remora attached itself to the undersides of sharks, whales, swordfish, and even tuna by means of its highly efficient suction disk, which is actually a greatly modified first and spiny dorsal fin. Not only does it hitch a free ride, but it also eats pieces of food dropped by the host fish. The remora does do some good, however, by acting as a cleaner fish and removing parasites from its host’s hide.

remove (take) the scales from your eyes. Realize the truth, wake up, stop being deceived about someone or something. This ancient expression is from the Bible (Acts 9:18): “And immediately there fell from his eyes as it had been scales; and he [Saul, later St. Paul] received sight forthwith, and was baptized.”

reports of my death are greatly exaggerated. A traditional story has it that in 1897 an American newspaper bannered Mark Twain’s death. When another paper sent a reporter to check the story Twain came to the door of his Connecticut home and gave him the following statement: “James Ross Clemens, a cousin of mine, was seriously ill two or three weeks ago, but is well now. The reports of my illness grew out of his illness. The reports of my death are greatly exaggerated.” Nothing any scholar says will change this tale, which is by now part of American folklore, but the true story is that a reporter from the *New York Journal* called on Twain while the author was staying in England—to check out a rumor that Twain was either dead or dying in poverty. Twain explained to the reporter that his cousin had been seriously ill in London and that reports of his own illness grew out of his cousin’s illness, that “the report of my death was an exaggeration.” But then maybe Twain had the facts wrong. “When I was younger,” he confided toward the end of his life, “I could remember anything, whether it had happened or not; but my faculties are decaying now and soon I shall be so I cannot remember any but the things that never happened. It is sad to go to pieces like this, but we all have to do it.”

requiem shark. Tropical sharks of the family Carcharhinidae, especially tiger sharks, are often called *requiem sharks*, their name coming from the French word *requin*, for “shark.” The pseudonymous sailor Sinbad explained the derivation of the French word in an 1887 book he wrote about sharks: “The French name for shark is *requin*. This word is probably derived from the Latin *requiem*, and signifies that if a man fall into the sea among sharks, his comrades may repeat for him the usual prayers for the dead. It is seldom, if ever, that a man who is so luckless as to fall amongst sharks appears again; a shriek is heard, a moving mass is seen under the surface and a fin above it; the next wave that breaks against the shipside is crimsoned, and the horror-stricken seamen know that their messmate has gone to that place from which no traveler returns.”

re-rat. They say you can rat, but you can’t re-rat. To rat is to change one’s political affiliation. Possibly, the coinage dates to 1923–24, when Winston Churchill rejoined the Conservatives after having left them earlier to join the Liberal Party.

Restaurant Into Which You Would Not Take a Dog. This is the name of a Shanghai restaurant, in a country far removed from hype, where eating establishments often vie with one another in coining self-deprecating names for themselves. Other examples include The Second-Class Establishment of Mr. Hsiang and Enter Here If Your Must.

retail. See WHOLESALE.

retire. The etymology of this word does not paint a pretty picture of retirement. *Retire* comes from the Old French *retirer*, to draw back, and was first used in the military sense of drawing back; it wasn't until the mid 17th century that we find *retire* used in the sense of retiring from a job. Nothing to alarm one so far, but when we look to the origins of the Old French *tirer*, "to draw out, endure," we find that it probably comes from the Old French *martir*, "a martyr," possibly because martyrs were often drawn out on the rack almost beyond the limits of human endurance.

retiring a number. Track competitors were the first athletes to wear numbers identifying them. Washington and Jefferson University had the first football team to do so, in 1908, and the 1929 New York Yankees were the first baseball team to adopt the practice (their numbers originally noted the player's place in the batting order). Soon the numbers of great players were "retired" when they retired from a sport, this being among the greatest honors a player could receive. The first player to have a number retired in any sport seems to have been football's Harold "Red" Grange, when he was at the University of Illinois. Grange, also known as "77" and most famously as the Galloping Ghost, later became a professional football star and a television sportscaster. Sportswriter Grantland Rice coined "Galloping Ghost" on the same weekend (October 18–19, 1920) that he coined the memorable "Four Horsemen." See also FOUR HORSEMEN.

Retreat, hell! A remark made by Major General Oliver Prince Smith, 1st Marine Division commander during the Korean conflict when his division was retreating from North Korea. The full quote is: "Retreat, hell! We're not retreating, we're just advancing in a different direction." Said a U.S. reconnaissance pilot looking down on the same bloody retreat: "This hurts. It hurts where I can't scratch." See DEVIL DOGS.

Reuben. No one is sure who invented this grilled sandwich of corned beef, Swiss cheese, sauerkraut, and Russian dressing on rye bread. The best guess is that it was first concocted at Reuben's Delicatessen in Manhattan during the early 1900s.

re-up. A military term for "re-enlist," as in "They told him he'd make sergeant if he re-upped for three years." The word was being used as far back as 1905. Today it also means to sign any renewed employment contract.

Revenge is a dish that tastes best when it is cold. An old Italian proverb that is a favorite of the Godfather, Don Corleone, in Mario Puzo's novel *The Godfather* (1969). A pithier variation is *Revenge is a dish best served cold*.

Rh disease. People with Rh positive blood have any of several substances on their red blood cell surfaces, while Rh negative individuals, a much smaller group, lack these substances and are incompatible with Rh positive blood. Erythroblastosis (the destruction of red blood cells) is a disease of newborn infants associated with incompatible Rh blood factors of mother and child. It is often called "Rh disease" and is so named because it was first found in the blood of laboratory (Rh)esus monkeys.

rhinoceros. As with HIPPOPOTAMUS and many other animals, the Greeks named the rhinoceros. They thought the huge horn on its head very formidable and called it *rhinokeros* after the Greek words *rhinos*, "nose," and *keras*, "horn." The rhino's horn, sometimes over four feet long, is an excellent defensive weapon, but it has plagued the animal through the ages, driving it at times to the shores of the Dead Sea of extinction. One old canard had it that a rhino horn used as a goblet could detect the presence of poison; other superstitions claimed that powdered rhino horn could cure many ailments, including epilepsy and bubonic plague, as well as ease the pain of childbirth. Yet what caused the rhino the most trouble was the belief that its horn, similar to the legendary unicorn's, was a sex stimulant. The ancient Chinese, Babylonians, Greeks, and Romans were among many people who believed this. Today at least three species of rhino are becoming extinct because the Chinese value their powdered horn (*hsi chio*) as an aphrodisiac—a large horn brings at least \$1,000 in what is definitely a seller's market.

Rhode Island. One story has Verrazzano, in 1524, observing the island now called Aquidneck in Narragansett Bay and naming it Rhodes Island because it reminded him of the island of Rhodes in the Mediterranean. Later, the island gave its name to the state. Most scholars contend that Rhode Island takes its name from the Dutch *Roodt Eylandt*, "red island," for its red clay.

Rhodesia; Rhodes scholarship. Poor health, which plagued him all his life, forced empire builder John Rhodes to leave England and Oxford for Africa in 1870. There he joined the rush to the Kimberley diamond fields, and by 1888 he had established De Beers Consolidated Mines, dominating both the diamond mine area and later the Transvaal gold mines. His huge fortune facilitated his entrance into politics, and he served as prime minister of Cape Colony, 1890–96. It was Rhodes's desire from his youth that the British should rule the world. When the British government failed to take action he formed a private company to occupy and develop the territory of what became Rhodesia, which was named for him five years later, in 1899. (The British protectorate, Northern Rhodesia, became the republic of Zambia in 1964, and Southern Rhodesia later became Zimbabwe.) The "Empire Builder" had returned to Oxford several times in the course of his brief life—once being sent back to Africa under a virtual death sentence, the doctor noting privately that he had only six months to live. Rhodes finally earned his degree at the university, and his will left an endowment of 6 million pounds for the famed Rhodes scholarship that bears his name.

rhododendron. This large genus of shrubs with very large, showy flowers takes its name from the Greek for rose (*rhodo*)

and tree (*dendron*). The name was given by the Greeks to the oleander, an unrelated species, but Linnaeus applied it to the shrubs we now know as rhododendrons when classifying them. *See also* AZALEA; LINNAEAN SYSTEM.

rhubarb. Speculation has been rife for years about how the slang term *rhubarb*, “a heated argument,” arose from the name of a popular vegetable. Since the word is often associated with baseball, many writers say it has its origins there. But probably the best explanation, advanced about 25 years ago by a veteran actor familiar with theatrical traditions, is that actors simulating angry talk in crowd scenes for “the noise without” gathered backstage and “intoned the sonorous word ‘rhubarb.’” The actor-etymologist Alexander McQueen advised that the word produces such an effect “only if two or three work at it,” and claimed that this theatrical tradition went back to Shakespearean times, but the slang *rhubarb* for an argument arose only in the late 19th century. It therefore came to mean a “rumpus” or a “row” at about the time baseball was fast becoming America’s national pastime. It is easy to see how the stage term could have been applied to an argument on the diamond, especially a mass argument that involved both teams, though there is no solid proof of this. *Rhubarb* itself has an interesting derivation, taking its name from the Latin *rha barbarum*. The Romans called it this because the plant was native to the river Rha (the Volga), a foreign, “barbarian” territory—the plant’s name, thus meaning “from the barbarian (foreign) Rha.” The first rhubarb planted in America was sent to the great naturalist John Bartram from Siberia in 1770. Americans long called the fruit pieplant because it made such delicious pies, especially when combined with strawberries.

rhyming slang. *See* BRISTOLS.

rice Christian. Used as early as 1816 in China and India, a *rice Christian* refers to someone converted to Christianity to improve his economic lot, for material rather than spiritual reasons.

Rice Coast. *See* CAROLINA RICE.

the rich are different from you and me. Ernest Hemingway’s remark about the rich, the rest of us, and money has its roots in a remark critic Mary Colum made to Hemingway at lunch one day. “I am getting to know the rich,” he told her. Replied Colum: “The only difference between the rich and other people is that the rich have more money.” Hemingway later put the remark to good use in his short story “The Snows of Kilimanjaro”—at the expense of his friend F. Scott Fitzgerald—having the story’s central character recall “poor Scott Fitzgerald and his romantic awe [of the rich] and how he had started a story once that began, ‘The rich are different from you and me.’ And how someone had said to Scott, yes, they have more money.” The only truth to this is that Fitzgerald’s story “The Rich Boy” begins: “Let me tell you about the very rich. They are different from you and me.” Fitzgerald soon complained to Hemingway, advising him that “Riches have never fascinated me, unless combined with the greatest charm or distinction.” Later, Maxwell Perkins, editor to both Hemingway and Fitzgerald at Scribner’s, on Fitzgerald’s request changed “poor Scott Fitzgerald” in the

story to “poor Julian.” But mistakes by biographers have made “the famous Hemingway-Fitzgerald exchange” a part of literary history that will probably be repeated as long as the two great authors are read.

rich as Croesus. *See* CROESUS.

rich as Rockefeller. *Rich as Rockefeller* refers to the family fortune amassed by John Davison Rockefeller (1839–1937). The oil refinery that became the Standard Oil Company made Rockefeller a billionaire before it was dissolved by the Supreme Court in 1911. Variations on the phrase above include *he’s a regular Rockefeller*, and *Rockefeller* itself is the American equivalent of *Croesus*. John D. may have given only dimes to beggars, but his philanthropies included the founding of the University of Chicago, the Rockefeller Institute for Medical Research (1901), and the Rockefeller Foundation (1913) for worldwide humanitarian purposes, in all worth about half a billion dollars. John D. Rockefeller, Jr., built New York’s Rockefeller Center, with Radio City completed in 1940. There is no popular saying “as rich as Bill Gates,” despite a 2002 study by *New York Times* business editor Allen R. Myerson that concluded that Gates’s fortune amounted to \$46 billion compared with Rockefeller’s \$25.6 billion when both fortunes were adjusted for inflation.

the richest corpse in the graveyard. An old phrase urging a friend, or enemy, to stop accumulating money and learn to enjoy spending it, at least some of the time. People who don’t learn this often end up the richest corpse in the graveyard.

Richmond, N.Y. *See* KINGS COUNTY.

Richter scale. A 0 to 9 open-ended logarithmic scale that indicates the intensity (the amount of energy released) of an earthquake. The scale is named for U.S. geologist and seismologist Charles Francis Richter (1900–85), who devised it in 1938 at the California Institute of Technology. The most destructive earthquakes register over 5.5 on the scale, every difference, from 1 to 2, for example, representing about a 32 fold difference in magnitude. According to the *Guinness Book of World Records* (1998), “The largest reported magnitudes on the Richter scale, are about 8.9, but the scale does not properly represent the size of the very largest earthquakes . . .” For these another rating system should be used. The deadliest earthquake known to history occurred in three Chinese provinces in 1556, claiming 830,000 lives. In 1976 another Chinese earthquake killed 750,000 people. Actually, the Richter scale should honor both Richter and his colleague Dr. Beno Gutenberg (1887–1960), who worked with him in developing it. But the term Gutenberg-Richter scale is rarely heard today.

rickey. *See* GIN RICKEY.

rickshaw. The name of this hooded, two-wheeled, man-drawn vehicle of Asian countries derives from the Japanese *jin-ricksha*. The Japanese word itself is an amalgam of the Japanese *jin*, “man or person,” *riki*, “power or strength,” and *sha*, “carriage,” and would strictly be translated “man power carriage.” A rickshaw powered by a driver peddling a tricycle is properly called a “trishaw.”

ride. To kid, to ridicule or harass. Both this word and the American underworld phrase *take someone for a ride* are first recorded at about the same time, around 1915. It has been suggested that the facetious *ride* derives from the sinister gangster expression meaning to force or entice someone into a car, take him to a lonely place, kill him, and dump him. To ride a person is of course not nearly so brutal as to take someone for a ride, but it isn't especially pleasant, either.

ride a cock horse. A child riding a cock horse sits on an adult's foot while that person lifts him or her up and down, giving the child a ride. The game is also called *horsey*.

ride and tie. Among American hillfolk, this is a seldom-used indelicate expression that means the sex act performed by a woman and two men. It is thought to derive from the old practice of two men riding one horse over a great distance: One man rode the horse for a while, tying the horse and walking on until the second man reached the horse, who rode it past the first man, etc., until they reached their destination.

ride backwards up Holburn Hill. To go to one's own hanging. Up until 1784, the year of the last execution at Tyburn in London, condemned men would go to the gallows riding backwards on a horse all the way up Holburn Hill, which rose steeply from Newgate Prison to the gallows at Tyburn. According to one account, "Some conceive the practice to increase the ignominy, but it is more probably to prevent the condemned from being shocked with a distant view of the gallows, as in amputations surgeons conceal the instruments with which they are going to operate."

ride close herd on. To *close herd* literally means to keep cattle close together, compact; thus to *ride close herd on something* is to pay close attention to it, not to let it get far out of your sight or out of hand, as in "He rode close herd on that plan from the start." The expression dates back to the 19th century.

ride herd on. See LIKE HERDING CATS.

Ride him, cowboy! A cheer commonly given to cowboys riding a bucking horse, especially in rodeos. "Ten thousand damnations! Get his head up! Stick your spurs into him! Ride him like a man! Ride him, cowboy!"

to ride off into the sunset. So many Hollywood Western movies ended with the hero riding his horse off happily into the sunset that the phrase became a synonym for a happy ending.

ride out on a rail. See TARRED AND FEATHERED.

ride roughshod over someone. A roughshod horse had nailheads projecting from its horseshoes to keep it from slipping, and it's said that similar shoes with projecting points were designed by blacksmiths in the 17th century for use by the cavalry on the battlefield. The gory spectacle of chargers with benailed hooves stomping over men in battle, or even the sight of a roughshod horse accidentally trampling a pedestrian on a city

street, suggested the expression *to ride roughshod over someone*, "to treat someone brutally, without the least consideration."

ride shotgun. To act as a guard, or to ride in the front seat of a car. The expression was suggested by the armed guard with a shotgun who often rode beside the driver on stagecoaches in the old American West.

riffraff. *Riffraff* has a complicated history for a little word. It is apparently based on the French phrase *rif et raf*, meaning "one and all." When first used in English *rif and raf* meant just that, but by the 15th century *riffraff* had been compressed from the phrase and meant something entirely different—the dregs of humanity, trash, worthless people. This radical change has been explained in several ways. It may be that another sense of the French phrase *rif et raf*, "a collection of people who steal," is responsible. Or *raf*, may have become confused with the Swedish word *rafs*, meaning rubbish, *riffraff* coming to mean "refuse and rubbish." Another possibility is that the present meaning derives from the French verbs *rifler*, "to ransack," and *raffler*, "to snatch away," anyone who ransacked or snatched something away being considered *riffraff*. Or the opposite of the phrase *riff and raff* may have something to do with the coinage. *Riff nor raff* meant "nothing whatsoever" and someone who had *riff nor raff* might have become *riffraff*, worthless.

rigadoon. There is no Señor Mambo or Mademoiselle Twist, but there apparently once lived a Monsieur Rigadoon—a M. Rigaud, anyway. *Rigadoon* does sound Scottish, but the lively dance—which resembles the twist in that the two dancers do their pirouetting at a distance from one another—is decidedly Provençal in origin. It is named for Marseilles dancing master Rigaud, who invented it in the late 17th century; the English *rigadoon* is *rigaudon* in French.

Rigg's pyorrhea. See BRIGHT'S DISEASE.

right; adroit, etc. *Right* is of honorable origin, deriving from the Anglo-Saxon *riht*, "straight, just." As for *adroit*, "cleverly skillful," it is just the French *à droit*, "with the right hand." Similarly, *dextrous*, meaning skillful with the hands, body, or mind, derives from the Latin word *dexter* "right-handed"—to call a left-hander *dextrous*, then, is something of a contradiction. *Ambidextrous*, "able to use both hands well," combines the Latin *ambi*, "both," with *dextrous*, literally meaning someone who has two right (two good) hands! Unlike *left*, the word *right* usually has the connotation of cleverness and grace in English words and phrases. A *right-hand man* is an invaluable, trusted aide; the *right side* was the place of honor in political assemblies and gave its name to royal or conservative parties of the right; and *right foot foremost* means putting your best foot forward. See GET UP ON THE WRONG SIDE OF THE BED; LEFT-HANDED COMPLIMENT.

right as a trivet. Excellent, perfect. An old tale says *trivet* is a pronunciation of Truefit, the name of a London wigmaker whose wigs were perfect. But the facts do not bear this out. Originally, the phrase was *steady as a trivet* and referred to the fact that three-legged trivets or tripods stand firm on almost any surface. Today a trivet is a small metal plate with short legs often put under a hot dish to protect a table.

right bower. *Right bower* used to be more frequently employed for someone's "right-hand man," like Sherlock Holmes's Dr. Watson. The expression is from the card game euchre, seldom played anymore, in which the right bower is the jack of trumps, among the most powerful cards in the deck.

right-o; everything's all tiggerty-boo. The American OK (qv) has found favor among the British, as it has almost everywhere, but *right-o* is still heard along with its forms *righty-o* and *right-ho*. So is *tiggerty-boo*, especially in the above expression. The *tiggerty* here (sometimes pronounced *tickerty*) is said to be from the Hindustani *tuga*, the expression introduced to Britain by Lord Mountbatten.

right off the bat. The sound of a baseball hit sharply on the meat of a bat inspired the Americanism *right off the bat*, meaning at once, immediately, very quickly, the first thing. It is first recorded in 1910.

right on your drag. Edna Ferber explains the expression in her novel *Giant* (1952): "The two men at [the rear end of the herd], they're the drag . . . You know we've got a saying here in Texas if you owe money or somebody is after you hot on your trail we say, 'He's on your drag.'"

right smart. In parts of New England and the South right smart can mean a large or considerable amount, as in "We have right smart of those Jonagold apples." The words can also mean talented or accomplished.

right stuff. The British were using this phrase a century ago to describe good soldiers, mainly in the form of "the right sort of stuff." American author Tom Wolfe made it popular again with his book *The Right Stuff* (1979), which described the character, intelligence, etc., needed by U.S. astronauts.

right up my alley. An inside-the-park home run in baseball is often hit *right down the alley*, between two fielders, but I doubt that this is the source of the above phrase, which is sometimes *right down my alley*. The expression, meaning "very familiar and appealing to me," probably has nothing to do with a bowling alley, either. *My alley* here seems to be a synonym for my street, the place where I live and where I'm most at home.

rigmarole. Often spelled and pronounced "rig-amorole," this word means confused, incoherent, foolish or meaningless talk, or any complicated procedure. It derives from a roll of names called the *rageman*, which originated in the 14th century. The name of this roll was altered through mispronunciation to *ragman role* and finally to *rigmarole* in the 18th century. Because the names and addresses on it were often changed or deleted, the rigmarole came to represent any confused or disconnected, incoherent statement.

rigor mortis. *Rigor mortis* refers to the muscular stiffening after death. The term, which came into English about 1830, derives from the Latin words meaning "stiffness of death." The American slang word *stiff* for a corpse also comes from this source.

rile. *Rile*, "to anger," derives from the word *roil*, meaning the same, and is one of the few English pronunciation spellings that became a standard word. Others like it, including *biled* for "boiled," *jine* for "join," *pint* for "point," and *pizen* for "poison," didn't make it.

ringer. For a fabled example of a ringer see DARK HORSE. A ringer is a counterfeit, especially a superior horse passed off as an unknown, or a professional athlete posing as an amateur. The word may derive, as Webster's says, from the old bell ringer's expression *ring in*, working a certain bell into a performance. But there seems to be very little evidence linking bell ringers with horseracing, sports, and gamblers. Perhaps a better explanation is that *ringer* was once a slang term for "counterfeit," which derived from the sale of brass rings for gold at country fairs. *Dead ringer* has no sinister connotations. It simply means a perfect imitation, a person with an uncanny resemblance to someone else. It derives from *ringer*, with *dead* in this case meaning "absolute," "complete."

ring finger. This name for the fourth finger of the human hand (including the thumb as a finger) has been traced back to about the year 1000. Today it most commonly is given to the fourth finger of the left hand, on which wedding rings are worn (because the left hand is closer to the heart than the right). It was in the past called the leech finger because doctors (a doctor was once called a leech) often used it for testing. One old superstition held that the ring finger could cure any wound it touched. See THUMB.

ring hollow; ring true. In the past, counterfeit coins could be detected by the dull, flat tone they produced when dropped on stone, in contrast to the clear ring of true coins. The test was called *ringing* or *sounding* a coin, a very old method that one writer dismissed as unreliable in 1796. Nevertheless, the practice was so common that it inspired the saying *to ring true*, to impress one as being genuine or good, as well as its opposite, *to ring false* or *to ring hollow*, the last a phrase that Ben Jonson used. Today real post-1963 U.S. "silver" coins don't give off a clear ring anymore.

ringing (burning) ears. At least as far back as Pliny the Elder (A.D. 24–79) in his *Natural History* (A.D. 77) people have believed that if their ears were ringing or burning others were talking about them somewhere. Writers have even claimed that if the sensation occurred in the right ear the talk would be complimentary, uncomplimentary if in the left ear. Pliny met his end in the great eruption of Vesuvius. He went out the day after the eruption to study it, a pillow wrapped around his head to protect himself against falling rocks, but was asphyxiated by the sulfurous fumes.

ringing the changes. A *change* in the ancient art of bell ringing is the order in which a series of bells are rung. Theoretically it would be possible to ring 479,001,600 changes with 12 church bells without repeating their ringing order—although it would take nearly 38 years to do so. *Ringing the changes* has long been a competitive sport among bell ringers, and the present champions are eight English ringers and their conductor who rang a peal, all the possible changes on a series of bells—on eight bells

in 1963. The peal consisted of 40,320 changes and took two minutes short of 18 hours. Past feats like this inspired the expression to *ring the changes*, to try every possible way of doing something, to state something again and again in different ways, or even to work something to death. The expression is also the name of a con game in which the swindler completely confuses his mark by continually changing money so that the victim loses track of what he gives out.

ring the bell; ring a bell. *To ring the bell*, “to succeed at something,” is an Americanism that has its origins in either amusement park shooting galleries, where the marksman rings a bell when he hits the target, or in those familiar carnival strength-testing machines, where a person tries to sledgehammer a wooden ball hard and high enough up a board to ring a bell. *Ring the bell* is common in the spiels, or pitches, for both games. *To ring a bell*—“to strike a familiar chord, to evoke a memory”—on the other hand, may refer to memories evoked by ringing church bells or school bells.

ringtum ditty. A western U.S. dish whose name origins are unknown and whose ingredients vary. It usually consists of cheese cooked with bacon, onions, tomatoes, and corn, among other ingredients.

riot act. See READ THE RIOT ACT.

RIP. A long-used abbreviation for the Latin phrase *Requiescat in pace*, “May he (she) rest in peace,” or *Requiescant in pace*, “May they rest in peace.” The abbreviation is commonly found on tombstones and mourning cards. It is only a coincidence that the first letters of English *rest in peace* are the same as those of the Latin phrases.

rip-off. Since at least the 1960s *rip-off* has been a synonym for stealing or defrauding of any kind. It has been used to describe everything from pickpocketing to consumer fraud (“What a rip-off that store is.”) No one is sure where the term comes from. One good possibility is a purse snatcher ripping a purse out of a woman’s hands. Less likely is a burglar ripping the door off a house to get inside.

ripsnorter. See QUICKER THAN HELL CAN SCORCH A FEATHER.

rising beauties. Big, beautiful firm breasts, the expression made famous in American literature by this passage in Erskine Caldwell’s *God’s Little Acre* (1933): “‘I ain’t ashamed of nothing,’ Ty Ty said heatedly. ‘I reckon Griselda is just about the prettiest girl I ever did see. There ain’t a man alive who’s ever seen a finer-looking pair of rising beauties as she’s got . . .’”

rising tide lifts all boats. This American proverbial saying may have originated in Cape Cod, as President Kennedy implied in a speech he made. The words seem to date back to the early 20th century and mean that in good times everybody prospers. A variation is *on a rising tide all boats are lifted*.

ritzy. César Ritz (1850–1918), Swiss restaurateur and hotel manager, built his first Ritz Hotel in Paris in 1898. By hiring the

master chef Georges-Auguste Escoffier and adopting such practices as sleeping in every room at least once in order to test the quality of its mattress, this perfectionist made his hotel the greatest of *la belle époque* and himself the greatest hotelier in the history of the western world. Ritzes opened in London, New York, and other cities, and *ritzy* or *like the Ritz* quickly became American slang for anything lavish and costly. The word can mean vulgarly ostentatious, too; *putting on the ritz* means TO PUT ON THE DOG or showing off, and *to ritz* a person means to behave *ritzily* or superciliously toward him.

rival. The Latin word *rivalis* first meant “one who shares or uses the same river as another person.” It then came to mean “a person or persons living on the opposite side or bank of a river.” Once people live on opposite sides of a river, the river becomes a boundary, and the people often fight over it, becoming rivals or competitors.

River of Doubt. The name of this poetically named river in northwestern Brazil was changed to Rio Roosevelt in honor of Teddy Roosevelt, who explored it in 1913. The 400-mile-long river in the Amazon is also called the Roosevelt River or the Rio Teodoro.

river Styx; stygian. In Greek mythology the river Styx is the principal of the nine rivers of the underworld (Hades), over which Charon ferried the souls of the dead to Elysium for a small fee (the reason for the old custom of burying the dead with a coin called “Charon’s toll” in their mouths). Styx is the name of an actual river that falls down a high cliff on Mount Aroanuis (modern Chelmos) in what was ancient Arcadia. Its waters were said to be poisonous, dissolving any ship trying to sail them. The name *Styx* comes from the Greek *Styx*, “the abhorrent,” which derives from *stugnos*, “hateful, gloomy.” Men swore solemn oaths on the supposedly poisonous waters of the actual Styx and believed that the gods themselves swore oaths on the legendary Styx; those who swore falsely were forced to drink of its waters, which made offenders speechless for a year. I can find no example of a phrase like *drink of the Styx* being applied to any liar, but the word *stygian*, “hellish, infernal, dark, gloomy,” comes from the name of this river, called by poet John Milton “the flood of deadly hate.”

R months. Many people believe that oysters are safe to eat only during months containing the letter R. So common is this canard that it has been commemorated in the poem “The Man Who Dared” by Stoddard King: “Let’s sing a song of glory to Themistocles O’Shea, / Who ate a dozen oysters on the second day of May.” The U.S. Bureau of Commercial Fisheries has been trying to dispel this myth for years, but the rumor persistently finds its way into print. The truth is that American oysters can be eaten safely at any time of the year. In point of fact, American oysters reach the peak of perfection in May and June, months without an R between them, when they are fatter and taste better because they are beginning to store glycogen in preparation for summer spawning. During summer and early autumn, oyster flavor declines. Due to the expenditure of the glycogen, the meat becomes skimpier and the nectar watery. Ironically, the traditional oyster harvest time is still in the fall because the demand is seasonal and oyster prices highest at this time. The “R” myth derives partly from those days when

poor refrigeration resulted in spoilage, but more important is the fact that the flat European oyster (*Ostrea edulis*), only one of a hundred oyster species, is definitely *not* desirable for human food during the “non-R” months. *Ostrea edulis* is unique in that its young are retained by the mother until tiny shells are developed, and the presence of those gritty shells makes the European oyster undesirable in the summer.

road. *Road*, for “a rather narrow street or passage,” came into English rather late, being first recorded in Shakespeare’s *Henry IV, Part I* (1596). It may derive from the Old English word *rode*, for “a journey on horseback,” but its origin is obscure.

roadhog. Surprisingly, this term for a driver who doesn’t keep to a lane, who takes more than a share of the road, was first applied to bicycle riders, not motorists. The term is an Americanism first recorded in 1891, according to the *OED*, but recorded two years later according to *A Dictionary of Americanisms*. At the time there were roughly 10 million bicycles on U.S. roads but no more than *two dozen* cars. See BICYCLE; CAR.

roadkill. *Roadkill* is commonly heard for any animal vehicle-killed on the road, but it is not listed in any of the major dictionaries or even dictionaries of slang. It is hardly a new word anymore, first recorded in 1972, and for 10 years or so it has also meant a person dead or useless: “Smith has been roadkill up at the plate recently.”

road pizza. Roadkill is common but road pizza is one on me. According to journalist Marion McKeone, writing in William Safire’s *On Language* column (July 30, 2006), a New York cop shouted it when a pedestrian tried to cross the street against the light: “Whassamatterwichya? Ya wanna be road pizza, ya (expletive) moron?”

road rage. A relatively recent coinage (1999) for violent behavior while driving a car.

roadrunner. *Geococcyx californianus* was dubbed the roadrunner by American cowboys in the mid-19th century because of its habit of running ahead of horsemen on trails. It is also called the ground cuckoo, lizard bird, paisano, cock of the desert, snake killer, and snake-eater, among other names. Mexicans used to capture young roadrunners and teach them to kill rats and mice.

road to Damascus. See DAMASK ROSE.

roam. No one has proved it, but several etymologists believe that *roam* derives from the city Rome, referring to the fact that English pilgrims took a roundabout course to the Eternal City. No better theory has been offered for the word’s derivation.

Robert E. Lee. Though it is rarely given in brief accounts of his life, the *E.* in the great Southern Civil War general’s name stands for Edward. He is widely known as Robert E. Lee, but actually he was most often called R. E. Lee during the war, and sometimes the Gray Fox, Marse Robert, Uncle Robert, the King

of Spades (for always urging his men to dig in deeper, deeper), the Great Entrencher, (the Southern “chivalry” were called the “shovelry”), and even Granny Lee (he was 57 and constantly fretted about his troops), but rarely Robert E. Lee or Robert Edward Lee, and never Bobby Lee to his face if one didn’t want to provoke his famous temper. The more stately Robert E. Lee is the name found today in all the histories of the Brothers’ War and on a myriad of statues throughout the South. See ULYSSES S. GRANT.

Robert’s Rules. *Robert’s Rules of Order*, the last word in parliamentary procedure, was originally published as the *Pocket Manual of Rules of Order for Deliberative Assemblies*—a cumbersome title for a little book. Written in 1876, the manual has had surprisingly few revisions. Its author, Brig. Gen. Henry Martyn Robert (1837–1923), was an American military engineer responsible for the defenses of Washington, Philadelphia, and the New England coast.

robin; robin redbreast. There are no true American robins; the bird we call a robin (*Turdus migratorius*) is actually a thrush. Our “robin” takes its name from *robin redbreast*, the British name for another bird species altogether. According to tradition, a robin pulled a thorn from Christ’s crown on the way to Calvary, and the blood spurting from the wound dyed the robin’s breast red forever.

Robin Hood. Robin Hood, chivalrous defender of the poor and oppressed, may have been based on the earl of Huntington, Robert Fitz-Ooth, an outlawed 12th-century English nobleman (b. ca. 1160) who harassed England’s Norman invaders. According to this popular theory, *Fitz* taken away from *Fitz-Ooth* leaves us with *ooth*, the *th* in this changing to *d* and yielding *Robert Ood*—not too far removed from *Robin Hood*. Both the bow and arrow of Robin Hood and the site of his grave are at Kirkless Hall in Yorkshire, where Robert Fitz-Ooth, legend says, was bled to death by a treacherous nun in 1247. But there are abundant theories and places claiming Robin Hood as their own. The legendary outlaw is likely a composite of numerous stories about many early English heroes.

Robin Hood’s barn. Places and plants named for Robin Hood abound all over Britain. To *go all around Robin Hood’s barn* means to wander in a roundabout way, to arrive at the right conclusion in this manner. Robin Hood, of course, had no barn, living in Sherwood Forest, and trying to get around a barn that wasn’t there was an apt description for early travelers lost in the woods.

Robinson Crusoe. Daniel Defoe’s novel was based on the true adventures of Alexander Selkirk (1676–1721), a seaman who in 1704 asked to be put ashore on the tiny island of Más a Tierra off South America because he objected to conditions aboard ship. Selkirk spent more than four years alone on the island before being rescued and returning to England, where he became a celebrity. Defoe, a journalist, certainly heard of Selkirk’s story and possibly interviewed him. In any case, he wrote the immensely successful *The Life and Strange Adventures of Robinson Crusoe* in 1719, embellishing Selkirk’s account and presenting it as a true story. In truth it was the first book to re-

veal Defoe's genius for vivid fiction and it was written when the author was almost 60. Selkirk never did go back to the Pacific island, as Defoe had Crusoe do in two sequels, which appeared the same year. His experiences had made him quite eccentric, however, and for a time he lived in a cave near his home in Largo, where it is said he taught alley cats how to do strange dances. A Robinson Crusoe is today anyone who lives alone like a hermit for a long time. *See* DOVER'S POWDER.

robot. In Karel Capek's play *R.U.R.*, first produced in 1921, mechanical men manufactured by the Rossum Universal Robot Corporation revolt and threaten to take over the world. This play marked the first time mechanical men were called robots, a word which has since been extended to include people devoid of human feelings who act like mechanical men and any mechanism guided by automatic controls. Capek coined *robot* from the Czech word *robata*, "work," meaning "a slave." The world is saved in the play when the robots miraculously become human. The U.S. Census Bureau reported that 5,535 robots were made by American industry in 1984, after its first survey of such machines. The Robotics Industries Association estimates that tens of thousands of robots are now in use in the U.S. The Census Bureau defines a robot as "a reprogrammable multifunctional manipulator designed to move material, parts, tools, or specialized devices through variable programmed motions for the performance of a variety of tasks." We've all done work like that.

rob Peter to pay Paul. The expression *rob Peter to pay Paul* goes back at least to John Wycliffe's *Select English Works*, written in about 1380. Equally old in French, the saying may derive from a 12th-century Latin expression referring to the Apostles: "As it were that one would crucify Paul in order to redeem Peter." The words usually mean to take money for one thing and use it for another, especially in paying off debts.

The Rock. *See* ALCATRAZ.

Rockefeller. *See* RICH AS ROCKEFELLER.

rocking chair. All that is certain about the rocking chair is that the name for it is first recorded in print in about 1760. It may have been invented at that time, perhaps based upon a rocking cradle, but some native genius may have come up with the idea much earlier. Several historians think that Benjamin Franklin may have been that inventor.

rock 'n' roll. The best guess is that *rock 'n' roll* "reflects a sexual metaphor," as one writer puts it, quoting the lyrics "My baby rocks me with one steady roll." *Rock and roll* music, an outgrowth of black culture in America, of course dates back much earlier than the first recorded use of the term in the early 1950s, deriving from black "rhythm and blues." The first major film to use rock and roll music was *Blackboard Jungle* (1955). Director Richard Brooks bought the rights to use the song "Rock Around the Clock" in the film for \$4,000. He could have bought the song outright for another \$1,000, but the studio refused to pay. "Rock Around the Clock" went on to sell 1.5 million records that year, becoming one of the biggest hits of all time.

Rock of Gibraltar. *See* GIBRALTAR.

Rocky Mountains. North America's chief mountain system, ranging from central New Mexico to northern Alaska with its highest peak being Mount McKinley (Alaska) at 20,300 feet. Also called the Rockies. The Rocky Mountain states are those states in the Rocky Mountain region, traditionally Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming. The Rocky Mountain goat is a long-haired, short-horned, white antelope-like animal (*Oreamnos montanus*) of mountainous regions, especially the Rocky Mountains, while the Rocky Mountain canary is a humorous term for a burro coined by early prospectors in the American West. Rocky Mountain spotted fever is an infectious disease transmitted by ticks that was first reported in the Rocky Mountain area.

rocky road. The variety of ice cream, consisting of chunks of chocolate ice cream, marshmallows, and almonds, was originally the name of a candy bar in the Great Depression years. Both the candy and the ice cream that took its name were meant to symbolize the rocky road people had before them in hard times, making the hard times easier by joking about them.

rode hard and put up wet. Someone who says he's been "rode hard and put up wet" feels he has been treated badly, abused. The analogy in this Americanism is to a horse that is sweaty from having been worked hard and is not properly cared for.

rodeo. A rodeo, from the Spanish *rodear* (to surround), was originally a roundup of cattle held once a year on western ranches. Cowboys often challenged each other at these roundups to see who could throw a cow fastest, break a horse, etc., and *rodeo* came to mean a public contest or tournament of cowboy skills, the word first recorded in this sense in 1889.

rodomontade. The braggart Moorish king Rodomonte in the Italian epic *Orlando Furioso* (1505–15) gave his name to this word for empty vainglorious boasting, which is sometimes incorrectly spelled *rhodomontade*. Thus Rodomonte's actual bravery has been forgotten in the language.

roentgen ray. The first Nobel Prize in physics was awarded to German scientist Wilhelm Konrad von Roentgen (Röntgen) in 1901 for his discovery of the X ray six years earlier. Roentgen called his largely accidental discovery the *X ray* because he was at first unable to fathom the nature of this shortwave ray; it was an unknown quantity to him and he borrowed the symbol from algebra for it. The physicist, a professor at Munich the last 20 or so years of his life, did much valuable work in thermology, mechanics, and electricity, most of it overshadowed by his great discovery. He died in 1923, aged 78. X rays are sometimes called roentgen rays in his honor today, and the fluoroscope the roentgenoscope. To roentgenize is to x-ray someone or something, which is done by roentgenologists, who take roentgenograms, or photographs made with X rays. But the use of Roentgen's name does not end here by any means. A roentgen is a measurement unit of radiation, and a roentgenometer is an instrument used for measuring X-ray intensity.

roger. This term, meaning “that’s understood and agreed upon,” was first recorded in about 1937 in the RAF, doing yeoman service in World War II.

Roget’s. Refers to English lexicographer Dr. Peter Mark Roget (1779–1879) and the renowned *Rogets Thesaurus of English Words and Phrases* that he published in 1852. Roget, a physician and scholar who lived to be 90, compiled updated editions of his book, as did his son and his grandson over the years. It was not until 1953 that *Roget’s* passed out of family hands, but this book of synonyms has never been out of print. *Thesaurus* is Greek for “treasure” or “storehouse.”

R.O.K. During the Korean conflict soldiers of the Republic of Korea (South Korea) were called R.O.K.s, this acronym pronounced *rocks*. The Korean National Police were called K.N.P.s, the letters pronounced individually. U.N. forces in Korea all used these U.S.-invented terms. See VIETCONG.

Roland for an Oliver. Roland and Oliver were two evenly matched knights of Charlemagne who once engaged in combat that lasted five full days on an island in the Rhine. Every time Roland got in a resounding whack, Oliver replied in kind and the contest to determine who was the better warrior ended in a draw. After the fight, Roland, Charlemagne’s nephew, and the intrepid Oliver became devoted friends. Both brave knights were killed by the Arabs in A.D. 778, in an ambush at Roncevaux in the Pyrenees, though one legend tells us that Oliver accidentally killed Roland after himself receiving a fatal wound from the enemy. The long epic poem *Chanson de Roland* of the 11th century tells how Roland and Charlemagne’s paladins died and how the king of the Franks avenged them. Many great deeds are credited to the two knights, so many that *a Roland for an Oliver* can mean an exchange of tall tales as well as blow for blow or tit for tat.

role. An actor’s role in a play derives from the text an actor reads to learn his part. The Old French *rolle* meant a roll of manuscript. Actors learned their parts from plays written on such *rolles* and eventually their parts themselves became known as roles.

rolled rs. An actress with great affectations annoyed composer-playwright Jerome Kern throughout rehearsals with her rolled “rs.” “Tell me, Mr. Kern,” she finally said, “you want me to c-rr-ross the stage, but I’m behind a table. How shall I get acr-rr-ross?”

“Why, my dear,” Kern replied, “just r-r-oll over on your rs.”

roller derby; roller disco. Famed author Damon Runyon invented the roller derby and named it in 1937 during the Great Depression. In brief, it is a rough body contact sport in which two roller-skating teams compete on an oval track in a race to complete as many laps as possible in a given time. A *roller disco*, invented in 1978, is a discotheque at which the dancers wear roller skates.

Rolling Stones; a rolling stone gathers no moss. In 1961 the British rock group called the Rolling Stones named themselves

after the Muddy Waters classic blues song “Rollin’ Stone.” Muddy Waters, in turn, had been inspired by the anonymous ancient proverb, “a rolling stone gathers no moss,” which dates back to at least the 14th century and means that someone always moving won’t ever accumulate a fortune (the moss on the rock).

Rolls-Royce. Regarded by many for many years as the best car in the world, the Rolls-Royce is named for Charles Stewart Rolls and Henry Royce, who first built it in 1904. Royce was the mechanical genius, a manufacturer of dynamos and electric cranes before Rolls, an auto dealer, heard of a new model auto Royce had built and sought him out.

roll with the punches. An expression from the boxing arena that probably dates to the 19th century, *roll with the punches* is based on the way a good, experienced boxer takes a punch. It means, of course, to take the blows of fate as they come, bending with them but springing back and moving on.

romaine lettuce. The French believed that this tall, upright lettuce with ribbed leaves was first cultivated by the Romans and named it *latique* (lettuce) *romaine*, soon shortening this to “romaine” alone. But the lettuce is also called Cos, after the Greek island where some botanists say the variety was first grown centuries ago.

roman à clef; livre à clef. *Roman à clef* translates from the French as “novel with a key” and is also known as a *livre à clef*, “book with a key,” and in German as a *Schlüssel-roman*. In such novels thinly disguised portraits of actual well-known persons are presented under fictitious names. When the *roman à clef* originated in 17th-century France “keys” to the real persons involved were often published after the books appeared. Notable instances of “key novels” in England include Thomas Love Peacock’s *Nightmare Abbey* (1818), which caricatured Byron, Shelley, and Coleridge; Benjamin Disraeli’s *Venetia* (1837); Aldous Huxley’s *Point Counter Point* (1928), featuring a disguised D. H. Lawrence, among others; and Somerset Maugham’s *Cakes and Ale*, among others of his novels, in which the characters were often hardly disguised at all.

romance. *Romance* derives from the Latin *Romanice scribere*, “to write in the Roman vernacular,” as distinguished from literary Latin. The Romance languages, French, Italian, Spanish, etc., are derived from this vernacular Latin. The old French adverb *romany*, for *Romanice*, became a noun meaning a tale told in verse about some hero of chivalry, this becoming *romance* in English.

ROM and RAM. These are acronyms for forms of computer memory. ROM stands for read-only memory, containing instructions for starting the computer that are permanent and cannot be modified. RAM means random-access memory, containing instructions for the particular task the operator wants the computer to perform; these instructions are temporary, entered from the keyboard or disc and lost when the power is turned off. One wonders if these will become general synonyms for “permanent” and “temporary.”

Roman fever. See MALARIA.

Roman holiday. A holiday that is obtained at the expense of others, just as the Romans obtained their enjoyment at the expense of the doomed gladiators who fought in the arena. Byron invented the expression in “Childe Harold” when writing of a captured Gaul forced to fight in the arena and “Butcher’d to make a Roman holiday.” A Roman holiday is thus also BREAD AND CIRCUSES, a public spectacle marked by onlookers pleasuring in the brutal, barbaric display of anything, from an airplane crash to a violent hockey game.

roman noir; film noir; film. *Roman noir*, from the French *roman*, “novel,” and *noir*, “black,” literally means a black novel, generally a whodunit that closely resembles a gothic novel in its atmosphere of doom and often gloom. Other *romans* include *roman policie*s, a detective story; ROMAN À CLEF; *roman-feuilleton*, a novel published in installments; and *roman-fleuve*, a series of novels with the same character. *Film noir* literally means a black movie (dark subject matter and atmosphere), its name suggested by *roman noir*. The word *film* itself is not recorded until 1905. See MOVIE.

Roman nose. A high-bridged nose, often thought of as regal because of its presence on surviving busts of Roman emperors. The old vaudeville joke “He has a Roman nose—it’s roamin’ all over his face” has two eponymous words in it, for *roamin’* also derives from *Roman*.

Roman numerals. Still used for limited purposes, such as dates on buildings, etc. Roman numerals for one to ten are I, II, III, IV, V, VI, VII, VIII, IX, and X.

romanticists and classicists. When in 1831 the French inspector general of theaters censored passages in Victor Hugo’s *Hernani* that were disrespectful of the monarchy, a literary war ensued in which romanticists supporting Hugo took sides against the classicists. There were pitched battles for weeks inside and out of the theater. Professional claquees were hired by the classicists, and Théophile Gautier led romanticist volunteers, urging them to take their stand “upon the rugged mount of romanticism, and to vainly defend its passes against the assault of the classics.” It was a costly victory for the romanticists; many were injured and at least one young man died in a duel.

Romany rye. A Romany rye is to Gypsies a friendly gentleman who speaks their language. *Romany* (which rhymes with *homin*y) derives from the Gypsy *rom*, man or husband.

Romeo and Juliet. Not much is known about Romeo and Juliet, but they were real lovers who lived in Verona, Italy, and died for each other in the year 1303. The Capulets and Montagues were among the inhabitants of the town at that time, and as in Shakespeare’s play, Romeo and Juliet were victims of their parents’ senseless rivalry. Their story was told in many versions before the Bard of Avon wrote of his “star-crossed lovers.” The tale can be traced to Masuccio’s *Novelle* (1476). Shakespeare found the tale in Arthur Brooke’s poem “The Tragical Historie of Romeus and Juliet,” containing “a rare example of love constancie . . .” (1562). *Romeo* alone means a male “lover”

today and has a derisive ring, but *Romeo and Juliet* still means a pair of youthful, often helpless lovers.

Rome wasn’t built in a day. This phrase is recorded as far back as the 16th century, when it appeared in John Heywood’s *The Proverbes of John Heywood* (1546), the first collection of English sayings.

’roo. See KANGA.

rook. Farmers in England called this member of the crow tribe (*Corvus frugilegus*) a *hrooc* as early as the eighth century, probably in imitation of its raucous cry. The bird has long been regarded as a pest and was distinguished from the crow, as this old seed-planting rhyme shows: “One for the rook / One for the crow / One for the weather / And one to grow.” The chess piece called the *rook* has an entirely different origin, deriving from a Persian word whose original sense is unknown. The thieving bird, however, does give us the word *to rook*, or cheat, which has been used since Shakespeare’s time, just as GULL has been.

rookie. There is much dispute about *rookie*’s origin. Some authorities trace the word to a shortening of *recruit*, a term first used in baseball at the end of the 19th century, and others suggest the rook from the game of chess as the source. Most etymologists, however, agree with Eric Partridge who claims *rookie* as British army slang for a raw recruit as well as a pun on *rooky*, British slang for a rascally person. It is possible, if not probable, that *rookie* had an independent coinage from *recruit* in American baseball and it is certain that the word achieved its popularity in the United States from its common use in baseball for “a player playing his first season in the major leagues.” Now *rookie* can refer to a first-year player in any sport, as well as an army recruit, or any neophyte.

rooster story. Both *cock* and *bull* are taboo words in the Ozark mountains, as is the word *tale* (a homophone for *tail*). Thus, a rare triple euphemism has arisen there for *cock and bull tale*, which many Ozarkians call a “rooster story.”

root canal. A dental treatment in which diseased tissue is removed from a tooth and the resulting cavity is filled with inert material. The expression is so widely disliked that it inspires remarks like “Yeah, he’s about as pleasant as root canal” (a nasty person).

root, hog, or die. To get down to work and shift for oneself; originally a southern expression, first recorded by Davy Crockett and based on the hog’s unfailing ability to provide for itself by rooting the ground with its snout, which yields it everything from trash to truffles.

rooty-toot-toot. Damon Runyon used this slang word for a machine gun, but it may derive from lyrics (“rooty-toot-toot that girl could shoot”) from the old boisterous “Frankie and Johnny” love song.

rope-a-dope. See ON THE ROPES.

rope lines. The site of a political campaign, so called from the ropes enclosing the area. In his 2004 victory speech President George W. Bush spoke several times of those loyal to him on the rope lines.

rope of sand. Expressing futility, ties that neither bind nor hold, *rope of sand* is an old English expression that is first recorded in 1624, but may well be proverbial. One early use: “. . . this rope of sand which Tradition is.”

Roquefort. “The King of the blue cheeses,” pungent Roquefort is made in France’s Roquefort district. Made from sheep’s milk, it is marbled with blue-green mold.

roquelaure. French marshal Antoine-Gaston, duc de Roquelaure (1656–1738), often wore and had named after him this hooded cloak or mantle reaching to the knees that was widely popular with men during the 18th and early 19th centuries.

Rorschach test. Popularly known as the ink-blot test, this widely used psychological diagnostic technique was invented in 1921 by Swiss psychiatrist Hermann Rorschach (1884–1922). The Rorschach test consists of a series of 10 standardized ink-blot designs that the subject observes, relating what he sees by free association to a trained tester. The way the ambiguous, colored blots are perceived is thought to reflect the interpreter’s personality and emotional conflicts. Though it has been used since 1921, the validity of the Rorschach is not universally accepted.

rosary. The string of beads used by Roman Catholics to count repetitions of certain prayers is said to be so named because the first ones were made of rosewood, a hard, reddish, black-streaked wood that often has a roselike odor and comes from several tropical trees, including *Dalbergia nigra* and *Pterocarpus erinaceus*, the African rosewood, or molompi. Another theory is that it takes its name from the “Mystical Rose,” one of the titles of the Virgin Mary.

Roscian. Roman actor Quintus Gallus Roscius (ca. 126–62 B. C.) was born a slave but became the greatest performer of his time. Excelling in comedy roles, he was so esteemed that the golden-tongued orator Cicero took lessons from him and became his friend, the two often competing to see who could better express any idea or emotion. Roscius, in fact, wrote a treatise comparing acting and oratory. In an age when actors were held in contempt, his grace and eloquence were praised in poems, Sulla awarded him the gold ring signifying equestrian rank, and he amassed a great fortune, retiring from the stage when still a young man. Over 2,000 years have passed and his name is still a synonym for eminence or perfection in acting. *Roscian* means pertaining to or involving actors, and when we say someone gave a *Roscian performance*, we mean one of outstanding skill. See *THESPIAN*.

roscoe. A pistol or revolver. This old American slang word was first recorded at the end of the 19th century, but its origin is unknown. Maybe a criminal named Roscoe is involved, but I haven’t found him. The male name Roscoe comes from the Germanic words meaning “swift horse.” One Roscoe with

something named after him is William Roscoe (1753–1831), a British philanthropist and historian who has the American bird *Roscoe’s Yellowthroat* honoring his patronym.

rose. The rose may take its name from the Celtic word *rhod*, “red,” in reference to its typical color. There are 100 to 4,000 species of roses, depending on which botanist you believe, not to mention the 8,000 or more rose cultivars. That great teller of tall tales Sir John Mandeville, who wrote of anthills of gold dust and fountains of youth, told the best story about the origin of the rose in his 14th-century *Voyage and Travels*. It seems that a beautiful Jewish maiden of Bethlehem rejected the brutish advances of a drunken lout named Hanauel. In revenge Hanauel falsely denounced her as a witch, and she was condemned to burn at the stake. But God answered her prayers and extinguished the flames; the stake itself budded and the fair maiden stood there unharmed under a rose tree of red and white blossoms, “the first on earth since Paradise was lost.” Legends abound about the rose. One says that the white rose was turned red when Eve kissed one in the Garden of Eden; another tells of Cupid’s blood shed upon it. Still another story holds that the rose bursts into bloom when a nightingale sings. Edward Phillips in *Sylva Florifera* tells this tale of the birth of the rose:

Flora [the Roman goddess of flowers] having found the corpse of a favorite nymph, whose beauty of person was only surpassed by the purity of her heart . . . resolved to raise a plant from her precious remains . . . for which purpose she begged the assistance of Venus and the Graces, as well as of all the deities that preside over gardens, to assist in the transformation of the nymph into a flower, that was to be by them proclaimed queen of all the vegetable beauties. The ceremony was attended by the Zephyrs, who cleared the atmosphere in order that Apollo might bless the new-created progeny by his beams. Bacchus supplied rivers of nectar to nourish it; and Vertumnus [the Roman god of orchards] poured his choicest perfumes over the plant. When the metamorphosis was complete, Pomona [the Roman goddess of fruit] strewed her fruit over the young branches, which were then crowned by Flora with a diadem, that had been purposely prepared by the celestials, to distinguish this queen of flowers.

Since the beginning of time, it seems, roses have been the flowers of love, the true flowers of Venus. Cleopatra carpeted a room with red rose petals so that their scent would rise above Mark Antony as he walked toward her. Dionysius, the tyrant of Syracuse, filled his house with roses for the frequent compulsory orgies he held with the young women of his city; Nero used millions of the blooms to decorate a hall for a single banquet, and rose water–saturated pigeons fluttered overhead to sprinkle the guests with scent. In fact, roses were so popular in ancient times that they actually became a symbol of the degeneracy of later Roman emperors, and it took the Church, to which the rose became a symbol of purity, to rescue it from oblivion during the Dark Ages. According to one ancient story, a number of noble Romans were suffocated under tons of rose petals dropped on them during one of Emperor Heliogabalus’s orgies. The Romans so loved the flower that they imported bargeloads of rose petals and hips from Egypt, where the growing season was longer, and they believed in the flower’s powers so fervently that they used rose water in their fountains. Long before this the Greek physi-

cian Galen had used a full pound of rose oil in a facial cosmetic he invented, and “attar of roses” remains a much-valued cosmetic ingredient to this day. For centuries the rose has been employed to invoke love in some rather strange ways. Persian women thought that rose water was a philter that would bring back straying lovers; one old Chinese love recipe drunk during the fourth-month rose festivals consisted of prunes, sugar, olives, and rose petals; and colonial ladies made “rose wine” to stimulate their lovers by marinating rose petals in brandy. Finally we have Napoleon’s empress Josephine, who, when her teeth turned bad, always carried a rose in her hand with which to cover her mouth when she laughed. *See also* SUB ROSA.

Rosebud Senator. Among the most unusual nicknames of U.S. senators, the Rosebud Senator was the cognomen of Senator Henry Anthony (1815–84). According to the *Congressional Record* of January 21, 1885, he was so called because of “the healthful glow that mantled his cheek, or as a tribute to the fact that he constantly wore a rose bud or other flower.”

rose-colored glasses. Some unfortunate people never take their rose-colored glasses off, but everybody wears these spectacles occasionally. This attitude of cheerful optimism, of seeing everything in an attractive, pleasant light, has always been with us, while the expression itself goes back to at least 1861, when it is first recorded in *Tom Brown at Oxford*: “Oxford was a sort of Utopia to the Captain . . . He continued to behold towers, and quadrangles, and chapels, through rose-colored spectacles.”

a rose is a rose is a rose. What Gertrude Stein really wrote in her poem “Sacred Emily” was “Rose is a rose is a rose, is a rose,” but her words have been misquoted as the above so often that she might as well have written “a rose is a rose is a rose.” In her prose Gertrude Stein had no use for nouns: “Things once they are named the name does not go on doing anything to them and so why write in nouns.” But in poetry, she felt: “You can love a name and if you love a name then saying that name any number of times only makes you love it more.” And poetry is “really loving the name of anything.”

rosemary. The homely herb rosemary was originally called by the Latin name *ros marinus*, “sea dew,” because it was often found on the sea cliffs in southern France. But over the years *ros* sounded more like “rose” to English ears, and *marinus* suggested the common name “Mary.” The herb was thus dedicated to the Virgin Mary, and the word *rosemary* was recorded as early as 1440. This flowering shrub has contributed its dried leaves and stems to many recipes, and oils from its leaves and flowers figure in numerous potions and perfumes. Bouquets of rosemary, “emblematical of manly virtues,” were once presented to bridegrooms on their wedding mornings, and bridal beds are still bedecked with the flowers in certain European countries to ensure conjugal bliss. Rosemary symbolizes remembrance, and Shakespeare’s Ophelia presented a bunch to Hamlet, perhaps to remind him of their meeting on Saint Valentine’s Day when the melancholy Dane “Let in the maid, that out a maid / Never departed more.”

rose of Jericho. Native to the deserts of Arabia, the rose of Jericho (*Anastatica hierochuntica*) or “resurrection plant” is,

when dry, a tight ball the size of an orange that is driven across the sands by the winds. It can be kept like this for many years but will often continue to grow, unfolding and revealing small leaves and minute white flowers when exposed to water. It is also called “the rose of the virgin.”

rose of Sharon. There are at least 25 species of flowers and shrubs named after the rose, usually because of some physical resemblance. The rose of Sharon is one of them, taking its last name not from any woman named Sharon, but from the Hebrew place name Sharon, for the fertile level tract along the coast of Palestine, where the flower mentioned in the Bible was said to grow. The identity of the true rose of Sharon is uncertain and today the name is applied to several plants in America, generally to the showy late shrub *Hibiscus syriacus* (also called *althea*).

roses have thorns. The words are from Shakespeare’s *Sonnet* 32:

Roses have thorns, and silver fountains mud,
Clouds and eclipses stain both moon and sun,
And loathsome canker lives in sweetest bud.
All men make faults.

Another great poet died from a rose’s thorn. It is said that the German poet Rainer Maria Rilke (1875–1926) died of leukemia which developed from the prick of a rose thorn.

No rose without a thorn is an old English proverb. *See* THE LAST ROSE OF SUMMER.

Rotokas. Rotokas is a language spoken in the central part of Bougainville Island in the South Pacific. It has the distinction of having the shortest alphabet of any living language, composed of just 11 letters (*a, b, e, g, i, k, o, p, r, t, and u*), with six consonants (also the least of any language) and five vowels. The language with the most letters is Cambodian, with 72.

Rotten Row. The London street, originally a royal route, may have originally been called La Route du Roi, the Royal Road, with the French expression corrupted into *Rotten Row*. But its name could also derive from *rotteran*, “to muster,” for soldiers once mustered there, or from the Anglo-Saxon *rot*, “pleasant, cheerful,” or even from *rotten*, referring to the soft material the road was made of. Another of many possibilities is the Norman *Rattan Row*, or “roundabout way,” the route over which corpses were carried in olden times to avoid main streets and traffic.

Rottweiler. A large, stocky, powerful dog with a black coat that was originally bred in the city of Rottweil, Germany, about 1910. *See* GERMAN MEASLES; DOBERMAN.

roué. *Roué* was first used to describe the debauched rakes in the duc d’Orléan’s crowd toward the beginning of the 18th century. These roués, who weren’t really old at all (even though the old cliché makes all roués old), took their name from the French word *rouer*, meaning to torture on the wheel. The reason: the duc and his cronies were so dissolute that many people thought they deserved to be broken on the torture wheel.

rough and ready. This was not only the nickname of General (later President) Zachary Taylor, but the name of a town in California. Applied to a person, *rough and ready* means someone who takes things as they come, who works in a rough but prompt and effective way; referring to things, it means something unelaborate, just good enough to serve the purpose. The term arose at the beginning of the 19th century, some time before the duke of Wellington could have invented it at Waterloo by instructing a Colonel Rough there, “Rough and ready, colonel!” as the old story goes.

rough it out. See TOUGH IT OUT.

Rough Riders. Teddy Roosevelt named his Spanish-American War cavalry unit the Rough Riders, after the American cowboy broncobusters called roughriders, many of whom were part of his regiment.

Roundheads. Cromwell’s soldiers and all Puritans of England’s Civil War period were called Roundheads and *crops* because, in contrast to the Royalists, who had long flowing hair, their hair was “trimmed close to a bowl-dish, placed as a guide on their heads.”

roundheels. *Roundheels* has been slang for a prostitute or a promiscuous woman since at least the early 1940s. The expression derives from the 1920s boxing term *roundheels* for an inferior boxer who is more often on his back than on his feet.

round robin. The round robin was originally a petition, its signatures arranged in a circular form to disguise the order of signing. Most probably it takes its name from the *ruban rond*, “round ribbon,” in 17th-century France, where government officials devised a method of signing their petitions of grievances on ribbons that were attached to the documents in a circular form. In that way no signer could be accused of signing the document first and risk having his head chopped off for instigating trouble. *Ruban rond* later became *round robin* in English and the custom continued in the British navy, where petitions of grievances were signed as if the signatures were spokes of a wheel radiating from its hub. Today *round robin* usually means a sports tournament where all of the contestants play each other at least once and losing a match doesn’t result in immediate elimination.

rove. In Medieval English the archery term *roven* meant “to shoot randomly.” Arrows shot randomly at distant targets, floating through the air, suggested comparison with a person strolling off to distant places, somewhat lazily, randomly, with no apparent purpose, and gave us our expression *to rove*.

row; oar. The word *row* meaning to propel a boat of any size by oars has been used since the 14th century. It comes ultimately from Old Norse *roa*, meaning the same. The word *oar* also can be traced to Viking days, deriving from Old Norse *ar*.

rowanberry. The European mountain ash, as the rowanberry (*Sorbus aucuparia edulis*) is also called, has an interesting history. It takes the name *rowanberry* from the Danish *rune*,

“magic,” being so called because it was supposed to have magical powers to ward off evil.

Rowley poems. See ITS.

royalties. *Royalties*, in the sense of an agreed portion of the income of a work paid to an author, or a portion of the proceeds paid to the owner of a right (mineral, oil, etc.), is of course connected with the granting of royal rights. *Royalty* in this financial sense seems to have first been used to describe a duty of one shilling a ton on all coal exported from the Tyne for use in England, which England’s Charles II granted in 1676 to his illegitimate son the duke of Richmond as part of a perpetual pension. In the sense of a payment to authors, *royalty* is first recorded in 1880 in *Scribner’s Magazine*. But book royalties are of such tenuous value today that one author has suggested a name change to *peasantries*.

royal we. Two centuries ago, the critic Edward Copelstan wrote: “There is a mysterious authority in the plural *we* which no single name, whatever its reputation, can acquire.” *Royal we* has been used by kings and queens since at least the reign of Richard I (1189–99) in England, and one old story claims that the practice was initiated by two Roman rulers who reigned in different capitals and issued identical joint decrees. Using *we* reflected the fact that sovereigns represented their many subjects, not just themselves, in addition to making the monarchs seem more authoritative. While the term *royal we* is fast dying among royalty today, it is often used by writers and editors because it seems both more authoritative and less egotistical than *I*.

Roystonea. It isn’t often that someone’s entire name, first and last, is taken for a word, but that is just what happened with General Roy Stone, a 19th-century American engineer in Puerto Rico who had the *Roystonea*, or royal palm, named after him. The genus *Roystonea* is well known, including six species of palms. Often used as an ornamental to line avenues in tropical America, its beautiful crest dominates every landscape where it grows, and every portion from its roots to its crown serves some useful purpose. Some of these feather palm species grow to over 100 feet high and the *Roystonea regia* species is widely planted in southern Florida. Florida’s Palm Beach, the wealthy resort where over 25,000 millionaires are said to be resident in season, became a palm-fringed paradise when a cargo of coconuts washed ashore from a shipwreck in 1879, and early residents planted the nuts along the once desolate beach.

rubber; mackintosh. Rubber was not even named until 1770, when chemist Joseph Priestley accidentally discovered that the hardened substance could “rub” out pencil marks, and progress in waterproofing did not come until half a century after that. Young James Syme, later to become a famous surgeon, first invented the process for making waterproof fabrics while a student at Edinburgh University in 1823, but the fabric itself was patented a few months later by Scottish chemist Charles Macintosh, who exploited the idea and was really the first person to produce a practical waterproof cloth. Macintosh (1766–1843), a Fellow of the Royal Society, had al-

ready invented an effective bleaching powder and improved a number of dyes. Finding that rubber could be dissolved by naphtha, he spread the resulting solution on cotton cloth, cementing another layer of cloth to it. Raincoats made from such double-thick fabrics with a middle layer of rubber won popularity overnight, as did numerous waterproof items that Macintosh manufactured at his plant in Glasgow. But the man who revolutionized outdoor living somehow became associated with his raincoat alone, and even this was spelled wrong from the very beginning. Properly, *mackintosh* or the *mac*, as it is sometimes called, should be *macintosh*, although the incorrect spelling prevails.

rubber chicken. An unappetizing dish invariably on the menu at dinners, banquets, and other large gatherings in the U.S. The British equivalent is *function fish*.

rubber match. A *rubber match* or *rubber game* or simply *rubber* in any sport means a deciding contest between two tied opponents. The term dates back to the late 16th century but no one seems certain of its etymology or in what sport it originated. The expression was not used in card games until the mid 18th century and the earliest recorded use of it appears to be a 1599 reference, cited in the *Oxford English Dictionary*, to the game of bowls. The word *rubber* in the term seems to derive from a word of unknown origin, not the resilient substance called “rubber” or the verb “to rub.”

rubberneck. Who invented *rubberneck* for a gawking tourist is unknown, but the Americanism dates back to the 1890s in New York City. In the words of H. L. Mencken (*The American Language*, 1948) *rubberneck* “is almost a complete treatise on American psychology . . . one of the best words ever coined . . . It may be homely, but it is nevertheless superb, and whoever invented it, if he could be discovered, would be worthy of a Harvard LL.D., but also the thanks of both Rotary and Congress, half a bushel of medals, and 30 days as the husband of Miss America.”

a rubber-nosed woodpecker in a petrified forest. Someone completely incompetent for a job.

rubber stamp. People have been making rubber stamps since the 19th century, but the first recorded use of the term figuratively to describe someone who approves things automatically and uncritically, a YES-MAN, dates back to a 1919 description of former president William Howard Taft by author William R. Thayer: “He may have heard the exhortation, ‘Be your own President; don’t be anybody’s man or rubber stamp.’” The way Thayer uses the phrase suggests that it was current at least 30 or so years before.

rube. See CLODHOPPER.

Rube Goldberg contraption. Cartoonist Rube Goldberg, as the preposterously “logical” machinery in his comic strips showed, never wanted to disappoint anyone. His complicated diagrammed panels never did, either; the machinery in them performed childishly simple tasks that could have been done far easier by hand. A parody of this mechanized world, these

wild and wonderful contraptions made his name synonymous with any complicated, wildly impractical invention or scheme and won him lasting fame as well as exhibitions in the most conservative museums. Goldberg died in 1970, aged 87, and some of his obituaries failed to mention the fact that he had won two Pulitzer Prizes for his political cartoons. See HEATH ROBINSON CONTRAPTION.

Rubik’s Cube. According to a *New York Times* article (November 16, 2003) by author David Hayes, “In 1974, a Hungarian designer named Ernő Rubik (b. 1944) created a multicolored, six-sided [plastic] cube as a three-dimensional model to demonstrate geometric principles. Despite its complexity—there is one correct alignment and 43 quintillion potential wrong ones—by 1980 Rubik’s Cube had developed a cult following. An estimated quarter of a billion cubes were sold between 1980 and 1985.”

rub out. To *rub someone out*, “to kill him,” isn’t gangster talk from the Prohibition era, as is so often assumed. The term dates back to the early 19th-century American Far West and has its origins in Plains Indian sign language, which expresses *to kill* with a rubbing motion. The term is first recorded in George Ruxton’s *Life in the Far West* (1848) and it is he who gives the sign language source.

rub the wrong way. An ingenious theory links this expression with the wet-rubbing of unfinished floors in Elizabethan homes. Oak floors that servants mopped against the grain became streaked, such carelessness giving rise to these words for the inept handling of people as well as floors. However, evidence is lacking; the phrase is first recorded in 1862 and must be marked “origin unknown.”

Rudbeckia. Under ADAM’S APPLE we mentioned the Swedish professor who tried to prove that the site of the Garden of Eden was located in the Land of the Midnight Sun. The professor, Olaf Rudbeck (1630–1702), also claimed in his book *Atlantikan* that Sweden had been the locale of Plato’s Atlantis. But he was otherwise a fine scientist, discovering the lymphatic system and making various botanical contributions. Linnaeus so admired the Rudbeck family that he named the North American coneflower after both Professor Rudbeck and his son, the junior Professor Rudbeck being a contemporary of Linnaeus. The *Rudbeckia* genus, some 25 species, includes the popular black-eyed Susan and golden glow. Plants in the genus are herbs, usually having yellow rays, and can be annual or perennial.

rudderless. Since the early 19th century *rudderless*, in reference to the absence of a ship’s rudder, has figuratively meant “without guidance or control.”

Rudolf Vrba. One of the first Jews to escape from Auschwitz and bear witness to the horrors of the death camp. Rudolf Vrba (1924–2006) changed his name from Walter Rosenberg, choosing the nom de guerre on joining the Resistance. It has been said that Vrba, virtually unpronounceable in English, is generally mispronounced as VERba. Rudolf Vrba’s autobiography was published in 1963.

rugby. In 1823 at a football game at the Rugby School in England, a young player named William Ellis picked up the ball and ran down field with it, an unsportsmanlike maneuver at the time for which Ellis profusely apologized. But his play caught on and began to be imitated by other players, which of course inspired the defense to stop the ball carriers by tackling them, another practice unthinkable under the old rules of the game. This type of football began to be called rugby football or simply rugby and another rule of the new game allowed a player to run with the ball if it was caught on the fly or on the first bounce. Players who preferred the old, no-ball-carrying football formed the London Football Association in 1863 and published their own rules. Their brand of football was called association football, which became assoc football. *Assoc football* was shortened to *soc*, to which an *er* ending was added, giving us the word *soccer* for the game. See FOOTBALL.

rugger. See SOCCER.

rule of thumb. There are two good choices here. Brewmasters of old often tested the temperature of a batch of beer by dipping a thumb in the brew, their long experience telling them how well the beer was brewing. One theory has it that our expression for a rough, guesswork estimate derives from this practice. More likely it stems from the ancient use of the last joint of the thumb as a measuring device for roughly one inch. I can find no proof for the common claim that the term *rule of thumb* relates to wife beating, specifically that it was originally a rule permitting a husband to beat his wife with a stick no wider than his thumb. The *OED*'s first reference to the phrase is from 1692 and refers to an artless fencer. The other nine or so references also have no relation to wife beating or any assault upon anyone. See as well Cecil Adams's discussion of the term at www.straightdope.com.

rule the roost. There's no doubt that this expression is well over four centuries old, but there is controversy about whether it was originally *rule the roost* or *rule the roast*. To *rule the roost* would of course refer to the cock who rules the chicken coop and to *rule the roast* refers to the lord of the manor who presided over the carving and dishing out of roast meat at the table and was thus master of the house. Americans still prefer the former expression and the British use the latter. Since early references are found for both versions, the truth will probably never be known. What complicates matters impossibly is that *roost* was formerly pronounced as we now pronounce *roast*, and thus spelled "roast" erroneously, while *roast* was sometimes pronounced *roost* and spelled that way. In any case, the expression means the same—to rule the house or whatever, usually while making a display of power.

rum. Called *Kill-Devil*, a West Indian name, by early colonists, and the basic liquor that they made (from molasses and sugar), *rum* possibly takes its name from the English *rumbullion*, first recorded in the 1640s, which may have been named for the town of Rambouillet. Another possibility is that it derives from the canting term *rum*, for "good, excellent," which is recorded as early as 1567.

Rumford stove. Before Benjamin Thompson, Count Rumford (1753–1814), invented his "kitchen range" most housewives

prepared meals in open fireplaces. But the Rumford stove was among the least of the count's accomplishments. Rumford led a remarkable life. The Massachusetts-born philanthropist fought for the British during the Revolution, leaving his wife, a wealthy widow 14 years his senior, and a baby daughter in New Hampshire. After serving as British undersecretary of state and being elected to the Royal Society, he entered the Bavarian civil and military service in 1783. Here he effected numerous reforms, including a reorganization of the army and the education of the poor. It is said that in one day he had 2,600 beggars arrested and sent to a Munich workhouse he had planned, where they were taught to support themselves. It was in this workhouse that the Rumford stove was invented, the wood- or coal-burning range proving so efficient that Rumford was commissioned to build similar cast-iron models for many aristocrats of the day.

rummage sale. As early as the 14th century the French word *arrimage*, related to our word "arrange," meant "loading a cargo ship." Sometimes cargo from the *arrimage* was damaged during the voyage and warehouses held special sales of these damaged items, sales that were at first called *arrimage* sales and then *rummage* sales. *Rummage* thus came to mean any damaged goods and finally any goods low in quality, including the used clothing and other items sold at charity rummage sales.

rum, Romanism, and rebellion. This political slogan is usually attributed to the supporters of Herbert Hoover, who used it to defeat Catholic Democratic candidate Al Smith for the presidency in 1928, calling the Democrats the party of rum, Romanism, and rebellion. But the words were first used in 1884 by New York Presbyterian minister Samuel D. Burchard, who spoke, in presidential candidate James Blaine's presence, of the Democrats as "the party whose antecedents are rum, Romanism, and rebellion," this offending the large Irish Catholic vote in New York, causing Blaine to lose the state by a scant 1,000 votes and thus lose the election to Grover Cleveland. Blaine's political reputation didn't help him either. The Democrat's slogan for that election was "James G. Blaine, James G. Blaine,/ Continental liar from the state of Maine."

Rum Row. During Prohibition, Rum Row was a line of ships anchored off New York City outside the three-mile coastal limit, waiting for smaller boats to speed out to buy their contraband liquor and bring the bootleg booze ashore. Fully one-third of all the illegal liquor that came into the country came in via this Rum Row.

rum, sodomy, and the lash. While Winston Churchill was First Lord of the Admiralty (1911–15), he remarked acidly, in answer to a protest about British naval traditions being violated, that the traditions of the navy were "rum, sodomy, and the lash."

run amok (or amuck). In 1516 an Englishman translated an Italian work that said of the Javanese, "There are some of them [under the influence of opium] who . . . go out into the streets and kill as many people as they meet. . . . These are called *Amuco*." Within a century, *to run amok* was common in English for "running viciously mad and frenzied for blood." The word

amok comes ultimately from the Malay *amok*, meaning attacking desperately, or murdering in a state of frenzy, and was originally applied to an animal in a state of rage.

According to a newspaper of the day, running a Mick during the Civil War was to get a needy Irishman drunk, induce him to enlist for two or three hundred dollars, and obtain five times the sum from citizens desirous of procuring a substitute.

run around like a chicken with its head cut off. When chickens are slaughtered by decapitation, they run around for a moment before falling down dead. This unpleasant reference hasn't prevented the term above from being used to describe any person who behaves hectically, who seems to have no control, as in "Don't run around like a chicken with its head cut off." The expression doesn't seem to be recorded anywhere, but it was certainly common 60 years ago—about when I first heard it—and it is probably an Americanism dating back to at least the mid-19th century. In fact, that the term has international use today is demonstrated by advice the Afghanistan Taliban leader Mullah Omar gave to his scattered troops on 11/14/01. "Any person who goes hither and thither is like a slaughtered chicken that falls and dies."

run a taut ship. To be a thoroughly efficient employer or supervisor. The saying dates back to the age of sailing ships, and captains who ran neat, perfectly maintained vessels with no slack in the rigging anywhere. The opposite expression is *to run a slack ship*.

runcible spoon. A forklike utensil with two broad prongs and one sharp curved prong used for serving hors d'oeuvres. The word was coined in 1871 by English author Edward Lear. The spoon seems to have been invented after Lear described it thusly in "The Owl and the Pussycat":

They dined on mince and slices of quince
Which they ate with a runcible spoon.

run down at the heels. The original of this proverb referred only to a pair of shoes in poor condition. But it came to mean someone in bad shape generally. *Well-heeled* means just the opposite.

run for your life. According to one old tale, a fast runner of the duke of Monmouth was captured during the Battle of Sedgemoor in 1685 and told that he could run for his life, that is, his life would be spared if he could outrun a horse. The contest was held, the horse losing the long race, and the runner was freed. This is supposed to be the origin of *run for your life*, though it was probably common long before any such race—if indeed there was one. It is, however, possible for a good runner to beat a horse in a long race like a marathon.

RunGLISH. Another hybrid form of English like *Spanglish* (qv) and *Franglish*. RunGLISH combines Russian and English and has created such unwieldy words as *hyam-boorgoors* (hamburgers) and *ized cyawfeh* (iced coffee). According to Alan Feuer, writing in the *New York Times* (June 14, 2005), "RunGLISH, as a linguistic term, is almost as infelicitous as it sounds when spoken aloud. The name is said to have been coined by veteran Russian

astronaut Sergei Krikalev, who took part in the launch of the Russian-American space station in the fall of 2000. "We say jokingly that we communicate in RunGLISH," Mr. Krikalev quipped at the time."

run hot and cold. There are many traditional stories about the semilegendary fabulist Aesop. He is said to have lived in the middle of the sixth century B.C. and been the black slave of a Thracian named Iadmon. Supposedly deformed and ugly, he won his freedom by telling fables. At any rate, many tales about animals, adapted to moral or satirical ends, circulated under his name, though some of them really date back a thousand years before his birth. One of Aesop's fables is about a satyr who finds a winter traveler blowing on his fingers to keep them warm. When the satyr gives the man a bowl of hot pottage and he blows on that, too, the satyr asks him why. "I am trying to cool it," the man says. The satyr thereupon orders the man out of his cave, declaring "I will have no dealings with one who can blow hot and cold from the same mouth!" Though the traveler wasn't inconsistent—his breath was first warmer and then colder than the object he blew upon—this fable became the basis for the saying *to blow hot and cold*, "to be inconsistent or vacillate." Today the expression is often heard in the form *to run hot and cold*, reinforced in modern times, perhaps, by plumbing that gives us alternately hot water and cold.

run into the ground. To overdo something, as in, "You've already told us twice, don't run it into the ground." The phrase seems to have been first used by cowboys in the late 19th century.

runners famous in history. See FAST AS LADAS; MARATHON.

running around with his (her) hair on fire. The phrase describes someone in an uncontrollable state of panic or anger in reaction to something. I first heard it used by U.S. Secretary of Defense Rumsfeld in March 2004, though it is certainly much older. I've since heard it used in the 1965 film *The Bedford Incident*, which concerns a sub-chaser and its terrible-tempered captain, who unleashes a nuclear attack.

run on the bank. Though I haven't encountered it in any dictionary or word book, this phrase does describe a crowd or mob of people rushing toward a bank that is believed to be bankrupt and unable to pay its account holders. The best movie description of this is in the film *It's a Wonderful Life*. Since the establishment of the FDIC (Federal Deposit Insurance Corporation) in 1933 there have been far fewer runs because this organization insures deposits in member banks.

run riot. *The Master of Game*, a hunting manual published in 1410, explains in part that *to run riot* was originally a term describing a hunting dog who lost the scent of the animal he was chasing and began acting unruly and undisciplined—running after other animals instead of the intended quarry. Over the next century the phrase came to be used figuratively for anyone acting without constraint or control.

runt. *Runt*, for "a small, weak person," came into the language as slang in about 1700. It derives from the name of the

small breeds of oxen and cattle called “runts” in Wales and the Scottish Highlands as early as the 16th century.

run the gamut of emotions from A to B. Sometimes said of unaccomplished actors and actresses, this expression has its origin in a witticism of American author Dorothy Parker. “Kate’s wonderful, isn’t she?” a friend said of Katharine Hepburn’s Broadway performance in *The Lake*, between acts at the Martin Beck Theater. “Oh, yes,” Miss Parker agreed. “She runs the gamut of emotions all the way from A to B.” These words became as celebrated as any of her ripostes, but years later Miss Parker told Garson Kanin that she didn’t think there was a finer actress anywhere than Katharine Hepburn; she had made the remark for the same reason she said many things—because it was funny, a joke. Miss Hepburn, however, agreed with her assessment of *The Lake*.

run the gauntlet. The *gauntlet* in this expression was first spelled *gantlope*, deriving from the Swedish word *gattloppe*, from *gat*, “a narrow path,” and *loppe*, “run” (akin to our “lope,” “elope,” and “gallop”), which literally meant “a running of the narrow path.” *Gattloppe* was the name of a punishment that originated in the Swedish army. A soldier found guilty of a serious offense was forced to strip naked and run between two rows of his comrades, each of whom struck him with a whip, switch, or even sword as he ran. The length of the rows depended on the severity of his offense. The English observed the use of this punishment by the Germans during the Thirty Years’ War (1618–48) and saw American Indians inflict a similar punishment on captives with war clubs. They first called the torture, which often resulted in maiming, *running the gantlope*, nasalizing the Swedish word *gattloppe*, but later further corrupted the key word in the phrase to *gauntlet*, probably because of its resemblance to the English *gauntlet*, for “glove.” Today the expression means to encounter trouble on all sides, to be severely attacked or criticized. The confusion between this *gauntlet* and the *gauntlet* that is a glove has led some writers to spell the punishment “gantlet.” In any case, both words are pronounced the same way. See THROW DOWN THE GAUNTLET.

run the table. In a *Times Magazine* William Safire column (*On Language* 11/4/01) Tom Shaw, managing editor of *Pool and Billiard Magazine*, advised that this term comes from the game of pool and means “to clear the table of all the balls and thereby to win the game.” He also dates the term back about 40 years. Memories of my misspent youth at Dapper Dan’s, the local pool emporium, assure me that the expression dates back at least 60 years, maybe 70, although the expression wasn’t much used outside the pool room at the time.

runway. *Runway*, for “a landing strip at an airport,” probably has its origins in the *runway* of burlesque, the narrow ramp extending from the stage into an aisle in theaters or nightclubs, on which women dance within reach of the audience. The Americanism *runway* is, however, recorded as early as 1835 as the path for a deer, and also means the bed or channel of a stream.

run wild as outhouse rats. Kansas wheat farmers appear to have coined this Americanism a century or so ago. It was often used to describe unsupervised, unruly kids.

Runyones. The language spoken by New York characters invented by author Damon Runyon (1884–1946); a colorful if exaggerated New Yorkese. The author of *Guys and Dolls*, a journalist and short story writer noted for his tales of the New York underworld and New York City itself, requested that his ashes be scattered over Broadway. On his death his ashes were dropped on the Great White Way from a transport plane flown by his friend, the famous American aviator Eddie Rickenbacker.

Ruritanian. A humorous term for any country that appears to resemble the small, remote backward central European kingdom of Ruritania in Anthony Hope’s very popular novels *The Prisoner of Zenda* (1894) and *Rupert of Hentzau* (1898). Anthony Hope was the pseudonym of Sir Anthony Hope Hawkins (1863–1933), an English barrister and author.

rush. Often called a *daily*, a *rush* is a series of hastily printed camera shots from a day’s shooting viewed by a movie director for possible use in the film he is making.

rush hour. The term *rush hour* came into the language long before the first cars clogged American streets. It dates back to 1883, when the Brooklyn Bridge was completed, releasing more traffic into Manhattan and Brooklyn. The subway expression *rush hour express* was first recorded in 1928. In Japan rush hour workers called “fanny pushers” (a euphemistic translation) are employed to pack people into rush hour trains.

Russia. *Russia* derives from the Russian word for the country, *Rossiya*, named after the Vikings who invaded it from the north to establish a kingdom in Russia and who called themselves *rothsmen*, “rowers.”

Russian, Polish, and Slavic words in English. Russian and Slavic words are the basis for a number of English ones, including: ruble, czar, kvass, sable, mammoth, knout, cravat, ukase, vodka, droshky, astrakhan, samovar, mazurka, polka, troika, steppe, pogrom, bolshevik, commissar, soviet, intelligentsia, kulak, robot, sputnik, babushka.

Russian roulette. Sad to say, *Russian roulette* refers to a game played throughout the world, as harrowing scenes in the movie *The Deer Hunter* (1978) reveal. It is, to say the least, a game of high risk in which each player spins the cylinder of a revolver containing one bullet, points the muzzle at the temple, and pulls the trigger. The word *roulette* is from the gambling game of roulette, French for “little wheel.” *Russian* may be used because czarist Russian officers played the game, but there is no solid evidence of this, and the term hasn’t been traced back before 1935.

Russians (Rooshians). In the Great Smoky Mountains wild boars are named after the Russians (pronounced “Rooshians”) on the theory that the boars were first imported to America from Russia. Domestic pigs are descended from these tusked wild pigs.

rustler. A cattle thief. This usage is first recorded in the American West in 1882. At first *rustler* meant an energetic person, one who rustled up stray cattle for his boss. The word

appears to have evolved from “hustler,” as this quote from Owen Wister’s *The Virginian* (1902) indicates: “It [*rustler*] was not in any dictionary, and current translations of it were inconsistent. A man at Hossie Falls said that he had passed through Cheyenne, and heard the term applied in a complimentary way to people who were alive and pushing. Another man had always supposed it meant some kind of horse. But the most alarming version of all was that a rustler was a cattle thief. Now the truth is that all these meanings were right. The word ran a sort of progress in the cattle country, gathering many meanings as it went.” Of course, the common meaning of the word came to be “a cattle or horse thief.” As a matter of fact, a Texas state legislator was convicted of cattle rustling as recently as 1983.

rutabaga; Swedish turnip. Commonly called the Swedish turnip, the rutabaga derives its name from the Swedish dialect *rotabagge*, for the plant; this relatively new vegetable, first re-

corded in 1620, is extensively grown in Sweden. It is also called Swede.

rutherfordium. The first person to split the atom was New Zealand-born Ernest Rutherford (1871–1937). Baron Rutherford had won the Nobel Prize in chemistry in 1908. After another three years he proposed his new atomic theory, which led to his splitting of the atom in 1919 and the naming after him of the unit of radioactive disintegration called “rutherfordium.” Strangely enough, Rutherford didn’t believe that atomic power could ever be harnessed.

Rx. The Latin *recipe*, “take,” provides the *R* in the symbol *Rx* used by pharmacists for centuries, while the slant across the *R*’s leg is the sign of the Roman god Jupiter, patron of medicine. The symbol looks like *RX* and is pronounced that way.

S

S. Our 19th letter can be traced back to the ancient Phoenician and Hebrew alphabets, where it was called *shin*. It did not acquire its present form until it came into Latin.

S. The S in Harry S. Truman isn't an abbreviation, but Truman's complete middle name. His father had wanted Harry to be named after his father's father, Andersen Shippe Truman, while his mother opted for his mother's father, Solomon Young—so the initial S was accepted as a compromise.

'S. Oaths like 'Sblood, 'Slife, and 'Sdeath are common in the works of Elizabethan writers like Ben Jonson. The 'S is a euphemistic abbreviation of *God's*, always written continuously with the following word.

sabotage. The root of *sabotage* is the French *sabot*, "wooden shoe," but that is as much as anybody really knows about the word, which came into English during World War II from the French *saboter* meaning "to do work badly" or "to destroy machines or a plant in order to win a strike." Why the French made the verb *saboter* out of *sabot*, "shoe," isn't really known, though one persistent old story claims that wooden-shoed peasants trampled down a landowner's crops to win better wages and working conditions. Another story says the term was coined after the great French railway strike of 1912, when "strikers cut the shoes (*sabots*) holding the railway lines." Or it could be that French factory workers threw their shoes into machinery to disable and disrupt a plant.

Sacco-Vanzetti pencils. These were originally named *Hammer pencils* for the American brothers who set up the first Soviet factory in the 1920s. But the controversial U.S. murder trial and execution of Nicola Sacco and Bartolomeo Vanzetti in 1927 made far better propaganda, the two capitalists (the Hammer brothers) losing out to the two anarchists. Many books by great American writers were written about Sacco and Vanzetti, including a novel by Upton Sinclair (*Boston*), the plays *Gods of the Lightning* and *Winterset* by Maxwell Anderson, and sonnets by Edna St. Vincent Millay.

Sacher torte. History's most famous chocolate cake is named for 19th-century Austrian confectioner Edward Sacher. Sacher, whose cigar-smoking mother served her son's creation to Prince Metternich, actually won a lawsuit from a rival confectioner over who could legally call the cake his own. The cake is made of chocolate torte batter, apricot jam, and chocolate frosting.

sacheverell. Not many preachers or politicians have been put down as properly as Dr. Henry Sacheverell (ca. 1674–1724). "Famous for blowing the coals of dissension," the English clergyman had both "the blower of a stove" and a chamber pot named *sacheverells* after him. The naming was undoubtedly done by Whigs, whom Sacheverell had violently attacked in 1709 in two sermons, especially lashing out against the government's toleration of dissenters. Charged with seditious libel, the fervent Tory was suspended from preaching for three years. But his trial brought about the downfall of the Whigs and he was rewarded with the important rectory of St. Andrew's immediately after his suspension expired. It remained for the dictionaries to take revenge for the Whigs. See **TWISS**.

sack; get the sack. *Sack*, according to legend, was the last word spoken at the Tower of Babel before the world's languages were scrambled, and for this reason it retains a strikingly similar form in over a dozen languages. As for *get the sack*, here etymologists have outdone themselves, with inventions worthy of Rabelais. By far the best tale is that Turkish sultans who grew tired of a wife or found her troublesome, had her taken from the harem, sewed up in a sack, and dumped into the Bosphorus. As outrageous as the story seems, it could well be the origin of the old expression, which dates back to the Middle Ages, for such "sacking" was widespread among the Turks, and the Romans similarly sewed up condemned criminals in sacks and tossed them in the Tiber. Most authorities, however, seem to accept with some reservations the explanation linking the phrase to the tools of medieval artisans and mechanics. Workmen generally carried their tools in a sack and for convenience's sake left them in a safe place on the job overnight. When an

unsatisfactory worker was fired, at the end of his last day on the job, his employer would hand him his pay and the sack containing his tools.

sackcloth and ashes. People used to show grief and sorrow by wearing sackcloth, a coarse material used for making sacks, and throwing ashes on their heads. From this custom came the expression *sackcloth and ashes*, meaning sorrow for something one has done or failed to do (e.g., “He came to me in sackcloth and ashes saying he’d found the book he had insisted I’d taken”). The phrase is an ancient one that is found in the Bible (Matt. 11:21).

sacred cod. See COD.

sacred cow. The Hindu hero Prithu changed himself into a cow to encourage his countrymen to be vegetarians. This and the doctrine of Ahimsa, “harmlessness to all living things,” preached by Buddha accounts for the fact that cows are still sacred in India, roaming the streets at will. Our fairly recent term *a sacred cow*, “any person or group so highly regarded as to be exempt from even justified criticism,” appears to stem from the Hindu belief. It probably came into the language when Mahatma Gandhi’s passive resistance movement brought worldwide attention to India. Gandhi himself was a confirmed vegetarian. In his youth he did try eating meat, but gave it up when he had recurring nightmares of animals bleeding in his stomach.

saddler of Bawtry. “Like the saddler of Bawtry, who was hanged for leaving his liquor.” This Yorkshire proverb describes someone too much in a hurry. It seems that the real saddler of Bawtry was on his way to the gallows and adamantly refused to stop with his guards for a last drink, as was the custom in York in the 18th century. Passing the tavern by, he hurried to the gallows, where Jack Ketch quickly accommodated him. His pardon from the king arrived only a few minutes later.

Sadie Hawkins Day. In 1939 cartoonist Al Capp’s comic strip *Li’l Abner* featured a race held on “Sadie Hawkins Day,” in which single women chased bachelors, trying to win their love. The fictional day soon inspired real Sadie Hawkins Days all over America. Usually held in November, these Sadie Hawkins Days are days on which girls escort boys to dances and parties, or ask boys to escort them.

sadism. Marquis Donatien Alphonse François de Sade (1740–1814) seems to have emerged a full-blown “fanatic of vice,” the “philosopher of vice,” and *professeur de crime* that Michelet and Taine called him. When it happened, how it happened, would stymie a panel composed of Freud, Jung, Job, and the living Buddha. De Sade’s upbringing was a factor, as were the licentious times in which he lived, his long years in prison, and perhaps there was even an organic problem. There is simply not enough reliable information available about de Sade—all his voluminous diaries were burned—and to try to make biography from a writer’s fiction is fruitless. Sometimes his insights were deep and remarkable, but his was in the main a disordered, deranged mind reflected in his life and licentious work. Sadism, the derivation of satisfaction or pleasure from

the infliction of pain on others, can be sexual in nature or stem from a variety of motives, including frustration or feelings of inferiority. De Sade’s life indicates that many such causes molded his twisted personality. His final testament read in part: “The ground over my grave should be sprinkled with acorns so that all traces of my grave shall disappear so that, as I hope, this reminder of my existence may be wiped from the memory of mankind.” See also MASOCHISM.

sad sack. The term *sad sack*, for “a maladjusted, blundering, unlucky soldier,” likable but always in trouble, was widely popularized by George Baker’s comic strip “Sad Sack,” which appeared in several World War II military publications and later appeared in many newspapers. However, the words were American collegiate slang during the 1930s, their origin unknown.

safari. Safaris are getting back to the original meaning of the word. Once exclusively hunting trips into the African jungle complete with guns, they are now often sight-seeing excursions for camera-toting tourists more in keeping with the Arabic word *safara*, “travel,” that is the root of *safari*. The word *safari* became well known when Teddy Roosevelt took a hunting trip into the bush with some 500 porters lugging his supplies, which included abundant cases of champagne. *Safari* is first recorded, however, in 1907.

safety bumps. See SLEEPING POLICEMEN.

saffron. Saffron costs about \$400 a pound, making it one of the world’s most expensive spices. This is primarily because it takes 4,000 blossoms of the autumn crocus (*Crocus sativus*), or 225,000 of its handpicked stigmas, to make one ounce of saffron. But luckily a little goes a long way, for the spice has been coveted by gourmets and lovers since the Arabs introduced it to Spain in the eighth century A.D. Even before then saffron was used by the Phoenicians to flavor the moon-shaped love cakes dedicated to Astoreth, their goddess of fertility. Today the spice is often called “vegetable gold.” The old expression *he hath slept in a bed of saffron* refers to the supposed exhilarating effects of saffron, meaning “he has a very light heart.” As an old poem puts it:

With genial joy to warm his soul,
Helen mixed saffron in the bowl.

See CROCUS.

sage (plant). See SALVIA.

sagebrush. *Artemisia tridentata* and several similar *Artemisia* species that grow wild on the plains and deserts and are a symbol of the American West. In *Roughing It* (1872), Mark Twain wrote, “. . . if the reader can imagine a gnarled and venerable live oak tree reduced to a little scrub two feet high, with its rough bark, its foliage, its twisted boughs, all complete, he can picture the ‘sage-brush’ exactly.”

Sagebrush State. A popular nickname for Nevada, along with the Silver State. Nevada is called the Battle-Born State because it came into the Union during the Civil War, and, jocularly, the

Divorce State because of Reno and Las Vegas, famous for quickie divorces.

saguaro. The giant saguaro cactus, whose common name (pronounced sa-wha-ro) is of Indian origin, has only one species and is the state flower of Arizona. The saguaro grows up to about 36 feet high and can weigh 7–8 tons. Its scientific name (*Carneglia gigantean*) honors American philanthropist Andrew Carnegie. The plant is valued for its fruit, often made into jams and jellies. See ARIZONA.

Sahara. *Sahara* has become a synonym for any barren, lifeless place. The desert in northern Africa takes its name from the Arabic *cahra*, “desert,” as if that is all that could be said about it. See GOBI DESERT.

sahib. See MEMSAHIB.

Sailor King; Clarence; Silly Billy. Because he served as a youth in the British navy, entering in 1779 as a midshipman when 15 and made lord high admiral 48 years later, William IV of England became known as the Sailor King. William had the Clarence, a closed four-wheel carriage, named after him when he was the duke of Clarence. Sad to say he was also known as Silly Billy during his reign (1830–37) because he often didn’t take his duties seriously.

sail too close to the wind. An old nautical saying with a metaphoric extension, in this case meaning “to be reckless, take too many chances, risk losing everything.”

sail under false colors. Pretending to be something you aren’t, to be a hypocrite. These words have their roots in those pirate ships that at the moment of attack lowered their friendly or neutral flag and hoisted the deadly skull and crossbones. The unwritten law of the sea, of course, required that all ships display their true flags or colors so that they could be recognized as friend or foe, but the Jolly Roger was by its nature exempt.

sainfoin. This perennial herb of the pea family is also called “holy clover” and has long been used as fodder, although it is sometimes planted in flower garden borders. It has among the most unusual of scientific names, *Onobrychis viciaefolia*; the genus name *Onobrychis* derives from the Greek for “food for asses,” alluding to the plant’s use for forage. Sainfoin, sometimes erroneously called “saintfoin,” takes its name from the Latin *sanus*, “healthy,” plus *foin*, “hay.”

St. Barbara. The ancients held that persons struck dead by lightning were incorruptible and honored them. However, many used charms to protect themselves against lightning. The Romans believed that the eagle, sea calf, and laurel warded off lightning, while people in medieval times grew houseleek on the roofs of houses to ward it off, Charlemagne ordering all his subjects to do so. People still invoke St. Barbara to protect themselves against lightning. She is the patron saint of those besieged by lightning because a lightning flash killed her father after he had tortured her and was about to lop off her head with a sword. See LIGHTNING NEVER STRIKES TWICE.

St. Bernard. Men crossed the Alps between Switzerland and Italy centuries before St. Bernard de Menthon (923–1008) founded the shelter now called the Hospice of Great St. Bernard. But the house of refuge he built in 982 made it much easier for travelers to make pilgrimages to Rome through the Mons Jovis Pass, 8,098 feet above sea level and covered with snow 10 months of the year. St. Bernard, a wealthy French nobleman who renounced his fortune to become a man of God, was canonized in 1681. Perhaps 200 years before this the monks at this hospice had begun breeding the great dogs that are named after him and training them to track down and rescue travelers lost in blizzards and avalanches. The breed is said to be a cross between a bulldog and a Pyrenean shepherd dog or a Molossian hound, and it once had long hair believed to result from matings with the Newfoundland dog. The long hair was found to be a handicap in the snow, however, and a smooth-haired variety has been developed in relatively recent times. St. Bernards are still trained by the monks of the Alpine hospice. Measuring up to about six feet long, they are capable of carrying a man and are bred for intelligence and docility as well as strength. The breed is the world’s heaviest dog, one specimen having reached a weight of 246 pounds. Numerous individual dogs have been honored as heroes, including the famous Barry, whose statue is in the St. Bernard Hospice. St. Bernards do not carry little kegs of brandy around their necks; this myth was the result of an early 1900s cartoon.

St. Boniface’s cup. Anyone who wants an excuse for an extra drink from time to time might do well to revive the custom of St. Boniface’s cup. The expression derives from an indulgence granted by Pope Boniface VI or Pope Boniface I to anyone who drank to his good health. A St. Boniface’s cup was long an excuse for another one of the same. The phrase is not related to *boniface*, for “an innkeeper,” which we owe to the convivial landlord of that name in the comedy *The Beaux’ Strategem* (1707) by Irish playwright George Farquhar.

St. Elizabeth’s flowers. According to tradition, St. Elizabeth of Hungary gave so much food to the poor that her own household didn’t eat well. Her husband suspected this and when he saw her leaving the house one day with her apron full of something, he demanded to know what she carried. “Only flowers, my lord,” Elizabeth said, and God saved her lie by changing the loaves of bread in her apron to roses.

St. Elmo’s fire. Corposants are luminous discharges of electricity that extend into the atmosphere from projecting objects, their name deriving from the Portuguese *corpo santo*, “holy body.” They are better known as St. Elmo’s fire, and were believed by sailors to be a portent of bad weather. St. Erasmus, the patron saint of Neapolitan sailors, was a fourth-century Italian bishop whose name became corrupted to St. Elmo. An Italian legend tells us that he was rescued from drowning by a sailor and as a reward promised to ever after display a warning light for mariners whenever a storm was approaching. St. Elmo’s fire does not involve enough discharge of electricity to be considered dangerous. The jets of fire are also seen on wings of aircraft, mountaintops, church steeples, on the horns of cattle, and blades of grass, and even around the heads of people, where it is said that they merely cause a tingling sensation. In ancient times St. Elmo’s fire was called Castor and Pollux, for the twin

sons of Zeus and Leda in Roman mythology, and a single burst of fire was called a Helen, for the twins' sister. A Helen was said to be a warning that the worst of a storm was yet to come, while two lights, Castor and Pollux, supposedly meant that the worst had passed. This has given rise to the theory that *St. Elmo* might be a corruption of *Helen* instead of *St. Erasmus*. Still another suggestion is that *St. Elmo* is a corruption of *St. Anselm* of Lucca.

St. Ignatius's bean. The seed or bean of the woody vine *Strychnos ignatti* yields the deadly poison strychnine, which does have curative medical properties as well. All that is known about the bean's namesake is that he is one of seven saints named Ignatius, perhaps the Portuguese-born Jesuit Azevedo (1528–70), who may have come upon the plant in his travels. *Strychnine* itself is an old Greek name for a kind of nightshade, applied by Linnaeus to the 220 species of this genus because so many of them are poisonous. In the United States only one poisonous *Strychnos* species is found, the *Strychnos nux-vomica* or "strychnine tree" of extreme southern Florida, whose seeds yielded poisons for the arrows of Indians native to the area. A large strychnine tree specimen grows in New York's Brooklyn Botanic Garden.

St. Martin's Day; St. Martin's goose, etc. After he became the patron saint of France, St. Martin's name formed the basis for a number of words. His feast day, Martinmas (Nov. 11) replaced the Roman Feast of Bacchus, retaining some of its customs, which probably accounts for the fact that he is regarded as the patron saint of bartenders, drunkards, and reformed drunkards as well. The phrase *Martin drunk*, "very drunk," also comes from St. Martin's association with the old pagan festival of *vinalia*, which noted the time when wines had reached their prime. St. Martin's goose was, according to legend, a bothersome goose that the saint ordered to be killed and served for dinner. Because he died while eating the meal, a St. Martin's bird was traditionally sacrificed every Martinmas. *St. Martin's summer*, like *St. Luke's summer* and *All Saints* (or *All Hallows's summer*), is a European term for our *Indian summer*, the weather around November 11 often providing an unseasonable spell of warmth and pleasantness that was called *été de la Saint-Martin* by the French. The halcyon days of St. Martin's summer combine with St. Martin's goose in a strange way to give us the word *gossamer*. Due to its association with both the geese eaten on St. Martin's Day and throughout the season. St. Martin's summer came to be called "goose summer" in days past. At this time of the year fine, filmy cobwebs are often found floating lazily in the still air and these delicate "goose-summer webs" are the direct ancestors of *gossamer*, which can either be the webs themselves or fabrics like them.

St. Nicholas. See SANTA CLAUS.

St. Patrick's cabbage. Though native to Spain, Saint Patrick's cabbage (*Saxifrage umbrosa*) is found in the mountains of west Ireland as well, for which reason it is named for St. Patrick, archbishop of Armagh, the apostle of Ireland. This ornamental with crimson-spotted petals is also known as London Pride. St. Patrick is said to be responsible for the shamrock being the Irish national emblem. When captured by a pagan ruler while preaching in the country he plucked a shamrock and explained

that its three leaves were distinct and separate on the plant, "just as the Trinity is the union of three distinct persons in One Deity."

Saintpaulia. The very popular African violet houseplant species are members of this genus of beautiful tropical African flowers. The genus is not named for a saint, however. It honors the German baron Walter von Saint Paul, who discovered one of the African violet species.

St. Peter's cock. See JOHN DORY.

St. Swithin's Day.

St. Swithin's day if thou doest rain—
For forty days it will remain;
St. Swithin's day if thou be fair
For forty days twill rain na mair—

These doggerel lines contain a well-known weather myth popular as early as the 12th century. The legend claims that St. Swithin, or Swithun, a ninth-century bishop of Winchester and counselor to King Egbert, had been buried in the churchyard outside the north wall of Winchester minster, where the "sweet rains of heaven might fall upon him as he wished and he be trodden under foot by those who entered the church." A century after his death it was decided that he should be canonized for miraculous cures he performed and his remains were to be reburied within the cathedral. The day was set, but as a miraculous sign of Bishop Swithin's displeasure, it began to rain on that day and rained for 40 days and 40 nights, causing the monks to abandon their plans. The date selected for his reinterment was July 15, 971, and July 15 has ever since been generally regarded as St. Swithin's Day.

St. Uncumber. St. Wilgefortes, who might be called the patron saint of unhappily married women, is a mythical saint, who, tradition says, prayed to grow a beard so that she could live her life "uncumbered with men." The prayer was granted and the ruse worked well until one of her enraged former lovers had her crucified. According to Sir Thomas More "women [later] changed her name [to St. Uncumber] because they reken that for a pecke of oats she will not faile to uncumber them of their husbandys."

St. Vitus's dance. *St. Vitus's dance*, or chorea, is named for the Roman St. Vitus, who became a martyr during the persecution of Christians by the Emperor Diocletian. In the 15th century it became customary for young people to dance frenetic dances around statues of St. Vitus to insure good health for the coming year. Soon, because of the nature of the wild dance, St. Vitus's aid was invoked against the nervous affliction most common among children and adolescents and the disease became popularly known as *St. Vitus's dance*.

salaam. The Arabs use this word, related to the Hebrew "peace," SHALOM, as a greeting, accompanying it with a low bow with the right palm held on the forehead. Thus in English to *salaam* someone came to mean to pay homage to someone.

salad days. Cleopatra, kidded by Charmian about her old love for Julius Caesar, joked that those were her *salad days*

when she was “green in judgement, cold in blood.” In other words she loved Caesar unskillfully and without much passion compared to the way she loved Mark Antony. Thus our expression for naive and inexperienced youth comes to us from Shakespeare’s *Antony and Cleopatra*. The real Cleopatra was actually a flaming youth, a trained and artful lover before her adolescence, and the *salad days* that Shakespeare has her admit to were distant memories long before she married her brother at 17.

salad potatoes. See NEW POTATOES.

salary. See SALT.

salat. A pronunciation of *salad* familiar to Shakespeare and still used today by American hillfolk. Words like *ballad*, *killed*, *scared* and *held* are pronounced *ballat*, *kilt*, *skeert* and *helt*, a *t* replacing the final *d* in them.

Salem. The nine or 10 places around the world called Salem, including Salem, Massachusetts, might be called “Peace,” for all take their name, ultimately, from the Hebrew *shalom*, or the Arabic *salaam*, both meaning “peace,” or “wholeness,” “welfare.”

Salisbury steak; hamburger. *Hamburger* literally signifies an inhabitant of Hamburg, the great German seaport, the *Hamburg steak* originating there, but *Salisbury steak*, a hamburger without a bun, derives from the name of a 19th-century English physician, Dr. James H. Salisbury. Salisbury steak, as every Army veteran knows, is really something more, or less, than a hamburger. The “steak” part makes it look good on menus, but today it is usually either a well-done hamburger, or a combination of ground beef, eggs, milk and bread crumbs cooked in patties and drowned in a gooey gravy.

Salisbury steak started out as well-done hamburger alone. In 1888 Dr. Salisbury advised his patients to eat well-cooked ground beef three times a day, with hot water before and after each feast. This diet, the health faddist claimed over the laughter of his colleagues, would either cure or relieve pulmonary tuberculosis, hardening of the arteries, gout, colitis, asthma, bronchitis, rheumatism, and pernicious anemia.

During World War I and again in World War II, efforts were made to drive German loan words like *hamburger* out of the language, a *hamburger steak* becoming a *Salisbury steak* and a *hamburger* a *liberty sandwich*. These efforts by superpatriots didn’t succeed. One suspects that *Salisbury steak* only survived because it made an excellent euphemism for hamburger. Certainly no one eats ground beef and hot water for health reasons anymore. See also GRAHAM CRACKERS; TARTAR SAUCE.

Salk vaccine; Sabin vaccine. The Salk vaccine is a vaccine composed of inactivated polio viruses used to immunize against polio (poliomyelitis). It was named after American virologist Jonas Edward Salk (1914–95), who developed this first effective killed-virus vaccine against the terrible viral disease (also called infantile paralysis) in 1954. American virologist Albert Sabin developed an oral vaccine, consisting of live polio viruses, at about the same time. Salk, a professor at the University of Pittsburgh, first tested his vaccine on a member of his

own family. The Salk Institute for Biological Studies in San Diego is named in his honor.

sally a ship. A ship is sallied, or rolled, by assembling the crew all on one side, then signaling them to rush together to the other side. When the signal is repeated at certain intervals, the ship can be made to roll. In the age of sail, *sally* was also a common expression for the continuous rising and falling or the swinging or bounding motion of a ship at sea. The word derives from the Middle French *saillir*, “to rush forward,” which comes from the Latin *salire*, “to leap.”

Sally Bee. See SARAH BERNHARDT.

Sally Lunn. Sally Lunn used to cry out her wares in the streets of the then fashionable English resort city of Bath toward the end of the 18th century. Her basket was filled with slightly sweetened tea biscuits, which are still called Sally Lunn’s, although a number of cakes and breads also bear the name today. It took an enterprising baker and musician by the name of Dalmer to make Sally Lunn’s buns universally known. Dalmer bought her recipe, built some portable ovens mounted on wheelbarrows to deliver Sally Lunn’s fresh, and even wrote a song about them. The song made the name a catchword that was still popular when nearly a century later a Gilbert and Sullivan character in *The Sorcerer* sang about “the gay Sally Lunn.”

Sally Mae. See GINNIE MAE.

salmagundi. The origin of the word is really unknown. A *salmagundi*, “any mixture or miscellany,” began as a mishmash of minced veal, chicken, or turkey, anchovies or pickled herring, and onions served with lemon juice and oil. One theory has it that the word comes from *salame condite*, Italian for “pickled meat”; another that it derives from the name of a lady-in-waiting to Marie de’ Medici, wife of France’s Henri IV. Marie is supposed to have invented the eclectic dish, or made it de rigueur at least, and named it after Madame or Mademoiselle Salmagundi, her lady-in-waiting. Later the word was used by Washington Irving for a series of 20 periodical pamphlets that he and two other writers published (1807–08). *Salmagundi; or the Whim-Whams and Opinions of Launcelot Langstaff, Esq. and others*, consisted of satirical essays and poems on New York society and politics, generally satirizing “mobocratic” and “Logocratic” Jeffersonian democracy.

salmon. The often pink-fleshed fish (from the Latin *salmon*) gives its name to the color salmon, but the salmon’s flesh doesn’t have to be pink—in fact, it is frequently white. Nevertheless, many Americans believe that salmon should be pink to be good. Over half a century ago the legendary advertising genius Elmer Wheeler (he coined the slogan “Don’t sell the steak—sell the sizzle”) was hired by a West Coast salmon cannery to get people to eat the white variety and learn that it is just as tasty. Wheeler had new labels pasted on every can of the company’s huge stock, each of them bearing the slogan: this salmon guaranteed not to turn pink in the can.

Salmonella. Salmon have no connection with *Salmonella* or *salmonellosis*. The latter is a form of food poisoning that can result in death and is caused by bacteria of the *Salmonella* genus, comprising some 1,500 species. The *Salmonella* genus was first identified by 19th-century American pathologist and veterinarian Daniel Elmer Salmon, who died in 1914. There are often outbreaks of salmonellosis, which is usually caused by infected and insufficiently cooked beef, pork, poultry, and eggs, as well as food, drink, or equipment contaminated by the excreta of infected animals. Nearly all animals are hospitable to the rod-shaped bacteria causing the acute gastroenteritis in humans, and food poisoning caused by them are almost as common as those caused by staphylococci. Incidentally, there is a “salmon disease” dogs and other animals get from eating salmon infested with cysts of flukes, but it has nothing to do with salmonellosis.

salt. In ancient times salt was highly valued, so much so that spilling salt became an unlucky omen among the Romans. Roman soldiers were in fact paid in salt, (*sal*) at one time, the origin of our word *salary*. Through the centuries a number of expressions reflected the importance of the precious seasoning and preservative. “Not worth his salt” referred to the salary the Romans paid their soldiers; “to eat a man’s salt” meant to partake of his hospitality; and “to sit above the salt” was to sit in a place of distinction, above the saler, or saltcellar, at a medieval table. “The salt of the earth” is an even older saying, dating back to biblical times. In Matt. 5:13 the meek, the poor in spirit, the merciful, those persecuted for the sake of righteousness, the peacemakers, the pure of heart are told by Jesus that “Ye are the salt of the earth . . . Ye are the light of the world.” The words are still a supreme compliment given to those we most admire as human beings.

salt a mine. To secretly stock a gold, silver, or diamond mine with ore or precious stones to make it appear valuable. The expression is said to derive from the practice of dishonest miners scattering a handful of salt, which is the color of gold dust, through mines they wished to sell to unwary investors.

salt horse. Beef or pork pickled in brine was often called *salt horse* on the New England coast and elsewhere. An old rhyme went:

“Old horse! old horse! what brought you here?”
 “From Sacarap to Portland Pier
 I’ve carted stone for many a year;
 Till, killed by blows and sore abuse,
 They salted me down for sailor’s use.
 The sailors they do me despise,
 They turn me over and damn my eyes;
 Cut off my meat and scrape my bones
 And heave the rest to Davy Jones.”

The “Sacarap” in the verse was a part of Westbrook, Maine, near Portland Pier, but the term *salt horse* is probably English in origin.

saltimbocca. This Italian veal and ham dish looks so delicious that some poetic gastronome several centuries ago named it *saltimbocca*: “leaps into the mouth.”

salt of the earth. See SALT.

saltwater taffy. The traditional story here has a storm and flood striking near the Atlantic City boardwalk, ruining the sweet chewy taffy the owner had left overnight in his candy stand. Not to be bested, the candyman sold his wares as saltwater taffy, which it remains today, a little sea water used in its preparation. All we really know is that the first printed mention of saltwater taffy is 1910.

saluki. Similar to the greyhound in appearance, the saluki is the oldest known breed of domesticated dog, excavations of the Sumerian empire finding its remains. The name of this hunting dog shows its place of origin, deriving from the Arabic *saluqi*, meaning “of Saluq,” an ancient city in southern Arabia.

salvia. Some species of *salvia* have medical properties, causing the Romans to name the genus from the Latin *salveo*, “to save or heal.” The flowers are also known as *sage*, which is a corruption of the French word *sauge*, for *salvia*, and *sage tea* has long been thought to have healing powers.

samarskite; samarium. Russian engineer Col. M. von Samarski became one of the few men to have an element named after him, through an unusual set of circumstances. In 1857 a glasslike, velvet-black mineral was discovered in Russia and named samarskite in honor of this mine official. Twenty-two years later the scientist Lecoq de Boisbaudran found by means of the spectroscope that samarskite contained a new element. He named this samarium, after the mineral in which he discovered it. Thus the little-known engineer was commemorated, indirectly, in a way usually reserved for the famous. Samarium belongs to the rare-earth group and has little commercial importance, though it is used as a catalyst and in the ceramics industry. In about 1901 another element was discovered in samarskite, this called europium, after the continent.

sambo. Blacks have probably been vilified with more slur names than any other group in history. All are, of course, disparaging and offensive, and this includes *sambo*. Ironically, the Little Black Sambo of the children’s story who helped give the term widespread currency is really an East Indian, but *sambo* was with us long before the boy who melted the tiger to butter. Possibly of American origin, the term was introduced via the slave trade. The word, some believe, derives from the Kongo *nzambu*, “monkey,” which became *zambo*, “bowlegged,” in Spanish. Alternate choices are the Foulah *sambo*, “uncle,” or the Hausan *sambo*, “second son.” It may be that *sambo* simply comes from the name of a West African tribe called the Samboses, mentioned in European literature as early as 1564.

Sam Browne belt. Born in India, Sir Samuel Browne, V.C. (1824–1901), served most of his military career there with the British army. Awarded the Victoria Cross and knighted for putting down the Indian Mutiny, a rebellion among native troops, he was promoted to general in 1888. Sometime during his long military career Browne invented the belt that bears his name. Designed originally as a sword belt that would support the weight of a sword smartly without sagging from the hips, it consisted of a belt with two auxiliary straps crossing over each shoulder. Later modified to one strap crossing from

the left hip over the right shoulder—swords were worn on the left side—the Sam Browne belt became compulsory dress for all British officers and was widely adopted by armies throughout the world. It was declared optional in 1939, but is still seen today, especially as part of drill, band, and cadet uniforms.

the same dog bit me. I feel the same way about it as you do. “Now you know,” one of Marjorie Kinnan Rawlings’s Floridian characters says in *The Yearling* (1938). “The same dog bit me.” The author won the Pulitzer Prize for her novel in 1939.

Sam Hill. If someone could locate any historical record of a Col. Samuel Hill of Guilford, Connecticut, we might find the origin of the phrase *go like Sam Hill* or *run like Sam Hill*. Edwin V. Mitchell makes mention of the man in the *Encyclopedia of American Politics* (1946). It seems that Colonel Hill perpetually ran for office—but no other evidence of his existence can be found. Since no one knows *who in the Sam Hill* he was, Sam Hill must remain “a personified euphemism our Puritan ancestors used for ‘hell.’”

Samian letter. See *Y*.

samoyed. Samoyeds are working dogs resembling the chow, but their gentleness and intelligence make them highly valued pets. The dog takes its name from the Samoyed people, a nomadic race of Mongols only 7,000 or so in number living in northwest Siberia and gradually becoming extinct. The strong, heavy-coated samoyeds, usually white or cream colored, were developed for pulling sleds, hunting, and herding reindeer. Their masters are an interesting people who domesticate the reindeer and use it for riding as well as milking. The samoyed husky happens to be the most widely traveled of all dogs, one having gone along for the space ride in 1957 aboard the Russian *Sputnik II*, which attained an altitude of 1,050 miles. In Russian the breed is called *laika*.

samphire. The seacoast plants were originally called *l’herbe de Saint Pierre* (the herb of St. Peter) in French, but over the centuries English tongues corrupted this to *samphire*.

Samson. Just as Delilah’s name symbolized treachery, Samson’s symbolizes strength. The biblical Samson slew a thousand men with the jawbone of an ass and performed various other prodigious feats as recorded in Judges 13–17. Samson’s Achilles’ heel was not so much his hair as his weakness for Philistine women, and he met his match in Delilah, who cut off his long locks, in which his strength or soul resided. After his betrayal by Delilah to the Philistines, Samson’s eyes were gouged out and he was brought down to Gaza. Eyeless in Gaza, he performed his last heroic deed when the Philistines tried making sport of him; he pulled down the temple of Dagon on his tormentors and himself. Samson’s name has been used for weight lifters and strongmen since at least May 28, 1741, when Thomas Topham was called the British Samson.

sanctimonious old bastard. Someone, usually an old person, who appears to be holier than thou but really has hardly any scruples at all.

sand. The old term *sand*, for “grit or courage,” probably comes from the expression *sand in his craw*, used by Mark Twain in *Huckleberry Finn* (1884). “Sand in his craw” refers to the belief that a chicken that eats a little sand has more endurance than a chicken that doesn’t.

Sandbox. A name used to describe the Middle East at the time of the 9/11 war, though the term may date back to the Gulf War of 1991, or perhaps earlier.

sand carpet. A carpet made of sand, with unusual colors such as blue and black, that was used in early American parlors. Housewives often drew designs and pictures in the sand, which were renewed again after company called and left.

sand in my shoes. Said by or of people who have spent their lives in a seaside community. The expression dates back to at least the late 19th century in the U.S. and is usually heard as *I’ve got sand in my shoes*.

sandlot baseball. Since the early 20th century, *sandlot baseball* has meant unorganized baseball games played by youngsters or loosely organized leagues of semiprofessional players. The term *sandlot* was made popular in 1880 by San Francisco’s Sand-lot Party of workingmen, who held their meetings in vacant sand lots. *Sandlot* is also used as a synonym for anything amateur, though not so often as *bush league* or *bush*.

sandman. The U.S. personification of sleepiness, especially for children, a mythical man who puts sand in the eyes of youngsters to make them sleepy. Often parents tell kids, “The sandman is coming.” The term originated in the mid-19th century; counterparts in other countries include Olaf Shuteye, Scandanavian, and Wee Willie Winkie, Scottish.

sandstorm. A phenomenon of the southwestern desert. Wrote J. Frank Dobie in *Coronado’s Children* (1930): “A man caught in a sandstorm cannot see his hand . . . The yarn goes that a cowboy awoke one morning to find his horse standing on top of a mesquite tree instead of under it where he had staked him.”

sandwich. At 5 A.M. on August 6, 1762, John Montagu, fourth earl of Sandwich, looked up from the gaming table and decided that he was hungry. The earl, an inveterate gambler in the midst of one of his famous round-the-clock sessions, didn’t dare leave his cards for a meal and ordered his man to bring him some cold, thick-sliced roast beef between two pieces of toasted bread. Thus the first sandwich was born. The Romans had a similar repast called *offula* before this, and it is said that the refreshment was first invented when in about 100 B.C. Hillel ate bitter herb and unleavened bread as part of the Jewish Passover meal, symbolizing man’s triumph over life’s ills. But the modern sandwich, our convenient quick lunch or snack and an important source of nourishment in this frenetic age, definitely evolves from those mighty gambling sessions, some lasting 48 hours and more, in which the dissolute earl passionately participated. Gambling was one of John Montagu’s lesser vices, but the earl has as many words honoring him as any politician, another example being the beautiful Sandwich Islands (Hawaii)

that Captain James Cook named after him because the earl headed the British admiralty during the American Revolution and outfitted the great explorer's ship.

sandwich generation. A term coined about 2001 meaning the generation that is presently sandwiched between the responsibilities of raising their children and caring for their elderly parents.

Sanforize. The patented process of sanforizing cotton and other fabrics to resist shrinkage by mechanical compression of the fibers was developed by the Troy, New York shirt manufacturing firm George B. Cluett Brothers & Co. and named in honor of Sandford L. Cluett (1874–1968), the firm's longtime director of research. The term is a trademark.

sang. Ginseng, which is found in the wild and used to be sold in large quantities to China, where it was first extensively used as a medicine. Also called *sang root*, it is valued by some as an aphrodisiac.

sanguine. This word's actual meaning is "bloody," or the color of blood, from the Latin *sanguis*, blood, but it came to be applied to any ruddy-cheeked person, whose cheeks were red with good health. By extension it finally took on the meaning of someone vital, full of life, confident, and hopeful.

San Jose; San Juan; San Antonio; San Francisco. These, of course, are the names of three cities in the United States and one (San Juan) in Puerto Rico. They also have the distinction of being the four leaders in North and South America among places named after saints: San Jose is the name of 429 places, San Juan 365, San Antonio 337, and San Francisco 275. Sometimes these cities aren't named for the same saint, however. One apocryphal story has a construction worker falling from the 10th floor of a building. "San Antonio!" he cries as he passes the seventh floor and, miraculously, he remains suspended in air a few instants. "Which San Antonio?" a sepulchral voice asks. "San Antonio de Padua!" the worker cries. "That's not me," the voice says, and the worker plummets toward the ground below.

Sanka. Sanka, a brand of decaffeinated coffee, is a trademark, and must be capitalized. The name of the product, first marketed in 1903, was coined from the French *san(s) ca(ffeine)*, "without caffeine."

San Marino. Reputedly the world's oldest republic, San Marino, located on the Italian peninsula, is said to have been founded in the fourth century A.D. by Marinus, a Christian stonemason. Marinus was later canonized as Saint Marinus, or San Marino, and the republic was named after him.

sannup. A young married Indian male, the term deriving from a Maine Abnaki Indian word for a young man. *Sannup* can also mean a mischievous boy always getting into trouble. The word dates back to 17th-century America.

sans-culottes. French supporters of the French Revolution in 1789 were called *sans-culottes*, which literally translates as

"without breeches." But the term has nothing to do with nudity. The revolutionaries went without the knee breeches that the royalists wore. These *sans-couettes* wore trousers or long pants, which soon became popular everywhere. Many held out, however. In America George Washington, John Adams, and Thomas Jefferson all wore knee breeches, despite their revolutionary faith. James Madison was the first U.S. president to wear trousers.

Santa Ana. Strong, hot, dusty winds that descend from inland desert regions to the Pacific Coast in the area of Los Angeles. Sometimes said to be named for Mexican general Antonio López de Santa Anna (or Ana) (1795–1876) who commanded Mexican forces at the Alamo and who, legend has it, later introduced chewing gum to the United States when he brought chicle here from Central America. More likely, the winds are named for the Santa Ana Canyon of Southern California.

Santa Claus. Yes, Virginia, there was a Santa Claus, a real one—probably. The custom of giving presents at Christmas is based on the legend that St. Nicholas—a bishop of Myra in Asia Minor during the fourth century—gave secret dowries to three sisters who could not have been married otherwise and would have been sold into prostitution if it hadn't been for his generosity. Nicholas, the story goes, was out walking one night when he heard the three sisters crying behind their curtained window. On being told that their poor father could find no husbands for them and had to sell them to a brothel, our Santa Claus dug into his coat and threw three bags of gold to them, disappearing into the night before their father could thank him. A twist on the tale has the bishop turning three brass balls into bags of gold, which is appropriate for the patron saint of pawnbrokers. St. Nicholas is also the patron saint of the Russian Orthodox church, Greece, Sicily, Aberdeen, scholars, travelers, sailors, thieves, and children, among other groups. Despite the lack of historical facts about him, he is no doubt the basis for our Santa Claus. The eve of his feast day, December 6, is a children's holiday when gifts are given in the Netherlands and elsewhere, the custom calling for someone to dress up as St. Nicholas and present the gifts. The English who settled in New York borrowed both the saint and this custom from the earlier Dutch settlers, moving his day to Christmas, their own gift-giving day, and corrupting his name from the Dutch dialect *Sint Klaas* to *Santa Claus*. See FATHER CHRISTMAS.

sap. Green, unseasoned wood is often full of sap, and so young, inexperienced foolish people have been called *sapheads* or *sapskulls* since the 17th century. By 1815, its first recorded usage, *sap* had succeeded *saphead* for a *cabbagehead* (1622). *Calabash* (1838), *pumpkin head* (1841) and *chump* (1883) are all similar agriculture-related words for "jingle-brained nincompoops."

Sapphism. See LESBIAN.

Sappho. The original Sappho was a great woman poet of ancient Greece as well as a LESBIAN. Other poets honored with the name include:

- *The English Sappho*—Mary Wortley Montagu (1689–1762, so named by Alexander Pope)

- *The English Sappho*—Mary D. Robinson (1758–1800)
- *The French Sappho*—Mlle. Scudéry (1607–1701)
- *The Scotch Sappho*—Catherine Cockburn (1679–1749)
- *Sappho of Toulouse*—Clémence Isaure (ca. 1450–1510)

Sarah Bernhardt. “The divine Sarah,” as Oscar Wilde called her, is regarded by many as the greatest actress of all time. Born Henriette Rosine Bernard, the daughter of Jewish parents who converted to Catholicism, she was brought up in a convent until she entered the Paris Conservatoire at 13. After making her debut at the Comédie-Française in 1862, she played internationally, winning her great fame in tragic roles largely because of her “voice of gold” and magnetic personality. Probably the tallest, thinnest woman ever to star on the stage (Arthur “Bugs” Baer once wrote, “An empty cab drove up, and Sarah Bernhardt got out”), her nickname Sally Bee became the nickname for any tall thin woman, just as her name is a synonym for a great actress.

sarcasm. Thomas Carlyle noted in *Sartor Resartus: The Life and Opinions of Herr Teufelsdröckh* (1833–34) that he saw sarcasm to generally be “the language of the devil.” The word came to us in the late 16th century from Greek *sarkázein*, “to rent or tear flesh, to sneer,” the Greeks equating biting a person with speaking harshly, bitterly, or derisively. See SARDONIC, CYNIC.

sarcophagus. A coffin made of stone that rests above ground and is often decorated with sculpture. The word derives from the Greek *sarkophagos*, “eating flesh,” especially in the term *lithos sarkophagos*, which described a limestone the Greeks believed decomposed the corpses laid in it. The Greek word later was used for any stone coffin and took this meaning after it passed into English via Latin in the 17th century. See TATTOO.

Sardanapalian; Sardanaplan. The dissolute Assyrian king Ashurbanipal was probably the prototype of Sardanapalus, the semilegendary king of Greek fable whose name has become a synonym for effeminate luxury. King Ashurbanipal lived in the seventh century B.C., the Greeks calling him Sardanapalus because his real name was a difficult one for them to pronounce. It is hard to separate fable from fact concerning Sardanapalus, but he does not deserve the designation “effeminate.” Rather he appears to have been a shrewd military strategist and bloodthirsty tyrant who reigned for over 40 years, beginning in 658 B.C., and conquered Babylon, parts of Egypt, the Medes and Persians. But as he grew older, Sardanapalus surrounded himself with luxuries, his philosophy, it is said, summed up in a monument he had erected in the city of Anchiale. Its inscription read: “Sardanapalus the king . . . In one day built Anchiale and Tarsus. Eat, drink and love, the rest’s not worth this!” The epicure retired to his magnificent palace filled with tempera paintings, woven carpets, and furniture inlaid with gold. Locked up with his wives and concubines, he devoted himself to sensual pleasure. So the legend goes anyway. We only know for certain that the virile king, last of the great Assyrian monarchs, was depicted as effeminately hedonistic by Greek writers under the name Sardanapalus and that he became famous for living in great luxury. Lord Byron helped this misconception

along with his poem “Sardanapalus” (1821) in which he wrote: “And femininely meanth furiously. Because all passions in excess are female.”

sardonic. A sardonic person might be called a dead one, inside and out. The ancient Greeks believed that the *sardone* (*herba Sardonia* in Latin), a poisonous plant native to Sardinia that gave the island its name, was so deadly that anyone unlucky or foolish enough to eat it would immediately succumb to its effects. Victims were said to literally die laughing, going into convulsions, their final contorted expressions after these death throes resembling bitter, scornful grins. The Greeks called their last bitter appearance of laughter *Sardonios gelos*, “Sardinian laughter,” *Sardo* being their name for the island. *Sardonios gelos* became the French *rire sardonique*, this resulting in our *sardonic laughter* and *sardonic*, laughter or humor characterized by bitter or scornful derision.

Sardoodledum. French playwright Victorien Sardou (1831–1908) was born to great wealth, but when his family lost its fortune, he descended into poverty he could not have imagined. Sardou was found near death of typhoid fever in a garret, covered only by a pile of rejected play manuscripts. The woman who found him nursed him back to health, and he later married her. He became one of the most successful playwrights of his day, writing many vehicles for Sarah Bernhardt, but his well-made, often contrived, shallow plays led George Bernard Shaw to coin the word *Sardoodledum* for such dramas.

Sargasso Sea. The relatively calm sea in the North Atlantic is named for the seaweed in it, not the other way around. *Sargasso* is the Portuguese name for the weed and the incredible tales of Sargasso weed choking the sea and holding ships captive forever were probably invented by the ancient Phoenicians to keep Greek ships away. The seaweed is also called gulfwweed. See SEAWEED.

sarsaparilla. True sarsaparilla (*Smilac officinalis*) is related to the asparagus but isn’t widely cultivated in the United States. The same legends surround its roots as surround asparagus; Mexican Indians, for example, have long used the roots of the vine in a concoction they believe cures impotence. In 1939 it was discovered that the sarsaparilla root contains large amounts of testosterone, and today much of the male sex hormone manufactured commercially comes from the plant. See ASPARAGUS.

Sartoris. An old-order family of southern aristocrats featured in William Faulkner’s *Sartoris* (1929) and other novels. Throughout Faulkner’s work, the Sartoris clan, whose name has become a synonym for southern aristocracy, tries to withstand the rise of the venal Snopeses, who have little history and are “just Snopeses, like colonies of rats or termites are just rats and termites.” See SNOPESES; WALL STREET PANIC.

sartorius. The longest muscle of the human anatomy, the thigh muscle called the *sartorius* takes its name from the Latin *sartor*, tailor. It is so called because the muscle is important in making possible the traditional cross-legged position of the tailor.

sashimi. Another Japanese word that has recently come intact into the English vocabulary. *Sashimi* means thinly sliced raw fish, which is eaten that way, often with sauces and seasonings.

saskatoon. Another Native American word that passed into English. The berry-bearing North American shrub (*Amelanchier alnifolia*) takes its name from the Cree Indian *misaaskwa-toomin* for the fruit of the plant.

sass. The word *sass* is still used to refer to stewed fruit or fresh vegetables in sections of the United States, as is “garden sass.” The word, first recorded around 1760, originally meant garden vegetables: “Short sass” was potatoes, onions, or turnips; “long sass” was carrots, parsnips, and other vegetables. *Sass*, which is probably an American alteration of “sauce,” didn’t acquire its more common meaning of “backtalk” until about the middle of the 19th century. This meaning possibly has something to do with the “freshness” of both long and short sass.

sassafras. Folklore holds that the genus of small plants called *Saxifrage* (from the Latin *saxum*, “rock,” and *frangere*, “to break”) is so named because the plant was valued by the ancients as a medicine to break up kidney stones. However, the genus probably got its name because the plants grow naturally in the clefts of rocks and could be imagined to have broken them. A plant that definitely was helpful in the fight against kidney stones is *sassafras*. The Romans drank a concoction made of sassafras tree bark (*Sassafras albidum*) to break up stones in the bladder, which is why its name means “stonebreaker.” Sassafras tea, a stimulant and diuretic, is also made from the tree’s bark, and sassafras oil, used in flavoring, perfume, and medicine, is made from its roots.

satan. The Hebrew word *satan*, meaning “adversary,” in the Old Testament usually denotes a human adversary, but in places (e.g., Job 1:6–12) it designates an angelic being who torments man with the knowledge or direct authority of Jehovah. *Satan* has been the English proper name of the supreme evil spirit, the devil, since at least the year 900. *See also* OLD NICK.

Satchel Paige’s rules. *See* DON’T LOOK BACK, SOMETHING MIGHT BE GAINING ON YOU.

Satchmo. The nickname of Louis Armstrong (1900–71), American jazz trumpeter, gravelly voiced singer, and virtuoso musician. He was first known as *Satchel-mouth*, which means someone with a big mouth, a very talkative person, and a jazz musician who plays a horn. Later on, it is said, a British admirer compressed *satchel-mouth* into *Satchmo*, a word used for the one and only Louis.

satín. One might expect this smooth, glossy fabric to have a glamorous story behind its name, but it was apparently a place name originally. Arab traders named it *zaituni*, “cloth from Zaitun,” this last word their name for the Chinese city of Zayton (now called Chuanzhou).

Saturday. Saturn was the Roman god of time and planting, the Romans naming the seventh day of the week *Saturni dies*,

the day of Saturn, after him. This became the Anglo-Saxon *saterdaeg*, and finally our *Saturday*.

Saturday’s child. *See* MONDAY’S CHILD.

satyagraha. Literally meaning “a grasping for truth” in Hindi, this Indian word has come to stand for the nonviolent “passive resistance” of Mohandas Gandhi, which the Mahatma practiced until his assassination in 1948 and which has been emulated by many other great leaders since then.

satyr. Alexander the Great had a dream about this word at the time when he was trying in vain to capture the city of Tyre and was about to abandon his campaign. Alexander dreamed he had captured a satyr. His advisers told him that the word *satyros* (*satyr* in Greek) in his dream was really *Sa Tyros*, “Tyre is his!” and he attacked and captured the city. In any case, our word *satyr* derives from the Greek word for the mythical woodland gods or demons who were the companions of Bacchus. First recorded in English by Chaucer, *satyr* came to mean a lascivious man. *Satyress* is a little-used word for “a female satyr,” first recorded in 1840.

sauce Mornay. *See* MORNAY SAUCE.

sauce Robert. This mouth-watering French sauce, which took hours to prepare in its original form, has been credited to Robert Vinot, an early-17th-century sauce maker of whom nothing else is known. But Rabelais described the sauce earlier and it could not have been invented by Vinot, although he may have improved it and given it his name. Still in use today, the ancient sauce is made with white wine, beef gravy, onion, mustard, butter, and salt.

Saudi Arabia. In 1926, Ibn Saud, 46, became the first king of the territory later named Saudi Arabia. Ibn Saud had helped his father and the Saudi family, of the Wahabis sect of Islam, drive rivals from the city of Riyadh and capture the holy city of Mecca. His father was so impressed that he abdicated in favor of his imposing six-foot, four-inch, 240-lb. son. In 1932, Ibn Saud, a wise benevolent monarch who began modernizing the country, named the new nation after his family.

sausage. *Sausage* comes ultimately from the Latin word *salus*, meaning salted or preserved. This meat treat was invented centuries ago by the Chinese, but the planetary record for the biggest sausage ever made was long held by bakers in Scunthorpe, England. Some years ago they reportedly made the Great Scunthorpe Sausage from this recipe: “Take up 738 pounds of ground pork and work in cereal to extend the mixture to 896 pounds. Take salt, pepper and sage and season to taste. Blend into mixture and force into 3,124 feet of sausage casing (pig intestines). Will serve 6,248.” However, today *The Guinness Book of World Records* (1998) gives the title to a Canadian butcher shop that in 1995 made a “continuous sausage” 28.77 miles long.

sauterne. This sweet white wine was first recorded in English (1711) as *sauternes*, coming from the Sauternes district near

Bordeaux. But since the late 18th century it has commonly been spelled *sauterne* in both England and the U.S.

savage. The Latin *silvaticus* (from *silva*, “forest” or “man of the forest”) became the Old French *sauvage*, which came into English as *savage* early in the 14th century.

savarin. See BRILLAT-SAVARIN.

Save a sailor! According to an 18th-century superstition, when a glass “rings” in a bar or at a table, a sailor will be drowned—unless a finger is placed on the glass to stop the ringing and someone cries out, “Save a sailor!”

saved by the bell. An expression first used in boxing, *saved by the bell* means to be rescued from something at the last moment. It originally described a fighter about to be counted out when the bell rings ending the round, saving him at least for another round. This practice became mandatory under the Queensberry rules, introduced in 1867.

saving face. See LOSING FACE.

savings bank. Although the term *savings bank* is now used to identify a bank that receives primarily the savings of individuals, as opposed to a commercial bank that caters to businesses, the words were first used to describe a child’s bank made to save coins. These became popular in the United States after the Civil War, when small coins became popular; before then merchant tokens, certificates, and stamps had been more commonly used. The savings banks were fashioned in many shapes, including the ubiquitous PIGGY BANK.

savoir-faire. French for “the ability to do the right or graceful thing.”

saw. The name for this tool perhaps derives ultimately from the Latin *secare*, “to cut,” its first use in England occurring before A.D. 1000. Legend has it that the saw was invented when Perdix, the nephew of Daedalus, picked up the spine of a fish while walking on the seashore and imitated it by notching a long piece of iron on its edge. According to legend, Perdix also invented the compass. The jealous Daedalus tried to push him off a high tower, but the goddess Minerva, favoring ingenuity, changed him into a bird as he fell, and that bird was called the partridge after his name. See PARTRIDGE.

sawbuck. Our word *sawbuck* for a sawhorse (“in which two supports at each end cross each other and so form a rack for holding that which is sawed”) derives from either the Dutch *zaagbok* or the German *Sägebock*, both meaning the same. *Sawbuck* is also slang for a 10-dollar bill. First attested in 1850, it is so named because the Roman numeral X for 10 resembles the x-shapes on each end of the sawbuck.

sawed-off shotgun. A shotgun with its barrels sawed off short; the gun was first used by express messengers in the West.

saxophone. While working in his father’s renowned musical instrument workshop in Brussels, 1840–44, Antoine-Joseph

Sax invented a series of valved brass wind instruments with a new tone quality. These he named the *sax-horn* (which his father Charles actually invented and he improved upon); the *saxophone*; the *saxtromba*; and the *sax-tuba*. Antoine-Joseph, often called Adolphe, left his 10 brothers and sister in Brussels and journeyed to Paris to make his fortune with his inventions. Sax made many influential friends among musicians, including Hector Berlioz, and they helped him to borrow money for a workshop and to promote his innovative instruments. The most lasting of his inventions proved to be the saxophone, although he thought of it as merely a bass instrument, unaware of its true potential. The inventor received many awards in his lifetime, but a poor business sense prevented him from making the fortune he set out to make. He died in 1894, aged 80, just before the *saxophone*, or *sax*, achieved a major role in modern bands.

say it ain’t so, Joe. They said “Shoeless Joe” Jackson, a poor boy from South Carolina, played ball without shoes down home, but he put on spikes when he made the majors and became a great star, his lifetime average of .356 the third highest in the history of baseball. Shoeless Joe never made Cooperstown’s Hall of Fame, though, and never will. Jackson was one of the eight Chicago White Sox players who conspired with gamblers to throw the 1919 World Series, after which he was banished from baseball for life. After confessing his role in the affair on September 28, 1920, Jackson walked down the steps of the Cook County Courthouse through a crowd of reporters and a ragged little boy grabbed his sleeve and said “Say it ain’t so, Joe.” The phrase is still used in reference to any hero who has betrayed his trust, though Jackson denied that the boy said it. See BLACK BETSY.

say it with flowers. See FLOWER.

sayonara. *Sayonara* has become part of America’s vocabulary since after World War II, when thousands of G.I.s were stationed in Japan. But few knew that this is one of the most poignant words for good-bye, its literal translation from the Japanese being “If it must be so.”

Say’s Law. Says Say’s Law: In a capitalist economy “the demand for products is equal to the sum of the products.” Formulated by the French economist Jean-Baptiste Say (1767–1832) in his *Traité d’économie politique* (1803), the theory holds that “a nation always has the means of buying all it produces,” and a “general glut” of products on the market is impossible, though there can be overproduction of one or more commodities.

scabiosa. Not a very nice name for a pretty flower, *scabiosa* derives from the Latin word *scabies*, for “itch.” The plant was used by the ancients as a cure for certain skin diseases.

scalawag. Undersized, lean, undeveloped cattle that were of little use were called scalawags by American ranchers and farmers in the West toward the middle of the 18th century. The term then came to be applied to disreputable people, rogues, scoundrels, rascals, those who refused to work, and had a special use in the South after the Civil War to describe anyone willing to accept Reconstruction. As for *scalawag* itself, the word remains something

of a mystery. It may derive from the Gaelic *sgalag*, for “a lowly servant or rustic,” but more likely comes from *Scalloway*, one of the Shetland Islands that is known for its dwarf ponies and cattle, which could have been considered worthless. Other suggestions are the Scottish *scurryvaig*, “a vagabond”; the Latin *scurra vagas*, “a wandering buffoon”; and the English dialect *scal*, “skin-disease.” No one seems to know why the word, with so many possible British derivations, is first recorded in America.

scallion. Crusaders returning from the Holy Land probably introduced the word *scallion* to Europe. These small onions were raised in the Palestinian seaport of Ascalon, now just ancient ruins, and had been named *Ascalonia caepa*, “Ascalonion onion,” by the Romans. This was shortened to *scalonia* in the common speech of the Romans and passed into English as *scalyon*, which finally became *scallion*. See also ONION.

scalp. To remove the scalp of the head, along with the accompanying hair, from the heads of enemies as a sign of victory, a practice of some Indians and whites during the colonial and frontier periods of U.S. history.

scam. *Scam*, for “a scheme to swindle, rob, or deceive,” seems to have originated as carnival talk late in the 19th century. Possibly a variant of “scheme,” it may also derive from the British slang *scamp*, meaning to rob a person on the highway, which dates back to the 18th century, or to the British slang *scamp*, meaning a cheat or swindler, recorded in the early 19th century and obsolete by about the time *scam* was born.

Scandahoovian. A humorous, mildly derogatory name for a Scandinavian. It is first recorded over a century ago in the American Midwest. See NORSKIE.

Scandinavian words in English. The Vikings, who conquered nearly half of England, the Danelagh, and were later absorbed into the population, contributed thousands of words to the English language—at least 1,500 places in England have Scandinavian names. Words that we owe to their northern Germanic language include: steak, knife, law, gain, birth, dirt, fellow, guess, leg, loan, seat, sister, slaughter, thrift, trust, want, window, flat, ill, loose, low, odd, tight, weak, call, die, egg, get, lift, rid, same, scare, though, till, both, husband, skin, hit, happy, rotten, ugly, wrong, and fell.

a Scarborough warning. To strike someone first and warn him about his behavior afterward. The expression dates back to 1557, when Thomas Stafford captured Scarborough Castle in Yorkshire and *then* ordered all the inhabitants to leave the town.

scarcer than hen's teeth. Nothing is scarcer because not even Ripley has found a hen with even a single tooth. The Americanism, which also means nonexistent, probably goes back to Colonial days, though it was first recorded in 1862.

scarecrow. See CROWHERD.

Scarface. A few movies, a few books, and a plethora of newsprint has been spent on U.S. mobster Al Capone (1899–

1947). Scarface, or Big Al, personally murdered at least 25 men, including five or so brained with a baseball bat. He was also responsible for Chicago's infamous St. Valentine's Day Massacre. Capone got the three jagged scars on the left side of his face from fellow mobster Frank Galluccio, after he insulted Galluccio's sister. Scarface is said to have died, half mad, of syphilis.

scarlet Indian. John Josselyn explained this term in his *Account of Two Voyages to New England* (1674): “[Any woman] suffering an Indian to have carnal knowledge of her [was forced to] wear the figure of an Indian cut out of red cloth.” See also SCARLET LETTER.

scarlet letter. The first mention of people being forced to wear a scarlet capital letter *A* that branded one as an adulterer is reported in the *Plymouth Colonial Records* (1639): “The Bench doth therefore censure the said Mary . . . to wear a badge upon her left sleeve.” The letter *I* was used for those found guilty of incest. See also SCARLET INDIAN.

scat. Scat has three meanings: (1) to leave hastily, as in scat!, scat! Get out of here! Its origin is unknown; (2) to perform jazz singing, its origin also unknown; and (3) excrement, animal dung, which derives from the Greek *skat*. See also SCATOLOGY.

scatology. *Scatology* derives from a Greek word meaning “dung knowledge” and is used in pathology to mean “diagnosis by a study of feces.” It is commonly applied today to obscene or bawdy literature, films, and dramatic performances.

scavenger's daughter. Like the earlier EXETER'S DAUGHTER, this vicious instrument of torture was introduced by an officer of the Tower of London. It consisted of wide iron manacles on which screws were tightened until the victim's head was clamped so tightly to his knees that blood was forced from his nose and ears, and sometimes from his hands and feet. Invented by Sir William Skeffington, lieutenant of the Tower during the reign of Henry VIII, it was first called *Skeffington's gyres*, or *irons*, and came to be called jocularly the *scavenger's daughter*, which both insulted the inventor and was more descriptive.

the scene opens. These words have been used to mark the beginning of a play or a scene in a play since at least 1673, when they were recorded in Elkanah Settle's melodrama *The Empress of Morocco*. It is also written as “the scene is opened.”

scenery-chewing. Acting melodramatically, overacting, a term dating back in the theater to the 18th century, as in “Caspar W. Weinberger is played by the always superb Colin Feore . . . with an understated realism that stands out among much scenery-chewing.”

Schadenfreude. A German word that is part of many English vocabularies, *Schadenfreude* means “joy gotten from someone else's misfortune.” Deriving from German *Schaden*, “harm,” plus *Freude*, “joy,” the word came into English about 1890, apparently filling a need.

schedule. This word is often pronounced “shedyule” or something similar by the British and “skedule” or something similar by Americans. One story has an affected American actor entertaining a circle of admirers at a party that included the inimitable American wit Dorothy Parker. The actor kept advising his sycophants of how busy he was, continually referring to his crowded schedule, which he pronounced “shedyule” in the British manner. “If you don’t mind my saying so,” an annoyed Miss Parker finally said, “I think you are full of skit.”

Schenectady. An old joke has it that the town of Schenectady, New York, was so named after a raiding party of French colonials and Iroquois Indians massacred 60 English residents of the town in February 1690. The town’s name, according to the story, comes from an Indian word meaning “skin neck today.” The massacre did occur, but there is no such Indian word and the origin of *Schenectady* is unknown.

Schicklgruber. See FÜHRER.

Schick test. While a professor of pediatrics at the University of Vienna in 1913, Dr. Bela Schick devised the famed *Schick test*, a skin test to determine susceptibility to diphtheria. His test consists of injecting diphtheria toxin into a person’s skin, the skin becoming red and swollen if the person is not immune. Dr. Schick, born in Hungary, immigrated to the United States in 1923, becoming a naturalized citizen six years later. A pediatrician for many years at New York’s Mount Sinai Hospital, he did important work on allergies, wrote several books on child care, and helped found the American Academy of Pediatrics. He died in 1967, aged 90.

the Schilder technique. Dr. Herbert Schilder, who died in 2006, age 77, might be called the Father of Root Canal. His Schilder technique made it possible to save many thousands of teeth badly damaged by infections.

Schillerlocken. *Schillerlocken*, a German fish dish named after the hair of a poet, is curled chips of smoked fish commemorating the curly locks of the poet Johann Christoph Friedrich von Schiller. Schiller (1759–1805) was one of the founders of modern German literature; only Johann von Goethe overshadowed him in his time. Schiller was a great favorite of the German people, and the wide popularity of his works led to the affectionate word made from his surname and *Locken* (“curl”).

Schindler. Oskar Schindler’s name has come to mean someone who risked his life to save Jews from the Nazi concentration camps. Schindler (1908–74) was a German manufacturer who in 1944 employed Jews in his Cracow enamelware factory and his armaments factory in Czechoslovakia, saving the lives of over 1,200. Later, the movie *Schindler’s List* (1993) made him famous. His name has wide currency. For instance, the Japanese diplomat Chiune Sugihara, who risked his life to save more than 10,000 Jews fleeing Germany, has been called the Japanese Schindler.

schipperke. The breed of small dogs with thick black coat and erect ears takes its name from the Dutch word for “little

boatman” or “skipper.” The dogs were once commonly used as watchdogs aboard ships in the Netherlands and Belgium.

schisma. Today we wouldn’t name even a Fowler anything like “Jacob the Scourge of Grammar,” as Giles Jacob (1686–1744), author of the *Lives and Characters of English Poets*, was called in his day. Yet the Scourge himself wouldn’t have contradicted German Emperor Sigismund, (1366–1437), who like Caesar considered himself above grammar. This story is told of Sigismund in Carlyle’s *Frederick the Great*: “At the Council of Constance, held in 1414, Sigismund used the word *schisma* as a noun of the feminine gender (*illa nefanda schisma*). A prig of a cardinal corrected him saying, ‘Schisma, your highness, is neuter gender.’ Whereupon the emperor turned on him with ineffable scorn, and said ‘I am king of the Romans, and what is grammar to me?’”

schizocarp. The “wings” or “helicopters” on maple trees that spin like pinwheels when you toss them into the wind, and which you may have attached to your nose when you were a kid, are technically called schizocarps. *Schizo* means “split,” and the scientific definition for a schizocarp is “a dry dehiscent fruit that at maturity splits into two or more one-seeded carpels.” “Wings,” or “helicopters,” is better.

schlemiehl; schlemihl. Nothing ever turns out right for the awkward and unlucky *schlemiehl*. The word, by now common American slang, comes from the Yiddish *shelumiel*, “one who is worthless,” which is said to derive from the name of the first Shelumiel mentioned in the Bible. Shelumiel appears four times in the Book of Numbers as the son of Zurishaddai and the leader of the tribe of Simeon. Nothing is said about him except that he is the leader of 59,300 people and makes an appropriate offering for the dedication of the altar at the Lord’s command, but it has been suggested that Shelumiel lost in battle all the time while the other tribal leaders were victorious. Be that as it may, the word *schlemiehl* got a boost from the allegorical tale *Peter Schlemihls Wunderbare Geschichte* (The wonderful story of Peter Schlemihl), written by the German botanist and poet Adelbert von Chamisso in 1814. In the story the impecunious Peter Schlemihl makes a foolish bargain with the devil, selling his shadow for a never-empty purse and finding himself an outcast from human society because he has no shadow. Through this story, which was translated into many languages and virtually became legend, *schlemihl* came to mean anyone making a foolish bargain, both living a life of its own and reinforcing the meaning of the earlier *schlemiehl*.

schlep. This Yiddish word has become part of the American vocabulary, meaning either “to lug around” (He schlepped the package all the way from Jersey), or “to move in a slow, awkward, or tedious manner.”

schmaltz. In Yiddish *schmaltz*, from the German *smaltz*, is chicken fat, a common, sticky, and greasy substance that gives its name to anything common and stickily sentimental.

schmo; shmoo. Though some authorities mark its origins unknown, this word for a stupid, foolish, or boring person, first recorded in about 1945, may be a shortened euphemism

for the stronger, obscene Yiddish word *shmuck*, which can mean either a jerk or a detestable man. The word became popular at about the time cartoonist Al Capp created an egg-shaped, much-abused creature called a *shmoo* for his comic strip *L'il Abner*.

schmuck. One wouldn't think *schmuck* is an obscene word, judging by its common use in America. *Schmuck* is Yiddish for "penis," deriving somehow from a German word meaning "ornament," and has come to mean a stupid, obnoxious person, of whom there are apparently enough to make *schmuck* one of the best-known Yiddish expressions.

schnauzer. Bred for over five centuries in Germany, this breed of dog takes its name from the German word for "growler."

schneider; Schneiderian membrane. The only Schneider I can find whose name became a word is the German C. V. Schneider (1610–80), for whom, as a result of his anatomical researches, the Schneiderian membrane, or mucous membrane of the nose is named. But there may be a case for the gin rummy *schneider*: one *schneiders*, or *schneids*, an opponent in gin rummy by winning before one's opponent has scored any points. Did some gin champion named Schneider do this so often that the feat came to be named after him? Or does the word derive from the German *Schneider*, "tailor," as most scholars believe? The term is apparently an Americanism, in use only since about 1940. Perhaps the term derives from "tailor" because tailors cut clothes down and *schneiders* cut down the size of the loser's bankroll!

schnook. A person timid and ineffectual, someone usually pitied rather than disliked. In fact, a schnook can be quite likeable. The Yiddish expression comes from German *schnucke*, "little sheep."

schnorrer. Take your choice from an impudent beggar, a moocher, a sponger who acts as if it's one's duty to give him money, a haggler, a habitual bargain hunter, a cheapskate, or a chisler. *Schnorrer* can mean all these things and more. The word is Yiddish, probably from the German verb for "to beg."

schnozzola. This word for the nose, especially a large nose, was popularized by American comedian Jimmy Durante, who was called the Schnozzola or the Schnoz after his considerable proboscis, the most famous nose on the stage since that of CYRANO DE BERGERAC. The word comes from Yiddish *shnoz*, which derives from the German word for "snout."

schooner. "Oh, how she scoons!" an admirer is supposed to have exclaimed when Captain Andrew Robinson of Gloucester, Massachusetts, launched the first vessel of this kind back in 1713 as she glided gracefully over the water. Robinson, overhearing the remark, called his ship a *scooner*, which came to be misspelled *schooner* within a year. *Scoon* itself probably derives from the Scottish *scon*, "to skip a flat stone over the water," as in the game ducks and drakes.

schwa. The schwa was a Hebrew letter, or Masoretic point, expressing an obscure vowel, such as the vowel in the second

syllable of the English *linen* or *button*. It became the name of such a vowel in modern languages, as well as the phonetic symbol (ə) for such a vowel.

Schweinfurt green. See PARIS GREEN.

sciamachy. See SQUIRREL.

science prizes. Prizes that put literary prizes to shame. The Fields Medal, for example, the mathematics equivalent of the Nobel Prize, awards \$1 million to winners. So does the Clay Mathematics Institute in Cambridge, Massachusetts (*New York Times*, August 15, 2006).

scientist. The word *science*, from the Latin *scientia*, "knowledge," is recorded in English as early as 1340, but the word *scientist* didn't make its appearance until five centuries later, in 1840, when it was invented by William Whewell in his book *The Philosophy of the Inductive Sciences*. Wrote the English scholar: "We need very much a name to describe a cultivator of science in general. I should incline to call him a Scientist."

sci-fi. A term invented and financed by Forrest J. Ackerman, "one of science fiction's greatest fans."

sciolist. See JACK OF ALL TRADES AND MASTER OF NONE.

scold. The best that word detectives have been able to do with this word is to trace it to the Old Icelandic *skald* for a poet. The guess here is that the *skalds* or poets in question were often poets who wrote biting, scolding verse.

scone; high tea. News about the proper pronunciation of scone. R. W. Apple Jr. reports in the *New York Times* (June 11, 2003) that the name of the delicious treat "rhymes with 'prawn,' not with 'bone.'" Mr. Apple also points out that "contrary to widespread American belief, afternoon tea . . . is not 'high tea.' High tea is a heartier, working-class meal usually served about 6 P.M."

scoots; scootberry. *Scoots* was 19th-century American slang for diarrhea (which sent one scooting to the outhouse), and because the sweetish red berries on the shrub *Streptopus roseus* almost always acted as a physic on youngsters who eagerly ate them, the plant was named the *scootberry*.

scorch; scorched-earth policy. The practice of invaded countries retreating before the enemy and burning all the land in his path, leaving nothing for his troops is as old as war itself, but it was first called the scorched-earth policy at the time when the Japanese invaded China in 1937. It became more familiar when the Nazis invaded Russia in World War II. *Scorch* as a cooking term, by the way, derives from the Old English *scorkle*, which at first meant to skin meat by searing.

score. See ACCORDING TO HOYLE.

scorpion. Confine a scorpion in a circle of fire and it will commit suicide, stinging itself to death. A good story but not

true. In addition, the true scorpion is immune to its own venom. The American lizards often erroneously called scorpions are harmless. True scorpions are cannibalistic, but they do care for their young, carrying the newborn on their backs for about a week after birth.

scotch. “If a body could just find out the exact proper proportion and quantity that ought to be drunk every day, and keep to that, I verily vow that he might leave forever, without dying at a, and that doctors and kirkyards would go out of fashion.” These were the words of a pioneer sage of Dufftown, Scotland on the benefits of Scotch whiskey, which has a base of malted barley and was first made in Scotland. The national name *Scotch* is used to describe many things, often referring to the penuriousness traditionally attributed to the Scottish, *scotch* itself sometimes meaning tight-fisted.

scotch a rumor. The people of Scotland weren’t particularly noted for *scotching* or suppressing rumors—no more than anyone else. The expression is actually rooted in the Old French word *escocher*, “to cut.”

Scotch Tape. *Scotch* in the trademarked adhesive tape’s name refers to the supposed fugality of Scottish people. It seems that 3M (the Minnesota Mining and Manufacturing Company) supplied masking tape to garages where cars were custom painted. To save money the company limited the adhesive coating to just a slight area on each side of the tape. This caused the tape to fall off and led to at least one garage owner telling 3M salesmen in no uncertain terms never to bring him that cheap Scotch tape anymore. The company mended its ways, and fully coated Scotch Tape became famous.

scot-free. Like *hopscotch*, this term for “absolutely free” has no connection with frugal Scotsmen. A *scot* or *sceot* was a municipal tax in 12th-century England and someone who went *scot-free* was one who succeeded in dodging these taxes. Later the term was given wider currency when *scot* was used to mean the amount that one owed for entertainment, including drinks, in a tavern—anyone who had a drink on the house went *scot-free*. The *scot* in the expression here was reinforced by the fact that all drinks ordered in taverns were *scotched*, or marked on a slate, enabling the landlord to make a reckoning of how much a person owed.

Scotland Yard. Scotland Yard, famous in the annals of crime and crime fiction, stands on the site of, and was named for, an ancient palace used by the Scottish kings when they came to London once a year to pay homage to the English sovereign.

Scottish Play. For some reason lost to history, actors consider it unlucky to mention the title *Macbeth*. Instead, they call Shakespeare’s tragedy “the Scottish Play.”

scour. To clean, polish, or clear an area of weeds. Abraham Lincoln used the word in a different way, a way which isn’t in the dictionaries anymore. *Scour* was a word he used to express the conviction that something lacked merit. After delivering the Gettysburg Address (1863) Lincoln turned to Ward Lamon and said “Lamon, that speech won’t scour! It is a flat failure, and the

people are disappointed.” This of a two-minute speech that will live as long as there are speeches. As for the audience, they were simply too deeply stirred to react.

Scouse. Someone from Liverpool, England. From *lobscouse*, a word referring to a stew often served to sailors, many of whom come from the port of Liverpool. Scouse (which rhymes with *blouse*) is also the name of Liverpool’s Scouse dialect, made famous by the Beatles.

Scovilite. One of a band of Carolina thieves put down by the Regulators. According to Joseph Johnson, *Traditions in the South* (1851): “The culprits . . . appealed to the royal governor for protection, and he sent a commissioner among them to adjust their differences. This was Colonel Scovil, who, instead of redressing the grievances on both sides, armed the depredators and paraded them for battle; they were, consequently, called Scovilites.”

scow. *Scow* is another word born in America; its parent is the Dutch *schouw*, “a large flat-bottomed pole boat or river boat,” which, through a mispronunciation, became *scow*. Usually serving as a ferryboat or lighter in the beginning, the scow first entered the language in the mid 17th century and is first recorded in 1669. *To scow* meant to cross a river by scow and America has since known cattle, dumping, ferry, mud, oyster, snag, sand, steam, stone-trading, and garbage scows.

Scrabble. The word game’s name was coined by unemployed architect Alfred Mosher Butts when he invented the game in 1931. *Scrabble* he said, stood for players “digging” for letters, part of game strategy. Two to four players in this popular game use counters of letters with various point value to build words on a playing board. The highest competition score in the game is 1,049, a record set in 1989.

scram. *Scram*, which gives us the pig Latin *amscray*, meaning the same—BEAT IT!, “get out of here!”—is thought by some semantic Sherlocks to be a shortening of *scramble*, but more likely it comes from the similar German slang *schrammen*. It is first recorded as underworld and circus slang at the turn of the century.

Scratch; Old Scratch. Although the name is featured in Stephen Vincent Benét’s “The Devil and Daniel Webster” (1937) as a name for the devil, *Scratch* or *Old Scratch* is a much older term, deriving from Scandinavian *skratta*, “monster” or “goblin.” Other “Old” names for the devil include Old Nick, Old Harry, Old Gentleman, and Old Serpent, but the origin of these cognomens is unknown.

screeched. Said to be the longest one-syllable word and a high score word in Scrabble. Invented by unemployed architect Alfred Mosher Butts during the Great Depression, Scrabble has become one of America’s most popular word games.

screw. The screw used in woodworking takes its name from a pig, of all things, deriving from the Latin *scrofa*, “sow.” The threads on a screw coil resemble a sow’s tail; hence the word.

Additionally, according to one theory, *screw*, for sexual intercourse, comes from the Latin *scrofa*, which was melded with another Latin word, *scrobis*, meaning “ditch” but also used as Latin slang for the vulva—these two words yielding our word *screw*, for “to copulate.” Partridge and others believe that *screw*, first recorded in the early 19th century, is associated with the idea of stealing sex from a woman, giving the word’s probable ancestor as the earlier British slang *screw*, for “a robbery effected with a skeleton key.” Lastly, as underworld slang for a prison guard dating back to the mid-19th century, *screw* was suggested by someone harsh and brutal, one who used thumbscrews on prisoners.

screwball; screw loose. “King Carl!” Hubbell’s famous screwball, which he introduced in the early 1930s, is probably responsible for this expression meaning an eccentric person. The New York Giant pitcher used his screwball in winning 24 games in a row, pitching 46 consecutive scoreless innings, and, most amazing of all, striking out in order the greatest concentration of slugging power ever assembled—Babe Ruth, Lou Gehrig, and Jimmy Foxx—in the 1934 All-Star game. Hubbell’s erratic pitch obviously got a lot of publicity in the sports pages. Since it corkscrewed crazily as it approached the batter and you never knew how it was going to break, it was inevitably compared with an unpredictable, erratic, eccentric person, helped by the expression *he has a screw loose* (“is a little unhinged”), common since the 1860s.

screwed hay. Hay that is baled in coils rather than rectangular bales. Not as common in certain areas.

The Screw Plot. According to the traditional story, in 1708 conspirators tried to kill England’s Queen Anne by removing the screw-bolts from certain huge beams in St. Paul’s Cathedral so that the roof would fall in on the queen and her party and kill them while they worshiped. Apparently, not enough screw-bolts were removed and the roof didn’t cave in.

scribblement. Careless or meaningless writing. Ultimately from the Latin *scribere*, to write. Disraeli claimed that his great political rival Gladstone couldn’t write: “Nothing can be more unmusical, more involved or more uncouth than all his scribblement.”

scrimmage. The football term *scrimmage* for the action that takes place between two teams from the moment the ball is snapped until it is declared dead is related to the military *skirmish*, for a brief fight. *Scrimmage* is a variation of the latter word, which originally referred to a medieval sword fight. A *scrimmage* can also be a practice game played by two teams.

scrimp. To economize severely. The word was possibly introduced from England’s Essex dialect, but may have been Scandinavian in origin.

scrimshaw. Up until relatively recent times sailors on long voyages would often spend their spare time carefully carving whalebone, shells, or ivory into decorative and useful objects, ranging from clothespins to elaborate canes and jewelry boxes. This intricate work was called *scrimshaw*, a word whose origins

are rather vague. *Webster’s* traces *scrimshaw* to the French *escrimer*, “to fight with a sword,” in the sense of “to make flourishes,” while other dictionaries suggest *scrimshank*, English military slang for “to evade duty, be a shirker.” Just as many authorities believe the word comes from the proper name Scrimshaw, referring to some once-illustrious sailor-carver noted for his craftsmanship. But Scrimshaw, if he did exist, hasn’t been identified. *Scrimshaw* work was also called *skrimshander* and today it can mean any good piece of mechanical work.

scriptorium. The ancient Greeks had commercial scriptoria that copied texts for a price and sold texts, but these “publishing houses” were not called *scriptoria*. This word from Latin *scribere*, “to write,” wasn’t recorded until medieval times, when it described a room in a monastery where manuscripts were stored, read, or copied. When the *Oxford English Dictionary* was being compiled, its editor, Sir James Murray (1837–1915), called an iron outbuilding in his Oxford garden the Scriptorium. He used it as a study, and in it were stored millions of reference slips for that great work.

scrod. Deriving from the Middle Dutch *schrode*, *scrod* means a strip or shred. New England scrod is immature cod or haddock weighing one and a half to two and a half pounds. Sometimes the term is applied to cusk of about the same weight, or to pollack weighing one and a half to four pounds. When fishermen use the word, they are usually referring to gutted small haddock.

Scrooge. Old Scrooge in Dickens’s *A Christmas Carol* (1843) is not given any credit in the language for eventually becoming a genial old chap at the tale’s end; his name still means a miserly, mean old man (and, sometimes, woman). Incidentally, Scrooge may well be a real English name. Dickens, like Balzac, was in the habit of collecting real names to use in his stories. As Joseph Shipley has pointed out, Scrooge is an apt name for the character, suggesting someone always ready “to put the screws on.”

scroop. A harsh, grotesque sound, as in “The gate scrooped as he closed it.” First recorded in about 1780.

scrub team. The English word *scrub*, dating back to at least the 16th century, meant small stunted trees or cattle. In America, by the early 19th century, *scrub* commonly meant “inferior” as well as “dwarf” and by the end of the century was being applied to second-rate college football teams, these *scrub teams* usually “second teams” that couldn’t compare with a school’s “first teams.” *Scrub* for “to wash vigorously” derives from the Middle English *scrobbe* meaning the same.

scuba. *Scuba* is simply an acronym standing for “self-contained underwater breathing apparatus.” Popular since World War II, *scuba diving* has enabled millions to see underwater sights previously the province of a few thousand professional divers.

Scum. Certainly one of the most unusual names of nicknames. Nobody would expect anything from someone nicknamed Scum, and leading British actor Cardonell “Scum”

Goodman (1649–99) provided nothing. Nicknamed Scum since his schooldays, when he was kicked out of Cambridge, Cardonnell, the son of a clergyman, probably had the most reprehensible manners of any actor who ever trod the boards. Once he fatally stabbed a fellow actor in an argument over a shirt the two men shared—Goodman wanted to wear it out of turn. On another occasion he was fined for trying to poison the two older sons of his mistress, the duchess of Cleveland, by whom he had a son of his own—apparently to get the two boys out of the way so that his own son could inherit her fortune. Later, he turned highwayman but was soon caught. James II pardoned him, and Scum returned the royal favor by becoming involved in a plot to kill William II. Scum Goodman finally fled to Paris; a British syndicate paid the scoundrel an annual pension to remain there for the rest of his life.

scunner. A deep dislike, an aversion; originally a Scottish dialect word. “I took a scunner to him right off.”

scuppernong. *Scuppernong* is the popular name for the muscadine grape (*Vitis rotundifolia*). Grown in the southern United States, it has large sweet fruit often used to make scuppernong wine. The name derives from the Scuppernong river and lake in Tyrell County, North Carolina, where the grape was discovered in the 18th century.

scuttlebutt. Corrupted to *scuttle* in English, the Old French word *escoutilles* first meant the hatch on a ship, then meant the hole or hatchway in the hatch, and finally was used as a verb meaning to open a hole in a ship in order to sink, or *scuttle*, her. The cask, or *butt*, for drinking water on ships was called a *scuttlebutt* because it was a *butt* with a square hole cut in it, and since sailors exchanged gossip when they gathered at the scuttlebutt for a drink of water, *scuttlebutt* became navy slang for gossip or rumors, in about 1935.

scuzzy; scuz. *Disgusting* gives us this relatively recent adjective, which was first recorded in 1969 and means “dirty, grimy, disgusting, awful.” A scuz is simply someone who is scuzzy. Another theory states this Americanism is a blend of *scummy* and *fuzzy*.

sea. The Old English poets used over 30 words for sea (and 27 for ship), as befits bards of an island nation. *Sea*, however, has lasted in the language. *Sea* is an earlier English word than OCEAN and is first recorded in *Beowulf* in the 10th century, its origins doubtful, though it may derive ultimately from the Greek *huei*, “it rains.” Today it often represents any large expanse of water more or less enclosed, but it originally had the same meaning as *ocean*.

Seabees. In World War II special navy construction battalions built airstrips or runways on many Pacific islands, among other duties. Their name, *Seabees*, is a phonetic acronym from the initials CB, Construction Battalion. The C was spelled “sea” because they were navy men.

seacoasts in Bohemia. The expression is used in referring to errors made by authors, deriving from *The Winter’s Tale*, where Shakespeare writes of a vessel “driven by a storm on the coast of

Bohemia,” although Bohemia has no seacoast. Shakespeare made a number of such errors, as have many writers. In *Robinson Crusoe* Defoe has his hero swim naked to a wrecked ship and then put biscuits he finds there into his pockets. As for Shakespeare again, the most recent research reveals that he did not blunder, as is so often asserted, when he wrote of a seacoast in (landlocked) Bohemia. According to one biographer, “Under King Premysl Ottocar II (1258–78) the kingdom of Bohemia stretched to the Adriatic Sea, and in 1526, upon the accession of the first Hapsburg to the throne of Bohemia, the realm of the king of Bohemia comprised the archduchy of Austria, which bordered the Adriatic Sea between the territories of the Venetian Republic.”

seagoing bellhops. *Seagoing bellhops*, a contemptuous name given to marines by sailors in reference to their colorful uniforms, is an expression still heard among Navy men. It probably originated in England during the late 19th century.

sea horse. The little sea horse, or *Hippocampus*, as it is known scientifically, swims upright and has a head and an arched, very horselike neck. Sea horses are also unusual in their breeding habits. During mating, the female’s eggs are fertilized by the male as they are shed, but the female deposits them in the male’s abdomen. The male’s pelvic fins are converted into a large incubating pouch that holds the eggs and he carries them about until they are ready to hatch, appearing as if *he* were pregnant.

sea lawyer. Back in 1867 one crusty old salt defined *sea lawyer* as “an idle litigious long-shorer, more given to questioning orders than to obeying them, one of the pests of the navy as well as the mercantile marine.” This term for an argumentative seaman or nautical nuisance given to questioning regulations is still used, and the type is still with us for better or worse. A good example is the officer responsible for the mutiny against Captain Queeg in Herman Wouk’s *The Caine Mutiny*. Because it is so clever and cunning, the tiger shark is also called the sea lawyer, as is the gray, or mangrove, snapper.

seamy side of life. The worst, most degraded side of life. This expression appears to have been suggested by the underside of clothing, where the crude seams, rough edges, and coarseness of the material shows, but another theory holds that the inspiration comes from carpets and tapestries, where the seams or threads of the pattern are visible on the underside. Shakespeare was the first to record the phrase, in *Othello*, where Iago’s wife Emilia says that her husband’s wit has been turned “the seam side without” by someone who has made him suspect her of adultery with the Moor. See COMING APART AT THE SEAMS.

séance. There is nothing mysterious about the etymology of the word *séance*. It derives from the French *séance*, “seat” or “session,” which was used to describe many different kinds of meetings. In about 1845 *séance* was applied for the first time to meetings of people attempting to contact the spirits of the dead.

sea of sand. See GOBI DESERT.

season. *Season* derives ultimately from a Latin word meaning time of sowing, or seedtime. The word was long used for the time of the year when seed was sown, and the division of the year into four separate seasons only dates back to around the 12th century.

season ticket. We often associate this term with modern-day sports events, the season ticket entitling the buyer to attend all that season's games, usually at a reduced rate. But the practice and its name are much older, first recorded in the early 19th century and offered for cultural events, transportation, etc.

seat belt. The designation *seat belt* was originally used on airplanes, the term coined in the early 1930s. However, the seat belt as we know it in cars was originally called a *safety belt*, though its design wasn't very safe. It wasn't until 1959, when Swedish inventor Nils Bohlin designed a safe device, that *safety belt* became *seat belt*. One estimate (*New York Times*, 9/26/02) calculates that Bohlin's "seat belt has saved more than one million lives in the last 40 years." Nils Bohlin died at the age of 82 on September 21, 2002, the same day he was inducted into the Inventor's Hall of Fame in Akron, Ohio, joining Orville and Wilbur Wright, Eli Whitney, and 168 other great inventors.

Seattle. Seathl, a chief of the Duwamish and Suquamish Indians, is remembered by Seattle, Washington, which was named for him in 1853, two years after it was founded as a lumber settlement. Actually, he sold his name to the whites for one dollar, believing that if your name is stolen after you die, you'll roll over in your grave and since the name no longer belonged to him he'd be able to rest in peace.

sea urchin. See URCHIN.

seaweed. *Seaweed* takes its name from Old English *sae*, "sea," and *weod*, "weed." It is generally divided into four groups: blue-green, green, brown, and red, with about 10,000 species in all. Kelps growing along the Pacific coast are the largest and most commercially important of the brown seaweeds, many growing to more than 100 feet long and the giant kelp (*Macro cystis pyrifera*) growing over 150 feet.

secateurs. The British, great gardeners that they are, use this name for what Americans call garden pruning shears. It is pronounced "sek-ah-tours" and derives ultimately from the Latin *secāre*, to cut.

secede. In the sense of "to secede from the United States," *secede* appears to have first been used by Thomas Jefferson in 1825: "Possibly their colonies might secede from the Union."

Seckel pear. See BARTLETT PEAR.

second Adam. See ADAM.

second childhood. When one says somebody is going through his or her *second childhood*, one echoes the words of the Athenian

comic playwright Aristophanes (ca. 448 B.C.–ca. 380 B.C.), who coined the term in his play *The Clouds* (423). Aristophanes also coined *plenty of irons in the fire* (*The Frogs*); *I laughed till I cried*; and *throw fear (caution) to the wind* (*clouds*).

Second Commandment. Second of the Ten Commandments: "Thou shalt not make unto thee any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth. Thou shalt not bow down thyself to them nor serve them." See TEN COMMANDMENTS.

second fiddle. This expression arose in the mid-18th century, meaning to occupy a secondary position and alluding to the second violinist of symphony orchestras, who follows the lead of the first violinist.

second rate. See FIRST RATE.

secret; secretary. Advisers who handled confidential matters in medieval Europe were called *secretarii*, their name itself deriving from the Latin *secretum*, "secret." By 1400, we find the word being written as *secretary*, but it is not until Queen Elizabeth I's time that *secretary* was used as a synonym for a minister or cabinet member of the government. *Secretary* first began to be used in its modern sense of a private assistant to an individual in the early 19th century.

Secretariat. See GEECHIE.

secretary bird. Standing four feet high and a relative of the eagle and hawk, the African secretary bird can kill the most venomous snakes with its taloned feet, striking and then jumping back to avoid being bitten. One would think this powerful wild bird of prey would have a less domestic name, but it was apparently so named because the erectile tuft of long black feathers hanging from the back of its head and nape seemed to resemble the quill pens that secretaries once used.

Secret Service. See c.

secret weapon. A weapon, usually one of great destructive force, often nuclear or biochemical, that a government has classified as secret, sometimes even denying its existence. The term was coined by British suspense and spy novelist Eric Ambler in *The Dark Frontier* (1936).

securities. Though they sometimes aren't, *securities* should always be safe investments, judging by the derivation of the word from the Latin *se* and *cura*, which literally translate as "without care."

sedulous ape. See PLAY THE SEDULOUS APE.

see eye to eye. A biblical phrase that is still widely used. This one, meaning "to agree completely," comes from Isa. 52:8: "For they shall see eye to eye, when the Lord shall bring again Zion."

Seeing Eye dog. Dogs used to guide blind people are called *Seeing Eye dogs*, after the Seeing Eye organization in Morristown, New Jersey, where such dogs have been trained for over half a century.

seeing stars. This expression was probably used much earlier (there is a 1609 quotation that seems to imply its use), but it is first recorded in the 1891 *Century Dictionary*: “To see stars, to have a sensation as of flashes of light, produced by a sudden jarring of the head, as by a direct blow.” The phenomenon results from a change in blood flow to the brain. According to neurologist Dr. C. Boyd Campbell: “Blood supplies nerve cells with oxygen, sugar, and other vital nutrients. Any loss of blood to the brain—easily caused by standing up, an action that forces blood away from the head—deprives the nerve cells of these nutrients. This causes a brief, random firing of neurons, which is interpreted by the brain’s visual cortex as quick flashes of light, or ‘stars.’ The phenomenon is also produced by a blow to the head or by stimulating the eye electrically, both of which alter the normal state of nerve cells.”

seen better days. An ancient expression that may have originated with Shakespeare, meaning something, usually clothing, is old and out of style: “That coat has seen better days.”

see no evil, hear no evil, speak no evil. Typically, three wise monkeys illustrate this proverb, their hands respectively covering their eyes, ears, and mouth. The common saying only dates back to the late 19th or early 20th century.

see red. To see red, “to be roused to violent anger,” comes from the older saying “to wave a red flag at a bull.” The expression became popular in America during this century, deriving of course from the waving of a red cape to rouse the bull in bullfights. No matter that bulls are color blind. The misconception is so widespread and red is so universally associated with violence that the words will be with us long after bullfighting is banned.

seersucker. No “seer” or “sucker” is behind this one. The Persian *shir o shakkar*, literally “milk and sugar,” is the ultimate source for the name of this crimped linen, cotton, or rayon fabric that was first made in India, whence the British began to import it in the early 18th century for summer seersucker suits. *Shir o shakkar* became the Hindu *sirsakar*, which was corrupted to *seersucker* in English.

See Spot run! Many millions of Americans read this and similar memorable lines as their first effort at reading. The words are from the Dick and Jane elementary textbooks that were written by Zerna Sharp, a first grade teacher in Las Porte, Indiana, and were used from the 1940s through the 1970s. The characters in the stories included Mother, Father, Dick, Jane, Spot the dog, and Puff the cat.

see the elephant and hear the owl hoot. To have a good time deep into the night. A variation on the older *see the elephant*, which referred to seeing the elephant at the circus, the elephant not being a common sight to Americans in the 19th century.

see you later. This widespread good-bye is an Americanism first recorded in the early 1870s. There have since been a number of variations on it, such as SEE YOU LATER, ALLIGATOR.

see you later, alligator. British rhyming slang spread to California in the 1850s, and one result was the word *alligator*, which rhymed with and meant “see you later.” Rhyming slang never really caught on in America, and *alligator* in this sense didn’t last long, but the full expression *see you later, alligator* remains with us. There are several variations on the 1960s phrase, including *on the Nile, crocodile* and *in a while, crocodile*.

seiche. A *seiche* is a long wave that sloshes rhythmically back and forth as if in a bathtub as it reflects off opposite ends of an enclosed body of water (usually a bay) when it is disturbed by storms, winds, or tsunamis. In Los Angeles harbor, one of the few major harbors that have seiching or surging problems, seiches cause big ships to move as much as 10 feet, to strain at or snap their mooring lines, and cause damage to piles and to the ships themselves. *Seiche*, a French word, is generally pronounced *saysh*, though people in some regions pronounce it to rhyme with “beach.” The term seems to have been coined by a Swiss scientist and is first recorded in English in 1839.

seize the day. See CARPE DIEM.

seize the moment. To act immediately on one’s impulse, not to delay or procrastinate, take the opportunity while it’s available or you may lose it. See CARPE DIEM.

sekando waifu. A Japanese expression for a mistress or kept woman. The words are a Japanization of English *second wife*. There is no term for *second husband*, but there is the polite *sekkusu furendo*, a Japanization of the English *sex friend*, which means a “lover” and can apply to a man as well as to a woman.

self-help. British author Thomas Carlyle coined the term *self-help*, “the action or faculty of providing for oneself without assistance from others,” in his book *Sartor Resartus* (1833): “In the destitution of the wild desert does our young Ishmael acquire for himself the highest of all possessions, that of Self-help.”

self-made man. This expression seems like it would be an Americanism, and it is, the *O.E.D.* tracing it back to an 1832 speech by a Kentucky congressman. One time a politician colared American editor Horace Greeley at a convention and proudly confided to him that he was a “self-made man.” “That, sir,” Greeley replied, “relieves the Almighty of a terrible responsibility.” But then author Henry Class said Greeley himself “was a self-made man who worshipped his creator.”

self-starter. *Self-starter* has come to mean “someone who doesn’t need much help in performing a task,” who has a remarkable amount of initiative. It is an Americanism dating back to 1894 and originally referred to an attachment for starting a car’s engine without hand cranking.

sell down the river. A universal phrase that has as its source the punishment of a slave by his owner by selling him to a sugarcane plantation on the lower Mississippi, where work conditions were at their worst. The expression appears to have been first recorded in Harriet Beecher Stowe's *Uncle Tom's Cabin* (1852).

sell like hot cakes. Hot cakes cooked in bear grease or pork lard were popular from earliest times in America. First made of cornmeal, the griddle cakes or pancakes were of course best when served piping hot and were often sold at church benefits, fairs, and other functions. So popular were they that by the beginning of the 19th century *to sell like hot cakes* was a familiar expression for anything that sold very quickly, effortlessly, and in quantity.

sell the pass. Irish legend holds that when a regiment of Crotha, Lord of Atha, was holding a pass against the invading army of Trathal, "King of Cael," one of Crotha's soldiers betrayed the pass for money, the invaders were victorious, and Trathal became King of Ireland. This inspired the ancient Irish expression *selling the pass*, "betraying one's own for money or other gain," which became common enough in English, both the expression and the practice.

seltzer. The German *Wasser seltseser*, "water of Selters," gives us the word *seltzer water*, or *seltzer*. Selters, a town in Hesse-Nassau, has long been famous for its effervescent mineral spring.

Semitic. German historian August Ludwig von Schloyer gave this language group its name in 1781, taking it from the name of Shem, a son of Noah described in the Bible as the common ancestor of various ancient peoples who spoke this group of related languages. The principal languages in the group were Hebrew, Aramaean, Arabic, Ethiopic, and ancient Assyrian. Later (ca. 1825) the word was applied to the people who spoke or speak these languages and it has most recently (ca. 1875) been used to refer primarily to Jewish people.

senate. The legislature in ancient Rome consisted of the popular assembly and another group of wise men who were always in their advanced years, because only old men were considered to be truly wise. The latter group was called the *senatus*, or "council of old men," in Latin, this word yielding our word *senate*.

send packing. To dismiss or fire somebody speedily and without ceremony. The phrase dates back at least to the 19th century when Browning used it in *The Pied Piper of Hamelin* (1842). Ernest Weekley, in *An Etymological Dictionary of Modern English* (1921) observes that *pack*, or its equivalent, in many languages is "commonly associated with hurried departure."

send to Coventry. The historic city of Coventry in England may have been built near and taken its name from *Cofa's tree*, in which case the otherwise anonymous Cofa family name is remembered in at least three words or phrases. The most common of these means boycotting a person by refusing to associate or have dealings with him, which is called *sending him to*

Coventry. This phrase is of uncertain origin, arising either because Royalist prisoners were sent to the staunchly Puritan town during the Great Rebellion, or due to the fact that Coventry was at one time so antimilitary that any soldier posted there found himself cut off from all social intercourse, the townspeople even refusing to talk to the troops. The Germans with their devastating bombings laid waste to much of Coventry in World War II, destroying 70,000 homes, all but the great spire of the 14th-century Cathedral of St. Michael, and many other historic sites, which led to the term *to coventrate*—to attempt to bomb a city out of existence. See also TRUE BLUE.

send to the showers. This phrase, meaning "to dismiss or reject someone," is from baseball, where it is first recorded in 1931. In baseball it means to take a failing pitcher out of a game and send in a relief pitcher. Since the pitcher can't play again in that game, he often takes a shower in the clubhouse and changes to street clothes.

senior moment. See BRAIN SKIP.

se'nnight. The Celts, like the Greeks, Babylonians, Persians, and Jews before them, customarily began each day at sunset, this practice giving us the term *se'nnight* for a week, or seven nights. In Genesis, for example, we find the evening coming before the morning in "The evening and the morning were the first day . . ." The same idea gives us *fortnight* (14 nights) for two weeks.

the sensation is momentary and the position ridiculous. A comment on copulation by waspish Professor Charles Townsend Copeland (1860–1952), who taught English at Harvard for many years beginning in 1893, influencing numerous authors (including John Reed and John Dos Passos). Copeland was noted for his beautiful reading voice and brilliant wit. On the subject of a career in journalism for a writer he commented: "Get in, get wise, get out."

sensitive plant. *Mimosa pudica*, the hairy sensitive plant, is so called because its leaves will fold together with sufficient irritation or cloudy weather—this representing one of the most remarkable cases of physiological response in the plant kingdom. It is also known by the terms *humble plant* and *touch me not*.

sentence. A sentence is defined as "a grammatical unit that is syntactically independent and has a subject that is expressed (or, as in imperative sentences, understood) and a predicate that contains at least one finite verb." *Gates of Paradise* by George Andreyevski (Panther, 1957) is a book with no punctuation and technically might be said to be one long sentence. The 1942–43 Report of the President of Columbia University contained a sentence of 4,284 words. Sylvester Hassell's *History of the Church of God* (ca. 1884) has a sentence of 3,153 words (with 360 commas and 86 semicolons) that is regarded as the longest legitimate sentence in a book. James Joyce, William Faulkner, and many other writers have written long "sentences" with no punctuation, but the longest legitimate sentence in a highly regarded literary work is a 958-word monster in Marcel Proust's *Cities of the Plain*.

sent off with a flea in his ear. To be dismissed preemptorily, with no chance for denial or refusal. Someone so dismissed is distressed and restless—and can do nothing about it—like a dog with a flea in its ear. The expression dates back to the 15th century in England and a century earlier in France.

sent up the river. To be sent to prison. First recorded in the 1930s, this term must be much older. *The river* referred to is the Hudson in New York City and *up it*, at Ossining, is Sing Sing Penitentiary, which was founded in 1830.

separate the sheep from the goats. An old expression that has its origins in the New Testament, Matt. 25:32–33, reading: “And before him shall be gathered all nations; and he shall separate them one from another, as a shepherd divideth his sheep from the goats.” It means to divide the good from the bad, the worthy from the unworthy.

sepia. This rich brown color is so named from the cuttlefish, which several centuries ago was widely known as the sepia (from the Latin *sepia*, “cuttlefish”). The inky fluid secreted by the sepia was first used to make a dye of this color.

September; October; November; December. When the Romans introduced the JULIAN CALENDAR, they retained several month names from their old Roman calendar, despite the fact that these months no longer had the same position on the calendar. Thus September, once the Roman seventh month of the year, deriving from the Latin *septem*, “seven,” remained as the ninth month of the year. The same happened with October, deriving from *octo*, “eight,” which became the 10th month; November, deriving from *novem*, “nine,” became the 11th month; and December, deriving from *decem*, “10,” became the 12th month.

the September Night. See BOLIVIA.

Septuagint. Seventy-two men give their “name” to this word. Tradition has it that Ptolemy II, who reigned from 285 to 247 B.C., had the laws of the Jews translated into Greek by 72 scholars, six from each of the 12 Jewish tribes, in a period of 72 days on the island of Pharos. The translation became the earliest Greek version of the Old Testament, later erroneously named the Septuagint from the Latin *septuaginta*, which means 70, not 72. Scholars believe that the translation was made in Alexandria at this time, but not at Ptolemy’s request, not by 72 Jewish scholars, and not in 72 days. Nevertheless, the fable about “the 70” is responsible for the word. The tradition, however, applies only to the Pentateuch; the other books of the Old Testament were translated later. *Septuagint* is often printed as the Roman numeral LXX.

sequin. The Italian gold coin called the *sequin* (based on a Turkish gold coin called a *sequin*, from the Arabic *sikkah*, “coin”) had been known in England since at least the early 17th century. Some authorities say that in the late 1870s the word was transferred to the bright spangles on clothes, but others claim that *sequin* in the latter sense has nothing to do with gold coins and derives from “shining artificial flowers invented by a chemist named Sequin in 1802.”

sequoia. The largest and tallest living things on earth, the giant sequoias of California and Oregon are named for the exalted Indian leader Sequoyah, who invented the Cherokee syllabary, which not only made a whole people literate practically overnight but formed the basis for many Indian languages. Sequoyah (also Sequoya, or Silwayi) was born about 1770, the son of a white trader named Nathaniel Gist; his mother was related to the great king Oconostota. Though he used the name George Guess, Sequoyah had few contacts with whites, working as a silversmith and trader in Georgia’s Cherokee country until a hunting accident left him lame. With more time on his hands, Sequoyah turned his attention to the “talking leaves” or written pages of the white man and set out to discover this secret for his own people. Over a period of 12 years, withstanding ridicule by family and friends, he listened to the speech of those around him, finally completing a table of characters representing all 86 sounds in the Cherokee spoken language. Sequoyah’s system was adopted by the Cherokee council in 1821; one story claims that his little daughter won over the council chiefs by reading aloud a message that they had secretly instructed her father to write down. Thousands of Indians would learn to read and write thanks to Sequoyah’s “catching a wild animal and taming it.” He joined the Arkansas Cherokee the following year, and in 1828 moved with them to Oklahoma after helping to negotiate in Washington, D.C., for more extensive lands. For the rest of his life he devoted himself to his alphabet and the study of common elements in Indian language, translating parts of the Bible into Cherokee and starting a weekly newspaper. Sequoyah was also instrumental in avoiding bloodshed and forming the Cherokee Nation when in 1839 the federal government heartlessly drove other Cherokee to Oklahoma from their ancestral homes in Alabama and Tennessee. He is believed to have died somewhere in Mexico around 1843 while searching for a lost band of Cherokee who were rumored to have moved there at about the time of his birth. It is said that he and his party of horsemen did ultimately find their lost brothers and taught them to read and write. Sequoyah, legendary in his own time among Indians and whites, is one of a few men to invent an entire alphabet adopted by a people.

In 1847, not long after Sequoyah’s death, the Hungarian botanist Stephan Endlicher gave the name *Sequoia sempervirens* to the redwood tree, and it is generally assumed, though not definitely known, that he had the great Cherokee leader in mind. There are three types of sequoias, all conifers. The redwood species mentioned, native to the coast of California and a few miles into Oregon, includes probably the tallest tree currently standing in the world: a sequoia in California’s Redwood National Park that stands 373 feet tall. (The tallest recorded tree of all time is probably an Australian eucalyptus that measured 470 feet before it fell in 1885.)

Another sequoia type is *Sequoiadendron giganteum*, which grows on the western slopes of California’s Sierra Nevada. These are generally called giant sequoias or “big trees,” not redwoods. They are not as tall as their relatives but are the largest plants on earth. Greatest among them, at 274.9 feet tall, is the General Sherman sequoia in California’s Sequoia National Park. This largest of all living things is popularly named for Union Civil War general William Tecumseh Sherman (1820–1891). It would take at least 17 adults with outstretched arms to

encircle this tree, which contains enough timber to make 5 billion matches. From its beginnings as a minuscule seed nearly 30 centuries ago, the massive General Sherman increased in weight more than 125,000 millionfold and in combined height and girth dwarfs any other plant. The General Sherman, 3,000 years old, is also one of the oldest of living things, but a bristlecone pine in California's Inyo National Forest holds the age record: "Methuselah" has endured for more than 4,600 years on the windswept slopes of the White Mountains—since 2600 B.C.

The third sequoia type is the "dawn redwood" or "living fossil," *Metasequoia glyptostroboides*. Discovered growing in China in 1946, these trees are reputedly the ancestors of all sequoias, and their fossil remains date back 30 million to 50 million years. The dawn redwood is now grown in the United States. Incidentally, it is little known that some sequoias have been grown successfully in the East; one grown in Rochester, New York reached a height of more than 50 feet. Adrian Le Corbeau's *The Forest Giant*, translated by T. E. Lawrence (Lawrence of Arabia), is a beautifully written appreciation of the giant sequoia.

serendipity. A desirable discovery made by accident. English novelist Horace Walpole coined the word in 1754, basing it upon a lucky faculty enjoyed by the three heroes of the old Persian fairy tale "The Three Princes of Serendip." Serendip is an old Arabic name for Ceylon (*Sindhalawipa*, "Lion Island").

a serpent in one's bosom. According to legend, a kind Greek shepherd found a frozen serpent and put it under his shirt. The snake revived but bit its benefactor, which gives us this saying for an ungrateful person.

serpent-licked ears. Anyone with serpent-licked ears is said to have the power of seeing into the future. The ancient Greeks believed that both Cassandra and Helenus had the power of prophecy because serpents licked their ears while they slept in the temple of Apollo.

serviceberry. "The blueberry of the northern plains," or "juneberry," was dubbed the *serviceberry* as far back as the 18th century. This name has a touching story behind it. Since its white blossoms appeared almost as soon as the ground thawed in spring, American pioneer families that had kept a body through the winter to bury in workable ground used these first flowers to cover the grave. Covering such graves was the "service" this bush performed.

sesame seeds. *Sesamum indicum* is said to be the oldest herbaceous plant cultivated for its seeds. *Benne*, as these sesame seeds are called in Africa and the South, or *sim sim*, another African name for them, were brought to America on the first slave ships. They have been used for everything from ink to cattle feed to flour to oil, and are a popular ingredient in cookies, crackers, and candies. *Sesamum* is the Greek version of the Arabic word for sesame.

Seth Pecksniff. See PECKSNIFF.

set one's cap at. This phrase most likely goes back to the 18th century, a time when ladies wore light muslin caps indoors as

well as out. When a suitor came to call, a young woman would naturally put on her best cap and wear it at the most fetching angle in order to impress her man and win a husband. This was called *setting one's cap at* or *for* a man, an expression still occasionally heard today.

set the Thames on fire. England's Thames River, that cradle of so many far-flung sea expeditions, is usually pronounced to rhyme with *hems*, not *James*. The name is first recorded as *Tamesis*, circa A.D. 893. To *set the Thames on fire* is an old expression, said of the Rhine and other rivers as well, meaning to do something marvelous, to work wonders, to almost set the world on fire. However, one persistent story claims that the *Thames* in the phrase is not the famous river, but a misspelling of *temse*, a word for a corn sieve in the 18th century. According to this theory, a joke about a farm laborer who worked his temse so hard that it caught fire probably led to this expression for "to do something remarkable." As with so many word derivations, the truth will probably never be known.

the settlement of the West. As Edna Ferber put it in *Cimarron* (1930), "The back and side doors of the dwelling [were] littered with the empty tin cans that mark any new American settlement, and especially one whose drought is relieved by the thirst-quenching coolness of tinned tomatoes. . . . Perhaps the canned tomato as much as anything else, made possible . . . the settling of the vast West. . . ."

Seven Cities. Ancient towns in New Mexico that inspired the Spaniards to explore the Southwest because of their reputed wealth; now thought to be Zuni pueblos, they are also known as the Seven Cities of Cibola.

Seven Deadly Sins; seven virtues. The Seven Deadly (or Capital) Sins are pride, wrath, envy, lust, gluttony, avarice, and sloth, while the seven virtues are faith, hope, charity, prudence, justice, fortitude, and temperance. The latter expression is recorded in English as early as 1320, the former a hundred years before this.

Seven Dwarfs. In the old German fairy tale "Snow White" collected by the Grimm Brothers, the seven dwarfs who help the eponymous heroine have no names. But in Walt Disney's cartoon film *Snow White and the Seven Dwarfs* (1937) they were immortalized and became known to billions as Happy, Sleepy, Doc, Bashful, Sneezey, Grumpy, and Dopey.

Seven Last Words. The Seven Last Words are the last utterance of Christ on the cross. This was also the title of a musical composition by Haydn, written in 1785. The words are "My God, why hast thou forsaken me?" (more strictly, "My God, my God, why hast thou forsaken me?"), recorded in Mark 15:34, and Matt. 27:46, which gives the Hebrew as "Eloi, Eloi, lama sabachthani?" But the *seven last words of Christ* are also considered to be the seven expressions given in the Bible (including this) that are Christ's last words.

seven names of God. Of the many names the ancient Hebrews had for the deity, the seven names of God were those

over which their scribes had to take particular care, the names being: El, Elohim, Adonai, YHWH (Jehovah), Ehyeh-Asher-Ehyeh, Shaddai, and Zebaot.

Seven Sages of Greece. These seven men of great practical wisdom lived in the sixth century B.C. and were philosophers, law-givers, and statesmen. The list of them varies from writer to writer but always includes SOLON, Thales, Bias of Priene, and Pittacus of Mitylene. Among the aphorisms they originated are “Know thyself,” “Know thy opportunity,” and “Nothing in excess.”

Seven Seas. The Seven Seas (the designation became popular when a collection of Rudyard Kipling’s poems was so entitled) are today generally regarded as the Arctic Ocean, Antarctic Ocean, North Pacific Ocean, South Pacific Ocean, North Atlantic Ocean, South Atlantic Ocean, and Indian Ocean. In olden times they were the Mediterranean Sea, the Red Sea, the China Sea, the West and East African Seas, the Indian Ocean, and the Persian Gulf. Someone who has sailed the seven seas has traveled widely.

seven-sided animal; seven-sided son of a bitch. A one-eyed man or woman: “each having a right side and a left side, a fore side and a back side, an inside and an outside, and a blind side.” The expression originated in the late 17th century and lasted until the early 20th. A western U.S. variant was *seven-sided son of a bitch*.

seven sleepers. See DORMOUSE.

seven stages of drunkenness. This wise 19th-century expression defines the stages as verbose, grandiose, amicable, bellicose, morose, stuporose, and comatose.

Seventh Commandment. Seventh of the Ten Commandments: “Thou shalt not commit adultery.” See TEN COMMANDMENTS.

Seventh-Day Adventists. In 1831 New York farmer and preacher William Miller (1782–1849) founded the Protestant sect of Second Adventists, often called Millerites. Convinced from his reading of the Bible that the second coming of Christ would occur 12 years later in 1843, he spread his belief throughout America, attracting many followers who prepared for the end of the world and Judgment Day. When 1843 and then 1844 passed without his prophecy coming true, Miller founded the Adventist Church, whose name was changed to the Seventh-Day Adventists 15 years later. Numbering well over a million members today, their church observes Saturday as the Sabbath (as do Seventh-Day Baptists) and forbids the use of alcohol and tobacco.

Seventh Heaven. The Muhammadan Seventh Heaven, is said to be “beyond the power of description.” There each inhabitant is bigger than the whole earth and has 70,000 tongues that speak 70,000 languages—all forever chanting the praises of Allah. In the Islamic graded concept of Heaven, which also prevailed among the Jews, one goes after death to the Heaven he has earned on earth, and the Seventh Heaven, ruled by Abraham, is the ultimate one, a region of pure light lying above the

other six, the Heaven of Heavens. Anyone in Seventh Heaven is thus in a state of ineffable bliss, having the greatest pleasure possible.

seventh-inning stretch. These words have become synonymous for a brief break from any long period of sitting. They derive of course from baseball’s traditional seventh-inning stretch, which dates back to the late 19th century. One theory credits the ritual to President William Howard Taft, who is said to have stood up to stretch in the seventh inning of a Washington Senator game, prompting the rest of the crowd to follow suit. Better documented is the theory that the tradition originated at a game in 1882 at Manhattan College in New York City. Manhattan College baseball coach Brother Jasper, also the prefect of discipline, instructed restless students in the stands to rise and stretch for a minute in the seventh inning before the game continued. This seventh-inning stretch became a ritual at all Manhattan College games and spread to the major leagues during the 1880s when the college team played exhibition games against the New York Giants in the Polo Grounds.

seven virtues. See SEVEN DEADLY SINS.

seven wonders of the world. The ancient list of the seven greatest man-made structures of the world dates back at least to the second century B.C. They are:

- Hanging Gardens of Babylon
- Colossus of Rhodes
- Egyptian Pyramids
- Pharos of Egypt
- Temple of Artemis at Ephesus
- Mausoleum of Mausolus (Halicarnassus)
- Statue of Zeus at Olympia

See MAUSOLEUM; ISLE OF RHODES.

seven-year itch. Used to describe a husband’s or wife’s urge to stray from his or her mate after seven years of marriage, this expression appears to have been invented by American playwright George Axelrod in his play *The Seven Year Itch* (1952) and further popularized by the film version starring Marilyn Monroe (1955). Word and phrase hunters haven’t been able to turn up any earlier use of the words in a sexual context, although *seven-year itch* had been used to describe a poison ivy itch that supposedly recurred once every seven years.

Seward’s folly; Seward’s icebox. After having been wounded by John Wilkes Booth’s fellow conspirator Lewis Powell at the same time that Abraham Lincoln was assassinated, William Henry Seward recovered and remained in the cabinet of Lincoln’s successor Andrew Johnson as secretary of state. A vigorous opponent of slavery, he had originated the well-known phrases *there is a higher law than our constitution* and *irrepressible conflict*, the last expressing the state of the nation until it became all slave or all free. Seward’s most important work in Johnson’s administration was the purchase of Alaska from Russia in 1867. Very few had the foresight to appreciate his \$7 million acquisition at the time and because Alaska was purchased almost solely due to his determination, although others had made overtures toward buying it before the Civil War, it was widely called *Seward’s folly*, or *Seward’s icebox*. William Henry

Seward died in 1872, aged 71, but the famous nicknames were used long after his death, even when fortunes were being made in Alaskan gold and fur. *Alaska*, from the Aleut *A-la-as-ka*, “the great country,” became the 49th American state in 1959. The Seward Peninsula in West Alaska on the Bering Strait also bears the statesman’s name, and Bering Strait and Bering Sea honor Captain Vitus Bering, a Dane who, in exploring for Russia in 1741, is believed to have been the first white man to visit Alaska.

sex and masterpieces. Charlie Chaplin wrote in his autobiography: “Like Balzac, who believed that a night of sex meant the loss of a good page of his novel, so I believe that it meant the loss of a good day’s work at the studio.” Chaplin was right about Balzac, though Balzac may not have been right about sex and writing, but Balzac did believe that the two acts of love were incompatible and that his writing prowess depended on how much sperm he retained in his body while working. He once “suffered” an uncontrollable nocturnal emission and claimed that it cost him a masterpiece the following day. One story has it that after one of his rare visits to a brothel Balzac could be heard muttering when he left: “Ah, j’ai perdu un livre! J’ai perdu un livre!” (“I’ve lost a book!”) See THE GREATEST OF NOVELISTS.

sex for the students, athletics for the alumni, and parking for the faculty. These, according to President Clark Kerr of the University of California, in a speech delivered at another university in 1958, are “the three major administrative problems on U.S. college campuses.”

sexist. A relative newcomer, based on *racist* and coined in an 11/18/65 speech by Paulette M. Leet, director of special programs at Franklin and Marshall College. *Sexist* refers to a person whose attitude or behavior is based on traditional stereotypes of sexual roles. Said Ms. Leet in her speech: “When you argue . . . that since fewer women write good poetry this justifies their total exclusion [from taking English courses], you are taking a position analogous to that of the racist—I might call you in this case a ‘sexist.’ . . .”

sex-up. An expression I’ve heard but haven’t yet seen collected. It means “to liven up, energize,” as in “Sex-up that speech or they’ll fall asleep.” Of recent origin, the term sounds like a Hollywood or Washington invention. In her book *Start With a Laugh* (2001), Liz Carpenter tells how to write a political speech: “Start with a laugh, put the meat in the middle, and wave a flag at the end.”

sgnik sdneirf. Early Americans liked to spell backwards things that they detested, as in the case of O-GRAB-ME. This was also the case with the expression *king’s friends*, which the Tories called themselves, contemptuous patriots calling them by the derogatory name *sgnik sdneirf*. As for the Loyalists, they called the patriots “rabble.”

shack. The Aztec *xacalli*, “wooden hut,” gives us our word for a miserable hut or shanty. *Shack* came into English in the 1870s, in the American Southwest, via the Mexican *xacal*, or *jacal*, which is pronounced as though written “shacal.”

shaddock. The ancestor of the grapefruit, the shaddock, or pomelo, reached Europe in about the middle of the 12th century from the Malay archipelago. It was called the Adam’s apple at first and didn’t receive its common name until a Captain Shaddock, a 17th-century English voyager, brought its seed from the East Indies to Barbados, where it was grown extensively. The grapefruit (*Citrus paradisi*) is neither a mutation of the thicker-skinned shaddock (*C. grandis*) nor a cross between the shaddock and sweet orange. It was developed in the West Indies and was given its name because it often grows in clusters like grapes. To further complicate matters, the shaddock is sometimes called the forbidden fruit and the grapefruit is called the pomelo in different parts of the world. The pink grapefruit was developed in Florida, as was the seedless variety.

shadow potatoes. An interesting name Fanny Farmer’s *Boston Cookbook* (1909) gives for very thin potato chips.

shag. Mainly British and Australian English slang for “to copulate, have sex with,” probably deriving, as Partridge notes, from *shag* meaning “to shake or toss about,” and first recorded in the late 1700s. The title of the film *The Spy Who Shagged Me* (2000) caused little concern in the United States, where few people know what it means, but the expression is heard more frequently here today. *Shagged out*, slang for very tired, hasn’t yet made it to America. In baseball lingo *shag* means to catch a fly ball hit to the outfield in practice.

shag; a shag on a rock. A shag can also be a large seabird related to the cormorant, and one sitting alone on a rock in the ocean inspired the Australian saying *like a shag on a rock*, “someone who looks utterly alone, even in a crowd.” The bird possibly takes its name from its shaggy crest.

shah. See KAISER.

shahid. Heard during the 9/11 war as an Islamic name for an Al Qaeda fighter or terrorist who dies in action and is granted immediate entrance to heaven as a martyr. See JIHAD.

shake a leg. See SHOW A LEG.

shake and bake. Military slang for the weapon white phosphorus, which illuminates enemy positions, rains flaming chemical balls, clings to anything it touches, and can burn for hours if it makes contact with human flesh. White phosphorus was first used in World War II and has since then caused human casualties, according to some sources. The Pentagon claims the weapon has never been fired at civilians.

shake like an aspen leaf. As the *Canterbury Tales* (1386) attest, Chaucer knew this expression and it was probably used long before him, ever since people first noticed that the delicate aspen leaf trembles in the slightest wind.

Shakespeare. As it now stands, no one really knows how William Shakespeare spelled his name. The seven unquestionably genuine signatures of Shakespeare are very difficult to decipher.

The name is spelled *Shakspeare* on the Bard's own monument, but *Shakespeare* on the tombs of his wife and daughter. Other early variations are *Shakspeare* and *Shagspere* (on his marriage license). In 1869 a Philadelphian named J. R. Wise published *Autograph of William Shakespeare . . . Together With 4,000 Ways of Spelling the Name*. If one of the seven known signatures of William Shakespeare came on the market today or a new one was discovered, it would sell for about \$1.5 million—second only to a “Julius Caesar,” which would be worth \$2 million, according to experts.

Shakespearean. *Shakespearean* means much more than “pertaining to the work of English writer William Shakespeare.” The word has come to represent profound universal magistry and vision in writing, among a veritable dictionary of superlatives. Little is really known about the personal life of the world's greatest poet and dramatist. Shakespeare was born in 1564 at Stratford-on-Avon of substantial middle-class parents, his father being an alderman, and received a solid grammar school education, well above the standards for the times. There is evidence that the Sweet Swan of Avon, as Ben Jonson called him, left Stratford for London to avoid a charge of poaching. He probably acted in the earl of Leicester's company and by 1592 had achieved fame as a dramatist and actor. By this time Shakespeare had acquired property and lived like a gentleman with his wife, Anne Hathaway, whom he had married 10 years previously, and with their children, Susanna and the twins Hammet and Judith. Shakespeare was one of the few writers in his day to win fame and wealth. The Bard of Avon died on his own birthday in 1616, aged 52, in Stratford, where he had retired five years before. Countless stories and speculations surround the dramatist's life, ranging from the spelling of his name—the plentiful variations including Shakspeare, Shakspear, and Shakspeare—to the alleged infidelity of his wife, the identity of the “dark lady” of the sonnets, and the fantastic theory that Bacon actually wrote his plays. Most of these theories are familiar, but none has been proved.

Shakespearean words. The *OED* credits over 500 invented words to Shakespeare. A small sample of these were cleverly arranged in the *New York Times* (11/10/02):

From the “spectacled” “pedant” to the “schoolboy,” all “gentlefolk” recognize Shakespeare as a “fathomless” “fount” of coinages. The “honey-tongued” Bard had no “rival,” nor could he “sate” his “never-ending” “addiction” to “madcap,” “flowery” (or “foul-mouthed”!) neologisms. Even “time-honored” “exposure” cannot “besmirch” our “amazement” at the “countless” and “useful” words that lend “radiance” to our “lackluster” lives. All in a “day's work!”

Many other such coinages can be found throughout this book and in the index.

Shakespeare's words. All of the scripts of Fred Allen's long-running radio show—39 a year—were bound by the comedian and stacked on 10 feet of shelves beside a one-volume copy of the collected works of Shakespeare, which occupied a mere three-and-one-half inches of space. “I did that as a corrective,” Allen explained, “just in case I start thinking a ton of cobblestone is worth as much as a few diamonds.”

shako. A military cap in the form of a cylinder or truncated cone, with a visor and a plume or pompom, the *shako* is also worn in a similar version by members of marching bands. It is another of the few words of Hungarian origin in English, deriving from the Hungarian *ozako*, “a peaked cap,” the original peak on the cap flattened off over the years.

Shall we tap the admiral? Shall we have another drink? According to legend, on the way home from the naval battle of Trafalgar, in which he was killed, Admiral Horatio Nelson's body was preserved in rum, and sailors repeatedly tapped the cask containing his body. See NELSON'S BLOOD.

shalom. *Shalom*, from a Hebrew root meaning “peace,” is an Israeli greeting for both hello and good-bye, Leo Rosten noting that Israelis say they use it so “because we have so many problems that half the time we don't know whether we're coming or going.” See SALAAM; SALEM.

sham. There is a good story about *sham* that merits repeating. One writer in 1734 claimed that “a Town Lady of Diversion [a prostitute] in Country Maid's Cloaths . . . to further her Disguise, pretends to be so *sham'd*.” But her clients discovered after sleeping with her that she wasn't shamed, innocent, or healthy and “it became proverbial, when a maim'd lover [one with venereal disease] was laid up, or looked meagre, to say he had met with a *sham*.” It may be true that *sham*, first recorded in the 1670s, derives from the tactics of some prostitute, but there is no absolute proof of it, though the word almost certainly has some connection with the word “shame.”

shaman. The medicine man or priest called a *shaman* takes his name in a roundabout way from the Sanskrit *sram*, “to exhaust, fatigue,” perhaps in reference to the exhausting epileptic seizures such medicine men often exhibit when working their magic. The English word *shaman* comes from a Greek modification of the Russian modification of the Tungusic *saman*. *Saman* derives from the Prakrit *samana*, “a Buddhist monk,” which comes from the Sanskrit *sram*.

shambles. The Latin *scamellum*, “little bench,” became *scamel* in Old English, changing to *shamel* in Middle English and meaning a butcher's block. *Shamel* became *shambles*, for “a slaughterhouse,” in the 16th century and soon the word was being used to describe any scene of bloody disorder resembling a slaughterhouse, though in recent times *shambles* has come to mean any scene of disorder, not necessarily a bloody one.

shampoo. The thousands of ads plugging various shampoo formulas never mention that the word is one brought back from India, deriving from the Hindi word *champo*, “massage.”

shamrock. A word representing the Irish from the Irish language. *Shamrock* simply means “little clover,” deriving from the Irish *seamrog*, the diminutive of *seamar*, “clover.” The three-leaved plant was used by St. Patrick to illustrate the trinity, which is why *to drown the shamrock* came to mean a drinking celebration on St. Patrick's Day.

shamus. A word for a private detective that probably came into the language of the underworld from Yiddish, in which a *shamos* is the paid caretaker of a synagogue, just as a *shamus* is often a paid caretaker of his clients. Partridge, however, believes that the word derives from the Irish name Seamus, because so many Irish immigrants in America became policemen.

shanghai. The old expression *to ship a man to Shanghai* is the original version of this term. Sailors first used the words to describe how press gangs got them drunk, drugged them, or blackjacked them and forced them in service aboard a ship in need of a crew. Shanghai, a long way from America, was a leading Chinese shipping port, and many a shanghaied sailor did wind up there. *Shanghai* became so common in the 19th century that it was applied to anyone seized or forced to work unwillingly.

Shangri-la. This word, for “a paradise on earth,” came into the language in 1933, when English novelist James Hilton published his novel *Lost Horizon*, which described a hidden paradise named Shangri-la. The name was used during World War II for the secret base from which U.S. planes flew to bomb Hiroshima and Nagasaki. The secret base was Tinian Island in the Mariannas.

shank's mare. See GOING BY SHANK'S MARE.

shanty; shantytown. *Shanty*, for “shack or rough cabin,” is an Americanism first recorded in 1820 that probably derives from the Gaelic *sean tig*, “old house,” though the French Canadian *chantier*, “log hut,” is also a strong possibility. *Shantytown*, recorded in 1845, first meant a cluster of shacks near a railyard where railroad construction workers lived. Because many Irish lived in such shantytowns the term soon meant a poor Irish district, *shanty Irish* (1925) coming to mean poor Irish people who lived in such districts.

sharecropper. A tenant farmer who in exchange for his labor receives certain necessities, such as lodging, and a share of the crop he raises. The sharecrop system dates back to the end of the Civil War in the South; the first sharecroppers were freed slaves.

shariah. Islamic law, seen as deriving from the Koran. The word is Arabic.

shark. Sea sharks take their name from land sharks, rather than the other way around. The German *Schurke*, meaning “a greedy parasite,” gives us the word *shark*, and German sailors applied this term to the sea creature with the voracious land shark in mind. English sailors brought the word home in 1569, the same year that John Hawkins, the first English mariner engaged in the African slave trade, exhibited a huge shark in London. Quickly adopted to describe the killer fish, the word is first recorded some 30 years earlier in English to describe its human counterpart. See also SHRIMP, WHITE SHARK.

Sharps rifle. The Sharps rifle “could be fired today and kill tomorrow,” said quipsters, in reference to the story that one

model could hit a target at five miles. This probably wasn't true, but the rifle—40 different models were made by the Sharps Company between 1840 and 1880—did have remarkable range, power, and accuracy. Hunters called it the “Old Poison Slinger” and it was used extensively in slaughtering the buffalo of America.

shavetail. U.S. Army second lieutenants are called shavetails because they are often untrained and untested, like the mules and horses in the old cavalry whose tails were customarily shaven as a warning to handlers and riders.

Shavian wit. George Bernard Shaw contributed his own name to the language in a characteristically clever way. Not liking the way “Shawian” sounded, he Latinized his name to Shavius and coined the adjective *Shavian* from it, leaving us with a sample of his *Shavian wit*. Shaw died in 1950, aged 94, his wit *Shavian* till the end. However, even he could be bested occasionally. “Isn't it true, my dear, that male judgment is superior to female judgment?” Shaw once asked his wife. “Of course, dear,” she replied, pausing briefly. “After all, you married me and I you.” See also SUPERMAN.

Shawinigan handshake. To give someone a Shawinigan handshake means “to strangle him.” The term comes from the mill town of Shawinigan in Quebec, Canadian prime minister Jean Chrétien's hometown. It seems that the prime minister once “literally wrung the neck of a protester who got close to him at a Flag Day rally in Ottawa” (*New York Times* October 28, 1998), and Canadians took to calling any such throttling a “Shawinigan handshake.”

Shays's Rebellion. See LEFT HOLDING THE BAG.

Shazam! A magic word used by newsboy Billy Batson to change himself into the comic book hero Captain Marvel. Probably the best-known of contemporary magic words, *Shazam!* was the name of a wizard coined from the initial letters of Solomon's wisdom, Hercules' strength, Atlas's stamina, Zeus's power, Achilles' courage, and Mercury's speed. Both Billy and *Shazam!* were introduced in a 1940 Whiz Comics. See ABRACADABRA.

she. *She* for a ship has several explanations, none of them capable of proof. The oldest explanation is that the Romans called all ships *she* because the Roman goddess of navigation was Minerva. Another theory says the feminine is used because a ship was “as near and dear as one's wife or mother,” while a third has it that a ship is “as capricious, demanding, and absorbing as a woman.” Perhaps not so incidentally, *another* ship spotted from the bridge is often referred to as *he*, this possibly referring to the captain of the other vessel, who is usually a man.

Shea Stadium. The New York Mets home field in Flushing Meadows, Queens. Completed in 1964, it is named for attorney William Shea, who was instrumental in getting the stadium built. A new home field for the Mets will open in 2009.

shebang. See WHOLE SHEBANG.

sheeny. Weekley puts a question mark to this anti-Semitic slang word, guessing that it comes “from a Yiddish pronunciation of the German *schon*, beautiful, used in praising (peddler or merchant) wares.” But there is no firm proof here, he further advises. As an offensive word for a Jew, *sheeny* dates back to London’s East End in the early 19th century.

sheep-dipping. In military slang sheep-dipping has nothing to do with real sheep. A character defines the term in Tess Gerritsen’s novel *The Apprentice* (2002): “It refers to the CIA’s practice of occasionally borrowing the military’s operations soldiers for certain missions. It happened in Nicaragua and Afghanistan, when the CIA’s own special operations group—their SOG—needed additional manpower. In Nicaragua, navy SEALs were sheep-dipped to mine the harbors. In Afghanistan, the Green Berets were sheep-dipped to train the mujahideen. While working for the CIA, these soldiers become, essentially, CIA case officers. They go off the Pentagon’s books. The military has no record of their activities.” In days past *sheep-dipper* was a contemptuous name rustlers gave to a cowboy loyal to his employer, the reference to dipping sheep in sheep dip vats filled with disinfectants. Today *sheepdip* can also mean “cheap rotgut whiskey.”

sheet anchor. This name for an emergency anchor has confused etymologists for many years. The best bet is that the word *sheet* here derives from *shoot*. According to this theory, the device was first called a *shoot anchor* because when an emergency came, it had to be “shot” out, that is, dropped quickly. In any event, no lines, or sails, were involved.

sheet anchor to windward. A nautical term that came ashore, this expression has come to mean “to take precautions.” People have a sheet anchor to windward, for example, if they save money for retirement or make sure their house has ample smoke alarms. On sailing ships, the heaviest and best anchor was the amidships sheet anchor. Putting it out to windward often saved ships from being blown onto a lee shore. Making sure one’s ship had a good one was an excellent precaution.

the Sheik. To say silent-screen star Rudolph Valentino was a sex symbol is putting it mildly. Italian-born Rodolfo d’Antonguolla came to the United States in 1913, and after working as a gardener, a dancer, and a bit player in Hollywood, he zoomed to stardom under his stage name in *The Four Horsemen of the Apocalypse* (1921), which was followed by hits like *The Sheik*, *Blood and Sand*, *Monsieur Beaucaire*, and *The Son of the Sheik*. Valentino became the embodiment of romance and sex to women all over the world; after many years his name is still a synonym for a handsome lover. But after his movie successes, Valentino became an object of worship to thousands of females. Women ripped his clothes off in the streets for souvenirs, climbed uninvited into his bed. The crowds were unbelievable wherever he went; once when he took a stroll aboard the *Leviathan* so many women rushed to his side that the captain feared the danger of a disastrous list. The antics of individuals were even more unbelievable. One woman broke her leg climbing into his dressing room, others paid his valet 20 dollars for a vial of his used bathwater. Valentino died of a bleeding ulcer when he was only 31 years old.

More than 50,000 people, overwhelmingly women, attended his funeral in New York in 1926, and even today admirers come to mourn at his crypt.

sheik. *Sheik* must be added to the number of terms such as CASANOVA, LOTHARIO, DON JUAN, and VALENTINO that we’ve treated in these pages. This word for a great lover or lady-killer derives from the name of the Arabian lover played by Rudolph Valentino in *The Sheik* (1921), a film based on E. M. Hull’s novel *The Sheik* (1919).

sheila. One of the best-known Australianisms, *sheila* means “any girl or young woman.” The term dates back to the late 19th century and is also used for a female kangaroo. The word derives from the personal name Sheila, but no one knows if any particular Sheila was the eponym. The name Sheila derives from Irish *Sile*.

shekels. See GELT.

Shell. An old story tells of a Shell gas station on a busy highway where a man has been pulled unconscious from a car wreck. When the man finally comes to that night, the first thing he sees are lights flickering about him and a huge sign in red letters reading HELL. It takes him a moment to realize that he’s still alive and the sign is just a SHELL sign with a malfunctioning letter S. I don’t know a better Shell story, but there is a tale about the British founder of the oil company, Marcus Samuel, naming his London curio shop the Shell Shop after his grandchildren brought him pretty seashells from a seaside vacation. In 1897, when Samuel’s son took over and added bottled kerosene to the shells and other curios sold there, the business expanded greatly, but it retained part of its old name, and the Shell Oil Company, complete with its scallop shell logo, was born.

shell out. From the actual “shelling out” of peas and corn—removing the first from their pods and removing corn from the cob—came the figurative use of *to shell out*, “to pay out.” Removing a seed from the pod, etc., is like taking money out of a purse or pocket and, furthermore, dried shelled peas and “shelled corn,” as it was called in America, were often a medium of exchange in the past. The phrase is first recorded in 1825.

shenango. See LONGSHOREMAN.

shenanigans. Though now it is always used in the plural, this Americanism for “mischief” or “trickery” was first recorded as *shenanigan* in 1855, in California. There have been several suggestions as to its ancestors, including the Spanish *chanada*, “trick,” and the argot German *schinaglen*, meaning the same. More likely it comes from the Irish *sionnachuighim*, “I play the fox,” or “I play tricks.”

shepherd’s sundial. Shepherds used to tell time by the scarlet pimpernel (*Anagallis arvensis*), which opens a bit after 7:00 A.M., closes at a little past 2:00 P.M., and never opens at all if bad weather is imminent. Its genus name is from a Greek word meaning “delightful,” though it is not a delight to one garden

writer, who classifies the low prostrate annual herb with tiny, red bell-shaped flowers as one of the 50 worst garden weeds. *Poor man's weatherglass* is another name for it.

Sheraton style. Only Thomas Chippendale has been more widely acclaimed than Thomas Sheraton (1751–1806) as a furniture designer. Unlike many of his predecessors, Sheraton was not a cabinetmaker and there is no record that he ever had a shop of his own or worked with his own hands building furniture. In fact, only one piece—a glass-fronted bookcase stamped with his initials—is known to have belonged to him. Sheraton's fame comes principally from his *The Cabinet-Maker and Upholsterer's Drawing Book* (1791), which introduced designs noted for simplicity and grace combined with utility. This book, followed by a cabinetmaking dictionary (1802) and an unfinished encyclopedia (1804), was intended for London cabinetmakers and the chairs and other pieces drawn in its pages strongly influenced many designers to adopt the Sheraton style, which was based on rectangular shapes, preferring straight lines to curves.

Sheridan's Ride. General “Little Phil” Sheridan's jet black gelding Rienzi stands stuffed in the Smithsonian Institution today, having won fame comparable to General Robert E. Lee's mount Traveler. Rienzi was ridden by Sheridan in their famous ride to rally Union troops to victory at Cedar Creek in 1864, a breakneck ride of over 19 miles that rivaled Paul Revere's and became one of the most dramatic in military history thanks largely to poet and artist Thomas Buchanan Read, whose romantic (often singsong) narrative poem “Sheridan's Ride” and painting of the same subject glamorized both man and horse. In urging his men to cease retreating and face the enemy, Sheridan is said to have cried: “Boys turn back, face the other way—I am going to sleep in their camp tonight or in hell!” Sheridan always denied he uttered such “profane” words, but he did his denying in puritanical times.

Sherlock Holmes. A. Conan Doyle probably named his detective after sage American author Oliver Wendell Holmes (1809–94), who was also a professor of anatomy and physiology at Harvard. Sherlock Holmes, however, was modeled in large part on Dr. Joseph Bell (1837–1911), an eminent Edinburgh surgeon under whom Doyle studied medicine and who, like Holmes, often deduced the life and habits of a stranger just by looking at him. Doyle once admitted: “I used and amplified his methods when I tried to build up a scientific detective who solved cases on his own merits.” It is said that Dr. John H. Watson, Holmes's Boswell, was intended as a parody of Doyle. In any event, working out of their rooms at 221B Baker Street, Holmes and Watson collaborated on some 60 cases, beginning with *A Study in Scarlet* (1887). In none of these stories did Holmes ever say, “Elementary, my dear Watson,” and although he was addicted to cocaine, the great detective never once cried, “Quick, Watson, the needle!” Today the word *Sherlock* has come to mean a detective.

Sherman's bummers; Sherman's hairpins; Sherman's monuments; Sherman's sentinels. Civil War Union soldiers, often deserters, who looted and burned civilian property, among other offenses, were called “bummers” by Southerners. Many

of them rode on the flanks of Union general William Tecumseh Sherman and were known as Sherman's bummers. Sherman's name also became hated in the form of Sherman's hairpins, the 265 miles of mutilated railroad tracks that General Sherman's troops in their famous March to the Sea heated with fires of railroad ties and twisted into grotesque shapes so that they could not be repaired. These were also called “Jeff Davis neckties” or “Lincoln gimlets.” The general's name was anathema, too, in Sherman's monuments, which referred to the many civilian homes his troops burned to the ground in their march through the South. Often chimneys were the only part of these houses left standing, and Southerners bitterly dubbed them Sherman's monuments as well as Sherman's sentinels. The process of destroying the railroad tracks was described by an engineer on the scene: “The method of destruction is simple, but very effective. Two ingenious instruments have been made for this purpose. One of them is a clasp, which locks under the rail. It has a ring in the top, into which is inserted a long lever, and the rail is then ripped from the sleepers [ties]. The sleepers are then piled in a heap and set on fire, the rails roasting in the flames until they bend of their own weight. When sufficiently heated, each rail is taken off by wrenches fitting closely over the ends, and, by turning in opposite directions, it is so twisted that even a rolling machine could not bring it back into shape.” *See WAR IS HELL.*

sherry. Via an indirect route, *sherry* is still another word that derives from Caesar's name. Sherry is made in Jerez de la Frontera, Spain, for which it was named, and *Jerez* in turn, commemorates Julius Caesar, having originally been called Xeres, this an adaptation of the Latin *urbs Caesaris*, “the town of Caesar.” Sixteenth-century Spaniards pronounced Jerez something like *sherris*, which the English adopted and changed to *sherry* because they believed *sherris* was a plural form. Shakespeare wrote “a good sherris-sack hath a twofold operation in it” in *Henry IV, Part II*, but today the false singular is always used. It is said that when Sir Francis Drake burned the port of Cádiz in 1587, he seized 2,500 butts of sherry from nearby Jerez. Drake called the wine *sack*, according to the old folk story, but the dockers unloading the barrels noted the letters XERES (for Jerez) on them and became the first to use the word *zherry*, or *sherry*.

she-wolf. *See HONEST ABE.*

shibboleth. Perhaps only racial, religious, and national slurs have killed as many men as this word. *Shibboleth* has been extended to signify a catchphrase, especially one used so often that it has lost its effectiveness. But it still means a “password,” which was its original biblical meaning. The word, deriving from the Hebrew *shibboleth*, for “stream in flood” or “ear of corn,” is first recorded in Judges 12:1–16, where the Gileadites used it to pick out the sons of Ephraim from the members of other tribes. Jephthah's men slew 42,000 Ephraimites, who couldn't pronounce the *sh* in the password *shibboleth* and had to say “sibboleth.” *See HULA-HULA.*

shill; shillibeer. London's first buses were introduced from Paris by George Shillibeer (1797–1866) on July 4, 1829. His omnibuses, coaches carrying 22 passengers and pulled by three

horses, immediately caught on in London and were being called “buses” within three years. Apparently, Shilliber later went into the undertaking business, or at least a combined hearse and mourning coach was named the *shilliber* after him. The word *skill*, for “a swindler’s assistant,” a “booster” hired to entice customers, may also derive from his name, especially considering that skills were and are still used to pack tourist buses in order to lure customers aboard. Shilliber’s connection with buses makes him a likely candidate, but there have been other suggestions. One is some notorious skill, probably a circus or carnival employee, surnamed Shilliber. Another possibility is the American humorist Benjamin Penhallow Shillaber (1814–90), who printed Mark Twain’s first work in his *Carpet Bag*, a weekly important in developing the new school of American humor. In 1847 Shillaber created the character Mrs. Partington, which he used in a number of books, beginning with his *Life and Sayings of Mrs. Partington* (1854). Critics charged Shillaber with lifting his character from English politician and author Sydney Smith. The American admitted that he took the name from Smith’s allusion to the legendary Dame Partington, who had tried to sweep the flooding Atlantic Ocean out of her cottage and whom Smith had compared in an 1831 speech with the opposition of the House of Lords to reform. Although Shillaber denied using anything more than the Partington name for his gossiping Yankee Mrs. Malaprop, his own name came into some disrepute and may have become the basis for *shillaber* and then *skill*.

shillelagh. The knobby wooden club, or cudgel, called a shillelagh and used as both weapon and walking stick takes its name from the stout oaks of Shillelagh, a town in southwestern Ireland. Once made only of oak or blackthorn, a shillelagh can now be any thick knarled stick. The name is first recorded in the 17th century.

shilly-shally. A common expression in the 19th century, *shilly-shally* means “to vacillate, to act indecisively, or to hang about doing nothing.” “Stop your shilly-shallying around.” The expression is a variation of “Shall I, shall I?”

shim. A transvestite is called a “shim” in Singapore, the word a conflation of English *she* and *him*. This meaning is not widely known, but a *shim* in American and British English means a thin wedge of wood or metal used in carpentry.

shimose. What word did Masashika Shimonose Kogakubachi give us? Masashika Shimonose Kogakubachi got his name into the dictionaries when he invented an explosive made of picric acid. Shimose powder, or shimose, was used against the Russians in the Russo-Japanese war of 1904–05 and proved highly effective. In France a powder to fill shells was made from it in 1886 and called melenite, while in England experiments in the town of Lydd two years later resulted in the explosive lyddite. All were names for essentially the same explosive, but shimose was the first to be extensively tested in war. Under whatever name you choose to call it, the first modern shell powder—it replaced black powder—has probably caused as much death and destruction internationally as any invention, still being one of the most common military explosives. Perhaps Masashika Shimonose Kogakubachi would rather have had it called by its scientific name of trinitrotoluene.

shindig; shindy. *Shin-dig* is first recorded, in 1859, as a southernism for “a kick in the shins.” It came to mean a loud, lively party within 10 years or so and most authorities believe that the party *shindig* derives from the word meaning a kick in the shins. Another possibility is that the party name comes from the Scottish *shinty*, for “a wild form of field hockey played in Scotland” and, later, in America, *shindy* here possibly suggested by players being kicked in the shins. According to this theory, *shinty* (first recorded in 1771) became *shindy* (1821), a sailor’s word for “a spree, merrymaking” and *shindy* by mispronunciation later became *shindig*. There was, in fact, a U.S. expression *to kick up a shindy*, “to cause a row or commotion,” at about the time *shindig* was born. I would guess that both *shindig* and *shindig* derive from *shinty*—*shindy*.

shingles. This painful nerve disorder “affects 20 to 30 percent of Americans at some point in their lives,” according to one expert. Its name comes from the Latin *singulum* (belt), because the rash mostly appears near the waist.

shinplaster. During the Civil War, beginning in 1862, the North issued paper currency of from 3-cent to 50-cent denominations that were humorously called *shinplasters*. The old story that they were so named because an anonymous soldier plastered his shin wound with them probably isn’t true, because paper money had been called shinplasters as early as 1824. More likely they were dubbed shinplasters because such paper money often became valueless and was good for nothing but plastering the shins.

ship. *Ship* can be traced back to the Old English *scip* or “shape,” evidence that the word *ship* arose when a ship was “no more than a trunk of a tree scooped out and *shaped* to enable it to glide safely and smoothly through the water,” according to one authority.

ship names. There has never been any universal system for naming ships. While the British preferred frightening names such as *Invincible*, *Devastation*, *Shark*, and *Hyena* for their warships, the Japanese have always liked romantic names such as *Siranui* (Phosphorescent Foam) and *Kasumi* (Mist of Flowers). No rigid logic seems ever to have been at work here, although the U.S. Navy did institute a comprehensive system during World War II, prescribing that the classes of ships be named in a certain manner (battleship after states, cruisers after cities, etc.). Many ship names have been used scores of times. The revolutionary British DREADNOUGHT of 1906, for example, was the eighth ship in English naval history to bear that name, and others have used it since. Sailors on even the most strictly disciplined ships often called them by entirely different names; the great *Missouri*, for example, was sometimes jokingly called the *Misery*; the *Brooklyn* was called the *Teakettle*; while the *Salt Lake City* was often called the *Swayback Marie!* In 1982 the U.S. Navy broke an old tradition by naming a ship after a living person, Admiral Hyman G. Rickover, who pioneered the nuclear submarine fleet. As for small pleasure boats, the Boat Owners Association of America reports that the five most popular boat names, in order, are *Security*, *Irish Eyes*, *Island Time*, *Sea Spirit*, and *Obsession*. Some humorous samples of the over half a million boat names are: *A Loan Again*, *Beeracuda*, *Codfather*,

Freudian Sloop, Out to Launch, Prozac, Sloop Du Jour, Victoria’s Sea-Cratem, and Wet Debt.

ship of fools. Sebastian Brandt’s famous *Narrenschiff*, or *Ship of Fools*, published in 1494, had as its theme the shipping of fools of all kinds from their native land of Swabia to the fictional Land of Fools. The various fools were introduced in the book by classes and reprov’d for their folly. In fact, in 15th-century Germany there were real *Narrenschiffe*. These most unusual ships were riverboats used to imprison the insane and thus clear city streets of them. Real ships of fools plied up and down the Rhine carrying their cargoes of madmen, who were thought to have lost their souls and were supposed to sail back and forth until they became sane again. However, most of them died aboard these hell ships, which had no destination save death.

Ship of State. See HANGING BREATHLESS ON; TEREDO

shipping lanes. In his book *Sailing Directions* (1855) U.S. Navy Lt. Matthew Fontaine Maury recommended “lanes,” or “strips,” for ships traveling westbound in the Atlantic after the U.S. mail steamer *Arctic* collided with the French steamer *Vesta* in 1854. These lanes became the building blocks for today’s complex, internationally approved seasonal routes.

Shiprock. An interesting New Mexico landmark described by Willa Cather in *Death Comes to the Archbishop* (1927): “And north of the canyon de Chelly was the Shiprock, a slender crag rising to a dizzy height, all alone out on a flat desert. Seen at a distance of fifty miles or so, that crag presents the figure of a one-masted fishing boat under full sail, and the white man named it accordingly. But the Indian has another name; he believes the rock was once a ship of the air. Ages ago . . . that crag had moved through the air, bearing upon its summit the parents of the Navaho race from the place in the far north where all peoples were made—and wherever it sank to earth was to be their land.”

ships that pass in the night. People who meet by chance and aren’t likely to meet again are sometimes compared to *ships that pass in the night*. The expression dates back to the 19th century and seems to have originated in Henry Wadsworth Longfellow’s poem *Tales of a Wayside Inn* (1863): “Ships that pass in the night, and speak to each other in passing . . .” Henry Wadsworth Longfellow’s *Tales of a Wayside Inn* (1865, 1872, 1874) is a series of narrative poems. The setting is a real inn in Sudbury, near Boston, and the characters telling the stories are all based on Longfellow’s friends.

shipworm. See GRIBBLE; TEREDO

shiri oshi. There is not yet a job classification corresponding to that of the *shiri oshi* in any American subway system, crowded as those systems may be. *Shiri oshi* translates, euphemistically, as “tushy pusher.” These Japanese train attendants, wearing neat blue uniforms and white gloves, stand in front of subway train doors during rush hours helping to pack passengers into the trains.

shirtsleeves to shirtsleeves in three generations. “There’s no’ but three generations atween clog and clog,” says the old

Lancashire proverb that is probably the ancestor of this expression, but American multimillionaire Andrew Carnegie (1835–1919) is credited with the exact words *shirtsleeves to shirtsleeves in three generations*, meaning that family wealth is not long-lasting. The words don’t apply to the Rockefeller, Du Pont, Rothschild, and Ford families, to name but a few that come quickly to mind.

shit. From the Indo-European root *skei*, “to divide,” comes the Old English *scitan*, “to defecate,” that is the ancestor of our word *shit*. *To shit* thus means strictly to divide or cut (wastes) from the body. *Shit*, as slang for nonsense or lies, is an Americanism probably first used by soldiers during the Civil War as a shortening of *bullshit*, another Americanism that probably goes back 30 years or more earlier, though it is first recorded, in the form of its euphemism *bull*, in about 1850.

shit belong-um fire. This apt bit of pidgin English was used by Lascar seamen employed as stokers on 19th-century British steamers. It means ashes.

shitepoke; crazy as a shitepoke. When flushed out by hunters, the small green heron (*Ardea virescens*) discharges its bowels and runs crazily to and fro. This led to American pioneers calling it the “shitepoke” (*shite* “excrement,” plus *poke*, “bag”), which also became a name for any vile person. *Crazy as a shitepoke*, “very crazy,” was first recorded in 1943 but must be much older. Wrote Laura Wood in *Walter Reed* (1943): “He’d be all right with a little rest, but sometimes, after a more severe ordeal by snow and silence, a man would come out crazy as—they had a word for it here—as a shitepoke, the awkward heron that seems to have no sense at all.”

shitkicker. Shitkicker is a Texas culture all to itself, according to Molly Ivins in *Molly Ivins Can’t Say That, Can She?* (1991): “Shitkicker is pickup trucks with guns slung across the racks on the back and chicken-fried steaks and machismo . . . and cheap, pink nylon slips, and gettin’ drunk on Saturday night and goin’ to church on Sunday morning, and drivin’ down the highway throwin’ beer cans out the window, and Rastus-an’-Liza jokes and high school football, and family reunions where the in-laws of your second cousins show up. . . .” And much more and, with a few minor changes, a culture in many places. *Shitkicker* has also been used to mean a cowboy and as a synonym for cowboy boots.

shit or get off the pot. Although Partridge gives this as World War II Canadian army slang “directed at a dice player unable to ‘crap out,’” it has been traced to the early 1900s in America, its maiden aunt ancestor probably *fish or cut bait*, “do something now or give up.”

“‘Shit!’ said the Queen. . . .” An old story, unproved one way or the other, has it that those good friends Rudyard Kipling and Mark Twain had a contest between them to see who could write the bawdiest, most offensive story. An effort of Kipling’s beginning “‘Shit!’ said the Queen . . .” was brought to an unamused Queen Victoria’s attention, which is why Kipling was never knighted and never became poet laureate.

Shit! The Guard never surrenders! See THE GUARD DIES BUT NEVER SURRENDERS.

shittimwood. The bark of this American tree is a powerful cathartic; hence its name, first recorded in 1884. *Rhamnus purshiana* is also called “bearberry” and “bear-wood.” Other trees called “shittimwood” were so named because their wood was worthless for lumber. Finally, there is the shittimwood (probably an acacia) that is said to have been used to make the ark of the covenant (Ex. 25–26), its name deriving from Hebrew *shittim*, “wood.”

shiv. *Shiv*, for “a dagger or knife,” is centuries older than its first mention in 18th-century England. For it was taken into underworld English intact from the Romany *shiv*, meaning the same, long used by the Gypsies.

shivaree. A noisy wedding reception or celebration usually held late at night at the home of the bride and groom, complete with a mock serenade with pots, pans, and other noisemakers and good-natured pranks on the newlyweds; from the French *charivari*, meaning the same, though the French word, appropriately, comes from a Medieval Latin word meaning “headache.”

shiver me timbers. Although this is a cricket expression referring to the scattering of wickets, for which timber is a slang substitute, it goes back much further. Originally, *timbers!* was an 18th-century nautical slang exclamation with no real meaning to it: “My timbers! what lingo he’d coil and belay.” Novelist Capt. Frederick Marryat then embroidered the oath, making it *Shiver my timbers!* in *Jacob Faithful* (1834), an ejaculation you can be sure no one used before this.

shlock. This Yiddish expression, for “shoddy, cheaply made, defective articles,” derives from the German *Schlog*, “a blow” suggesting that the goods have been knocked around and damaged. Pronounced to rhyme with “stock,” *shlock* is sometimes spelled *schlock*.

shmeer. *Shmeer* is Yiddish for to smear, from the German for “grease,” but bagel lovers widely use the word to mean a bagel with cream cheese spread on it, as in “One with a shmeer.” *Shmeer* is also slang for a bribe, grease for the palm.

shnozzola. The nose, especially a large nose. From the Yiddish *shnoz*, which derives from the German for “snout.” The term was popularized by comedian Jimmy Durante, who was called the *Schnozzola* or the *Schnoz* after his large proboscis, the most famous nose on the stage since *Cyrano de Bergerac*.

Shoah. A widely heard term from Hebrew for the HOLOCAUST. Literally, the word means “catastrophe.”

shock. The French *choc*, a noun of action for “a military encounter,” came into English early in the 16th century as *shocke*, with the meaning of the first charge in a battle, or two jousts charging each other and smashing together. By the early 18th century *shock* had come to mean a sudden disturbing impact on the mind as well as the body.

shoddy. Civil War suppliers cheated the Union Army with a cheap uniform cloth called “shoddy,” which literally unraveled on the wearer’s back—and added a new adjective to the language.

shoe. The name of the footwear derives from the Old English *scoh*, helped along by the German *Schuh*.

shoebill. The large African storklike bird *Balaeniceps rex*, whose bill looks something like a shoe.

shoicide bomber. This play on *suicide bomber* was applied to that alleged terrorist who was found to have explosives in his shoes during an international airline flight and was subdued by crew members and passengers. The expression is said to have been coined by talk-show host Jay Leno.

shoestring. The expression may have come from *faro*, but it isn’t recorded until 1904, although *shoestring gambler*, for a “petty, tinhorn gambler,” is recorded 10 years or so earlier. *On a shoestring* suggests that one’s resources are limited to the laces of one’s shoes.

Shoe Tree. A cottonwood tree growing near Middlegate, Nevada, that is covered with many styles and sizes of shoes hanging from its branches. According to one source, about 20 years ago, a newly married couple out camping had an argument under the tree and the groom threw the bride’s shoes up into the cottonwood. When the bride realized she would have to walk home barefooted, the couple made up and the groom carried her home. But about a year later the couple returned to the tree and threw their firstborn baby’s shoes up into the branches, a custom observed ever since.

sholom aleichem. A traditional greeting of Jews meaning “hello, how are you?” the response being the reverse order, *aleichem sholom*, “and unto you, peace.” The Russian-born Yiddish-writing author Solomon Rabinowitz (1859–1916) took his pen name, Sholom Aleichem, from these words. According to one tale, Aleichem, called “the Jewish Mark Twain,” claimed to have met Mark Twain in New York City. “I am the American Sholom Aleichem,” Twain modestly told him. See TRISKAIDEKAPHOBIA.

sho’ nuff. Sure enough, a pronunciation known to millions from thousands of American comedy routines.

shoofly plant. There is only one garden species of the *Nicandra* genus, named after Nicander of Colophon, a Greek physician, poet, and botanist of the second century A.D. And this annual species, *Nicandra physalodes*, seems to have but one distinction: It is a repellent to the white fly if grown next to other plants troubled by this pest. It is also called *apple-of-Peru*, because it is plentiful in that country.

shoot deer in the balcony (theater). This old show biz phrase, dating back a century or so, refers to the empty theaters that result due to a flop or bad business of any kind: “You could shoot deer in the balcony.”

shoot down. *To shoot down* someone's argument or *to shoot it down in flames* means to show that it is wrong or totally worthless, impossible. The expression originated during World War II, when so many planes were shot down and destroyed by the enemy.

shoot-from-the-hip-flask reporting. A style of writing associated with American author Hunter S. Thompson, whose most famous book was *Fear and Loathing in Las Vegas*. See Marc Weingarten's *The Gang That Couldn't Shoot Straight*, 2005.

shootin' iron. A handgun. This term dates back to 18th-century America and did not originate in the West, despite its constant use in Hollywood westerns.

shoot one's bolt. The *bolt* in this phrase, *he's shot his bolt*, meaning he's finished with his efforts, is not a door bolt, but an arrow—a bolt being an arrow with a bulletlike knob. Among other words and phrases owing their origin to the arrow are *thunderbolt*, *a bolt from the blue*, “a complete surprise,” and *to bolt upright*.

shoot the cat; shoot one's cookies; shoot the moon; shoot one's cuffs. *Shoot the cat* is British slang meaning “to vomit, throw up, be sick to one's stomach.” The expression, similar to the American *shoot* (or *toss*) *one's cookies*, has been traced to the early 19th century, but the use of *cat* has never been satisfactorily explained. *Shoot the moon* means “to move out of a residence at night without paying the rent,” while *shoot the crow* means “to suddenly leave a place (skip town, as Americans say), and *shoot one's cuffs* means “to display a large amount of shirt cuff when wearing a jacket.”

shoots. As far as I know, there is no real synonym for OK in the American language unless one counts the long so-called stretch form of OK, such as okeydoke, or the okie dokie used in a popular 1947 song. Several sources, however, say that the Hawaiian *shoots* or *shootz* can also serve as an OK substitute, meaning satisfactory, all right, etc. In my own brief travels in Hawaii I didn't come across this word. See OK.

shoot the works. A western Americanism meaning to spend everything, get whatever you want.

shop. The word *shop* derives from a Saxon term meaning the porch or lean-to of a house. Such “open rooms or stalls” eventually developed into enclosed stores.

shopping cart. The first of America's 30 million shopping carts were invented and named by Sylman Goldman in 1936 for his Standard Supermarkets in Oklahoma, making him a millionaire in the process.

shopping days until Christmas. See CUSTOMER IS ALWAYS RIGHT.

shopping mall. In the 16th century the popular Italian game *pallamaglio* (from *palla*, “ball,” and *maglio*, “mallet”) spread to France, where it became known as *palemail*, which was called

pall mall when the game was adopted by the English. A large playing area for the game called The Mall in London's St. James Park during the reign of Charles II later became a broad public walk, or promenade, called Pall Mall. It is this public walk where people promenaded that is the basis for our outdoor and indoor shopping malls (also called shopping centers), where people promenade along a broad walk lined with shops. Shopping malls, or malls, as we know them today, are a relatively recent American innovation dating back only to the years after World War II. But rude examples of their kind can be found further back in American history, and they have their deepest roots in many age-old institutions, including the bazaars of Persia, the agoras of ancient Greece, the forums of Rome, and the fairs and marketplaces of medieval Europe. They have been called “the quintessential American place of today,” malls being the places where people spend more time than anywhere else except at home or work.

Shoreditch.

I could not get one bit of bread
Whereby my hunger might be fed . . .
So weary of my life at length
I yielded up my vital strength
Within a ditch . . . which since that day
Is Shoreditch called, as writers say—

Shoreditch in London is so named because Jane Shore, Edward IV's cast-off mistress, died there in a ditch, her tale told in the old ballad above.

short arms and deep pockets. See DICK SMITH.

short bit. In the old West, the *short bit* was a dime, being 2½ cents short of a bit (12½ cents). According to *A Dictionary of Americanisms*, “In the West, when small coins, except the dime and the quarter (2 bits), were scarce, a dime was accepted in payment for anything priced at one bit. A *long bit* was the equivalent of 15 cents, being the price paid when a dime was returned as change from a quarter tendered for a purchase priced at one bit.”

short fuse. *He has a short fuse*, we say of short-tempered people whose anger explodes at the slightest provocation. The expression originated during World War II, based upon short fuses in bombs and shells.

short hairs. See GET BY THE SHORT HAIRS.

shorthand. See STENOGRAPHY.

Shortia. *Shortia* is definitely a “low-growing” genus of evergreen herbs, comprising only two species, but that is not the reason for its name. The genus honors Dr. Charles W. Short (1794–1863), a Kentucky botanist. Native to the mountains of the Carolinas and Japan, the flowers are well adapted for use in a rock garden. The American species is sometimes advertised as Oconee Bells and the Japanese, Nippon Bells. The plants have beautiful white bell- or heart-shaped flowers, solitary and nodding on long stalks. They are more often called *Shortia*, or coltsfoot, than by their “Bell” names.

short-list. To be put on a list of people most likely to be chosen for something, a list that has been winnowed from a longer one. For example, several novels are short-listed each year for Britain's prestigious Booker Prize and from this short list a winner is selected. The expression is not a new one, dating back about 75 years.

short shrift. So many crimes were punishable by execution in Elizabethan times that condemned persons were often given only a few minutes for last rites on the crowded scaffold. Roman Catholic prisoners were allowed the sacrament of *shriving*, commonly called *shrift*, during which sins were confessed and absolution granted, but their callous executioners frequently permitted only a short version of the customary ceremony. This became known as *to give short shrift*, which from its literal sense has come to mean to cut short, to make quick work of, or to give very little attention to. *Shriving* and *shrift* derive from the Anglo-Saxon *scrifan*, "to make a confession."

short story. The name, though not the form, was invented in the U.S., its first mention in *Harper's Magazine* in 1887 in the form of "short story writing." A short story, briefly, is usually a prose work of fiction under 10,000 words, "differing from a novel in being shorter and less elaborate," according to the *O.E.D.* A short short story is even more condensed, perhaps of up to 1,200 words. Edgar Allan Poe is regarded as the originator of the modern short story, which Americans have excelled in. An old joke has an English teacher telling a class that the five requisites to a good short story are "brevity, a religious reference, a sexual reference, some association with society and an illustration of modesty." The next day a student handed in a story that read in full: "My God!" said the duchess. "Take your hand off my knee!"

shotgun wedding. Any wedding where the father or other member of the family, pointing a gun at his head, forces the groom to marry the bride, who has been made pregnant by or lost her virginity to the man. It is doubtful that many real shotguns were used in such weddings, but since 1925 or so, when first recorded, the Americanism has meant "a wedding made by pregnancy."

shot heard round the world. Baseball fans ascribe a different meaning to this Ralph Waldo Emerson line describing the opening of the American Revolution. For half a century now they have remembered the words as a name for the home run New York Giant slugger Bobby Thomson hit in the ninth inning of the last game of the 1951 playoffs against the Dodgers to win the National League pennant. The "Jints" victory was dubbed "The Miracle of Coogan's Bluff," after the hill behind the Giant's Polo Grounds stadium.

shot in the arm. Anything that gives a person renewed vitality, enthusiasm, determination, confidence, or hope. However, if the expression's origins were taken into account it would mean short-lived vitality and false hope, for the words derive not from a shot administered by a doctor but from hypodermic injections of narcotics by drug addicts. Some anonymous drug user coined *a shot in the arm* back in the 1920s, basing it on the medical *shot*, for medicine injected into the body, which had

been invented shortly before it. The phrase has nothing whatsoever to do with "Quick, Watson, the needle!" a saying often attributed to Sherlock Holmes. *See also* SHERLOCK HOLMES.

shot in the dark. A random conjecture, a wild guess, and most likely a guess that will fail. This Americanism refers to a gun shot in the dark at a target or anything else, a shot that would rarely succeed.

shotten herring. Since Shakespeare's time worthless or spiritless persons have been called *shotten herring* because they resemble such fish. Shotten herring are herring that have "shot off," or ejected, their spawn and are weak, tired, and worthless.

shoulder candy. *Candy*, or *eye candy*, for a sexy young woman is documented as dating back to about 1968, but I haven't seen *shoulder candy* in any dictionary. The term is defined in a *New York Times Magazine* column (11/24/96) by John Tierney: "Models are visual bait," says David Jones, a gossip reporter at the *Daily News*. . . . "Even the serious playboys, the rich guys who live to chase models, often aren't that interested in sex. They mainly want their fellow wolves to see them walk in with a model. The term they use is 'shoulder candy.'"

I should never be allowed out in private. The phrase is an invention of English politician and journalist Randolph Churchill (Winston's son), whose drunken behavior ruined many a dinner party.

shout. *Shout*, of course, means "to call out loudly." It possibly derives from Old Norse *skuta*, "a (loud) taunt," and has given birth since to such expressions as *it's all over but the shouting*, the allusion being to the end of a boxing match whose outcome the crowd in the arena is protesting, and *within shouting distance*, a short distance away. In Australia *shout* refers to a round of beers bought in a pub, "It's your shout, mate" being the Aussie equivalent of "It's your turn to buy the drinks, friend."

shout it from the housetops. Let everybody know. The old expression is from the Bible (Luke 12:3): ". . . and that which ye have spoken in the ear shall be proclaimed upon the housetops."

show a leg; shake a leg. *Show a leg* means to get up from bed, to hurry, or be alert. One version of its birth says that when the bos'n's mate on early 19th-century sailing ships woke up the crew in the morning, he cried, "Show a leg, show a leg or a stocking!" At that time, according to the story, women were allowed to be on board ship, ostensibly as sailors' wives, and a "leg in a stocking put over the side of a hammock indicated that the occupant was a woman, who was allowed to remain until the men had cleared out." A more prosaic and reasonable account says the bos'n cried, "Come on, all you sleepers! Hey! Show a leg and put a stocking on it." *Shake a leg*, meaning "hurry," may derive from this earlier phrase, for both are nautical expressions and no better explanation has been given.

Show-Me State. A nickname for Missouri (*see* I'M FROM MISSOURI). It has also been called the Ozark State, the Lead State,

the Bullion State, (after Senator Thomas Hart Benton, “Old Bullion,” an advocate of metallic currency), and the Pennsylvania of the West. Obsolete is the nickname the Puke State, possibly so named as a misprint for Pike County, Missouri, or after a word describing a backward yokel. *See also* PUKE.

show the white feather. A cock with any white feathers was believed to be poorly bred and too cowardly for cockfighting in days past. This led to the old expression *to show the white feather*, “to exhibit cowardice.”

shpos. Hospital slang for an obnoxious person, especially a patient. Originally an acronym for subhuman *piece of shit*.

shrapnel. Shrapnel’s shell, or shrapnel’s shot, as it was first called, was the brainchild of Henry Shrapnel, a British artillery officer who held the rank of second lieutenant and had only turned 23 when he began work on his deadly contrivance in 1783. Shrapnel had joined the army at the age of 18 and served in Gibraltar, the West Indies, and Flanders under the duke of York. He devoted all his spare time and money to developing his invention, the shrapnel shell, which consisted of a spherical projectile filled with lead musket balls and a small charge of black powder that was set off by a time fuse, exploding the shell in midair and scattering the shot in an ever-widening circle over a large area. This antipersonnel weapon, which laid low everyone in its path, was finally adopted in 1803 due to Shrapnel’s persistent efforts and he was promoted to regimental lieutenant colonel the following year. Although the shell itself wasn’t used during World War II, the term *shrapnel* is still applied loosely to shell fragments from any high explosive, whether artillery, bomb, or mine. Henry Shrapnel, who had been promoted to lieutenant general in 1837, died five years later, aged 89. He had never been paid a cent for his important invention and the government refused even to compensate him for the several thousand pounds of his own money that he had spent in developing the weapon.

shrewd. *Shrewd* most likely comes from the name of the shrew, a small, mouselike animal with a long snout, common in England’s forests. Extremely truculent animals, shrews will often fight to the death over a bit of food, the victor eating the loser in the bargain. Thus a shrew became an evil, vicious person, especially a woman who scolded or nagged, as in Shakespeare’s *The Taming of the Shrew*, and the verb *to shrew* formed from this noun gave us the word *shrewd* in its past participle. Over the centuries *shrewd* lost its meaning of evil but retained the qualities of sharpness and cleverness that made the little shrew formidably wicked, so that today *shrewd* means keen-witted, clever, sharp in practical affairs.

shrimp. Short people are *not* called shrimps because they resemble the shellfish in size. As with SHARKS, it is the other way around. The common little European species *Crago vulgaris* was named *shrimp* from the Middle English word *shrimpe*, which meant a puny person.

a shrimp short of a barbie. Used by Australians to describe someone who isn’t too smart, isn’t quite normal. *Barbie*, of course, is the word Australians prefer for a barbecue or barbecue grill.

shrink. *Shrink*, and *headshrinker*, from which it derives, are Hollywood terms, the latter dating back to the late 1940s and the former coming on the scene some 20 years later. Both, of course, mean a psychiatrist and may be a comparison to the medicine men of primitive tribes who literally shrunk heads to work magic; *headshrink* may refer to the *shrinking*, or lessening, of problems in a patient’s head.

shtick. Deriving ultimately from the German *Stuck*, “piece,” *shtick* (or *shtik*) has a number of meanings in Yiddish, but its most recent meaning is best-known in English today. Since about 1955, it has been heard most as the term for a comic acting routine or piece of business inserted to get a laugh, to draw attention to oneself. Thus it also means one’s special interest or talent, one’s “thing,” as in “That’s his shtick.”

shucks. The expression *shucks* may derive from worthless “shucks” or husks of corn, but the interjection, used to express mild disgust or regret, first recorded in 1847, is thought by some to be simply a euphemism for “shit,” as its oldest quotation in *A Dictionary of Americanisms* would seem to indicate: “And Mr. Bagley was there to [shoot] any gentleman who might say ‘shucks.’”

shuck those oysters, etc. We shuck oysters and clams when we open them; we hull strawberries; husk corn; pit or stone plums, cherries, and peaches; pare carrots, turnips, and parsnips; peel apples and potatoes; French stringbeans; pluck chickens and turkeys; scale fish; split and crack lobsters; and skin eels. That’s 13 or so words used in preparing dinner. Let us know if you know any others.

shufti. A term heard among the British but rarely in American English. First recorded during World War II, it derives from Arabic *saffa*, “try to see,” and means “look or glimpse,” as in “Have a shufti at this one.”

shutmouth. An old-fashioned word, not much used anymore, that describes someone who is closemouthed, keeps his real feelings to himself. “Lincoln was the most shutmouth man I ever met,” said his law partner of 16 years.

Shut my mouth! A southern expression of surprise that has become a national cliché because it has been used so often in comic routines. Another similar expression is “*Hush my mouth!*”

shut out. Though the term is most commonly heard in baseball for a game in which the losing team doesn’t score, *shut out* probably has its origins in horse racing. First recorded in 1855, *shut out* has long referred to a bettor who arrives at a track window when it is too late to bet, thus being shut out by the closed window. Today someone who fails to make any headway in an endeavor is said to be shut out.

shut up, he explained. Perhaps the most famous of American author Ring Lardner’s quips was inspired by the writer’s move with his family from Chicago to New York, where he began his syndicated column. Somehow the Lardners went astray

in the Bronx. The famous exchange came when the author's son asked him if they were lost, Lardner later re-creating the scene in his short story "The Young Immigrants," told from a child's viewpoint: "Are you lost, Daddy?" I asked tenderly. "Shut up," he explained.

shut your face. Stop talking. This Americanism is first recorded by Upton Sinclair in *King Coal* (1917): "The marshall bade him 'shut his face,' and emphasized the command by a twist at his coat collar."

shyster. *Shyster*, an American slang term for a shady, disreputable lawyer, is first recorded in 1846. Various authorities list a real New York advocate as a possible source, but this theory has been disproved by Professor Gerald L. Cohen of the University of Missouri-Rolla, whose long paper on the etymology I had the pleasure of reading. Shakespeare's moneylender Shylock has also been suggested, as has a racetrack form of the word *shy*, i.e., to be shy money when betting. Some authorities trace *shyster* to the German *Scheisse*, "excrement," possibly through the word *shicir*, "a worthless person," but there is no absolute proof for any theory.

Siamese twins. Chang and Eng Bunker were born in Bangesau, Siam (now Thailand) on April 15, 1811, and were discovered at Mekong when they were 16. Their bodies were joined by a ligament between the xiphoid cartilages, a short tubular band uniting them at the chest through which their circulatory systems communicated. After P. T. Barnum brought the world-renowned "Chinese Double-Boys" to America, he had considerable trouble with them, claiming that they were the only show business people he couldn't get along with. But then Chang and Eng hated everybody, even each other, Barnum said. At any rate, the two often quarreled with the impresario over his methods and only exhibited when they needed the money. In April 1864 they married two English sisters, Sarah and Adelaide Yates, fathering 22 children between them—Chang, 10, and Eng, 12—according to the records. They finally settled with their families on a farm in New Hampshire, where they died on January 17, 1874, within two or three hours of each other. But the surviving twin did not die of a broken heart, as the story goes; fatal illness in one Siamese twin dooms the other unless they can be separated, which was impossible in Chang and Eng's case. The Siamese Twins, as they were billed, gave their name to all others so born after them and the term is also used to describe inseparable friends. Doubles of many kinds are called Siamese, such as the Siamese pipes with two openings almost at ground level outside some buildings, which fire engines use to pump water into a building for its standpipes and sprinkler system.

sic. Pronounced "sik," this little word is simply the Latin for "thus," "so." It is used in brackets by writers after a word or phrase to indicate that the word or phrase is being reproduced by the writer exactly as it is in the original, even though it is wrong in some way.

Sicilian vespers. In 1282, the Sicilians massacred their French oppressors throughout the country, the signal to begin the massacres in each city being the bell for evening church

services, or vespers. Within a few days Sicilian wits were calling the massacres the Sicilian Vespers.

Sicily. See ISLAND OF THE SUN.

Sick Man of Europe. A nickname for the Ottoman Empire, which never regained its grand days of glory after entering the 20th century. The term is said to have resulted from Russian Czar Nicholas I saying in 1853: "I am not so eager about what shall be done when the sick man dies, as I am to determine with England what shall not be done upon that event taking place."

Sic semper tyrannis! John Wilkes Booth's infamous words after he assassinated Abraham Lincoln, which are Latin for "Thus always to tyrants!" The rest of Booth's words were "The South is avenged!" "Sic semper tyrannis" is the state motto of Virginia.

sic transit gloria mundi. Latin for "so passes the glory of the world." Another version of this very old phrase is "Oh how quickly the glory of the world passes away."

sideburns. General Ambrose Everett Burnside had a flair for doing the daring, innovative thing in war as well as fashion. Despite his many failures as a general he went on to be elected governor of Rhode Island for three terms, 1866–69, and United States senator for two terms, from 1875 until his death in 1881, at age 57. From the constant publicity given him, the flamboyant Burnside hat that he wore in the field came to be called after the big bluff and hearty general, as were the burnside whiskers, or *burnsides*, he affected. Innovative as ever, he had chosen to wear the hair on his face in a new way, shaving his chin smooth below a full mustache and big muttonchops, or sidebar whiskers. Thousands imitated him and his burnsides, because they were on only the sides of the face, were soon called sideburns, this reversal of Burnside's name having nothing to do with his military reversals, though that might have been appropriate.

sidekick. Side pants pockets are the hardest pockets for pick-pockets to pick because they are closer to the hands of a victim and are constantly moving with the motions of the legs. About 1900, according to one story, men wise to the ways of pick-pockets began keeping their wallets in their side pockets or side-kicks (*kick* being slang for a pants pocket since the 17th century). *Side-kickers* then became a slang synonym for a faithful buddy (usually male), a partner always at one's side. O. Henry first recorded the term in a 1904 story, and about 10 years later *side-kick* was shortened to *sidekick*.

sidewalk. Americans have been calling the part of a street reserved for pedestrians a sidewalk since at least 1851, when the word was first recorded, describing a cement walk at the side of a road. In fact, *side passage* was used as early as 1790. Today Americans rarely say anything but "sidewalk," except as regionalisms, while Australians use *footpath* and the British prefer *footway* and *pavement*.

sidewinder. A rattlesnake, or, figuratively, a dangerous, treacherous person. The word was suggested to American

pioneers by the sidewinder rattlesnake, so called for its lateral locomotion.

Siegfried Line. A zone of heavy fortifications in Germany facing the French MAGINOT LINE that was built in the years before World War II. On March 7, 1945, the Western Allies smashed through the line and crossed the Rhine, the war in Europe ending for all intents and purposes about six weeks later. Siegfried, the line's eponym, is a great hero of German mythology. The line is also remembered by the old British song "We're gonna hang our washing on the Siegfried Line."

Sieg Heil! Heil Hitler! "Hail to victory!" is the translation of *Sieg Heil*, a salute invented by German Nazis and used at their political meetings and rallies. *Heil Hitler!* was used by the Nazis as a greeting honoring Hitler. Both expressions date back to the early 1930s, when the Nazis came to power.

sienna. The Italian city of Siena lends its name to the red color sienna, while Venice gives its own to Venetian red. The colors were apparently invented by artists in those cities. See also MAGENTA; TITIAN.

Sierra Leone. Portuguese sailors off Africa thought they spied a great mountain chain along the west coast and were convinced they heard the roaring of lions coming from those mountains. They thus named the area Sierra Leone, "mountain range of the lions," a name that the African country Sierra Leone still bears today, even if the Portuguese seafarers did eventually discover that the "mountain range" they saw were great cumulus clouds in the sky and the roaring they heard was the surf breaking on the beach. See also NOME; GUINEA.

sign language. Sign language is any method of communication employing manual gestures, especially as used by deaf people. The term dates back to about 1840. *Signing* is the process of employing sign language. When ill in the South Pacific and unable to hold his pen or even speak, Tusitala, or "the Tale Teller," as the natives called Robert Louis Stevenson, dictated his stories with his fingers by the signing alphabet.

Sikhism. Call out the surname *Singh* in a crowded Indian market and lots of people will turn toward you, for all Sikh men must have the surname *Singh* and all Sikh women must have the surname *Kaur* (princess). Sikhism was founded by Nanak in about 1469. Born in Punjab "he taught that all religions are the way to the same God and all should be respected." The last Sikh guru was Govind Singh (b. 1666) who introduced the Sikh practice of wearing a turban, carrying a dagger, and never cutting the hair or beard.

Silent League. A society organized in 1903 (in the U.S. Navy of all places), of men who "solemnly agree to discourage Profanity and Obscenity everywhere so long as they live," in the words of its founder, Chaplain Carroll Q. Wright. As Gary Jennings notes in his delightful *Personalities of Language* (1965): "I know of no sailor today who ever heard of the Silent League, but I know several who are walking evidence that Profanity and Obscenity have outlived it."

silent—like the p in swimming. British in origin and mostly British in use, this punning catchphrase (the obvious pun is on "pee," to urinate) dates back to the early 1900s and, as Partridge notes, is sometimes employed jokingly in explaining difficult pronunciations; e.g., "Her name is Fenwick, where the *w* is silent—like the *p* in swimming."

silent majority. President Richard M. Nixon used this term in a November 3, 1969, speech to describe the majority of Americans, those who didn't protest against the Vietnam War. His vice president, Spiro Agnew, employed the phrase six months before that. Soon the term came to mean the "average American," all those who aren't outspoken and are considered to constitute a majority of the electorate, usually conservative in their opinions. Long before, the ancient Greeks used *silent majority* to mean "the dead."

the silent t. "You're Mar-got Asquith, aren't you?" screen siren Jean Harlow asked Lady Margot Asquith at a party. "No," replied the peerless Asquith, archly: "The *t* is silent, as in *Harlow*."

silhouette. Madame de Pompadour had her friend Étienne de Silhouette appointed France's controller general in 1759, but was probably disappointed with the results. Silhouette, then 50, proceeded to try to get France back on her feet after the bankruptcy brought about by the Seven Years' War, not to mention the luxury-loving court where La Pompadour set the style and spent more than anyone else. The new minister started out well enough, raising a 72 million-livre loan, but he soon placed restrictions on the spending of Louis XV himself, proposed a land tax on the estates of nobles, and ordered a cut in government pensions. This naturally angered the nobles, who often found ways to circumvent Silhouette's reforms, and the minister trotted out plans to levy an income tax, triple the poll tax on bachelors, institute a luxury tax, and levy a stringent sales tax. People generally thought such reforms cheap, capricious, and petty, resenting the sacrifices demanded, and when financiers boycotted his treasury operations, Silhouette was forced to resign less than nine months after he took office. In the meantime, his parsimonious regulations had inspired the phrase *à la silhouette*, "according to Silhouette," or "on the cheap." Pants without pockets—and who needed pockets with such confiscatory taxes—were said to be made *à la silhouette*, as were snuff-boxes constructed with wood, and coats that were required to be fashioned without folds. The term was also applied to shadow portraits made by tracing the outline of a profile and filling it in with black, or cutting the outline out of black paper. These were called portraits *à la silhouette*, cheap portraits in the fashion of Silhouette, and soon became known simply as *silhouettes*.

silicon; Silicon Valley. Silicon is a nonmetallic element occurring in minerals and rocks and constituting over one-fourth of the Earth's crust. It has been used most recently in manufacturing computer chips. *Silicon Valley*, the name first recorded in 1974, is an area in northern California, southwest of San Francisco in the Santa Clara valley. It is so named because the many microelectronic firms based there make it the world capital of computer technology. Regarding silicon, it's said that artist and wit James Whistler (1834–1903) was dismissed from

West Point because he failed chemistry. “Had silicon been a gas,” he later quipped, “I would have been a major-general.” *See* GOD BLESS AMERICA.

silicone. A word coined by British professor of chemistry Frederic Stanley Kipping (1863–1949), who did extensive important researches into silicone compounds. Today Silicon Valley in northern California is the center of the billion-dollar semiconductor industry, but Kipping never received proper credit or remuneration for his work, which helped change the world.

silk purse out of a sow’s ear. *See* YOU CAN’T MAKE A SILK PURSE OUT OF A SOW’S EAR.

Silly Billy. *See* SAILOR KING.

silo drippings. This synonym for homemade liquor dates back to the late 19th century when it was made on farms in the American Midwest, where Prohibition was often in effect. Silos held corn for the winter feeding of stock and the corn packed in a full silo slowly fermented, forming a potent brew that dripped out of holes drilled in the bottom of the silos and was collected by thirsty farmers.

Silver Knight of the West. William Jennings Bryan of Nebraska, who fought for the silver standard and was famous for his Cross of Gold speech at the 1897 Democratic National Convention.

silver or lead. The classic choice offered by mobsters to someone they want to bribe: either take the money or a bullet. This offer that can’t be refused probably dates back to the 1930s in America.

silver spoon. The earliest spoons were made of wood, the word *spoon*, in fact, deriving from the Anglo-Saxon *spōn*, “a chip of wood.” Until the 19th century most people used pewter spoons, but traditionally, especially among the wealthy, godparents have given the gift of a silver spoon to their godchildren at christening ceremonies. The custom is centuries old throughout Europe and inspired the saying “born with a silver spoon in one’s mouth,” *i.e.*, born to hereditary wealth that doesn’t have to be earned. This expression is not of American origin as the *O.E.D.* implies; the great dictionary only traces the phrase back to 1800 here, but it is much older, for Cervantes used it in *Don Quixote* (1605–1615): “Every man was not born with a silver spoon in his mouth.” The duke of Bedford gave a nice twist to the phrase in the title of his biography, *A Silver-Plated Spoon*. The *silver shoon* in Walter de la Mare’s poem “Silver” are “silver shoes,” *shoon* being an old plural of *shoe*:

Slowly, silently, now the moon
Walks the night in her silver shoon.

Silver State. A nickname for Nevada, after the silver mined there. The state was once called Silverland.

silvertip. *See* GRIZZLY BEAR.

simba. This word, famous in animal tales, is Swahili for lion. Less well known Swahili animal names are *nyanyi* (baboon) and *tembo* (elephant).

Simenon. A *Simenon* is a serious psychological novel of about 50,000 words written by author Georges Simenon—and written in a rather unique way. Simenon gets a complete medical examination before he begins one of these critically praised short novels. He then literally locks himself in a room and, working from the barest of notes, allows himself seven days to write each book and three days to revise. *Simenons* are distinct from the author’s popular Inspector Maigret stories, which are highly respected in the mystery field. Born in Liège, Belgium on February 13, 1903, the prolific but not prolix Simenon has authored some 500 novels since he began writing at the age of 19, many of these admittedly *POTBOILERS* turned out under a score of pseudonyms.

’simmon. A shortening of persimmon. *Simmon* and *persimmon* figure in many old American proverbs: “The longest pole takes the ’simmons”; “We all come down like ’simmons after frost”; “To be a huckleberry over someone’s persimmon” (to be beyond someone’s capacity); “To bring down the persimmons” (to win the prize).

simoleon. Our slang for “one dollar,” common since the late 19th century, may derive from the British slang *simon*, for “sixpence,” which can be traced back to about 1700. First the British *simon* became our *simon* for a dollar (ca. 1859 but now obsolete) and then for some reason it became *simoleon*—though this leaves unexplained the shift in accent from the first syllable in *simon* to the second in *simoleon*. *Simon* is said to have been used by the British for “sixpence” because it is alliterative with “six,” but *Simon Magus* (*see* *SIMONY*) has been suggested as an eponym.

Simon Legree. *See* UNCLE TOM.

Simon Pure. English dramatist and actress Susan Centlivre (1669–1723) created a host of *APTRONYMS* in her comedy *A Bold Stroke for a Wife* (1717). The most lasting proved to be one *Simon Pure*, a Pennsylvania Quaker who tries to win the heart of the heiress Ann Lovely. But *Simon Pure*’s letter of introduction to her guardian, Obadiah Prim, is stolen by Colonel Feignwell, who pretends to be *Simon Pure* and convinces Ann Lovely’s guardian to let her marry him. At the last minute *Simon Pure* shows up, proves that he is “the real *Simon Pure*,” and provides a happy ending. As a result of the play, *Simon Pure* became an eponym, his name proverbial for anything authentic, true, the real and genuine article, “the real McCoy,” as we say more often today. Mrs. Centlivre, married to Queen Anne’s chef, turned to writing for a living when her husband died, and she became one of the few women of her time to earn her livelihood as a playwright.

simony. There is a legend that *Simon Magus* the magician tried to prove his divinity in a dispute with Peter and Paul before the emperor Nero. He attempted to fly up to heaven after jumping out a high window, succeeded in defying the laws of

gravity for a few moments, and then found himself cast down to earth by the prayers of the disciples. Simon Magus, who lived in the first century in Samaria, was a skilled magician, his last name, in fact, meaning sorcerer. The story of his conversion to Christianity is told in the Bible (Acts 8:9–24), but the passage instructs us that Simon's conversion was made only so that he could obtain the new powers of sorcery that he thought the apostles possessed. Simon's name, in the form of *simony*, has since been a synonym for traffic in sacred things, such as the buying and selling of church offices, a *simoniac* being one who practices simony. Not much is known of Simon after he was reproached by Peter, but it is believed that he founded a rival religion, a Gnostic sect combining elements of Christianity and paganism, traveling with a former prostitute named Helen and winning a number of disciples called Simonians. The traditional belief is that the wily magician died trying to prove his divinity when he attempted to imitate the resurrection of Christ. Simon, it seems, allowed himself to be buried alive, mistakenly believing that he would rise on the third day.

simples. *Simples* is an old word for medicinal herbs. In days past, the market gardeners of Battersea in England used to grow simples, and London apothecaries went to the town to select or cut the herbs they wanted. The similarity of the word *simpleton* and the *simples* of this common practice led to the use of “you must go to Battersea to get your simples cut” as a reproof to a simpleton or someone who made a very foolish observation.

Simpson's rule. This mathematical method is named after English mathematician Thomas Simpson (1710–61), but is first recorded toward the beginning of the 20th century.

since Hector was a pup. A long time ago; at least as old as the mythological Trojan warrior Hector. Partridge substitutes *Caesar* for *Hector* and calls this a Canadian phrase originating in about 1910. See HECTOR.

sincere. According to an old story, *sincere* has its roots in the quarries where Michelangelo worked before he became an immortal sculptor and an accomplished poet. Roman quarrymen often rubbed wax on marble blocks to conceal their imperfections temporarily. Then the Roman Senate decreed that all marble be “without wax,” or *sine cera*, this eventually becoming our word *sincere*, “without deception.” Most authorities, however, trace *sincere* to the Latin *sincerus*, “clean, pure, sound.”

since the hogs et grandma. This humorous expression from the U.S. Ozark mountains means a long time ago, as in “I haven't had so much good fun since the hogs et grandma.” A variation is *since the hogs et little brother*.

since time immemorial. We have used this phrase for at least eight centuries to mean “ancient beyond man's memory or records.” But in English law *time immemorial*, according to a 1275 statute, is any time prior to 1189, the year Richard I came to power in England.

since well I've played my part . . . For his last words, before he embraced his wife, Livia, and died, the Roman emperor Augustus, a great theater fan, chose a phrase often used at the conclusion of Roman comedies: “Since well I've played my part, clap now your hands, and with applause dismiss me from the stage.” See CURTAIN SPEECHES.

since when. Jamaicans condensed this expression meaning “a newly rich man or woman” from the phrase “Since when did he (she) get money?” commonly said of such a person.

sin-eater. Old, poor people called sin-eaters were hired at funerals in ancient times to eat beside the corpse and thus take on all the sins of the dead person, who was then thought to be freed from purgatory. Usually, all they got for taking on these often myriad sins was a small coin, a crust of bread, and a bowl of ale—small payment, though a living, for what amounted to a pawned soul.

sine die. A Latin expression used to mean “without fixing a day for future action or meeting,” as in “The assembly adjourned sine die.” *Sine* is the Latin for “without,” *die* the Latin for “day.” Italian author Carlo Guidi is said to have “died of shock” when he translated a religious work into Latin, presented a copy to the pope, and it was brought to his attention that the Latin word *sine* had been printed as *sin* throughout the book.

sine qua non. That which is indispensable, an indispensable condition, something essential. Although the words translate as “without which nothing,” the original Latin phrase from which they were taken is *Sine qua non potest esse*, “Without which it is not possible to exist.” Dating back in English use to the 16th century, the words have their origins in Aristotelian expressions. The term is also used attributively (“Publication is a *sine qua non* condition for the generation of literature”—Thomas De Quincey, *Works*, 1860) and can be used to mean “somebody indispensable.” The little-known plural, *sine quibus non*, is not used in the humorous expression for men's trousers—“these indispensables” being called *sine qua nons*.

sing a different tune. Possibly the wandering minstrels of medieval Europe suggested this expression because they changed the words of their songs from court to court in order to praise the exploits of different lords. They could have, for the phrase is recorded as early as 1390. It now means to act or speak in a different manner, and usually to humble oneself in the process. Generally it's heard in the form of *to make someone sing another tune*, to make him change his behavior or recant what he's said.

Singapore. Owned originally by the sultan of Johore, who ceded it to the British in 1824, Singapore is a corruption of the sultan's name.

sing for one's supper. A proverbial phrase, immortalized in the nursery rhyme about little Tommy Tucker, *to sing for one's supper* has its origins in the troubadours who literally sang for their suppers in English taverns.

sing Indian. American Indians under torture or in great peril often courageously defied death by singing or chanting; this inspired the now historical expression *to sing Indian*, to act courageously in the face of death.

singing beach. See quote from Agnes Edwards's *The Romantic Shore* (1915): "Manchester, Massachusetts' peculiar attraction is that beach of ruddy sand—a warm tawny pink—which, when a carriage drives over it or people tread on it, gives forth a crisp note, something like snow under foot in dry cold weather. This musical vibration has poetically christened it the Singing Beach, a wonder of the world and a never failing source of entertainment."

singing psalms to a dead horse. See QUICKER THAN HELL CAN SCORCH A FEATHER.

singing telegram. It was on February 10, 1933, the worst year of America's Great Depression, that the Postal Telegraph Company in New York City introduced the singing telegram. Several small companies around the country continue the practice today.

Sing Sing. The nickname for the New York State prison, Sing Sing Penitentiary, up the Hudson River at Ossining, a place where many New York City criminals have served time since it opened in 1830.

Sinhalese words in English. Sinhalese, spoken in Sri Lanka, has contributed several words to English, including beriberi and tourmaline.

sink one's teeth into. *To sink one's teeth into something* means to eat it, usually with great enjoyment, or to get into the spirit of anything. The Americanism was first recorded in 1892 as *sink tooth into*: "Only a favored few of the millions of feasters on Thanksgiving Day will sink tooth into genuine wild turkey meat."

sink or swim. An old saying that can be traced back at least to Chaucer about 1368. Chaucer, who may have coined the expression, wrote: "Ye rekke [reckon] not whethyr I flete [obsolete for swim] or sink." Since then, most writers give the phrase as *sink or swim*, not Chaucer's *swim or sink*, and it is often used to mean "no matter what happens," as in Byron's famous lines in *Don Juan* (1819) regarding the writing life: "And what I write I cast upon the stream / To sink or swim—I have had at least my dream."

Sinningia. Not named for any sinner, *Sinningia* is an eponymous plant genus that honors German horticulturist Wilhelm Sinning (1794–1874). It includes many tropical plants cultivated as houseplants, the popular gloxinia among them.

sin to Davy Crockett. A historical expression meaning something exceptional or extraordinary, as in "The way we used 'em up [killed them] was a sin to Davy Crockett." It refers, of course, to Davy Crockett (1786–1836), legendary frontiersman and hero at the Alamo.

si nummi immunis. *Si nummi immunis* has been called the lawyer's palindrome (reading the same backward as forward). The Latin can be translated as "Pay me your fee and you go scot-free." See also PALINDROME.

Sioux. These Indians called themselves *Dakotah*, "the allies." However, rival tribes called them the *Nadowessiou*, "little snakes, the enemy," and white explorers in the area mistakenly dubbed them the *Sioux*, from the last syllable of this slur upon them.

Sioux State. A nickname of North Dakota, where the Sioux Indians once ruled. North Dakota has also been called the Land of the Dakotas and the Great Central State. It is called the Flickertailed State after a ground squirrel called the flickertail found only in the state.

sippin' whiskey. An old name in the South and elsewhere for the best quality BOURBON.

Sir, I have not yet begun to fight! During the famous battle between the *Bon Homme Richard* and the *Serapis* it seems that some of John Paul Jones's men cried for surrender, but the captain laid one of them low with the side of his pistol, fracturing his skull. Captain Richard Pearson of the *Serapis* then shouted to Jones, asking if he had had enough. Jones uttered the immortal words: "Sir, I have not yet begun to fight!" So Lieutenant Richard Dale later recalled. Jones himself claimed that he answered Pearson's challenge with the far less colorful words "I have not yet thought of it, but am determined to make you strike."

sirens. Represented in mythology as birds with the heads of women, the Sirens were the three daughters of the Greek sea god Phorcus (Achelous). Perched on their pleasant island, they lured mariners to death, the sailors enchanted by the Sirens' song crashing their ships against the rocks. In rare instances they could be defeated, as when Orpheus, the legendary poet, outwitted the Sirens by playing his spellbinding lyre over the sound of their song. The name *siren* is now applied to any sexy, wilful woman.

Sir Galahad. The prototype of the chivalrous male, the original Sir Galahad may have been added to the Arthurian legends by Welsh author and clergyman Walter Map in about 1200. The son of Lancelot and himself a Knight of the Round Table, he is the hero of the Quest for the Holy Grail. His name is still synonymous with a courteous gentleman, mostly used in the same lighthearted, even humorous ways that it has been for a century or so.

sirloin. Sirloin, strictly speaking, is meat from the steer's hip, but today it is sold without the prized filet and often goes by the name of shell hip or rump steak. The widely accepted Sir Loin story about its origins shows how highly esteemed in the past was this aristocrat of steaks. The tale is told about numerous British monarchs, including the lusty Henry VIII, James I (on whom Jonathan Swift bestowed credit), and lastly, Charles II, who ruled England from 1660 to 1685. In each case the king in question was supposed to have been so pleased with the succu-

lent slice of pink meat served him that he unsheathed his sword, laid it on the brown-crust sirloin and knighted it, solemnly declaring, "Hereafter thou shalt be dubbed 'Sir Loin.'" The only bothersome fact is that *sirloin* really derives from an Old English word *surloin* (from *sur*, "above" or "over"), which simply meant the cut above the loin and came to be misspelled *sirloin* in about 1600. This, however, did not prevent writers like Scott from using terms like *the knightly sirloin* and *the noble baron of beef*. The last, practically unheard of today, was a double sirloin, a huge joint weighing up to 100 pounds and comprising both sides of the back. *See also* PORTERHOUSE.

sirocco. *See* MONSOON; WINDS.

sissy. In the mid 19th century *sissy* was merely a synonym for *sister* and it is still used as a nickname for girls, as is *Sis*. But by about 1890 the Americanism took on the meaning of a boy who acts like a girl, a coward or weakling. The word, as demeaning to women as it is to men, finally came to include among its derogatory definitions "a male homosexual," especially in the form *sissy-boy*.

Sisyphean. Endless heartbreaking toil is the lot of anyone engaged in Sisyphean labors. The term comes to us from the legend of Sisyphus, an ancient king of Corinth, who was sent to Hades for crimes against his subjects and condemned forever to roll a huge stone up a steep hill, only to have it roll downhill when he reached the top, so that he must roll it uphill again in an unending cycle.

sit-down strike; sit-in. Sit-down strikes, common in the 1930s, involved workers sitting down at their machines and refusing to let other workers take their places until a strike was settled. Sit-ins, a tool of civil-rights and other protest groups in the 1960s, employed the same technique, these passive protests originally being used only against racial segregation.

sit shiva. Shiva, from the Hebrew word for "seven," is the seven days of mourning following the funeral observed by Jews for a deceased parent, sibling, child, or spouse. To sit shiva is to observe this period and is so named because traditionally members of the family sat on stools or low benches while mourning, an ancient custom still observed by many today.

Sitting Bull. Sitting Bull (1834–90) was the great American Indian warrior and chief of the Hunkpapa who defeated Custer at Little Big Horn in 1876. In America, the buffalo (as our bison is commonly called) is responsible for all the bull names (Sitting Bull, White Bull, etc.) of the great plains Indian chiefs and warriors.

siwash. To travel lightly, without equipment. A Chinook jargon word *not* deriving from the name of an Indian tribe that traveled that way (there is or was no Siwash tribe) but from a corruption of the French word *sauvage*, "savage, wild," as if to insultingly say Indian "savages" traveled that way.

six and a half feet above snakes. That is, above the ground, as in: "He's a lean rangy cowpoke, about six and a half feet above snakes."

sixes and sevens. I'm at sixes and sevens, in a state of confusion, trying to explain this expression, which dates back to 1340. One theory is that it comes from the biblical phrase (Job 5:19): "He shall deliver thee in six troubles: yea in seven there shall no evil touch thee." More likely the term evolved from the old dice game of hazard. *Sinque* and *sice* ("five" and "six") were the most risky bets to make in the old game, and anyone who tried to throw these numbers was considered careless and confused. Later, *sinque* and *sice* became "six" and "seven." Perhaps the change simply occurred because the terms looked and sounded somewhat alike. But it is possible that six and seven (an impossible throw in dice and two numbers that add up to the unlucky 13) represents a joking shift. Only about a century and a half ago did *set on six and seven* take on its plural forms and become (set) at *sixes and sevens*. The phrase is still widely used today. A similar, older Italian expression, *a tredici*, "at 13," may be the source of the expression.

six of one and a half-dozen of another. Captain Frederick Marryat may have invented this phrase in *The Pirates and the Three Cutters* (1836), or else it was old sea slang that the author recorded. It apparently arose from no specific situation and means "nothing to choose between," "one and the same," simply because "six" and "a half dozen" are identical. ARCADES AMBO a similar phrase, means two persons having the same tastes or habits in common. It comes from Virgil's seventh eclogue: "*Ambo florentes aetabibus, Arcades ambo*" ("Both in the flower of youth, Arcadians both").

six-shooter. A popular name for the Colt revolver, patented by Samuel Colt in 1835 and also known as the *Colt* or *six-gun*. The revolver held six cartridges.

6666, The. A famous huge cattle ranch once owned by S. Burke Burnett, a Texan who won it in a poker game with a hand of four sixes.

Sixth Commandment. Sixth of the Ten Commandments: "Thou shalt not kill." *See* TEN COMMANDMENTS.

\$64 question. On the radio quiz program "Take It or Leave It," which premiered in 1941 and was emceed by Bob Hawk, topics were chosen by contestants from the studio audience and questions on these topics answered by each contestant on seven levels. The easiest question was worth two dollars and the questions progressed in difficulty until the ultimate \$64 Question was reached. The popularity of the show added to the language the expression *the \$64 question*, "any question difficult to answer," and inspired a slew of similar quiz shows. A decade later came television's "\$64,000 Question" with its plateaus instead of levels, its isolation booth, and its scandals involving prominent contestants who cheated in cahoots with the producers. Then, after a long hiatus, there was the "\$128,000 Question," but despite these programs with their inflated prizes, *\$64 question* retains its place in the national vocabulary.

sizzle. *See* ONOMATOPOEIA.

Sjambok rule. *Sjambok*, for "a rhino-hide whip," is said to come from Malay and ultimately from Urdu. The word, however,

is associated with the Boers of South Africa, *sjambok rule* meaning a repressive tyrannical rule of whips and violence. The word is an international one, recorded in the dictionaries of many languages. It seems to have come into English in the first quarter of the 19th century.

skate on thin ice. The allusion here is to skating over ice so thin that it hardly bears the skater's weight. This was actually once a sport called tickledybendo in New England. The metaphor *skating on thin ice* means that someone is taking chances, or behaving in a questionable, dangerous, or indelicate manner.

skedaddle. *Skedaddle* is often thought of as an Americanism for "to retreat, flee, clear out, depart hurriedly." But the expression probably comes from Scottish and English dialect, possibly deriving from the Greek *skedannunai*, "to split up." First used in America during the 1820s it became popular among Northern troops during the Civil War as a word describing Rebels fleeing the battlefield after a loss.

skeeziks. A good-for-nothing, but more often the affectionate name for a mischievous young boy or teenager. The word, its origin unknown, dates back to about 1850 and has been kept alive in recent times by the character named Skeeziks in the *Gasoline Alley* comic strip, though it isn't used much anymore.

skeleton at the feast. The Egyptians, according to Herodotus and Plutarch, liked to sit a skeleton or "image of a corpse" at their feasts in order to remind guests of their mortality. Whether this inspired an "eat, drink and be merry, tomorrow you die" atmosphere or assured their hosts that their guests would leave early, isn't known, but the *skeleton at the feast*, now serves as a humorous term for a deadhead, a party pooper, a wet blanket, someone who won't be invited to the next feast.

skeleton in the closet. It took years to find what seemed to be "the perfect lady," one without "a single care or trouble," but, alack and alas, the lady proved to have her dark secret, too. She admitted this and took the investigators to her bedroom closet, where a skeleton hung from the ceiling. After explaining that the skeleton was once her husband's rival, whom he had killed in a duel, she cried: "I try to keep my trouble to myself, but every night my husband forces me to kiss that skeleton!" Certainly this would be one of the most interesting of phrase derivations if the old horror story could be proved. But it can't. No one knows the origin of a *skeleton in the closet*, a shameful secret which a family tries to hide. There have also been attempts to link the words with actual skeletons that doctors hid in their homes or offices when dissection was forbidden by law, none very convincing. We only know that William Makepeace Thackeray first used the expression in print in an 1855 story he contributed to *Punch* and that it was probably in use at least 10 years before that.

ski. The noun *ski* derives from the Old Norse *skith*, "snowshoe." Over the centuries *ski* became a verb as well as a noun, so that we now go *skiing* on our *skis*.

skidoo. See 23 SKIDOO.

skid row. The expression, common throughout the United States, originated in the Northwest, where roads were made of debarked small logs called skids. Skid row then came to mean a town with these skid rows and finally a disreputable part of town.

skin. Partridge gives this as 20th-century Australian slang for a feeble, often pathetic horse, especially a race horse, but it seems to have first been used by Ernest Hemingway through-out his classic short story "My Old Man," written before the Australianism: "He'd have maybe taken a trial trip with one of Razzo's skins early in the morning . . ."

skin alive. *I'll skin you alive*, someone might say to another person in anger, meaning he will severely beat that person. The expression seems to have been recorded first in 1869, in a reference to a shady "skin-em-alive place." But it must be much older and is probably based upon the actual practice of skinning animals alive. According to Edward Hoagland in *The Tugman's Passage* (1982) "the more brutal [American] pioneers" skinned wolves alive "and turned them loose to scare the rest of the pack."

skinflint. A cheap, mean penny-pincher, a Scrooge. The term, first recorded in 1690, is said to derive from the medieval saying to *skin a flint*, to be very exacting in making a bargain. A flint is a hard stone and would be exceedingly difficult if not impossible to skin.

skin game. In the early 1800s *to skin* made its debut as a verb meaning "to strip one of his money." After another 50 years *skin game* was being used for a card game or any other game or scheme in which a person has absolutely no chance to win.

skinny dipping. Dipping has been used by Americans for swimming since early Colonial days, and skinny dipping, "swimming naked," has been popular just as long. While dipping is not much used by itself anymore, it is still found in the expression let's take a dip.

skipper. As *scip* meant SHIP in Old English, *scipper* meant a ship's captain. By 1830 the English were pronouncing the latter word *skipper* and using it for the captain of a small merchant vessel, though it now refers to the captain of any ship.

the skipper swallows the anchor. This expression originally meant that the captain or skipper of a ship has retired. *The skipper swallows the anchor* dates back to the late 19th-century steamship lines, and is now sometimes used to indicate that death has come as well.

skirt. American slang for a woman, especially one who is young and attractive. A *skirt chaser* is a womanizer. Both terms are first recorded in the late 19th century.

skit. No one really knows the origin of the word *skit*, for "a short comical act in a variety show." A good guess is the Swedish *skjuta*, one of whose meanings is "full of frisks or capers." The word, first recorded in 1820, may also be a back-formation from *skittish*, in its sense of lively, humorous.

skivvies. *Skivvies*, slang for men's shorts, may derive from the Japanese *sukebei*, "lewdness." In the British navy *skivvy* is a greeting said to have been first encountered as a salutation of Japanese prostitutes, and "Skivvy-skivvy, G.I.?" or "Skibby-skibby, G.I.?" was indeed the way Japanese and Korean street prostitutes and pimps solicited Americans during both World War II and the Korean conflict.

skoshi; skosh. Little, little bit, few, a word from the time of the Korean conflict that probably derives from Japanese *sukoshi* meaning the same. *Skosh* (rhymes with *gauche*) and *skoshi* were both used frequently by G.I.s in Korea, the Koreans having borrowed it from the Japanese during their long occupation of Korea. *Skosh* is the form mostly used in American English today.

skulduggery. *Skulduggery*, for "dishonesty or trickery," has no connection with heads or skulls. It does have something to do with adultery. *Skulduggery* is the American variant of the Scottish *skulduddery*, which means illicit sexual intercourse or obscenity, the Scottish word originally coined as a euphemism for *adultery* (*duddery*, "adultery"). Thus the word is doubly euphemistic: *skulduddery* itself and the American *skulduggery* fashioned from it that is first recorded in 1856. In America the word has never suggested any sexual hijinks, usually meaning political trickery.

skull. When the English poet Lord Byron drank from a skull he was hardly being original. Human skulls used as drinking cups have been traced back before 7000 B.C. Herodotus, for example, mentions that the Scythians made drinking vessels out of skulls of their enemies by sawing off the skull below the eyebrows, covering the outside with leather and gilding the inside with silver or gold. He also notes that people near the River Don in southern Russia boiled the flesh of a dead parent with that of sheep and ate it, preserving the parent's skull as a keepsake cup. An old story, "The Lay of Weyland the Smith," tells how the eponymous hero slew his opponent's sons, making golden cups out of their brainpans and gems out of their eyes, which he sent to their mother, and fashioning broaches from their teeth, which he sent to their sisters. Skulls were also used as drinking cups by the Vikings and the skulls of saints were used as drinking cups in medieval monasteries. Such customs have led some etymologists to suggest that the word *skull* itself meant a drinking cup before it acquired its present meaning. No proof of the derivation has been established, but there is a strong connection between the Old Norse *skal*, "a bowl," and *skull*. Another possibility is that *skull* derived from the Old Norse *skel*, "a seashell."

skunk. The little striped mammal can squirt his foul yellow spray up to 12 feet, so American Indians called him *segankw*, or *segonku*, the Algonquian dialect word meaning simply "he who squirts." Pioneers corrupted the hard-to-pronounce Algonquian word to *skunk*, and it has remained so since. We know the skunk's foul spray as *m-butyl mercaptain*, or $\text{CH}_3\text{C}_2\text{H}_5\text{CH}_2\text{SH}$, but it smells as bad under any name. The skunk was called *enfant du diable*, "child of the devil," by French Canadian trappers, but is also called the wood polecat and the wood pussy. The most common species is the striped skunk, *Mephitis me-*

phitis, which might be loosely translated as "double stinky," though *mephitis* means a noxious exhalation from the ground.

skunk cabbage. The much-maligned marshland *skunk cabbage* (*Symplocarpus foetidus*) bears little relation or resemblance to the cabbage (*Brassica capitata*). The plant takes its name from its fetid smell and its leaves' supposed resemblance to cabbage leaves. Actually the skunk cabbage's large, nearly round leaves are far more handsome and its sheath-like spathe is beautifully colored. But the plant's foul smell has caused it to be called pole-cat weed as well as skunk cabbage.

skunk in the churchhouse. See HAIR IN THE BUTTER.

skunk works. A humorous name for a secretive scientific project conducted in a lab or the like. The expression, dating back to 1965, comes from Al Capp's comic strip *Li'l Abner* in which his character Big Bill Barnsmell makes moonshine called Kickapoo Joy Juice in his skunk works. See KICKAPOO JOY JUICE.

Skutnik. Lenny Skutnik, the young hero of a 1982 Washington plane crash, was introduced by President Reagan during his State of the Union address. When such introductions became common in political speeches, the word *Skutnik* began to be used not as an eponymous synonym for heroism, as might be expected, but for "a human prop, used by a speaker to make a political point," as Jeff Greenfield defined it in his book *Oh, Waiter! One Order of Crow!* (2001). The word has no relation to SPUTNIK.

skyscraper. The world's first skyscraper office building was the 10-story Chicago office of the Home Insurance Company built in 1883 by architect William Le Baron Jenney. The fitting name *skyscraper* was given to this first building to employ steel skeleton construction, a building much higher than any other building of its time, but journalists had borrowed the word from the triangular sails that had long been used high on the masts of sailing vessels, scraping against the sky. Novelist Henry James wrote that Manhattan skyscrapers looked "like extravagant pins in a cushion already overplanted, and stuck in as in the dark, anywhere and anyhow."

Slainte! A drinking toast familiar to Irishmen everywhere, *slainte!* (pronounced *s-lawn-cheh*) is simply Gaelic for "cheers!"

slam dunk. *Dunk* simply meant to shoot a basketball through the goal in the 1930s when the term is first recorded. But in the mid-1960s tall players developed what is known as the dunk shot by leaping above the basket and stuffing the ball in. The slam dunk came soon after, this a more theatrical version of the dunk shot in which the ball is slammed down through the hoop. *Slam dunk* has come to mean any "sure thing," as in, "We'll win tomorrow, it's a slam dunk." See also BASKETBALL.

slammer. Slammer had been slang for "a door" before it became a slang synonym for "prison" in the 1930s. Both terms, of course, refer to the slamming of doors, in the last case the

slamming shut of all the metal doors in a cellblock at the same time. *See also* HOOSEGOW-JUG.

slang. The fabled “Dutch General Slangeuberg noted for his abusive and exaggerated epithets when he reproved the men under his command” is *not* the source for the word *slang*. Neither is the Italian *s-lingua*—*s*, the negative, and *lingua*, “language,” equaling *slingua* (slang), or “bad language.” No one is sure, but some prominent etymologists, including Ernest Weekley, believe that *slang* may come from the Norwegian *slengjakeften*, “to sling the jaw,” “to abuse.” The word dates back to the late 18th century.

slap-happy. The internal rhyme of this word has insured its long life, which dates back at least to the late 1920s. It means to be very confused, dazed, or PUNCH-DRUNK, and comes from the sport of boxing, which has produced too many men who act like this because they’ve taken too many blows to the head. Despite his nickname, clowning boxer Slapsy Maxie Rosenbloom was *not* one of them.

slapstick. The slapstick used in early low comedies was “a large paddling implement consisting of two boards hinged at one end but loose at the other.” Clowns in late 19th-century American variety shows used this slapstick to give other performers laugh-getting light but loud whacks on the rear end. The slapsticks were so widely used that they gave their name to any broad, loud knock-about comedy.

slave; Slav. The word *slave* has nothing to do with Athens in the Periclean Age, when there were twice as many people in bondage as free, or with the “African trade” that created four centuries of suffering. *Slave* came into the language long after the former and long before the latter inhumanity, deriving from the name of a tribe living in what is now Poland and other areas of Eastern Europe. The name of these people meant “noble” or “illustrious” in their own tongue, but in about 6 A.D. they were conquered by German tribes from the west and forced to serve their conquerors or sold into bondage to the Romans. The Romans called them *Sclavus*, which became the Medieval Latin *sclavus*, “a Slav captive,” this term of contempt applied to any bondsman or servile person. *Sclavus* became *esclave* in French and came into English as *slave*, retaining the *c* until about the 16th century, when *slave* was first used. The word *Slav*, for the race of people in Eastern Europe, comes from the same source, the proud “noble” tribe whose name underwent a complete metamorphosis.

sleazy. Several respected sources mark the origin of *sleaze* “unknown.” But this word meaning contemptibly low, mean, or disreputable may have originally been a derogatory reference to shoddy fabrics made in Siberia. At least folk etymology has it so. When first recorded in about 1635, *sleazy* did refer to cheap flimsy fabric.

sleep at the bottom of the ocean; sleep with the fishes. Dead, killed, assassinated. In the Academy Award-winning movie *The Godfather* (1972), the acting Corleone boss, Santino, or Sonny, is sent a large dead fish wrapped in the bulletproof vest of his Mafia family’s chief enforcer, Luca Brasi. “It’s a Sicilian

message,” one of his capos tells him. “It means Luca Brasi sleeps with the fishes.” In Mario Puzo’s novel *The Godfather* (1969) the expression varies some: “When he came back he was holding Luca Brasi’s bulletproof vest in his hands. Wrapped in the vest was a huge dead fish . . . ‘The fish means that Luca Brasi is sleeping at the bottom of the ocean,’ he said. ‘It’s an old Sicilian message.’” A humorous play on the words is *sleeps with the gefilte fishes*.

sleeper. A *sleeper*, for “any unexpected success,” dates to the 1930s. One speculation has the word deriving from *sleeper*, for “an unbranded steer,” a late 19th-century term that came to mean, in one sense, “something taken for something else.” Another vague possibility is *sleeper* for “a bet in faro when the owner has forgotten it, when it becomes public property, anyone having a right to take it.” By this reasoning the *sleeper*, or bet, could turn out to be a good one.

sleeping. A tender euphemism for “buried” used mainly by old-timers, as in: “My older boy went to war in ’14. He’s sleeping over in France . . .”

Sleeping Beauty. A classic fairy tale by Charles Perrault, published in 1697. It was the first of eight stories published as *Mother Goose Tales* and remains among the best-known tales today.

sleeping policemen. In Trinidad these are humps in the road to slow traffic. In the U.S. they would be called, less colorfully, *speed bumps*, *road bumps*, or *safety bumps*.

sleep like a top. A top spinning at high speed is so poised and steady that it hardly seems to move. Writers first compared sound sleepers to spinning tops over 350 years ago, and even though we now know that no one sleeps so soundly the whole night through, the comparison remains a good one—for a spinning top begins to wobble after a while, is rewound, and resumes its steady spinning. Some authorities have tried to trace the phrase back beyond its first recorded use in English (1616), to the French word *taupe*, a “mole,” the implication being that one sleeps as peacefully as a mole. But the French saying is also to “sleep like a top,” *dormir comme un sabot*, not *dormir comme une taupe*, “to sleep like a mole.” Tops, like yo-yos, are in fact said to be “sleeping” when they are spinning perfectly. William Congreve played on both meanings when he wrote in his comedy *The Old Bachelor* (1693): “I can ensure his anger dormant, or should be seen to rouse, ’tis but well lashing him and he will sleep like a top.” Congreve’s play, which brought him sudden fame, has a cast of aptronyms second to few. There is Heartwell, the kind old bachelor; Vainlove, who forsakes his mistress; Fondlewife, the uxorious old banker; and even a cowardly bully named Captain Bluffe.

sleep on a clothesline. The expression “I’m so tired I could sleep on a clothesline,” with much more British than American use today, dates back to 18th-century England, when people unable to afford a bed in boardinghouses were charged two pennies to sit on a communal bench through the night, leaning on a clothesline stretched tight in front of them. The taut “two-

penny rope” was cut in the morning, the sleepers jolted into reality again.

sleeps. “It was many sleeps away.” Among some American Indian tribes a *sleep* was one day, “the measure of time between one sleeping period and the next.” The term is recorded as early as 1670 in South Carolina and was adopted by settlers.

sleeps with the gefilte fishes. See SLEEP AT THE BOTTOM OF THE OCEAN.

sleep that knits up the ravelled sleeve of care. See RAVELLED SLEEVE OF CARE.

sleuth. The first sleuth was a *sleuthhound*, the name for a bloodhound which gave us our word *sleuth* for a human detective in about 1872. The *sleuthhound*, in turn, took the first part of its name from the Middle English *sleuth* meaning “track or trail.” Edgar Allan Poe may have written the first detective story, but author Harlan Page Halsey was the first to use the word “sleuth” as a synonym for a detective. He created the fictional character Old Sleuth, which later became his nickname, and for a time even held a copyright on the name. He was so possessive of “sleuth” that he once went to court to prevent another writer from using the word.

slice. Often used by Americans instead of a piece of pizza when ordering pizza in a pizzeria or pizza parlor: “Gimme a slice anna small coke.” When a whole pizza pie is ordered it’s “Gimme a pie.” This word is first recorded in the United States in the early 1930s, when slices weren’t widely sold as they are today and pies prevailed, these usually eaten at a table in an Italian restaurant. It should be noted that while thinner pie-slice-shaped Neopolitan pizza can be asked for by ordering a slice, a square cut of thick Sicilian pizza shouldn’t be: “Gimme a piece of Sicilian.” Chicago pizza is a deep-dish pizza popular in the Midwest.

a slice off the old ham. Eugene O’Neill’s father, James, gave up a promising career as an actor for the financial security of playing the leading role in *The Count of Monte Cristo*, which he played more than 5,000 times. “A chip off the old block, eh?” Eugene said to him soon after he, too, had chosen the theater as a career. “Say, rather, a slice off the old ham,” James O’Neill replied.

slick as a peeled onion. An onion peeled of several layers is indeed slick and glistening, which is why this old Americanism is used to describe a slick and slippery person, someone often dishonest.

slide; Kelly, slide. As Dizzy Dean would have put it, when Kelly “slud,” he “slud” hard. Michael Joseph “King” Kelly, who played ball for Chicago and Boston, was a talented hustling player called “the Ten Thousand Dollar Beauty” because he signed for that sum one year, an incredible amount of money for a ballplayer at the time. In 1889 a song was written about Kelly by his friend monologist John W. Kelly exhorting him to *slide, Kelly, slide*, an expression which has become proverbial.

Kelly innovated a number of techniques besides the “hook” or “fadeaway” slide. As a catcher he invented the dirty trick of throwing his mask up the first-base line in order to trip a batter trying to beat out a hit. Kelly played to win. As Boston’s manager, he looked up from the bench one day to see a foul ball drifting toward him. At the time, baseball rules specified that substitutions could be made at any point in the game, and seeing that the Boston catcher could not possibly reach the foul, Kelly jumped up off the bench, shouted “Kelly now catching for Boston,” and caught the ball for an out. His maneuver led to the rule now on the books that substitutions can only be made when the ball isn’t in play.

sliding pond. Is it pronounced “sliding pond” or “sliding pon?” That depends on where you come from in America. Many experts believe that the slides found in most playgrounds were first named *sliding ponds* because they reminded people of how they used to slide on the ice of ponds before playground slides were invented sometime in the 19th century. By this reasoning *sliding pon* is simply a shortening of *sliding pond*. But some *sliding pon* advocates claim that *pon* here is the corruption of any of a number of foreign words that could be applicable. Still another guess is that *sliding pon* comes from “sliding upon.” More American terms for *sliding pond* include *sliding board*, *slide*, *sliding pot*, and even *chutey-chute* (from the British *chute*, and probably obsolete today). Strangely enough, no major American dictionary lists *sliding pond*, or *sliding pon*, including *A Dictionary of Americanisms* and *The Dictionary of American Slang*—though the terms have been commonly used in some areas since early in this century and must have spread throughout the country by now in both speech and literature.

Slim. Over the past 20 years this has been a name given to the AIDS disease by English-speaking East Africans, because the disease has ravaged the African continent and often reduces those it attacks to living skeletons.

slime in the ice machine. A recent popular expression or catchphrase in the Houston, Texas, area for anything dirty, icky, gooey, nasty, distasteful. Apparently the expression originated with Houston news broadcaster Marvin Zindler, who uses the words to denounce health violations in local restaurants: “Sliiiiime in the ice machines!” According to the *New York Times* (March 9, 1994), a Texas governor used the same expression publicly when “served a dessert slathered with gooey peach syrup,” lending it more prestige.

slim pickings; Slim. *Picking* can refer to the harvesting of a crop, this sense of the word first recorded in 1828 and often used in the Americanism *picking bee*. *Pickings*, however, can mean “ gleanings or scraps,” and prefaced by *slim* (probably from German *schlimm*, “bad, small”), means “very little to be had, unprofitable.” Charlotte Bronte coined *scanty pickings*, a synonym for *slim pickings*, in her novel *Jane Eyre* (1847). In the late 1930s a tall, slender actor in cowboy movies took the name Slim Pickins at the beginning of a long career, *Slim* even then having been a century-old cowboy nickname for a thin person.

sling the bat. British soldiers in 19th-century India coined this expression, which means to be able to speak a foreign language.

No cricket bat is involved, the bat here being the Hindi *bat*, “language,” and the British slang *slang* meaning to utter or speak. Kipling used the phrase in 1892. Eventually, *slang the bat* meant to be able to speak not only Indian languages but any foreign language at all.

slip. *Slip*, as in “She’s a mere slip of a girl,” that is, she’s small and thin, may derive from *sliver*, which comes from Middle English *slivere*. Or it may derive from the Middle Dutch *slippe*, which also gives us the word for any long, narrow strip; a small piece of paper; a scion or plant cutting.

slip of the tongue. This phrase, first recorded in the work of English poet John Dryden in 1667, is a translation of the Latin *lapsus linguae*. The similar term *slip of the pen* isn’t heard much anymore, but FREUDIAN SLIP remains popular. See GOLDWYNISMS; MALAPROPISM; SPOONERISM.

slippery slope. A recent term with much currency in political circles. It means “a tricky, precarious situation,” a slope on which it is an easy, smooth ride to your injury or destruction below.

slipshod. The first slipshod people were men in the 16th century who walked the streets in slippers, a kind of loose slipper. Such men, slopping along shod in their slippers, were considered uncouth by respectable people, who soon coined the word *slipshod* for them, *slipshod* ultimately applying to anything done in a slovenly way.

slipslop. A *slipslop* is a MALAPROPISM. In this case the synonym for the misuse of words comes from the name of Mrs. Slipslop, the chambermaid in Henry Fielding’s novel *Joseph Andrews* (1742). Mrs. Slipslop utters a few words nobody has been able to translate yet, including “ragmaticellest mophro-dites.” See GOLDWYNISM.

slithy. “’Twas brillig and the slithy toves did gyre and gimble in the wabe.” Author Lewis Carroll concocted this blend, or portmanteau, word from *lithe* and *slimy* in *Through the Looking Glass* as part of his “Jabberwocky” language.

slogan; campaign slogan. Probably the most successful slogan ever written, or at least the most profitable one, is the “Think Mink” button invented by Jack Gasnick, which was conceived in 1929 and has sold 50 million copies since 1950 alone. Gasnick also invented the ubiquitous “Cross at the Green . . . Not in Between” slogan. All slogans, whether they be catchy advertising phrases or the rallying cries of political parties, are direct descendants of Gaelic battle cries, the word itself deriving from the *sluagh-ghairm* (battle cry) of the Gaels. Gaelic soldiers repeated these cries, usually the name of their clan or clan leader, in unison as they advanced against the enemy. Over the years the word came to describe any catchy phrase inducing people to support a cause (the LIBERTY, EQUALITY, FRATERNITY! of the French Revolution) or a commercial product (the 99 ⁴⁴/₁₀₀% Pure of Ivory Soap). Sometimes *watchword* is used loosely for slogan, as is *catchword*, though this last is more often employed in a contemptuous sense (as in “advertising catchwords”). Advertising slogans were with us

long before 1841, when the first advertising agency opened in Philadelphia (it was called an *advertising brokerage*). Over the years, from the first tavern signs in the colonies to the first electric signs of the 1890s, there have been thousands of memorable slogans, but here are some of the best known:

Pink Pills for Pale People—Dr. William’s Pink Pills, ca. 1870
 99 ⁴⁴/₁₀₀% Pure—Ivory Soap, 1879
More Than One Million Copies Sold!—*The Science of Life or Self Preservation*, published in 1882
You Push the Button We Do the Rest—Kodak, 1888
The Beer that Made Milwaukee Famous—Schlitz, 1895
The Strength of Gibraltar (the Rock)—Prudential Insurance, 1896
Good to the Last Drop—Maxwell House Coffee, 1907
The Breakfast of Champions—Wheaties Cereal, 1922
The Skin You Love to Touch—Woodbury Soap, 1922
They Laughed When I Sat Down, but When I Started to Play . . .—U.S. School of Music, 1925
Call for Philip Morris—Philip Morris Cigarettes, 1933
There’s a Ford in Your Future—Ford Motor Co., 1944
Lifebuoy Stops B.O. (Body Odor)—Lifebuoy Soap, 1948
Does She or Doesn’t She?—Miss Clairol, 1955

Another interesting one was *Don’t Talk Chum, Chew Topp’s Gum*, a variation on or the inspiration for the popular World War II slogan *Loose Lips Sink Ships*. See POLITICAL SLOGANS; CIDER.

slothful. *Sloth*, deriving from the Middle English *slow*, “slow,” dates back to at least 1175 as a word for laziness, and the adjective *slothful* is recorded as early as 1390. The arboreal mammal of South America called the sloth didn’t get its name until the early 19th century. The sloth does virtually nothing for weeks on end, not breathing for long periods, taking at least two weeks to digest its food, and not even springing up if it falls out of its tree. It was named by explorers who observed it, one describing how a sloth took “three or four days at least, in climbing up and down a tree,” and another observing that one took “a whole day in going fifty paces.”

slow and steady wins the race. When Charles Darwin measured the speed of a Galapagos turtle by walking beside it, he found that it “walked at the rate of sixty yards in ten minutes, that is 360 yards in an hour, or four miles a day—allowing a little time for it to eat on the road.” That is certainly slow enough for an expression *slow as a tortoise*, but the creature, unlike the snail, has been noted for his reliability rather than his lack of speed. The expression *slow and steady wins the race* is from the poem “The Hare and the Tortoise” by Robert Lloyd (1733–64) but can be traced back in all but its exact form to Aesop’s fable “The Hare and the Tortoise,” in which the hare awakens to see the tortoise crossing the finish line in a race the hare was sure he would win.

slow bear. A humorous Civil War term that foragers used for farmers’ pigs that they stole, killed, and ate. Humorous, that is, so long as you weren’t the farmer.

slowest selling book. David Wilkins (fl. early 17th century) is said to be the author of the world’s slowest selling book. Pub-

lished in 1716 by the Oxford University Press, his translation of the New Testament from Coptic into Latin sold 500 copies in the 191 years it remained in print (until 1907), for an average of about two copies a year.

slug. It is hard to find anything good to say about the slimy slug, which is technically a snail-like terrestrial gastropod with no shell that feeds on leafy garden crops. Interestingly, the slug takes its name from the Scandinavian *sluggje*, a heavy, slow person. In fact, in English the word *slug* meant a fat person before it was applied to the garden pest. Like the shark and the shrimp, the slug is named for a person sharing its characteristics, not the other way around. See SNAIL.

slugger. The term *to slug*, “to hit hard,” has been used in baseball since the 1860s, and *slugger* for a hard or heavy hitter is recorded as early as 1883. But *slugger* was used in reference to a hard-hitting boxer before this, as well as to a cricket batter. Possibly the word derives from the early expression *to hit with a slug*, that is, a piece of lead fired from a gun.

slum; slumber. *Slum*, for “a squalid area of a city or town,” is a relatively new word first recorded in 1812. The *O.E.D.* won’t venture a guess at its origins, simply labeling it “cant,” but it has been suggested that *slum* may derive from *slumber*—perhaps because *slum* first meant the squalid room where a poor person slept, or perhaps because slum areas were erroneously thought to be sleepy, quiet places! *Slumber* comes from the Middle English *slumeren*, “to doze.”

slumgullion. By the end of the 19th century *slumgullion* meant a meat and vegetable stew in America, but the word started out meaning “slime.” *Slum*, a mispronunciation of slime, had first meant the scummy liquid left over in the tryworks after blubber was processed aboard whaling ships. By mid-century *slum* came to mean a stew. Then miners in the 1849 gold rush borrowed *slum*, for “soup,” added *gullion*, an English dialect word meaning “mud,” and used *slumgullion* to mean the soupy liquid resulting from sluicing. *Slumgullions*, in turn, seemed to make a funny word for soup to some miners and this became its primary meaning.

slumlord. A landlord of completely neglected or barely maintained tenements in a very poor area. George Bernard Shaw coined slum landlord in about 1893 and the American English contraction slumlord first appeared in print 40 years later. See also RACHMANISM.

slush fund. *Slush fund* originally referred to the surplus fat or grease from fried salt pork, a standard food on 19th-century ships. This slush was usually sold in port, the money raised from it put into a general fund that was used to purchase luxuries for the crew. By 1866 the nautical term had been applied to a contingency fund set aside from an operating budget by Congress, and in later years it took on its current meaning of a secret fund used for bribes or other corrupt practices.

slush pile. The pile of unsolicited manuscripts found on a book or magazine editor’s desk. Rarely is the pile even glanced at but sometimes it contains a very profitable or brilliant work. See also SLUSH FUND.

slut. The word seems to have passed from its original meaning of “a dirty slovenly woman” to “a prostitute, an immoral woman.” First recorded toward the end of the 18th century, it may derive from the Middle English *slut*, mud.

slut’s wool. See DUST BUNNY.

smack. In its sense of a sloop-rigged fishing boat *smack* derives originally from the Dutch *smak* meaning the same. The word has several meanings, including to eat noisily (from the German *schmatzen*) and the slang heroin whose origins are unsure but may derive ultimately from the Old High German *smac*, to smell, taste.

a small cup of tea. In Kenya this phrase is slang for a bribe or for a “not unreasonable” bribe.

small fry. In her epochal *Uncle Tom’s Cabin* Harriet Beecher Stowe introduced *small fry* (“smaller fry”) to describe children, but *fry* had been used in this sense as early as 1697. Both expressions refer to the *fry*, “or young, of salmon, herring and other fish.” The word derives from the Norse *frae* “seed,” meaning the berry or seedlike masses of eggs these fish produce.

small potatoes. A favorite expression of the character based on big-time crook Meyer Lansky in *The Godfather* (1970), *small potatoes* means “something or someone trivial or insignificant.” The term is an Americanism dating back to about 1831, when it was first recorded, and is frequently used in the form *small potatoes and few in a hill*, a favorite Davy Crockett expression. Small potatoes are often called new potatoes and SALAD POTATOES in the U.S.. They are usually considered tastier than larger specimens.

small solace. *Solace*, meaning “comfort, consolation,” came into the language about 1300, but no dictionary seems to have recorded the common phrase *small solace*, “consolation that doesn’t help much,” as in “You’ll find small solace in the bottle.” All my search turned up was *great solace* (*grat solas*), first recorded in 1400. *Solace* derives ultimately from the Latin *solari*, “to console.”

smart aleck. If there ever lived a real “smart Aleck,” an Alexander so much of an obnoxiously conceited know-it-all that his name became proverbial, no record of him exists. The term can be traced back to about the 1860s and is still frequently used for a wise guy today. The original *smart aleck* may have been at least clever enough to cover up all traces of his identity. One possibility for a real smart aleck, however, would be 19th-century American confidence man Alec Hoag.

smart apple. A wise guy or smart aleck is a *smart apple* today, but when it originated in the early 1920s the term meant an intelligent person. An *apple* had simply been a “guy” before this.

smart as a steel trap; smart as a whip. Very smart and alert. The first expression dates back at least to humorist Seba Smith’s *The Life and Writings of Major Jack Downing* (1833). Similar

old terms are *smart as a whip* and (to have) *a mind (or memory) like a steel trap*.

smart cookie. “He’s a real smart cookie,” a doctor recently told me (2003) of another diagnostician, proving that the expression is still used. The *cookie* in the phrase is American slang for a person and is first recorded in this sense about 1917 in the form of “He’s a hardboiled cookie,” by hardboiled cookie President Harry S. Truman in his book *Dear Bess*. The expression *smart cookie* in its entirety didn’t find its way into print until 1955. *Tough cookie* and *rough cookie* are also heard.

smear by a broad brush. To spread with any dirty substance, using a wide brush to cover as much area as possible. The word is recorded before 900 in the form of *smeren*. To be *smear*ed can mean to have one’s reputation destroyed.

smellefeastes. See PARASITE.

smellfungus. A discontented person, a grumbler and fault-finder. The first *smellfungus* was British novelist Tobias Smollett (1721–71), who was once imprisoned for libel. Smollett’s book *Travels in France and Italy* (1766) was entertaining but ill-tempered and novelist Laurence Sterne parodied the author as “Smellfungus” in his *Sentimental Journey through France and Italy* (1768). Within a short time *smellfungus* was being applied to any ill-tempered grumbler.

Smell-O-Vision. Smell-O-Vision, “the first movies that stink on purpose,” was invented in about 1955 by Hans Laube, who called himself an “osmologist” and believed that his process would make people desert their home television sets and come stampeding back into the empty movie theaters of the era. Unlike its rival process, Aroma-Rama, which released a variety of confusing scents one after another through a theater’s ventilation system, Smell-O-Vision’s scents were discharged at the proper time from 50 tiny “scent vents” attached to the back of every seat. The scents were often overwhelming and even gross, as when the bulls were running in the Festival of Pamplona. But a *New York Times* critic wrote of one movie, “The odor squirters are mildly and randomly used, and patrons sit there sniffing and snuffling like a bunch of bird dogs trying to catch the scent.” Needless to say, the process never caught on.

smellsmock. Licentious priests were called smellsmocks in the early 16th century because people thought their sexual affairs made their smocks smelly and because they knew how to “smell a smock,” how to recognize an easy conquest. *Smellsmock* soon came to cover any licentious man, but it survives today only as the popular name of several plants such as the cuckooflower and the woodsorrel.

smelt. These small fish are said to take their name from the words *smell it*, because when first caught they smell like freshly cut cucumbers. More conservative etymologists smell a rat here and derive *smelt* from the Anglo-Saxon *smelt*, smooth and shiny, like fish itself. *Smeltania*, on Lake Charlevoix, Michigan, has long been a principal center for smelt fishing, and one of the few places named after a fish.

smile. The Middle English word *smilen* is the direct ancestor of *smile*, but nobody knows where *smilen* came from—probably from a Scandinavian language. *Smiles* is said to be the longest word in English, according to an old riddle: “There’s a mile between the first and the last letter.”

smiley. *Smiley*, or *smilie*, is an unusual word for a cut made by a club on the face of a golf ball, which somewhat resembles a smile. The term only dates back to the 1970s. See also DIMPLES.

smiley face. Unaccountably absent from most dictionaries today, smiley face was first recorded in print in 1972. The ubiquitous cartoon-style picture of a smiling face—usually in black and yellow, always with mouth turned up and dots for eyes—was invented by some anonymous artist in the late 1960s. It has since been a symbol for peace and happiness, among other causes. Seen and heard occasionally as happy face. The smiley face is well-known almost everywhere. According to the *New York Times* (July 5, 2006), “The most widely credited claim for inventing the smiley face goes to Harvey R. Bull, for the State Mutual Life Assurance Company of America, a Massachusetts-based company, in 1963. Mr. Bull, a graphic artist, was paid \$45 for creating a button intended to cheer employees . . .”

smite someone hip and thigh. *Smite someone hip and thigh* and you smite him all over his body violently. The old phrase is from the Bible, Judg. 15:8: “He smote them hip and thigh with a great slaughter . . .”

Smith. Smith has been the most common American surname for at least the last 50 years, according to the U.S. Census Bureau. As Justin Kaplan and Anne Bernays put it in *The Language of Names*, “Smith is the ultimate catchall for linguistic neutralization. It takes in Schmidt, Schmitt, Schmitz, Smed, Smed, Schmeider, Smidnovic, Seppanen, Fevre, Kalvaitis, Kovars, Haddad, McGowan, and other variants that in their original language mean someone who works with metal.” In the United States alone there are 2,382,500 Smiths. The first of the Smiths in the United States was the English explorer and colonist John Smith (1580?–1631).

smithereens. *Smithereens*, as in the expression *blasted to smithereens*, derives from the Irish *smidirin*, “small fragment.” It is first recorded in English in the 19th century.

Smithfield ham. Famous Virginia hams made for over a century at Smithfield, Virginia, from hogs originally grown on a peanut diet and cured with the smoke of the burning shells.

Smith’s. Among the most unusually named of all the magazines published over the last three centuries is *Smith’s*. It was some anonymous genius’s idea to so name the magazine in the mid-19th century, not in honor of anyone but to attract a readership from among the myriad of Americans named Smith. See SMITH.

Smithsonian Institution; smithsonite. Despite the fact that he neither had visited nor known anyone living in America,

British chemist James Smithson (1765–1829) left over \$508,000, the whole of his estate, “to the United States of America to found at Washington under the name of the Smithsonian Institution an establishment for the increase and diffusion of knowledge among men.” The money was actually willed to his nephew with the stipulation that the above condition apply if the nephew died without children—which he did in 1835. Smithson, the illegitimate son of Sir Hugh Smithson and Elizabeth Macie, made many valuable analyses of minerals, and smithsonite, an important zinc ore, is also named in his honor. Congress took 10 years debating whether or not to accept his bequest, finally accepting largely through the efforts of John Quincy Adams. The museum was founded in 1846.

smoke and mirrors. The conjuring tricks of magicians led to the old phrase smoke and mirrors, meaning deception or trickery.

smoke children. Cambodian soldiers serving in Pol Pot’s Khmer Rouge made these “magic talismans by slicing open the stomachs of pregnant women, removing the fetuses and hanging them up in the eaves of huts to shrivel and blacken.” (See Philip Short’s *Pol Pot*, 2005).

smoke-filled room. Associated Press reporter Kirke Simpson first recorded the expression *smoke-filled room*, in a newspaper story describing the behind-the-scenes political manipulation used to secure Warren Harding’s nomination for president in 1920. However, Harry Daugherty, a friend of Harding, probably coined the phrase.

smoking gun. The term has been used so much over a relatively short period that it is almost a cliché. It means “indisputable proof or evidence of a crime,” proof comparable to someone with a smoking gun in hand being guilty of a shooting. It was first recorded about 1970 and became a prominent expression during the Watergate political scandal that led to President Richard M. Nixon’s resignation in 1974. *Smoking gun* referred to a Nixon tape on which he said he wanted minimal FBI participation in the Watergate investigation. See DEEP THROAT.

Smokin’ Joe. Fighter Smokin’ Joe Frazier, and any boxer dubbed *Smokin’*, isn’t so called because he smokes a lot of cigarettes or cigars. Smokin’ Joe Frazier and all like him came “smokin’” into the center of the ring as soon as the bell rang.

smooch; smouch. *Smooch*, “to kiss or pet, to make love,” may oddly enough be another example of ethnic prejudice in language. Nobody has proved its origins, but it may derive from *smouch*, a favorite word of Mark Twain’s, which in its original sense meant to obtain illicitly by cheating or swindling. In all probability it comes from the derogatory Dutch *Smous*, “a German Jew,” this word possibly formed from the proper name Moses.

smooth as silk. See EASY AS SILK.

smooth-shaven. English poet John Milton, not a copywriter for razor blades, coined *smooth-shaven*, in about 1635. Milton

had as precedents the earlier *smooth-skinned* and *smooth-faced*. See LOVELOORN.

s’mores. A U.S. treat made of marshmallows heated over a campfire with chocolate sandwiched between graham crackers. So named because they are so delicious you always want “s’more.”

The Smythe Report. The official history of the development of the atomic bomb. It was edited by American physicist A. Shurcliff, who later helped defeat President Reagan’s defense system known as Star Wars.

snack. Snacks, so named, probably, because they are quickly “snatched,” have meant “mere bites or morsels of food, as contrasted with regular meals” since the 17th century. Wrote the first writer known to use the word: “When once a man has got a snack . . . he too often retains a hankering . . .”

snafu. See FUBAR.

snail. Since at least 1592 a *snail’s pace* has meant “exceedingly slow,” but until recently no one knew just how exceedingly slow that was. Recent studies have shown that garden snails travel at about two feet an hour, or one mile every three months or so. In the expression DRAW IN ONE’S HORNS, *horns* refers to the horns of the snail, because the garden pest draws in its horns and remains in its shell when threatened with danger, or when weather conditions aren’t favorable. The snail’s actions do suggest someone who draws away from a situation and takes no action while reconsidering the matter. The expression is first recorded in the early 1300s and clearly indicates that the garden snail is its source. See also SLUG.

snail mail. A humorous synonym for postal mail coined in the early 1980s by some anonymous e-mail user. Electronic e-mail is of course much faster than regular mail. The expression was born in the U.S. but is widely used today.

snake dance. An American Indian ceremonial dance in which snakes or representations of snakes are handled or imitated by the dancers; the Hopi Indians use it as a dance in which they pray for rain. The dance is often performed with poisonous snakes.

snake eyes. See WITHIN AN ACE OF.

snake in the grass. *Latet anguis in herbe* (“a snake lurks in the grass”), the Roman poet Virgil wrote in the third *Eclogue*, and from this ancient source comes our common expression for a hidden or hypocritical enemy. Proving that times don’t change much, the Latin proverb first appears in English as a line in a political song of about 1290: “Though all appears clean, a snake lurks in the grass.”

snake-oil salesman. A salesman who sells medicine of useless value for any illness. In his book *The Toadstool Millionaire*

(1961), historian Dr. James Harry Young described many of these “medical messiahs.” One often overlooked is, as he advertised himself, “Dr. William A. Rockefeller, The Celebrated Cancer Specialist.” See QUACK.

snake pit; cuckoo nest. M. J. Ward’s bestselling novel *The Snake Pit* (1947), which was made into a movie nominated for an Academy Award in 1948, gave us the expression *snake pit* for a mental hospital where deplorable conditions prevail. Similarly, Ken Kesey’s novel *One Flew Over the Cuckoo’s Nest* (1962), also made into an award-winning film, helped popularize the term *cuckoo nest* for a psychiatric hospital. However, *cuckoo nest* was recorded as “a crazy place” two years before Kesey’s title, in an episode of the TV series *The Many Lives of Dobie Gillis*, and the term *cuckoo house* for an insane asylum dates back to at least 1930. *Cuckoo* for an insane person is a British coinage of the late 19th century, though it first meant a stupid person. See CUCKOO.

snap beans. See STRING BEAN.

snapper. A humorous old term for whatever it is in baked beans that causes gas. Sign in a restaurant: “The beans we serve here have the snappers removed.” Incidentally, not long ago, the U.S. Department of Agriculture introduced what is called a “gasless bean.”

snapshot. *Snapshot* was originally a hunting term for a hurried shot taken without deliberate aim, especially at rapidly moving game. It was first recorded in an 1808 entry in the diary of a British Colonel Hawke, who wrote: “Almost every pheasant I fired at was a snapshot among the high cover.” It wasn’t for over 50 years that the term was used in photography to mean “a quick photo” taken with a hand camera, this meaning the only one heard today.

snark. An imaginary animal that is the subject of Lewis Carroll’s poem *The Hunting of the Snark* (1876). The elusive troublesome snark when finally tracked down turned out to be only a Boojum and hence the name *snark* (a combination Carroll made of *snake* and *shark*) has come to be applied to the quests of dreamers. It is said that the poet Dante Gabriel Rossetti suffered from the delusion that Carroll caricatured him as the snark.

snath. Another unusual word whose use will make you look knowledgeable—or foolish. A snath is the handle of a scythe. “Do you carry scythe snaths?” you can ask your much-impressed, or perplexed, garden supply store owner. See also BERM.

snawfus. This unusual imaginary creature of the U.S. southern mountains is said to resemble a winged white deer with flowering branches as antlers. It figures in much southern folklore.

sneak. Though *sneak* sounds like *snake*, it doesn’t derive from the latter word. It does, however, come from the Old English *snican*, to creep or crawl, just as a snake would do.

sneakers. The first sneakers were made in 1868 but the athletic shoes weren’t called *sneakers* until about 1895. Once worn in many sports, the fabric and rubber shoes may have been so named because baseball players “stealing” bases favored them, or because thieves found them useful in their line of work. The word is an Americanism made, of course, from the word *sneak*. The British call these shoes *plimsolls*. See also PLIMSOLL MARKS.

Sneaky Pete. Any cheap inferior wine, often sold in pint bottles and favored by winos. Muscatel is frequently the wine used here—“Everything’s swell with muscatel.” Sneaky Pete is so called because it sneaks up on the drinker, delivering a powerful blow.

snicker. A snide, slightly stifled, disrespectful lalugh. Also *snigger*. The word originally came from England’s Essex dialect. Snickers is the name of a long-popular American candy bar.

snipe hunting. See HUNT ELEVETRICH.

sniper. The snipe is a wary, quick bird that hunters had no success with in England until the bow and arrow was replaced with the gun in the 16th century. Even then the bird was difficult to bag unless the hunter concealed himself and patiently waited for a good shot. Snipe shooting became a favorite sport because of its difficulty, and because of the snipe hunter’s *modus operandi*, the word *sniper* came to mean any marksman firing from a concealed position.

Sniper Street. A street in Baghdad controlled by enemy Sunni snipers in 2006 until they were driven off by U.S. and Iraqi troops.

snitch. *Snitch* for an informer is not an Americanism from early days in the West, as some people believe. The term goes back at least to 18th-century England and is recorded in Francis Grose’s *Classical Dictionary of the Vulgar Tongue* (1785). Originally *snitch* was a synonym for a nose. Since *nose* came to mean an informer in early English slang, so did *snitch*.

snobare. The Italians have adopted many English words over the past century. In this case they borrowed the word *snob* and made out of it the verb *snobare*, “to snub.”

snollygoster. One very rarely hears this word today, but in the 19th century it was a common Americanism for “a pretentious boaster.” The word is probably a fanciful formation coined by some folk poet who liked its appropriate sound; it is first recorded in 1862. A Georgia editor defined a snollygoster as a “fellow who wants office regardless of party, platform or principles, and who, whenever he wins, gets there by the sheer force of monumental talknophical assumacy.” The type is still common, even if the word isn’t.

snood.

When thou hast heard his name upon
The bugles of the cherubim
Begin thou softly to unzone

Thy girlish bosom unto him
And softly to undo the snood
That is the sign of maidenhood.

One wouldn't think James Joyce wrote this, but it is from his early poem "Bid Adieu to Maidenhood." *Snood* is mostly a crossword puzzle word today; the silk ribbon with which Scottish and Irish maidens tied their hair isn't used much anymore. The headband was worn only by virgins and by custom had to be replaced with another hair covering if a girl married or lost her virginity before marriage. *Snood* is a very old word, dating back to the eighth century and probably derives from Swedish *sno*, "twine, string." In more recent times it has meant a woman's hair net.

snookers. A variety of pocket billiards played with 21 balls, 15 red and 6 of other colors. The game is said to have originated in India (though some writers claim its origin is unknown) where its first recorded example was in an 1875 game in which British army officers participated. Snookers is very popular in England. The word is said to mean "a mild rebuke over a missed shot."

snoop. The verb *snoop* derives from something Americans still do, but which we have no good word for—the Dutch *snoepen*, "to eat sweets secretly." *Snoepen* came to mean the prying and spying that the Dutch in early New York did on their neighbors, and passed into English as *snoop* in the late 18th century.

Snopesism. A word coined by William Faulkner for the taking over of the world by a grasping, greedy, money-grubbing middle class without any real culture, the word of course deriving from the Snopes family depicted in his novels of fictitious Yoknapatawpha County, Mississippi. Wrote Faulkner in *The Mansion* (1959): "He had to be the sole one masculine feller . . . not just to recognize she had a soul still capable of being saved from what he called Snopesism . . ." See SARTORIS; WALL STREET PANIC.

snorkel. The *snorkel*, introduced during World War II, was at first only a retractable tube that ventilated a sub cruising slightly below the surface. It took its name from the German *Schnorchel*, "air intake." After the war, *snorkel* became better known as a tube one breathes through while swimming facedown in the water or slightly below the surface.

snow. The word *snow* is first recorded in about A.D. 825 in the form of *snaw*. Though we have terms like *red snow*, *green snow*, *black snow*, and *golden snow* for snow tinged by algae or foreign substances, we basically make do with the one word *snow* to describe the crystalline white stuff. (The *powder* made for skiers is an exception to the rule.) On the other hand linguist Benjamin Lee Whorf once reported on an Eskimo tribe that distinguishes 100 different types of snow—and has 100 synonyms (including *tipsiq* and *tuva*) to match them. The walrus also has many synonyms in Eskimo language "In Yupik there are forty-seven words for a walrus, depending on what he's doing," writes Clay Hardy of the U.S. Fish and Wildlife Service. "There is no word for *time*. You tell me who's got the proper values." See WALRUS.

snowbirds. Southwesterners use this term today for northerners who come south for the winter, but it originated in the U.S. Army in the late 19th century as a name for men who enlisted for food and quarters during the winter and deserted in the spring.

snows of yesteryear. See YESTERYEAR.

snuffing the candle. It hasn't been depicted in a western film, but snuffing the candle was a genuine entertainment on the American frontier. The term is recorded as early as 1838 and referred to a frontier amusement in which incredibly accurate riflemen snuffed candles with bullets as a test of marksmanship. Some (using either rifles or pistols) were said to be so good that they could shoot through the flames *without* putting the candle out.

snuff out. *Snuff out*, "to kill," is best known as U.S. underworld slang from the 1920s, but it originated in World War I and is British in origin, deriving from the British slang *snuff out*, meaning "to die," which is first attested in 1864 and was probably suggested by the snuffing out of a candle, the flame of the candle compared to the flame of life. Sadistic *snuff movies* of the 1980s and earlier reputedly depict the actual killing of "actors" on the screen.

snug. This was originally a nautical term meaning neat, trim, compact, deriving from the Danish *snyg* meaning the same. It apparently came into maritime use in the 17th century or earlier and soon after came ashore.

snug as a bug in a rug. One would guess that this is a folk saying of untraceable origins, but it apparently is the invention of Benjamin Franklin, who jotted it off in a letter in 1772. It means "the utmost in contentment." Franklin is of course responsible for many maxims that are part of our speech today, including *a word to the wise; time is money; death and taxes; an ounce of prevention; and early to bed, early to rise.*

soapberry. The scientific name (*Sapindus*) for this tree explains the berry's use: *Sapindus* is a combination of the Latin for "soap" (*sappo*) and "Indus" (Indian). American Indians used the berries for soap. The pulp of soapberries contains saponin, so they lather up easily and were valued as shampoo, although the soap made from them does damage some materials. *Saponin*, the lather-producing agent in soapberries, can be poisonous if taken internally; in fact, American Indians caught fish by stupefying them with bits of the fruit thrown into pools.

soap opera. *Newsweek* seems to have used *soap opera* first in an 11/13/39 article, putting the expression in quotes as if it were new. Earlier a writer in the *Christian Century* (8/24/39) came very close to coining the term, however: "These fifteen minute tragedies . . . I call the 'soap tragedies' . . . because it is by the grace of soap I am allowed to shed tears for these characters who suffer so much from life." He was referring, of course, to the soap manufacturers who sponsored many of the early radio serials characterized by melodrama and sentimentality that are now called *soap operas*, or simply *soaps* (an abbreviated form that is 20 years or so old).

soapstone son-of-a-bitch. I've found this derogatory expression only in Richard Ford's novel *Wildlife* (1990), set in Montana around 1960. Soapstone has a greasy slippery feel to it and is thus an appropriate name for an unctuous character, just as "Soapy Sam" in England was a century ago. The pertinent quote from Richard Ford is "You can't choose who your old man is," he said to me . . . 'Mine was a son-of-a-bitch. A soapstone son-of-a-bitch.'"

Soapy Sam. The first Soapy Sam, Samuel Wilberforce, bishop of Oxford and later Winchester, was a nonconformist and controversial clergyman if ever there was one. Wilberforce, son of the great antislavery leader William Wilberforce, tried to steer a middle course between High Church and Low Church factions in England. Although a devout man in his personal life, this position forced him to develop a suave, unctuous manner of speaking, persuasive but versatile and expedient almost to a fault. By 1860 he had earned the nickname Soapy Sam, which has since been applied to any slippery, unctuous speaker who can talk his way out of anything. The coining was perhaps given an assist by the initials "S.O.A.P." on the floral decorations above the stall where he preached—these standing for the names Sam Oxon and Alfred Port. Once someone asked him about the nickname and he assured his questioner that he was called Soapy Sam "Because I am often in hot water and always come out with clean hands." Bishop Wilberforce died in 1873, aged 68.

sober as a judge. In the play *Don Quixote in England* (1734) one of Henry Fielding's characters says: "I am as sober as a judge." Perhaps it was simply Fielding's observation that judges are almost always sober on the bench, but the phrase may have its source in the saying AN APPEAL FROM PHILIP DRUNK TO PHILIP SOBER. *Sober* is the exact opposite of the Latin word for "in his cups," deriving from *so*, "apart from," and *bria*, "cup."

soccer; rugger. Partridge tells us that *soccer* is a "perversion" of association football, formed in the late 19th century by adding what he calls "the Oxford-er" to association football. *Rugger*, a synonym for rugby, was formed in much the same way.

social butterfly. The expression and the species are as common today as in the 15th or 16th century when *social butterfly* was coined, mainly because it aptly describes a pretty or well-dressed person of little substance flitting from one party or other social function to the next.

sociology. French philosopher Auguste Comte, the father of the discipline of sociology, invented the word *sociologie* for "the science or study of the origin, history and constitution of human society." The word was first anglicized in 1843.

sockdollager. See QUICKER THAN HELL CAN SCORCH A FEATHER.

Sock Saunders. A mythical American character of the woods more human than PAUL BUNYAN. Louise Dickenson Rich in *We Took to the Woods* (1942) explains Sock this way: "If I a man . . . slips on a log, but catches himself in time, he says, 'Foxed you

that time, Sock Saunders.' If he cuts his foot, he explains, 'Sock Saunders got me.' There are no stories about Sock Saunders. He's just the guy who hangs around and makes life complicated."

so cold the wolves ate the sheep just for the wool. A colorful old Ozark Mountains saying describing bitter, way below zero temperatures.

Socratic irony; Socratic method. By feigning ignorance, Socrates led his audience into traps, easily defeating them in argument, and this pretended ignorance has since been known as Socratic irony. The great Greek philosopher also developed the inductive Socratic method, conducting a cross-examination by questions and answers carefully designed to impart knowledge, or to evoke knowledge from those who may have believed they were unknowing. Socrates was born about 470 B.C., the child of a sculptor and a midwife. After receiving a good education and completing a tour of military service in which he was distinguished for his bravery, he devoted his life to the investigation of virtue, justice, and purity. His profound spiritual influence led him to be called the philosopher who "brought down philosophy from the heavens to earth" and he liked to call himself "the midwife of men's thoughts," but he left behind no writings and his work is known primarily through the *Dialogues* of Plato. Condemned to death by the Athenian government in 399 B.C. for neglecting the old gods, introducing new ones, and corrupting youth, Socrates was forced to commit suicide by drinking hemlock. "The hour of departure has arrived," he said at the last, "and we go our separate ways—I to die, and you to live. Which is the better, God only knows." See HENPECKED; XANTHIPPE.

sod. The mostly British slang word *sod* has gained some respectability over the years. It was first recorded in the early 19th century as short for SODOMITE. It then came to mean any obnoxious person, and finally was and is used to describe any fellow, as in "The poor sod lost his job last week." Partridge says the last two meanings are "often used in ignorance of the word's origin."

soda pop. At the beginning of the 19th century soda water consisted of nothing but water, a little soda, and sometimes a bit of flavoring. Soon someone thought to force gas into the water and to keep it there under pressure, the soda water sparkling and foaming when the pressure is removed and the gas escapes. The soda was kept under pressure in cylinders that came to be called *soda fountains* and were often quite unsafe, for when dropped the pressure inside them could cause a tremendous explosion, which happened once in a while, according to newspapers of the day. At any rate, the sparkling, popping soda that came out of the fountains probably was responsible for the name *pop*, for "soda," long before soda was bottled. *Soda pop* or *pop*, is not recorded in the language, however, until the early 20th century.

soddy. A prairie sodhouse of farmers or sodbusters. Wrote Lucia St. Clair Robson in *Ride the Wind* (1982): "The [collapsed] soddy had been dug into a hillside . . . The other three sides were made of large sod bricks laid in double rows. Grass

and flowers grew thickly on the partially caved-in roof . . . The canvas door still hung askew from the broken cottonwood pole that served as a lintel. With charcoal someone had written on the stained, grey canvas:

250 miles to post office.
100 miles to wood.
20 miles to water.
6 inches to hell."

sodomite; sodomy. Sodom and Gomorrah, the twin sin Cities of the Plain in the Bible, have long represented male and female vice respectively—a *Gomorrhean*, in fact, meaning a lesbian in 16th-century England. A sodomite is one who practices sodomy, "unnatural intercourse with a human or animal," such practices being attributed to Sodom's male inhabitants. The story of Sodom and Gomorrah is told in Genesis 18:19. Old Testament scholars believe the story is a mythological attempt to account for the destruction of a city once located near the Dead Sea. *See* SOD.

sofa. The Arabic word *suffah*, "cushion or long bench," gives us our word *sofa*, for "a couch." The word came into English early in the 17th century.

so far back in jail you can't shoot peas to him. A saying that became news when Georgia governor Marvin Griffin addressed civil rights protestors in the late 1960s: "We'll put him so far back in jail you can't shoot peas to him."

soft berm. A soft shoulder on the road. It could be argued that *berm* is a word dating back to the days of knightly chivalry, when in Norman times it meant "the ridge between the edge of the moat around a castle" and the castle.

soft sawder. To flatter someone, talk a lot of blarney; an old term that is still heard occasionally, though it isn't recorded in most dictionaries. The derivation is unclear, apparently having something to do with "soldier," but it is first recorded in Thomas C. Haliburton's *The Clockmaker* (1836): "If she goes to act ugly, I'll give her a dose of 'soft sawder.'"

soft soap. A relatively soft, semiliquid soap containing potash, introduced early in the 19th century, inspired the Americanism to *soft-soap* someone, which dates to about 1830. The soap was oily, as unctuous as a wheedling flatterer.

soft underbelly. A vulnerable part of anything. Another of the many expressions invented by the British prime minister Winston Churchill during World War II. First said by Churchill in an August 1942 meeting with Stalin: "To illustrate my point I had meanwhile drawn a picture of a crocodile and explained to Stalin . . . how it was our intention to attack the soft belly of the crocodile as we attacked his hard snout" (Winston Churchill, *The Second World War*, vol. 4, 1951). Later, "belly" became "underbelly."

so fun. Americans, especially young Americans, have recently taken to saying so fun, in conversation, as in "That was so fun at the club last night," instead of, say, "That was so much at the club last night." When this usage first appeared is not known.

Soho. London's noted Soho area probably takes its name from the old hunting cry *Soho*, used centuries ago when there were hunting fields in the vicinity. This cosmopolitan area, however, noted for its nightclubs, striptease clubs, and restaurants, did not give its name to New York City's SoHo district in Manhattan, which is a shortening of South of Houston (Street) by which it is bordered on the north. The area, revitalized in the 1970s and 1980s, is a fashionable neighborhood, among the most vibrant in the city. In the early 19th century it was known as Hell's Hundred Acres. *See* TALLYHO.

soigné. Sophisticated, elegant, fashionable, well-dressed. The word is pronounced *swan-yea* and derives from the Old French meaning "to take care of," which is ultimately of German origin.

so it goes. A favorite catchphrase of the late American novelist Kurt Vonnegut, who used it in many of his works. *So it goes* also served as a catchphrase for those who opposed the Vietnam War. *See* AND SO TO BED.

soland. *See* MONSOON.

solar plexus. This term was first used as a synonym for the pit of the stomach in the 1890s by American fighters. Before this it had meant the network of nerves behind the stomach. Gentleman Jim Corbett lost the heavyweight championship in 1897 when Bob "Fitz" Fitzsimmons knocked him out with a blow to the solar plexus.

soldier's breeze or wind. A sailor's contemptuous regard for landlubbers is reflected in this 19th-century term for a wind that is equally forcible going or coming. In other words, when the wind is about abeam going out and coming back, it takes little ability to sail—even a soldier could do it.

solecism. An error in grammar, or in the use of words, or a breach of etiquette is called a *solecism*. Soli, or Soloi, was an ancient Greek colony in the province of Cilicia, Asia Minor, far removed from Athens. Colonists who settled there developed a dialect of their own that Athenian purists considered barbarous and uncouth, leading them to coin the word *soloikos* as a slang term for ignorant speech. From *soloikos* came the Greek noun *soloikismos*, "speaking incorrectly," like an inhabitant of Soloi, which eventually, through the Latin *solecismus*, made its entrance into English as *solecism*. In years to come, Yankee colonists would be criticized in much the same way by Englishmen, but the label *Americanism* has always been accepted with pride by Americans. Soli, located in what is now Turkey, was an important, prosperous port in the time of Alexander the Great. When Pompey rebuilt the city after it was destroyed by Tigranes in the Third Mithridatic War, he named it Pompeiopolis. Few of Soli's ruins remain today, but *solecism*, originally slang itself, endures in all modern European languages as a remembrance of the way its citizens "ruined" Greek.

solicitor. In England solicitors handle the preliminaries of law cases, while BARRISTERS alone are members of the bar and can

take cases to court. Barristers are composed of two classes: junior counsels called barristers and a higher class of king's (or queen's) counsels, who wear silk gowns, as opposed to the formers' gowns of common cloth. In times past a solicitor was "one who solicits in Courts of Equity through counsel," while ATTORNEYS (from the French *atourner*, to turn over to another) belonged to other courts.

Solid South. A political term much used from the Civil War to the late 1950s, when the South's electoral votes could be counted upon by the Democratic party. Political realignments have made the term purely historical today.

solitaire. See CANFIELD.

solitary as an oyster. No single Faulknerian sentence could contain all the miseries of the oyster's life, from the *Crepidula fornicata*, or slipper limpet, that multiplies as fast as its Latin name suggests and suffocates whole beds of oysters, to the starfish that grotesquely stick their whole stomachs out of their mouths and into open oyster shells to digest some soft meat. No wonder the oyster tries to keep to itself. No wonder we have the expression *as solitary as an oyster*, first recorded by Dickens in *A Christmas Carol*.

solitary confinement. Solitary confinement in "the hole," a cell removed from all others and often below ground, was a punishment originated by the state of Pennsylvania in the late 18th century. Suggested by the Quakers, "solitary" was considered a reform measure at the time, replacing brutal floggings for incorrigible prisoners.

Solomon; Solomon's ring. Solomon, the son of David and Bath-sheba, ruled over Israel for some 40 years, and was noted for his wisdom and wealth. The latter and perhaps the former are witnessed by the 700 wives and 300 concubines he kept in great splendor. His wisdom is shown by the tale of the baby he proposed to divide in two. By suggesting this, Solomon determined the child's rightful mother—the false claimant accepting his proposal and the real mother asking that the child be given to her rival rather than be killed. His reign was a great one marked by peace and economic and literary development, Solomon himself having the "Song of Songs" and the books of *Ecclesiastes* and *Proverbs* attributed to him. Yet there was a religious decline and increasing social injustice in the king's time, and the northern tribes revolted upon his death in about 933 B.C. Solomon left Israel saddled with taxes and dissension, but his name remains a synonym for wisdom, the Bible referring to him as "wiser than all men . . . his fame . . . in all nations round about." The wisdom of Solomon is sometimes expressed by the phrase *to have Solomon's ring*, referring to a legendary ring he wore that told him all he wanted to know.

Solomon Grundy existence. Life according to the old, anonymous rhyme *Solomon Grundy*.

Solomon Grundy,
Born on a Monday,
Christened on Tuesday,
Married on Wednesday,

Took ill on Thursday,
Worse on Friday,
Died on Saturday,
Buried on Sunday.
This is the end
Of Solomon Grundy.

Solomon's seal. Some say that Solomon's seal (*Polygonatum multiflorum*) is so named because as the flower's stem decays the rootstalk of the plant becomes marked with scars that have some resemblance to official seals such as the seal of Solomon, king of Israel in about 900 B.C. Others hold that the root has medicinal value in sealing up and closing wounds.

solon. "I grow old ever learning many things," wrote the sage Solon in the often quoted line. The wise statesman and lawgiver lived some 82 years before he left Athens in about 590 B.C. and died, according to tradition, while wandering somewhere in the East. One of the Seven Sages of Greece, his motto was "Know thyself." Solon initiated many legal and social reforms, including a new constitution for Athens that revived the popular assembly at a time when tension between the rich and poor had reached the breaking point. His love poems and patriotic verse were well known, but the proverbial remark "Call no man happy till he is dead" was probably not his, though attributed to him. Elected archon, officer of the state, in 594 B.C., Solon instituted reforms that laid the foundation for Athenian democracy. His name has come to mean any lawmaker, not necessarily a wise one, *solon* sometimes being used because it takes up less space in headlines and newspaper stories than representative or congressman.

So long! *So long!*, for "good-bye," may not be an Americanism. The *O.E.D.* gives 1834 as its first recorded date, and the source is probably British, since *So long!* isn't recorded in the U.S. until the late 1850s. Other possibilities are that it comes from the Hebrew SHALOM, the German *so lange*, or the Arabic SALAAM. Another theory, contributed by linguist Howard Marblestone as "perhaps plausible," suggests that "British soldiers posted to Malaya in the 19th century heard there among the Muslims the Arabic *salaam* with native nasalization, thus: *sa-laang*. As this sounded to them like the English 'so long,' they brought it back to England, greetings often being borrowed into other languages."

so long Charley; so long. In the epic race between Seabiscuit and War Admiral on November 1, 1938, Seabiscuit's jockey George Woolf pulled his horse away from his great adversary, who was ridden by jockey Charley Kurtsinger. According to Laura Hillenbrand's *Seabiscuit, An American Legend* (2001): "War Admiral tried to answer, clinging to Seabiscuit for a few strides, but it was no use. He slid from Seabiscuit's side as if gravity were pulling him backward. Seabiscuit's ears flipped up. Woolf made a small motion with his hand: 'So long Charley.' He had coined a phrase that jockeys would use for decades." Thousands of other Americans would use the expression as well. So long itself, however, dates back to the mid-1800s, this much older salutation possibly deriving from the German *adieu so lange*, or the Hebrew *shalom*—both of which mean "peace."

solwara he stret olgeta. Literally “salt water he straight altogether,” which means “the ocean very calm” in the Pidgin English spoken in New Guinea, which is called Tok (talk) Pisen (pidgin). Another example is *mi no manki bilong you*, “me no monkey belong you”: “I’m not your slave or servant.” See PIDGIN ENGLISH; PIDGIN LANGUAGE.

sombrero. The great broad-brimmed hat long associated with Mexico takes its name from the shade (in Spanish, *sombra*) that it provides its wearer.

someone stole his rudder. We find this expression, for “a helpless drunk,” first recorded in the American West during the 19th century, but it is obviously a borrowing from nautical language, of the sea or the inland waterways of America.

something is rotten in Denmark. Marcellus’s suspicion about the kingdom of course proved to be well founded, but what Shakespeare had him say was *something is rotten in the state of Denmark*, not the persistent misquotation from *Hamlet* above.

something on the ball. A baseball pitcher with *something on the ball* has the ability to throw a variety of pitches that are usually effective. Since the early 1900s the phrase has been extended to mean anyone with skill or ability. See NOTHING ON THE BALL; ON THE BALL.

something the cat dragged in. The expression refers to a dead or dying rat, mouse, or anything a cat might drag into the house. Widely heard, often in the phrase “He looked like something the cat dragged in,” that is, he looked terrible.

something up one’s sleeve; laugh up one’s sleeve. Garments in medieval times had few if any pockets, so men often carried whatever couldn’t be hung from their belts in their full sleeves. Probably from this source, rather than from magicians with rabbits up their sleeves, comes our expression for having something in reserve or an alternative plan, although the phrase, in its sense of a scheme or trick, was most likely influenced by magicians concealing in their sleeves the means by which they do a trick. A second expression deriving from the same source is *to laugh up (or on) one’s sleeve*, “to ridicule a person secretly.” Someone wearing a garment with capacious sleeves was quite literally able to conceal a laugh by hiding his face in his sleeve.

song catcher. Someone who travels across the country collecting (catching) old songs that are all but forgotten. Alan Lomax was among the best known of these.

son of a bitch. See LES SOMMOBICHES.

a son of a bitch’s son of a bitch. A coinage of William Faulkner meaning the absolute worst of people.

son of a bitch stew. You use everything but “the hair, horns and holler,” according to one recipe for son of a bitch stew, commonly made on chuck wagons in the old West. All the innards of a steer, including heart, brains, and kidneys, had to be included in the stew, but the most indispensable ingredient was

gut (tripe). This inspired the old saying: “A son of a bitch might not have any brains and no heart, but if he ain’t got guts he ain’t a son of a bitch.”

son of a gun. *Son of a gun* is now a euphemism for the much stronger *son of a bitch*, or even a term of affectionate regard between friends (“You old son of a gun!”), but this expression did not start out that way. It dates back to the early 1800s and was just a little less perjorative than *son of a bitch*, or *son of a whore*, which came into the language at about the same time. In the early 19th century, *son of a gun* meant “a sailor’s bastard,” but it proceeded to become more innocuous with the passing of time. *The Sailor’s Wordbook* (1867), written by British navy adm. William Henry Smyth, attempts to explain the expression’s origins, but bear in mind that the book was written a long time after the term was born: “An epithet conveying contempt in a slight degree, and originally applied to boys born afloat, when women were permitted to accompany their husbands to sea; one admiral declared he literally was thus cradled, under the breast of a gun-carriage.”

son of a sea cook. *Son of a sea cook*, which can mean either a “good guy” or a “mean SOB,” depending on the context, really has little to do with the sea. No sea cook had any hand in it. It seems that the earliest American settlers appropriated the word *squenk*, for “skunk,” from the Indians around the Massachusetts Bay Colony, pronouncing it *see-konk*. Thus, a *son of a see-konk* was first a stinking son of a skunk. Because *see-konk* sounded something like “sea cook” it came to be pronounced “sea cook” long after the Indian word was forgotten. The fact that sea cooks were often cantankerous old men probably reinforced the term’s present ambivalent meaning.

son of a whore. This commonly used epithet is not taken too seriously in northern England, where it is heard most frequently. It does yeoman service in describing everything from a beloved friend (“How are you, you old son of a whore?”) to an avowed enemy, and is applied to situations of good luck as well as bad luck, even to women as well as men. This is not to say, however, that someone might not take exception and break one’s nose for using it.

sons of dogs. A saying often heard in Iraq in 2006. Says one bereaved father: “Maliki [the president of Iraq] and the Americans are sons of dogs because they do nothing to protect us.”

Sooner; sooner. *Sooner*, capitalized, refers to a native of Oklahoma, the Sooner State. Uncapitalized, the word has several meanings: 1) someone who settles on government land before it’s opened to settlers; 2) any person who unfairly gets ahead of another; and, most interesting of all 3) a child born fewer than nine months after his or her parents were married, one who came out sooner than he or she should have. The last is an expression used mainly in the Appalachian Mountains.

Sooner State. A nickname for Oklahoma, after the “sooners” who “jumped the gun sooner” and sneaked over the border before the lands there were thrown open to settlement by U.S. citizens at noontime on April 22, 1889. Many of the 20,000 people who came to claim land on that day found that “sooners” had

gotten there before them. Indians, of course, were there sooner than anyone, for all the good it did them. Today residents of Oklahoma are called Sooners.

sop. See GIVE A SOP TO CERBERUS.

sophistry; sophomore. The Sophists were not really a school of philosophers but individual teachers who toured the cities of Greece in the mid-fifth century B.C. teaching rhetoric and other subjects. They did, however, share common beliefs. Far less idealistic than the Socratic school, they prepared their pupils for public life, placing little store in truth for truth's sake and accepting money for their teaching, being what might be called pragmatists today. Although their name derived from *sophos*, the Greek word for wise, it was a contemptuous term among their contemporaries. Because they taught the art of persuasion to young men eager for political careers and the methods they taught were often unscrupulous and overingenious, *sophist* came to mean someone who tries to mislead people with clever arguments, one who tries to "make the worse seem the better reason." *Sophism* is now used to mean a plausible but fallacious argument, and false, specious reasoning is called *sophistry*. The word has thus had almost a complete reversal in meaning since the time when the wise men of Greece were called sophists—before the Sophists came on the scene. The word *sophomore*, a second-year college or high school student, probably comes from *sophom*, an obsolete form of *sophism*.

Sorbonne. A college in the University of Paris, which indeed is often called the University of Paris itself. Today it is the seat of science and literature at the university. The Sorbonne was founded by and named after Robert de Sorbon (1201–74), chaplain of Louis IX. It opened in about 1247.

sorel. A deer of the third year; a deer of a fourth year is a sore. Shakespeare plays with the words in *Love's Labour's Lost* (1595).

a sorry sight. Any sad, miserable, terrible, pitiable sight, quite the opposite of a *sight for sore eyes*. The phrase is first recorded in *Macbeth* (1606) and possibly was coined by Shakespeare.

SOS. SOS doesn't stand for "Save Our Ship," "Save Our Souls," or "Stop Other Signals." The letters, adopted in 1908 by international agreement, actually mean nothing at all and were chosen only because they are so simple for a wireless operator to remember and transmit in Morse code—three dits (dots), three dahs (dashes) and three dits (. . . - - . . .). The doctrine of resemblances suggested this term to hungry G.I.s during World War II. It is the abbreviation of *shit on a shingle*, the creamed chipped beef on toast so often served in messhalls. See CQD.

so stingy cheap he's afraid to set down. If he sat down, this old saying implies, he'd add wear to the seat of his pants.

Sotadic. See PALINDROME.

sotto voce. This term, taken directly from Italian about 1730, means "to speak in a low, soft voice, an undertone," so that you

are not overheard. The Italian words literally mean "under (the) voice." In music the term means "in very soft tones."

soubise. Charles de Rohan, prince de Soubise, may have created the superbly simple sauce that bears his name, but it's more likely that it was created and named in his honor by his majordomo, the great chef Marin. Soubise (1715–87), a famous gourmet who was the grandson of the princesse de Soubise, one of Louis XIV's mistresses, became marshal of France in 1758 through the influence of Madame de Pompadour, Louis XV's mistress. The prince liked to cook as much as he liked making love and war, and his chef Marin was among the greatest of 18th-century culinary artists, his cookbook, *Les Dons de Comus* (Gifts from the kitchen), appearing in 1739 and intended to brighten the tables of the bourgeoisie, enabling "even third-class persons to dine with grace." A soubise is a brown or white sauce containing strained or pureed onions and served with meat: it is made by blending onions simmered tender in butter with a creamy bechamel sauce and rubbing this through a fine sieve.

so ugly that when he was a little boy momma had to tie a pork chop around his neck so the dog would play with him. A saying heard in Texas, probably of recent origin.

soul brother, etc. As a term for blacks used by blacks, *soul brothers* has been around since at least the 1950s. Today it is often abbreviated, by blacks, as *the brothers* (or *sisters*) and further shortened to *bro* when used in a greeting. The meaning here is that blacks are alike in the soul, but in earlier combinations *soul* is used in many ways. *Soul sharks* were rapacious preachers, black or white, usually without a pulpit, and *soul butter* was a term for moralizing drivel, black or white, that Mark Twain popularized. *Soul mate* can be someone much loved, or even a mistress. *Soul music* and *soul food* (food like collard greens, black-eyed peas, hog maw, etc., associated with southern blacks) are also black terms dating back at least to the 1950s.

soul driver. A person who took slaves to market to sell them; an overseer. The expression is recorded as early as 1774 and came into the vocabulary of abolitionists.

soul kiss. Actress Olga Nethersole's long passionate onstage kiss in Dandot's *Sapho* in the late 1880s led to her prosecution for obscenity. It is said that her "intraoral and interlingual" kiss, or French kiss, as it is also called, inspired the term *soul kiss*, from a shortening of the name Nethersole. A good theory, but nothing more, for the expression *soul kiss* isn't recorded until the 1930s.

soul ships. Until the late 19th century, soul ships were believed to sail to Brittany's Bay of Souls near Point du Ray and collect recently deceased sailors for the journey to the fabled "Isles of the Blessed" somewhere to the west. Soul ships were sighted by many a mariner, just as mermaids and sea serpents were.

sound; sounding. The *sounding* that determines the depth of the water by means of a line and lead is of no relation to the

word *sound*, meaning something audible, which derives from the Latin *sonus*. *Sounding* comes from the Old English word *sund*, for “water, sea, or swimming.” The *sound* that is an inlet of the sea has the same roots.

soup. Nitroglycerin was dubbed *soup* by safecrackers because the liquid can be obtained by *very very very* gently simmering dynamite in water. The Americanism is first recorded in about 1905.

soup and fish. Dating back to 19th-century America, this term for formal white-tie dinner clothes probably derives from the obsolete American term *soup and fish*, for a lavish dinner of many courses. *Soup and fish* for an elaborate dinner, in turn, is apparently related to the still common expression *from soup to nuts*, but this last term seems to have been first recorded in the 1920s.

soupbone. Baseball pitching great Christy Mathewson appears to have first recorded this term for one’s throwing or pitching arm, in his book *Pitching in a Pinch* (1912): “My old soupbone . . . was so weak that I couldn’t break a pane of glass at fifty feet.”

soup fin shark. Another name for the requiem shark (*Golorhinus zyopterus*) of the Pacific Ocean. The Chinese use these shark fins to make tasty shark fin soup. *Yerchee*, as it’s properly called, has been available in quality Chinese restaurants since about 1900.

Soup Nazi. A phrase used on the New York–inspired television comedy *Seinfeld* to refer to a real-life soup merchant located in midtown Manhattan. The impatient Soup Nazi is known for supposedly badgering disorganized patrons and for not including the customary piece of bread with an order of soup for customers who take too long to decide what they want. People tolerate his attitude because he reportedly serves outstanding soup.

soup to nuts. See FROM SOUP TO NUTS.

soup up. To soup up a car is to improve its capacity for speed by enriching its fuel and/or adjusting the engine. This use of the words was first recorded in about 1940. Soup itself is American slang for car or airplane fuel, while to soup up a horse is to inject dope into the animal to make it run faster.

sourdough bread. Now known in commercial forms throughout the United States, sourdough bread, made from sour or fermented dough, was first a mainstay of miners in the early West, who were in fact *sourdoughs* because they carried some of the fermented dough with them from place to place to start new batches of bread.

sour grapes. In Aesop’s fable “The Fox and the Grapes,” a fox spies luscious-looking grapes hanging from a vine. He leaps a number of times trying to get them, failing by a few inches with each leap, and gives up after rationalizing that they are probably sour and inedible anyway. La Fontaine, another great fabulist,

later regarded the fox as admirable, remarking that his words were “better than complaining,” but the fox’s *sour grapes* have come to mean any belittling, envious remark.

sousaphone. “The Stars and Stripes Forever,” “The Washington Post,” “Semper Fidelis,” “Hands Across the Sea,” “Liberty Bell,” “High School Cadets”—John Philip Sousa composed over 100 such popular marches, inspiring an English magazine to dub him the March King, a title that remained with the bandmaster throughout his long career. Sousa, the son of Portuguese refugees, began conducting theater orchestras when only 19. He became bandmaster of the U.S. Marine Corps band in 1882, his father having played there before him, and formed his famous Sousa’s Band 10 years later. His band toured the world, bringing him great renown, and he composed numerous comic operas, suites, songs, and orchestral music in addition to his marches. Sousa died in 1932 aged 78. Besides greatly improving the quality of band music, he invented the sousaphone, a large circular tuba standing 52 inches high and weighing some 26 pounds, with a flaring adjustable bell, adjustable mouthpiece, and a full, rich sonorous tone.

South Carolina. See NORTH CAROLINA.

South Dakota. See NORTH DAKOTA.

Southern chivalry. Though rarely, if ever, heard today, this historical term was common up until the end of the Civil War. According to the *Magazine of American History* (vol. 3, 1885), “It was claimed as a proud title by Southerners and their friends, but has always been heard and used by the North with a shade of contempt.”

southerner. Often capitalized, this common word for a resident of the American South may have been coined between 1820 and 1830. The term first appeared in *Western Monthly Magazine* in 1828. *Southern gentleman* was recorded about half a century earlier.

southern fried chicken. Originally chicken fried in bacon grease, southern fried chicken has been popular in the American South since before 1711, when the term *fried chicken* is first recorded there. It became popular throughout the country in the 1930s, when it was first widely sold at roadside restaurants. See GOSPEL BIRD.

southern gentleman. This term for a courtly, well-bred southerner dates back at least to the late 18th century. Clare Booth Luce, in *Kiss the Boys Goodbye*, offered this definition: “If you can shoot like a South Carolinian, ride like a Virginian, make love like a Georgian, and be proud of it like an Episcopalian, you’re a Southern gentleman.” But an anonymous infidel Yankee defined the chivalrous species as “one who rises to his feet when his wife comes in bearing the firewood.”

southern hospitality. The words *southern hospitality*, the hospitality characteristic of southern people and sometimes considered the epitome of sectional hospitality, have been traced back to 1819, when a traveler from the North wrote in

his journal, “The mistress . . . treated us to milk in the true spirit of Southern hospitality.” But the South was famous for its hospitality long before this, as it still is today, and the much-used phrase is surely older.

south of the border. To Americans *south of the border* has long meant “down Mexico way,” across the Rio Grande. In Scotland the expression refers to England, the border being the one between Scotland and England.

southpaw. Humorist Finley Peter Dunne, then a sportswriter, coined this word for a left-handed baseball pitcher while covering sports in Chicago in the 1880s. Home plate in the Chicago ball park was then to the west, so that a left-handed pitcher released the ball from the “paw,” or hand, on his south side. The word soon came to describe any left-hander.

Souvenir de Madame Salati-Morgeldag, archduchess Marie Immaculate. Perhaps the longest named rose used to flatter people.

sowbread. See CYCLAMEN.

sow one’s wild oats. The wild oat (*Avena fatua*) is a common tall plant that looks like its relative the cereal plant oat, but is really a pernicious weed that infests the planting fields of Europe and is difficult to eradicate. About all wild oats, or oat grass, have ever been used for is in making hygrometers, instruments that measure the humidity in the air, the plant’s long twisted awn, or beard, readily absorbing moisture. The wild oat’s uselessness has been known since ancient times and for almost as long we have had the expression to *sow wild oats*, “to conduct oneself foolishly,” to sow weedseed instead of good grain. The expression has been traced back to the Roman comic Plautus in 194 B.C. and was probably used before him. It usually refers to a young man frittering his time away in fruitless dissipation, or to the prolific sexual activities of a young man, and is almost always said indulgently of the young. Rarely, the expression is used in the singular, with a prudish young man who sows “his one wild oat.” In the 16th and 17th centuries dissolute or wild young men were called *wild oats*.

sow the wind and reap the whirlwind. To do something wrong, the results of which are even worse for the perpetrator. The expression is from the Bible, (Hos. 8:7): “For they [Israel] have sown the wind and they shall reap the whirlwind.”

soybean. The ancient Chinese made a sauce called *shiyu* (*shi*, “salted food,” + *yu*, “oil”) from this bean, which they apparently named after the sauce; *shi-yu* became *shoyu* and then *shoy* in Japanese, which ultimately became *soy* and *soybean* (*soy* + *bean*) in English. The Japanese valued soy sauce so highly that it was part of the salary of Japanese imperial court officers in the fifth century.

spa. The town of Spa in eastern Belgium, famous since the 16th century as a health resort for its mineral springs, long ago gave its name to any similar resort. Spa, Belgium, was especially popular in the late 18th century, when royalty often came there “to take the waters.”

spaghetti; macaroni. Italian for “little strings, strands, or cords,” *spaghetti* was brought to Italy by Marco Polo in the early 14th century and so named at that time, though it is apparently not recorded in English until 1888, the editors of the *O.E.D.* much preferring *macaroni* (first recorded by Ben Jonson in 1599) and not including *spaghetti* until the first supplement to that masterful work. *Macaroni*, an Italian word of obscure origins, has had its derogatory uses. As early as 1764 *macaroni* meant a fop or a dandy (as in the “Yankee Doodle” lyric), referring to London’s Macaroni Club, where the members enjoyed foreign foods like macaroni. Then there is *macaroni boats*, a mostly British term for ocean liners carrying Italian immigrants to America in the early 20th century. See MACARONIC VERSE; SPIC.

spaghetti western. A cheap western movie, first made in Italy in the 1960s, usually featuring bloody violence more prominently than plot or character.

Spahn and Sain and Pray for Rain. A baseball rhyme that rivals “Casey at the Bat.” Johnny Sain, a right-hander, and Warren Spahn, a left-hander, were the Boston Braves’ ace pitchers in their drive for the 1948 National League pennant. Sain would pitch one day, Spahn would pitch another, and all the Braves fans would pray for rain so that each hurler would have a chance to rest his arm. The Braves did win the pennant, though they lost the World Series to the Cleveland Indians.

Spalding; Spaldeen. Alfred Goodwill Spalding (1850–1915) deserves his place in baseball’s Hall of Fame as much as any man. He may not be “the Father of Baseball,” but is certainly “Father of the Baseball,” and it was only when he came upon the scene with his uniform manufacturing methods that what had been a chaotic minor sport was fashioned into the national pastime. Lively balls were once so rubbery that baseball scores like 201–11 were not uncommon, and others so dead that the phrase “fell with a dull thud” found its way into the language. The former Chicago White Sox manager did not invent the hard ball when he founded his company in 1880, but the rigid manufacturing standards he maintained made it possible for the newly formed National League of Professional Baseball to survive. Such careful preparations over the years have made the Spalding trademark synonymous for a baseball. Other sporting equipment manufactured by the firm includes a red rubber ball called the Spaldeen (spelled *Spalding*), which has been known by that name to several generations of American youngsters.

Spam. People all over the world have eaten some 5 billion cans of Spam since the Hormel Foods Corporation began selling it under this name. At first Hormel sold the mixture of pork shoulder, ham, salt, sugar, and sodium nitrate as *special ham*. When other meatpackers began selling the same product, the company in 1936 sponsored a nationwide contest to create a memorable brand name. Actor Kenneth Daigneau, the brother of a Hormel executive, won a mere \$100 for *Spam*, which Judith Stone in an exhaustive July 3, 1994, article in the *New York Times Magazine* (“Five Million Cans And Counting”) called “arguably the planet’s most recognizable portmanteau word” (a combination of the *s* from *shoulder*, the *p* from *pork* and the *am*

from *ham*). However, *chortle* (from *chuckle* and *snort*) may be better known.

Spanglish. Many Hispanic people speak this combination of Spanish and English. The hybrid language features words such as *fafu* for “fast food,” *tensen* for a “10-cent store,” such as the late Woolworth’s; *chopping* for “shopping,” and *chileando* for “chilling out.” Its combination of Spanish and English might result in a sentence like “Vamos a lonchar, or what?” (“Are we going to have lunch or not?”)

spaniel; cocker spaniel. Shakespeare has Antony speak of the “hearts that spaniel’d me at heels, to whom I have their wishes.” *Spaniel* can be a verb or adjective, signifying affectionate humility, as well as a noun. The dog’s name simply means “Spanish dog,” deriving from the old French *chien espagneul*, which was shortened to *espagnol*, “Spanish,” and then *spaniel* in English. Either the spaniel was a breed developed in Spain or the dog reminded Europeans of the Spaniards, who were regarded as submissive and fawning during the Middle Ages. Neither the Spaniards nor the dogs are servile, but the breed’s silky hair and soft, soulful eyes may have suggested the appearance of the Spaniards. There is no hard evidence for this, however. The cocker spaniel gets its first name either from the way it cocks its long drooping ears or because it was trained to retrieve woodcocks.

Spanish fly. The blister beetles, *Lytta vesicatoria*, used to make the dangerous reputed aphrodisiac Spanish fly are abundant in Spain. Cantharides, or Spanish fly, is medicinally a diuretic and skin irritant.

the Spanish Lady. A name for Spanish influenza, which killed over 20 million people worldwide before running its course. No one ever discovered exactly what caused this contagious, infectious pandemic flu; it was known only to be caused by a flu virus of type A. It lasted from March 1918 to November 1918.

Spanish moss. The familiar Spanish or long moss (*Tillandsia usneoides*), which drapes live oaks, cypresses, and other trees from Virginia southward, is not a moss but an epiphytic (tree-perching) nonparasitic plant that takes its own nourishment from the air and does not kill any supporting plant, as many believe. Contrary to what the great Linnaeus thought, it does best in moist locations. The Swedish botanist was so sure the plant disliked moisture that he named the genus after his countryman Elias Tillands, a physician and botanist traveler who so feared water that he once walked 1,000 miles out of his way to avoid crossing the narrow Gulf of Bothnia. Why the plant is popularly called *Spanish moss* has not been determined.

Spanish words in English. There are probably 500 words in American English alone that are borrowed from Spanish. Some of the more common ones include: cork, cask, anchovy, sherry, spade (cards), galleon, grenade, armada, comrade, sombrero, cannibal, Negro, iguana, alligator, armadillo, saffrafrans, sarsaparilla, mosquito, banana, cargo, desperado, matador, lime, embargo, parade, guitar, siesta, peon, chinchilla, cockroach, vanilla, barracuda, avocado, barbecue, tortilla, plaza, 10-gallon hat,

chaps, serape, poncho, adobe, cafeteria, patio, plaza, pueblo, breeze, buckaroo, chaparral, cinch, corral, hacienda, lariat, lasso, machete, ranch, reata, rodeo, stampede, wrangler, alfalfa, marijuana, mesquite, yucca, bronco, buffalo, burro, barracuda, bonito, pompano, coyote, mustang, palomino, pinto, chili con carne, enchilada, frijole, jerky, mescal, pinon nuts, taco, tamale, tequila, calaboose, hoosegow, vigilante, incommunicado, arroyo, canyon, mesa, sierra, couch, coon, creole, junta, mulatto, fiesta, filibuster, hombre, loco, marina, mosey, pronto, rumba, samba, savvy, stevedore, tornado, vamoose. Some of these are covered in this book.

spank. Ernest Weekley in his *An Etymological Dictionary of Modern English* (1921) says *spank* is “imitative of a resonant slap.” Meaning to strike a blow with the open hand (especially to strike the buttocks), the word has been traced back to *Bailey’s Dictionary* (1727) and is certainly older.

spanner. See MONKEY WRENCH.

spare the rod and spoil the child. An old if widely ignored saying that goes back a thousand years and is found in Proverbs 13:24: “He that spareth his rod hateth his son.”

spare tire. Sometimes called simply *a spare*, the *spare tire* has been an emergency feature of cars since the earliest days of the automobile. Its humorous use as a name for excess fat around the waistline dates back just as far.

spark. Americans were “sparking” at least as far back as 1787, when the expression was first recorded. *To spark*, an old-fashioned term meaning “to make love, to court,” especially by a young woman’s sweetheart or “feller,” may be of Scandinavian origin.

sparrow. No bird is better known everywhere in Great Britain than the little sparrow, whose name, in the form of the Old English *spearwa*, is first recorded in the seventh century. The small brownish gray bird of the family Fringillidae, also native to the U.S., gives us the term “sparrow-legged,” for a person with a big belly and skinny legs. The bird was even used in sparrow-pie, a dish that supposedly made the eater sharp-witted.

sparrow-fart. Toward the beginning of the century British slang for “at dawn” was *at sparrow-fart*, the expression popularized by soldiers in World War I. A polite variant is *at sparrow’s cough*.

sparrow grass. Another name for asparagus (qv), sparrow grass was the polite form, Weekley tells us, until the 19th century. I have heard it used only once or twice in the last 50 years.

Spars. See WRENS.

Spartan. “Either come back with it or on it,” the proverbial Spartan mother tells her only son when she hands him the shield he is to carry into battle. The inhabitants of ancient Sparta, the Greek city-state noted for its military excellence, were forced

to be courageous, frugal, and sternly disciplined almost to a fault. Life there seems to have been equal to one long term of military service without leave from the barracks and battlefields, for women as well as men. Weak children were discarded and the survivors subjected to an ascetic discipline without luxuries or even comforts. Spartan virtues, which can easily become vices, give us the terms *Spartan fare*, “a frugal diet,” *Spartan courage*, “that of one who can unflinchingly bear pain or face danger,” and *Spartan simplicity*, “the barest necessities of life.”

Spasmodic School of Poetry. A humorous term applied in the 1850s to a school of poetry devoted to violent wordy dramatic poems characterized by obscurity and wild imagery. The English poet Sydney Dobell’s long, unfinished *Balder* (1854) is considered perhaps the most extreme example of the Spasmodic School. Two of its lines went: “Ah! Ah! Ah! / Ah! Ah! Ah! Ah! Ah! Ah! Ah! Ah! Ah! Ah! Ah! Ah!” When he wrote his poem *The Roman* (1850), Dobell inverted his first name to form the pseudonym Sydney Yendys.

spat. A little, petty fight; *tiff* the English would say. This Americanism was first recorded in 1804, but no one has established its origin. Perhaps, if I may guess, it is from the sound made by a slap in a fight.

speakeasy. The word goes back 30 years or more before its use during Prohibition, to at least the 1880s. Samuel Hudson, a newspaperman of the day, said he first heard it in Pittsburgh, used by an old Irish woman who sold liquor without a license and told her clients to “spake asy” when they came to buy it. Over a century before this there were Irish *spake-aisy* shops or smugglers’ dens. Speakeasies were also called speaks during Prohibition. The original “spake-aisy” places may have been so named because patrons had to speak quietly when entering them to avoid alerting police and neighbors.

speak for yourself, John. The famous words of the maid Priscilla to John Alden, who, in Henry Wadsworth Longfellow’s poem “The Courtship of Miles Standish” (1858), courts her for his friend Miles Standish even though he, too, loves her. The full quote is “Why don’t you speak for yourself, John?” Alden does finally marry Priscilla without losing the friendship of Miles. The poem, incidentally, sold 15,000 copies on the first day of publication, an incredible number for that time.

speak now or forever hold your peace. These words come ultimately from the “Solemnization of Matrimony” in the *Book of Common Prayer*, the official service book of the Church of England, the book first issued in 1549 (revised in 1928 in the United States). The exact words in the *Book of Common Prayer* are “Let him now speak, or else hereafter for ever hold his peace.” In addition to its use in the matrimonial ceremony, the words, in the form of *to hold one’s peace*, have come to mean “to remain silent.”

speak of the devil. A common saying often heard when two people are talking about somebody and that somebody appears. Originally the phrase was *speak of the devil and he will appear*, and it was first recorded in a 1672 poem in this sense: “Talk of the devil and see his horns.” Jonathan Swift, however,

first recorded the term in its modern sense in *Polite Conversations* (1738). The French use the similar expression *When you speak of the wolf, you see his tail*, while an Arabic speaker often uses *Thinking of the cat, it comes leaping*, and for Germans it’s *When you speak of the donkey, he comes running*. Still another old saying is *talk of the devil and up he pops*.

speak softly and carry a big stick. Apparently, this well-known proverb isn’t an American invention, but is African in origin. Bartlett’s *Familiar Quotations* should note that Theodore Roosevelt’s biographer, H. F. Pringle, in his *Theodore Roosevelt* (1931), quotes Teddy as saying in the first recorded use of the expression: “I have always been fond of the West African proverb ‘Speak softly and carry a big stick; you will go far.’” Pringle has T. R. saying this in 1900; in the 1901 speech Bartlett’s quotes, Roosevelt prefaces the proverb with “There is a homely adage that runs. . . .”

Special Forces. See GREEN BERETS.

speculator. The first speculators in the U.S. to be called speculators did business during the Revolutionary War boom, though there was no formal stock exchange at the time and wheeling and dealing was done in coffeehouses along Wall Street in downtown Manhattan, or outside. The word *speculator* has its roots in the Latin *speculatus*, observed, watched.

speed bump. Since about 1970 the term for a ridge that is part of a road or shopping center, forcing cars to slow down.

speed demon. Someone who travels or works at a high level of speed. Also, it seems, a name for a person who drives far too fast.

speed lane. The speed lane is usually the name for the left lane on a road or highway, the lane customarily reserved for cars going at least the speed limit, while the right lane, or slow lane, is for drivers choosing to go slower. Sometimes the speed lane is called the fast lane, but fast lane is usually the term for the lane in a public swimming pool reserved for fast swimmers. In doing pool laps slow swimmers customarily use a lane labeled the slow lane, while swimmers of medium ability use the medium lane.

spencer. This repeating rifle, made by Christopher Spencer’s Spencer Repeating Rifle Company, served the Confederates well in the Civil War and went West after that. Said boys in gray of the reliable carbine: “You can load it on Sunday and shoot all week.” The rifle was light and ideal for mounted soldiers.

Spencerian. Spencerian refers to the thought of English philosopher Herbert Spencer (1820–1903), especially his attempt to unify all knowledge through the single principle of evolution, his “synthetic philosophy.”

Spencerian script. Even as recently as 25 years ago penmanship remained an important subject in American grammar schools, but the increased use of the typewriter and computer has made penmanship exercises almost obsolete. In those days

of yesteryear, when a fine hand was a great social asset and absolutely essential in conducting a business, one of the first American styles of calligraphy was that developed by Platt Rogers Spencer (1800–64), a system based on precise slanted strokes marked with flourishes at the ends of words. Spencer taught classes in a log cabin on his Geneva, New York farm and lectured at various business schools and academies. His Spencerian style, popularized by a series of textbooks he wrote, greatly influenced early-19th-century American calligraphy, so much so that today the term *Spencerian script* is used by collectors to describe the handwriting of his period and beyond.

spencer jacket, etc. First Lord of the British Admiralty George John, the second earl Spencer, who recognized Lord Nelson's potential early, created this short wool jacket. Another Spencer, possibly related, invented the spencer sail, and still another, the cork-filled Spencer life belt.

spend a penny. An interesting British expression that is a euphemism for "go to the bathroom." A penny used to be the nominal fee to use a public bathroom.

spending spree. Apparently British novelist Aldous Huxley coined the term *spending spree* in 1956 (according to the May 1993 *Atlantic*). However, he got help from the older British expression *on the spree*, meaning "out partying, out on the town," etc. The origin of *on the spree* is unknown.

spic. Before it was applied to Hispanic Americans this offensive derogatory name was given to Italian Americans. First recorded in 1915, it is thought to be a shortening of "spaghetti." See SPAGHETTI; MACARONIC VERSE.

Spice Islands. Punning on the Spice Islands, the Moluccas in Indonesia, this expression was 19th-century slang for a privy or any foul-smelling place.

Spider. Robert Frost described someone with the nickname Spider in his poem "The Code" (1914): "He was one of the kind sports call a spider, / All wiry arms and legs that spread out wavy / From a humped body nigh as big's a biscuit. . . ." I remember a runner nicknamed Spider who leaped from the stands into a mile race and proceeded to win the race—wearing a raincoat and wing-tip shoes.

spider hole. Much in the news in recent years because Iraqi dictator Saddam Hussein was pulled trembling from one by U.S. troops. A *spider hole* is a camouflaged hole in the earth barely big enough for someone to hide in. The expression is used in the same way as *rat hole* for a wretched disgusting hovel. The term was invented in Vietnam, when Vietcong dug camouflaged holes containing clay pots a few feet into the earth. Guerrillas crouched in the pots, ready to begin shooting when American soldiers passed by. Because poisonous spiders could get in the holes or cracked pots, GIs dubbed them *spider holes*.

spiel. This Americanism, for "sales talk or a line," has been used at least since 1870. It derives from the German *spielen*, "to

play a musical instrument." In its American usage the word meant "to talk in a high-flown, grandiloquent manner" before it was used to describe the voluble talk of the carnival barker and then the salesman.

spiffs. Bonuses paid to American salesmen for switching customers from merchandise.

spill the beans. A fanciful story, widely printed, holds that members of Greek secret societies voted on the admission of new members by dropping beans into jars or helmets. White beans signified an affirmative vote and black beans a negative ballot. Occasionally, the story says, voters would accidentally knock over the jar or helmet, revealing the secret vote, spilling the beans. However, the phrase is an American one that entered the language only around the beginning of this century. No one knows how it made its entrance, unless it was on the heels of an older expression, as an extension of KNOW BEANS, "to know what is what."

spinach. Popeye did so much for this vegetable with the young set that spinach growers in one Texas town erected a large statue to him. Some authorities claim *spinach* derives from the Latin *hispanicus olus*, "the Spanish herb." The word does come to us from Spain, but probably not directly. Apparently the Persian and Arabian *isfanakh* became the Old Spanish *espinaca*, which eventually changed into the Middle French *espinache*, which resulted in our word *spinach*. At any rate, the Arabs did introduce the vegetable into Spain, and then it spread to the rest of Europe. Dr. Johnson, for one, enjoyed it, according to Boswell. Napoleon did almost as much for spinach's fame as Popeye by decorating the golden epaulettes of his colonels with what looked like gold spinach leaves and were thus referred to as *spinach*—a term that lingers to this day. The phrase *gammon and spinach*, meaning "nonsense," or "humbug," is not as familiar today as it was in Dickens's time, when he wrote in *David Copperfield*, "What a world of gammon and spinnage it is; though, ain't it!" The phrase, most likely an elaboration of the slang word *gammon*, which meant "nonsense" or "ridiculous story," is probably patterned on the older phrase "gammon and patter," the language of London underworld thieves. The nonsense part of it was possibly reinforced by the old nursery rhyme "A Frog He Would A-Wooing Go" (1600), which was heard by millions: "With a rowley powley gammon and spinach / Heigh ho! says Anthony Rowley." E. B. White wrote the caption that became the catchphrase "I say it's spinach, and I say the hell with it" for the Carl Rose cartoon that appeared in the December 8, 1928, issue of *The New Yorker*. It shows a spoiled little girl who rejects her indulgent mother's offer of broccoli with words that have come to mean, "When I'm indulging my prejudices I don't want to be confused with facts." The phrase's abbreviated form, *spinach*, means "baloney," "malarkey," "bull." In 1991 President George Bush joined the ranks of broccoliphobes when he told the press that he hates the stuff. President Clinton has gone on record that he likes it.

spin a yarn. See YARN.

spin doctor. A *spin doctor* is an adviser of a politician who interprets or slants stories to the media in his or her client's favor.

Spin here is probably from the spin a pitcher puts on a baseball to make it curve; thus the spin doctor is throwing the media a curve. The term is a new one only frequently heard in the last few years. See also THROW SOMEONE A CURVE.

spineless as a jellyfish. *Jellyfish* for “a person of flabby character” was first recorded in 1883, and *spineless as a jellyfish* probably appeared soon after, though the exact date isn’t known. This Americanism is based on the common sea creature jellyfish, which is 99 percent water, composed of a gelatinous substance called mesoglea, with no backbone. Considering its construction, however, the jellyfish, like man, is hardly spineless and does the best it can. See MEDUSA.

spinet. Only in this century has *spinet* been used in the U.S. to describe a small, upright piano. Invented in about 1500 by Venetian musical instrument manufacturer Giovanni Spinetti, the spinet was at first similar to the clavichord. Having one keyboard, one string to each note, and until the middle of the 18th century no attached legs, the small instrument had often been called the virginal. In England today *spinet* still designates all small keyboard instruments with one string to a note that are plucked by a quill or plectrum of leather. The spinet may also be named from the Italian *spina*, “a thorn,” in reference to the quill points on the instrument, the naming probably influenced by both *Spinetti* and *spina*. At any rate, the historical information available on the etymology is scanty. In fact, the only reference to the inventor is found in a rare old book entitled *Conclusione nel suona dell’organo, di Adriano Banchieri*, published in Bologna in 1608. Its author states that: “Spinetta [the spinet] was thus named from the inventor of that oblong form, who was one Maestro Giovanni Spinetti, a Venetian; and I have seen one of those instruments . . . within which was the inscription—Joannes Spinetvs Venetvs fecit, A.D. 1503.”

spinnaker. The most probable explanation we have for this word is that back in the 1860s an unknown yacht owner invented a sail rigged at right angles from his racing vessel’s side, a sail that extended from masthead to deck and ballooned far out to take advantage of the slightest breeze. The racing vessel was named *Sphinx*, but its crew had difficulty in pronouncing its name, calling it *Spinnicks*. Thus, the new sail was referred to as *Spinnicker’s sail* and finally became known as a *spinnaker*.

spirit away. Originally, in 17th-century England, this expression referred to the kidnapping of boys to work on the West Indian plantations. The children were taken as quickly and quietly as possible, to give people the impression that they had been “supernaturally removed.”

spit and polish. Military in origin, this term goes back to Victorian times, probably to the middle of the 19th century, although it isn’t recorded before 1895. Meticulous cleaning and smartness of appearance were demanded of sailors in the British navy, which became known as the “Spit and Polish Navy.” Enlisted men liked it then no more than they do now and *spit and polish*—the application of one’s spittle as a polishing agent and much elbow grease to make an object shine—came to be a perjorative term for finicky, wasteful work in general.

spitball. *Spitball* is now used outside of baseball as the synonym for a deception or a dirty trick, and, as William Safire notes in *On Language*: “Because an old-time baseball pitcher never knew which way his spitball would break, the verb *to spitball* now means ‘to speculate.’” The term’s baseball origin probably goes back to 1902, when a pitcher named Frank Corridon accidentally discovered that a ball wet with saliva twisted and turned weirdly as it traveled to the plate. Corridon apparently told Chicago White Sox teammate Elmer Stricklett about his discovery and Stricklett perfected the pitch, even naming it when another teammate asked him what he called it: “Don’t know. I suppose ‘spitball’ explains it as well as anything.” Although other sources claim the spitball was invented by New Bedford pitcher Tom Dond in 1876, when he rubbed glycerine on the ball, the term is first recorded in 1904 and the Stricklett story seems more likely. Outlawed since 1920, the spitball was once a perfectly legal pitch in baseball. Many pitchers used it in its heyday and its unpredictable behavior made batters dread the pitch. Some modern-day pitchers have been charged with using the “spitter”—not usually by spitting on the ball anymore, but by more devious methods such as moistening the hands and scratching the ball. Schoolboys’ *spitball* is even older than the baseball variety, as the word is first recorded in this sense in 1846. See THROW SOMEONE A CURVE.

spit curl. The spit curl was a new and daring fashion in 1831: a short curl of a woman’s hair plastered to her forehead with a little spit. In 1883 Henry Wadsworth Longfellow dubbed such curls “spite curls,” a designation not much heard anymore, after he wrote the still popular poem “There Was a Little Girl” for Blanche Roosevelt and she refused to learn how to pronounce the word “forehead” mentioned in the poem. The “little curl” in the poem is a spit curl Blanche Roosevelt wore:

There was a little girl
Who had a little curl
Right in the middle of her forehead,
When she was good
She was very, very good,
But when she was bad,
She was horrid.

spittin’ image of. The germ of the idea behind this phrase has been traced back to 1400 by Partridge, who cites the early example “He’s . . . as like these as th’ had’s’t spit him.” Similarly, in England and the southern U.S., the expression “he’s the very spit of his father” is commonly heard. This may mean “he’s as like his father as if he had been spit out of his mouth,” but could also be a corruption of “spirit and image.” If the last is true, it would explain the use of “and image” in the expression since the middle of the 19th century. *Spittin’ image* would then be derived from “he’s the very spirit and image of his father,” that is, the child is identical to his parent in both spirit and looks. It’s possible that both sources combined to give us our phrase for “exactly alike,” which is also written *spit and image*, *spitting image*, *spitten image*, and *spit n’ image*.

spittlebug. These small sucking insects produce a white frothy material in which they live and which is often called “frog spittle” (because gardeners once believed that such white

masses on plants were made by frogs). Despite its looks, however, the froth or foam isn't spittle and does little harm to garden plants. It just forms a protective blob of foam under which the busy spittlebug larva, safe from predators, can happily feed.

spizorinkum. Born on the American frontier, *spizorinkum* was originally used during the 1850s as the term for "good" hard money, as opposed to greenbacks or paper currency, but soon came to have many diverse meanings, including "tireless energy." It was possibly used so much because people liked the sound of the word! In any case, *spizorinkum* is "an impossible combination" of the Latin *specie* ("kind") and *rectum* ("right"), "the right kind." The word is sometimes spelled with two z's.

splash. *Splash* seems an innocent word, evoking pleasant days at the beach or pool, but it is also a term for a wave generated by a landslide. One such wave was bigger than any ever recorded. On July 9, 1958, an earthquake caused nearly 100 million tons of rock and glacial ice from the Fairweather Range of the Saint Elias Mountains to fall into Lituya Bay, Alaska. A wave of almost 1,800 feet—a third of a mile high—splashed up the mountain on the opposite shore, stripping it of all vegetation to a height of 1,740 feet—which is taller than the Sears Tower in Chicago, America's tallest building. One trawler was lifted from anchor by the splash and carried unharmed from the bay to the ocean behind, its crew looking down at trees far below. See TSUNAMI.

The Splendid Drunken Twenties. A name for the 1920s coined by American novelist Carl Van Vechten (1880–1964). Van Vechten and his second wife, actress Fania Marinoff, entertained the fabulous literary lions of the day at their famous parties. His novel *Parties* (1930) was based on the lives of F. Scott Fitzgerald and his wife, Zelda.

splendid little war. A name President William McKinley's secretary of state, John Hay, invented for the U.S. war against Spain, best known as the Spanish-American War (1898). The war only lasted from late April until mid-August, and the U.S. was victorious.

the Splendid Splinter. The nickname of slugger Ted Williams, the best-known baseball player to play for the Boston Red Sox since Babe Ruth. Often shortened to *the Splinter*. Among the best hitters in the history of baseball.

spliced. This nautical expression, for "the joining together of two pieces of rope," eventually became nautical and then general slang for "to join together in matrimony." It is not modern slang in this sense, dating back to the 18th century, when it is first recorded in Tobias Smollett's *The Adventures of Peregrine Pickle* (1751), which contains characters like the old sea dog Commodore Howser Trunnion and boatswain Tom Pipes.

splice the main brace. There is some doubt as to why *splice the main brace* has come to mean taking a strong, intoxicating drink. The main brace on a ship is the line secured to the main

yard, from which the mainsail flies. The implication might be that a good drink braces a body. But one authority says the term derives from the days of sail, when the main brace was the most difficult to splice, being in a highly dangerous position, and that the crew received a double tot of rum after finishing the job on it.

split hairs. One Englishman has actually split a human hair 13 times into 14 parts, the world record, and there are drills so fine today that minute holes can be bored in a single hair. However, when the expression *to split hairs* was coined over three centuries ago (in the original form *to cut a hair*), it was thought to be impossible to really split a hair and the phrase described any argument making overrefined, caviling distinctions; a *hair-splitter* was one who quibbled over trifles. Machiavelli was the first to have the word applied to him.

split infinitive. The late Bergen Evans once compiled a list of writers who commonly split infinitives (that is, placed a word between *to* and the simple form of a verb, as in "to quickly walk away") to show that it has been the practice of our best writers. Over a relatively short period he came up with Sir Philip Sidney, Sir Thomas Browne, Donne, Pepys, Defoe, Samuel Johnson, Burns, Wordsworth, Coleridge, Lamb, Byron, De Quincey, Macaulay, Holmes, Whittier, George Eliot, Carlyle, Browning, Arnold, Pater, Ruskin, Hardy, Meredith, Galsworthy, Conan Doyle, Kipling, Shaw, Benjamin Franklin, Abraham Lincoln, Theodore Roosevelt, Woodrow Wilson, and even Henry James. One theory intended to justify the split infinitive holds that in Latin the infinitive form of a verb is only one word and thereby unsplitable, whereas in English the two-word infinitive need not be governed by any such classical rule.

split the log. According to Everett Dick in *The Dixie Frontier* (1948), a peculiar way of "banking" gold and silver on the frontier was "to bore holes in large blocks of wood, fill the holes with coins, and drive tightly fitting pegs in them. Then the pegs were sawed off short. This left no way to remove the money except by splitting the log."

Spode. "Josiah Spode produced a better porcelain than any that had yet been made in England," wrote Alexandre Brogniart, director of the French plant producing the famous Sèvres ware. "He endeavoured to equal the soft porcelain of Sèvres, which his paste closely resembled. He introduced, or at any rate perfected, the use of calcined bones in the body of the ware." Brogniart was referring to English potter Josiah Spode (1754–1827), who developed his formula of bone ash and feldspar at Stoke-on-Trent in 1799. England's leading chinaware manufacturers all adopted Spode's formula to produce the durable, fine bone china much esteemed ever since as Spode ware, or Spode.

spoiled priest. *Spoiled priest* has been used so often in modern literature to mean someone who has failed to live up to the standard expected of him that it probably does mean that by now. But the 19th-century term originally meant a priesthood candidate who failed to take his vows.

spoils of the conquered ocean. When he impulsively decided to become conqueror of Britain in A.D. 40, the mad Roman emperor Caligula, who had made his horse Incitatus a priest and a consul of Rome, started to move his legions across the Channel from Gaul. Then he just as suddenly changed his mind and took his men on a march up and down the beach hunting for seashells! The Roman historian Suetonius says that when Caligula's legions gathered enough shells, the emperor marched them home in self-acclaimed triumph carrying "the spoils of the conquered ocean." It was Caligula who angrily exclaimed: "Would that the Roman people had but one neck!" His name means "little boots" in Latin, and he was so called because of the army sandals (*caligae*) he wore when a boy in the army. He was only 29 when he was assassinated in A.D. 41

spoils of war. The spoils here are valuable goods, not ruined things, and take their name from the Latin *spolium*, "the hide stripped from an animal." Thus anything stripped or taken from a country after it lost a war became known as "spoils." The word was employed in this sense as far back as 1300 and Dryden used the expression *spoils-of-war* in 1697. *Spoil* in the sense of ruined, useless, takes its meaning from the remains of animal carcasses that have been left to rot after being stripped of their skin.

spoils system. Often attributed to Andrew Jackson, this phrase did arise during his presidency, when the practice of giving appointive offices to loyal members of the party in power was first adopted on a large scale. However, the phrase was suggested by New York senator William Learned Marcy, who defended Jackson's 1829 policy in a speech a year later. Marcy, a member of the Albany Regency, a political group controlled by "The Little Fox," Martin Van Buren, rose in the Senate to defend the appointment of Van Buren as minister to England, his public defense of this political patronage being "the rule that to the victor belong the spoils of war." This remark led to the anonymous coining of *spoils system*, the phrase first recorded in 1838. The political atmosphere of an era can often be seen in the expressions born in that period and during the Jackson and Van Buren administrations we find the following first used in a political sense: *dyed in the wool* (1830), *party line* (1834), *picayune* (1837), *party machinery* (1829), *wirepuller* (1832), and even *exposé* (1830), among others. See also O.K.

Spokane. Settled on the site of a trading fort in 1810, this city in eastern Washington State is named after the Spokane Indian tribe, whose name means "children of the sun," or "sun warrior," or "sun."

spondee. The Greeks often made drink-offerings called *sponde* ("libation") to the gods on solemn occasions. A slow meter used in poetry read on such occasions also came to be called *sponde* and it was this word that gave us our word *spondee*, for a "metrical foot of two stressed or long syllables." The spondee is often used to slow the rhythm of a line.

spondulix. Where this old American word for money came from is anybody's guess, but *spondulix* is recorded as early as

1856. It's another word that can only be guessed to be of fanciful origin, a funny word that caught on because people liked its sound. Mark Twain used it in *Huckleberry Finn*.

sponge. *To sponge* (from Greek *spongos*) means "to live like a parasite off someone," to suck up someone else's goods and goodness as a sponge sucks up water. Shakespeare used the word in this sense, and our term *sponger* was recorded as far back as 1677. As their Latin name *Porifera* ("porebearing") implies, all live sponges are covered with minute openings through which water is drawn by the beating of flagellated cells called lashers, the water passing through a complex system of canals before it is expelled from several larger exit holes or vents. The sponge's single purpose in life is to pass water through itself, the water yielding food, minerals, and oxygen to the animal and carrying away waste products. Everyone who is familiar with the natural commercial sponge has noticed the numerous canals opening into still larger tubes, which perforate the mass. In life these canals were lined with active cells formed within the skeleton, the whole resembling a gelatinous mass not unlike a piece of liver in consistency. See THROW IN THE TOWEL.

spoof. This word for "a mocking imitation," was coined by British comedian Arthur Roberts, who invented a game called "Spoof" in the late 19th century. What he coined the word from no one knows.

spoonerism. The Reverend William Archibald Spooner, dean and later warden of New College, Oxford, was a learned man, but not spell woken—well spoken, that is. "We all know what it is, to have a half-warmed fish inside us," he once told an audience, meaning to say "half-formed wish." On another occasion he advised his congregation that the next hymn would be "Kingering Congs Their Titles Take," instead of "Conquering Kings Their Titles Take," and he is said to have explained to listeners one time that "the Lord is a shoving leopard." Spooner's slips occurred both in church, where he once remarked to a lady, "Mardon me Padom, this pie is occu-pewed, allow me to sew you to another sheet," and told a nervous bridegroom that "it is kistomery to cuss the bride," and in his classes, where he chided one student with, "You hissed my mystery lecture," and dismissed another with, "You have deliberately tasted two worms and can leave Oxford by the town drain!" Nobody knows how many of these spoonerisms were really made by Spooner, but they were among the many attributed to him. Spooner was an albino, and his metathetical troubles were probably due to nervousness and poor eyesight resulting from his condition. The scientific name for his speech affliction is metathesis, the accidental transposition of letters or syllables in the words of a sentence, the process known long before Spooner made it so popular that his slips of the tongue and eye were widely imitated. Spooner, who lived to the ripe old age of 86, once called Queen Victoria "our queer old dean" when trying to say "our dear old queen." See MARROWSKY.

spoor. The track or footprint of a man or animal, including snakes, and extended to mean the track of a wagon or a motorized vehicle. Originally used in South Africa (from Dutch *spoor*

meaning the same), but now widely used wherever English is spoken, even in such literary phrases as “the bulldozers barren spoor.” First recorded in 1837.

spork. Two eating utensils made into one. The *spork*, coined from *spoon* and *fork*, was made mainly for disabled people and according to its manufacturer “can be adapted by bending and/or riveting on an extension.” Its name was recorded in the *Century Dictionary* (1909), but it wasn’t heard at all after that until it became a trademark in the 1970s.

sport. *Sport* is simply an abbreviation of the English word *disport*, “to amuse oneself,” and is first recorded in about 1350. *Disport* itself is composed of the Latin *des*, “away,” and *porto*, “carry,” *disport* originally meaning to carry away, especially to carry away from work, which is what one does by amusing oneself playing a sport.

spot. To spot someone something is to give him or her a handicap or concession. The expression is from billiards at a time in the early 19th century when the standard game consisted of knocking a red ball into a pocket with the cue ball from a white spot on the table, leaving the cue ball in position to make another shot. Some players spot shots: In order to equalize games with those less skillful, these experts granted their opponents a certain number of spot shots (as if they had made them). This became known as *spotting* an opponent points and added a new expression to the language.

a spot of tay. When an Irishman says he’ll have *a spot of tay* he’s being more British than the British. *Tay* is not an ignorant Irish pronunciation of *tea*. The Portuguese introduced the drink we now know as tea into Europe as *cha*, and that was the first English name it went by. But as far back as 1650 Englishmen were using the name the Dutch got from the Malaysians for tea, *te*. This was pronounced *tay* in English long before it was pronounced *tea* and was often spelled *tay* to indicate its pronunciation. The pronunciation was common up until the end of the 18th century. In his “Rape of the Lock,” for example, Pope spells the word *tea* three times, but rhymes it with “obey,” “stay,” and “away.” See *TEA*.

spotted dick. This pudding dessert, often found on British bills of fare, is a plain flour pudding with currants or raisins (the spots).

sprain one’s ankle. A euphemism meaning “to have been seduced.” Rarely, if ever, heard today, it was coined in the late 18th century and was a popular euphemism in Victorian times. The French have a similar term.

spring chicken. We find the expression *now past a chicken*, meaning “no longer young,” recorded as early as 1711 by Steele in *The Spectator*: “You ought to consider you are now past a chicken; this Humour, which was well enough in a Girl, is insufferable in one of your Motherly Character.” *No spring chick-*

en, an exaggeration of the phrase, is first recorded in America in 1906.

sprout-kale month. Because cabbages began to sprout in February, the Anglo-Saxons called that month *sprote-Kalemonath*, or *sprout-kale month*.

spruce. Courtiers in the reign of England’s Henry VIII affected the dress of Prussian noblemen, those *hautest* of the *haut* who wore such fashionable attire as broad-brimmed hats with bright feathers, silver chains around their necks, satin cloaks, and red velvet doublets. Anything from Prussia had been called *Pruce* during the Middle Ages, but by the 16th century an *s* had somehow been added to the word and courtiers who dressed as elegantly as the Prussian nobleman were said to be appareled in *spruce* fashion. *Spruce* soon meant a smart, neat, or dapper appearance, as is reflected in the phrase *to spruce up*. The neat, trim form of the *spruce tree* may have suggested its name, too, but it more likely derives from the belief that the spruce was first grown in Prussia.

spruce gum. Spruce gum was the first American chewing gum. All types of *Picea* produce an abundance of resin, this genus name for the spruce deriving from the Latin word for “pitch.” Here in America a number of cultivated spruce species—as well as other native trees like the sweet gum and juniper—have been valued from colonial days for their chewy resins. But the black or bog spruce (*Picea mariana*) and the red spruce (*Picea rubens*) are the principal producers of resin gum. The Indians introduced us to chewing gum from these trees and they, in turn, may have emulated a bear or other animal “gumming up” on spruce resin in prehistoric times. Hunters say that bears customarily “gum up” before they hibernate by swallowing quantities of spruce gum as large as a man’s fist. Chewing gum is today mainly made from synthetics and from chicle, the thick creamy latex of the sapodilla tree (*Achras zapota*), native to Central America. The Mayans chewed chicle, wrapping it in banana plant leaves to make an edible package.

Spruce gum is still collected in Maine and New England, sometimes as a small business, but in nothing like the 150-ton-a-year quantities collected in the early 1900s. This natural chewing gum (see my *The Great American Chewing Gum Book*, 1976) is collected in winter and comes from punctures made on the trunks of both black and red spruces the previous spring. Hayden Pearson recalled in *New England Flavor* (1961): “I knocked down a couple of good big chunks and took them back to the house. It was a good idea to trim the pieces of gum before I put them away in a shoebox. . . . I got rid of the bits of bark that clung, and trimmed the rough edges and any soft spots. Then from time to time I’d cut off a chunk and chew it into a pleasant purplish magenta ball. If it was first-quality gum it was chewable a considerable number of times.”

spry. Although this word meaning lively, active, originated as a provincialism in England, it was first used with any frequency in America and is part of the American vocabulary today.

spud. *Spud*, for “a potato,” is a Scottish term dating back at least to the 19th century, when a *spud* meant a raw potato and a roasted spud was a *mickey*, cooked jacket and all in the cinders. The word derives from the sharp spade called a *spud* used to dig potatoes, which, in turn, dates back several centuries earlier and is of unknown origin, possibly deriving from the Middle English *spuddle*, a kind of knife. *Spud* definitely is not an acronym for the Society for the Prevention of Unwholesome Diets!

spunky. *Spunky* means “courageous, spirited, plucky.” Among early American colonists *spunk* (from Scottish Gaelic *spong*) meant “tinder” and to *spunk up a fire* meant “to kindle it up, throw more wood on it.” Soon *getting one’s spunk up* meant “to become fired with courage,” the term first recorded in 1834, *spunky* coming along a few years later.

Sputnik. The first Soviet satellite sent into earth orbit, launched on October 4, 1957, is so named from the Russian *sputnik*, meaning “fellow traveler [of Earth].”

Squanto. The Pawtuxet Indian who lived with and befriended the Plymouth colonists from 1621 until he died in 1622, showing them the best fishing and hunting places and teaching them how to plant corn, among other things. Squanto, also called Tisquantum, may have visited England two times before meeting the Pilgrims. It is certain that British Captain Thomas Hunt kidnapped him in 1615 and that he lived in England for four years before being returned to America. The names of other Indians who helped the colonists include Samoset, who introduced Squanto to them, and Chief Massasoit, who made a peace pact with them.

squantum. *Squantum* is an American Indian word whose meaning is uncertain. An annual celebration held near Boston as early as 1812 and called the feast of Squantum may have inspired this term for a *clambake* or *picnic*. In any case, *squantum* was still in use at the turn of the 21st century.

the square circle. A name for a boxing ring.

square dance. Any of a number of group dances of rural origin. The square dance is the official dance of the state of Washington.

square the circle. It is mathematically impossible to square the circle, as mathematicians discovered centuries ago. Therefore, just as long ago, people began to use the expression figuratively to describe someone undertaking any futile, impossible task.

squaric acid. See CUBANE.

squash. *Asquutasquash*, meaning “that which is eaten raw,” was the Narraganset Indian word for a kind of melon. No wonder that early colonists abbreviated the word to *squash*. Later, they somehow transferred the word *squash* to what we know now as squash, which of course is not usually eaten raw, but which resembles a melon.

squaw; squawman. The offensive term *squaw* for a Native American woman, or any wife or woman, derives from Algonquian *squa*, “young woman or wife.” This is innocent enough, but *squaw* has had an insulting, degrading connotation almost from the first time it was recorded in 1634. The same can be said about the offensive word *squawman*, a white man who marries an Indian woman, which was first printed two centuries later in 1866.

the squeaky wheel gets the most grease. The expression is often heard as above, but what American humorist “Josh Billings” (Henry Wheeler Shaw, 1818–85) said exactly in his poem “The Kicker” was:

The wheel that squeaks the loudest
Is the one that gets the grease.

Josh Billings is also responsible for “It is better to know nothing than to know what ain’t so” (“Proverbs,” 1874), which, strangely enough, the German philosopher Nietzsche reiterated in *Thus Spake Zarathustra* (1883–91), though I’m sure Nietzsche never read him: “Better know nothing than half-know many things.”

squeeze play. The squeeze play, or squeeze play bunt, or suicide squeeze, is said to have been invented by two Yale University baseball players in 1897, but wasn’t consciously used much or widely known until the 1905 major league season. It consists of a batter trying to “squeeze in” a run by laying down a bunt in a no-out or one-out situation when there is a runner on third base. The runner breaks toward home plate with the pitch and the batter tries to place the bunt in a spot from which the fielder can’t throw the runner out at the plate. *Squeeze play* in American English also means to apply pressure on a person in order to gain an advantage or force compliance; this expression is possibly influenced by the baseball term. See also BUNT.

squelching. A slang synonym for sexual intercourse that probably derives from the statement by English punk group singer Johnny Rotten (John Lydon, b. 1957) that “Love is two minutes fifty-two seconds of squishing (or squelching) noises.” The words may originally have been heard in *New Musical Express* (1978), but aren’t used much anymore. Later Mr. Rotten changed the squelching definition to five minutes because he’d “mastered a new technique.”

squib. A word of uncertain provenance that was first recorded in the early 16th century, *squib* first meant “a short, witty, or sarcastic saying or writing.” Since then it has come to mean a variety of things, including a short news story or film; a type of small firecracker; and an electric device for firing a rocket engine igniter. In Australia *squib* means “coward.” Another interesting use of the word is the little-known movie term *squib*, meaning the vials or capsules containing a red liquid resembling blood that are wired to an actor’s body and exploded when the actor is violently killed or wounded in a film. For the machine-gun killing in *The Godfather* (1972), for example, actor James Caan (“Sonny”) was wired with 147 vials. Surprisingly, Hollywood hasn’t yet come up with a movie “vial rating system” for advertising purposes, as in: “A THREE-THOUSAND VIAL FILM!”

squirrel. The Greeks were impressed not so much by this bright-eyed rodent's acrobatic performances in trees as by its bushy tail, which they believed the animal wrapped around it like a parasol when the sun was too strong. So they named the animal *skiouros*, "shadow-tail," from their words for shade, *skia*, and tail, *oura*, meaning shadytail, the animal that makes shade with its tail. The allusion was pleasant, poetic, but the road to our word *squirrel* proved difficult. *Skiouros* became *sciurus* in Latin and then *escureul* in France before going through nearly a score of English spellings and becoming the *squirrel* that we know today. Another word from the Greek root *skia*, is *sciama-chy*, which means a sham fight or shadow boxing, and comes directly from a Greek word meaning "fighting in the shade, fighting with shadows." The term isn't heard in the gym, but political or even CIA *sciama-chy* is not unknown. See DRAY.

squish. A cross between a squid and a shark. This imaginary animal can be seen at the Smithsonian Institution's Air and Space Museum, where there is a permanent exhibit of 27 paintings of animals that might be found someday in outer space—a kind of zoo of the future based on educated guesses. Other such animals are the great filter bat, a 150-pound flying rodent, and the bandersnatch, a 10,000-pound centipede whose name was coined by Lewis Carroll.

squoz. In his *Long Time Leaving, Dispatches from Up South*, Roy Blount advises that *squoz* is "the past tense of 'squeeze.'"

SS. SS stands for *Schutzstaffel*, meaning "protective echelon or elite guard." Growing out of a small group of thugs who were recruited in 1923 to protect Hitler and became the security arm of the Nazi Party, it was expanded under Heinrich Himmler in 1929 and about 1 million men had passed through its ranks by the end of World War II. The *Waffen* (weapons) SS were crack, cruel combat units. The *Totenkopf* (Death Head) SS served as guards, executioners, and torturers in concentration camps, taking their name from their black caps and the skull-and-crossbone insignia on their collars.

S.S. Minnow. The name of the ship in the television comedy *Gilligan's Island*, a yacht that was wrecked in a typhoon on an uncharted tropical island, leaving first mate Gilligan and his fellow castaways to fend for themselves while awaiting rescue. The late Bob Denver (1935–2005) played the wacky, bumbling Willy Gilligan, whose first name was rarely used, and the show's 98 episodes, beginning in 1964, became cult classics over the years. At the time *Gilligan's* was thriving on TV, Federal Communication Commissioner Newton N. Minnow pronounced prime-time television "a vast wasteland." Avenging the insult, *Gilligan's* executive producer Sherwood Schwartz named the little ship the S.S. *Minnow*. (See *New York Times*, September 7, 2005.)

stab at it. See TAKE A STAB AT.

stack the deck. Stacking the deck against someone is dishonestly prearranging something against that person. The expression has its origins in the age-old gambling practice of stacking a deck of cards, that is, prearranging them in order to cheat the other players.

stag dance. A dance that apparently originated on the frontier in forts of mining camps, where there were few women, in which only men participated. The terms *stag dinner*, *stag smoker*, and *stag film* probably all derive from this term.

Stage Door Canteen. Probably the only "nightclub" celebrated in a song—Irving Berlin's "I Left My Heart at the Stage Door Canteen"—is the Stage Door Canteen that the United Service Organization (USO) and American Theater Wing ran during World War II in the basement of Broadway's 44th Street Theater. This was the first USO canteen in the country. Admission was free to all armed forces personnel, and Broadway players performed there gratis, danced with the GIs, and even waited on tables. The New York Stage Door Canteen was featured in several movies, as was its counterpart in Hollywood.

stage mother. Stage mothers (and fathers) have too often supported their own bank accounts and egos rather than the child actors they dragged by the collar to stardom. The term apparently dates back to early movie days. "My mother was the stage mother of all time," Judy Garland said in one of her last television interviews. "She really was a witch. If I had a stomachache and didn't want to go on, she'd say, 'Get out on that stage or I'll wrap you around a bedpost!'" There were many stage mothers even worse. Jackie Coogan's mother, Lillian, was the most historically important among them, along with his stage father, Arthur Bernstein. Jackie was one of the most popular child stars of all time—best known for his starring role in Charlie Chaplin's *The Kid* (1921) when he was only seven. He earned as much as \$1 million a picture (making him the youngest self-made millionaire in history). But he was never given more than a \$6.50 weekly allowance before he legally came of age. In 1935, Coogan sued his parents for the millions he had earned, but though he won in court, there was apparently only about \$125,000 left for him to retrieve—barely enough to pay his legal expenses. Coogan died in 1984. His outrageous fleecing resulted in the passage of the 1939 Coogan Act, which protects child performers by empowering the courts to put in trust a large percentage of their earnings while they are minors.

the Stagira. Born in Stagira the son of a noted physician, Aristotle is sometimes called the Stagira.

stag party; bachelor party; stag films; stag movies. The British expression *stag party* would be termed *bachelor party* in Australia and the U.S. Americans use *stag* in the term *stag films*, because pornographic films were once shown only at male gatherings. A euphemism is *adult movies*. See PORNOGRAPHY.

stake a claim. Surveyors still use wooden stakes to mark property lines, as they have done since colonial times in America. Beginning in the 1830s, U.S. gold prospectors marked with "claim stakes" property they had claimed where they would dig for gold, hoping to find a bonanza. Those who staked a claim, however, often never hit pay dirt. See PIKES PEAK OR BUST.

Stakhanovite. Soviet authorities reported that coal miner Aleksei Stakhanov vastly increased his production in 1935 by

the use of more rational working techniques and teamwork. This voluntary efficiency system, called Stakhanovism, or the Stakhanovite Movement, in the miner's honor, was strongly encouraged by the Soviet government to speed up completion of the then current five-year plan, and it did much to accomplish this national objective. Stakhanovite workers were rewarded with higher pay, bonuses, and other incentives, and while the idea behind Stakhanovism was nothing new, its success in the Soviet Union made the word widely known throughout the world. Aleksei Grigorievich Stakhanov, born in 1905, eventually worked for the U.S.S.R. Ministry of Coal Industries, having made the great leap forward from worker to commissar. He won many awards, including the Order of Lenin, before his death in 1977.

Stalag. During World War II the Germans called their prison camps for allied enlisted men *Stalags*, the word a shortening of *Stammlager*, "base camp," which comes from German *Stamm*, "base," and *Lager*, "camp." After the war the popular American play *Stalag 17* ran on Broadway for several years and was made into a movie.

Stalinism; Stalingrad, etc. Iosif Vissarionovich Dzhugashvili (1879–1953) took the name Joseph Stalin after joining the Russian revolutionary movement in 1896. Stalin, which means "man of steel," instituted what became known as Stalinism, a synonym for ruthless dictatorship rarely equaled in any other time or place. There is no doubt that the Soviet leader transformed his country into a great modern military and industrial power after succeeding Lenin. But no nation ever paid a higher price for such "progress." Ten million or more Kulaks, wealthy peasants, were exterminated in order to make Stalin's collective farms a success; another 10 million people were eliminated in the Great Purge that lasted from 1934 to 1938; no one knows how many more millions were killed in the continual vengeful, fearful purge that seemed at times to be this paranoid's sole reason for living. De-Stalinization began in Russia in 1956 when Nikita Khrushchev exposed Stalin's crimes. By 1961 Stalin's body had been removed from the mausoleum in Red Square and every factory, mountain, street, and city named after him had been renamed—even the city of *Stalingrad* (now Volgograd), which had been dedicated to him in 1925 because forces under his command drove out the White Armies during the Revolution. Stalingrad will always be known historically for the great battle that proved to be the turning point in World War II, and Stalin's name is best remembered in *Stalinism*.

stalker. *Stalk*, according to Weekley, derives from Anglo Saxon *stealcian*, "to walk stealthily," but the word has only recently taken on the meaning of following a person (often prominent, such as a movie star) and harassing or persecuting her or him. The stalker is always an obsessed person and can be violent. The word isn't recorded before the late 1980s, but the practice is an old one.

stalking horse. Hunters of old sometimes trained their horses to walk toward their quarry while the hunters remained hidden behind them until the game was within shooting range. Such horses were called stalking horses in the 16th century; it

wasn't long before a *stalking horse* came to mean a sham political candidate used to conceal the candidacy of a more important figure in order to draw votes from a rival, or anything put forth to mask plans, a pretext.

stampede. Cowboys borrowed the Spanish word for a sudden frenzied flight of a herd of animals. It derives from the Spanish *estampida* (stamp, rush, uproar) and is first recorded in 1843, though it was probably used 20 years earlier. A stampede is also an annual celebration combining a rodeo, contests, and exhibitions.

standing dead. A colorful name given by firefighters to trees left standing in a forest fire. Wrote Richard Ford in *Wildlife* (1990): "Do you know what they call the trees that're left up when the fire goes by?' 'No,' I said. 'The standing dead,' my mother said. 'Don't they have an interesting terminology for things?'"

Standing Fishes Bible. Various editions of the Bible have over the years earned popular names because of printers' errors. In the *Standing Fishes Bible* (1806) Ezekiel 48:10, reads: "And it shall come to pass that the fishes [instead of "fishers"] shall stand upon it. . . ."

stand pat. American poker players in the late 19th century invented this expression to indicate that a player was satisfied with the original hand dealt to him and would draw no more cards. Where did the *pat* come from? One theory is that because the word meant "in a manner that fits or agrees with the purpose or occasion" or "incapable of being improved" it was a natural for the poker expression. Another holds that *stand pat* is a corruption of *stand pad*, an older English expression meaning "to sell from a stationary position" and originally referring to peddlers who remained in a fixed location. *To stand pad* was to remain fixed or firm, like a poker player who didn't move to take any more cards. From poker, in any case, the expression passed into general use as a term for taking a firm, fixed position on something.

stand the gaff. The *gaff* here is the sharp metal spur attached to the legs of cocks in cockfighting. A bird has to stand the slashes of such gaffs or lose the fight, which gave us the century-old expression *to stand the gaff*, meaning to weather hardship or strain, to endure patiently.

Stanislavski method. The Russian actor and stage director Konstantin Stanislavski (1863–1938) taught his actors to identify closely with the characters they played and to use latent powers of self-expression, among other practices. By the early 1920s, people were calling such instruction the *Stanislavski method*. It took another 30 years before *method* alone began to be used and such terms as *method acting* and *method actor* were heard.

Stanley Cup. One of many sports trophies named after donors, this one (in ice hockey) after Frederick Arthur, Lord Stanley of Preston (1841–1908), governor general of Canada.

Stanley Pool. A huge pool-like Congo River expansion in west-central Africa that was noted by Sir Henry Morton Stanley on his African expedition to find David Livingstone in 1871. See DOCTOR LIVINGSTONE I PRESUME!

Stanley Steamer. The Stanley Steamer steam-powered automobile was developed by twin brothers Francis Edgar Stanley (1849–1918) and Freelan Stanley (1849–1940). Introduced by the inventors in 1897, the Stanley Steamer became famous in song and story.

Stapelia. Dutch physician J. B. Stapel (d. 1636) is remembered by a carrion flower; the large flowers of the cactuslike *Stapelia* genus, containing some hundred species and having a very unpleasant, fetid odor. Native to South Africa, a few of these curiously marked species—variously colored and sometimes marbled or barred—are grown in the greenhouse for their flowers. There is no record of whether the naming was meant as a compliment or insult.

star. *Star*, for an actor of exceptional popularity or talent, or both, isn't some press agent's invention as many believe. The term is first recorded in a 1779 book on the theater in an appraisal of the great English actor David Garrick: "The little stars, who hid their diminished rays in his [Garrick's] presence, began to abuse him." *Star*, as a verb, wasn't used until about 1825. *Stardom* seems to have been coined by O. Henry in a 1911 short story. See MATINEE IDOL.

starboard; larboard. Old English ships were steered (*steor*, "steer") by a paddle or board (*bord*) over the right side. This *steorbord* became *starboard* and *starboard* later became the name for the right side of the ship itself. *Larboard*, the left side of a ship, derives from the earlier *lureboard* (from the Anglo-Saxon *laere*, "empty"), in reference to the fact that the left side was usually empty because the steersman stood on the right, or steering-board (*starboard*), side.

star chamber proceedings. A star chamber is any committee or tribunal that proceeds by arbitrary or unfair oppressive methods. The term dates to the reigns of British monarchs James I and Charles I when a civil and criminal court called the *star-chamber*, abolished in 1641, notoriously abused its powers and from which there was no appeal. The court, its judges the king's own counselors, was probably so named because it was held in a room, or chamber, in the royal palace at Westminster where the ceiling was decorated with gilt stars. However, Blackstone's *Commentaries* has it that the *star* here derives from the *starra*, or "contracts and obligations of Jews," that were stored in the room.

starfish. Crammedtogethercloserthanthis, each no bigger than the period ending this sentence, more than 1,000 tiny globules cling tenaciously to a handful of seaweed as they begin assuming their star shapes. Vaguely, the living, changing "nurse" eggs begin to resemble small asterisks, and then a few weeks later the five points of their stars suddenly become clearly visible. From a smattering of stardust, hundreds of sea stars, or starfish, that can be so many varied colors—orange, yellow, red,

purple—are finally born to human eyes. Though the word *starfish* was first recorded about 1530, the sea creatures were known to earliest man, less for their beauty than for their destructive raids against oysters, clams, and coral reefs (including Australia's Great Barrier Reef). Another name for them is *the walking stomach of the sea*, because they actually eat with their stomachs, which they can push out through the mouth centrally located beneath their bodies and digest food on the spot. After dining, this amazing stomach proceeds to double as an excretory system. See REGENERATION.

stark naked. Although *stark* was a common Middle English word meaning "strong" and is sometimes used to intensify other words, as in *stark raving mad*, it has nothing to do with *stark naked*. The original form of *stark naked* was *start naked*, *start* here being a corruption of the Anglo-Saxon *steort*, meaning "tail or rump." Someone *stark naked* is therefore literally "naked even to the rump."

starling. This bird, whose name is akin to the Old English for tern, *stearn*, was brought across the Atlantic in 1890 and released in Central Park by literary enthusiasts seeking to introduce to America all the birds mentioned in Shakespeare. It has since become a pest, reminding some gardeners of the Englishman back in 1886 who said, "Few people are aware of how good the starling is to eat." The starling (*Sturnus vulgaris*) constitutes more of the 100 billion birds in the world than any other species, and has long been noted for its ability to speak and whistle.

Stars and Bars. The official flag of the Confederacy during the Civil War. It had two broad red stripes commonly called the bars and a blue field in the upper left-hand corner bearing a circle of stars (one for each of the seceded states). The Stars and Bars is often erroneously depicted as the RED CROSS BANNER, or battle flag, in Civil War illustrations.

Stars and Stripes; Star-Spangled Banner. Though the Continental Congress resolved in 1777 that the U.S. flag be composed of 13 stripes and 13 stars, the term *Stars and Stripes* for the flag isn't recorded until five years later. *Star-Spangled Banner*, for the flag, was of course inspired by the national anthem, whose lyrics Francis Scott Key wrote in 1814, but the song didn't become our official national anthem until 1931 (though it had for almost a century been called our "national ballad"). The Greek lyric poet Anacreon (fl. 6th century B.C.) wrote light bright poems praising wine and love that were imitated by Jonson, Herrick, and other early English bards. A drinking club in London used his name, and its club song, "Anacreon in Heaven," provided the music for Francis Scott Key's "Star-Spangled Banner," the American national anthem. See ANACREONTIC; OLD GLORY; STARS AND STRIPES.

start from scratch. Unlike COME UP TO SCRATCH, which probably derives from prize-fighting, this was originally a horse-racing expression. A scratch in England was the starting line in a horse race and horses started there with no advantage besides their own ability, like anyone who starts from scratch in any undertaking. In this sense a scratch race is a race without

restrictions as to the age, weight, and winnings of the horses entered.

start over dads. Often called SODs, these are late-life fathers, a more common phenomena every year. A *New York Times* article (April 12, 2007) gives many celebrity examples, including Tony Randall, Larry King, Rod Stewart, Paul McCartney, Kenny Rogers (the father of identical twins), and Julio Iglesias.

starvation. On March 6, 1775, Henry Dundas, first viscount Melville (1742–1811), made a Parliamentary speech speculating whether famine would result in America because of a 1775 British bill restricting trade with Britain's New England colonies. Dundas said he was "afraid" famine "would not be produced from the Act." This hard-hearted remark inspired author Horace Walpole and others to later nickname him "Starvation Dundas" and "Starvation," names he would be remembered by through the rest of his days and through history. The *OED* says that despite the absence of confirmation it is "not improbable" that Dundas used *starvation* before anyone else, and he may even have coined the word, but an examination of the records reveals that he did not employ *starvation* in his Parliament speech, as some sources claim.

stash. Interestingly, the first recorded use of the verb *stash* for hiding something is a 1929 remark about Ozark moonshine: "Billy, he done stashed the jug in the bush an' now the danged old fool can't find it."

State of Franklin. See TENNESSEE.

State of the Union message. George Washington delivered the first State of the Union message to Congress, though it was called the Annual Address at the time. It reports on the state of the nation and is also called the State of the Union address. The speech is required of the president by the U.S. Constitution (Article II, Section 3). It was not called the State of the Union message until 1945.

stateroom. One persistent old story has the term *stateroom* coined by an early owner of steamboats named Shreve, for whom the city of Shreveport, Louisiana was named. Shreve, according to this account, named luxurious cabins on his boats after states (e.g., the Texas Room) and they came to be known as *staterooms*. *Stateroom* is first recorded for the "sleeping apartment on a U.S. passenger steamer" in 1837 by Harriet Martineau, but there is no evidence yet of any Shreve with his finger in the pie. More likely this *stateroom* evolved from the *stateroom* meaning "a captain's or officer's quarters on board ship," which is first recorded in Pepys's *Diary* in 1660.

stateside. *Stateside* may have been invented by G.I.'s in World War II for "to, toward or in the continental U.S." At least the word is first recorded at about that time when many soldiers were far from home. In the U.S. itself today the term is only used by Alaskans (it is rare in Hawaii) for the mainland. Alaskans also call the 48 contiguous states the Lower 48, the lower states, the Outside, and even the South!

States'-Rights Democrat. A designation, not frequently heard anymore, for southern Democrats espousing the doctrine of states' rights. It was apparently coined just after the Civil War.

Statue of Liberty. The statue of Liberty Enlightening the World, better known as the Statue of Liberty, is, of course, as much a symbol of the United States as Uncle Sam. The colossal 152-foot statue of a woman with uplifted arm holding a burning torch stands at the entrance to New York Harbor. It was a gift from France to the United States, designed by French sculptor Frédéric Auguste Bartholdi; its steel framework was designed by Gustav Eiffel, designer of the Eiffel Tower. French citizens contributed the \$250,000 for the statue itself, and Americans gave \$250,000 for its pedestal on Bedloes Island, whose name was changed in 1956 to Liberty Island. Dedicated in 1886, the statue is now under the protection of the National Park Service, which administrates it along with Ellis Island, a former detention center for immigrants entering America, as part of the Statue of Liberty National Memorial. In the statue's left arm is a tablet with the date July 4, 1776, engraved upon it. At its feet are the broken shackles of tyranny.

Statue of Liberty play. Named for its resemblance to the uplifted arm of the Statue of Liberty, this football play has a passer faking a pass, and another back coming behind him, taking the ball from his upraised hand and either passing it himself or running toward the goal with it. Outdated today, it was the pride of every kid's sandlot team a generation ago.

stave off. A stave is a stick of wood, the word a back formation from the plural of staff, *staves*. In the early 17th century staves were used in the "sport" of bullbaiting, where dogs were set against bulls. Too often these contests were badly matched, for the bulls frequently had the tips of their horns cut off, and when the dogs got a bull down, the bull's owner often tried to save him for another fight by driving the dogs off with a stave or stick. Because the owner actually "postponed" the bull's death until another day, the expression *to stave off* acquired its present figurative meaning of "to forestall." This is at least a possible explanation for *stave off*, which we know is associated in some way with beating off dogs.

Stavin Chain. *Stavin Chain* isn't heard much anymore, but since about 1910 it has meant a sexually powerful man very attractive to women, after the hero of a popular American southwestern folk song.

staying the course. President George W. Bush popularized this catchphrase during the war in Iraq, beginning in 2004. He meant by the phrase that American soldiers should remain in Iraq until the war was won. Mr. Bush must have repeated the words at least a few dozen times in speeches and they became the butt of comedians' jokes.

stay in there pitching. Keep on working as hard as possible at the task at hand. Originally this might have been encouragement to a baseball pitcher or even to a carnival pitchman. I've heard keep on pitching applied to baseball, but have never heard anyone urging a carnival pitchman to pitch.

Stedi Cam. Short for *steady camera*, a traditional device that holds a camera steady to the cameraman's body, enabling him to take smooth shots without any jerking or shaking. The first Stedi Cams were used in the Oscar-winning film *Rocky* (1976).

steak. *Steak*, an old English word, takes its name from the way such meat was first cooked; on a thin *stake*, from the Old English *staca*, akin to stick. The word is first recorded as *styke* in the early 15th century.

steak tartare. Bloodthirsty about their meals as well as their conquests, the nomadic Tartars liked their meat raw, or almost always so—sometimes they placed a hunk of meat under the saddle and cooked it by friction during hours of riding. At any rate, in medieval times traveling Hamburg merchants learned about a recipe for scraped raw meat seasoned with salt, pepper, and onion juice and named it *tartar steak* or *steak tartare* in their honor. This was the first HAMBURGER, remaining so until some anonymous Hamburger shaped *steak tartare* into patties and cooked them. Tartar sauce, a mayonnaise containing diced pickles, onions, olives, capers, and green herbs, takes its name from tartar steak, which was often seasoned with similar ingredients.

steal a march on someone. Here the *march* is the distance armed troops can cover in a day. In medieval times enemies could easily figure this distance and, by marching at night, be waiting to surprise their opponents when they arrived at their destination. This was known as *stealing a march* on someone and came to mean “to anticipate someone's moves and thus gain an advantage over him.”

steal my thunder. “Our author, for the advantage of this play, had invented a new species of thunder . . . the very sort that is presently used in the theatre. The tragedy itself was coldly received, notwithstanding such assistance, and was acted but a short time. Some nights after, Mr. Dennis, being in the pit at the representation of *Macbeth*, heard his own thunder made use of; upon which he rose in a violent passion and exclaimed, ‘See how the rascals use me! They will not let my play run, and yet they steal my thunder.’” This early account of the origin of the expression *steal my thunder*, from the *Biographia Britannica*, is accurate in all respects, according to most authorities. Restoration playwright John Dennis (1657–1734) had invented a new and more effective way of simulating thunder on the stage (by shaking a sheet of tin) for his play *Appius and Virginia* (1709). The play soon closed, but a rival company stole his thunder, inspiring his outburst and giving us the expression *steal my thunder*.

steamboat. *Steamboat* is an Americanism dating back to at least 1785, when John Fitch invented the first workable one. Fitch was not able to secure the financial aid necessary to promote his invention after his fourth ship was destroyed, and he died a broken man, leaving a request that he be buried on the banks of the Ohio River so that he might rest “where the song of the boatman would enliven the stillness of my resting place and the music of the steam engine soothe my spirit.” His dream became a reality in 1807, nine years after he died, when Robert

Fulton's steamboat *Clermont*, which had been called “Fulton's Folly,” proved a great success.

steatopygous. “With many Hottentot women,” Darwin wrote, “the posterior part of the body projects in a wonderful manner; they are steatopygous.” Darwin clearly appreciated this way that some women extend in his *Descent of Man*, but the word *steatopygous*, when applied to Hottentot Bushmen (especially the Bongos) or anyone else, clearly isn't nearly as complimentary as CALLIPYGIAN. Deriving from the Greek for “fat rumped,” its dictionary definition is “a protuberance of the buttocks, due to an abnormal accumulation of fat in and behind the hips and thighs.”

steeplechase. According to one tradition, *steeplechase* originated with a race from church steeple to church steeple in Irish horse country. Another tale credits a group of British riders returning home from a foxhunt with inventing the sport and the word—these foxless riders decided to run a race in a direct line, regardless of obstacles, to the steeple of the village church, the winner the rider “who first touched the stones of the steeple with his whip.” In any case, the original horseback races called steeplechase races had a church steeple in view as the goal, the riders having to clear all intervening obstacles. The word is first recorded in the British *Sporting Magazine*, in 1805.

steerage. The ancestors of millions of Americans came to America in steerage, which literally was the noisy, crowded section of a ship below deck. Passage was \$10 to \$15 for such quarters, compared with about \$40 for regular tickets. Later, the term came to mean any area on a ship where the passage was cheapest. See ELLIS ISLAND.

stem to stern. Loosely speaking, the stem is the bow of a ship and the stern is the rear. Thus *from stem to stern* means “throughout” as in “We turned the place over from stem to stern.” The expression is an old one, dating back to at least the early 16th century.

the Stendhal syndrome. In his diary, the French novelist Stendhal (a pseudonym of Marie-Henri Beyle, 1783–1842) tells of how, when visiting Florence in 1817, he fell ill in the presence of all the great works of art around him, especially the frescoes in the church of Santa Croce. His heart beat irregularly, he feared he would fall down if he walked, and he felt his life draining away from him. Only when he left the church and sat down on a bench to read poetry did he feel better. Today his experience is shared by scores of travelers in Florence every year, so many that psychiatrists have dubbed the phenomenon “the Stendhal syndrome.”

Sten gun. This British light machine gun of World War II is an unusual blend of the first initials of its two inventors' names, Sheppard and Turpin, plus the first two letters of the name of their country, *England*. The Sten gun, or Sten, is not extremely accurate, but is easy to operate, can be fired from the shoulder, weighing only eight pounds, and fires rapidly at the rate of 550 rounds per minute, making it an effective short-range weapon. Mass-produced mainly from stamped parts, the inexpensive *Sten* should really be classed as a submachine gun, like the

American Thompson, or Tommy gun, and the German Schmeisser, or burp gun.

stenography. Though its practice dates back to the ancient Greeks, the word *stenography* is first recorded in the early 17th century. The word derives from the Greek *stenos*, “narrow,” and *graphein*, “to write,” literally meaning “narrow writing.” Other synonyms are the rare *brachygraphy*, “short writing,” and *short-hand*, which dates back to 1636 and is the most common term today.

stentorian. Under freak acoustical conditions the human voice has carried over 10 miles across water, but its average range is about 200 yards in still air. Stentor, Homer’s Grecian herald of the Trojan War, who may have been based on some top sergeant of old, probably had a range far exceeding this. In the *Iliad* Homer tells how the herald faced the enemy to dictate terms in “a voice of bronze . . . as loud as 50 men together.” Greek legend claims that Stentor finally met his match in Hermes, herald of the Gods, dying as the result of a vocal contest with him. But his name lived on as the Greek for loud-voiced and gave us the English word *stentorian*, “extremely loud.” A howling monkey, a trumpet-shaped protozoan, and an electric magnifying speaker called the stentorphone also do him homage. See HECTOR; NESTOR.

Stepin Fetchit. American vaudevillian Lincoln Theodore Monroe Andrew Perry took his stage name, Stepin Fetchit, from a racehorse he had won money on, hoping that the nag’s name would continue bringing him good luck. It didn’t, in the long run. *Stepin Fetchit* instead became the synonym for a servile, silly black man when Hollywood typecast the talented actor in such roles throughout the 1940s. By the time of the civil rights movement, the actor was completely out of favor and out of work.

step on it. Speed it up. The expression is obviously a shortening of *step on the gas*, which of course means to push down harder on a car’s gas pedal to make it go faster. The phrase dates back to the early days of the automobile.

step on things. To show a contempt for somebody or something. One person might say, “He’s not a bad guy,” and another might reply, “You’ve got to be kidding, I’ve stepped on better things than him.”

stepping the mast. When a mast is about to be stepped, all those on board the new ship contribute good-luck coins to be placed under it. This old maritime tradition is said to have its origins in the ancient Roman custom of placing coins in the mouths of men killed in battle. The coins were supposed to pay Charon, the mythical ferryman, for transporting the dead men across the River Styx. Today the coins are often placed in corrosion-proof receptacles at the base of the mast, and the mast is stepped, put in place, immediately afterward.

sterling. In medieval England a starling was a coin worth about a penny and took its name from the star (*steorra*) embossed upon it. The pound sterling began life as 100 of the

smaller sterlings, and its value, of course, has risen and fallen over the years.

stet. *Stet* is Latin for “let it stand,” the printing term being used as a direction to the printer to reinstate a word or words that had been marked for deletion in a proof or manuscript. The term is a fairly recent one, first recorded in 1821.

Stetson. After poor health forced John Batterson Stetson (1830–1906) to travel west at the time of the Civil War, it occurred to him that no one was manufacturing hats suited to the practical needs of the western cowboy, and on his return to Philadelphia in 1865 he went into the hat business, specializing in western-style headgear. The wide-brimmed, 10-gallon felt hats he manufactured immediately became popular with cowboys and have been called Stetsons, or John B’s, ever since.

stevedore. See LONGSHOREMAN.

Stevengraph. English weaver Thomas Stevens (1828–88) made this bright colored woven silk, which was named after him. The designs were small pictures depicting popular subjects.

stew. Now the synonym for a brothel or a prostitute, a stew was in medieval times the town bathhouse. Toward the end of the Middle Ages the town bathhouse became the gathering place for loose men and women, *stew* taking on its present meaning. Our word *stew* for meat and vegetables slowly boiled together comes from the same source, the verb meaning to bathe in a hot bath or stew.

stewed as a fresh boiled owl. Very drunk. The origin of the expression is anybody’s guess, and I’d appreciate hearing any facts or theories. Maybe someone desperate did shoot and stew an owl whole for food and noticed its stewed resemblance to someone deep in his cups.

stickball. A kid’s form of baseball played on city streets with a sawed-off broomstick or similar bat and a rubber ball such as a spaldeen. Among many great baseball players who began their careers as stickball players are Willie Mays, Whitey Ford, and Joe Pepitone.

stick in one’s craw. When you can’t swallow something, when it won’t go down, or you are loath to accept it, it sticks in your craw. The craw is the crop or preliminary stomach of a fowl, where food is predigested. Hunters centuries ago noticed that some birds swallowed bits of stone that were too large to pass through the craw and into the digestive tract. These stones, unlike the sand and pebbles needed by birds to help grind food in the pouch, literally stuck in the craw, couldn’t go down any farther. This oddity became part of the language of hunters and the phrase was soon used figuratively.

stick in the mud. A dull, conservative, old-fashioned person; also an old fogey who refuses even to try something new or exciting. “All right, stay home by yourself then, you old stick in the mud,” his wife told him. The expression dates back to about

1725 and is still heard today, if infrequently. One writer has called Osama bin Laden “a pathetic stick-in-the-mud.”

stick it in your ear. This rude insult may have its origins in baseball, where *stick it in his ear* is often the cry of bench jockeys to a pitcher on their team who is facing a batter crowding the plate. Literally, it means “to hit the batter in the ear with the ball,” but it usually means “to throw the ball very close to the hitter, to dust him off.” No one has determined exactly when this phrase came into the language, but it was around in the 1950s. It may simply be a variation of much ruder phrases like *stick it up your ass* and *shove it up your ass*.

stickler. The earliest sticklers were umpires or moderators at wrestling or fencing matches and tournaments in the 16th century. Within another hundred years the word was being used figuratively, followed by *for*, to describe anybody who unyieldingly insists on something. *Stickler* derives from the Anglo-Saxon *stihtan*, “to arrange or regulate.”

the sticks. *The sticks* is an Americanism for the country, or the backwoods. First recorded in 1905, it derives from the use of *sticks* by lumbermen for “timberlands.”

stick to one's guns. It seems sure that this expression was born with some fort or ship being attacked, but though it may be military in origin it is first recorded, as late as 1839, in a popular novel called *Ten Thousand a Year*, the words put in the mouth of a civilian named Mr. Titmouse.

stick your neck out. See DON'T STICK YOUR NECK OUT.

sticky wicket. A sticky wicket is a difficult or awkward situation that calls for delicate handling, and this 1920s British expression still has some currency in the U.S. as a humorous term. It comes from the phrase *bat at a sticky wicket*, meaning to contend with great difficulties, which has its origins in cricket. In cricket a sticky wicket (goal) literally means that the ground around a wicket is soggy because of recent, heavy rain. This condition doesn't allow the ball to bounce well, making things difficult for the players trying to field it.

stiff; stiffing the world. In its sense of cheating someone of something he or she deserves—as in purposely failing to leave a worthy waiter a tip—the word *stiff* has frequently been in the news recently. It was first used in this sense, though as a noun, in *The Massarenes* (1897), a novel by Ouida, the pen name of Louise de la Ramée (Ouida is a childish pronunciation of Louise). Ouida used *stiff* to describe a passenger on board a ship who failed to tip, probably comparing that person to a corpse (an earlier meaning of *stiff*) in his spending habits. Over the years *stiff* came to be a verb, which was finally used by President George W. Bush when he charged that Iraqi leader Saddam Hussein “is stiffing the world.”

stiff-necked. Obstinate, stubborn. The allusion here is to a horse that refuses to respond to the reins. The expression is recorded in the Bible (Jer. 17:23): “They obeyed not, but made their necks stiff.” This refers to Jerusalemites dishonoring the

Sabbath, but, according to Professor Howard Marblestone, “The better-known use appears in Exodus 32:9 (and other places) when God condemns the Israelites for being ‘a stiff-necked people’ of little faith, who followed Aaron in making the golden calf.”

stiff upper lip. Since it is the lower lip that quivers when someone is afraid or on the verge of crying, keeping a stiff upper lip seems to be a rather meaningless expression. Probably there is no logic behind this admonition to be firm in times of trouble, but at least one attempt has been made at an explanation. Young British officers who adopted mustaches tried to keep them trim so that they didn't make their upper lips twitch, such twitching being a sign of lack of control and emotional immaturity to their superiors. The main problem here is that all recorded evidence shows this phrase to be of American origin, from New England in about 1830. Possibly it is just the reverse of the American expression “down in the mouth.”

still another chicken joke. “If chickens knew their fate, they'd stay in their shells.”

still as a stone. Just as he probably originated BUSY AS A BEE, Chaucer probably coined the classic alliterative phrase *still as a stone*, which later became the Shakespearian *stone still*: “I will not struggle; I will stand stone-still”—*King John*. At least both expressions are first recorded in his work.

Still Corners. A small town in New Hampshire. So called not because of its constant quiet, but because it wanted to be a city and never became more than “a crossroads in a wood.”

still have some snap left in one's garters. An expression dating back to the late 19th century and meaning “still energetic, not yet worn out.” “I really think,” Senator Russell B. Long of Louisiana told the press on March 17, 1985, “that it's better to retire on Uncle Earl's terms, when you still have some snap left in your garters.” Mr. Long was referring to his legendary uncle, former Louisiana governor Earl Long, who may have used the expression too.

still waters run deep. Someone quiet on the outside is more worthwhile or even dangerous than any bigmouth. The germ of the idea behind this saying goes all the way back to the Roman poet Quintus Curtius of the first century A.D., who wrote: “The deepest rivers flow with the least sound.” Later, in 1580, the British writer John Lyly (see EUPHUISM) wrote: “Where the streame runneth smoothest, the water is deepest.” Finally, in *Henry VI* (1591) Shakespeare borrowed and improved a bit upon both with “Smooth runs the water where the brook is deep.”

stink chariot. *Stink chariot* for an automobile was invented by Australian author and editor John Norton, who published a weekly paper called *John Norton's Truth* earlier in this century. It is obsolescent if not obsolete but worth remembering.

stinker; stink on ice; stink out loud. *Stinker*, one writer suggests, may derive from the unskilled hands among American

buffalo hunters who skinned the freshly killed animals and stank from the blood and intestines that clung to them. Partridge, however, states that *stinker* has meant a disgusting contemptible person in British slang since the 17th century. *Stink on ice* and *stink out loud* are definitely 19th-century Americanisms.

stinkin' Benjamin. This flower of the genus *Trillium* looks nice where it grows; it's only when picked for a bouquet that its fetid odor is noticed. It is also called purple trillium.

stinking iris. The bruised evergreen foliage of the "stinking iris" (*Iris foetidissima*), also called "stinking gladium," makes up for its unpleasant smell by its medicinal uses. In fact, some gardeners must have *liked* its smell, for it went by the common name "roast beef plant" in days past. *See also* IRIS.

stinkpots. Stinkpots, favorite weapons of pirates, were malodorous concoctions made from saltpeter (potassium nitrate), limestone (calcium carbonate), asafetida (a vile-smelling gum resin), and decayed fish that were packed into earthenware jugs, ignited, and hurled onto an enemy ship. Nauseating smoke spread over the deck and through the hold, often discouraging the enemy from fighting, or at least weakening his resistance. Pirates also hung stinkpots from the yardarms and cut them off when they projected over the vessel under attack.

stinky billy. *See* SWEET WILLIAM.

stirrup cup. A farewell drink of wine or liquor given to a mounted rider, feet in the stirrups and ready to depart. *Stirrup*, referring to an ancient device, derives ultimately from the obsolete German word *sty*, "climb," plus *rope*. This indicates that the first stirrups were looped ropes. The rider put his or her foot in one of the loops and climbed up on the horse's back. *See* DEOCH-AN-DORIS.

stitch. *See* THROW INTO STITCHES.

Stix Nix Hix Pix. This is among the most famous of the colorful headlines that have appeared in the show business newspaper *Variety*. It referred to a survey indicating that residents of small towns don't like movies about small town life.

Stockholm syndrome. A condition in which hostages or kidnapped people bond with and help their captors. It is named after a 1973 bank robbery in Stockholm, Sweden, when the hostages showed hostility toward the authorities even though such actions might have been harmful to themselves. There have been many similar cases. In the bizarre 1974 Patty Hearst kidnapping case, for example, Patty changed her name to Tania and joined the Symbionese Liberation Army that kidnapped her.

stocking cap. *See* TOQUE.

stocks and bonds; stock market. Both *stocks* and *bonds* have their etymological roots in substantial things. No one knows exactly how the words came to be applied to securities, but *stocks* comes ultimately from the Old English word *stoc*, for

"tree trunk," and *bonds* from the early English *band*, meaning "fastening." *Stock market*, and ultimately *stocks*, may come from the name of a London meat and fish market called the Stock Exchange near the site of the Mansion House in the 15th century. An ancient source says this market was so named because it was built on a site where "had stodee a payre of stocks for a punishment of offenders."

stogy. *See* CONESTOGA WAGONS.

Stoksosaurus clevelandi. This dinosaur species is included because it honors the person with the most dinosaur fossil species named after him, geologist William Lee Stokes (1915–94). Dr. Stokes was so honored eight times and a number of rock formations in Utah were named after him as well.

the stolen generation. For 67 years, beginning in 1905, Australia took Aborigine children from their families and placed them in "mainstream" institutions and homes. Growing up with no parents or families these children came to be called *the stolen generation*.

stone. In Britain, Ireland, Australia, and New Zealand, but not in the U.S., *stone* refers to a weight measure equal to 14 pounds, or 6.35 kilograms, although the term has been used less frequently since the introduction of the metric system.

stone crab. This delicious crab (*Menippe mercenaria*) of the southern United States is named from the rocky shores it inhabits. Usually the crab's meaty claws are broken off to be eaten and the rest of the crab is discarded to grow new claws.

stoned. Ancient Greek actors and dramatists were sometimes frightened off the stage by audiences who threw figs, olives, or stones when they disliked a performance. One anonymous dramatist-actor, apparently a poor one, borrowed a supply of stones to build a house and promised to return the loan with the stones he expected to collect from his next performance.

a stone in my shoe. A minor annoyance, an irritation. In the *Godfather* and *Sopranos* films this expression was employed several times, usually when one gangster wanted the Godfather to take care of him by taking the stone out of his shoe, that is by putting the first gangster out of commission. A variation on the expression is get rid of a *pebble in my shoe*.

stone melons. There are melon-shaped stones on Mount Carmel, said to have fallen there from the cart of a peasant. According to Muslim tradition, Elijah saw the peasant carrying melons and asked him for one. The peasant lied that they were stones and Elijah promptly changed them into stones.

stone-roller. Another name for the American minnow *Campostoma anomalum*, so called because it moves stones in its way as it feeds.

stone's throw. A very short distance, as in "The river's only a stone's throw from our place." The expression is first recorded in the late 16th century.

stone still. See STILL AS A STONE.

stonewaller. One who obstructs or blocks anything with stubborn, stonewall-like resistance. The term may come from the nickname of Civil War Confederate general Thomas Jonathan Jackson (1824–63), who got the name Stonewall at the first battle of Bull Run when a fellow officer told of seeing Jackson “standing like a stone wall.” Stonewall Jackson was accidentally killed by his own troops at the battle of Chancellorsville. “I have lost my right arm,” Robert E. Lee, commander of the Confederate armies, said on hearing of his death.

stone walls do not a prison make. These famous words by the Cavalier poet Richard Lovelace are from his “To Althea, from Prison,” which he wrote in 1642 while serving seven weeks in the Gatehouse prison at Westminster for presenting a petition to the House of Commons on behalf of King Charles I. The poem also contains words praising Charles (“The sweetness, mercy, majesty / And glories of my King”), yet Lovelace was freed not by any action of the monarch but on a large bail of 4,000 to 40,000 pounds that he posted. In 1648 Lovelace was again imprisoned, by the Commonwealth, and while in prison prepared for press another famous poem “To Lucasta, Going to the Wars,” which contains the famous lyric “I could not love thee, Dear, so much / Loved I not Honour more.” Lovelace named “Lucasta” for his beloved Lucy Sacheverell, who married another man when it was reported that the Cavalier poet was killed fighting for the French king in France. By the time Lovelace finished his second jail term, his great fortune had been exhausted supporting the monarchy. It is said that he died in a cellar, without money to buy food, before his 40th birthday in 1658.

stoning ground. This phrase puts one in mind of Shirley Jackson’s short story “The Lottery” (1949), but the practice of stoning was all too real under the Taliban in Afghanistan. According to a *New York Times* story (12/28/01): “At the direction of the religious police—mostly young thugs . . . couples caught in adultery were led out to the ‘stoning ground’ before a mosque, the woman buried in a pit up to her head, the man tied hand and foot beside her, their children required to cast the first rocks.”

stool pigeon. Fowlers in the past used live decoy birds to lure pigeons and other birds into range of their nets or guns, which helped them to wipe out several species. These live decoys, their eyes sometimes stitched closed, were called stool pigeons, stool-crows, or the like, probably because they were tied by a long string to small stools that the hunters could move up and down while waiting hidden for their prey (although their name may derive from the Old English word *stale*, meaning “a living bird used to catch others of the same species”). At any rate, in about 1830 the term *stool pigeon* became American slang for a criminal decoy used by the police to catch other criminals, and by the end of the century it meant a police informer. The last meaning was probably influenced by the use of the slang *carrier pigeon* for “an informer” at the time, a carrier pigeon carrying information to the police the way the bird carries messages. *Stoolie*, an abbreviated form of the term, is of relatively recent usage.

stooper. A man or woman who makes a small business of collecting winning pari-mutuel tickets that have been discarded, usually inadvertently, by horseplayers at racetracks. Sometimes the tickets are ripped into small pieces by the players and pieced together by the stoopers, who have also been called *ground squirrels*.

stop and smell the roses . . . An old proverb urging busy travelers to enjoy life, to stop and smell the roses along the way.

stop me if you’ve heard this (one). An often apologetic phrase from about 1930, uttered when someone is about to tell a joke or story. Partridge says the phrase is “mock-considerate” and Noël Coward, in a short story entitled “Stop Me If You’ve Heard It,” calls it “that idiotic insincere phrase—as though people ever had the courage to stop anyone however many times they’ve heard it.” But author Ring Lardner (1885–1933), who had the driest wit of any American writer of his time, so disliked jokes that whenever anyone warned him, “Stop me if you’ve heard this one,” he invariably cried “Stop!”

stop one’s ears. See TURN A DEAF EAR.

stop the presses! “One of the most legendary but rarely used phrases in the news business,” the *New York Times* noted (January 6, 2006) in discussing how newspapers throughout the United States reacted to the report that all but one of trapped West Virginia miners were dead, *not* alive as had originally been reported.

store; stoic. *Store* derives from the roofed colonnades called *stoas* that housed the small shops of merchants in the ancient Athenian agora, that same marketplace where Socrates and his followers gathered, where Solon the wise lawgiver made his fortune as a merchant. In this marketplace the philosopher Zeno taught that “what will be will be,” that man must accept his fate calmly in this world. He and his pupils came to be called Stoics because they met in a *stoa*. Thus the Greek word *stoa*, for “a shop,” yielded both the words *store* and *stoic*, this last something many a storekeeper has been forced to be by economic and other calamities over the centuries.

the stories get passed on and the truth gets passed over. A saying noted in Cormac McCarthy’s novel *No Country for Old Men* (2005).

storm door. I had assumed that this term was an Americanism invented in relatively recent times. But lexicographers trace it back to the Dutch *storm deur*, meaning the same, used here in the 17th century, when New York was called New Amsterdam.

stormonter. *Stormonter* is obsolete except in a historical sense and never made the dictionaries, but it tells an amusing story about Benjamin Franklin, who had among his many gifts a genius for coining words. Lord Stormont, the British ambassador in Paris during the Revolution, was the most assiduous spreader of tales about America’s defeats at the hands of Great Britain, his aim of course to color the facts and discourage European nations from supporting the American cause. One time a

French friend came to Franklin with Stormont's story that six battalions of Americans had laid down their arms. The Frenchman wanted to know if this was true. "Oh, no," Franklin replied gravely, "it is not the truth, it is only a Stormont." Within a day his witticism swept Paris and *stormonter* became a new French synonym for lying. Franklin is also responsible for *harmonica*, the musical instrument he invented in a rude form and named from the Italian *armonica*, "harmonious."

Storyville. A famead district in New Orleans where prostitution was made legal by the board of aldermen. It was said to be named in honor of alderman Sidney Story, who sought to isolate prostitutes.

stovaine. The anesthetic stovaine was named in an irregular way for its 20th-century French discoverer, Ernest Fourneau. The anesthetic has *cocaine* in it, accounting for the last syllable and the "Four" of Fourneau's name translates into English as *stove*; hence, *stovaine*.

stove. The first *stoves* were saunas, not kitchen appliances. *Stove* comes to us from the Old English *stofa* "a hot air bath," or sauna, the hot steam baths brought to England from Scandinavia. *Stofa* didn't change in spelling to *stove* until the 15th century and it wasn't until the 16th century that *stove* was used to mean a furnace.

Stradivarius. When the Lady Blunt Stradivarius (1721) was auctioned off at Sotheby's in London for \$200,000, it was the highest price ever paid for a musical instrument. Yet this violin is not considered to be the finest one made by Antonio Stradivari, that honor usually accorded to the Messiah, or the Alard Stradivarius. Amazingly, some 600 of the 1,100 or so violins, violas, and cellos made by Stradivari from 1666 to 1737 still survive today, half of them in the United States—a tribute to the master craftsman's genius. Only the barest essentials are known about the supreme Italian violin maker. Born at Cremona in northern Italy in 1644, he was an apprentice of the distinguished craftsman Niccolò Amati, but he soon developed his own methods, in 1684 opening a shop where his sons Francesco and Omobono worked with him. Stradivari was famous in his own time, his commissions including instruments for England's James II and Spain's Charles III. He died in 1737, aged 93, and to this day his secrets of success have not been discovered.

strafe. *Strafe* means "to attack enemy ground troops or fortifications, etc., by aircraft with machine-gun fire." The word is a joking one that the British coined from German *strafe* (punish) during the early years of World War I. In 1914 German author Alfred Funke had coined the popular catchphrase and salutation *Gott strafe England* (May God punish England). The British borrowed *strafe* and changed its meaning, using it to mean machine-gun fire that punished the Germans.

straight arrow. A decent, upstanding person; after an archetypal upright Indian brave. A variation on the 19th-century term is *straight shooter*.

straight from the horse's mouth. By examining a horse's teeth an expert can make a good estimation of its age; a horse's first permanent teeth, for example, don't appear until it is about two and a half years old. So despite what any crooked horse trader might have wished them to believe, informed horsemen in England stood little chance of being cheated about a horse's age—they had it on good authority, *straight from the horse's mouth*. The expression may have been used as far back as the Napoleonic Wars, according to one source, but there is no evidence to support this theory, and the phrase was first recorded in Great Britain in 1917.

straight from the shoulder. The expression means honestly, frankly, and to the point and derives from a boxing term of the mid 19th century. A punch straight from the shoulder was once made by bringing the fist to the shoulder and sending it forward straight and fast. Such undeceptive blows are quick, effective, and often to the point of the chin.

straight through hell and out the other side. Through the most difficult situation. "He was the best damn trail boss I ever knew. He could take a herd straight through hell and come out on the other side. . . [he'd] walk up to a grizzly and spit in its eye if that come along in the line of work."

strait; straitlaced. Though used several hundred years earlier, *straitlaced* emerged as a popular figure of speech only in the early 17th century when girdles became fashionable. Wrote one arbiter of taste at the time: "No Maid here's handsome thought, unless she can with her short Palms her straight-lac'd body span." This of course required a lot of tugging on the laces of a bodice or corset, but a woman's body did become very *strait* or "tight and narrow" at the waist. Thus the term *straitlaced* derives not from the word "straight" but from the Middle English *strait*, the same word that gives us the tight and narrow geographical *straits*. *Strait*, in turn, comes from the Latin *strictus*, "to tighten, bind tightly," which also gives us *constriction*. The term *straitlaced* early became related to excessive prudishness because a straitlaced person supposedly drew moral bonds as tight as those on a girdle, while an unlaced, loose, woman was thought to be more voluptuous and less repressed.

the Strand. "The business belonged to Thomas Boller of the Strand." On reading a sentence like that, Americans often wonder just what the British mean by "the Strand." The name refers to a well-known London street that connects the area called the City of London to Westminster. Since the street runs along the shore (or strand) of the Thames River, it is called the Strand.

strangle; stranglehold; strangle with my bare hands. *Strangle*, to kill by squeezing the throat to prevent the intake of air—to throttle or choke—is first recorded in the mid-12th century, the word deriving from the Greek *strangalan* meaning the same. A *stranglehold* is an illegal hold in the sport of wrestling, this term dating back to the 1890s, while the phrase I'll strangle him with my bare hands is an angry passionate threat of revenge. Professional wrestler Strangler Lewis was probably the best-known strangler in U.S. history.

straphanger. A term for a subway commuter popular at least since the first U.S. subways were built early in the 20th century and which may even date back to the days of horsedrawn trolleys.

strata; Strata Smith. Geologically *stratum* refers to a horizontal layer of material, such as rock, often one of several parallel layers (strata) on top of one another. In 1815 William Smith (1769–1839) published 15 huge drawings illustrating his finding that strata regularly slant eastward in a slight ascending grade until they end at the Earth's surface. For his discovery he was pensioned off by the British government and earned the sobriquet "Strata Smith."

strawberry. Several theories have been proposed about the origin of *strawberry*, but none is convincing. Some say the straw mulch often used in its cultivation inspired the name, others that the dried berries were once strung on straw for decorations, still others that the long runners of the mother plant (strawlike when dry) gave the fruit its name. The word was used as early as A.D. 100 in England and doesn't derive from any other language. It may be that the *straw* in *strawberry* is a corruption of the word *strew*. Certainly the mother plant strews, or scatters, new plants all over a patch when it propagates itself by sending out runners. There's always been an air of mystery surrounding the strawberry. The early Greeks, in fact, had a taboo against eating them, as they did against any red food, and pregnant women in the Middle Ages avoided them because they believed their children would be born with *strawberry marks* (small, slightly raised birthmarks resembling strawberries) if they did. A *strawberry roan* is a reddish-coated horse flecked with white hair.

strawberry friend. This oldtime rural Americanism describes people who visit from the city when strawberries are in season to get free berries (and other produce) from their rural friends or relatives.

straw boss. A writer discussing hobo lingo in *American Speech* almost half a century ago traced this term to the late-19th-century American farm. "The (real) boss attended to the grain going into the thresher," he explained; "the secondman (or straw boss) watched the straw coming out and hence had little to do." Thus the term *straw boss* has come to mean anyone, especially a foreman, who gives orders but has no real authority to enforce them.

strawfoot. Union Army slang for a raw rural recruit during the Civil War, *strawfoot* may have been coined by the drill sergeants who taught these men to march. According to one story, many such men didn't know their left foot from their right and the instructors tied hay to their left foot and straw to the right, shouting the marching cadence "Hayfoot! Strawfoot!" rather than "Left foot! Right foot!" But, alas, *strawfoot* is more likely a description of recruits who still had straw from the farm in their shoes.

straw man. See MAN OF STRAW.

straw that broke the camel's back; last straw. Charles Dickens probably invented these expressions in *Dombey and Son*, where he wrote: "As the last straw breaks the laden camel's back." But Dickens got the idea from an old English proverb: 'Tis the last feather that breaks the horse's back. Both phrases refer to someone's limit or breaking point. The strongest camel can carry about 1,200 pounds—a straw more might literally break its back.

streak. To run naked in a public place, outdoors or indoors, where a large number of people can see you. The word *streaking* was first recorded in 1973, but the practice of streaking probably began among college students a year or two earlier on campuses in California. In the most famous example of streaking, a nude man streaked across the stage during the televised 1974 Academy Awards ceremony.

stream of consciousness. William James coined the name of this common term in his *Principles of Psychology* (1890), but the literary technique itself appears to date back at least to Laurence Sterne's *Tristram Shandy* (1759–69). The technique, a development of realism, seeks to express the multitude of thoughts and feelings that flow through a character's mind, these ideas and sensations often revealed without regard for logical sequences or syntax. Another name for it is *interior monologue*. The French novelist Édouard Dujardin (1861–1940) was the first to perfect the technique (calling it *interior monologue*) in *Les Lauriers sont coupés* (1888) and James Joyce credited him with pioneering the method, which marked a revolution in the form of the novel and soon was no longer regarded as avant-garde. Others besides Joyce who experimented with stream of consciousness include Arestino, Diderot, Edgar Allan Poe ("The Tell-Tale Heart"), Marcel Proust (*À la recherche du temps perdu*, 1913–27), Virginia Woolf (*Mrs. Dalloway*, 1925), Dorothy Richardson (*Pilgrimage*, 1915–38), and William Faulkner (*The Sound and the Fury*, 1931). Cases have been made for Herman Melville and Henry James as well. But Joyce's name is most associated with the technique because of the masterly 40-odd-page interior monologue of Molly Bloom in his novel *Ulysses* (1922, but written much earlier), which has just one punctuation mark. Earlier Joyce had used the technique in *A Portrait of the Artist as a Young Man* (1916). Today the technique has become pervasive and has been practiced by writers ranging from Ernest Hemingway to Eugene O'Neill. See CENSORSHIP; INTERIOR DESIGN; SOLILOQUY.

street numbers and letters. The numbering and lettering (e.g., Fifth Avenue and 23rd, or Avenue C and 40th) of streets is an American custom probably invented by Major Pierre-Charles L'Enfant when he laid out the plan of Washington, D.C. in 1791. At first condemned by the English as unimaginative, the practice has by now won some acceptance in England.

street taxes. See JUICE LOANS.

streetwalker. The use of this term for "a prostitute who works the streets," is an ancient one—older than the use of *streetwalker* for a pedestrian. It is first recorded by Shakespeare's detractor, dramatist Robert Greene, the same Bohemian who died of a

surfeit of pickled herrings and Rhenish wine. In a tract on “Conny-catching” written in 1592, in which he describes London’s lowlife, Greene wrote of “street walkers . . . in rich garded [attention-getting] gowns.” It wasn’t until almost three decades later that *streetwalkers* was applied to anyone who walks in the street.

the strenuous life. See ANANIAS.

strike. Though workers had certainly refused to work on occasion before 1768, the word *strike* is first recorded in that year, when British seamen threatened to strike (take down) the sails on their ships and cease all work until what they called their grievances were settled. This they did, and a new word entered the language. In reference to a sudden stroke of luck or success, the term *strike* is first recorded during the California gold rush to mean a find of gold, and was often called a lucky strike or a big strike by those who struck it rich.

strikeout. In the American lexicon, *to strike out* means to fail completely; it is one of the most widely used baseball-derived terms. The baseball *strikeout*, a combination of three strikes, has been used in the sport since the 1840s. At first *strike* meant just a missed swing at the ball or a fouled-off ball. There were no called strikes by the umpire until 1863; a strike is called when a ball is pitched within the strike zone (which is the area above home plate between the batter’s knees and his armpits) and the batter doesn’t take a swing at it. See also TWO STRIKES AGAINST YOU.

strike sail. See STRIKE.

strike while the iron is hot. A blacksmith has to wield his hammer while the metal on the anvil is red-hot or he loses his opportunity and must heat the iron all over again. Which is the idea behind this phrase meaning to act at the most propitious moment, an expression that goes back at least to Chaucer, who in the *Canterbury Tales* wrote that while the “Iren is hoot men sholden smyte.”

string along with someone. To accept someone’s decision or advice, to follow someone as a leader, to go along with someone. In 1799 a political observer speaks of “the sycophantic circle that surrounds the President in stringing to his quarters.” *Stringing along* probably comes from the same source as this earlier phrase, which suggests docile pack animals tied together in single file and led by their masters. The phrase isn’t recorded until the 1920s.

string bean. *String beans* is an Americanism for green beans, first recorded in 1759 and so named for the stringlike fibers along the vegetable sutures. When Burpee & Co. seedsmen developed the Beautiful Burpee, “the stringless string bean,” in 1894 the term *string bean* began to take a back seat to *green bean*. It is still heard, however, along with other synonyms like *snap beans* (named for the sound the pods make when broken), *wax beans* (yellow varieties), *kidney beans*, and *haricot*. Napoleon wouldn’t eat string beans, afraid that he would choke on the strings.

stringer. A stringer is a part-time newspaper correspondent, often in an out-of-the-way place. Such reporters used to be paid by the column inch. After pasting together all their contributions for a certain period of time, they’d send their editor their string of clippings. The editor would then measure the length of the string and send the stringer his check.

strings. *Strings* are usually conditions or limitations on any proposal. Therefore, a really generous offer has no strings attached, no tricky condition or fine print to fool the signer.

strip poker. Noticing our entry on POKER, a reader asked about the origins of *strip poker*, a usually coeducational variation on the game in which the losing players in every hand have to remove an article of clothing. I can only add that the *strip* in the term is of obvious derivation and that mention of the delightful game apparently hasn’t been found before 1915, almost a century after *poker* is first recorded. The game’s rules vary. “Beauty is Nature’s brag and must be shown,” wrote Milton.

stripteaser. See ECDYSIAST.

strong-arm. A term used in America for physical violence since about 1850. The words are first recorded as a verb meaning “to use physical force” some 50 years later. *Strong-arm tactics* is a common variant.

strontium 90. This radioactive isotope of the element strontium, found in nuclear fallout, is named for the village of Strontium in Scotland—not because of any fallout in the beautiful country, but because strontium was first discovered there in 1764.

Strulbrug. Another word coined by Jonathan Swift in *Gulliver’s Travels* (1726). The *Strulbrug* therein are people who never die, always remaining mentally and physically useless, hopeless wards of the state. See also BROBDINGNAGIAN; LILLIPUTIAN.

strung-out. From its early use as a term for out-of-tune musical instruments—that is, harps or other stringed instruments with their strings removed or relaxed—*strung-out* came to be applied to a human body weakened and unnerved, a strung-out person being someone, usually a drug user, whose nerves and muscles have lost their natural tension and have no tone. The figurative use is an old one, too, dating back to at least the late 17th century.

stubborn as a mule. See BUILD A FIRE UNDER.

studied felicity. See GREAT MAJORITY.

stuffed as a goose. See FOIE GRAS.

stuffed shirt. It may be that the ladies’ shirtwaists stuffed with tissue paper displayed in many department store windows at the turn of the century suggested this term for a pompous,

pretentious bore who insists on formalities. Though flimsy, the shirtwaists looked imposing and inflated when stuffed with paper. Comparing a man to a lady's shirtwaist would have been an insult in itself, but we only know that the first literary use of the term is by Willa Cather in *O Pioneers!* (1913). Another possibility is that the term simply derived from similar earlier "stuffed" expressions such as *stuffed ballot*, a fraudulent ballot; *stuffed monkey*, a conceited person; and *Stuffed Prophet*, an epithet the *New York Sun* hung on Grover Cleveland when he ran for president in 1892.

stumbling block. William Tyndale apparently coined this expression when he translated Rom. 14:13 into English for his Bible in 1534, the version that fixed the tone and style of the English Bible. In Romans, Paul of Tarsus had written that a good Christian should not put a *skandalon* in his brother's path. Since the *skandalon*, a kind of hunting trap, was unfamiliar to Englishmen of the time, Tyndale changed the word to *stumbling block*, making Paul's phrase "that no man putt a stomblinge blocke . . . in his brother's way." The translator may have invented the term, or it may have been suggested to him by the earlier (1450) phrase to *stumble at a block* (a tree stump), but in any case *stumbling block* quickly became an expression for an obstacle of any kind.

stumped. *To be stumped* for "to be baffled" has its origins in the stumps that American settlers had to pull from the earth after felling trees—some stumps were so big and deep-rooted that they perplexed the pioneers. The expression is first recorded in 1812: "John Bull was a little stumped when he saw [Brother] Jonathan's challenge."

stupid water. A Comanche name for whiskey, because it made people act stupidly. Wrote Lucia St. Clair Robson in *Ride The Wind* (1982): ". . . the men of God [on the reservation] stripped the warriors of their very reason for living, war. They no longer had any way to attain status within their tribe. Whiskey, the 'stupid water' that the People had always scorned, became their solace."

Sturm und Drang. The German phrase, pronounced "stoorm und drang," means storm and stress. First applied to the revolutionary literary movement that was awakening Germany under the inspiration of Goethe and Schiller in the late 18th century, the name was suggested by the play *Wirrwarr, oder, Sturm und Drang* (1776), a romantic drama by Friedrich Maximilian von Klingler. Its adherents, extremely nationalistic, preferred inspiration to reason and were also characterized by opposition to established forms of society. The expression is now often used to mean a time of trouble and stress in the life of a nation or individual.

style. Ernest Hemingway explained the Hemingway style to an interviewer: "In stating as fully as I could how things really were, it was often very difficult and I wrote awkwardly and the awkwardness is what they called my style. All mistakes and awkwardness are easy to see, and they called it style."

style is the man. The great French naturalist author Comte de Buffon (1707–88) did not say this upon his 1753 induction

into the Académie Française. What he said in his *Discourse sur le style* address was "*Le style, c'est l'homme meme*": *Style is the man himself*. Yet "style is the man" is the way his observation is usually heard in English today.

stymie. *Stymie*, meaning to block or prevent, first recorded in 1902, had been a golfing term meaning to block the hole on the green with your ball (thus stopping an opponent from holding his ball) since at least the mid 19th century. The golfing term, in turn, may derive from the Scottish expression *not to see a styme*, "not to see at all," recorded in the 14th century, or the Dutch *stuit mij*, "it stops."

sub rosa. According to legend, the Greek god of silence, Harpocrates, stumbled upon Venus while she was making love and Cupid, the goddess of love's son, bribed him to keep quiet about the affair by giving him the first rose ever created. This story made the rose the emblem of silence and since the fifth century B.C. a rose carved on the ceilings of dining and drawing rooms where European diplomats gathered enjoined all present to observe secrecy about any matter discussed *sub rosa*, or "under the rose." A similar phrase used at such gatherings was *sub vino sub rosa est*, "What is said under the influence of wine is secret," a reminder that things revealed by tongues made loose with wine weren't to be repeated beyond these walls. The rose was also carved over the Roman Catholic confessional as a symbol of silence and the phrase *sub rosa*, became well known in German as *unter der Rose*, in French as *sous la rose*, and in English as *under the rose* as a term for strict confidence, complete secrecy, absolute privacy. Incidentally, the ancient legend of Harpocrates was inspired by what the Greeks thought was a picture of the Egyptian god of silence, Horus, seated under a rose with a finger at his lips. Actually, the rose in the picture was a lotus and the infant god Horus was merely sucking his finger.

suburb. *Suburb* derives from the Latin *sub*, near, and *urb*, city. It usually means a residential area outside a city. Weekley tells us that "'suburban,' in a disparaging sense, is due to Byron." Weekley is referring here to the great British poet's use of *suburbanite* in his poem *Beppo* (1818), "his first work in the ironic, colloquial style which was to lead him to *Don Juan*." See EXURB.

suburbio. A good example of an English word borrowed for another language but given a completely opposite meaning. A suburbio (from *suburb*) in Spain is a slum quarter or shantytown in a city.

succotash. The first succotash was made by American Indians, who cooked corn and beans together in bear grease. Colonists used the word in the early 18th century, if not before then, and it apparently derives from the Narraganset Indian *misickquatash*, meaning "an ear of corn," or the Narraganset *manusquashedash*, "beans."

succubus. See NIGHTMARE.

suck. To be bad, as in "That movie sucked." This slang use of the word dates back to the early 1940s and is widely and

often heard today, frequently replacing stink and similar words.

suck eggs. See TEACH YOUR GRANDMOTHER TO SUCK EGGS.

sucker. The origin of the word *sucker*, for “a dupe or easily tricked person,” is a mystery. One theory holds that the slang word comes from the name of one of the many American freshwater fishes called *suckers* because they have lips that suggest that they feed by suction. Several of these fish are easily caught and might have suggested an easily hooked or hoodwinked person. But the word, first recorded in 1831, could just as well derive from *sucker* in the sense of a not-yet-weaned animal, with the *sucker's* naïveté reminiscent of the innocence of a child still sucking at its mother's breast.

sucks. See COOL.

suck the hind tit. The runt of a pig litter feeding on the last teat of a sow suggested this old rural term meaning “to get the worst of something, have the worst position.”

Sudan. Sudan's name translates as “land of the blacks,” in reference to the dark-skinned people who live there.

sudden death. *Sudden death* is sometimes used today to mean a fight to the finish (but not death) of any kind. It is mainly confined to football, where it indicates an overtime period in which a tied game is won by the team that scores first. There are sudden death periods in hockey and soccer, too, but in basketball, the sport where the practice probably originated, overtime periods of a certain time duration are now played instead.

suede. *Gants de Suède*, or “gloves from Sweden,” is what the French called the rough-surfaced gloves made in Sweden that were popular in Paris during the 19th century. The English abbreviated the name to *suede* and used it to describe similar leather made anywhere.

Suffrage State. See EQUALITY STATE.

sugar. The sweetener sugar, made mainly from sugarcane and beet sugar, takes its name from Persian *sukkar* for the same. First recorded as *zucker* in 1299, it has since the 1850s meant “money” and can be a welcome or unwelcome form of address from a man to a woman. *Sugar coat* means “to make something more palatable or acceptable.” “Did you know that *sugar* and *sumac* are the only two words in English that begin with *su* and are pronounced *shu*?” historian B. H. Liddell Hart said to George Bernard Shaw. “Sure,” replied Shaw.

Sugar Bowl. A college football end-of-season game held in New Orleans since 1936 and so named because the annual trophy is an antique sugar bowl. Also a nickname for Louisiana, famous for its output of sugar.

sugar daddy. A wealthy man, usually middle-aged or older, who supports and spends money freely on a young woman in the hope of sexual favors in return. The expression is American in origin, first recorded about 1915. Also called a “daddy,” which can mean a prostitute's lover, or a sweetheart, as well.

sugared. See AIR BALL.

Sugar Loaf. The name of various hills and mountains in the U. S. The term derives from the cone-shaped loaves of sugar people used in olden times. A ski resort in Maine also shares the name, as does a mountain in Rio de Janeiro. *Sugar Hill* is a wealthy black neighborhood in New York City's Harlem.

suicide; suicide bomber; suicide squad; suicide charge; suicide mission; bomber. The word *suicide* derives from Latin *sui*, “of oneself,” plus *cide*, “killer,” but *suicide bomber* refers to a killer of far more than oneself. Though *suicide bomber* refers to terrorists like those who destroyed the World Trade Center on September 11, 2001, and killed thousands of civilians, the name was first recorded in 1981 when it was used to describe a terrorist who drove a car bomb into the Iraqi Embassy in Lebanon. Before this, in Vietnam, groups of Vietcong who raided behind American lines with little or no chance of getting back were called suicide squads. In World War II Japanese soldiers were sent on suicide charges, and Japanese kamikaze pilots were described as going on suicide missions. In World War I *suicide club* was a “humorous term for various specialist formations such as bombers, machine gunners, etc., whose work was exceptionally dangerous,” according to the *O.E.D. Bomber* in the *suicide club* quote refers to a soldier who throws bombs; as the example from the *O.E.D.* explains: “The bombers . . . seizing one of these rocket-like bombs from their belts . . . hurl them high above the parapet [of the trench].” *Bomber* in the sense of a terrorist using bombs to kill was first recorded in 1927, *bomb* being from Greek *bombos*, of imitative origin. See WHAT CATO DID . . . ; TERRORIST.

suicide by cop. A recent phenomenon in which one commits some violent act or acts, expecting and hoping that a policeman or other law enforcement officer will kill one in responding to the violence.

suicide gun. Cowboys early in this century called the Colt .32 (and similar guns) a suicide gun because it lacked the power to stop an assailant dead in his tracks and thus often led to the death of the man who fired it.

suicide pact; the Constitution is not a suicide pact. The phrase *suicide pact*, an agreement between two or more people to commit suicide together, dates back to about 1910. The second phrase is much younger. According to Linda Greenhouse, writing in the *New York Times* (9/22/02): “Supreme Court cognoscenti usually attribute the phrase [*the Constitution is not a suicide pact*] to Justice Robert H. Jackson's dissent in a 1949 free-speech case, *Terminiello v. Chicago*. The court's majority opinion, by Justice William O. Douglas, had overturned the disorderly conduct conviction of a right-wing priest whose anti-Semitic, pro-Nazi rantings at a rally had incited a riot.

Chicago's breach-of-the-peace ordinance violated the First Amendment, the court held. Where his colleagues saw free speech, Jackson, after serving as a judge at the Nuremberg war crimes trial, saw the dangers of the mob. He countered the four-page ruling with a 24-page dissent ending: "The choice is not between order and liberty. It is between liberty with order and anarchy without either. There is danger that, if the court does not temper its doctrinaire logic with a little practical wisdom, it will convert the constitutional Bill of Rights into a suicide pact."

Suicide Six. A nickname for highway route 6 on Cape Cod. As novelist William Martin put it in 1991: "Nervous damn stretch—two lanes runnin' straight and flat through pine woods for thirteen miles, speed limit fifty and damn-you-straight-to-hell if you were an old man who didn't go over forty. Somebody always itchin' to pass. Tourists comin' the other way. No wonder they called it Suicide Six."

sui generis. Latin for "unique, the only example of its kind."

suits. An often derogatory term, first used in Hollywood for studio executives, that is now used to describe all business executives. It derives of course from the wearing of a suit, skirt, tie, etc., especially at work.

suits you to a "T." Most dictionaries attribute the expression to the accuracy of the draftsman's T-square, but this is impossible, according to the *O.E.D.*—for the phrase was around many years before the T-square got its name. The expression has been used to indicate exactness or perfection since at least the early 17th century and is probably an abbreviation of the older expression, *to a tittle*. *Tittle* or *titil* was the English name for small strokes or points made in writing the letters of the alphabet, a corruption of the word seen today in the Spanish *tilde*. Thus *to a tittle* meant to a dot, precisely, and was used this way more than a century before someone shortened it to *to a T*.

sulky. The sulky carriage takes its name from sulky people. The light, two-wheeled carriage, which is principally used in harness racing today, seats only one person. Those who drove them in the 19th century were presumed to be aloof, and the carriage was named for these "sulky" people who preferred to be alone. The first quote using the word (1756) tells of "a formal female seated in a Sulky, foolishly pleased with having the whole vehicle to herself." The word *sulky* itself may come from the Old Frisian word *sultig* meaning the same, and *sulk* is a back-formation of sulky.

Sultan of Swat. Baseball's Babe Ruth, whose name itself is of course a synonym for a great slugger, was called the *Sultan of Swat*—but not only because he swatted the ball. There was a real Sultan of Swat (a small country now part of Pakistan) whose name was well known thanks to a poem by Edward Lear: "Who, or why, or which, or what/ Is the Akhoond [Sultan] of Swat?" The alliterative name probably appealed to some sportswriter in the early 1920s as a natural for the "Bambino"

(which Ruth was dubbed when he joined the Boston Red Sox as a pitcher in 1914 when only 19).

Sumerian words in English. See *HAMAL*.

summer soldier and sunshine patriot; times that try men's souls. Thomas Paine's famous words first appeared in *The American Crisis*, December 23, 1776: "These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that stands it now, deserves the love and thanks of man and woman." Paine was writing of men who supported the Revolution only when things were going well, some of whom served short summer enlistments when soldiering was comfortable. The great sloganeer also coined the expressions *the rights of man*, *the government is best which governs least*, *the age of reason*, and many other stirring phrases. His revolutionary book *Common Sense* is said to have been read on average by one in seven Americans at the time. See *UNITED STATES OF AMERICA*.

Sumpter. A frequent pronunciation and misspelling of *Sumter*, as in Fort Sumter, the opening battle of the Civil War. At the start of the war, many newspapers, including the *New York Times*, spelled it this way.

sunbeam. A ray or rays of sunlight. The term would have been *column of light*, but the ninth-century translator of the Venerable Bede's *Historia Ecclesiastica Gentis Anglorum* (*The Ecclesiastical History of the English People*), written in Latin in 731, could not translate the Latin phrase *columna lucis*, "column of light," having no word for *column* in his Old English vocabulary. Instead, he used *sunne* for *lucis* and *beam*, which meant "a building post," for *columna*, making the new word *sunnebeam*, this eventually becoming *sunbeam*.

sundae. Wisconsin ice-cream-parlor owner George Giffy probably first called this concoction, which he did not invent, a *Sunday* back in the early 1890s because he regarded it as a special dish only to be sold on Sundays. No one knows exactly why or when *Sunday* was changed to *sundae*.

Sunday. The first day of the week, the *sunnendaeg*, "Sunday," of the Anglo-Saxons, was so called because the day was dedicated to the sun in ancient times.

Sunday best; Sunday-go-to-meeting clothes; Sunday face. *Sunday best* refers to a person's best clothes, those reserved for going to church. The term is still common over a century after it was first recorded in 1849. A humorous version of the phrase is *Sunday-go-to-meeting clothes*, first recorded in 1831. *Sunday face* means "a sanctimonious expression," the term, if not the expression, all but obsolete.

Sunday driver. A poor driver, one who drives only on Sundays and often stops or slows down to "see the sights." The term was common before the 1920s and continues to be used today.

Sunday punch. A fighter's best punch, often a knockout blow. The expression is patterned on SUNDAY BEST and was first recorded in 1931. In baseball a Sunday punch is a pitcher's strong, overpowering fastball.

Sunday's child. See MONDAY'S CHILD.

The sun don't shine on the same dog's ass each day. A saying, probably from the Midwest, meaning "we all have our day in the sun, don't assume the sun will always shine on you and not your opponent."

sunflower. Sunflowers are so named because they resemble the full sun, not because they follow the direction of the sun during the day. *Helianthus* actually turns in every direction whether the sun is out or not. The word sunflower was coined toward the middle of the 17th century.

sunni. A rare word for a rare little antelope that is only about a foot high and weighs about 10 pounds. *Suni* is the only word from the Chaga language of Tanzania that has come into English. Also called a bushbuck, the little antelope is quite a pest to Tanzanian farmers. The animals can be viewed in several U. S. zoos.

The sun never sets on the British Empire. Contrary to popular notion, this saying, which used to describe the worldwide empire of the British, originated with the Spanish. Long before the first British use of the term, in 1829 by Christopher North (a pen name of John Wilson) in *Blackwood's Magazine*, Giovanni Guarini, in *Il Pastor Fido* (1590) celebrated Spain's Philip II as "that proud monarch to whom when it grows dark [elsewhere], the sun never sets." It was also used by the English explorer John Smith in 1631, in the form of "the sun never sets in the Spanish dominions."

Sunni. A main branch of Islam believing that religious leaders don't have to be blood relatives of Muhammad. The Shiites (qv), on the other hand, believe just the opposite and constitute more than 10 percent of the Muslim population.

sunshine patriot. See SUMMER SOLDIER AND SUNSHINE PATRIOT.

Sunshine City. Writes Ring Lardner in his classic story "The Golden Honeymoon": "St. Pete is what folks call the town, though they also call it the *Sunshine City*, as they claim there's no other place in the country where there's fewer days where Old Sol don't smile down on Mother Earth, and one of the newspapers gives away all their copies free every day when the sun don't shine. They claim to only give them away some sixty-odd times in the last eleven years."

Sunshine State. This is Florida's official nickname (at least it is on state license plates), but its nicknames the Everglade State and the Peninsula State are a century older. New Mexico shares the nickname the Sunshine State with Florida and adopted it in 1926. New Mexico has also been called the Cac-

tus State, the Land of the Cactus, the Spanish State, the Land of the Montezumas, the Land of the Delight Makers, the Land of Opportunity, the Land of Enchantment, and the Land of Heart's Desire.

supercalifragilisticexpialidocious. This word, from a song in the film *Mary Poppins*, may be the longest (34 letters) commonly used word of all time. It means the greatest, the best of all. There are many far, far longer words, but no longer word has been spoken or sung by so many people. In fact, the only rival that comes even close is *antidisestablishmentarianism*, which many people think (falsely) is the longest English word.

supercentenarian. The recently coined name given to any person older than 110, of which there are 84 known in the world today (January 31, 2007). According to the Gerontology Research Group, the oldest living person is 114 years, 63 days old.

supercilious. See Highbrow.

superman. George Bernard Shaw, not Friedrich Nietzsche, coined *superman*, never expecting a movie to be made of him. The German philosopher's word for a dominant man above good or evil, introduced in *Thus Spake Zarathustra* (1883-91), was *Übermensch*, "overman" or "beyondman." Shaw didn't like the sound of Nietzsche's word and so translated its German prefix *über* into the Latin *super-* then added to it the English *man*, translated from the German *Mensch*. Shaw used the new word for the first time in his play *Man and Superman* (1903). The term was widely popularized by an American comic book character of the same name who made his debut in the 1930s. See KAL-EL.

supermarket. The world's first supermarket was the A & P, the Great Atlantic and Pacific Tea Co., which was founded by tea merchant George Huntington Hartford in 1859 in New York City and had stores across the country by 1917. But the word *supermarket* didn't come into the language until the early 1920s in California. It was probably first applied to one of the stores in the Piggly-Wiggly self-service chain.

supermodel; model; superstar. The term *supermodel* for an internationally famous model wasn't coined in 1977 to describe Margaux Hemingway, as several sources report. According to word hunter Barry Popik, the word first described Naomi Sims in a 1972 number of *Vogue* magazine. *Model*, in its present sense of one who models clothes (not an artist's model), dates back to at least 1904. Popik has also traced the term *superstar* to the sports world, not motion pictures, claiming it was first used by hockey commentator Stan Fischler in the mid-1960s. See STAR.

Supreme Example of Allied Confusion. This World War II American and British term, originating with American soldiers and sailors, was a sarcastic play on the initials SEAC, which stood for the South East Asia Command.

sure. Ultimately from Latin *securus*, “secure,” and first recorded about 1300. See SUGAR.

sure as eggs is eggs. This 17th-century expression, for “a certainty,” almost certainly has no connection with eggs. *Eggs* here is probably a corruption of *X* in a mathematical formula, the expression originally being *as sure as X is X*.

sure as God made little green apples. Though a very popular song includes this line in its lyrics, the phrase is an Americanism dating back to at least 1909, when it first appeared in print. It means, of course, something positive, a sure thing.

sure as shootin’. An Americanism meaning “for certain” that is first recorded in the mid-19th century, possibly as a euphemism for *sure as shit*.

surfing; surfboarding. *Surfing* is a recent term for using a television remote control to switch from channel to channel to see what is playing or to escape relentless unimaginative commercials. The term is apparently based on surfing with a *surfboard*, a word that dates back to about 1826.

surly. In medieval times a man who conducted himself admirably, like a knight, was called *sirly*, that is, “like a sir,” even if he wasn’t strictly speaking a *sir*, a title reserved for knights and baronets. The spelling changed to “surly” over the years and the meaning of *surly* changed from “knightly” to “arrogant” and finally “rude” as knighthood and its emulators faded out of flower and fashion.

surname. A family name (from the prefix *sur*, “over, above” plus name) as distinguished from a given, first, or Christian (to Christians) name. The term dates back to the 16th century in England. The English seem to have been the first to use surnames as given names, two of the best-known examples being *Rudyard* Kipling and *Aldous* Huxley.

surrey. The two-seated, four-wheeled carriage, still well-known in America from the popular old song “The Surrey with the Fringe on Top,” takes its name from the county of Surrey in England, where it first was made in Victorian days.

surround. *Surround* derives not from *round*, but from the Latin *unda*, “a wave.” *Unda* yielded the Latin *undare*, “to move in waves,” which produced *superundare*, “to overflow.” *Superundare* yielded the Medieval French *suronder*, “to overflow,” a word with which English speakers associated the English word *round* and gave it its present meaning.

survival of the fittest. The term was coined not by Charles Darwin but by British philosopher Herbert Spencer. “This survival of the fittest which I have here sought to express in mechanical terms, is that which Mr. Darwin has called ‘natural selection, or the preservation of favored races in the struggle for life.’” Spencer wrote in his *Principles of Biology* (1864–67). Darwin approved of Spencer’s coinage in his epochal *On the Origin of the Species by Means of Natural Selection* (1859), which sold

out on the day it was printed. Spencer was the founder of evolutionary philosophy, his ideal being the unification of all knowledge on the basis of the single all-providing principle of evolution.

sushi. Japanese sushi bars have found great popularity in America within the last 30 years, and the word *sushi* has become familiar to many Americans. *Sushi* means “it is sour,” referring to the vinegar and other ingredients used in making it. It is often composed of cold rice molded into small pieces and topped with raw seafood (*sashimi*). In sushi bars diners enjoy raw fish like *maguro* (tuna); jellyfish cut into strips like spaghetti; and a kind of shrimp (*ebi*) that is eaten whole still alive and wiggling. Of the *ebi* the Japanese particularly relish a squirming delicacy called *ebi odori*, which is made by shelling, gutting, and splitting a shrimp down the middle—the creature’s nerves are still functioning when it is pressed into a small ball of rice that doesn’t stop trembling until it is popped into the mouth.

Susie stroke. The backstroke in swimming. The stroke is named after Susie O’Neill, the popular Australian swimmer who perfected and help popularize it. See TRUGEN STROKE; AUSTRALIAN CRAWL.

suttee. *Suttee* is the old Hindu custom of burning the widow on the funeral pyre of her husband, a custom also found in other cultures around the world. The word *suttee* derives from the Sanskrit *sati*, “a virtuous wife.” The practice was practically obligatory by custom for 2,000 years but was outlawed in British India in 1829. Its purpose was purportedly to help the souls of both husband and wife in the next world, but its use is not supported by the Vedic texts that its adherents cited to condone the practice.

Svengali. *Svengali*, a common word unaccountably omitted from many dictionaries, means someone who controls other people and forces them to do as he wishes. The word comes from the assumed name of a Hungarian musician in George Louis Du Maurier’s *Trilby* (1894) who hypnotizes the heroine, gaining complete control over her. See TRILBY HAT.

swab. Some 300 years ago a *swab* meant a merchant seaman, probably deriving from the Dutch *swabbe*, “mop,” in reference to sailors swabbing or mopping the decks. Before that, as far back as 1592, sailors who cleaned the decks were called *swabbers*. *Swabbie*, related to both these terms, came into use in the late 19th century.

Swahili. Swahili is not spoken by more Africans than any other language, as is widely believed. This record is held by Hausa, spoken in Nigeria and other parts of West Africa, with some 25 million speakers in all, many of its words borrowed from Arabic. But Swahili, more correctly called *Kiswahili*, with more than 10 million speakers, is the most important language of East Africa, being the official language of Kenya and Tanzania, while spoken fluently in many other countries as a second language. Basically its vocabulary is Bantu but there are many Arabic borrowings. *Swahili* itself derives from

an Arabic word meaning coastal, the language having developed in the seventh century among Arabic-speaking settlers of the African coast.

swallow. See ONE SWALLOW DOES NOT A SUMMER MAKE.

swallow the anchor. Some old salt coined this expression meaning “to retire from the sea,” but it is now used for retirement in general. The phrase is thought to have originated among British liner officers.

Swamp Fox. General Francis Marion (ca. 1732–95), one of America’s first war heroes, hid with his men in the South Carolina swamps whenever he encountered formidable British forces during the American Revolution. There he continued practicing the guerrilla warfare for which he became famous and earned the name *Swamp Fox* history remembers him by.

Swanee River. The first line in Stephen Foster’s famous song “The Old Folks at Home” should go “Way down upon the Suwannee River,” for there is no Swanee River. The American composer first considered the Pedee and Zazoo Rivers, but settled on the Suwannee for his song after consulting an atlas. Needing a two-syllable name, he changed *Suwanee* to *Swanee*. Had he seen the Suwannee, he might not have immortalized it. Running through swamps for most of its course in Georgia and Florida, the Suwannee’s water is coffee black. Originally it was called the San Juan, which was corrupted into Suwannee by constant mispronunciation.

the Swan of Usk. A perfectionist poet, Virgil was always diffident about his own poetic powers. When he died in 19 B.C., he left instructions that all 12 books of his *Aeneid* be burned because the manuscript wasn’t polished enough. The work was saved when the Roman emperor Augustus ordered that it be published despite Virgil’s last wish. Later the *Aeneid* became so venerated that it was used to foretell the future by opening a volume at random to a page, that page supposedly predicting what was to come.

swan song; Swan of Avon; Swan of Meander, etc. The swan makes no sound other than a hiss when it is angry, but the ancient Greeks thought that the mute bird broke its lifelong silence with one last melodious song just before it died. This *swan song*, according to Socrates, was a happy one, for the dying bird, sacred to Apollo, knew that it would soon be joining its master. The superstition, embraced by poets through the ages, led to the use of swan song to mean a person’s last, eloquent words or performance. Shakespeare was called the Swan of Avon; Homer was called the Swan of Meander, and Virgil the Mantuan Swan because Apollo, the god of poetry and song, was fabled to have been changed into a swan and the souls of all poets were at one time thought to pass into the bodies of swans after death. Still other “swans” of literature include: the Swan of Padua, Francesco Algarotti; the Swan of the Thames, John Taylor; the Swan of Usk, Henry Vaughn; and the Swan of Lichfield, Anna Vaughan. See BARDS.

Swartwout. Samuel Swartwout (1783–1856), collector of the port of New York in Andrew Jackson’s administration, stole more than \$1 million of public funds and fled to England. Thus *Swartwout* came to mean an embezzler and *to Swartwout* to embezzle or abscond.

swashbuckler. Today’s swashbucklers are action-packed, romantic films or novels featuring much sword-play. The word, in its oldest sense, means a swaggering show-off and was used this way in Elizabethan times. A buckler was a small shield used to catch the sword blows of an opponent and to swash meant to dash against. But swashbucklers weren’t always good swordsmen and often ran when the going got tough. See PIRATES; WALK THE PLANK.

swear like a trooper. The theatrical profession has been chastised for its vigorous swearing in times past, but this phrase *wasn’t* originally *swear like a trouper*. It dates back almost two centuries, to a time when British cavalymen were noted for their profanity. English soldiers, or troopers, had in fact been famous for their blasphemy since long before Shakespeare’s soldier, the fourth of his seven ages of man, “Full of strange oaths and bearded like the bard.”

sweaters. The first garments called sweaters were heavy blankets fashioned to fit around a racehorse’s body that trainers in the early 19th century used to induce profuse sweating during a workout on the track. The word is first recorded in this sense in 1828 and it was another 30 years before *sweater* was used to mean flannel underclothing that athletes wore when trying to work off weight. Finally, in 1882, the word *sweater* was applied to a woolen vest or jersey worn in rowing or other athletic activities, the direct ancestor of the sweater we know today.

sweatshop. *Sweatshop*, for “clothing factories where people work long hours for little pay,” is first recorded in 1892 in America, but the seed of the expression can be found in Henry Mayhew’s *London Labour and the London Poor* (1851–61): “I have many a time heard both husband and wife . . . who were sweating for a gorgeous clothes’ emporium, say that they had not time to clean.”

Swede. *Swede*, or *dumb Swede*, is American slang for a dope or a blunderer, a stupid person. Swedish-Americans have not fared well in the American-English language, also being called by such endearing terms as *square heads*, *box-heads*, and SCANDAHOOVIANS. Notre Dame football coach Knute Rockne, born in Norway, famously, or infamously, said of Swedes: “What’s dumber than a dumb Irishman? A smart Swede.” See RUTABAGA.

Sweden. Sweden is named for the Suiones, a native tribe that became dominant in the country by the sixth century A.D.

Swedish meatballs. Thin meatballs or patties that are made of chopped meat, bread, onions, milk, and seasoning. According to one source, they are said to be a cheap but tasty dish invented by Swedish immigrants to the United States.

sweepstakes. *Sweepstake* is recorded as the name of a ship a century before its first mention as a gambling term in 1593, but no one has been able to connect the ship with the word in any way (or even explain the name of the ship!). *Sweepstakes* originally meant “winner take all,” as if the winner *swept* all the *stakes* into his pocket after winning a game or race, but later a number of winners in sweepstakes, such as the Irish Sweepstakes have had to divide the stakes among them.

Sweet Adeline. The “Sweet Adeline” in the song of the same name was originally “Sweet Rosalie.” Songwriters Richard Gerard and Henry Armstrong wrote “You’re the Flower of My Heart, Sweet Rosalie” in 1903, tried to sell it, and couldn’t. When they decided to name the song’s heroine in honor of popular prima donna Adelina Patti and shortened the title to “Sweet Adeline,” it sold and eventually became the barbershop quartet hit of all time.

the sweet blood. A recent term for diabetes, which is also called *getting the sugar*.

sweet bubbly. The strawberry shrub, *Calycanthus florindus*. So called, according to plantsman M. W. Morley, because of its blossoms’ supposed resemblance to female breasts.

the sweet death. Dating back to the 19th century, this expression refers to death while having sexual intercourse. The first person recorded to die the sweet death is Attila the Hun. Attila, said to be a dwarf, died in the arms of a Brunhildean blonde.

sweeten the kitty. In the game of faro the “tiger” was the bank of the house, possibly because the tiger was once used on signs marking the entrance to Chinese gambling houses. Gamblers called the tiger a kitty, and it also became the name for the “pot” in poker and other card games. By the late 19th century *sweeten* or *fatten the kitty* had become a common expression for adding chips to the pot in a poker game or for increasing the payment in any business deal.

sweetest Shakespeare. From a poem by John Milton celebrating Shakespeare. The lines go: “Or sweetest Shakespeare, Fancy’s child, / Warbling his native wood-notes wild.” See BARD.

sweet Fanny Adams. Fanny Adams was murdered and mutilated in 1812, her body cut into pieces and thrown into the River Wey at Alton in Hampshire. Her murderer, one Fred Baker, was publicly hanged in Winchester. Young Fanny Adams’s name, given wide currency, was adopted by sailors to indicate a particularly distasteful meal, since Fanny Adams had been disposed of in a kettle. In fact, when kettles came into use in the British navy they were dubbed *Fannys* as were tins or cans of meat. There is no doubt that Fanny Adams is the basis for the military expression *sweet Fanny Adams*, meaning something worthless or nothing at all.

sweetheart contract. Sweetheart contracts are contracts made with favored employers by labor unions in return for

similar favors. This term first came into use in about 1900, when it was applied to favoritism by public officials in awarding contracts without open bidding, those who received the contracts making kickbacks and supporting the political machine.

sweetness and light. Jonathan Swift invented this perennial phrase in his preface to *The Battle of the Books* (1697). Swift took the figure from the beehive when comparing the merits of the bee (the ancients) with the spider (the moderns): “The difference is that instead of dirt and poison, we have chosen to fill our hives with honey and wax, thus furnishing mankind with the two noblest things, which are sweetness and light.” Later, Matthew Arnold, in *Culture and Anarchy* (1869), regarded these as the basic contribution of the artist and the basis of culture itself: “He who works for sweetness and light united, works to make reason and the will of God prevail.”

sweet talk; sweet mouth. Sweet talk is smooth, unctuous flattery designed to win over a person. There is no proof of it, but this southern Americanism possibly comes from Krio, an English-based Creole of Sierra Leone, specifically from the expression *swit mot*, sweet mouth, for “flattery.” To *sweet mouth* someone is the opposite of to *bad-mouth* him.

sweet thunder. A long home run, the sound of it off the bat. A *sweet spot* is a spot on the bat that when the ball hits it results in a home run.

sweet william. The English named this flower sweet william after William, duke of Cumberland, who in 1746 defeated the Scots at the Battle of Culloden. The Scots of course feel quite different about the man and call the same flower the stinky billy.

Swiftian. Merciless, bitter, biting satire is called Swiftian after Johathan Swift (1667–1745), British author of *Gulliver’s Travels* (1726) and many other trenchant satires.

swim fins. Benjamin Franklin was America’s first great swimmer and he even taught the sport in his early years. It was then that he invented and named swim fins, not the least of his myriad inventions, considering the fun these flippers have brought to millions.

swim in the same water we all do. Suffer the same conditions as everybody. Heard in the movie *Chinatown* (1974): “He has to swim in the same water we all do.”

swindle. *Swindler*, deriving from the German *Schwindler*, “a giddy person,” first meant a merchant who took “dizzy risks” that often led to the loss of money. *Swindler* soon came to mean “someone who made money disappear,” hence a cheat.

swish! Though others have used it since, the expression *swish!* for a basketball shot that doesn’t touch the rim of the basket was first used by announcer Marty Glickman at Madison Square Garden in the 1930s. It became his trademark.

Swiss chard. Chard is a variety of beet that is cultivated for its leaves and stalks. It apparently takes its name from the French *chardon*, “thistle,” a word closely related to the Latin word for thistle. *Swiss chard* is the most famous variety.

switchel. *Switchel* is old sailor’s slang for a very thirst-quenching drink of molasses and water seasoned with vinegar and ginger. However, the word has been used in contexts referring to alcoholic drinks as in Jeremiah N. Reynold’s 1835 account of a whale hunt for Mocha Dick, the prototype of Herman Melville’s *Moby-Dick*. Therefore, *switchel* almost surely was commonly seasoned with rum, as several writers suggest. Unfortunately, the origin of the word, first recorded in a 1700 poem by Philip Freneau, is unknown, but there is a spiritless recipe: Mix together one gallon water, two cups sugar, one cup molasses, one cup vinegar, one teaspoon ginger, and “hang in the well to cool.” Add what you want to make it spiritous.

switch-hitter. There have been switch-hitters (hitters who can bat left-handed or right-handed) in professional baseball since at least 1870 when Robert V. Ferguson of the Brooklyn Atlantics batted this way. But the term switch-hitter may not have been coined until the 1920s. The word is now used generally to mean a versatile person and is also slang for a bisexual person.

swive. *Swive* or *swyve*, related to *swerve* and used by Chaucer and many English writers, was an early synonym for sexual congress. There was no shame attached to the expression; in fact, a 17th-century Scottish translation of the Book of Genesis, with all its “begots,” was called the *Buke of Swiving*. The *O.E.D.* tells us of an old ballad about Richard of Alemaine, a legendary king of Germany who “spend al is treasure opon swyving.”

swoosh. During the 1970s I heard this term used regularly by a sports announcer to describe someone scoring a goal by shooting the ball cleanly through the net, without touching the rim. But it is mostly used today to describe the lightning-like flash on Nike running shoes and basketball shoes, among other Nike products.

sword of Damocles. “Uneasy lies the head that wears a crown.” Both Cicero and Horace tell the story of the flatterer Damocles, a fifth-century court follower of Dionysius I (405–367 B.C.), the Elder of Syracuse. Damocles annoyed Dionysius with his constant references to the ruler’s great power and consequent happiness. Deciding to teach the sycophant the real perils of power, he invited Damocles to a magnificent banquet, surrounding him with luxuries that only a king could afford. Damocles enjoyed the feast until he happened to glance up and see a sharp sword suspended by a single hair pointing directly at his head, after which he lay there cowering, afraid to eat, speak, or move. The lesson was that there are always threats of danger, fears, and worries that prevent the powerful from fully enjoying their power, and the expression *sword of Damocles* has come to symbolize these fears. The phrase also gives us our expression *to hang by a thin thread*, to be subject to imminent danger.

sybarite. One ancient Sybarite, legend says, complained to his host that he could not sleep at night because there was a rose petal under his body. Inhabitants of the Greek colony of Sybaris on the Gulf of Tarantum in southern Italy, the Sybarites were noted among the Greeks for their love of luxury and sensuousness, and to some extent for their effeminacy and wantonness, all qualities associated with the word *sybarite* today. The fertile land of Sybaris, founded in the sixth century B.C., made luxurious living possible, but too many pleasures weakened the people. The neighboring Crotons, assisting the Troezenians, whom the Greeks had earlier ejected from the city, destroyed Sybaris in 510 B.C., diverting the river Crathis to cover its ruins. It is said that the Sybarites had trained their horses to dance to pipes and that Crotons played pipes as they marched upon them, creating such disorder among their rivals that they easily won the battle. The city of Thurii was later built on or near the site of Sybaris.

sycophant. The old story, incapable of proof but widely accepted, is that this word for an APPLE-POLISHER originated in ancient Greece from the Greek *sukophantes* (*sukon*, “fig,” and *phainen*, “to show”), which meant an informer on those who exported figs. At one time it was supposedly against the law to export figs from Athens, and *sukophantes*, or *sycophants*, often turned in violators of the unpopular law for their own personal gain, these toadies being widely despised.

syllabus. *Syllabus* began life as a printer’s error in a 15th-century edition of Cicero’s *Epistles to the Atticans*. In this work Cicero had written *indices . . . quos vos Graeci . . . sittubas appellatis*, meaning “indexes, which were called *sittubas* by the Greeks.” The printer misprinted *syllabos* for *sittubas* and *syllabos*, later slightly changed to *syllabus* (instead of *sittubas*), became a synonym for index. Its meaning of index or table of contents was later expanded to mean “an outline or other brief statement of a discourse, the contents of a curriculum, etc.”

synagogue. The Hebrew *keneseth*, “assembly,” from *kanas*, “to collect or assemble,” was translated into Greek in ancient times as *synagoge*, which eventually became the Latin *synagoga*. The Latin yielded the English *synagogue* for “a Jewish house of worship.”

synonym. See POECILONYM.

syphilis. “MRS. GRUNDY’S disease” is on the increase in America and throughout the world. Over the ages it has claimed millions, often due to ignorance and superstition, its victims including Herod, Julius Caesar, three popes, Magellan, Columbus, Capt. James Cook, Louis XIV, Henry VIII, Keats, Baudelaire, Schubert, Schumann, Goya, Nietzsche, de Sade, Goethe, Beethoven, Ivan the Terrible, Napoleon, and Lord Randolph Churchill. The disease has gone by many names through history and *wasn’t* first contracted among natives in the New World; in fact, it may have been described by Thucydides as far back as 430 B.C. as “the plague of Pireaus.” The word *syphilis* itself derives from the name of a character in Girolamo Fracastro’s poem *Syphilis sive Morbus Gallicus*,

“Syphilis, or the French Disease” (1530). This New World fable tells of the blasphemous shepherd Syphilis who so enraged the Sun God that he struck him with a “new” disease: “He first wore buboes dreadful to the sight;/First felt strange pains and sleepless past the night;/ From him the malady received its name.”

syringa. In days past, the stems of this plant were used in making pipes. Because the stems resembled hollow reeds, the attractive, fragrant, ornamental bush was named from the Greek *syringos*, “reed.” The syringa (*Philadelphus coronarius*) is also called the “mock orange.” Linnaeus named the genus *Philadelphus* after King Ptolemy Philadelphus, who ruled Egypt in the third century B.C.

T

T. Today's *T* is a modification of the earlier form *X* for the letter. In Hebrew it is called *taw*, and in Greek, *tau*. *T* or *tau* was in ancient times the last letter of the Greek alphabet (as it remains in Hebrew) and thus in medieval times the common expression *alpha to omega*, "including everything," was often rendered as *alpha to tau*.

Tabasco. The condiment sauce's name, which is a trademark, was apparently first applied to a potent liquor once popular in the American Southwest. The liquor, in turn, took its name from the state of Tabasco in Mexico.

tabby cat. Prince Attab, famed in Arab legend, lived in a quarter of old Baghdad named Attabiya in his honor. Here a striped silk taffeta material was woven, the streaked fabric called *attabi* by the Arabs after the quarter, *attabi* eventually being transformed to *tabis* in French during the Middle Ages and translated in English as *tabby cloth*. *Tabby* became a verb for "to stripe" soon after, and by 1695 the word was used to describe a brownish dark-striped or brindled tabby cat whose markings resembled the material. Old maids were also called tabbies, and this may have been because they often kept tabby cats and shared their careful habits, but the word for a spinster is more likely a pet form of Tabitha.

table d'hôte. This French term was borrowed by the English almost four centuries ago. Literally, it means "table of the host" and it originally meant a common table from which guests ate at a hotel. From this it came to mean the complete meal served at a hotel or restaurant.

tabloid. *Tabloid* was originally a trademark for a pill compressing several medicines into one tablet made by Great Britain's Burroughs, Wellcome and Company. The *Westminster Gazette* used the word for the title of a new newspaper it published in 1902 and won a court case in which the pharmaceutical company claimed that the word was private property. Though

the first paper called a tabloid appeared in 1902, all of the journalistic practices associated with tabloids are much older.

taboo. The Friendly Islands (now Tonga) were visited by the great English explorer Captain James Cook in 1777. It is in Cook's journals that we find the first recorded use of *taboo* for something banned or prohibited. Cook had taken it, altering the spelling a little, from the Tongan *tabu*, meaning the same. He later lost his life for violating a taboo, being murdered by natives in Hawaii. Etymologist Alfred Holt reported seeing a dead-end street in Honolulu in 1920 that, instead of reading Dead End, bore the sign TAPU.

taboo words. Numerous everyday words are avoided by mountain folk whenever possible because they suggest "lustful ideas." They include, often for no clear reason: *bed, tail, stocking, piece, maiden, bag, buck, bitch, virgin, buckshot, bullfrog, cockeyed, cocksure*, and even *love, heart, and decent*.

Tad. A good number of references are found in these pages to T(homas) A(loysius) D(organ) (1877–1929), the great American cartoonist better known as "Tad" to millions of newspaper readers early in the 20th century. Dorgan, born in a San Francisco tenement, taught himself to draw with his left hand when at the age of 13 an accident deprived him of the use of his right hand. He worked for a time on San Francisco newspapers, but his great fame came when William Randolph Hearst hired him away to New York. "Judge Rummy," "Silk Hat Harry," and many of Tad's characters, all dogs in human dress, became household words in America, and Dorgan was recognized as the country's most prolific and original coiner of words and catchphrases. If there is a writer anywhere who invented more lasting words and expressions than Dorgan, I've missed him. Just for the record, here are some of the most memorable ones, a good number of which are described at length in these pages. Many were listed by humorist S. J. Perelman, a student and early admirer of Tad, in a *New York Times Magazine* article: HOT DOG; YES-MAN; dumbhead; APPLESAUCE

(for insincere flattery); *drugstore cowboy*; *lounge-lizard*; *chin music* (pointless talk); *the once-over*; *the cat's meow*; PRESS NOTICE; 23-SKIDDOO; *flat tire*; FOR CRYING OUT LOUD; *Officer, call a cop*; YES, WE HAVE NO BANANAS; *the first hundred years are the hardest* (sometimes credited to Wilson Mizner); *see what the boys in the back room will have*; *the only place you'll find sympathy is in the dictionary*; *half the world are squirrels and the other half are nuts*; *as busy as a one-armed paperhanger with the hives* (sometimes attributed to O. Henry, who in a 1908 story wrote: "Busy as a one-armed man with the nettle rash pasting on wallpaper").

tadpole. *Tade* was an early spelling for "toad," and *pol* meant "head" in 17th-century speech. Therefore, *tadpole* means toad head, an appropriate name for the early stage of a frog when it is little more than a big head with a small tail. The synonym *polliwog* comes from *pol*, "head," and "*wiglen*," "to wiggle," meaning "wiggle head."

tail between the legs. See WITH TAIL BETWEEN LEGS.

Taj Mahal. Shah Jahan built the magnificent Taj Mahal to commemorate his favorite wife, Mumtaz Mahal, whose title was Taj Mahal, Crown of the Palace. The mausoleum near Agra, India was begun by the Turkish or Persian architect Ustad Isa three years after Mumtaz died in 1632 and completed by about 1650, nearly 20 years later. The royal lovers are buried in a vault beneath the floor in the octagonal tomb chamber, surrounded by what many consider to be the finest example of romantic architecture in the world. If any structure proves that beauty can be the sole function of a building, it is this spectacular edifice, which is actually more a sculpture than architecture. The great tomb, the luxurious gardens, even the four 133-foot-high minarets at the great tomb's corners, were all built for beauty alone, at a cost of some \$15 million.

take a bath. American slang meaning "to take a great financial loss," to lose everything or close to everything in a business venture. Someone who takes a bath financially is stripped of everything, as a person taking a bath is stripped of his clothes. The expression dates back only to the 1930s, when someone who took such a bath was said to be "in the tub." More recently, *take a bath* has come to be applied to any complete failure. The older phrase TAKE TO THE CLEANERS is similar but has the sense of fraudulent means being used to effect the loss.

take a cab. U.S. mob slang for to be killed. Comedian Alan King on the Arts & Entertainment channel's "Las Vegas" program (December 1996) said he was told of Bugsy Siegel's killing this way: "Bugsy took a cab."

take a leaf out of one's book. These words are never used literally for "plagiarism," to my knowledge. *To take a leaf out of one's book* is simply a figurative expression meaning to imitate another person. It is usually highly complimentary to the person aped, for it means he is a model for whatever you wish to do, that he succeeds at it so well that it is best to do it his way. The expression is first recorded in 1809, but the saying it appears to derive from, *to turn over a new leaf*, "to reform," goes all the way back to Holinshed's *Chronicle of England, Scotland*

and Ireland (1577). In the earlier phrase the leaves or pages are from a book of lessons or precepts.

take a long walk on a short pier. Get lost, don't bother me, you're not wanted here. Apparently an American slang expression dating back a century or so.

take a powder. Nobody agrees about the origins of this slang phrase but there are some wonderful explanations. To *take a powder* means to leave quickly, flee, take off, beat it, dust off, take it on the lam. *Powder* has been used in the sense of "to rush" since the early 17th century, deriving its meaning from the rapid explosiveness of gun-powder ("Cacheus climb'd the Tree: But O how fast . . . he powder'd down agen," 1632). But the phrase seems to date back only to the 1920s, when it was first *take a run-out powder*. One possibility is that it was suggested by the dust (or powder) of a person fleeing down the road, another that "flee" suggested "flea" and thus "flea powder." The most ingenious theory is that the *powder* in the expression represents the "moving" powers of a laxative powder.

take a stab at it! A 20th-century Americanism meaning to take a try at, as in: "That's a tough question, but I'll take a stab at it." Also *shot* or *crack*.

take a walk up ladder lane and down hawser street. A humorous old nautical term for to be executed by hanging, a hawser being a thick nautical rope.

take down a peg. A ship's colors in Elizabethan times were raised and lowered by a system of pegs—the higher the peg, the higher the honor. Colors taken down a peg, therefore, reduced the esteem in which the ship was held, even by its crew. This practice probably suggested the expression *to take down a peg*, "to humble someone, lower him in his own or everyone else's eyes," which dates back to about the same time.

take it easy. This expression is an Americanism first recorded in 1927, but it is thought to derive from the British expression *easy does it*, which dates back to the early 17th century.

take it on the chin. To endure anything, especially pain, is the meaning of *to take it*, an American expression from boxing, where someone who can take it can endure anything an opponent can dish out. The same thought is behind the expression *take it on the chin*, also from boxing. Both of the phrases now generally mean to take punishment or adversity with courage and not let it defeat you.

take lying down. To take a beating or any attack with abject submission. The picture suggested by this expression is so basic to the idea of spineless surrender that you'd think the phrase went back a long way. But it is modern, first recorded in 1888, in an English journal deploring Englishmen who "take lying down any and every inconvenience that the victorious Irish may inflict."

taken aback. To be caught off guard, as in sailing when the wind is caught on the wrong side of the sails. The expression is at least a century old.

take one's wife to Paris. This is the German equivalent of “bringing coals to Newcastle,” meaning any pointless action, the expression dating back to the late 19th century. *See* CARRY COALS TO NEWCASTLE.

take out. In the sense of to kill or destroy, to *take out* was first recorded in Raymond Chandler’s detective novel *The Big Sleep* (1939): “I’ll take him out. He’ll think a bridge fell on him.” Chandler may have coined the term, which has nothing to do, of course, with taking out food or taking out a date.

take the bull by the horns. Since the earliest quotation yet found for this expression is 1873, it seems unlikely that it has its roots in bull-running, a brutal English sport popular from the day of King John until it was outlawed in the mid-19th century. Bull-running consisted of a mob with clubs and dogs chasing a bull loosed in the streets and eventually beating it to death, a favorite trick for the braver bull chasers being to grab the poor beast by the horns and wrestle it to the ground. More likely the expression originated in Spain or America. In bullfights Spanish banderilleros plant darts in the neck of the bull and tire him more by waving cloaks in his face and seizing him by the horns, trying to hold his head down. Raw-boned early ranchers in the American Southwest also wrestled bulls, or steers, in a popular sport called bulldogging that is still seen in rodeos—the object being to grab the animal’s horns and throw him. Either of these practices could have prompted the saying *take the bull by the horns*, “screw up your courage and cope with a dangerous or unpleasant situation decisively, head on.”

take the cake; cakewalk. Cakes have been awarded as prizes since classical times, so when slaves on southern plantations held dance contests to help a needy neighbor, or just for the fun of it, giving a cake to the winning couple was no innovation. But the cakewalk inspired by these contests was definitely another black contribution to American culture. Dancers tried to outdo each other with fancy steps, struts, and ways of walking while the fiddler played and chanted, “Make your steps, and show your style!” By 1840 *cakewalk* was recorded as the name of these steps, which became the basis of many top dance routines still seen today. Whether the expression *that takes the cake*, “that wins the highest prize,” comes from the cakewalk is another matter. Though the phrase is recorded a century earlier elsewhere, it almost certainly originated with the cakewalk in America. Today it has taken on a different meaning and is said of something (or someone) that is so unusual as to be unbelievable. What we know as *cakes*, however, are a comparatively recent innovation. *Fishcakes*, *pancakes*, and other round comestibles were known long before English cooks began experimenting with the sweet cakes that bear the name today.

take the long count. A boxer knocked out *takes the long count*, that is he stays down at least until the referee counts to 10. The American expression has also long been used in the past tense as a synonym or euphemism for death.

take the rag off the bush. *See* WELL, IF THAT DON’T TAKE THE RAG OFF THE BUSH!

take the scales from your eyes. *See* REMOVE (TAKE) THE SCALES FROM YOUR EYES.

take the stone out of my shoe. Apparently this is an old Italian proverb used by the Mafia meaning “to eliminate someone,” remove him from my life so that he won’t bother me anymore. In Richard Condon’s *Prizzi’s Honor* (1992) the godfather, Don Corrado, says with finality “After you take the stone out of my shoe, leave her in a rent-a-car at the airport.”

take the waters. *See* SPA.

take the wind out of one’s sails. To stop or slow somebody down. Pirate ships often sailed to the windward of a merchant ship, cutting off the wind blowing on its sails and slowing the ship down so that they could board. Later, the same technique came to be used in yacht racing and soon the term was being used figuratively.

take to journalism and strong drink. It is said of English author John Mitford (1782–1859) that he “took to journalism and strong drink.” Mitford was paid a shilling a day by his Grub Street publisher, “of which he expended tenpence on gin and twopence on bread, cheese and an onion.” Rent he had not, as he “lived in a gravel pit, with pen, ink and paper” for the last 43 days of his life.

take to the cleaners. A person defrauded or bilked in a business deal or a confidence game is said to have been *taken to the cleaners*. A relatively recent phrase, probably dating back no later than the early 1900s, the words are related to *to be cleaned out*, an early 19th-century saying that sometimes meant “to be duped of all one’s money” (usually in a card game), but today always means to lose all one’s money.

take to the hustings. A politician who takes to the hustings takes his campaign to the voters. Hustings were 18th-century platforms upon which candidates for Parliament made campaign speeches, named for a similar raised platform called the hustings where officials sat at the Court of Hustings, the supreme court of the city of London. The Court of Hustings, which met at the Guildhall, took its name from the English *husting*, for “a council or court of law,” *husting* deriving from the Old Norse *hust-thing* (from the Old Norse *hus*, “royal house,” and *thing*, “council”), a royal council, as opposed to a general assembly.

take to the tall timber. Meaning to depart suddenly and unceremoniously, *to take to the tall timber* is a variation on the early 19th-century *to break for the high timber*, which meant to escape into the high woods at the edge of civilization in order to make pursuit by the law difficult.

take under one’s wing. A very old expression that was originally in the plural and alludes of course to a hen protecting her chicks under her wings. The source of the phrase is biblical, the famous passage from Matt. 23:37: “O Jerusalem, Jerusalem, thou that killest the prophets, and stonest them which are sent unto thee, how often would I have gathered my children together, even as a hen gathereth her chickens under her wings, and ye would not!”

take with a grain of salt. Pliny the Elder, who of all ancient historians should most often be taken with a *cellar* of salt, writes that when Pompey seized Mithridates' palace he found the king of Pontus's fabled secret antidote against poisons that had protected him from assassins all his life. It contained 72 ingredients, none of them given by the historian, but the last line of the famous formula supposedly read to "be taken fasting, plus a grain of salt [*addito salis granito*]." The incredulous Pliny isn't known for his subtlety, so it is doubtful that he meant the phrase in any but its literal sense. Nevertheless, the story arose in modern times that Pliny's remark was skeptical and was the origin of the expression *to take with a grain of salt*, "to accept something with reservations, to avoid swallowing it whole." People quoted Pliny's Latin phrase incorrectly and *cum grano salis* was widely accepted as the ancestor of the expression. Actually, the term is little more than three centuries old. Its origin is unknown, and it obviously stems from the idea that salt makes food more palatable and easier to swallow. The Romans knew this, and even sprinkled salt on food they thought might contain poison, but there is no record that they ever used the phrase to indicate skepticism. See MITHRIDATIZE.

taking a first. Americans often wonder just what the term *taking a first* means in relation to British universities. *First* simply stands for *first-class honors* in the university honors examinations, roughly the equivalent of *summa cum laude* in the U.S. There are "seconds" and "thirds" as well.

taking the westbound. Long a hobo's term for death, referring to the freight trains that traveled "the iron roads" of America. See HOBO.

talent does what it can. Toward the end of his days Edward Robert Bulwer, first earl of Lytton (1831–91), grew to regard his life as a failure, despite the many volumes of poetry he wrote and his diplomatic service as viceroy of India. In his "Last Words of a Sensitive Second-Rate Poet" (1868) he gave us the now proverbial:

Talk not of genius baffled. Genius is master of man.
Genius does what it must, and Talent does what it can.

Tale Teller. See SIGN LANGUAGE.

Taliacotian operation. An operation that grafts flesh from one part of the body to repair another part. It was pioneered by Italian surgeon Gasparo Tagliacozzi (1546–99) and especially involved the reconstruction of nose and lips. It's hard to believe that such complex operations were performed so long ago, but they were fairly commonplace.

talk a blue streak. This American expressions refers to lightning bolts and has been traced back to about the middle of the 19th century, though it is probably much older. Similarly, *a bolt from the blue*, "something unexpected and startling," draws the picture of a lightning bolt striking from a cloudless blue sky, without any warning at all. *Blue streak* refers to a blue streak of lightning flashing through the sky and was used to describe the rapidity of horses and coaches that "left blue streaks behind them" before it became part of the expression *talk a blue streak*, "to talk rapidly and interminably, to talk someone's ear off."

talk dollars. To have a command of English often determines one's fate in other countries. That is why *to talk dollars* means "to speak English" in the Philippines, where English is the language of government, education, and business and is spoken by 65 million Filipinos.

talkie. A synonym for a motion picture with sound that was first recorded in 1910 (at least *talking motion picture* was). Movie myth insists that Al Jolson's *The Jazz Singer* (1927) was the first sound film ever made, but in truth sound had been used in movies long before this, ever since Edison's first Kinetoscopes in the late 19th century. Many short sound films at the time featured great actors and actresses speaking their parts, as when Sarah Bernhardt spoke in the dueling scene from a 1900 version of *Hamlet*. What held back talking pictures was the huge investment needed to convert Hollywood studios and movie theaters across the country to sound systems. Toward the middle of the 1920s Warner Bros. realized that they had fallen far behind the other major studios and decided as a last-chance gamble to produce synchronized sound movies. Warners built its own huge Hollywood theater, bought the old Vitagraph company with its 15 houses, and converted its studio stages to sound. On August 6, 1926, it premiered its first synchronized sound film, a lavish Vitaphone production of *Don Juan* starring John Barrymore. A year later, it had its first big hit with *The Jazz Singer*. See YOU AIN'T HEARD NOTHIN' YET.

Talking Water River. Lucia St. Clair Robson defined this name in *Ride the Wind* (1982): "The Comanche called the Colorado Talking Water River for good reason. The racing, leaping rapids tumbling over its rock-strewn bed drowned out conversation."

talk the talk, walk the walk. Often used in question form to someone, as in "You talk the talk, do you walk the walk (Do you take action, do something about it)?"

talk through one's hat. Since the phrase arose at about the time Benjamin Harrison was campaigning for the presidency in his tall handsome beaver hat, it has been suggested that his Democratic opponents coined the expression to help convince voters that Harrison was spouting nonsense in his speeches around the country. There isn't any proof that Harrison's trademark inspired the words, although cartoonists often caricatured him in a big beaver hat. Like another Americanism of about the same time, *keep this under your hat*, "keep it secret or confidential," the origins of the phrase are really unknown. The expression *to eat one's hat*, appears to have been invented by Dickens in *The Pickwick Papers*.

talk turkey. According to an old story, back in Colonial days a white hunter unevenly divided the spoils of a day's hunt with his Indian companion. Of the four crows and four wild turkeys they had bagged, the hunter handed a crow to the Indian, took a turkey for himself, then handed a second crow to the Indian and put still another turkey in his own bag. All the while he kept saying, "You may take this crow and I will take this turkey," or something similar, but the Indian wasn't as gullible as the hunter thought. When he had finished dividing the kill, the Indian protested: "You talk all turkey for you. You never once talk

turkey for me! Now I talk turkey to you.” He then proceeded to take his fair share. Most scholars agree that from this probably apocryphal tale, first printed in 1830, comes the expression *let’s talk turkey*, “let’s get down to real business.”

tall, dark, and handsome. As the description of an attractive man, this cliché can be traced to newspaper descriptions of movie idol Rudolph Valentino in the late 1920s, though Valentino was only of average height. Mae West undoubtedly popularized the expression in her 1933 film *She Done Him Wrong*, in which Cary Grant is the object of her desire.

tall oil. “An Americanized Swedish-German hybrid,” this term illustrates the complicated ways some words are formed. As the magazine *Progress Through Research* (summer, 1948) put it: “The name *tall oil* is an Americanized Swedish-German hybrid. The Swedes, who were active in first developing tall oil, called it *tallolja* (meaning pine oil) because it is an oily material obtained from pine wood during the manufacture of paper. At the time, however, the term *pine oil* was already used in Europe and America to describe a different oil obtained from pine trees. To avoid confusion, the Germans, who were among the first to use tall oil extensively, coined the word *Tallol*, from the Swedish ‘tal’ for pine and the German ‘ol’ for oil. In the United States this became *tall oil*, the name by which the product is known today.”

tally. *Tallies*, or wooden sticks, were used to keep accounts in the British Royal Exchequer in medieval times. To make a tally, a notched stick of wood (the number of notches equaling the amount of money owed) was split down the center, each half stick retaining half of the notches—one half being given to the party owed money and the other being retained by the Exchequer. No money would be paid by the Exchequer unless a tally, or match of the sticks, was made. This cumbersome system, often involving notched sticks six feet or more long, wasn’t abandoned until 1834, when all the remaining sticks were burned in the furnace of the House of Lords, which overheated the flues and caused the House of Parliament to burn down in the process! But the tallies did contribute the word *tally*, which today means count, to the language. See JUST IN THE NICK OF TIME.

tallyho. The cry *tallyho* originated on British fox hunts in the 19th century, where it was and still is, as far as I know, the cry of a hunter on first sighting the fox. The term is said to have its roots in the French hunter’s cry of *tayau*, which dates back to about 1750. See IN AT THE KILL. See FOXHOUND.

tam; tam-o’shanter. The eponymous hero of Robert Burns’s poem “Tam o’Shanter’s Ride” (1791) wore a cap similar to the traditional woolen cap with the pompon that is worn by the Scots and called a *tam*, or *tam-o’shanter*.

tamale. A dish made of minced, seasoned meat stuffed in cornmeal dough, wrapped in corn husks and steamed; from the Nahuatl *tamalli* for the same.

Tammany; Tweed Ring. Tammany Hall hasn’t the power it once did, but for over 150 years the machine held sway over New York City politics under such bosses as William Tweed,

Richard Croker, and Carmine DeSapio. Tammany’s unsavory association with machine politics dates back to the late 18th century, but Tammany clubs thrived in this country long before that, mostly as patriotic Revolutionary War organizations that ridiculed Tory groups like the Society of St. George. The clubs were named for Tammanend or Tammenund, a Delaware Indian chief said to have welcomed William Penn and signed with him the Treaty of Shakamaxon calling for friendly relations. Tammanend (sometimes his name is given as *Taminy* or *Tammany*) may have negotiated with Penn for the land that became Pennsylvania and may have been George Washington’s friend. The colonists jocularly canonized this friendly Indian chieftain as St. Tammany and adopted his name for their patriotic societies. These gradually died out, but not before one William Mooney had formed a Tammany Society in New York in 1789. By the Jacksonian era the club became one of the strongest Democratic political organizations in America. Thomas Nast created the famous symbol of the Tammany tiger in his cartoons attacking the machine in the 1870s, when the corrupt TWEED RING was fleecing the city of over \$100 million.

tandem. *Tandem* is a humorous coinage, first recorded in 1785. Some anonymous wit took the Latin *tandem*, “at length of time,” and punningly applied it to a carriage drawn by two or more horses harnessed not side by side, but one before the other—strung out in a line or at length. *In tandem* has come to mean “in association or partnership” as well as “one following the other.”

tangerine. This fruit is called the “kid-glove orange” because its loose skin can be peeled off as easily as soft kid gloves can be peeled off the hands. But it is far better known as the *tangerine* after the seaport Tangier in Morocco, where the small deep-orange fruit was extensively cultivated and first called the “tangerine orange.” Tangerines belong to the mandarin group of oranges, which were first cultivated in southeast Asia. Residents of Tangier are called Tangerines. The word *Tangerine* also means a resident of Tangier.

a tangled web. Sir Walter Scott (1771–1832) first used the proverbial expression “O what a tangled web we weave, / When first we practice to deceive.” The words are from Scott’s romantic poem *The Lay of the Last Minstrel* (1797). See also SPITTING IMAGE OF.

tank. The motorized tank wasn’t invented until World War I. Winston Churchill, who advocated its use, gave it the name *tank* as a “cover name” to help conceal the new weapon from enemy intelligence agents. Before this, *tank* had absolutely no connection with war. Possibly deriving from the Indian *tankh*, it had for centuries meant an irrigation pond and then a cistern holding water. The British brought the word back from India, using it exclusively as the term for any large metal container holding any liquid (such as gas and oil tanks) until Churchill appropriated the word.

Tannhauser. Though his poetry was indifferent, this 13th-century German meistersinger attracted many legends around his name. One claimed that his staff budded in his hands, while

another said that he escaped from Venusberg, “the place of fleshly temptation,” with the help of Our Lady. These legends appealed to many writers and became the basis for several works, including Wagner’s celebrated three-act opera *Tannhauser*, which was named after him.

tantalize. Tantalus, the son of Zeus in Greek mythology, divulged the secrets of the gods to humans. The Lydian king was punished by being submerged in a pool of water in Hades, a tree laden with fruit above his head. Whenever he attempted to drink the water or eat the fruit they moved just beyond him—the water receding and the fruit tree wind-tossed—causing him agonizing thirst and hunger. This punishment gives us the word *tantalize*.

Tantony pig. The smallest pig in every litter, one that is traditionally believed to follow its master anywhere, is called a Tantony pig after St. Anthony, long the patron saint of swineherds. St. Anthony probably had nothing to do with pigs, other than citing an “unclean demon” as one of the temptations he resisted, but he is often represented in art with a pig by his side. In the Middle Ages, when the pig began to lose its reputation as an unclean demon, it was popularly supposed that the animal was dedicated to the saint. St. Anthony, born about the year 250 in middle Egypt, defeated many “assaults by the devil,” including temptations such as “gross and obscene imagings” of beautiful, naked women that Lucifer sent to “harass him night and day.”

taper off. A taper, or candle, gradually diminishes in thickness from the base to the tip. This image suggested the term to *taper off* to Englishmen of the early 19th century. Like the candle growing smaller by degrees, anything becoming gradually less in intensity was said to taper off. The words were especially applied to shedding an established habit by degrees, usually to tapering off from the habit of hard drinking.

taps. The military bugle call taps may simply derive from the sound of a drum tap, but it could be a corruption of the British drum call tattoo, as the recorded first use of the latter word (in 1644) indicates: “If anyone shall be found tiplinge or drinkinge in any Taverne, Inne, or Alehouse after the houre of nyne of the clock at night, when the tap-too beates, hee shall pay 2S.6d.” In fact, *tap-too* was still being used for *tattoo* in 1833, 11 years after the Americanism *taps* is first recorded. *Tattoo* itself may derive from the Dutch *tap toe*, “to close or turn off the tap,” which 17th-century Dutch tavern owners were required to do by military authorities at a certain time every evening, so that soldiers wouldn’t be tempted to stay out too late. In any case *taps* was first a drumroll in the American army, meaning “put out the lights and go to bed.” The haunting tune we now know as *taps* was written by Union general Daniel Butterfield with the aid of his bugler, Lt. Oliver Wilcox Norton. Now also used at the end of a soldier’s burial, its words are: Put out the lights,/ Go to sleep,/ Go to sleep, Go to sleep, Go to sleep./ Put out the lights,/ Go to sleep,/ Go to sleep.” See TATTOO.

tar. See JACK TAR.

Tara. The famous plantation from Margaret Mitchell’s *Gone with the Wind* (1936), hence a name for any Southern plantation, even a joking name for any Southern home.

tarantula. This much-feared, hairy, venomous spider takes its name from the Italian seaport of Taranto, where it was thought to abound in medieval times. From the 15th to the 17th century the bite of tarantulas was believed to cause a dancing mania called *tarantism*, which was actually a hysterical disease epidemic to southern Europe at the time.

ta-ra-ra-boom-de-ay. A hit popular song in 1892. Later, in 1950, it became the basis for the famous Howdy Doody children’s TV program. The song is said to have originated with an anonymous piano player in a St. Louis brothel. See Q.T.

Tarheel; Tarheel State. A nickname for a North Carolinian. According to the *Overland Monthly* (V.3, 1869): “A brigade of North Carolinians . . . failed to hold a certain hill [in a Civil War battle] and were laughed at by Mississippians for having forgotten to tar their heels that morning. Hence originated their cant name, ‘Tar heels.’” The state of North Carolina has been called the Tar and Turpentine State. Other North Carolina nicknames have included the Old North State and the Land of the Sky, in reference to its beautiful western mountain country. In putting down their older, once more sophisticated neighbors Virginia and South Carolina, North Carolinians have called their state the Valley of Humility Between Two Mountains of Conceit.

tariff. According to one old tale, the island of Tarifa off the coast of Spain, where the Moors formerly levied taxes upon all who passed, is the source of our word *tariff*. A diverting story, but *tariff* has its ultimate roots in the Arabic *tarif*, “information,” which became the Old French *tariffe*, “arithmetic.”

tarmac. See MACADAM.

tarnation. The interjection *tarnation!*, a euphemism for damnation! or *damn!*, has been used in New England since colonial times and is familiar to millions of Americans from its use in books, movies, radio, and television. The best guess is that it derives from the English *tarnall*, which itself derives from the mild interjection *eternal!*

tarot. *Tarot* is the French name of the popular central European card game called *tarok*, which the *Encyclopaedia Britannica* says is the world’s oldest surviving card game. The game is named after Tar, the Egyptian god of the underworld, whom the Greeks called Tartarus. It has many features borrowed by other card games, including competitive bidding and the wild joker, and is now played with 54 cards, 22 of them trump card tarots bearing allegorical representations. These 22 illustrated cards, depicting vices, virtues, and elemental forces, are the only ones used in the fortune-telling game called tarot that most people are familiar with.

tarradiddle. A little white lie; twiddle; silly or pretentious prose. The word’s origin is unknown.

tarred and feathered. At Salem, on September 7, 1768, an informer named Robert Wood “was stripped, tarred and feathered and placed on a hog’shead under the Tree of Liberty on the

Common.” This is the first record of the term *tarred and feathered* in America. Tarring and feathering was a cruel punishment where hot pine tar was applied from head to toe on a person and goose feathers were stuck into the tar. The person was then ignited and ridden out of town on a rail (tied to a splintery rail), beaten with sticks and stoned all the while. A man’s skin often came off when he removed the tar. It was a common practice to tar and feather Tories who refused to join the revolutionary cause, one much associated with the Liberty Boys, but the practice was known here long before the Revolution. In fact, it dates back even before the first English record of tarring and feathering, an 1189 statute made under Richard the Lion-hearted directing that any convicted thief voyaging with the Crusaders “shal have his head shorne and boyling pitch powred upon his head, and feathers or downe strewn upon the same, whereby he may be known, and so at the first landing place they shal come to, there to be cast up.” Though few have been tarred and feathered or ridden out of town on a rail in recent years, the expression remains to describe anyone subjected to indignity and infamy.

tarred with the same brush. Someone who shares the sins or faults of another, though possibly to a lesser degree, is tarred with the same brush. The saying may have something to do with tarred-and-feathered criminals, but the reference is probably to the tarring of sheep. Owners of a flock of sheep, which can’t be branded, used to mark their wool all in the same place with a brush dipped in tar to distinguish them from sheep of another flock. It is said that red ochre was used to make the mark and that brushing sheep with tar served to protect them against ticks.

tart. Another example of words that change in meaning. The fruit pie dessert called a tart derives from the Latin *tarta* meaning the same. By at least the 1860s *tart* was being used as a term of endearment for a girl or woman, but after another 20 years, for reasons unknown, it took on its present sense of an immoral woman or prostitute, never to be used endearingly again.

tartar. Contrary to popular belief, Swiss physician, alchemist, and writer Paracelsus (Philippus Theophrastus Bombastus von Hohenheim, 1493?–1541) did not invent the word *tartar*, which apparently derives from an Arabic word and was recorded before Paracelsus. Paracelsus did write that “All diseases can be traced to a coagulation of undigested matter in the bowels.” He called these acids of putrefaction “tartar” because their deposits in joints, muscles, and other parts of the body “burn like hell, and Tartarus is hell.” He went on to say that “Doctors boast of their [knowledge of] anatomy, but they fail to see the tartar sticking to their teeth.” Thus, though not the inventor of *tartar*, he may have been the first to use the word as it is used in all the toothpaste ads.

tartar sauce. See STEAK TARTARE.

Tarzan. A Tarzan is any well-built outdoors man with great agility, strength, and valor. The word comes from American author Edgar Rice Burroughs’s novels about Tarzan, the son of a British aristocrat orphaned in the jungle as a baby and raised by apes, his adventures beginning with *Tarzan of the Apes*

(1914). The novelist’s opinions may have been inspired by William Milden, earl of Streaam, who was shipwrecked off Africa in 1869 when barely 11 years old and supposedly lived with apes for 15 years before being found and returned home to England. *Tarzan* is the only eponymous word constructed from an invented language, in this case the “monkey language” Burroughs devised in his first book, in which the hero’s foster mother, Kala the ape, names him from *tar*, “white,” and *zan*, “skin,” *Tarzan* literally meaning “white skin.” The much-quoted humorous line “Me Tarzan, you Jane” wasn’t invented by Burroughs, coming from one of the many films or comics made of the author’s 24 *Tarzan* books. Tarzan’s cry, his chest pounding, his swinging on vines, and his high dives into the water have long been imitated by children of all ages.

Tasmania. An Australian island rich in natural resources named for Dutch explorer Abel Janszoon Tasman (1602?–59). Tasman himself named the island Van Diemen’s Land after the governor general of the Dutch East Indies, who sent him to explore Pacific waters in 1642. It wasn’t until 1853 that Tasmania was named after Tasman. The Tasman Sea and the Tasman Glacier (where ski meets are held) also bear the explorer’s name. So do the predatory *Tasmanian devil* and *Tasmanian wolf* or *tiger*, both of which are native to the island.

taste. *To taste* meant to touch before it meant to taste. In *Merlin, or the Early History of King Arthur* (ca. 1450) we find the following: “Merlin leide his heed in the damesels lappe, and she began to taste softly till he fell on slepe.” *Taste* is recorded in this sense as early as 1290, 50 years or so before the word began to take its present meaning—which may have been suggested by feeling food (tasting it) with the tongue.

tater. *Tater* is baseball slang for a base hit or a home run. It possibly derives from the admiring expression *that’s some potatoes* that fans early in the game’s history would shout out after a player got a good hit.

tattarrattat. This is at 12 letters the longest one-word palindrome (a word that reads the same backward or forward) in English. It is recorded in the *Oxford English Dictionary*. See PALINDROME.

tattletale. An informer, one who carries tales. *Tattletale*, which is still commonly heard, is an Americanism patterned on the much earlier British *tell-tale* (as in Tell tale tit / Your tongue shall be split . . .) meaning the same. It wasn’t used by school children here until the 18th century, perhaps 300 years after its ancestor. American children increasingly use the gangster movie term *rat* for a tattletale today, calling tattling *ratting*.

tattoo. As far as is known, Capt. James Cook was the first European to record the practice of tattooing, when he sailed the *Endeavor* on his historic exploration of the South Seas in 1769. Noting that the Tahitians cut their skin and injected a black dye that left a permanent mark when the wound healed, he called the practice *tattowing* in his diary. This was a fair approximation of the native word *tatau* for the operation. Within a short time the word was being spelled *tattoo*. See TAPS.

taunt. See TIT FOR TAT.

tawdry. Anglo-Saxon princess Aethelthryth seems to have spent her married life trying to preserve her chastity. Daughter of the king of East Anglia, she protected her virginity through two unwanted marriages that her father had arranged for political reasons, keeping the promise she made as a girl that she would dedicate her life to God. The pious princess carried but one sin on her conscience: in her youth she had loved wearing golden chains and necklaces, and she believed that the cancer of the throat that she died of in 679 had been caused by this worldly vanity. In Norman times Aethelthryth's name was shortened to Audrey and she was finally canonized as St. Audrey. It became the custom to hold fairs on the Isle of Ely on St. Audrey's Day, October 17, and the souvenirs sold at these fairs included lace scarves and golden necklaces that were called St. Audrey's laces. This merchandise, at first treasured articles, declined in quality until it became known as cheap and showy. Shouted by hucksters as St. Audrey's lace, it was soon clipped in speech to "Sin t'Audrey lace" and eventually to *tawdry lace*. All the gaudy, worthless objects like it were sold as *tawdry*, too, and by the 18th century the word had come to mean anything cheap and tasteless, showy tinsel.

taxi. Incensed about the high fares horse cabs were charging in 1907, Harry N. Allen introduced taximeter cabs in Manhattan, naming the 4-cylinder, 16-horsepower cabs he imported from France from the Greek *taxa*, "charge," and the word *cab*, the common short form of the French *cabriolet*. Allen's coinage became shortened to *taxicab* and finally *taxi* long before taxi fares far surpassed those of the horse-driven cabs.

taxi dancer. A woman who dances with partners in a dance hall for a fee, dancing single dances or for an agreed period of time. The expression dates back to the 1930s and is so called because the dancers, like taxi cabs, can be hired, the word *taxi* at the time having taken on the connotation of "hired."

taxi squad. In the late 1940s Art McBride, the original owner of the Cleveland Browns football team, had a number of players under contract to him who weren't on the active player list and could only play if one of his active players was injured and deactivated. Since this seemed like a waste of his money, he put these extra players to work as drivers in his taxicab company. Soon all such players in the pro leagues were being called members of the taxi squad. Later, when the rules changed, the term was applied to the four extra players on a professional football team who aren't allowed to suit up for an official game but who are ready to join the team to replace injured or unsuccessful players.

tea. British slang for a cup of tea is "cuppa char." *Char* is a corruption of *cha*, which means tea in England, deriving from the Mandarin *chá* for the same. *Tea* comes to us from the Chinese Amoy dialect *tè*. The scientific name of the tea plant, *Thea sinensis*, sometimes grown in the United States, is the Latinized version of the Amoy name. Tea bags weren't invented until the turn of the century, when an American tea wholesaler named Sullivan began mailing prospective customers one-cup samples of his tea contained in little silk bags. The idea didn't catch on

because the cloth changed the flavor of the tea, but during World War II chemists developed a tasteless paper tea bag that became extremely popular and accounts for most of the tea sold in America today. See also ALL THE TEA IN CHINA; SPOT OF TAY; TEMPEST IN A TEAPOT.

tea caddy. No relation to the golf CADDY, the tea caddy, a small box for storing tea, takes its name from the Malayan *kati*, "a weight of about 21 ounces," perhaps because tea used to be packed in 21-ounce boxes. See TEA.

teach your grandmother to suck eggs. Someone who says "Trying to teach him how to swim is like trying to teach your grandmother to suck eggs" is saying that the whole idea is ridiculous because he knew how to swim well long before you were born. Most country grandmothers knew how to suck eggs in days past—poking two small holes in the shell and sucking out the contents through a straw while leaving the shell intact. Today not many grandmothers suck eggs, but people still use the expression, first recorded in the early 18th century.

teapoy. Because it is used for serving tea, this small, often three-legged table takes its name from the drink. But the table's name has nothing to do with tea. Brought back from India by the British, the little table is named from the Hindi *teen*, three, and the Persian *pae*, foot(ed).

tear down this wall . . . See THE GREAT COMMUNICATOR.

tearing up the pea patch. Red Barber popularized this southern U.S. expression for "going on a rampage" when he broadcast Brooklyn Dodger baseball games from 1945–55, using it often to describe fights on the field between players. Barber hails from the South, where the expression is an old one, referring to the prized patch of black-eyed peas, which stray animals sometimes ruined. See also CATBIRD.

tear of Christ. See LACHRYMA CHRISTI.

tears of Eos (Ē-os). A poetic name for the dewdrops of morning that is rarely used anymore but has a charming story. Maemmon, a handsome black prince, was slain by Achilles in the Trojan War. His mother Eos (the Dawn) was inconsolable and cries for him every morning, early morning dew said to be *the tears of Eos*.

tears of the sun. An old Apache Indian term for gold, which the Apaches held sacred and not to be touched.

teasel. There are scores of tiny hooks on the dried seed pods of the teasel plant (*Dipsacus fullonum*). These hooked seed pods have long been grown for use in mills to raise or tease up the nap on woolen cloth. From this practice we get the hair-dressing expression "teasing," as well as the "teasing" that irritates somebody, just as drawing a teasel pod across someone's skin would do.

Technicolor. A trademark name used to describe a method of making movies in color. The word is often lowercased, however

wrongly, in figurative contexts such as “The leaves were a technicolor spectacle of crimson and gold.” The Technicolor process was developed in 1917, but the first feature film made in it was *Becky Sharp* (1935). The word is a combination of *technical* and *color*.

techy. Not an ignorant “hick” pronunciation of *touchy*, as many people believe. The word (meaning “irritable,” or “peevish”) is not related to *touch*, but derives from Middle English *tecche*, a bad habit, which in turn comes from Old French *teche* (a blemish).

teddy bear. Brooklyn candy store owner Morris Michtom fashioned the first teddy bear out of brown plush in 1902 and named it after President Theodore Roosevelt. Michtom’s inspiration was a cartoon by *Washington Post* cartoonist Clifford K. Berryman called “Drawing the Line in Mississippi” that had been reprinted throughout the country. Based on a news story about an expedition Teddy Roosevelt made to hunt bears near the Little Sunflower River in Mississippi, it showed the old Rough Rider with his back turned to a helpless bear cub. Gallant Teddy, it had been reported, refused to kill and even set free the small brown bear that his obliging hosts had stunned and tied to a tree for him to shoot. Apocryphal or not, the story enhanced Roosevelt’s reputation as a conservationist and made Michtom rich.

Teddy boys; Teddy girls. London’s rebellious Teddy boys and Teddy girls in the 1960s took their name from the Edwardian styles they preferred, especially the boys’ tightly fitted trousers and jackets. *Edwardian* in this case refers to the styles popular in the reign of England’s Edward VII, Queen Victoria’s son, who ruled from 1901–1910. The opulent styles of the period reflect the self-satisfaction prevalent before World War I and perhaps indicated a rebellious desire on the part of the Teddy boys to return to better days.

tee. The first tees were just small handfuls of sand or dirt off which golf balls were hit. The Scottish word was first recorded in 1673 as *teaz*, but people thought this was the plural of *tee* and over the years *tee* became the singular form. The little wooden pegs we call *tees* today were invented by New Jersey dentist William Lowell in the 1920s.

teeny-weeny. An Americanism that combines *teeny*, a variant of *tiny*, and *wee*, “small,” *teeny-weeny* is first recorded in the 1890s as a word describing someone or something very little. Still used today and immortalized in the popular song “Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini” (1960), it was helped along by the “Teenie Weenies” comic strip that appeared in many U.S. newspapers from the 1920s up until the 1960s.

teetotal. The only invented word I know of that is recorded on the gravestone of its author. Some people believe this word for total abstinence from alcoholic beverages has something to do with tea: one drinks tea totally, nothing stronger. Perhaps this is one reason the word caught on when it was coined in 1833 by Dick Turner, an artisan in Preston, England. But Turner formed the word as a reduplicated variation of *total*, in a speech he made advocating total abstinence from intoxicating

drink. The inscription on the reformer’s gravestone reads: “Beneath this stone are deposited the remains of Richard Turner, author of the word *Teetotal* as applied to abstinence from all intoxicating liquors, who departed this life on the 27th day of October, 1846, aged 56 years.”

Teflon; Teflon Don. *Teflon* is the trademark name for a chemical substance used to make nonstick cooking pans that Dupont introduced in 1945. Metaphorical use of the word didn’t come until the 1980s, when it was used to describe Ronald Reagan as the “Teflon President” because no scandal or criticism seemed to stick to him. Said Representative Patricia Schroeder during a 1983 speech, in which she may have coined the new term: “Ronald Reagan . . . has been perfecting the Teflon-coated Presidency. He sees to it that nothing sticks to him.” The term has since been applied to several politicians, including former President Clinton, but is best known as the nickname of John “the Teflon Don” Gotti, a New York Mafia crime boss. Before he was finally sentenced to life in prison, Gotti and his lawyers had managed to beat every charge brought against him.

Tehrangles. Iranians exiled in Los Angeles coined this word, adding *Tehran* to the *angeles* of *Los Angeles*. The word dates back to about 1992.

telegram. See CABLEGRAM.

telegraph. Simple telegraphic devices have been known since ancient times, but the first to be called a *telegraph* was the one invented by Claude Chappe in 1792. The inventor wanted to call his device the *tachygraphe*, but was advised that this name was inappropriate and should be *telegraphie*, from the Greek words for “afar” and “to write”—“to write from afar.” See WHAT GOD HATH WROUGHT.

telegraphese. The clipped, concise language of telegraph messages. In a humorous, apocryphal example of it a fan wants to know actor Cary Grant’s age and sends him a telegram reading: HOW OLD CARY GRANT. Grant replies: OLD CARY GRANT FINE. HOW YOU.

telemark. A skiing turn in which the skier puts one ski far ahead of the other and angles the tip of that forward ski in the direction in which he wants to turn. It is named for Telemark, Norway, where it is said to have been invented in about 1905. Skiing is said to have begun as a sport in Telemark in about 1860.

telepathy. Psychologist and poet Frederick W. H. Myers coined this word for thought transference in an 1882 scientific paper. Later, in his book *Human Personality* (1903), he defined *telepathy* as “the communication of impressions of any kind from one mind to another independently of the recognized channels of sense.”

telephone. *Telephone*, from the Greek roots for “far” and “sound,” was a term first used to describe any device for conveying sounds to a distant point. In 1667, for example, Robert Hooke invented a device in which vibrations in a diaphragm caused by voice or sound waves are transmitted mechanically

along a string or wire to a similar diaphragm that reproduces the sound. He called this device a *string telephone*. Another inventor, in 1796, called his megaphone a *telephone*, as did the inventor of a speaking tube not much later. Alexander Graham Bell used the old name for his invention as soon as he invented it in 1876. See TELEGRAPH; “MR. WATSON COME HERE . . .”; NUMBER PLEASE.

telephone Hitler. See I AM GOING TO TELEPHONE HITLER.

TelePrompTer; Laff Box. The trademarked TelePrompTer hidden from the audience, provides television performers with a magnified script he or she can read line by line. Its counterpart in the theater is its ancestor, the human prompter. The TelePrompTer was introduced in 1951. In Britain it is called the “autocue.” Another device invented for television is the trademarked Laff Box, or laugh track, which supplies recorded audience reactions for TV shows, reproducing “giggles, guffaws, cries, moans, jeers, ohs and ahs,” etc., when needed. It was invented by Charles (Charlie) Rolland Douglass (1910–2003) in the early 1950s.

telescope. The great Galileo did not at first use the word *telescope* for the famous instrument that he invented, calling it instead a *perspicillum* and sometimes an *organum*, or *instrumentum*, or *occidale*. In about 1610, a rival and lesser claimant to the discovery, Prince Cesi, head of the Italian Academy, named the instrument the *telescope*, from the Greek word for “far seeing.” Only then did Galileo employ the word, and he, in fact, is the first person known to record *telescope*, in a letter of September 1, 1611. See MICROSCOPE.

telestitch. See ACROSTIC.

television. Like TELEPHONE, *television* seems to have been an old coinage, in this case from the Greek *tele*, far, and the Greek *vision*, vision. The word is not recorded until about 1910 and seems to have been applied to another device, not the television we know today. The first television set was demonstrated at Chicago’s 1933 Century of Progress Exposition, but it wasn’t until the 1940s that programming became common. See RADIO; TELEGRAPH; TV DINNER.

teller. The bank teller takes his or her appellation from the Middle English *tellen* “to count.” The term had much wider use in days past, when anyone who counted anything, money or merchandise, was called a teller. *Teller* is recorded in this sense as early as 1480.

tell him (her) where to get off. Apparently a trolley-car conductor or the like has nothing to do with this expression meaning “to admonish someone for his or her audacity or arrogance.” The phrase was first recorded by American author George Ade, often noted for his use of vernacular, in his *More Fables in Slang* (1879): “He said he was a gentleman and that no cheap skate in a plug hat could tell him where to get off.” The expression may come from the old expression *to get up on one’s high horse*. What is implied is “from what high horse does he think he can give me orders from; I’ll tell him where to get off it.” The phrase is also heard as *show him (her) where to get off*. See HIGH HORSE.

tell it to the marines. Not the U.S. Marine Corps, but the British Royal Marines, formed in the 18th century, are the gullible ones here. The Royal Marines, quartered aboard ships and responsible for discipline, weren’t well liked by sailors, who considered them stupid and gullible about the seafaring life and made them the butt of many jokes. Seamen even called empty bottles marines. Any tall tale told to a sailor was likely to be met with the response “Tell it to the marines—sailors won’t believe it”; that is, sailors, unlike marines, were too intelligent to be gulled. The saying soon passed into popular use and was first recorded by Lord Byron in *The Island* (1823), the poet noting that it was an old saying even then.

tell me about it. I know exactly what you mean, perhaps better than you. “I hate cops getting shot.’ ‘Tell me about it,’ Harry nodded grimly.”

Tell’s apple. See WILLIAM TELL’S APPLE.

tell tales out of school. John Heywood, called the prose Shakespeare, was the first to record this old saying, in his *The Proverbes of John Heywood* (1546), the first collection of English sayings. This saying describes someone who talks behind someone’s back.

tell the truth and shame the devil. An English proverb from the 16th century that means “to be honest.”

telly. A colloquial British term never used in the United States. Used for both a television set or “television,” as in “What’s on the telly tonight?”

tempest in a teapot. This saying for “making a big fuss over a trifle,” was first *a tempest in a teacup*. It has been traced back only to 1857, but is probably older. Similar early English sayings were “storm in a wash basin” and “a storm in a cream bowl” (1678). For that matter Cicero, as far back as 400 B.C., referred to a contemporary who “stirred up waves in a wine ladle,” and he indicated that the expression was ancient. See also TEA.

Temple orange. See ORANGE.

tempura. In Japanese cookery tempura is seafood or vegetables dipped in batter and deep-fried. The word, however, is of Portuguese, not Japanese, origin. On Ember Days, which the Portuguese called by the Latin name *Quatuor Tempora*, “the four times of the year,” most people in Portugal eschewed meat and ate deep-fried shrimp or other seafood, which came to be called tempura after the holy days. By the early 1540s Portuguese sailors had introduced tempura to Japan.

tempus fugit. See TIME FLIES.

10 (ten). Ten, more often written as 10, means anything perfect—from a perfect woman or man to a perfect situation. The expression dates back to the early 1970s and may come from the sport of gymnastics, in which a 10 is a perfect score on the scale of zero to 10.

Ten-cent Jimmy. The original was President James Buchanan, elected in 1856. The term was applied to Bachelor Buchanan because he advocated low tariffs and low wages (ten cents a day).

Ten Commandments. The injunctions, also called the Decalogue, given by God to Moses on Mount Sinai which form the basis of Mosaic Law. The language here is based on the King James Version of the Bible. See each commandment under its number (FIRST COMMANDMENT; SECOND COMMANDMENT, etc.) See also the biblical Exodus 20: 1–17.

tenderfoot. As early as the 17th century the British applied this word to horses that needed breaking in before they could handle heavy loads. Next they used *tenderfoot* as a derogatory term for a vagrant. It wasn't until the California gold rush of 1849 that Americans applied the word to footsore people unused to the hardships of pioneer life as they traveled in search of gold. Soon *tenderfoot* was a term for any greenhorn, not only one with sore feet. "In my tenderfoot ignorance," Owen Wister wrote in *The Virginian* (1902), "I was looking indoors for the washing arrangements."

the tenderloin. In New York City, where the expression originated in the 1870s, the tenderloin was the area from 23rd to 42nd Streets west of Broadway. Gambling and prostitution flourished in this district, giving police officers "luscious opportunities" for graft. In fact, one cop named Williams was so happy to be assigned to the old 29th precinct covering the area in about 1890 that he said he had always eaten chuck steak but from now on he'd "be eating tenderloin." His remark led to the area being dubbed *the tenderloin*, that name eventually transferred to similar places throughout the country.

tender loving care (TLC). From Shakespeare's *Henry VI, Part 2*, spoken by the king after a mob outside threatens to break in: "Go, Salisbury, and tell them all from me, / I thank them for thy tender loving care." TLC is short for tender loving care. Nigel Rees in *Mark My Words* (2002) notes that one of his correspondents in the U.S. "recalls being told in the 1940s that there was a study done in founding hospitals where the death rate was very high, which showed that when nurses picked up the babies and cuddled them more frequently, the death rate went down. This led to the prescription, TLC *t.i.d.* (three times a day; from the Latin *ter in die*)."

tenements. American city tenements are bad enough today, but toward the end of the 19th century they were horrors, always without heat, water, or bathrooms, often with names like the Dirty Spoon or Bandit's Roost and located on streets actually named Poverty Gap, Bottle Alley, Penitentiary Row, etc. Often they were boardinghouses with signs advertising "Five Cents a Spot," "Hallway Space 3 cents" and "Standing Room Only."

10-foot pole. See WOULD'N'T TOUCH IT WITH A 10-FOOT POLE.

1040 form. According to one story, U.S. personal income tax forms are called 1040s because in 1040 A.D. Lady Godiva rode naked through the streets of Coventry, England, protest-

ing taxes. Another yarn has it that the infamous forms are so named because in 1040 B.C., Samuel, the last of the prophets, gave in to his people's demands that he give them a king, yet warned them that a king would require them to pay taxes. But though these tales are as ingenious as some tax deductions, the I.R.S. says "the mundane truth is that the four-digit number happened to be the next available in the forms numbering system when the 1040 was devised in 1913."

10-gallon hat. Although the hat's name is usually thought to be an indication of its liquid holding capacity, the Americanism *10-gallon hat* has its origins in the Spanish word for braid, *galón*. The wide-brimmed hats worn by cowboys were originally decorated with a number of braids at the base of the crown.. Actually, a ten-gallon hat holds about a gallon of liquid. See STETSON

Tennessee. Admitted to the Union in 1796 as our 16th state, Tennessee's name derives from the name of a Cherokee settlement in the area that is of unknown origin. It had been called Tenaqui by the Spanish in the 16th century and went by the name State of Franklin, after Ben Franklin, from 1784–88. See VOLUNTEER STATE.

tennis. Tennis supposedly takes its name from the tinnisi cloth (made in Egypt) that was used to cover the balls in an early form of the game. As for lawn tennis, Weekley tells us that it was also called grass-court tennis and was invented in Wales in 1873 by British army Major Walter C. Winfield. However, another British officer, Major Hickey writes in his memoirs: "The game we played was an invention of our own and called field-tennis."

Tennis, anyone? *Tennis, anyone?* began life as *Who's for tennis?* in England about 80 years ago, also serving as a conversation opener or an ironic comment on the pastimes of the leisured classes. Partridge believes it may have arisen "as a good-natured comment upon lawn tennis as an adjunct of tea parties in the vicarage garden or at country-house weekends," but it has also been suggested that the catchphrase comes from some turn-of-the-century English comedy of manners in which "an actor sprang through French windows calling, 'Anyone for tennis?'"

tennis racket. See RACKET.

Tennyson bindings. The 19th-century expression *Tennyson bindings* is used to indicate affectation of culture. According to Willard Espy, in *O Thou Improper, Thou Uncommon Noun*: "A *nouveau-riche* matron was showing a friend of similar stripe her library, which had been stocked by interior decorators 'and here,' she said, 'is my Tennyson,' 'No, no, darling,' corrected her friend. 'Those are green. Tennyson is blue.'" Chewing gum millionaire William Wrigley bought books by the yard. "Measure those bookshelves with a yardstick and buy enough books to fill 'em," he told his secretary while furnishing his Chicago apartment on Lake Shore Drive. "Get plenty of snappy red and green books with plenty of gilt lettering. I want a swell showing." At least more original is the advice *Lady Gough's Book of Etiquette* gave library owners in Victorian times: "Don't place

books by married male authors next to those by female authors and vice versa.”

tent. See TENTERHOOKS.

tenterhooks. Tenters were frameworks used to stretch woven cloth in the days before modern manufacture (as early as the 15th century) and tenterhooks were the pins or hooks that held the cloth in place. Tenterhooks was later applied to the hooks meat is suspended from in butcher shop windows and it is probably from this use of the word that we get the figurative *on tenterhooks*, to be in a state of “painful” or anxious suspense, your curiosity “torturously stretched” to its limits. The dreaded rack, an instrument of torture that literally stretched people, was also called the tenter and no doubt reinforced the meaning of the phrase, first recorded in the 17th century. *Tenter* probably derives from the same Latin word (*tentus*, “stretched”) as *tent*, a tent being stretched canvas.

Tenth Commandment. Tenth of the Ten Commandments: “Thou shalt not covet thy neighbor’s house, thou shalt not covet thy neighbor’s wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor any thing that is thy neighbor’s.” See TEN COMMANDMENTS.

the 10th muse. In Greek mythology there are commonly nine MUSES, the nine daughters of Zeus and Mnemosyne, each of them identified with individual arts and sciences. *The 10th muse* is a name traditionally given to Sappho, a Greek poet of Lesbos in about 600 B.C., who is thus the only real person to be accorded the status of a Muse. See LESBIAN.

tepee on wheels. American Indians gave this American name to the covered wagons of settlers on the Oregon Trail.

Tepee project. An early monitoring system for detecting nuclear explosions and rocket launchings; derived from Thaler’s Project, which was named for Office of Naval Research scientist William J. Thaler.

teredo; shipworm. From time immemorial the sharp-toothed teredo, or shipworm, which eats its life away, has been gnawing gluttonously at ships, piers, jetties, and every other wooden object man has dared to leave in the water for any appreciable period. This masticating mollusk of the genus *Teredo* has in the process caused damage amounting to billions of dollars. In San Francisco Bay, from 1917 to 1921, to cite just one example, shipworms damaged wharves and piers to the cash register tune of over \$25 million, taking their rightful place beside the termite, the furniture beetle, and the death-watch beetle as one of nature’s finest demolition experts. In 1733 the British scientist Godfrey Sellers proved that the teredo is a bivalve mollusk, although it differs widely from clams, oysters, and other members of that group. Since then scientists have preferred to call the shipworm by its Latin generic name, *Teredo*, which comes from the Greek for “to rub hard, wear away, bore.” The reputation of these teredos can be seen in the many mentions of their name in England, that great maritime nation. One English politician called the opposition “teredos of every plank in the Ship of State.” See GRIBBLE.

termagant. Trivegant or Tervagent was a violent, noisy, overbearing character in old morality plays, in which he was erroneously called “a Mohammedan deity.” Careless pronunciation changed the name to *termagant*, which became our word for a violent, turbulent, or brawling woman, as well as an adjective for “violent; turbulent; brawling; and shrewish.” The term applied to men until about the 17th century, when it was applied to both men and women.

termination with extreme prejudice. This is a CIA euphemism for assassination, which apparently originated in the 1960s. The CIA reportedly had (maybe still has) a special assassination unit called the Health Alternative Committee.

terminological inexactitude. A euphemism invented by Winston Churchill. It means a lie.

terra firma. This Latin term for “firm land,” dating back at least to the 19th century, was first applied to the firm land of the continents, originally the Italian mainland territories controlled by Venice. Later *terra firma* came to mean any dry land as distinct from sea or air.

terra incognita. Latin for unknown or unexplored territory. The term is first recorded in John Smith’s *Description of New England* (1616).

a terrible beauty is born. The words are from W. B. Yeats’ poem “Easter 1916,” in which they appear at the end of three stanzas. Yeats wrote the poem on September 25, 1916, five months after the Easter Rising, in which Irish nationalists rose up against the British and proclaimed Irish independence. The event actually took place on Easter Monday, 1916.

terrier. See AIREDALE TERRIER.

terrorist. During the French Revolution period called the Reign of Terror, as many as 17,000 people may have been put to death for opposing the regime before the bloodshed ended in 1794 with the bloody-minded Robespierre’s guillotine execution. Certainly thousands were killed in Paris alone by what the French called *terroristes*, agents or partisans of the revolutionary tribunal who practiced terrorism. Soon the new word, shortened to *terrorist* in English, came to describe any such “hell hounds . . . let loose on the people,” as Edward Burke called them. See GUILLOTINE; SUICIDE BOMBER.

testicles. *Testicles* is from the Latin *testiculi* meaning “little witnesses.” Apparently, in this case the witnesses testify to their owner’s masculinity. From this come our words *testify*, *testimony*, and *testicles*, all deriving from the Latin. All such *test* words—including *protest*, *protestant*, and *attest*—have this *testicle* connection. Some time ago *Ms.* magazine published a letter stating: “I protest the use of the word ‘testimony’ when referring to a woman’s statements, because its root is ‘testes’ which has nothing to do with being a female. Why not use ‘ovarimony’?”

test tube baby. See FALLOPIAN TUBES.

tetched. *Tetched* isn't an American dialect term. This word for "slightly mad, touched" derives from the late Middle English *techyd*, meaning "marked or blemished." *Techyd* was confused in sense with *touched*, also coming to mean "a little crazy."

tête à tête. *Tête* is the French word for "head," familiar to us in expressions like *tête à tête*, literally "head to head," which means a private conversation between two people. Interestingly, this important French word came into French from Latin slang. Few people would guess that the French word for head was originally the Latin slang for "pot."

Teton Range. A mountain range in northwestern Wyoming that takes its name from the French *téton* (breast) because the mountains somewhat resemble women's breasts.

Tetragrammaton. See FOUR-LETTER WORD.

Texas. Texas takes its name from a Caddo Indian word meaning "friends or allies" (written "texas," "texios," "tejas," "teyas") applied to the Caddos by the Spanish in eastern Texas, who regarded them as friends and allies against the Apaches. See also NORTH DAKOTA.

Texas leaguer. A cheap hit that falls between the infield and the outfield in baseball is called a Texas leaguer because back in 1886 three players who had been traded up to the majors from a Texas league team enabled Toledo to beat Syracuse by repeatedly getting such hits. After the game, the disgusted Syracuse pitcher described the hits as just "little old dinky Texas leaguers," and the name stuck.

Texas longhorn. A once-common breed of southwestern beef cattle developed from cattle introduced from Spain and noted for their fecundity and resistance to disease. Also called coasters, these cattle have horns that can measure over 77 inches.

Texas mouse. A euphemism for a rat, or rather a failed euphemism. Back in February 1983, American Airlines captain Karl Burrell reported a big rat foraging aboard his plane in the first-class cabin as he prepared for takeoff to New York from Dallas. "The stewardesses prevailed on the captain to turn the plane around, and we sat on the ground for 45 minutes," said an eyewitness. "Finally, Captain Burrell polled all the first-class passengers and they decided we should go on with the rat. It was at least six inches long. We heard the captain say to the control tower, 'Let them take care of the problem in New York.'" The airline's public relations director euphemistically called the rodent a "Texas mouse," but a local exterminator said, "Smells like a rat to me—we don't get six-inch mice even in Texas." The rat was killed once the plane landed at La Guardia.

Texas T-shirt. William Safire's "On Language" column in the *New York Times* (March 27, 1991) defined this as a humorous derogatory term for "one of those disposable [toilet] seat bibs that are found in interstate roadside bathrooms."

Texas turkey. See ARMADILLO.

Texas twist. An intricate twist in the horns of Texas longhorn cattle, whose "rocking chair" horns can often measure over 77 inches. What made this bull additionally attractive were the many cows and steers sired by him.

Texas wedge. A humorous golfing term, not for a wedge club but for a putter "when it can be used for a short approach shot over very flat rather bare ground, as might be found in Texas," according to Stuart Berg Flexner in *Listening to America* (1982).

Texas yell. See REBEL YELL.

Tex-Mex. This word, dating back to about 1945, means of or pertaining to aspects of culture developed in Texas but based on or strongly influenced by Mexican elements, such as Tex-Mex cooking.

Thailand. Since 1937, Thailand has been the official name of the former kingdom of Siam. *Thailand* means "Land of the Free." The Southeast Asian nation has a population of over 40 million.

Thaïs. Like ASPASIA the proper name *Thaïs* has become a literary euphemism for a courtesan. Thaïs was a Greek courtesan with whom Alexander the Great consorted in 330. One night she suggested that he set fire to the palace of Xerxes in Persepolis. This Alexander did, burning it to the ground.

Thames. See SET THE THAMES ON FIRE.

thanks for nothing. One might think this is a sarcastic contemporary rejoinder to someone who has made an unacceptable offer. Its ancestor, however, is a line from Cervantes's *Don Quixote* (1605–15): "Thank you for nothing." Others of the several hundred phrases first recorded in that great novel include *the sunset of my brows; in a pickle; without a wink of sleep; no limits but the sky (the sky's the limit); a finger in every pie; every dog has its day; you may go whistle; I give up the ghost; let every man mind his own business; within a stone's throw; naked I came into this world, and naked must I go out; thou has seen nothing yet; give the devil his due; wild-goose chase; I shall cry my heart out; split his sides with laughter; think before thou speakest; let us forget and forgive injuries (forgive and forget); I must speak the truth and nothing but the truth; I begin to smell a rat; birds of a feather flock together; the proof of the pudding is in the eating; the fair sex; neither will I make myself anybody's laughingstock; forewarned forearmed; turn over a new leaf; honesty's the best policy; he would not budge an inch; with a grain of salt; mum's the word; the pot calls the kettle black; there were but two families in the world, Have-much and Have-little (haves and have-nots).*

Thanksgiving Day. A national holiday in the United States that some say was inaugurated by Abraham Lincoln but was actually first celebrated by George Washington in 1789 and before this by the Pilgrim colonists and neighboring Indians in 1621.

thank-ye-ma'am. An American courtship term that dates back to 19th-century New England. Roads at the time had diagonal earthen ridges running across them that channeled off rainwater from the high to the low side and prevented washouts. Rural Casanovas driving their carriages along these rude roads made sure that they hit these ridges hard so that their female companions would bounce up in the air and bump into them. With the head of his sweetheart so close, the gentleman could steal a kiss, and usually expressed his gratitude with a *Thank-ye-ma'am*, that expression becoming synonymous with a quick kiss or any hole in the road that caused riders to bump up and down.

thank you. In Kenya *thank you* is the customary English reply when someone says “good-bye.”

thank your lucky stars. The idea that the stars sway human destiny is as old as mankind. The phrase *thank your stars* goes back at least to Ben Jonson, who used it in *Every Man Out of His Humour* (1599): “I thanke my Starres for it.” *Thank your good stars* is next recorded in 1706, and the variation *thank your lucky stars* is a relatively modern development of the 19th century or so.

that and a nickel will buy (or get) you a cup of coffee. Commonly said when information or goods offered by someone is considered of minimal value. Today, we would better say *That and a dollar will buy (or get) you a cup of coffee*.

that damned cowboy. Vice President Theodore Roosevelt, who had been a North Dakota rancher from 1884 to 1886 and formed a cowboy “Rough Riders” unit during the Spanish-American War, became president of the United States in 1901 when William McKinley was assassinated. Political boss Senator Mark Hanna’s comment was “Now look, that damned cowboy is president.”

that dog don't hunt. That idea or theory isn't logical, doesn't wash; popularized in the movie *J.F.K.* (1991), set in New Orleans and Texas.

that gets me. *Get one's dander up, get one's Irish up, get one's Indian up*, and even *get one's Ebenezer* (Ebenezer was a nickname for the devil) *up*, were only a few of the many *get me . . .* terms meaning “to become angry” that were common in 19th-century America. So common were such terms that *that gets me* came to mean “that angers or annoys me.”

That Guy. An unusual pseudonym, in this case for New York City mob boss Vincent “Vinnie the Chin” Gigante, whose mob members are not permitted to speak his name; they are required to say “That Guy” while rubbing the chin, when speaking of him.

that rings the bell. That's perfect, just what we wanted. This Americanism, first recorded in 1904, is almost certainly from the carnival game where one tests his strength by driving a weight up a pole with a mallet and wins if he rings the bell at the top.

that's a doozy. Said of something splendid, outstanding, as in “That's a doozy [of a striped bass you caught].” The term was common in the 1940s and 1950s but is less frequently heard today. It is first recorded in 1903 and is probably an alteration of *daisy*, influenced by the last name of the great Italian actress Eleonora Duse (1859–1924), who was indeed a doozy of a performer. It can also mean something outstandingly bad, as in “That's a doozy of a cut you got.”

that's a good one. That's a great joke or story, although it can also mean “that's quite a lie.” It is in the first sense that the expression was first recorded, in William Wycherley's *The Country Wife* (1672). There Alithea tells Sparkish he ought to hate his rival for courting her. “That's a good one!” Sparkish says. “I hate a man for loving you! If he did love you, 'tis but what he can't help; and 'tis your fault, not his, if he admires you.”

that's a hell of a note. *Note* in this expression probably refers to a badly tuned note on a musical instrument, not a counterfeit banknote. The words mean “something disagreeably or unpleasantly surprising”—“What a revoltin' development!” as one TV comedian of old put it. The expression is an Americanism first recorded in 1871.

That's all, folks! These are the concluding words of many *Merry Melodies* cartoons produced by Warner Brothers since about 1930. It is said that Mel Blanc (1908–89), the voice of Bugs Bunny and other *Merry Melodies* cartoon characters, chose the words for his epitaph. I've read that others have done so too. *See also* WHAT'S UP, DOC.

that's all she wrote. Meaning that's the end of it, it's finished, that's all there is, *that's all she wrote* is first recorded in 1948 as college slang, but probably dates back before World War II. It may have derived from the Dear John letters breaking up a relationship that some soldiers received from wives and sweethearts while away from home. This seems to be indicated by its use in James Jones's novel *From Here to Eternity*, which takes place just before World War II: “All she'd have to do, if she got caught with you, would be to holler rape and it would be Dear John, that's all she wrote.”

that's a no-no; no-no. *No-no* is baby talk first recorded in 1942 that means “something is forbidden, must not be done,” as in “that's a no-no,” a phrase frequently heard today. Television's *Rowan & Martin's Laugh In*, which premiered in 1968, featured the expression, making it a national catchphrase.

that's George. Some anonymous eponymous George may have inspired the coining of *that's George*, or *that's real George*, but no one has ever revealed a real George behind the words. *That's George*, meaning “excellent, great, or fine” (“That's a real George car he's got there”) was first recorded in 1930, far too late for George Washington or George III to be responsible, as someone has suggested.

that's how the cow ate the cabbage. An expression to indicate the speaker is laying it on the line, telling it like it is, getting down to brass tacks—with the connotation of telling someone

what he or she needs to know but probably doesn't want to hear. According to Little Rock attorney Alston Jennings, who submitted this southernism to Richard Allen's February 2, 1991, "Our Town" column in the *Arkansas Gazette*, the expression has its roots in a story about an elephant that escaped from the zoo and wandered into a woman's cabbage patch. The woman observed the elephant pulling up her cabbages with its trunk and eating them. She called the police to report that there was a cow in her cabbage patch pulling up cabbages with its tail. When the surprised police officer inquired as to what the cow was doing with the cabbages, the woman replied, "You wouldn't believe me if I told you!"

that's life; that's the way it goes; that's the way the ball bounces.

That's life, meaning "that's fate, that's the fortunes of life, the way things happen," probably dates back at least to the turn of the century. It is thought to be a loan translation of the French *c'est la vie*. The American expression *That's the way the ball bounces*, meaning the same, appears to have originated with U.S. forces in Korea, while the synonymous *that's the way it goes* came into the language a little later.

that's not writing, that's typing. The oft-heard remark was made by Truman Capote when someone told him that Jack Kerouac boasted that he never rewrote a manuscript after putting the words on paper. Kerouac did type out his famous novel *On The Road* on one continuous roll of teletype paper.

that's really gross. In Australia this expression means "that's really great, very good," just the opposite of what it means in American English.

that's show biz! That's how things are and you'd better accept it, there's nothing else to do. Though it sounds like a modern expression, the words date back to the mid-19th century. *That's life* is a similar phrase, as is *That's the way the world whirls*.

that's that. Common in both the U.S. and England for "that's the end of it," *that's that!* probably dates back to World War I, though it isn't recorded until the late 1920s. Variants are *and that's that* and *and that is that!*

that's the ball game. One would suspect that phrases like this, meaning that's the end of anything from a sports contest to an election, have been used since the first baseball game was played. So were expressions like *it's a whole new ball game*, "it's a new beginning," and *it's the only ball game in town*, "it's the only choice available."

that's where the West begins. An expression from Arthur Chapman's poem "Out Where the West Begins," the refrain of which goes: "Out where the handclasp's a little stronger, / Out where the smile dwells a little longer, / That's where the West begins."

that was no lady—that was my wife. The vaudeville comedian's answer to the question "Who was that lady I saw you with last night?" The joke was old when it was used in British music halls over a century ago.

that won't wash. That (usually exaggerated) excuse, story, or alibi won't do. Though it seems like a recent coinage this expression dates back to about the early 1840s in England. It was originally said of poor fabrics that wouldn't hold up to washing. "That willn't wash, miss," is said by a character in Charlotte Brontë's *Shirley* (1849), set in the time of the Luddite riots when the Yorkshire wool industry suffered great losses. "He won't wash," the didactic British novelist and poet Charles Kingsley (1819–75) said about the poet Robert Browning's literary reputation in a letter to a friend.

the. The definite article *the* is, according to at least three major studies, the most frequently used word in English. *I*, surprisingly enough, only ranks among the top 10 in two of the three surveys.

theater. The word *theater* or *theatre* comes from the Greek *theatron*, a place for seeing. No theater existed in this sense of the word before the planned theaters of the ancient Greeks; all previous plays were performed in such places as temple courts and terraces. The very first theater, so far as is known, was the theater of Dionysus at Athens, the ruins of which can be seen today. It was patterned on "natural theaters" at the foot of hillsides on which spectators stood or sat. Rome's Colosseum, built in A.D. 180 and covering five acres, was the largest of the classical theaters or amphitheaters measured by its dimensions and seating capacity, with a total of 87,000 seats. According to *The Guinness Book of World Record* (1998), Australia's Perth Entertainment Centre (1976) is the world's largest indoor theater, with 8,003 seats. See COLLOSSEUM; YOUNG FOLK OF THE PEAR GARDEN.

theater of the absurd. See ABSURD.

the child is born! An expression seamen sometimes use to mean "a job is done."

Theon's tooth. A bitter, biting critic is sometimes said to have Theon's tooth. The expression commemorates the ancient Roman poet Theon, noted for his sharp satires.

Theophrastus. No one knows the real name of the Greek philosopher Theophrastus (ca. 37–ca. 287 B.C.). So eloquent was this pupil of Aristotle's that he is remembered only by the name his master gave him: Theophrastus—meaning that he spoke like a god. Another godlike philosopher was the French visionary preacher and pamphleteer Catherine Theot (1725–94), who believed that she was the mother of God and changed her name (*Theot*) to *Theos*, "God." Chilean poet Vicente Huidobro (1893–1948) often signed himself "The God of Poetry." *Godlike* was a nickname of American statesman Daniel Webster.

therblig. A term used in time and motion study, meaning "any of the basic elements involved in completing a given manual task that can be subjected to analysis," *therblig* is an anagram of the name of American engineer Frank B. Gilbreth (1868–1924) of *Cheaper by the Dozen* fame.

there, but for the grace of God, goes God. Winston Churchill is credited with coining this phrase. Noticing the pompous

Sir Stafford Cripps pass by him one day, he turned to a friend and observed, "There, but for the grace of God, goes God."

there ain't no horse that can't be rode / there ain't no man that can't be throwed. An old saying common among American cowboys.

there are no atheists in foxholes. There has been controversy about this phrase, but most sources attribute it to Father William Thomas Cummings, a Catholic priest who in 1942 delivered it in a field sermon on Bataan. *Atheism* derives from the Greek *atheos*, "without," plus *theos*, God: "without God."

there but for the grace of God go I. On seeing several criminals being led to the scaffold in the 16th century, English Protestant martyr John Bradford remarked: "There, but for the grace of God, goes John Bradford." His words, without his name, are still very common ones today for expressing one's blessings compared to the fate of another. Bradford was later burned at the stake as a heretic.

thereby hangs a tale. The phrase comes from a little poem in Shakespeare's *As You Like It* (1599):

And so, from hour to hour we ripe and ripe,
And then from hour to hour we rot and rot,
And thereby hangs a tale.

there's a one-eyed man in the game. Watch out for a cheat. The expression had its origins in poker, from an old superstition that it was unlucky to play cards with a one-eyed gambler.

there's as good fish in the sea as ever came out of it. Don't be discouraged if you lose one chance; there will be another just as good. A proverbial English saying since the late 16th century.

there's a sucker born every minute. Showman P. T. Barnum lived by this principle, but he probably didn't invent the phrase so often attributed to him. Since there is no recorded instance of Barnum uttering the words, they must be credited to "Anonymous," like another famous American cynicism, *Never give a sucker an even break*, which was the title of a W. C. Fields movie. Terms that Barnum did coin or help popularize include JUMBO, BANDWAGON, SIAMESE TWINS, the Bearded Lady, the Wild Man of Borneo, Swedish Nightingale, Tom Thumb, Three-Ring Circus, and the Greatest Show on Earth.

there's many a slip twixt (between) cup and lip. This ancient expression, which means that no plan is sure until it is accomplished, is supposed to have originated with a slave of the legendary Ancaeus, the son of Poseidon. The abused slave told his cruel master that he would not live to drink the wine from his treasured vineyards. Spiting him, Ancaeus took a cup of new wine and prepared to drink it. "There's many a slip betwixt cup and lip," the slave quipped and just then another slave entered the room with news that a wild boar was rooting up vines in the vineyard. Putting down his untasted cup, Ancaeus ran out to deal with the wild boar, which proceeded to kill him.

there's no love lost between them. Recorded at least since the early 17th century:

No love between these two was lost.
Each was to other kind.

(*Babes in Wood*, 17th century)

there's no there there. Gertrude Stein's famous declaration about her native Oakland, California. See also LOST GENERATION.

there's nothing in the middle of the road but yellow stripes and dead armadillos. An admonition against excessive moderation attributed to Texas politician Jim Hightower.

there's nothing new under the sun. This old saying goes back to the 16th century and derives from the biblical "There is no new thing under the sun," found in Ecclesiastes 1:9.

there's the rub. Though Shakespeare didn't invent the expression (it was old when he used it) he did make the words famous in Hamlet's soliloquy:

To be or not to be: that is the question . . .
To sleep: perchance to dream: ay, there's the rub.

The rub in the phrase means "the difficulty" and may originally have referred to any hinderance in the sport of bowls that prevented the bowled ball from moving smoothly along the course. Another theory, however, claims *the rub* derives from a spoon rubbing inside a mixing bowl and preventing smooth mixing.

"There Was a Little Girl." The well-known poem by Henry Wadsworth Longfellow was written just after he had witnessed his little daughter Edith strongly protesting her mother's attempts to curl her hair:

There was a little girl
Who had a little curl
Right in the middle of her forehead;
And when she was good
She was very very good
But when she was bad she was horrid.

there were giants in the earth in those days. There seems always to be a feeling, among older people at least, that the present generation is a degeneration of generations past. The notion is an ancient one, the above expression, for example, recorded in the book of Genesis.

thermos. See DEWAR FLASK.

thersitical. Among the loudest, most foulmouthed men of all time was Thersites, an officer in the Greek army at the siege of Troy. The ugly, deformed Thersites, whose name means "the Audacious," liked nothing better than arguing, we are told in the *Iliad*, his mean temper sparing no one, be he humble or great. Greek legend tells us that he reviled even Achilles—laughing at his grief over the death of Penthesilea, the queen of the Amazons—and that Achilles promptly kayoed him permanently with one blow to the jaw. Thanks largely to Shakespeare's treatment of the scurrilous Thersites in *Troilus and Cressida*, we have the adjective *thersitical*, "loudmouthed and foulmouthed." See HECTOR; NESTOR; STENTORIAN.

thesaurus. First recorded as the word for a collection of synonyms in 1852, with the publication of Peter Mark Roget's *The-saurus of English Words and Phrases* (often called simply *Roget's* today), our word *thesaurus* can be traced all the way back to the Greek *thesauros*, treasury. It was used in this sense of treasury in English long before it was applied to a collection of synonyms, dictionaries, for example, being called *thesauruses*.

thespian. A *thespian* is an actor, and as an adjective the word means "pertaining to tragedy or dramatic art." Both words pay tribute to the first professional actor. According to legend, Thespis was a Greek poet of the late sixth century B.C., who recited his poems at festivals of the gods around the country; he is even said to have invented tragedy and to have created the first dialogue spoken on the stage in the form of exchanges between himself as an actor reading his poems and responses by a chorus. Thespis is probably a semilegendary figure, his name possibly an assumed one. The popular story that he went around Attica in a cart in which his plays were acted is of doubtful authenticity, but may be partly true. See ROSCIAN. In recent times *thesping* has become theatrical slang for acting.

they never go back to Pocatello. An old political saying meaning that legislators who lose elections don't usually return home, but remain in Washington, D.C., in some other occupation. Pocatello is a city of some 50,000 inhabitants in southeast Idaho.

they shall beat their swords into plowshares, and their spears into pruning hooks, nation shall not lift up sword against nation, neither shall they learn war anymore. From the biblical book of Isaiah.

they shall not pass! The French rallying cry in World War I when on February 20, 1916, the Germans tried to break the deadlock in the Great War by launching a huge assault on the town of Verdun. The French did hold fast, though they suffered enormous losses, a total of over 1 million men eventually killed on both sides in the nine-month battle for the city, which was the war's longest and bloodiest battle. Verdun had to be almost completely rebuilt after the war. The words *They shall not pass* (*Ils ne passeront pas!*) are attributed by some to MARSHAL PÉ-TAIN, the great French hero of World War I, whose name became synonymous for *traitor* in World War II.

thick as Jesse. Very thick-skinned, unreasonably resistant to arguments. Another reference (like Jumbo) to the name of an elephant—in this case the London Zoo's pachyderm Jesse, who was very popular in the late 19th century.

thimblorig. Thimblorig is a sleight-of-hand swindling game in which the operator palms a pea while appearing to cover it with one of three thimblelike cups, and offers to bet that no one can tell under which cup the pea lies. The name is first recorded in about 1815 and is still heard, but is mainly known as the shell game today after the walnut shells it is played with.

thin air. See VANISH INTO THIN AIR.

thingamabob; thingamajig. See DINGBAT.

A thing of beauty is a joy forever. Not a proverb but from John Keats's poem "Endymion," which the poet based upon the legend of Endymion, the handsome shepherd of Greek mythology who was loved by the moon goddess Selena. The full line from the long poem, dedicated to poet Thomas Chatterton, goes:

A thing of beauty is a joy for ever:
Its loveliness increases; it will never
Pass into nothingness; but still will keep
A bower quiet for us, and a sleep
Full of sweet dreams, and health, and quiet breathing.

The poem was written in September 1818, the beginning of a year ending in September 1819 that became known as "The Great Year," when Keats, only 24, wrote over a dozen masterpieces, including "La Belle Dame sans Merci," "Ode to a Nightingale," and "ODE ON A GRECIAN URN." Yet for all this, he would later write to Fanny Brawne (Feb. 1820): "If I should die, said I to myself, 'I have left no immortal work behind me—nothing to make my friends proud of my memory—but I have loved the principle of beauty in all things, and if I *had* time I would have made myself remembered.'" See DEATH'S HEAD MOTH.

thin ice. See CAT ICE; SKATE ON THIN ICE.

thinking cap. This expressions seems to have originated in the 17th century as *put on your considering cap*, that is, "take time to think something over." At the time square-cut, tight-fitting caps were worn by scholars, clergymen, and jurists, who were all regarded as intelligent "thinking men" by the masses. Any or all of these professional men could have suggested the phrase, the common man believing that their caps helped them to think. But *considering cap* is most likely a reference to the fact that English judges once put on their caps before passing sentences in all cases, just as they still do before passing the death sentence.

think out of the box. Here's another one that may not be recorded anywhere else. *Think out of the box* means "to find unconventional solutions to problems, to be unbound by traditional thinking." Its origins are unclear, but the expression has been common in business circles for a few years.

thinks one hung the moon and stars. Someone who loves somebody madly, and blindly, as if that person were a god. According to Professor Frederick Cassidy, who is in the process of compiling a monumental study of American regionalisms, this expression is a southernism. It has been around since at least early in this century and by now, deservedly, has spread to other regions of the country.

thin red line of heroes. "The Russians dashed on toward that thin-red line streak tipped with a line of steel," wrote W. H. Russell, the greatest war correspondent of his day, in reporting the Battle of Balaclava for the *London Times*. He was describing the 93rd Highland Infantry which hadn't formed in a defensive square. Rudyard Kipling scoffed at this romantic notion in his poem "Tommy," where his British soldier remarks about a *thin red line of heroes* and later adds "We aren't no thin red heroes."

Third Commandment. Third of the Ten Commandments: “Thou shalt not take the name of the Lord thy God in vain.” See TEN COMMANDMENTS.

third degree. As a term for “prolonged questioning and rough handling of a person by the police in order to obtain information or a confession of guilt,” *to get the third degree* dates back only to about the 1890s in America. The phrase has no connection with “murder in the third degree” or any language of criminal law. The third degree is the highest degree, that of Master Mason, in Freemasonry. Any Mason must undergo very difficult tests of proficiency before he qualifies for the third degree and it is probably from these “tests” that the exhaustive questioning of criminals came to be called the *third degree*, though there is no brutality, physical or mental, involved in the Masonic exam.

third rail. The most daring of us who played in the railyard and swam in the river were those who walked on the thick boards covering the third rail. A few were even electrocuted by the deadly rail and it came to be associated with death in phrases like “the third rail of American politics” in as early as 1982. A much fuller account can be found in William Safire’s *On Language* column in the *New York Times* of February 18, 2007.

third rate. See FIRST RATE.

Third Reich. See REICHSTAG.

The Third World. The underdeveloped countries of the world, those of Asia, Africa, and Latin America, who weren’t aligned with either the Communist or non-Communist bloc during the cold war (qv). The phrase is a translation of the French *tiers monde*. It is usually said to have been coined by French scholar Alfred Sauvy (1898–1990) in the early 1950s, though Indian leader Jawaharlal Nehru (1889–1964) has also been credited with the words. The English translation of *tiers monde* doesn’t seem to have been recorded until 1963. The terms *First World* (the West) and *Second World* (Communist) haven’t been much used.

30 (thirty). For over a century the symbol 30 has been used by reporters to mark the end of a typewritten newspaper story. It comes either from the old telegraphy symbol indicating the end of a day’s transmission, a kind of “Goodnight, I’m closing up the office,” or from old printers’ jargon. The maximum line on Linotype composing machines is 30 picas, about five inches, and when an operator reaches 30 picas, he can go no farther.

38th parallel. See FORGOTTEN WAR.

30-something. Used to describe someone between 30 and 40 years old, *30-something* was popularized by the U.S. T.V. show of the same name in the late 1980s. Unlike the earlier term *29-plus*, which people once used to hide their age, *30-something* is not an attempt at such concealment.

this great stage of fools. This world. The full line, from Shakespeare’s *King Lear* (1604–5), is “When we are born, we cry, that

we are come / To this great stage of fools.” Lear’s words (act IV, scene 6) are preceded by his lines “Thou know’st the first time that we smell the air / We waul [wail] and cry. . . .”

this is a hell of a way to run a railway. An example (see MUTT AND JEFF) of a cartoon contributing an expression to the language. In this case the common saying describing something in a state of confusion possibly originated in a cartoon published in a 1932 issue of *Ballyhoo Magazine*. The cartoon shows two trains coming at each other on the same track and about to crash. “This is a hell of a way to run a railway,” a railway signalman says. But the expression may date back to the turn of the century, according to the recollections of several word enthusiasts who remember hearing it that far back.

this isn’t our (my) first rodeo. We aren’t inexperienced, this isn’t the first time we’ve (I’ve) played this game, done this, etc. Heard as a comment about Alabamians during the devastating hurricanes and tornadoes of 2004. See RODEO.

this is the sort of nonsense up with which I will not put. Winston Churchill made the above comment when told that a sentence can never be ended with a preposition.

thistle. The thistle became the heraldic emblem of Scotland in the eighth century or earlier in commemoration of the role it played in an attack by the Danes on Stirling Castle. Barefooted Dane scouts stepped on thistles during that night attack, alarming the Scots and enabling them to defeat the raiders. All thistles are members of the *Compositae*, one of the largest families of plants in the world, including among its relatives such fine garden flowers as marigolds, asters, cosmos, dahlias, and chrysanthemums. But thistles are generally thought of as a prickly weed that is little valued. Abraham Lincoln’s lowest estimate of a man was to call him a thistle. The word dates back in English to at least A.D. 752 and its origins are unknown.

Thomas Jefferson still survives. These famous last words are famous all right, but they are false, despite being widely believed. Former American presidents John Adams and Thomas Jefferson both died on July 4, 1826, 50 years after the founding of the United States, but Adams’s last words were not “Thomas Jefferson still survives.” Jefferson actually died a few hours before Adams and Adams’s last words were “Independence forever.” Jefferson’s last words were “I resign my spirit to God, my daughter to my country.”

Thomas’ Muffin. A common name for an English muffin, even though it is a trademark. It honors Samuel Bath Thomas, founder of the S. B. Thomas Company (called Thomas’ today), who opened a bakery in Manhattan in 1880 and sold English muffins made from a recipe his mother brought from England.

Thomism. The philosophy of St. Thomas Aquinas (ca. 1225–74), who has been called, among many more titles, the “Angelic Doctor,” the “Father of Moral Philosophy,” and the “Prince of Scholastics.” His name, Thomas of Aquino, comes from his birthplace in southern Italy, from where he set out as a Dominican friar on pilgrimages in search of truth and knowledge, against the wishes of his father, the count of

Aquino. His system of philosophy has greatly influenced Roman Catholic doctrines.

Thompson submachine gun. See TOMMYGUN.

thorn in one's side. The Talmud describes 10 classes of Pharisees, members of a strict, ascetic Jewish sect arising in the second century whose name in Hebrew means "apart" (from the crowd), "separated" (from the rest of mankind). These classes include the "Immovables," who stood like statues for hours while praying; the "Mortars," who wore mortars, or caps, which covered their eyes so that their meditations wouldn't be disturbed by the sight of passersby; and the "Bleeders," who put thorns in their trousers so that their legs would be pricked as they walked. The Pharisees' tendency to look upon themselves as holier than others gives us our modern definition of a Pharisee as "a self-righteous hypocritical person," and the "Bleeders" among the sect possibly inspired the saying *a thorn in one's side*. At least St. Paul may have had them in mind when he described a source of constant irritation or personal vexation as *a thorn in the flesh* in 2 Cor. 12:7. Then again, he may have simply taken the image from native plants like the buckthorn and acacia, whose thorns made travel difficult in the Holy Land. Over the years Paul's biblical phrase was altered to *a thorn in my side*, although the original is still used as well.

thorn in the flesh. See THORN IN ONE'S SIDE.

Thorn test. An early test for Addison's disease, devised by and named for Dr. George W. Thorn (1906–2005). See ADDISON'S DISEASE.

thou. See QUAKER.

thrasonical. *Thrasonical* is an adjective deriving from *Thraso*, the name of the braggart soldier in Terence's play *Eunuchus*. Caesar's thrasonical brag of I came, I saw, I conquered, and a similar character in Shakespeare's *As You Like It* derives from this eponymous character.

three-and-thirty wounds. According to Plutarch, Julius Caesar was stabbed three-and-thirty times by his assassins. Shakespeare believed the same, as he wrote in *The Tragedy of Julius Caesar* (1599).

three blind mice. Only "Hickory, dickery, dock" rivals the jingle "Three Blind Mice" as a popular rhyme: "Three blind mice, three blind mice, / See how they run, see how they run! / They all run after the farmer's wife, / Who cut off their tails with a carving knife, / Did you ever see such a sight in you life / As three blind mice?" Several historians have linked these words with three men whom England's Queen Mary I put to death during her reign, the farmer's wife being "Bloody Mary" herself. In the U.S. today *three blind mice* is often a taunt shouted at baseball umpires.

three bricks shy of a load. An Americanism dating back to the 1960s, which is also heard as "a few bricks shy of a load." It describes someone simple-minded, or a little crazy or eccen-

tric. The Australian version is *a few snags* (sausages) shy of a *Barbie* (barbecue). Americans also say half a bubble off of plumb.

three cheers. Much has been written about the REBEL YELL Confederate soldiers often gave when going into battle. The Union forces in the Civil War gave what was called three cheers when they attacked.

three-dog night. Sled dogs sharing beds with their masters provide warmth in frigid climes like Alaska, according to several possibly apocryphal stories. Thus a *three-dog night*, in which three dogs are enlisted, is very cold indeed, while *two-dog nights* and *one-dog nights* are somewhat milder.

three-fifths compromise. Under the U.S. Constitution, slaves were considered property and had no vote, but in order to redress the imbalance of representation between the populous North and the sparsely settled South, the southern states were allowed by the Founding Fathers to count each slave as three-fifths of a person for their congressional apportionment. This meant in practice that the more slaves there were, the less power they had and the more power the slaveholders enjoyed.

360-degree son of a bitch. Cormac McCarthy explains the term in his novel *Child of God* (1974), set in the Kentucky backwoods: "No, those were sorry people all the way around, every man jack a three hundred and sixty degree son of a bitch, which my daddy said meant they was a son of a bitch any way you looked at them."

three-martini lunch. A business lunch with martinis or other potables that is used as a tax write-off. Who invented the term is unknown, but pundit William Safire, in his *Safire's Political Dictionary* (1978), says South Dakota senator George McGovern popularized the expression when he ran for president in 1972, attacking the three-martini (or "martoonie") lunch as a common example of unnecessary business expense footed by the taxpayer. See MARTINI.

three-mile limit. This is usually the limit of territorial waters—that is, waters on their coasts—claimed by maritime nations. It is the limit claimed by the law of the U.S., Britain, and most other nations, but, as recent disputes have shown, some nations claim much wider jurisdiction over their waters.

a three-minute decision with two minutes for coffee. A decision with little or no importance at all. Heard at a defense secretary Donald Rumsfeld press conference December 16, 2003. Origin uncertain.

three on a match. A superstition dating from World War I, when three soldiers lighting their cigarettes on one match gave an enemy sniper enough time to sight and fire upon one or more of them, often resulting in death. See LUCIFER.

threepeat. A relatively new word, based on *repeat* and meaning to do something three times in a row, this expression may have been coined by New York Knicks coach Pat Riley in 1993,

when the Chicago Bulls won the National Basketball Association title for the third straight year. There is already some controversy about the word's first use. After the previous edition of this book was published, San Francisco running back Roger Craig claimed he used the word in 1990.

three-ring circus. See THERE'S A SUCKER BORN EVERY MINUTE.

three R's. The three R's are of course reading, writing and arithmetic. One persistent old story has it that they are so called because an early Lord Mayor of London, Sir William Curtis, a man with good intentions if not learned, once proposed a toast: "To Reading, Riting, and Rithmetic!"

three score and ten. The phrase is biblical, from Psalm 90:10, which advises that "The days of our years [our lifespan] are three score years and ten [seventy years]." The passage goes on to say, however, that "if by reason of strength they [our years] be fourscore [80] years, yet is their strength labor and sorrow, for it is soon cut off, and we fly away." See FOURSORE AND SEVEN.

3-7-77. The numerals 3-7-77, accompanied by a skull and crossbones, were first used by vigilantes to warn a man to leave the county; the measurement three feet wide, seven feet long and 77 inches deep is roughly that of a grave.

three sheets to the wind. "Sheets" aren't sails in nautical use; neither are they bed coverings. A sheet is the rope or chain attached to the lower corner of a sail that is used for shortening and extending it. When all three sheets on a three-sailed vessel (such as a ketch) are loosened, allowed to run free, the sails flap and flutter in the wind. Thus sailors would say a person slightly drunk had *one sheet to the wind* and that someone who could barely navigate had *three sheets to the wind*. The expression is first recorded in Richard Henry Dana's *Two Years Before the Mast* (1840). Professor Albert Huetteman of the University of Massachusetts advised me of another possible derivation of *three sheets to the wind*: "On Nantucket Island . . . we took the local tour bus, which stopped at the Nantucket windmill. The elderly gentleman tour guide told us a story of how the windmill keeper's job was to install the canvas sheets on the four arms of the windmill when the wind conditions were right. If he drank too much, however, he might only install three sheets, thus giving rise to the phrase, 'three sheets to the wind.'"

three sisters. The Iroquois Indian name for corn, pole beans, and squash, the staples of their diet before the Europeans came. The beans were planted next to the hills of corn and climbed the corn stalks, enriching the soil with nitrogen at the same time, while the broad-leaved squash plants that were planted shaded the soil, inhibiting weed growth.

three strikes and you're out; three-strikes law. These are both popular names for laws that provide a severe punishment for anyone who commits a third felony. The terminology is from baseball (see STRIKEOUT), though such laws have only been around since the 1980s. Writing of the three-strikes law in his book *The Ticket Out* (2004) author Michael Sokolove observes: "For God's sake, it doesn't even hold up as a baseball

metaphor. Three strikes and you're out? Well, yes, but then you get three or four more at bats in the same game. And then hundreds of at bats over a whole spring, summer, and fall of baseball. . . . [Baseball] is a sport of forgiveness and opportunity."

three-tailed bashaw. Hardly heard anymore, this old phrase is worth reviving. A *bashaw* is an important Turkish official, now more often called a *pasha*. *Three-tailed* refers to the horse tails attached to this official's standard, three being the most any bashaw boasted. The expression dates back to the 17th century.

the three wise monkeys. A name for the small statue group *see no evil, hear no evil, speak no evil* once common in Victorian drawing rooms.

threshold. Farmers originally threshed wheat, separated the grain from the chaff, by trodding on piles of it. According to one theory, this trodding seemed similar to wiping one's feet at the doorway of a house, which took the name *threshold* from such threshing. In any case, the word is first recorded in about A.D. 1000.

thrice. *Thrice*, "three times," isn't used much today in British or American English, but is still commonly heard in India, as in "She saw him thrice in one day."

trillionaire. A mocking nickname for millionaires, billionaires, and trillionaires who spend millions to make more money from space projects such as launching weather satellites. The word, a recent one, may or may not last, but the adventurous spirit will be here for years to come. (see the *New York Times*, February 5, 2006).

Throgmorton Street. Throgmorton Street is to England what Wall Street is to America—the center of the financial or business world. The Stock Exchange is located on this narrow London Street, which was named for Sir Nicholas Throgmorton (1515–71), who served Queen Elizabeth I as a soldier and ambassador to France and Scotland. The diplomat was given to intrigue, however, and also served two stretches in the Tower, though not stretched on the rack there.

through the mill. See PUT THROUGH THE MILL.

throw. When we say "These tickets are a dollar a throw," we mean they are a dollar apiece. The expression possibly derives from those carnival games where players throw balls, hoops, or rings, trying to win a prize. *Throw* meaning to deliberately lose a fight or game is an American sports and gambling term from the mid-19th century.

throw cold water on (something). To cold-pie or cold-pig someone, to wake him up by throwing cold water on him, was a practice well known and despised in Elizabethan times. Perhaps *cold-pigging* suggested the expression to *throw cold water on* (something), "to discourage a plan or practice," for it surely ruined many a good dream. But a lot of guesses are possible here. The expression is at least 200 years old and could also

have been suggested by hydrotherapy, the so-called ocean cold-water cures with which many a physical and mental illness was treated by dousing a patient with cold seawater. Anyway, the treatment was said to reduce the “mental heat” of extremely nervous persons and make them apathetic.

throw down the gauntlet. The English language contains two wholly different words spelled and pronounced *gauntlet*. The *gauntlet* in this expression means glove and derives from the medieval French *gantellet*, “a little glove.” Knights of the age of chivalry, though not so noble as they seem in romances, did play by certain rules. When one knight wanted to cross swords with another, he issued a challenge by throwing down his mailed glove, or gauntlet, and his challenge was accepted if the other knight picked up the metal-plated leather glove. This custom gave us the expression *to throw down the gauntlet*, “to make a serious challenge.” See RUN THE GAUNTLET.

throw dust in the eyes of. To mislead or deceive. Throwing dust or sand in the air to conceal their movements from their enemies on the field of battle was an ancient Arab trick in desert warfare. This is probably the origin of the expression, which Quintillian used figuratively as early as A.D. 80 to describe the great Roman orator Cicero: “He threw dust in the eyes of the jury.”

throw fear (caution) to the wind. See SECOND CHILDHOOD.

throwing out the first ball. This old baseball tradition dates to the day of portly President William Howard Taft (1857–1930), who initiated the custom in 1910. Taft’s experience as chief justice of the U.S. Supreme Court (1921–30) might have made him a great umpire.

throw in the towel. *Throw in the towel* and *throw in the sponge*—both meaning to give up, quit, or admit one has been defeated—have been around at least since the 1860s and probably date back to 18th-century England. The expression comes from boxing, where a fighter’s corner man throws a towel into the ring to stop the fight when he determines that his fighter has taken enough punishment and has no chance of winning. Figuratively, the colorful phrase came to mean the admission of defeat by anyone from a politician to a saint. Possibly the color of a white towel, suggesting a white flag of surrender, has helped the first variation endure.

throw into stitches. Here stabbing became a joking matter. The Old English *stice*, from the same Teutonic root that gives us “stick,” meant a prick, stab, or puncture inflicted by a pointed object, especially pain caused by acute spasms of the rib muscles after prolonged or violent exercise such as running. These stitches in the side are more painful but similar to pains from excessive laughter, when one “laughs so much that it hurts.” Thus anyone who told a funny story that convulsed his audience was said to *throw them into stitches*. Shakespeare seems to have first suggested the expression in *Twelfth Night* (1601) when he wrote, “If you . . . will laugh yourselves into stitches, follow me,” but when the exact words were coined is unknown. A *stitch* in sewing comes from the same root word.

thrown for a loss. Born as a football expression, *thrown for a loss* refers to a ball carrier who is thrown back for a loss by the opposing line on trying to penetrate its defense and gain yardage. Common in football, the words began to be used in post-World War II years to describe someone’s loss in any endeavor.

throw someone a curve. If you surprise someone in a negative way, deceive or mislead or ask a tricky question, you are throwing someone a curve. The expression has its roots in the curve pitch of baseball, which comes directly toward the batter and then breaks away, often surprising or tricking him. The first recorded mention of a *curveball* in baseball is 1874, but the pitch was introduced by Hall of Famer William Arthur “Candy” Cummings.

throw the baby out with the bath water. A late-19th-century proverb that means to reject the essential as well as the unimportant. The phrase is usually heard in the negative: “Don’t throw the baby out with the bath water.”

throw the book at. Sorry, but I can find no record of a judge literally throwing a law book at a convicted criminal. However, during the Prohibition gangster era many judges did figuratively throw the *contents* of law books at criminals when sentencing them, imposing every penalty found in books of law for their particular crimes. In underworld argot *the book* came to mean the maximum penalty that could be imposed for a crime, especially life imprisonment. Although its original meaning is still common, the metaphor has come to stand for penalties much less severe as well, sometimes nothing more serious than a parent taking away the car keys from a child as a punishment for coming in too late.

throw to the dogs. See GO TO THE DOGS.

throw to the wolves. In a grisly Russian folk tale a family pursued by a wolf pack throws infants from their sleigh at intervals to keep the wolves busy until they reach their house. This, or some story like it, may be the origin of the expression *to throw to the wolves*, which means of course to abandon someone or turn someone in in order to benefit oneself.

thug. An Indian sect of religious fanatics called the P’hanisigars, “noose operators,” whom the British euphemistically called Thugs, from a Sanskrit word (*sthaga*) meaning “rogue or cheater,” dated back to at least the 13th century. The thugs supposedly honored Kali the Hindu goddess of destruction with their murders and thievery. They would worm their way into the confidence of travelers, or would follow a wealthy victim for weeks sometimes before finding him in a lonely place and slipping a rope or cloth noose around his neck. The group was as well organized as the Syndicate today, even speaking a secret language, Ramasi, and bribing government officials for protection. The British eliminated the Thugs in India in the 1830s when they hanged 412 of them and sentenced another 2,844 to life imprisonment, but the name of the band lives on after them. *Thug*, an ugly word, is still used for ugly criminal types from tough guys to assassins, and *thuggee* is sometimes heard for the crime of strangulation that the Thugs perfected.

The Thug. He's been shot to pieces by police hundreds of thousands of times over the last 40 years, but this paper target, first used in New York City, has become the best-known in the United States. Officially, his name is Advanced Silhouette SP-83A, but no one calls him that. Some say he was named after various police officers he bore a resemblance to when the targets were adopted (namely New York officers Fred V. Worell and Bruno Fulginiti). Others opt for the actor Ernest Borgnine, very popular at the time and still working, but the target is usually called *The Thug* among lawmen at firing ranges. According to one account (*New York Times*, February 17, 2005), The Thug has hardly changed over all these years, a husky, crouching tough guy, a gun in his right hand, "maybe a little German, maybe a little Italian, some Irish, with his pug nose and his thick head of dark wavy hair."

thumb. The thumb is of course the thickest of the five fingers on the human hand, unless one takes the view that we do not have five fingers but four fingers and a thumb. In any case, the thumb, so important to the development of the human race, was thought to be a thick digit by our ancestors and it takes its name from the Old English *thumba*, thick or swollen. *See also* INDEX FINGER; MIDDLE FINGER; PINKY; RING FINGER.

thumbs down. First, we have the traditional story: *Habet!* or "He's had it," Roman spectators shouted when they wanted a defeated gladiator to be killed. Their shouts were accompanied by a thumbs-down gesture that is believed to be the ancestor of the same gesture we use today and of our expression *thumbs down* for "no!" Some Latinists, however, say that *thumbs down* is a mistranslation of the Latin phrase *pollice verso*, which means "thumbs turned." According to this theory, spectators made the gesture *pollice primo*, "thumbs in front," when a gladiator fought a good fight, and made the gesture *pollice verso* if he fought poorly and they wanted him killed. The idea that *pollice verso* meant "thumbs down," this story holds, seems to have been first suggested by a painting of 19th-century French artist Jean Léon Gérôme that depicted scowling Roman spectators holding their thumbs down at the end of a gladiatorial contest.

thunderbolt. *See* SHOOT ONE'S BOLT.

Thursday. Thor was considered the god of thunder in ancient times, and it was thought that it thundered when his great chariot was drawn across the sky. His day was *thuresdaeg* in Anglo-Saxon times, this becoming our *Thursday*.

Thursday's child. *See* MONDAY'S CHILD.

thyme. We pronounce the *th* in *thyme* (time) as a *t* because it passed into English from the French with that pronunciation at an early date. Thyme ultimately comes from the Greek *thuo*, "perfume," in reference to the herb's sweet smell.

thyroid. The thyroid cartilage, or ADAM'S APPLE, which protects the throat, was named for its resemblance to the shields of Homeric warriors, deriving from the Greek word for "shield" or "shield-shaped." It gave its name to the thyroid gland that straddles the windpipe. The term is first recorded in 1693.

tick. Ticks, a species of which spreads Lyme disease, are insects to be avoided. Though only pinhead size in most cases, they attach themselves to the skin, gorging themselves on blood until they swell to twice their size or larger. This led to the expression "full as a tick" to describe someone who has had much too much to drink.

ticker tape. The tape emanating from the first stock ticker installed in the New York Stock Exchange in 1867 was called ribbon. Ticker tape didn't come into use until the turn of the century.

tick-tock. Journalists use this recent U.S. term to mean "the time sequence of events," as in "What's the tick-tock on this?" when does it happen, how long will it last?, etc.

t.i.d. *See* TENDER LOVING CARE.

tiddly; tiddlywinks. In British Cockney rhyming slang a *tiddlywink* meant a drink. From this expression comes *tiddly*, for "a little drunk," first recorded in the late 19th century. The game *tiddlywinks* is first recorded in 1870 and may be so named because of the little counters used in playing it, *tiddly* here perhaps being baby talk for "little."

tide. Though a sea tide is usually thought to be high or low water, anything between ebb and flood, *tide* really means "the fixed time of flood and ebb." *Tide* was originally a synonym for *time* (as in eventide), so the expression "Time and tide wait for no man" is something of a tautology. The Greek navigator Pytheas observed and explored ocean tides in the third century B.C., but it wasn't until Isaac Newton's time that scientists widely believed that the Moon had any effect on ocean tides. The greatest tides occur in the Bay of Fundy, Nova Scotia, where there is an extreme range of 57 feet between high and low tides and 100 million tons of water are carried out of the bay twice each day.

tidy. Since TIDE was originally a synonym for *time*, *tidy* came to mean "in tide, in time, timely." Something timely or tidy later became something methodical or neat, the word's meaning today.

tied to one's mother's apron strings. "Apron-string hold" or "apron-string tenure" was a law about four centuries ago under which a husband could hold title to property passed on to his wife by her family only while his wife lived—provided that she had not divorced him. Many wives therefore controlled the purse strings and made all important family decisions, in which their husbands didn't have much to say. Such men, who often did just as they were told, were said to be *tied to their wives' apron strings*, a phrase suggested by "apron-string hold." Because male children in such a family tended to be dominated by their mothers as well, even when they were fully grown, the now more common expression *tied to his mother's apron strings* arose. French writer Gérard de Nerval (1808–55) actually hanged himself from a lamppost with an apron string. *Apron* is a corruption of *napron*, from the French *naperon*, "a little tablecloth," a *napron* corrupted to an *apron* in English.

to tie one on. To get drunk. An American expression that is commonly used but whose origin is unknown.

tie the knot. In ancient times the marriage ceremony in many parts of the world consisted only of a priest or the family patriarch knotting together the garments of the bride and groom to symbolize a permanent union. The practice, still a custom in some countries today, is the basis for the universal saying *to tie the knot*, meaning to get married, for which *tying the knot* has been a symbol in England since at least 1275. The Greeks followed the custom of *untying* a knot to declare a marriage. Brides used the Herculean knot, a representation of the snakes entwined on the rod of Mercury, to fasten their woolen girdles. Only the bridegroom was allowed to untie this knot, praying as he did so that the gods would make his marriage as fruitful as that of Hercules—that is, very fruitful indeed, for Hercules once married the 50 daughters of Thestius, all of whom gave birth to his children on the same night. This last was *not* one of the legendary 12 labors of Hercules.

Tiffany glass, etc. Tiffany and Company, the famous jewelry firm in New York City, was founded by Charles Lewis Tiffany (1812–1902). During the Civil War the firm turned out swords and other war supplies, but was noted for its manufacture of gold and silver jewelry, the improvement of silverware design, and the importation of historic gems and jewelry from Europe. Branches were soon opened in London and Geneva, Charles Tiffany winning fame as the inventor of the *Tiffany setting*, as in a ring where prongs hold the stone in place. His son, Louis Comfort Tiffany (1848–1933), became an artist and art patron, remembered chiefly for his invention of *Tiffany glass* in 1890. Trademarked as *Favrile glass*, the iridescent art glass was made by the Tiffany Furnaces, which Louis established at Corona, New York. There glass for mosaics and windows, vases, and Tiffany lampshades was manufactured.

tiger. The animal's name comes ultimately from the Latin *tigris*. It is a large carnivorous feline mammal, but is also regarded as an aggressive or fierce person. The Chinese, however, once called the United States a *paper tiger*, and American Tiger Woods, one of the greatest golfers of all time, is a mild-mannered man.

tiger kidnapping. A form of kidnapping in which the victims are stalked before they are seized, the kidnappers acquiring detailed knowledge of the families, friends, routes home, work, etc.

tiger lily. This ubiquitous flower, often found on roadsides and in woods in the northeastern United States, originated in Japan or China. It takes its name from its orange and black colors. According to a Korean legend, *Lilium tigrinum* was named when a magician-hermit changed his pet tiger into a flower he could keep in his garden. After the magician died, the tiger lily left the garden and journeyed all over the world searching for his friend, which is why tiger lilies are so widespread. There is no reason why tiger lilies should talk more than other flowers, except that Lewis Carroll made them so inclined in *Through the Looking Glass*. The tiger lilies there tell Alice that they talk all the time “when there’s anybody worth talking to.” They also offer a tip to

people who’d like to hear their flowers talk. When Alice wants to know why she’s never heard flowers talk in other gardens, they explain, “In most gardens, they make the beds too soft—so that the flowers are always asleep.”

tigers of the desert. A name for the Apache Indians among U. S. soldiers and settlers in the 19th century, when they were looked upon with fear and awe.

tiggerty-boo. See EVERYTHING’S ALL TIGGERTY-BOO.

tight as Dick’s hatband. This phrase refers to the fact that the crown was too tight or dangerous to be worn by a certain king of England. The particular king’s identity is unknown, but one popular theory suggests Oliver Cromwell’s son Richard, often called Tumbledown Dick, who was nominated by his father to succeed him but served for only seven months beginning in September, 1658 because he received no support from the army. Another candidate is King Richard III, who assumed the throne in 1483, denouncing the rightful claims of his two young nephews. Long regarded as an evil king who ordered the “accidental deaths” of his nephews, Richard is said to have been uncomfortable wearing a crown bought with blood. He was killed by the earl of Richmond at the Battle of Bosworth Field in 1485. In recent times his historical reputation has improved considerably. See also QUEEN DICK.

tightwad. *Tightwad*, for a cheapskate who won’t part with his money, has its origins in a tightly folded wad of money, *wad* having meant a large roll of money since 1814 or so and *tight* having meant “stingy” since about the same time. *Tightwad* is said to have been invented by Indiana humorist George Ade in his *More Fables* (1900), which first records the term: “Henry was undoubtedly the Tightest Wad in town.” See GLADHANDER; PANHANDLER.

tigon; liger. *Tigon* refers to the offspring of a male tiger and a female lion, the name of the cross first recorded in 1927. About 10 years later, in 1938, a male lion and female tiger were mated, and their offspring was called a “liger.” See POMATO.

Tijuana. The Mexican city doesn’t take its name from the Spanish *Tia Juana*, “Aunt Jane,” as is sometimes claimed. *Tijuana* is a corruption of the Amerindian name *tiwana*, meaning roughly “by the sea.”

till all’s blue. A mainly British navy expression “carried to the utmost” that was borrowed from the idea of a vessel making it out of port and finally getting into deep blue water.

Tillandsia. See SPANISH MOSS.

till death or distance do us part. The marriage vow among American slaves contained this change in the traditional words *till death do us part* because families were often broken up when slaves were sold down the river.

till the cows come home. Relatively modern amplifications of this one include *Till the cows come home in the morning* and

Till hell freezes over and the cows come skating home over the ice. The expression has meant “a long, long time” for a long, long time, since about 1600, and the idea behind it is that cows take their own good time about coming home if they aren’t driven—often until the next morning, when, with udders painfully swollen, they come home to be milked.

till the last dog is hung. Until the very end or resolution of something. The earliest mention of the phrase is in a history of the Civil War published in 1865: “I stayed until the last dog was hung and had to laugh to see how mad the Col (Colonel) got.”

tilt at windmills. Advising his squire Sancho Panza that 30 or 40 windmills were “monstrous giants,” Don Quixote spurred his steed Rosinante forward, his lance extended to “do good service” and “sweep so evil a breed off the face of the earth.” Attacking a windmill, his lance got caught in one of its sails, which lifted the valiant knight into the air and smashed him to the ground, leaving him with nothing but injuries for his effort. This was perhaps the most absurd of the QUIXOTIC adventures of Don Quixote, hero of Cervantes’s great satirical novel *Don Quixote* (1605–15). The book was meant to satirize the age’s romantic tales of chivalry that filled its hero’s mind, and this particular episode is among its most memorable. Almost as soon as *Don Quixote* was published it inspired the expression *to fight with or tilt at windmills*, “to combat imaginary foes or ward off nonexistent dangers,” and the phrase *to have windmills in your head*, “to be full of fanciful notions or visionary schemes.”

Timbuktu. “In popular imagination, the word Timbuktu is a trip of three syllables to the ends of the earth,” Lila Azam Zanganeh writes in the *New York Times* (April 24, 2004). She goes on to describe this West African city as “a slumbering and decrepit citadel at the southern edge of the Sahara, in Mali, one of the poorest countries in the world.” But in addition to its use as the synonym for a distant remote place, the middle of nowhere (“Where are you taking us to—Timbuktu?”) and its widespread poverty today, Ms. Zanganeh reminds us that the legendary city was in the 11th century a great center of learning and gold trading. Its name is often spelled *Timbuctoo*, especially in describing a faraway place.

Time, gentlemen, please! A British barman’s reminder that the pub will soon close, in keeping with the legal closing hours, so please finish your drink. It can be abbreviated to *Time!*

time and tide wait for no man. A warning not to put things off, don’t procrastinate or be a “time killer; life is over before you know it. The proverbial saying is from the late 14th century.

time flies. An old workhorse of a phrase that goes back at least to the Latin *tempus fugit*, meaning the same, which in turn was suggested by a phrase in the Roman poet Virgil’s *Georgics* that translates: “Irretrievable time is flying.”

time heals all wounds; time wounds all heels. “Healing is a matter of time, but it is sometimes also a matter of opportunity,” the Greek physician Hippocrates (460 B.C.–377 B.C.) wrote in his *Precepts*. This is the first suggestion of the common saying *time heals all wounds*. The clever twist on the words *time wounds all heels* is attributed to Frank Case (1870–1946), the

owner of New York City’s Algonquin Hotel, where the famed Round Table of wits (Dorothy Parker, Robert Benchley, etc.) held sway in the 1920s. Apparently some of the wit rubbed off on Case. See HIPPOCRATIC OATH.

time is money. See SNUG AS A BUG IN A RUG.

time is of the essence. No eminent philosopher or statesman said this. It was originally a legal term, first recorded in 1873, applied to a contract where time was essential, indeed indispensable to that contract’s fulfillment. If, for example, the contract required a manufacturer to deliver goods within three months, he had to deliver them within that time or suffer the consequences.

times, ver’ quiet, ver’ soft, like summer night, but when she mad she blaze. A poetic term said to be “the Indian equivalent for firefly” by Mark Twain in his short story “A Horse’s Tale” (1906).

Times Square. Part of New York City’s midtown Manhattan surrounding the intersection of Broadway and Seventh Avenue. Originally known as Long Acre Square, it was an important commercial center and home to William Vanderbilt’s Horse Exchange, as well as to an exclusive neighborhood built by the Astor family between 1830 and 1860. It was renamed Times Square around the turn of the century in honor of the newly built *New York Times* building on 43rd Street, and the newspaper’s publisher, Adolph Ochs, sponsored what has since become Times Square’s most famous event—an annual New Year’s Eve celebration that is still observed today. Following World War I, the district became a major center for the theater and entertainment industries and a popular tourist attraction. See THE GREAT WHITE WAY.

times that try men’s souls. See SUMMER SOLDIER AND SUNSHINE PATRIOT.

time to whistle up the dogs and piss on the fire. A saying among old cowboys that means “it’s time to leave,” “light a rag,” “hit the grit,” “VAMOOSE.”

timothy grass; herd’s grass. *Timothy* is another, more popular name for *herd’s grass*, both designations referring to meadow cat’s-tail grass, *Phleum pratense*, which is native to Eurasia and is widely cultivated for hay in the United States, where it was probably brought by early settlers. Then, in about 1770, one John Herd supposedly found the perennial grass with its spiked or panicked head growing wild near his New Hampshire farm, the grass receiving his name when he began cultivating it shortly thereafter. Timothy Hanson or Hanso gave his prenominal to the same grass when he quit his New York farm in 1720 and moved to Maryland, or possibly Carolina, introducing *Phleum pratense* seed there. *Timothy’s seed* became *timothy grass* when it grew and this was finally shortened to *timothy*.

tin cans (naval destroyers). During World War II American destroyers were called tin cans because they were the smallest, thinnest-armored fleet vessels. Destroyers were also called rust

buckets at the time, though *rust bucket* more often meant any old ship.

tin ear. A person who has a tin ear is tone deaf and thus doesn't appreciate good music, especially jazz. He can also be deaf to the rhythm of words. The term, dating back to the 1930s, was probably suggested to jazz musicians by the adjective *tinny*, "cheap and poorly made," and the earlier term *tin ear* from boxing, which meant about the same as *cauliflower ear*.

Tinef. *Tinef* was the name Albert Einstein himself gave his 15-foot sailboat, this Yiddish word meaning "junk" or "worthless." The same word could have described Einstein's own sailing abilities, according to others who sailed in Cutchogue on the North Fork of Long Island in the summer of 1939. But Einstein later recalled those days were his "happiest summer ever." Even when he was capsizing his boat—several times!

tingle. See ONOMATOPOEIA.

tinhorn gambler. In chuck-a-luck, an ancient dice game very popular during the Gold Rush, gamblers bet against the house that all three dice used would read the same when rolled, or that the sum of all three dice would equal a certain number, or that one of the three dice would turn up a specified number. It is a monotonous game and was looked down upon by players of faro, a more complicated and costly pastime. Faro operators coined the name *tinhorn gamblers* for *chuck-a-luck* players, giving us the expression for any cheap gambler. Pulitzer Prize winner George Williston explained how in his book *Here They Found Gold* (1931): "Chuck-a-luck operators shake their dice in a 'small churn-like affair of metal'—hence the expression 'tinhorn gambler,' for the game is rather looked down upon as one for 'chubbers' [fools] and chuck-a-luck gamblers are never admitted within the aristocratic circles of faro dealers."

tinker. See NOT WORTH A TINKER'S DAMN.

Tinkers to Evers to Chance. This synonym for a routine double play in baseball should really be *Tinker to Evers to Chance*, referring as it does to the Chicago Cub infield combination of Joe Tinker, shortstop, Johnny Evers at second base, and Frank Chance at first. All three are enshrined in Baseball's Hall of Fame at Cooperstown, New York, but aren't there for the double plays they executed. Actually, the vaunted trio only averaged 14 twin killings a year from 1906–09, the peak of their careers, very low for a double-play combo. Their fame is due principally to a famous Franklin P. Adams poem heralding them.

Tin Lizzie. See FORD.

Tin Pan Alley. The original Tin Pan Alley was and is located between 48th and 52nd Streets on Seventh Avenue in New York City, an area where many music publishers, recording studios, composers, and arrangers have offices. The place was probably named for the tinny sound of the cheap, much-abused pianos in music publishers' offices there, or for the constant noise emanating from the area, which sounded like the bang-

ing of tin pans to some. *Tin Pan Alley*, the term first recorded in 1914, today means any place where popular music is published, and can even stand for popular music itself.

Tinseltown. "Strip the phony tinsel off Hollywood," musician and wit Oscar Levant said in the early 1940s, "and you'll find the real tinsel underneath." This sardonic remark allegedly led to the cynical name "Tinseltown" for Hollywood.

tintinnabulation. Ernest Weekley, among our greatest word detectives, suspects this word was coined by Poe from the Latin *tintinnabulum*, which comes from *tinnire*, to resound, tinkle. Poe's poem *The Bells* (1849) is a tour de force of tintinnabulation consisting of four different sounds of bells: sleigh bells; wedding bells; alarm bells; and funeral bells.

tip. A persistent unsubstantiated story has the word *tip*, for "gratuity," originating with the initials, *t. i. p.*, "to insure promptness (or promptitude)," which was supposed to be inscribed on offering boxes in 18th-century English coffeehouses. More likely the word comes from the 16th-century slang *to tip*, meaning "to hand over," which possibly derives from the verb *tip* in its meaning of "to touch lightly." A *tip* as "secret information" probably derives from the same slang source.

Tippecanoe and Tyler too. See CIDER.

Tironian notes. Marcus Tullius Tiro, the man who invented the ampersand (&), introduced it as part of the first system of shorthand of which there is any record. A learned Roman freedman and amanuensis to Cicero, Tiro invented Tironian notes about 63 B.C. in order to take down his friend's fluent dictation. Though a rudimentary system, Tiro's shorthand saw wide use in Europe for almost a thousand years, outlasting the Roman Empire. The ampersand, sometimes called the Tironian sign in Tiro's honor, was a symbol for the Latin *et*, or "and." Taught in Roman schools and used to record speeches made in the Senate, Tiro's system was based on the orthographical principle and made abundant use of initials. *Ampersand*, first recorded in 1837 by Canadian humorist Thomas Haliburton, is a contraction of *and per se and*.

'tis better to have loved and lost, than never to have loved at all. Alfred, Lord Tennyson wrote these lines in his famous poem *In Memoriam A.H.H.* (1850), which was written for his close friend and sister's fiancé, Arthur Henry Hallam, a scholar of great promise who died suddenly at the age of 22. Tennyson wrote the long elegy, if it can be called that, between Hallam's death in 1833 and 1850.

tit; titman. This word has no vulgar connotation among farmers in New England, who often refer to the runt in a litter of pigs as a *titman* or *tit*. *Tit* here derives from an old Germanic word meaning "small," whereas *tit* as slang for a woman's breast comes from the Old English *titt*. A century ago, *titman* meant a small or stunted person, as when Thoreau called his generation "a race of titmen." *Titman* or *tit man*, is of course in American slang a male who prefers breasts to any other part of a woman's anatomy.

Titania. See URANUS.

Titanic; titanium. See URANIUM; URANUS.

tit for tat. Probably the French phrase *tant pour tant*, “so much for so much,” influenced the formation of *tit for tat*, and possibly the Dutch *dit vor dat*, “this for that,” helped as well. But the expression derives directly from the six-century-old English phrase *tip for tap*, a “tip” at the time meaning the same as a “tap”—a light blow. As for the idea of tit for tat, a blow for a blow, the Latin *quid pro quo* itself has been around for over four centuries. The French phrase *tant pour tant*, with its sense of paying back, also gave us our word *taunt*, “a sharp or clever rejoinder.”

Titian. Tiziano Vecellio, or Vecelli, whose name is anglicized as Titian, began his training as an artist in 1486 when nine years old and did not stop painting until his death of the plague 90 years later, when he was approaching one hundred. The greatest artist of the Venetian school, Titian produced hundreds of paintings during his unusually long and prolific career, including portraits and religious and mythological works, all noted for their magnificent use of color and design rather than for his drawing. In his many paintings the artist often depicted a model with shades of bright golden-auburn hair, and rendered the color so beautifully that the lustrous bronze has since been called Titian hair, or simply Titian. One tradition claims that Titian’s auburn-haired model was his daughter Lavinia, whom he did paint several times.

Titon the Taster. See IDAHO POTATO.

tittle. *Tittle* is another word for the dot above an *i*, and can also mean an accent, a vowel mark, or any diacritical mark. The word is found in Matt. 5:18: “. . . one jot or one tittle shall in no wise pass from the law, till all be fulfilled.” See I.

ti yi yee, ti yi yi yay. A cowboy cry, as in this old folk song stanza quoted by Kerry Newcomb in *Morning Star* (1983):

So come on you dogies
It’s late in the day
Sing ti yi yee
Ti yi yi yay.

T.L.C. As an abbreviation for *tender loving care*, *T.L.C.* is first recorded as the title of a 1960 song. The expression *tender loving care*, however, goes all the way back to Shakespeare, who used it in *King Henry VI, Part II* (1592).

toady. The toady was in the 17th century a toad-eater, a conjuror’s assistant who would eat a toad (said to be poisonous) so that his master could demonstrate his magic healing powers. Anyone who would eat a toad was considered so low that the word became a contemptible term for a sycophant. By the early 18th century *toad-eater* had been replaced by the shorter *toady*.

to a “T.” See SUITS YOU TO A “T.”

tobacco. The common name for the tobacco plant is the result of a mistake and seems to have first been recorded in Christo-

pher Columbus’s journal for November 6, 1492: “My messengers reported that after a march of about twelve miles they had discovered a village with about 1,000 inhabitants. The natives had received them ceremoniously, and had lodged them in the most beautiful houses. They encountered many men and women carrying some sort of cylinder in which sweetly smelling herbs were glowing. The people sucked the other end of the cylinder and, as it were, drank in the smoke. Natives said they called these cylinders tabacos.” Clearly then, the Carib word *tabaco* meant the reed pipes in which the natives smoked the dried leaves, but over the years *tabaco*, the ancestor of our *tobacco*, came to designate the leaves themselves and then the tobacco plant.

tobacco road. Erskine Caldwell explained the term in his famous novel *Tobacco Road* (1932): “The road on which Jeeter lived was the original tobacco road his grandfather had made. . . . The road had been used for the rolling of tobacco casks, large hogsheads in which the leaf had been packed after being cured and seasoned in the clay-chinked barns; thousands of hogsheads had been rolled along the crest of the ridge which connected the chain of sand hills, and they had made a smooth firm road the entire distance of fifteen miles. . . . There were scores of tobacco roads on the western side of the Savannah Valley, some only a mile or so long, others extending as far back as twenty-five or thirty miles into the foothills of the Piedmont. Anyone walking cross-country would more than likely find as many as six or eight in a day’s hike. The region, topographically, was like a palm leaf; the Savannah was the stem, large at the bottom and gradually spreading out into the veins at the top. On the side of the valley the creeks ran down like the depressions in the palm leaf, while between them lay the ridges of sand hills, like seams, and on the crests of the ridges were the tobacco roads.”

to be or not to be. See THERE’S THE RUB.

Tobit’s fish. The principal character in the Book of Tobit, included in the Old Testament Apocrypha, was blinded by the dung of sparrows while he slept in a courtyard. The angel Raphael bid Tobit’s son to catch a huge fish in the Tigris and apply its gall to Tobit’s eyes, thus curing him of his blindness.

Today I consider myself the luckiest man on the face of the earth. The words of New York Yankee hero Lou Gehrig on July 4, 1939, at a ceremony honoring him at Yankee Stadium. Gehrig, the “Iron Man” or the “Iron Horse,” had been forced to retire two months earlier by the insidious Amyotrophic lateral sclerosis, which came to be called Lou Gehrig’s disease after him.

toddy. See TOT.

toe the line. Before the Queensberry rules were devised, English prizefights were long and bloody. There was no footwork, and no tactics aside from dirty ones. No attempt was made to evade blows from an opponent. Their bare fists often hardened from soaking in walnut juice, fighters firmly placed their toes on a line officials marked in the center of the ring and slugged it out until one man fell, thus ending the round. The fighters

then staggered or were dragged back to their corners for 30 seconds and the match continued until one man couldn't come out to toe the line when the bell rang for the next round. One of these bouts, the Burke-Byrne fight in 1833, lasted 99 rounds, and poor Byrne—who never gave up—died from the beating he took. The sight of lurching, leaden-armed, broken-handed fighters toeing the line for hours at a time, and doing their job of battering each other bloody and senseless with superhuman willpower, inspired the saying *to toe the line*, “to do one's job, to live up to what is expected of you or conform to the rules.” That the expression was an early one used in track events, meaning that all contestants must place their forward foot on the starting line (“Get ready, get on your mark . . .”) also contributed to the popularity of this phrase.

tohu-bohu. I like the sound of this unusual old word, which derives from the Hebrew lamentation *Thohu-wa-bhohu*. It means emptiness and despair, confusion, formlessness, chaos itself, and unusual as it is, great writers such as Rabelais, Voltaire, Purchas, Browning, and Gladstone have employed it. The original Hebrew words are translated in the Bible in the second verse of the first chapter of Genesis: “And the earth was without form, and void; and darkness was upon the earth.” Wrote one 19th-century author: “The world is a *tohu-bohu* of confusion and folly.”

toilet. In America, the term refers to what the British call the water closet. The word comes from the French *toilette*, which originally meant a “little cloth.” This became the British name for the cloth used to cover a dressing table, then meant the table itself, and was finally used for the dressing room in which the dressing table was located. It took over four centuries, but Americans ultimately used *toilet* for the *john* in the room most often used for dressing or making one's toilet. *See also* CRAP; JOHN THOMAS.

toilet paper. *Toilet paper*, or lavatory paper, which Nancy Mitford says is the “U” term for it, isn't recorded until the 1880s. The first commercial toilet paper had been marketed, however, in 1857, when Joseph C. Gayetty of New York City began selling an unbleached, pearl-colored pure manila hemp product at 300 sheets for 50 cents. “Gayetty's Medicated Paper—a perfectly pure article for the toilet and for the prevention of piles” had Gayetty's name watermarked on each sheet. Before this the Ward and Sears's mail-order catalogs were indispensable in the outhouses of America, and regretfully, many other books have served this purpose. Wrote Lord Chesterfield to his son in the 18th century: “I know a gentleman who was such a good manager of his time that he would not even lose the small portion of it which the calls of nature obliged him to pass in the necessary-house; but gradually went through all the Latin poets in those moments. He bought, for example, a common edition of Horace, off which he tore gradually a couple of pages, carried them with him to that necessary place, read them first, and then sent them down as a sacrifice to Cloacina: this was so much time fairly gained, and I recommend you to follow his example . . .” A *New York Times* critic related an anecdote about a famous musician's reply to a critic who had panned his performance the night before: the riposte began, “As I sit here in the bathroom, your review in hand . . .”

toilet paper capital of the world. Green Bay, Wisconsin, is the home of football's Green Bay Packers. It has been known as the Toilet Paper Capital of the World (an appellation the local chamber of commerce won't acknowledge, even though paper manufacture is a big industry in Green Bay) ever since the late great sportswriter Red Smith, a native son, affectionately named it so.

Tokay wine. Produced near Tokay (Tokaj) in the Carpathian Mountains near the Ukrainian border, Tokay is a long-lasting Hungarian white wine with a strong grape flavor.

tokus. A euphemism for *ass*. Originally a Yiddish expression heard more frequently as *took-us*. *Tushy* is a synonym, used mostly for children. *Tokus* and its comrades are becoming widespread in America. In *The Road* (2006), Cormac McCarthy writes of a man admonishing his son, who wants to stay in the water, “You'll freeze your tokus off.”

Tokyo Rose. AXIS SALLY, LORD HAWHAW, and Tokyo Rose were the best known Axis radio propagandists of World War II. Of the triumvirate only Tokyo Rose worked for the Japanese and she was actually a number of women, her name bestowed upon her by American G.I.'s in the Pacific. Iva Toguri d'Aquino and Ruth Hayakawa, both Americans of Japanese descent, were mainly responsible for the radio programs beamed from Tokyo. Their sweet, seductive voices and the sentimental music they played were designed to promote homesickness, but more often than not were good for a laugh. Mrs. d'Aquino was sentenced to 10 years in prison for treason in 1949 and was paroled in 1956. Mildred E. (Axis Sally) Gillars was convicted of treason by a federal jury the same year and received a 10- to-30-year sentence but won a parole in 1961. d'Aquino was pardoned by President Gerald Ford in 1977.

Toll House cookie. Perhaps America's favorite pastry, or at least cookie, this chocolate chip delicacy was invented in 1930 by pastry chef Ruth Wakefield of the Toll House Inn in Whitman, Massachusetts. *See* MADELEINE.

tomahawk. The name of this Indian hatchet passed into English from the Virginia Algonquian *tumahak*. Other Indian words that eventually passed into English are *raccoon* (qv) *moccasins*, and *terrapin*.

Tom and Jerry. The sweet spicy rum drink is named for Tom and Jerry Hawthorne, men-about-town who lived the good life in Pierce Egan the elder's *Life in London* (1821). Egan's books threw light on the manners and slang of London in his day, while his son and sometime collaborator Pierce Egan the younger was known as “a pioneer of cheap literature.”

Tomania. The name Charlie Chaplin gave the dictatorship in his film *The Great Dictator* (1940), among Hollywood's first talkie movies. *Tomania* here is a play on *ptomaine poisoning*.

the Tomatina. It is called the Tomatina in the town of Bunel, not far from Valencia, Spain, where it has been held for the past 60 years on the last Wednesday in August, the height of

the local tomato harvesting season. Though officially regarded as a tomato festival, the Tomatina has become best known as a huge tomato food fight in which some 25,000 people pelt each other with dead and overripe tomatoes. Soon after farm trucks dump some 275,000 pounds of tomatoes into the downtown streets, eager contestants begin scooping up whole and mashed handfuls of the bright-red fruit and throwing them at each other. The slippery streets become coated with tomato paste, a river of tomato juice half a foot or so deep flowing along them. As for the participants, by the time local fire engines arrive to hose down the streets these combatants are often unrecognizable.

tomato. Those “affected” people who pronounce it “toe-mah-toe” are historically correct. The plant was first called *tomate* in Spain when introduced there from the New World, and even in the early 16th century it was pronounced in three syllables. The *o* incidentally has no place at all in “tomato,” apparently being there because mid-18th-century Englishmen erroneously believed that it should have this common Spanish ending. *Lycopersicon esculentum* has also been called the *wolf apple*, the *wolf peach*, and the *love apple*. The first two designations arose because most Americans thought that tomatoes were poisonous and didn’t eat them until about 1830—the tomato *vine* is, in fact, poisonous, the plant a member of the deadly nightshade family. “You say toe-may-toe and I say toe-mah-toe,” Cole Porter wrote, and he might have added if he had the space that Americans also pronounce the fruit’s name *tamater*, *termater*, *mater*, *tomarters*, and *tomaties*, among other variations. Regional pronunciations of the plural *tomatoes* are even stranger, including *tomatoeses*, *tomatussis*, and *martisses*. See also LOVE APPLES.

tomato can. See GO IN THE WATER.

Tomb of the Unknown Soldier. The first American unknown soldier, whose body was chosen from four unknowns, in 1921 placed in the Tomb of the Unknown Soldier in Arlington National Cemetery. Its inscription reads: *Here Rests in Honored Glory an American Soldier Known but to God*. Unknowns from three other wars were added over the years.

The Tombs. A nickname for the Manhattan Detention Complex in New York City. The Tombs is so named because it is an Egyptian revival structure. The jail was built in 1838.

Tom Collins. Many sources tell us that the Tom Collins—that refreshing, tall drink made with gin (or vermouth), lemon (or lime), sugar, and soda water—honors its bartender-creator. Yet no one has been able to establish who Tom Collins was, where he came from, or when he first mixed the drink. Variations on the Tom Collins include the John Collins (whiskey) and the Marimba Collins (rum). The Tom Collins is claimed by many, but the lack of evidence indicates that its real creator didn’t mix well, at least socially. The best prospect is probably John Collins, a 19th-century bartender at London’s Limmer Hotel who did not devise but was famous for his gin sling—a tall gin and lemon drink that resembles the Tom Collins.

Tom, Dick, and Harry. All of these are very common names, reason enough for them to represent “everybody” or an indiscriminate, unnoteworthy collection of men in the phrase. However, one ingenious theory tried to link the expression with nicknames of the devil. The trouble is that while Old Harry and Dick (the dickens) or Nick have long been nicknames for Olde Horney, he has never been known intimately as Tom. Also, every *Tom, Dick, and Harry* is an American expression of the late 19th century, before the British used *Dick, Tom, and Jack* for the same purpose. *Browns, Jones, and Robinson* was used by the British in Victorian times to mean “the vulgar rich.”

Tom Fuller. The Choctaw Indians’ national dish was a fermented hominy called *tahfula*. To the ears of early settlers in the West this sounded like “Tom Fuller” and by 1848 they had Anglicized the name.

Tommy Atkins. The British army account or record books in the 19th century had a fictitious sample entry in the name of “Private Thomas Atkins” to help soldiers fill in details about themselves. So ubiquitous was Thomas Atkins that he became affectionately known as *Tommy Atkins* and became a nickname for all British soldiers, similar to the American G.I. Joe. British soldiers were frequently referred to simply as *Tommies*.

tommygun. The infamous *chopper* so often hidden in violin cases in gangster movies, takes its name from the patronym of one of its inventors, American army officer John T. Thompson (1860–1940). Thompson and Navy Comm. John N. Blish invented the .45 caliber portable automatic weapon during World War I and much improved it in later years. Gangsters and reporters popularized the nickname *tommygun* in the Prohibition era along with colorful expressions like *torpedo*, *triggerman*, *bathub gin*, *hideout*, *hijacker*, *to muscle in*, and *to take for a ride*. Although *tommygun* originally identified the Thompson machine gun, with its pistol grip and shoulder stock, the term is now used to describe any similar lightweight weapon with a drum-type magazine. See UZI.

tommyrot. Partridge says that the *tommy* in *tommyrot*, “nonsense, bosh,” may be a euphemism for the strong British expression *bloody*—British soldiers, called *Tommies*, once wore scarlet (bloody) uniforms. More likely, as he seems to agree, it comes from the British expression *tommy*, meaning “goods supplied instead of wages” by employers who ran stores on the side, something like the more infamous American company stores (first recorded in 1872). According to Edwin Radford’s *Unusual Words* (1946): “Employees of labour not infrequently owned shops to which the worker had to go to draw money; and there he was compelled to spend a portion of his wages on the purchase of the goods he must consume during the week in order to leave. To the working man, these shops were known as ‘Tommy-shops’—the shops where he purchased his ‘tommy,’ or food. The viciousness of this system will be realized when it is stated that the employer could charge pretty well what he liked in the way of high prices for the most inferior food, and the workingman had no chance but to take it, or lose his job.” Workers, incensed at the poor stuff bundled onto them at high prices, referred to the goods of the Tommy-shop as “Tommy-rot.” The

workers' only possible revenge was with words. See TOMMY ATKINS.

tomtarian. A *rosarian* is someone with expertise in the cultivation of roses. Coined here for the first time by the author is *tomtarian*, someone with expertise in the cultivation of tomatoes.

Tom Thumb. This term, often applied to a "little person," as many "dwarfs" prefer to be called, and to little children as well, has its origins in fairy tales of old, in which Tom Thumb was the size of a man's thumb. However, its modern use is due in great part to "General Tom Thumb" (Charles Sherwood Stratton, 1838–83), whom American showman P. T. Barnum exhibited in the mid-19th century.

Tom Thumb golf. *Tom Thumb* golf is a synonym for *miniature golf* (also known as *midget golf*), which is a game played with a putter and golf ball on a very short course that has many wooden and concrete obstacles. The game was invented around 1910. One of the first courses was built in Pinehurst, North Carolina, by landscape architect E. H. Wiswell and named "Thistle Dhu"—supposedly because Wiswell tired of the job and pronounced it finished, saying "This'll do."

tom-tom. American Indians did not call their drums tom-toms. They were so named by the British, who, in the late 17th century, had brought the word *tom-tom* back to England from the East Indies, where such a drum was called a *tam-tam*, this Hindustani word imitative of the sound a drum makes.

tone down. *To tone down*, "to soften or make less emphatic," may be an expression that originated among artists, rather than among musicians as might be suspected. It could have arisen along with the reaction against the varied and vivid colors used by Turner and his school. Many artists in the early 19th century, when the expression is first recorded, did return to the use of more subdued tones in their paintings, and bright canvases at the time were sometimes coated with varnish to soften them.

tongue; tongue-tied; wondrous tongue. *Tongue* comes to us from the Old English *tunge*, meaning the same. To be tongue-tied is to be unable to speak from shyness or embarrassment, the expression dating back to the early 16th century. There is a medical condition called tongue-tied: impeded motion of the tongue caused by shortness of the frenum, which binds it to the floor of the mouth. At the other extreme we have the great actor Richard Burbage, Shakespeare's friend, whose elegy when he died on May 13, 1617, included the famous words "He's gone, and with him what a world is dead." Burbage's death brought on such grief in London that people forgot the death of Queen Anne, wife of James I, a few weeks before. Still another dirge claimed that if Burbage with his "enchanted tongue" had been able to speak to Death he would with his "all-charming art" have convinced the Grim Reaper to let him remain alive, but Death knew this and seized his wondrous tongue first. According to the elegy, this explained Burbage's dying of paralysis that began with his tongue and gradually extended to his entire body:

Death first made seizure on thy wondrous tongue,
Then on the rest, 'twas easy; by degrees
The slender ivy twines the hugest trees.

tongue in cheek. Before Richard Barham invented this phrase in his *The Ingoldsby Legends* (1845) nobody stuck tongue in cheek as a humorous warning that something just said was insincere, so Barham could be credited with inventing the custom as well as the expression. Why he chose *with tongue in cheek* to describe someone engaging in insincerity or irony is a mystery. Especially as anyone actually speaking with tongue in cheek—the tongue tip lodged against the inside of the cheek—wouldn't be understood at all.

tongue oil. In my continuing quest for synonyms for whiskey and other strong drink I've come upon *tongue oil* several times. It's a western U.S. expression dating back perhaps to the mid-19th century and obviously refers to the way spirits loosen one's tongue.

tongue twister. The name tongue twister for a sequence of words difficult to pronounce is first recorded in 1898, long after some of the classic tongue twisters were invented. Probably the oldest or best-known is "Sally" (or "she") "sells seashells at the seashore." But experts hold that "the sixth sick shiek's sixth sheep's sick" is the worst tongue twister in English, especially if spoken rapidly. The 72 muscles we use in speaking one word seem to rebel against pronouncing all of these together. Almost as famous as Sally and her seashells is "Peter Piper picked a peck of pickled peppers" etc. Try also: "The skunk sat on a stump; the skunk thunk the stump stunk, but the stump thunk the skunk stunk." Or say "Toy boat" fast five times. More great old tongue twisters like "How much wood would a woodchuck chuck if a woodchuck could chuck wood?" can be found in *Peter Piper's Practical Principles of Plain and Perfect Pronunciation* (1834). In the meantime, try those 72 muscles on Carolyn Wells's:

A tutor who tutored the flute
Tried to tutor two tutors to toot
Said the two to the tutor,
"Is it harder to toot, or
To tutor two tutors to toot?"

and on the vowelless Czech words for "stick a finger in the throat":

Strch prst skrz krk.

ton of bricks. See COME DOWN LIKE A TON OF BRICKS ON SOMEONE.

ton of cobblestone. A large quantity of anything ordinary or commonplace. American radio comedian Fred Allen (1894–1956) coined the expression. He bound all the scripts for his long-running radio show—39 a year—and stacked them on 10 feet of shelves beside a one-volume copy of Shakespeare's collected works, which occupied a mere 3½ inches of space. "I did that as a corrective," he explained, "just in case I start thinking a ton of cobblestone is worth as much as a few diamonds."

tontine. The tontine was an early form of life insurance devised by Italian banker Lorenzo Tonti (1635–90) and intro-

duced by him into France in 1653. Under the system a number of people subscribe to the tontine, the annuity increasing in value to the survivors as each subscriber dies. Finally, the last surviving member takes all. When the tontine was first introduced, any money from the fund that hadn't been spent by the "winner" reverted to the state after the death of that last subscriber.

Tonto. Tonto, the name of the fabled Lone Ranger's sidekick, was a name indiscriminately given by the Spanish to several Indian tribes, including the Tonto Apaches. Tonto is a Spanish word meaning "fool." It also came to be a term for Indians who have broken with traditions and are looked down upon by their tribes.

Tonton Macoutes. The Tonton Macoutes were the secret police thugs who terrorized "enemies of the state" under the dictatorial Duvalier regimes in Haiti from 1957–86. After the Duvaliers were deposed, the name was applied to any thug who terrorized poor people in that country. The Tonton Macoutes were named for Tonton Macoute (Uncle Knapsack), a giant bogeyman who roamed the Haitian countryside stuffing children in his sack. The mythical character became all too real.

Tony. This award presented annually for outstanding performances in the theater honors Antoinette (Tony) Perry (1884–1946), an American actress and producer who served as chairman of the American Theater Council. *See also* OSCAR.

too big for one's breeches. Describing someone obsessed with his own importance, *too big for one's breeches* is first recorded in the work of Davy Crockett—born on a mountaintop in Tennessee (1786), died at the Alamo (1836)—congressman and frontier hero, whose life was a tall tale.

too high for picking cotton. An old term describing someone who is a little drunk; first recorded in Parson Weem's *The Drunkard's Looking Glass* (1818).

too lazy to work and too nervous to steal. An Americanism describing any person regarded as a totally useless no-account.

too many cooks spoil the broth. A proverb from the late 16th century. There are counterparts in many languages, including: *Too many chefs ruin the sauce* (French); *A ship directed by many pilots soon sinks* (Spanish); and *With too many rowers the ship will crash into a mountain* (Japanese).

too many irons in the fire. "They that have many irons in the fires, some must burne," Captain John Smith wrote in *The General Historie of Virginia, New England and the Summer Isles* (1624), and almost a century before another writer warned, "Put no more so many yrons in the fyre at ones." Then there is the old Scottish proverb "Many Irons in the Fire, some must cool." All of these admonitions illustrate the meaning of the phrase: to be engaged in more activities than one can manage at one time, to bite off more than you can chew. What is alluded to is another matter. Blacksmiths might be the source; no doubt some blacksmiths weren't skilled enough to handle many pieces

of steel in the forge and work over them in rapid order. But the "cool" in the Scottish proverb suggests that old laundry flatirons, which had to be heated in hot coals, may have been the source. Leave too many laundry irons in the fire at once and those at the edge of the fire might not be hot enough to use.

too much of a good thing. This old proverb, dating back to the 15th century, is found in Cervantes's *Don Quixote* as "Can we ever have too much of a good thing?"

too old to cut the mustard. *See* CUT THE MUSTARD.

too poor to paint and too proud to whitewash. A term describing any impoverished southern gentleman or lady. Whitewash is much cheaper than paint.

toothache tree. American pioneers called the prickly ash (*Zanthoxylum americanum*) the toothache tree or toothache bush, because the white-spined ash-leaved tree's fruit has pungent properties when applied to an aching tooth. The term is first recorded early in the 19th century.

tooth and nail. The Latin equivalent for this ancient phrase was *toto corpore atque omnibus unguis*, "with all the body and every nail." The French have a similar saying, too: *bec et ongles*, "beak and talons." All mean the same: to fight with tooth and nails, biting and scratching, with weapons, with all the powers at one's command. Figurative use of the expression in England brings us back to the early 16th century, and it was listed as a proverb then.

too thick to drink and too thin to plow. Muddy, unpalatable water, the expression probably first said by American pioneers over a century ago.

tooth-jumping. An aptly described practice from early pioneer days that few people would suffer today. Tooth-jumping, once a common toothache remedy, was the extraction of a tooth by holding a nail at an angle against it and striking the nail with a hammer so that the tooth jumped out.

toothwalker. A name for the WALRUS, which sometimes uses its huge tusks, up to three feet long, as a means of locomotion, digging them into the earth or ice and pulling themselves along. *Toothwalker* is the translation of the Inuit name for the animal.

Tootle-oo! Good-bye, see you later. The saying is British, dating back to about 1905. Partridge suggests that it may derive from a Cockney corruption of French *à tout à l'heure*, "see you soon." The word has some American humorous usage and is sometimes heard as "toodleoo."

toots. A woman might commonly be called *toots* in the 1920s, but the word is rarely heard today, even as a joke. Probably deriving from *tootsie*, it is slang for a babe or young woman. *Tootsie*, of course, is the name of a well-known movie, and "Toot Toot Tootsie, Goodbye" is an old song made famous by Al Jolson.

Tootsie Roll; Chunky. The still popular Tootsie Roll was invented by American candy maker Leo Hirschfeld in 1896. He named the chewy chocolate for his daughter Clara, whose nickname was Tootsie. Another similar named candy is the square hunk of chocolate, cashews, brazil nuts, and raisins called the Chunky. Candy maker Philip Silverstein invented the confection and named it after his daughter, nicknamed Chunky.

top banana. A comic or comedian in American burlesque or vaudeville. The expression derives from an old turn-of-the-century burlesque skit that involved the sharing of bananas.

top brass. See BRASS.

top dollar. This expression, meaning “full value,” probably arose from the game of poker, from the image of the highest stack of poker chips on the table, the pile whose top chip or dollar is higher than all the rest.

top-drawer. Of the best or highest quality. This American term comes from the early 1900s British expression *out of the top drawer*, meaning “well-bred, gentlemanly, upper class, aristocratic.” *Drawer* refers to a chest of drawers, one’s valuables usually kept in the top drawer.

the top five languages spoken worldwide. *Chinese* (with about 1,300 million native speakers) is spoken by more people than any other language. *Arabic* (420 million), *Hindi* (360 million), *English* (340 million), and *Spanish* (320 million) make up the rest of the top five.

topiary. Topiary is the clipping and training of plants like yew and arborvitae into fantastic shapes such as peacocks, elephants, foxes, birds, and grotesque geometrical figures. The word itself comes to us from the Latin word *topia*, akin to “artificial landscape.” The Romans were expert at the art or craft, as were the English in Tudor times, and topiary is still far more common in England than in America. Alexander Pope denounced topiary, inventing a mock garden catalog description of: “Adam and Eve in Yew, Adam a little shattered by the fall of the tree of knowledge in the great storm: Eve and the Serpent very flourishing . . . Divers eminent modern poets, in bays, somewhat blighted, to be disposed of, a pennyworth.” But topiary can be used effectively. Examples often cited are the topiary at the Alhambra in Granada and Italian gardens at Florence and Rome.

top of the heap. The biggest, or best, an American expression that goes back at least to the 1930s. *Heap* itself can mean a pile or large amount of money, that meaning a century older. I remember an old Mark Hellinger story about a gangster who vowed he’d wind up with more money and fame than anyone—on top of the heap. He was finally killed by rival gangsters and dumped on the top of a garbage heap.

top of the morning to you. A well-known greeting that Irish English speakers use only humorously today. More common is *how’s about you?* and *how’s she cuttin’?* or *what’s the crack?*

topping. An old-fashioned British term meaning “excellent, the very best.” “It was topping, absolutely topping.” The word never had much currency in the U.S.

toque. *Toque* refers to what Canadians call a woolen hat with a small ball of wool on top. Americans call this a “stocking cap,” while the British call it a “bobble hat,” and the Australians prefer “beanie.”

tor. *Tor* may be one of the first words spoken in England. Generally held to be a Celtic term used in place names, it may be a remnant of the prehistoric language of Bronze Age people on the island. These tribesmen lacked the writing to record their language but may have used *tor* as a place name that the Celts somehow adopted. *Tor* has come to mean “a high rock, a pile of rocks.” See also TORPENHOW HILL.

Tora! Tora! Tora! The phrase (which means *Tiger! Tiger! Tiger!* in English) that the lead Japanese pilot cried advising his men that the December 7, 1941, surprise raid on Pearl Harbor had begun. The words in 1970 became a book and movie.

tornado. Dorothy, her dog, Toto, and her house were carried off to the land of Oz by a tornado or cyclone in Frank Baum’s *The Wizard of Oz* (1900) and the movie made from it (1939). *Tornado* is used synonymously for a cyclone, a violent funnel-shaped wind located in a small area. *Tornado* derives from Spanish *tronado*, “thunderstorm,” and *tornar*, “turn.” It was so named by Spanish navigators in tropical seas. See HURRICANE.

torpedo. *Torpedo* can mean several things. The electric ray, or torpedo fish, was the first “torpedo,” taking its name from the Latin *torpere*, “to be stiff or numb,” in reference to the ray’s numbing sting. In World War I, naval men named the self-propelled mines called torpedoes after the fish because the mines resembled the actions of the electric ray, stunning all that came into contact with them. Yet torpedo meant a percussion shell before this, in 1786, and described a stationary explosive mine, the kind Admiral Farragut spoke of when he said, “Damn the torpedoes, full speed ahead!” The torpedoes Farragut disdained, were in fact, beer kegs filled with powder.

torpedo juice. Thirsty sailors in World War II sometimes made a potent drink called torpedo juice from alcohol drained from Navy torpedoes. This deadly brew soon lent its name to any raw homemade whiskey with killing power.

Torpenhow Hill. *Torpenhow Hill*, a ridge near Plymouth in England, literally means Hillhillhill Hill. The Saxons called it *tor*, “hill”; the Celts, not knowing the meaning of *tor*, added *pen*, “hill,” for the same reason. The Scandinavians added *haug* (how), “hill”; and finally Middle English speakers, not knowing that all the components of the word *Torpenhow* meant hill, added a second word *hill* to the place name. See also TOR.

Torquemada. More than 100,000 cases were tried and 1,000 people executed under the administration of Tomás de Torquemada (ca. 1420–98) after the pope appointed him Spanish Grand Inquisitor in 1483. The harsh rules Torquemada devised

and strictly enforced for the Inquisition, including the use of torture as a means of obtaining information, made the inquisitor-general's name a synonym for a cruel persecutor or torturer. Torquemada particularly distrusted the Maranos and Moriscos, Jewish and Moorish converts to Catholicism, many of whom he felt were insincere, and he was partly responsible for the royal decree in 1492 which expelled 200,000 unconverted Jews from Spain. One story, probably exaggerated, says that the hated grand inquisitor never traveled anywhere unless guarded by 250 armed retainers and 50 horsemen.

Torschlusspanik. A German word that literally means “shut door panic” and describes a sudden fear or alarm one experiences in middle age on thinking that life has passed one by, there will be no more chances.

tortoni. In one story a Signore Tortoni, an Italian restaurateur in Paris during the late 19th century, invented this rich ice cream studded with cherries and almonds or macaroons. Others claim that *tortoni* derives from the Italian *torta*, “tart.”

Tory. Dictionary makers were not always nonpartisan. In his great groundbreaking dictionary, Dr. Johnson, committed to the Tory party, defined a Tory as: “One who adheres to the ancient constitution of the state, and the apostolic hierarchy of the Church of England—opposed to a Whig.” (*Whig* was dealt with as if by the ax-man: “The name of a faction.”) *Tory* derives from the Irish *toraidhe*, a pursued person, the term first applied to Irish who were forced from their land by the English and took to the hills, becoming outlaws. It then became the name for Catholics fighting for James II and finally described those who supported the Stuarts as a political party. By the reign of George III, the party had lost its Stuart bias and vigorously supported the Crown, State, and Church as established by law. Since about 1830 the Tory Party has gradually become known as the Conservative Party and *Tory* has become a synonym for “conservative.” See WHIG.

toss in a blanket. Tossing someone, usually a girl, in a blanket has been an amusement among young people at beaches in relatively recent times, but the practice, at first a rough punishment, goes back at least five centuries. Shakespeare was the first to record blanket tossing, in *2 Henry IV* (1597): “I will toss the rogue in a blanket.” Twelve years later Ben Jonson used *blanket* as a verb to describe the practice. See BLANKET; WET BLANKET.

tot. A relatively recent word, first recorded in 1725, *tot*, for “a small child,” may go back to the Old Norse *tuttr*, “dwarf,” or the Danish *tommelot*, for “Tom Thumb.” It could also derive from *totterer*, or be connected somehow with the Anglo-Saxon *totri-da*, “swing.” And since *tot* means a small drink, too, the word could come from the earlier *toddy* (rum toddy, etc.), which derives from the Hindi *tari*, “a drink,” and is first recorded in 1609. A lot of theories for a little word—and no proof for any of them.

tote. *Tote* is of uncertain origin, but most likely comes from the African Kongo and Kikonga language *tota*, meaning “to carry.” The word may have passed into English through the Gullah dialect in the southern U.S.

totem. A totem is an object toward which individuals or groups have a special mystical relationship. Often these people observe totemic taboos, such as the Buffalo people of Ruanda, who will not eat buffalo meat, explaining that they are descended from the animal for whom they are named. The word *totem*, appropriately, comes from the Algonquian Indian *ototema*, meaning “his relations.”

To the babies! A toast made at an 1879 Chicago banquet for General Ulysses S. Grant. Mark Twain answered it: “We haven't all had the good fortune to be ladies; we haven't all been generals, or poets, or statesmen; but when the toast works down to babies, we stand on common ground.”

to the manor born; to the manner born. Some people are to the manor born, but Shakespeare, who invented the phrase, has Hamlet say “to the manner born” when he is speaking to Horatio. When Horatio asks what means the flourish of trumpets, roll of drums, and discharge of cannon he hears at midnight, Hamlet replies that the king is having a drinking bout and that each time he drains a flagon he is hailed with this uproar. Horatio wants to know if this is an old Danish custom and Hamlet answers:

Ay, marry, it is;
But to my mind, though I am native here
And to the manner born, it is a custom
More honored in the breech than the observance.

The phrase therefore refers to a custom, not to aristocracy or high estate, as the word *manor* would imply.

touch all bases. Not touching a base in baseball can result in big trouble (see BONEHEAD PLAY) and even a player who hits a home run must touch all the bases as he rounds them, which led to the common general expression *to touch all bases*, to be thorough and leave nothing undone. This phrase, in turn, is the source of the expression *to touch base with*, meaning to consult or inform someone concerning an impending matter.

touch and go. Either coach driving or ship pilotage gave us this term for a narrow escape or a precarious situation in which the outcome is doubtful for a time. Coach drivers used the term *touch and go* for a narrow escape after the wheels of two coaches touched in a near accident, a favorite scene in many costume adventures. The *Sailor's Word Book* (1867) explains the term's possible nautical derivation: “Touch and go—said of anything within an ace of ruin; as in rounding a ship very narrowly to escape rocks, etc., or when, under sail, she rubs against the ground with her keel!”

touché. Originally a French term for a touch in fencing, *touché* became by extension, in about 1920, an expression for a telling remark made against one's opponent in an argument.

touch-me-not. See NOLI ME TANGERE.

a touch of Caruso. A great tenor and a lighthearted man of boyish charm, Enrico Caruso (1873–1921) was something of a cutup and once pinched a girl's derriere in a Paris park. Resulting publicity gave rise to the expression *a touch of Caruso*

(“Give her a touch of Caruso, chief!”), meaning the turn of a ship’s engines astern.

touch off. To kill. In *Garden of Beasts* (2004), a novel set in the 1930s, Jeffrey Deaver has one of his characters say he used the term *touch off* instead of *kill*: “It was the phrase Sergeant Alvin York used to describe killing enemy soldiers during the war [World War I]. It made Paul feel less like a punk to use the term that a war hero did.”

touch of the holy bone. Said to be a very brief Irish aphorism heard among workers on the Boston docks to describe sexual intercourse or love play.

tougher than a 30-cent steak. This humorous expression was used in the 1943 movie *Heaven Can Wait* to describe a tough guy. It must date back a century or so, for there were no 30-cent steaks (no matter how tough) available in 1943.

tough guys don’t dance. According to one story, this famous phrase was first spoken by a Mafia hood who was escorting his stunning doll around town. They visited club after New York club, but no one took him up on his offer of dancing with his gorgeous girl. Finally, someone did ask why he didn’t dance with her himself. “Tough guys don’t dance,” he replied. The phrase later became the title of a book and movie.

tough it out. An Americanism meaning “to undergo hardship,” as in “They toughed it out on that rocky soil for three years before they quit.” The expression was first recorded in 1830 and is still heard today. *Rough it out* is also used.

Tourette’s syndrome. This hereditary neurological disorder is characterized by involuntary movements and vocal tics, such as grunts and barks, and obscene language (coprolalia). Though usually suffered by children, Tourette’s was first diagnosed in a French noblewoman by French neurologist Georges Gilles de la Tourette (1857–1904) in 1885.

tourista. Another jocular term for traveler’s diarrhea (jocular, that is, to those who aren’t suffering from it). The word derives from the Spanish *turista*, tourist, and is first recorded in about 1955. See also MONTEZUMA’S REVENGE.

tournedos; Tournedos à la Rossini. Tournedos are small, round thick pieces of beef, served with a number of sauces and garnished. The Italian composer Gioacchino Antonio Rossini (1792–1868), best known for the *Barber of Seville* (1816), is said to have invented the cut of beef when he conceived Tournedos à la Rossini at the height of his popularity. According to the old tale, Rossini was dining at the Café Anglais in Paris. Tired of the beef dishes on the menu, he gave instructions for his meat to be prepared in a different way. “Never would I dare to offer such a thing—it is unpresentable!” the maître d’hôtel protested. “Well then, arrange not to let it be seen!” the composer countered. Ever after, we are told, *tournedos* were to be served not before the eyes, but behind the diner’s back. Hence the name in French: *tourne le dos* (“turn the back”). There is no doubt, anyway, that Tournedos Rossini

are named in the composer’s honor: succulent slices of fried fillet of beef set on fried bread, capped with foie gras, crowned with truffles, and coated with Périgueux sauce. One of the richest, most expensive dishes in the world.

towering rage, etc. *Towering* in all such phrases derives from a term in falconry. Castle watchtowers were the tallest structures in the Middle Ages, so high-flying hawks were said “to tower.” *Towering ambition* is thus, ambition that is beyond ordinary bounds, as high as the towering of a hawk. *Towering rage* or *passion* could both be explained in the same way, rage or passion mounting to its highest point, but there is an added dimension that strengthens the phrases. When a falcon “towers” she hovers at the height of her ascent searching for prey, is ready to swoop down on her victim.

toxic; toxin. See INTOXICATED.

Toyota. The very popular Japanese car would be called a *Toyoda* if its manufacturers in the early 1930s hadn’t been superstitious. The Toyoda family wanted to name their car after the family, but *Toyoda* needs 10 characters in Japanese writing, while *Toyota* needs only eight. As eight is a lucky number in Japan, the family actually changed its name to Toyota, and the car’s lucky name was born.

tradattore, traditore. *Tradattore, traditore* translates literally from the Italian as “translator, traitor.” It is an old Italian saying claiming that a great book or poem can never be translated into another language and retain all its original shades of meaning.

trademarks and generic terms. Trademarks—“the name or symbol legally adopted and used by a manufacturer in order to distinguish the goods he manufactures or sells and to distinguish them from those manufactured or sold by others”—must always be capitalized. *Coca-Cola*, a trademark registered in 1887, has always been jealously protected by its owner. In 1930 the company went to the Supreme Court to obtain a ruling that the nickname *Coke* belonged exclusively to it and subsequently registered it too as a trademark. In the case of *cola*, however, the Supreme Court ruled in 1938 that any soft drink using the cola nut in its manufacture could call itself a cola, as cola is a generic word and therefore not the Coca-Cola Company’s exclusive property. Trademarks are also known as brand names or brands, this term deriving from the practice of branding animals to indicate ownership. The U.S. Patent Office began to officially register trademarks in 1870 although they were used several centuries before this. The *Trade Name Dictionary* (1977) lists over 106,000 trade names. Trademarks that have entered into general use as generic terms include: typewriter, shredded wheat, corn flakes, raisin bran, cube steak, dry ice, kerosene, lanolin, yo-yo, heroin, trampoline, cellophane, celluloid, Ferris wheel, aspirin, hoover, windbreaker, escalator, linoleum, lanolin, thermos, razor, nylon, acetate, spandex, asbestos, pullman, mimeograph, milk of magnesia, malted milk, mason jar, photostat, diesel, polyester, vinyl, zeppelin, and zipper. These former trademarks most often lost their trademark status because they were not properly protected. Others that are often used erroneously as generic terms, though they are still legally trademarks, include B.V.D.s, Skivies, Band-Aid, Frisbee, Ping-

Pong, Ouija Board, Listerine, Frigidaire, Teflon, Victrola, Kotex, Kleenex, Latex, Plexiglass, Kodak, Muzak, Pyrex, Vaseline, Scotch Tape, Jello, Xerox and Technicolor.

trade rat. See PACK RAT.

trade winds. These are winds that regularly “blow trade” in one direction or another. In the northern hemisphere they blow from the northeast, and in the southern hemisphere from the southeast. In some places they blow six months of the year in one direction and six months in the opposite direction. *Trade winds* is first recorded in 1626, but the term *to blow trade* is first mentioned in Richard Hakluyt’s *Diverse Voyages* (1582). See WINDS.

tragedy. “Goat singer,” the Greek *tragodia*, is the earliest ancestor of the word *tragedy*. But we don’t know exactly why R. C. Trench wrote in *On the Study of Words* (1888): “There is no question that tragedy is the song of the goat; but *why* the song of the goat, whether because a goat was the prize for the best performance of that song in which the germs of the future tragedy lay, or because the first actors were dressed, like satyrs, in goatskins, is a question which has stirred abundant discussion, and will remain unsettled to the end.”

trailblazer. A trailblazer isn’t someone who blazes new paths by “setting the world on fire.” To *blaze a trail* means to indicate a new path by notching trees with an ax or knife. *Blaze* in this sense is the white mark in the notch when the bark is removed. It originally meant the white spot on the forehead of a horse before American pioneers *trailblazed* the new use of the word.

trailer trash. A trailer is a mobile home, and people who live in them permanently are often looked down upon for no good reason. The derogatory term was first recorded in 1993 and is very common, sometimes meaning “any poor people.”

Trail of Tears. The term is explained by Edna Ferber in *Cimarron* (1930): “Tears came to his own eyes when he spoke of that blot on southern civilization, The Trail of Tears, in which the Cherokees, a peaceful and home-loving Indian tribe, were torn (1838–39) from the land which a government had given them by sworn treaty to be sent far away on a march which, from cold, hunger, exposure, and heartbreak, was marked by bleaching bones from Georgia to Oklahoma.”

train. In the mid-19th century, people first gave the name *train* to railway carriages attached to locomotives, obviously because what was most impressive about the locomotive was the fact that it could pull a long train of carriages behind it. *Train*, which comes from the Latin *trahir*, “to drag,” had previously been used for anything that trailed behind, but now it took on an entirely new meaning.

tramp. A tramp is so called because he or she tramps from place to place. The word has meant a wandering vagabond or beggar since the mid-16th century and has also become a term for a promiscuous woman. For more on these “knights of the road” see BUM, HOBO.

tranquilizer. The world’s first tranquilizer was *Reserpine*, invented by British botanist Robert Robinson and Swiss pharmacologist Emil Schittler in 1947, after testing it for more than five years. The tranquilizer came from the powdered white crystalline root of the sarpaganda shrub, which had been known for many years for its quieting effect.

transatlantic. See CISATLANTIC.

transitional sentence. The author Thomas Wolfe knew that editorial cuts were absolutely essential for him. Legend has it that the complete manuscript of *Look Homeward, Angel* that Wolfe sent to his editor Maxwell Perkins measured three feet high, or some 6,000 pages. Actually it was about a third of that, and the novel still had to be cut extensively. Often Wolfe would agree to cut only if he were allowed to write what he called a “transitional sentence.” The transitional sentences would turn into transitional paragraphs, pages, and chapters, but his work was usually pruned into shape by his editors.

trap war. A fight among lobstermen over where traps or pots are put, usually occurring when one lobsterman encroaches on another’s traditional territory. According to *The Lobster Almanac* (1988) “Trap wars are legendary, especially in Maine, where lobstering territories are often legacies from father to son. A half-hitch knot on a buoy spindle is a warning. A severed pot warp is a threat. On very rare occasions, territorial disputes flash into genuine war, as groups of lobstermen retaliate against other groups.”

trash. Shakespeare, in *Othello* (1604), is the first recorded author to use *trash* as a term for worthless or disreputable people. *Trash fish* and *trash duck* are old terms used by fishermen and hunters to mean various species of fish and ducks that are not edible. These latter terms date back to the Dutch in New York and are widely used today. See POOR WHITE TRASH.

trashing. During Vietnam War protests in the 1960s, student protestors emptied administration wastepaper baskets and garbage cans in what were the first incidents of “trashing” and the first uses of the word. Later, trashing involved breaking windows and writing on walls in administration buildings, often to protest war-related research by the colleges.

travelogue. A lecture, slide show, or motion picture describing travels. The word was coined in 1903 by writer Burton Holmes, who fashioned it from *travel* and *monologue*. Some scholars objected that it was “irregularly formed” because its first half is French and its second Greek, but *travelogue* has stood the test of time.

T.R.D.J.S.D.O.P.I.I. Probably the most unusual or complicated pseudonym in English literary history. The initials conceal The Reverend Doctor Jonathan Swift, Dean of Patrick’s in Ireland. Swift also used at least four other pen names: Isaac Bickerstaff (see BICKERSTAFF HOAX); A Person of Quality, A Person of Honor; M.B. Drapier; and A Dissenter.

Treachle Bill. See NO BALM IN GILEAD.

Treasure State. A nickname for Montana, which once was called the Bonanza State. It has been called the Stub-Toe State because of its steep hills and mountains.

tree. In his *Origins*, etymologist Eric Partridge traces the adjective *true* to the Old English *treow*, which means both “loyalty” and “tree.” A true person is thus “as firm and straight as a tree.” Trees figure in many other words and phrases. The Tree of Knowledge of Good and Evil is an unidentified tree in the Garden of Eden (Gen. 2:17, 3:6–24) bearing the forbidden fruit that Adam and Eve tasted. The Tree of Life is another name for this tree (Gen. 2:9, 3:22), while *the tree is known by its fruit* is an old biblical proverb (Matt. 12:33) meaning “one is judged by actions not by words.” An expression common to several languages, *a tree must be bent while it’s young* means essentially “you can’t teach an old dog new tricks.” A *Gregorian tree* is a synonym for the gallows. Obsolete in speech though not in literature, since the early 19th century, the expression derives from the names of two hangmen, Gregory Brandon, royal executioner in the time of England’s James I, who was succeeded by his son Richard, often called “Young Gregory.” In the United States poplars and other trees, called trees of liberty, were planted as symbols of growing freedom during the Revolutionary War. The custom was adopted by other countries, notably France during the French Revolution. First recorded in the early 1900s but probably older, *go climb a sour apple tree* means “go to blazes, go to hell.” It is an Americanism that is still occasionally heard in its shortened form *go climb a tree*. To hang someone from a sour apple tree was to show the ultimate contempt for him, hence the Civil War’s Union lyric “We’ll hang Jeff Davis [president of the Confederacy] from a sour apple tree.” Tree Day is the exact translation of Arbor Day, *arbor* being the Latin word for “tree.” Arbor Day was first celebrated in 1872, when Nebraskan J. Sterling Morton and his supporters persuaded their state to set aside April 10 for tree planting, to compensate for all the trees Americans had destroyed over the years in clearing the land for settlements. More than a million trees were planted on just the first Arbor Day alone and today the holiday is celebrated in every state.

A Tree Grows in Brooklyn. Although never named in Betty Smith’s novel *A Tree Grows in Brooklyn* (1943) nor the movies made from it, the tree in the book is *Ailanthus altissima*, also called the tree of heaven. No other tree withstands smoke and other city conditions so well, and the ailanthus seeds easily everywhere, often growing out of cracks in deserted sidewalks. Only female trees should be planted, however, as the odor of the male flower is obnoxious to many, which is why the ailanthus, a native of China, is also called the stink tree or stinkweed. The tree was brought to France by a missionary in 1751 and reached America 39 years later. Also called the backyard tree.

tree-hugger. A person who cares for the environment, to the extent of protesting to save it from being cut down. Often used contemptuously to describe an environmentalist in general.

tree of heaven. Though never named in Betty Smith’s novel *A Tree Grows in Brooklyn* nor the movies made from it, the tree in the book is *Ailanthus altissima*, also called the “tree of heaven.” No other tree withstands smoke and city conditions so well, and the ailanthus seeds easily everywhere, often growing out of cracks in deserted sidewalks. Only female trees should be planted, however, as the odor of the male flower is noxious to many, which is why the ailanthus, a native of China, is also called the “stink tree” or “stinkweed.” The tree was brought to France by a missionary in 1751 and reached America 39 years later.

tree of sadness. This pretty name describes the small Indian tree *Nyctanthes arbortristis* of the verbena family. It has very fragrant white and orange flowers that bloom at night. Also called the sad tree, it apparently suggested sadness to the unknown person who named it more than a century ago.

tref. Not as well-known as its antithesis, *kosher*, *tref* derives from the Hebrew *traf* meaning “animal torn by wild beasts.” *Kosher*, of course, has worldwide circulation, while *tref* is barely holding on.

trek. The *trek* we use to describe a long, slow, or difficult journey is an Afrikaans word adopted by British settlers in South Africa in about 1849. It originally meant a long, slow journey by ox wagon. Today it is familiar from the television science-fiction series *Star Trek*.

trembling poplar. See ASPEN.

triangle of death. An extremely dangerous area south of Baghdad during the Iraq War. Infamous for its booby-trapped bombs, kidnappings, and vicious executions. The area’s name was apparently coined by an anonymous soldier.

triangular trade. In the triangular trade, ships carried New England rum to the African Gold Coast on the first passage, traded the rum for slaves and transported the shackled slaves to the West Indies on the middle passage, where the slaves were sold for molasses and sugar, which were brought back to New England to make more rum on the final passage. The middle passage was, of course, the worse and most inhuman of the three legs of the journey.

tribulations. The Roman *tribulum* was a sledge consisting of a wooden block studded with sharp pieces of flint or iron teeth. It was used to bring force and pressure against wheat in grinding out grain. The machine suggested the way trouble grinds people down and oppresses them, *tribulations* becoming another word for troubles and afflictions. The word is first recorded in English in 1330.

Tricky Dick. A sobriquet for former president Richard Nixon that may have its roots in an Irish-American nickname for another politician named Richard. My grandmother spoke of a New York ward heeler named Tricky Dick, but she may have meant Slippery Dick Connolly, comptroller for the Tweed Ring. In any case, James Joyce named a politician Tricky Dick Tier-

ney in his short story “Ivy Day in the Committee Room” (1914), and it is not inconceivable that it was a felicitous Irish turn of speech, one of so many that came to New York with Irish immigration.

trilby hat. Trilby O’Ferrall, the heroine in British author, George Louis Du Maurier’s novel *Trilby* (1894), was a beautiful artist’s model who fell under the spell of SVENGALI and came to a tragic end. Many articles of clothing were named after Trilby while the novel was popular, including the soft felt hat with indented crown that the heroine wore in the stage version of the novel, a hat that remains fashionable today.

trillionaire. It seems impossible that anyone will ever become a British *trillionaire* (a trillion is a million billions in Great Britain; that is 1 followed by 18 zeroes), but some oil-rich Arab might become an American *trillionaire* (a trillion is “only” a thousand billions in the U.S.). Needless to say, there are presently no trillionaires (from the French *trillion*) in the world, but there are a few dozen billionaires, thousands of millionaires, and, as John Jacob Astor 4th said: “A man who has a million dollars is as well off as if he were rich.” See also BILLIONAIRE; MILLIONAIRE; MULTIMILLIONAIRE.

trim his sails. A sailor who *trims his sails*, “adjusts them to take advantage of the prevailing winds,” is a good one, but this 19th-century expression is now usually applied to an opportunist in everyday life, one who is skillful in shifting his principles with the prevailing winds, without regard for anyone or anything else.

Triple Crown. See BELMONT STAKES.

trip the light fantastic. Milton’s poem “L’Allegro” (1632) gives us this expression, meaning “to dance”:

Haste the Nymph and bring with thee
Jest and youthful Jollity . . .
Come, and trip it as ye go
On the light fantastick toe.

triskaidekaphobia. Fear of the number 13. One of the most notable sufferers of this phobia was the author Sholom Aleichem (Solomon Rabinovitch), whose manuscripts never had a page 13. He died on May 13, 1916, aged 63, but the date on his stone in Mount Carmel Cemetery, Glendale, New York, reads May 12a, 1916.

Tristan da Cunha. In case you want to live away from it all, Tristan da Cunha in the South Atlantic is the world’s remotest inhabited island, 1,315 miles from its nearest neighbor, St. Helena. It is named for Portuguese explorer Tristão da Cunha, who discovered it in 1506. Some 280 people live on the British dependency.

trivet. See RIGHT AS A TRIVET.

trivial. Some trivia about the word *trivial*. One theory holds that *trivia* derives from the Roman *trivium*, or “crossroads,” where people met to discuss small, insignificant things. Another,

less favored, says that during the Middle Ages the seven liberal arts were divided into the *quadrivium* (consisting of arithmetic, geometry, astronomy, and music) and the *trivium* (consisting of rhetoric, logic, and grammar). Since the *trivium* was considered less substantial, its subjects more superficial, the word *trivium* eventually gave us the word *trivial*.

Trojan. See REGULAR TROJAN.

Trojan horse. Ancient Troy is believed to have been located where Hissarlik, Turkey now stands. Here the Greeks waged the Trojan War (about 1200 B.C.) in an effort to claim their Queen Helen, who had been abducted by Paris, the son of the king of Troy. At least so the classical writers claim. The war, probably fought for the control of trade, lasted for some 10 years before Troy fell, the last year of the siege recorded by Homer in the *Iliad* and the burning of Troy described by Virgil in the *Aeneid*. Troy finally fell, Virgil writes, when the famous *Trojan horse* was left near the gates of the city overnight. The Trojans believed the giant horse to be a gift to the gods, but its hollow interior was filled with Greek soldiers, who slipped out in the dark and opened Troy’s gates to their comrades. Since then the phrase *Trojan horse* has been used for any deceptive scheme.

trolley. The British word for what Americans call a shopping cart. Both Yanks and Brits use the carts in huge supermarkets.

trolling. The trolls, or dwarfs, of Scandinavian mythology have nothing to do with this word. Meaning in its nautical sense to angle with a running line (which may have originally run on a *troll*, or winch), or to trail a baited line behind a boat, the word *troll* has its beginnings in a hunting term, the Middle French *troller*, which meant “to go in quest of game,” or “to ramble.”

trompe l’oeil. A painting so realistic that it at first appears three-dimensional is a *trompe l’oeil*. The term is French for “trick the eye.”

trophy. The Greeks and the Romans often collected the arms of a vanquished enemy army after a battle and hung these swords, helmets, and armor on the branches of trees, arranging the display as if the tree were an armed man. This monument was called a *trapaion*, “a turning point,” because it was always situated at the place where the turning point of the battle occurred. It is to this monument of victory, the *trapaion*, that our word *trophy* owes its birth.

trophy wife. When an older (usually rich and powerful) man marries a very attractive young woman, he is said to have won a trophy wife. The term only dates to the 1980s, but the practice is as old as money and/or power.

Trotskyite. A follower of Leon Trotsky, the pseudonym of Lev (or Leib) Davidovich Bronstein (1879–1940), the brilliant and prolific Russian revolutionary whose brand of communism advocated worldwide revolution, among other theories. Opposed by Stalin after the death of Lenin, Trotsky was sent into exile in

1929 and was assassinated, allegedly by a Stalinist agent, in Mexico 11 years later.

troubadour trouble. Provençal troubadour Guilhem de Cabestan (fl. 13th century) suffered an end similar to the tale of King Tereus in Greek mythology, who was served the flesh of his son by his vengeful wife, Procne. According to one story, Cabestan was killed by a jealous husband, who had the poet's heart cooked as a delicacy and served to his unfaithful wife. After his wife had finished her meal the husband informed her that she had eaten the heart of her lover, and she threw herself out the window to her death.

trouble goin' fall. This old Gullah proverb, once common among slaves on the South Carolina rice plantations, is part of what one scholar calls the slaves' "acceptance strategy of survival." As it was explained by a Gullah speaker: "Trouble made for man. Ain't goin' fall on the ground! Goin' fall on somebody!"

Troy weight. During the 13th century the fairs at Troyes, France, in the province of Champagne, were the most famous in Europe. The weights and measures among merchants there were strictly supervised to ensure honesty and *Troy weight* became a standard of excellence still used today to measure precious metals and drugs.

truck garden. *Truck*, deriving from the Old French *troquer*, "to exchange," was another word for COUNTRY PAY in earlier times. Since truck most often consisted of vegetables from gardens, the term *truck garden* came to refer to a vegetable garden.

true. See TREE.

true as Troilus. The phrase is a coinage of Shakespeare's in his play *Troilus and Cressida* (1602), Troilus standing for faithfulness, loyalty, and devotion in the tragedy.

true blue. Cloth made at Coventry in England in medieval times was noted for its permanent blue dye, which withstood many washings, not fading at the first washing like so many blue dyes of the day. Its constancy inspired the saying *as true as Coventry blue*, which meant dependable and faithful and was later shortened to *true blue*. The term's meaning was reinforced in the 17th century when the Scotch Presbyterians who fought for their religion called themselves Covenanters and selected blue as the color of their flag. Those unequivocally on their side were referred to as true blue.

true love never runs smooth. Strictly speaking, the saying is *the course of true love never did run smooth*, and it is from Shakespeare's *A Midsummer Night's Dream* (1595), in which (act I, scene I) Lysander consoles Hermia with the words. The young couple do finally overcome the resistance of Hermia's father and the Duke of Athens and are wed.

truffle. The "diamonds of gastronomy," as black truffles are called, and the "pearls of the kitchen," white truffles, are the

world's most expensive food (save for a few rare spices), selling some years for more than \$2,000 a pound. The underground fungi probably take their name from the Osco-Umbrian *tufēr*, which is a variation of the Latin *tuber*, "truffle." According to this explanation *tufēr* changed to the Vulgar Latin *tufēra*, which became by metathesis (the transposing of letters) the Old Provençal *trufa*, which was the basis for the French *truffe* and the English *truffle*. So far, so good—black truffles, after all, are more plentiful in Italy's Umbria region than anywhere in the world. But why the *l* in truffle? Some authorities believe that it's there because the English *truffle* derives directly from the Swiss *truffla*, not from the French *truffe*. The Swiss word, they claim, comes from the French *truffe*, with the *l* added from another French word, *trufle*, which means "mockery" or "cheating," alluding to the hard-to-find fungi's habit of hiding underground. In any event, there was inevitable confusion between the French *truffe* and *trufle*, and it is easy to believe that people accidentally combined the two words, given the truffle's evasive qualities.

It's interesting to note that the eponymous hero of Molière's famous play *Tartuffe* was named for the Italian word for truffles. *Tartuffe* appears to have been drawn from the character of a bawdy French abbot of the period, and Molière is thought to have used *tartuffe* to symbolize the sensuous satisfaction displayed by certain religious brethren when contemplating truffles. It is said that the name came in a flash to the playwright "on seeing the sudden animation that lighted on the faces of certain monks when they heard that a seller of truffles awaited their orders."

People have always been excited by truffles, so much so that they have gone to the trouble of training many animals with keen senses of smell to sniff them out from under the earth—pigs, dogs, goats, ducks, and even bear cubs among them. No other food has been so eulogized. The "pearl of banquets" has been apostrophized by poets like Pope—"Thy truffles, Périgord!" Porphyry called truffles "children of the gods"; they were "daughters of the earth conceived by the sun" to Cicero, and "*la pomme féérique*" (the fairylike apple) to George Sand. "Who says 'truffle,'" wrote Brillat-Savarin of the reputed aphrodisiac, "pronounces a grand word charged with toothsome and amorous memories for the skirted sex, and in the bearded sex with memories amorous and toothsome." Perhaps the truffle's aphrodisiac reputation can be explained by the old French proverb, "If a man is rich enough to eat truffles, his loves will be plenty." But aside from this cynical saying, little can be found in any language derogatory of the truffle. About the only such expression is the French slang word *truffe*, which means a "peasant" or "boor," in reference to the peasants of the Périgord and elsewhere who dig for truffles. Truffles are found by gatherers throughout America, though they are inferior varieties and no dogs or pigs are employed to sniff them out. There have been recent successful efforts to farm truffles in Spain.

Trugen stroke. Outstanding British amateur swimmer John Arthur Trudgen (1852–1902), introduced the Trugen stroke to Europe in 1893, after seeing it used in South America. The stroke, employing a double overarm motion and a scissors kick, is regarded as the first successful above-water arm action used in swimming. Trudgen popularized the idea of minimizing wa-

ter resistance by bringing both arms out of the water, which paved the way for the reception of the now common Australian crawl adopted from South Sea natives. His stroke was sometimes called the Trudgeon, another misspelling of the swimmer's name.

trump. *Trump* or *trumps*, meaning a suit in card games outranking all other suits for the duration of a hand, is an old alteration of the word *triumph*. The word was first recorded in 1529 and apparently first meant both the name of a card game called trump, and the term described above. Later the term spread to whist and then to bridge.

trumped-up charges. Groundless accusations that are fabricated, usually by a law enforcement agency. *Trump* derives from the Medieval French *tromper*, "to deceive," and has been used in this sense for over five centuries.

truth is stranger than fiction. Lord Byron is the author of the saying, in his poem *Don Juan* (1823): "'Tis strange,—but true; for truth is always strange; / Stranger than fiction. . . ."

truth lay at the bottom of the well. An expression British poet Percy Bysshe Shelley (1792–1822) may have coined after he leaped into the Arno River and his friend Edward Trelawny, a strong swimmer, saved him. Shelley protested, saying, "The truth always lay at the bottom of the well and in another minute I should have found it." Despite several such close calls Shelley never learned to swim and did indeed drown when his schooner, the *Ariel*, sank in the Gulf of Spezia.

try it out on the dog. A late 19th-century theatrical expression meaning to try out a play or a vaudeville act in a small city, making improvements before bringing it to New York. The small towns involved came to be called "dog towns."

tsunami. *Tsunami* means "storm wave" in Japanese. Tsunami (soo-nam-ee) waves have killed tens of thousands. Starting as the result of an undersea volcanic eruption or earthquake, tsunamis gather force and can travel at over 400 miles an hour, rising to heights of over 100 feet before they crash into shore. Tsunamis have been traced back almost to the beginning of recorded history, but the word itself did not come into English until the 20th century. See SPLASH.

tuba. A straight war trumpet was called a *tuba* by the ancient Romans, after the Latin word for "arouser or exciter." Over the centuries this word for a war trumpet became attached to an entirely different musical instrument that hadn't even been invented in Roman times.

tuberose. This plant is no relation to the rose and, in fact, was first pronounced in three syllables, "tu-ber-ose." However, people so often mistakenly associated the flower with the rose that its name came to be pronounced in two syllables, "tube rose." The tuberose is the only cultivated species of the genus *Polianthus* and has many fragrant waxy-white flowers that are used in making perfume.

tuckered out. Very tired, exhausted, as in "It was only a game but it tuckered him out." The American expression is first recorded in 1825.

Tucson bed. A humorous expression from the western range that probably dates back to the late 19th century, a Tucson bed, after Tucson, Arizona, means "lying on your stomach and covering that with your back." Early cowboys apparently didn't think much of Tucson's accommodations.

Tuesday. *Tuesday* is named for the Germanic god of war, Tiw, deriving from the Anglo-Saxon *tiewesdaeg*, "the day of Tiw."

Tuesday's child. See MONDAY'S CHILD.

tug of war. Lord Byron used the phrase *tug of war* in *Don Juan* (1819–24), but not to describe the popular game of that name. In the game two teams pull on opposite sides of a thick rope, each trying to pull (tug) the other side over the dividing line between them. The words in this sense were first recorded in an 1876 British magazine article: "The tug of war was the most popular item in Saturday's entertainment." At "The Pull," held annually in Michigan's Hope College since 1898, two teams pulled for three hours and 51 minutes before one team was tugged over the line—a record for the event there.

tuk-tuk. A South African three-wheeled six-seater taxi that is powered by a motorcycle. The name is said to derive from the "tuk-tuk" sound its motor makes. Also, an open Bangkok taxi often seen on the city streets.

tulip. Of all the foolish investment schemes the world has known, the 17th-century tulipomania was certainly one of the most reckless. Starting in Holland, the mania for the purchase of tulip bulbs spread throughout Europe and rose to its height from 1634 to 1637, when investors purchased bulbs for more than \$10,000 each and people lost fortunes on speculations in unusual bulbs that often came to nothing. The tulip takes its name from a Latinized version of an Arabic word for "turban," an allusion to the shape of the flower. Tulips were first grown in Turkey and brought with the Turks to Europe when they invaded the Continent. They have since become one of the most popular flowers in the world, with thousands of varieties available. See also MULBERRY.

tumbleweed. Any of several plants, including the *Amaranthus* genus and the Russian thistle (*Salsola kali*), whose branching upper parts come loose from the roots and are driven by the wind across the prairie. The plant, like sagebrush, has become a symbol of the West, as in song lyrics such as "drifting along with the tumbling tumbleweed." One old belief has it that God put tumbleweed here to show cowboys which way the wind is blowing. The plant was originally imported to the U.S. as a border hedge!

tummeler. A popular Yiddish term for an all-around entertainer who can tell jokes, sing and dance, and even act or work as an MC.

tuna. An Americanism first recorded in 1884, *tuna* appears to be an anagram of the Spanish *atun*, for the fish, which had been called the tunny (from the Latin *thumis*) in English since at least the 16th century.

tuna fish. There are still thousands of Americanisms that are different from British English expressions, though these have dwindled with the spread of movies, television, and increased foreign travel. A good example of such differences is found in a story about plain old tuna fish. The highest word rate ever paid a screenwriter is the \$15,000 producer Darryl F. Zanuck gave American author James Jones for correcting a line of dialogue in the film *The Longest Day*. Jones and his wife, Gloria, were sitting on the beach when they changed the line “I can’t eat this bloody old box of tunny fish,” to “I can’t stand this damned old tuna fish.” That works out to three word changes at \$5,000 a word.

tundra. One of the few words contributed to English by the Laplanders in Europe’s far north is the word *tundra*, for the bleak, nearly level barrens these people inhabit. The Lapp *tundra* passed into Russian before being recorded in English during the mid-19th century.

tunnel. In Medieval English a *tonel* was a net with a wide mouth used to trap birds. From this word derived *tunnell*, for “the shaft of a chimney or any pipe or tube,” which gave us the word *tunnel*, for “an underground passage.”

tunny. See TUNA.

tupelo. The native American tupelo tree genus (*Nyssa*), which includes the black or sour gum tree, means “tree of the swamp” in Creek Indian language. *Tupelo*, recorded in 1730, is a good example of the mess Americans made of some Indian words. It was *ito opilwa* in Creek.

Tupperware. Plastic bowls and food containers named after American engineer Earl Tupper, who invented them in the 1940s and set up a company manufacturing them. The airtight containers are primarily used for storing food in the refrigerator. Tupperware parties held in housewife’s homes proved very successful for direct sales.

turducken. According to an article in the *Farmers’ Almanac* (2007), this delicious dish was invented by two Louisianans in 1985. The men, both butchers, were asked by a customer to bone a turkey, a duck, and a chicken, and stuff each one inside the other (the chicken inside the duck, the duck inside the turkey). The butchers not only stuffed the fowl—they named it. The *tur* in the dish was for *turkey*, the *duck* was for *duck*, and the *en* came from *chicken*.

Turing machine; Turing test. In 1937 British mathematician Alan Mathison Turing (1912–54) described what many regard as the theoretical forerunner of the modern computer. This “Turing machine,” however, was not an object but a mathematical model. Another eponymous term from Turing’s name is the “Turing test,” which no computer has yet passed—that is, no

computer has been able “to impersonate a human well enough to fool a human judge,” according to Mitchell Kapor, the founder of Lotus Development, quoted in the *New York Times* of 9/1/01. A brilliant codebreaker during World War II, Turing committed suicide after being prosecuted and persecuted as a homosexual.

Turk. A cruel, brutal, and domineering man is sometimes called a Turk or an unspeakable Turk, such qualities ascribed to the Turks from early times. The word *Turk* itself is Arabic or Persian for a native of Turkey. *Turk*, uncapitalized, can also mean one of a breed of Turkish horses similar to the Arabian horse, the distinctive plum curculio insect, or a scimitar. See YOUNG TURK.

turkey. The domesticated turkey hardly knows what to eat and has to be attracted to food by colorful marbles placed in its feed; it often catches cold by getting its feet wet and frequently panics and suffocates itself when the flock presses together in fear. For such reasons *turkey* has been slang for any stupid, worthless, useless, unsuitable thing since before 1930. *Turkey* for a poor, third-rate play, movie, or book is said to be an invention of humorist S. J. Perelman, who in the 1920s called himself a “Pennsylvania farmer of prized turkeys, which he displays on Broadway once a year.” The word is also used for a socially incompetent, awkward person, a fake drug capsule, easy money (because turkeys are comparatively easy to catch), an easy task (a *turkey shoot*), a valise, a 50-cent piece (from the eagle on the coin), and a hobo’s suitcase. *Turkey* comes from *turkey hen*, native to Turkey, which was confused with the American bird. See ELEPHANT BIRD.

turkey neck. A U.S. slang term for a person’s neck similar to a turkey’s: fleshy, bunched up, and full of depressions and swellings.

turkey twizzler. A dish presently served to children in British school cafeterias. It consists of tiny pieces of turkey made into shapes, with the assistance of nonmeat products, before being deep-fried. The children generally dislike the dish, much preferring CHIP BUTTY (qv) and CRISPS (qv).

Turkish words in English. Turkish words that have enriched the English language include the ancestors of: turban, tulip, yogurt, caviar, horde, fez, and vampire.

turmeric. The powdered root of the East Indian turmeric plant is often the chief ingredient in a flavorful curry dish. This led the French to name it *terre merite*, roughly “worthy earth,” which gives us its English name, *turmeric*. The plant is botanically called *Curcuma domestica*.

turn a blind eye. To deliberately ignore something when you know it is going on. The expression is said to have been inspired by a famous incident at the Battle of Copenhagen. Admiral Nelson had been ordered by flag signal from his superior to halt the bombardment of enemy ships. He deliberately placed his telescope to his blind eye, ignored the order as if he had not seen it, and proceeded to win the day for England.

turnabout. A shift in opinion or loyalty. For a brilliant example, see William Faulkner's short story "Turnabout," which is set in World War I.

turn a deaf ear. People have been *turning* or *giving deaf ears* to others, "refusing to listen," since at least the 14th century. A similar expression is to close or stop one's ears, the latter used by Shakespeare in *A Winter's Tale*.

turncoat. Someone, especially a traitor, who deserts his party or country for another, usually out of self-interest. There have been a few attempts to explain the "coat" in the phrase, none very convincing. The term dates back to the 16th century.

Turnera aphrodisiaca. As its name implies, this Mexican and African plant, commonly known as *damiana* and scientifically named by Linnaeus in honor of William Turner, author of the *New Herball* (1551), has been widely used as an aphrodisiac. Distributed throughout tropical America, the plant is believed to be effective in treating impotence and is supposed to have a tonic effect on the genitals and nervous system. Long ago, the Aztecs used the leaves of damiana to make an aphrodisiac tea. A commercial liqueur made from damiana, called "Liquor for Lovers," can be purchased in the United States. The plant's scientific name is sometimes given as *Turnera diffusa*.

turnip. *Turnip* comes from the early English *turnepe*, that word blending the noun *turn* (with reference to the vegetable's neatly round shape) and the earlier English word *nepe*, for turnip.

turn of the century. The expression has been around since the turn of the 19th century, which was midnight December 31, 1900. Contrary to popular belief, the last turn of the century did not fall on midnight, December 31, 1999. The next turn of the century was midnight, December 31, 2000. Midnight December 31, 1999 was only the beginning of the last year of the old century.

turn over a new leaf. The leaf turned over is one from a book not a tree. People have been using the expression, for "reforming or amending one's conduct" for almost 500 years and it refers to turning to a blank page in an exercise book where one can begin work afresh, or to a new lesson in a book of precepts. A page of a book is called a *leaf*, however, because the leaves of certain plants were used as manuscript pages before the invention of paper. Many ancient manuscripts written on palm leaves still survive.

turn over gravel. Down deep in the holler, or hollow (valley), mountain folk say this of a man in good health, indicated by his ability to urinate so vigorously he can turn over gravel on the ground.

turn over in his (her) grave. An old expression, still often used, as in "Your father would be turning over in his grave if he knew what you've done with the property."

turnpike. See PIKER.

turn the tables. Collecting antique tables was a fad among wealthy men in ancient Rome, we're told. When these collectors chided their wives about expensive purchases, the women turned them toward these antique tables and reminded their husbands of their own extravagances, "turning the tables on them." A good story, but there is no evidence that it is true. The expression *to turn the tables* doesn't date from Roman times, is only about 400 years old, and possibly derives from the game of backgammon. In backgammon, formerly called "tables" in England, the board is usually divided into two "tables." One rule of the complicated game allows a player to double the stakes in certain situations and literally turn the tables. Another possibility is that the phrase comes from the old custom of reversing the table or board in chess, which enabled a player at a disadvantage to shift the disadvantage to his opponent.

turn turtle. British sailors in the Caribbean during the 17th century noticed that natives would capture huge sea turtles by turning them over, thereby rendering them helpless, when the creatures came ashore to bury their eggs. Later they used this image when they said that a capsized ship *turned turtle*, and soon the expression came to mean anything upside down.

turn up one's nose. *Turn up one's nose* means "to show contempt or disdain." Lord Byron may have coined this phrase in *Don Juan* (1819), writing of "Antonia . . . turning up her nose, with looks abused her master." But a century or so earlier, *hold up one's nose* had been recorded as meaning "to be proud and haughty."

turpinite. Used in making shells, *turpinite* was for a short time the most powerful explosive in the world, and like the atom bomb inspired the false hope that its terrible effects would end war for all time. The French inventor Turpin concocted *turpinite* about 1894, about six years after he had invented the explosive *lyddite*, which is named for Lydd, England, the town where its preliminary tests were made. Turpinite, said to have been tested among sheep with devastating results, inspired fear even among French troops.

turquoise. This blue or green gem was mined in Persia in medieval times and shipped through Turkey to Europe. Europeans, however, believed it to be mined in Turkey and the French called it *la pierre turquoise* ("the Turkish stone"), which soon became simply *turquoise*.

turtledove. No turtles involved here. The mourning dove takes its name from the Latin *turtur*, echoic for the sound that the bird makes, and *dove*, for "a diver." *Turtur* became the Dutch *tortelduyf*, the German *Turteltaube*, and finally the English *turtledove*. The *Song of Solomon's* "The voice of the turtle is heard in the land," refers to the turtledove.

Turveydropian. An eponymous word, little used today, that remembers Dickens's character Mr. Turveydrop in *Bleak House* (1852–53). Mr. Turveydrop considers himself "a perfect model, a past master of deportment," Dickens writes. He is in reality a selfish widower, "a fat old gentleman with a false complexion, false teeth, false whiskers, and a wig." He considers himself "one of the aristocracy" and has worked his devoted wife to

death at his Dancing Academy. As for his son, he has had him christened Prince in honor of the Prince Regent, even though Prince sounds like a dog's name. While he has the best of everything, his son has nothing.

Tusitala. See SIGN LANGUAGE.

tussie mussie. See NOSEGAY.

tutania. British manufacturer William Tutin, who had a plant in Birmingham in about 1770, may have been as patriotic as the inventors of the *sten gun*, who named their invention from their initials plus the *En* of England. Tutin manufactured a silvery white alloy of tin, antimony, and copper, which he probably named after himself and four letters from *Britannia*. Possibly someone else fashioned the odd word, however, and the coining of *tutania* was probably influenced by *tutenag*, "a crude zinc."

Tuvan throat singing. Tuva is a former British protectorate in the central Pacific that achieved independence in 1978. It is known for its throat singers, whose art of singing involves making several vocal-cord sounds at the same time. The film *Genghis Blues* (2000) tells of American blues guitarist Paul Pena (1950–2005), one of the few Westerners who mastered the Tuvan art form.

tuxedo. What do Indians have to do with tuxedos? In 1890, dress requirements at the local country club in Tuxedo Park, New York, 40 miles or so from Manhattan, called for men to wear a tailless dinner jacket at most nightly affairs. This was known as a *tuxedo coat* until matching pants were added to the outfit and it became known as a *tuxedo*, which inevitably was shortened to *tux*. The word *tuxedo* itself derives from the white settlers' pronunciation of the name of the Ptukisit Indians, a subtribe of Delaware Indians who lived in what is now Tuxedo Park. *Ptukisit* meant "roundfoot" or "wolf tribe" in allusion to the wolf, "he of the roundfoot."

tuzzy-muzzy. See NOSEGAY.

TV dinner. Few people realize that the ubiquitous frozen TV dinner is a trademark name of the C. A. Swanson Company. It was coined in 1953, during the early days of television, when people first began to sit around their TV sets and eat prepared dinners that were easily heated in the oven. It should be added that Gerry Thomas (1922–2005), a Swanson salesman, invented the TV dinner, whose sales now total \$30 billion a year. The first dinner was sold in 1954 and consisted of turkey, peas, sweet potatoes, and cornbread and was served in a compartmentalized tray similar to an army mess kit. See TELEVISION.

tweed. "Twill" would have been the name of the coarse woolen cloth named "tweed" if the Scotch weavers who wove it in the mid-19th century had had their way. *Twill* referred to the weaving style used to make the cloth, but English merchants at the time dubbed it *tweed* both because *twill* was pronounced *tweal* in Scottish dialect and because the Tweed River passes through the southern part of Scotland where the cloth is made.

Tweedledum and Tweedledee. A 1725 epigram about the relative merits of the composers Handel and Giovanni Battista Bononcini, or Tweedledum and Tweedledee as the poet called them, went as follows:

Some say compared to Bononcini
That mynheer Handel's but a ninny;
Others aver that he to Handel
Is scarcely fit to hold a candle.
Strange all this difference should be
Twixt Tweedledum and Tweedledee.

The epigram, variously attributed to John Byrom, Pope, and Swift, first used the words Tweedledum and Tweedledee, which has since described two people, groups, or things identical in looks, opinions, or certain characteristics. The nicknames, which suggested the contrast between high- and low-pitched musical instruments, were given to German-born English musician George Handel and the musician G. B. Bononcini when a rivalry sprang up between the two while Handel served as director of the Royal Academy of Music. English aristocrats mainly sided with Bononcini, who is little-known today and left no work nearly as popular as Handel's *Messiah*. Tweedledum and Tweedledee were made more famous as the twins in Lewis Carroll's *Through the Looking Glass* (1872).

Tweed Ring. See TAMMANY.

12 (twelve). Twelve is first recorded in English at about the time the Danish Vikings began invading England in 789 and it may derive from the Old Frisian *twelf*. In any case the victorious Vikings did transmit their duodecimal system to the English. They counted in twelves instead of tens and our 12 inches to a foot, 12 men to a jury and marketing unit of a dozen all evolved from their system.

21-gun salute. Guns were fired as salutes in early times, but a 21-gun salute is an American expression. According to an official U.S. Navy publication: "Guns could not be loaded quickly then, so the act of firing one in a salute indicated that the saluter had disarmed himself in deference to the person being saluted. The larger the number of guns fired the greater degree of disarmament . . ." Since 21 guns was the greatest number found on one side of one of the larger ships of the line, firing all of them became the highest mark of respect, reserved for heads of state. Fewer numbers of guns were fired in salutes to people of lesser importance. But for any salute only odd numbers are used, reflecting the old seagoing superstition against even numbers. This form of saluting was first recognized in the U.S. in 1875. As commander in chief, the president is accorded the highest salute of 21 guns.

20 tailors around a buttonhole. An old American variation on the older 16th-century TOO MANY COOKS SPOIL THE BROTH

23 skiddoo. For well over half a century no one has used this expression seriously, but it is still remembered today—mainly as a phrase representative of the Roaring Twenties, which it is *not*. Twenty-three skiddoo is important, too. It goes back to about 1900 and for 10 years enjoyed great popularity as America's first national fad expression, paving the way for thousands

of other dispensables such as *Yes, we have no bananas, Shoo-fly, Hey, Abbott!, Coming, mother! and I dood it!* Twenty-three skiddoo practically lost its meaning of “scram” or “beat it” and just became the thing to say, anytime. As for its derivation, it is said to have been invented or popularized by that innovative early comic-strip artist “Tad” Dorgan, encountered frequently in these pages under *hot dog, yes man*, and other of his coinages. Regarding its composition, *skiddoo* may be a shortening of the earlier “skedaddle.” *Twenty-three* is a mystery. Perhaps it was a code number used by telegraphers. There is even a theory that it “owes its existence to the fact that the most gripping and thrilling word in *A Tale of Two Cities* is twenty-three”: Sydney Carton, the 23rd man to be executed on the 23rd of the month. Finally, there is the story that *twenty-three* referred to the address of New York City’s Flatiron Building, on whose windy corner men liked to watch women’s skirts blow upward, until cops told them to scram—“Twenty-three skiddo!”

twepping. Homicide was called by the acronym *twep*, “terminate with extreme prejudice,” in C.I.A. circles during the Vietnam War, and may still be used today. *Twep* was used so frequently that it gave rise to the euphemistic verb *twepping*.

twerp. This word for an insignificant objectionable little person may well be an eponym. The Englishman in question, according to several authors, is T. W. Erp, who attended Oxford in about 1911. Author J. R. R. Tolkien has called this T. W. Erp “the original twerp,” while author Roy Campbell shares his opinion and suggests that T. W. Erp was first called a *twerp* by “rigger-playing stalwarts” who were jealous of his charm and intellectual gifts. Both these authors are referring to Thomas W. Earp (1892–1958), whose last name is pronounced *Erp*, making the eponymous word just as likely. Earp, an art critic and author, criticized D. H. Lawrence’s paintings in the *New Statesman* (Aug. 17, 1929) and Lawrence replied with a poem that began: “I heard a little chicken chirp:/ My name is Thomas, Thomas Earp!/ And I can neither paint nor write,/ I only can set other people right.” It is said that Earp really did have a curious high-pitched voice similar to a “chirp,” making Lawrence’s putdown all the more effective. Another theory has *twerp* deriving from the Danish *tver*, perverse; still another that it is a variant of *twit*.

twigloo. A treehouse construction first built in Britain in the late 1990s, the word obviously coined from *twig* and *igloo*. The treehouse, built in selected locations, helped environmentalists halt the building of objectional highways and dwellings.

Twinkie defense. When former San Francisco supervisor Dan White was on trial in 1979 for killing Mayor George Moscone and supervisor Harvey Milk, the defense psychiatrist claimed White’s lethal actions were caused by an over-indulgence in junk food such as Twinkies. This came to be called the Twinkie defense. White was paroled after serving five years of his eight-year sentence, but committed suicide 19 months later.

twin poets. Tirupati Winkatakawulu was the pseudonym of the Indian “twin poets” whose real names were Diwakarla Tirupati Sastri (1872–1919) and Cellapilla Wenkatasastri

(1870–1950). The “twin poets” were good friends who wrote all their work together for more than 25 years and called themselves by one name—the only known case of poets doing this. Great scholars as well as bards, they revived a broad interest in Indian Telugu literature with their many original poems and translations. The “twin poets” were also famous for their phenomenal memories, exhibited in the performance of *satawad-hana*, where, according to one biographer, “a hundred interrogators were each given line-by-line a verse of four stanzas on a subject prescribed by each, the hundred verses finally repeated complete [by the twin poets] without missing a syllable.” Wenkatasastri continued to write under the pseudonym for 30 years after his fellow poet died.

Twin Towers. Until their tragic destruction by terrorists on September 11, 2001, the Twin Towers of the World Trade Center complex in downtown Manhattan were New York’s tallest office buildings, surpassed only by the Petronas Towers in Malaysia and the Sears Tower in Chicago. Over 50,000 people worked in the World Trade Center complex, thousands of whom were killed in the terrorist attack on the Twin Towers. See EMPIRE STATE BUILDING.

Twiss. Here the Irish had the last word, as is often the case. Author Richard Twiss (1747–1821) may have thought he had put the natives down when he published his uncomplimentary *Tour in Ireland* in 1775, but he hadn’t counted on the Irish wit. They promptly began to manufacture a chamber pot called the *Twiss*, but didn’t let it go at that. On the bottom of the chamber pot was a portrait of *Richard Twiss*, the picture captioned thus:

Let everyone—
On lying Dick Twiss.

No one knows if he was inspired by the much older but similar Twiss Affair (qv), but William Randolph Hearst, the American newspaper publisher and model for *Citizen Kane*, was expelled from Harvard in 1885 after he gave a chamber pot to each of his professors—each chamber pot bearing each professor’s portrait inside on the bottom.

See also CRAPPER; FURPHY; OLIVER; SACHEVERELL; VESPASIANNE.

twist. In American slang a *twist* is a woman, often a woman who associates with gangster types. But the *Twist* is also a dance very popular in the 1960s.

twist (turn) someone around one’s little finger. “[She] had already turned that functionary around her finger,” historian John Motely wrote in *The Rise of the Dutch Republic* (1855). This is the first recorded mention of anything like the more embellished expression *to twist someone around one’s little finger*, though Motely makes no claim to having coined the phrase.

twist slowly, slowly in the wind. President Richard Nixon’s assistant for domestic affairs, John D. Ehrlichman, coined this expression on March 8, 1973, while on the phone with presidential counsel John Dean discussing the withdrawal of Patrick Gray’s nomination for director of the F. B. I. Gray had not been told about the withdrawal and was waiting for his appointment.

"I think we ought to let him hang there," Ehrlichman said. "Let him twist slowly, slowly in the wind."

twit. A *twit* is an insignificant foolishly annoying person. I've heard the word mainly in remarks like "Nasty little twit, isn't he?" and it apparently comes ultimately from the Old English *aetwitan*, to reproach or taunt. There are several theories however, about the origins of this word, which is first recorded in the early 1920s in this sense.

twitter. See ONOMATOPOEIA.

two bits. *Bit* was British slang for money or any small coin (a threepenny bit, etc.) as far back as the early 16th century. In U. S. regions bordering on Mexico the term was applied to the Mexican *real*, worth 12½ cents and called a shilling in many eastern states. By 1730 the expression *two bits*, two Mexican reales, or 25 cents, was being used in the American Southwest and for many years *quarter* was practically unknown there. *Two bits* became popular throughout the country, as did the expression *not worth two bits*, "practically worthless," but *four bits* and *six bits* never caught on nationally.

two comma kid. Recent clever, unrecorded black slang for a millionaire, especially a young one, like a rap star. Million written in numbers (1,000,000) has two commas.

two down, one to go. When something is close to being accomplished, when the finish is near, one might say *two down, one to go*. The common expression is from baseball, where *down* is a synonym for "out" and has been used that way for over a century. There are of course three outs an inning allowed to a team at bat before the opposing team gets a chance to bat.

twofers. *Twofers* has meant "two theater tickets for the price of one" since about 1948 in America. Previously, since as early as 1890, *twofers* had referred to "two-for-a-nickel" cigars.

two heads are better than one. An old proverb first recorded in *The Proverbs of John Heywood* (1546).

two lamps burning and no ship at sea. A foolishly extravagant person. Someone with ships at sea in the days of sail was rich and could afford to burn two expensive oil lamps. Anyone else who burned two lamps was likely a fool.

a two-legged animal without feathers. A famous definition of mankind by Plato. It is said that the cynic Diogenes delivered a plucked cock to the academy, remarking, "Here is Plato's man." Plato, however, not to be outdone, added to his own definition: "with broad flat nails."

the two-mile movie. It takes one and a half feet of 35-millimeter film to make one second of screen time. A two-hour movie thus uses about two miles of film—not counting the film that has been cut.

two percent to glory. Albert Einstein was a dedicated pacifist and in 1930 made a speech declaring that "If only two percent of those assigned to military service would announce their re-

fusal to fight . . . governments would be powerless. They would not dare to send such a large number of people to jail." He was soon affectionately dubbed "Two percent Einstein" by a pacifist group, which made its slogan "Two Per Cent to Glory." See EINSTEIN.

two strikes against you. When you have two strikes against you, you are close to striking out in baseball, a game in which a batter has three missed chances before his turn at bat is over. Thus we have the widely used phrase *to have two strikes against you*—borrowed from baseball, no one knows exactly when—meaning perilously close to losing, or, in another sense, starting out with an unfair disadvantage. See also STRIKEOUT.

two strings to one's bow. To be prepared for anything, to have an alternate plan. This expression is probably much older than its first recorded use, by Cardinal Wolsey in 1524, having its roots in the archer of ancient times who always carried at least two bowstrings when he went into battle.

two-time loser. In some states a third conviction for a major crime results in an automatic term of life imprisonment for the offender. Thus a criminal who has two such convictions and remains a criminal is a desperate man, a two-time loser.

two whoops and a holler. In western U.S. parlance *two whoops and a holler* means a short distance, not far, "within spitting range." The phrase probably dates back to the late 19th century.

tycoon. *Tycoon* is just an American phonetic spelling of the Japanese *taikun*, for "great prince." The Japanese word, in turn, comes from the Chinese *ta*, "great," and *chun*, "prince." Americans encountered the *taikun*, whose military title was *shogun*, during Commodore Perry's expedition to Japan of 1852–54 and brought the word home, where it was applied to any powerful man, especially a wealthy businessman.

Tyler gripe. John Tyler (1790–1863) has the dubious honor of being the only U.S. President for whom an epidemic is named. The Tyler gripe was a virulent influenza that swept the country at the time he became President in 1841. In fact, Tyler, elected vice-president, assumed office when his running mate, old William Henry Harrison, died a month after being inaugurated as President. Harrison died of pneumonia or the Tyler gripe, or a combination of both.

typefaces named for printers. Numerous typefaces for printing have been named for their designers. Several of the most famous are: 1) Baskerville, after Englishman John Baskerville, who died in 1775. He is said to have made all the tools of his trade, including his own inks. 2) Bodoni (1740–1813), the son of a printer, who produced many works over his long career that are considered classics today. 3) Caslon, after Englishman William Caslon (1692–1766), one of London's leading printers. 4) Gill, for British sculptor and type designer Eric Gill (1882–1940). 5) Plantin, after Christophe Plantin, who died in 1549 when only 35. Famous for his excellent craftsmanship in his own lifetime, he is now honored by the Musee Plantin in Antwerp, which was the site of his famous printing house.

typewriter. The word *typewriter* was coined by American Christopher Latham Sholes, who patented the first practical commercial typewriter in 1868 (slow, difficult machines, intended primarily for the blind, had been invented as early as 1714). Sholes's "type-writer" had only capital letters. Manufactured by Remington, it was owned by Henry James, Mark Twain, and Sigmund Freud, among other famous early experimenters. Mark Twain, in fact, typed *The Adventures of Tom Sawyer* on Sholes's machine in 1875, this being the first type-written book manuscript (a fact that Twain kept secret in his lifetime because he didn't want to write testimonials or show the uninitiated how to use the machine).

typhoon. There is some doubt about the origin of this term for a violent tropical storm in the area of the China Seas, but it probably derives from Chinese *tai fung*, "big wind," influenced by Greek *tuphon*, "whirlwind," and Arabic *tufan*, "storm." Typhon, the giant Greek father of the winds, also influenced the coinage. Joseph Conrad's short story "Typhoon" (1903) deals with typhoons so violent that even the imperturbably obtuse captain of a tramp steamer doubts his ship's survival. See HURRICANE.

typo. *Typo*, short for typographical error, is an Americanism dating back to the 1890s. Newspapers and magazines regularly

run features pointing out the best or worst typographical errors in other newspapers and magazines. For example, a Clive Barnes review in the *New York Times* of *A Midsummer Night's Dream* found "David Waller's virile bottom (instead of 'Bottom') particularly splendid." Possibly the worst modern-day slip appeared in the *Washington Post* in 1915, where it was noted that President Wilson had taken his fiancée, Edith Galt, to the theater and rather than watching the play "spent most of his time entering Mrs. Galt," instead of "entertaining Mrs. Galt." See also ENTERTAIN.

typographical inspiration. The first numbers of the famous *Story Magazine* were edited by Whit Burnett and Martha Foley on the island of Majorca, off the coast of Spain, and were printed locally. As the local printer's font had no *w*, all those early issues of *Story* had little holes on the pages where *w*'s should have been. This inspired Miss Foley to write and print a story in the magazine without a single *w*. Later in the year, Edward O'Brien included her tale in his annual *Best Stories* anthology.

tyro. A green recruit was called a *tiro* by the Romans, to distinguish him from an experienced ordinary soldier, called a *miles*. In Medieval Latin *tiro* was often spelled *tyro*, which became our term for a novice or greenhorn in any field.

U

U. The letters *U* and *V* were at first interchangeable in English, the letters not separated in dictionaries until the early 19th century (*upon*, for example, was often spelled *vpon*). *U* in recent times has become a humorous term for “upper class” or “correct,” *non-u* or *un-u* being its opposite.

U-boat. The German *unterseeboot*, “undersea boat,” gives us this universal abbreviation, which became popular during World War I.

UFO. *UFO*, as a term, has been in use since the 1950s or earlier, but the first unidentified flying objects were reported in America in 1896. UFOs are often called flying saucers, but they have been reported in many different shapes. The first were said to resemble “cigar-shaped airships.”

Ugandan. According to at least one source, the editor of the British satirical magazine *Private Eye* coined this word for “sexual activity.” It is said to be based on a media party during which a reporter and a Ugandan diplomat spent two hours together in a bedroom. On emerging the reporter explained, “We were discussing Ugandan affairs.”

ugh! There is no record of an American Indian ever uttering the sound “ugh” when he or she meant “yes” or “hello.” The term can be traced to dime romances about the American West popular at the turn of the century, its use perpetuated by early American motion pictures. As a sound of contempt and disgust *ugh* is first recorded in 1837 but is probably much older.

ugli fruit. *Ugli* here is simply a spelling variation of *ugly* and is used to describe a large sweet variety of tangelo with rough, wrinkled yellowish skin that originated in Jamaica. A tangelo is a cross between a tangerine and grapefruit. See GRAPE; TANGERINE.

ugly as a mud fence. American pioneers often made fences of sod and dirt when stone and wood were in short supply on the

prairie. These homely fences served their purpose but were eyesores, leading to the expression *ugly as a mud fence* for someone or something extremely ugly.

ugly as sin. One can’t be much uglier than this, even if some sins seem lovely. The expression, though possibly much older, is first recorded in Sir Walter Scott’s novel *Kenilworth* (1821) with its many glimpses into the court of Queen Elizabeth.

ugly duckling. Hans Christian Andersen’s tale “The Ugly Duckling” tells of a sad “ugly duckling” that was actually a cygnet and, to its mother’s surprise, grew up into a magnificent swan. Soon after the story was translated into English in 1846 the expression *ugly duckling* became part of the language, usually meaning an unpromising child who grows into an admirable adult.

Ugly Valley. One of many New Zealand place names translated into English from Maori words. In this case the original was *Awakino*, which means “valley ugly.” About 60 percent of New Zealand place names are of Maori origin.

uh, oh; uh-huh; uh, uh; huh. Humorist H. Allen Smith thought *uh, oh* was the most terrifying phrase in English, “as when a doctor looks at your X-rays and says ‘uh, oh.’” It is not to be confused with *uh-huh* and *um*, “yes”; *uh-uh*, “no”; or *huh?*, “what?” All of these expressions or grunts have been traced back to at least the 1830s. Stuart Berg Flexner in *I Hear America Talking* has described *uh-uh*, *huh?*, and *um* as “among the most common ‘words’ heard in America . . . truly native earmarks of an American,” and points out that perceptive English author Captain Frederick Marryat properly identified them as Americanisms over a century ago. Flexner doesn’t mention it but *y’know* is replacing *uh* as a surrogate crutch today, *y’know*; I mean, uh, *y’know* is a form of “inarticulateness,” that is, uh, *y’know* . . .

Uhyanapatanvaani. In the Karuk indigenous language of the United States this huge word means “little word asker.” It

was coined by the Karuk in honor of William Bright (1928–2006), a renowned linguist, whose dictionaries and other books on American Indian languages, especially the Karuk (sometimes called Karok), helped keep their words and phrases alive. “Little word asker” referred to the many travels Professor Bright made to ask Native speakers the meaning of their words, for which they also made him an honorary member of the tribe.

ukulele. *Ukulele* is the Hawaiian word for “flea.” Apparently, it was transferred to the musical instrument that the Portuguese brought to Hawaii in 1879, either because one’s fingers hop like fleas from string to string when playing the instrument, or because British army officer Edward Purvis, a member of King Kalakaua’s court, nicknamed “the flea” because of his small stature, was a skilled ukulele player who helped make the instrument popular in Hawaii.

Ultima Thule. A distant territory or a remote goal or ideal. The original Thule was the northernmost region of the habitable world to ancient Greek geographers, from the time the fourth century Greek navigator Pytheas visited a northern island he called Thule, which has variously been identified as Iceland, Norway, or the Shetland Islands. The words *Ultima Thule*, sometimes used in the lower case, are from the Latin *ultima*, “farthest,” plus *Thule*. There is a real town called *Thule* in north-west Greenland.

ultracrepedarian. See COBBLER SHOULD STICK TO HIS LAST.

ululate. Meaning to howl or wail, to lament loudly, *ululate* is a word of imitative origin, possibly going back to the Sanskrit *ulukas*, a name for the screech owl.

Ulysses. See ODYSSEY

Ulysses S. Grant. Most people believe this was the name of Union Civil War general U. S. Grant, but his real name was Hiram Ulysses Grant—a clerical mistake at West Point had listed him as Ulysses Simpson Grant, and he accepted the error until the end of his life, even in the title of his *Memoirs*. He was called Sam at the Point, however; the old story was that an upperclassman spied his name given as U. S. Grant on a bulletin board listing of new cadets and joked that this stood for United States Grant, or better yet, Uncle Sam Grant. “That’s what he is,” another joker supposedly chimed in: “Uncle Sam Grant—the grandson of our good old Uncle Sam.” The awkward little soldier was glad to be called Sam, too, throughout his career. He liked it better than the strange Ulysses and far better, of course, than the Useless of his childhood playmates. It was also clearly preferable to his other nickname, “Little Beauty,” given to the good-looking soldier by the officers of his regiment before the Mexican War. During the Civil War he would be called Unconditional Surrender Grant and also the Butcher for his unsparing sacrifice of Union troops. See ROBERT E. LEE.

umber. The color *umber*, dark dusty brown or dark reddish brown, is named for the earth called umber that makes such

pigments. *Umbra earth* comes from the Italian *terra d’Umbria*, “earth of Umbria,” referring to the soil in Umbria, east of Tuscany in northern Italy. Umbria is named for the *Umbri*, a tribe that once inhabited the region. It is a great TRUFFLE producing region.

umbrage. *Umbrage* derives from the Latin *umbra*, “shadow or shade,” the same root that gives us UMBRELLA. The expression means to take offense, suggesting someone “shadowed in offended pride, retreating into the darkness of proud indignation.” There is a story about the editor of a small newspaper who quickly read a wire service story during World War II stating that the Russians had *taken umbrage* at something, as they often did. Not knowing what the phrase meant, he headlined the story: “Russians Capture Umbrage.”

umbrella. The umbrella is named for the benefit it provides in hot, sunny countries. It derives from the Latin *umbra* “shade,” its diminutive ending making the word mean “a little shade.” (*Sombrero* similarly comes from the Spanish *sombra*, “shade.”) The umbrella has been known in England since Anglo-Saxon times, but is said to have first been used there as a protection against rain by the world traveler Jonas Hanway in 1760. His innovation caused a riot among sedan chairmen and coachmen, whose vehicles up to then had been the pedestrian’s only protection from downpours. See also GAMP; UMBRAGE; UNDER THE UMBRELLA OF.

umlaut. In German the umlaut is used to indicate an internal vowel change in a word or to show that a letter is pronounced differently than it ordinarily would be. It is also called a *diaeresis* in English, when it is used above the second of two coupled vowels to show separate pronunciation, as in *coöperate*. The only English or American authors, and perhaps the only English or American family, with an umlaut in their name are the Brontë sisters—Charlotte, Emily, and Anne. Their father, Patrick Brunty, trying to distinguish himself at Cambridge, changed the family name to Brontë soon after Lord Nelson was created duke of Brontë; he added the German umlaut for even more éclat.

ummern; dummern. Words often take on almost unrecognizable forms in remote places. A century ago, for example, the scholar Horace Kephart found that “the word *woman* has suffered some strange sea-changes” in the North Carolina Appalachians. There, in Mitchell County, he heard “the extraordinary forms *ummern* and *dummern*” for *woman*.

umpire. *Umpire* is a later form of *noumpere*, which meant the same: “one who decides disputes between parties.” *Noumpere*, in turn, ultimately derives from the Old French *nonper* (*non*, “not” plus *per*, “equal”). Thus, the idea behind the word is that the umpire is not equal to either party in a dispute, is the impartial third person. *Noumpere*, the accepted form up until the 15th century, began to be pronounced *umpire* because people transferred the *n* in the word to the indefinite article: *noumpere* becoming an *oumpere* and finally an *umpire*. In the same way a *napron* became an *apron*, a *nadder* became an *adder*, and an *ewt* became a *newt*.

umpteen, umpty. These are words meaning a large number, as in “She has umpteen pairs of shoes.” Of World War I origin, both words may have been coined by army telegraphers. *Umpty* was slang for a dash in Morse Code, and a great many dashes or umptys may have become *umpteen* (patterned on *thirteen*, *fourteen*, etc.)

un-American. *Un-American* is a very American word, dating back to at least 1817, when it is first recorded, and not at all of recent vintage. It means contrary to U.S. values, even traitorous, and was most prominent recently in the name of the House [of Representatives] Un-American Activities Committee, active from 1938 to 1975, which critics claim was more un-American than many of the people it investigated. In 1945 HUAC’s name became the Committee on Un-American Activities; in 1969 it was renamed the Committee on Internal Security; and it was finally abolished in 1975.

unartificial insemination. A drunken woman at a party told James Thurber she wanted to have a baby by him. Thurber replied: “Surely you don’t mean by unartificial insemination.”

un-artist. See HAPPENING.

uncial. An *uncial* is a majuscule script, often used in ancient manuscripts, that takes its name from the Latin *uncia*, “inch,” because the letters in it are about an inch high.

uncle! *To say or cry uncle* has since the beginning of this century meant “to give up, to surrender, to say you’ve had enough.” Apparently it is of schoolboy origin, at least it is most used by schoolboys when fighting, especially when one has another pinned helplessly on the ground. For about 30 years the cry *give!* has been more common in the New York City area, but one still hears the earlier expression. Why *uncle* was chosen by kids is anybody’s guess; there probably is no good reason unless a defeated boy originally had to curse his uncle, just as bullies often make their victims curse their mothers and sisters before letting them go. Which is no more than a guess. *Cavy!* a similar expression not heard anymore, is said to date back to Tudor times, a corruption of the Latin *peccavi*, meaning “I have sinned, I am wrong.”

Uncle Duke. A well-known character in the Garry Trudeau comic strip *Dooniesbury* who was based on American writer Hunter S. Thompson (1937–2005). Thompson’s book *Fear and Loathing in Las Vegas* (1972) introduced his alter ego Raoul Duke.

Uncle Miltie. See I’LL TELL YOU WHAT I’M GONNA DO.

Uncle Remus. Joel Chandler Harris’s Uncle Remus tales, collected in *Uncle Remus: His Songs and His Sayings* (1880) and many other books, were among the first and remain the greatest of black folk literature. In the books, Uncle Remus, a former slave, entertains the young son of his employer with traditional “Negro tales” that in St. Augustine’s words “spare the lowly and strike down the proud,” including the “Tar-Baby” stories and

other tales of Brer Rabbit (always the hero), Brer Fox, and Brer Wolf. Harris, born a “poor white” or “redneck,” a pineywoods “Georgia cracker,” collected the authentic tales from numerous former slaves. One who helped him a great deal was an old gardener in Forsyth, Georgia called Uncle Remus, and Harris named his narrator after him. The tales, however, probably go back to Africa, where they were born among people who spoke the Bantu language and of course no Uncle Remus is in them. Uncle Remus is considered “a servile groveling ‘Uncle Tom’” by some blacks today. Versions of the Brer Rabbit tales without him have been told by Arna Bontemps and Langston Hughes.

Uncle Sam. The original *Uncle Sam* was Samuel Wilson, the nephew of army contractor Elbert Anderson, who owned a store or slaughterhouse in Troy, New York and had a contract to supply the army with salt pork and beef during the War of 1812. Wilson and his uncle Ebenezer, Elbert’s brother, worked as army inspectors and frequently inspected the meat Elbert Anderson packed in barrels with the initials “E.A.—U.S.” stamped on them. According to a popular version of the story, one soldier asked another what the initials E.A.—U.S. (Elbert Anderson United States) meant and his companion quipped that they stood for “Elbert Anderson’s Uncle Sam.” Some scholars dispute this story, which was widely accepted during Wilson’s lifetime, but no better explanation has been given. The term’s first recorded use was in the *Troy Post* of September 7, 1813, which speaks well for the Samuel Wilson theory except that the article only says the words derive from the initials on government wagons. The name *Uncle Sam* caught on quickly as a symbol of the army and then as a national nickname to counteract that of England’s John Bull.

Uncle Tom. Everyone knows that *Uncle Tom* comes from the character in Harriet Beecher’s Stowe’s *Uncle Tom’s Cabin* (1852), the immensely popular American antislavery novel that caused President Lincoln to say on meeting Mrs. Stowe, “Is this the little woman whose book made such a great war?” Mrs. Stowe depicted Uncle Tom as simple, easygoing, and servile, willing to put up with anything, though it should be remembered that she intended him as a noble, high-minded, devout Christian and that he is flogged to death by the brutal overseer Simon Legree at the end of the book for bravely refusing to reveal the hiding place of Cassie and Emmaline, two female slaves. Few people know that Mrs. Stowe’s model for Uncle Tom was a real-life slave named Josiah Henson, born in Maryland in 1789, who wrote a widely read autobiographical pamphlet. Henson was far from an *Uncle Tom* in the term’s recent sense. Like many slaves, he served as the overseer, or manager, of a plantation before he escaped to Canada. Once free, he started a prosperous sawmill, founded a trade school for blacks, whites, and Indians and helped over 100 slaves escape to Canada. When he journeyed to England on business, the archbishop of Canterbury was so impressed with his speech and learning that he asked him what university he had studied at. “The University of Adversity,” Henson replied.

Uncle Tomahawk. Recent slang for an American Indian who is accused of being servile to whites by other Indians; patterned on the older familiar term “Uncle Tom.” Also *Uncle Taco* (*Tio Taco*).

unconditional surrender. “Unconditional Surrender” was the nickname of Union General U. S. (Ulysses Simpson) Grant, who would give “no terms but unconditional surrender” to the Confederates in 1862 when his forces captured Fort Donelson in Tennessee, the first major Union victory of the war. The term has been used in every war since, but got its start with “Old Unconditional.” See ULYSSES S. GRANT

uncouth. *Couth*, originally meaning “known or familiar,” dates back before Chaucer’s day. Its antonym *uncouth* is just as old, the word being used in *Beowulf* for “unknown or unfamiliar.” The dislike of the unfamiliar, of strangers, foreigners, is probably responsible for the change in the word’s meaning over the years to unseemly, awkward, uncultured, etc.

under (his or her) thumb. Under the control or power of someone else, as in “He’s completely under her thumb.”

underdog. *Underdog* appears to have originated in a popular 19th century song by David Barker called “The Under-Dog in the Fight,” two stanzas of which follow:

I know that the world, that the great big world
Will never a moment stop
To see which dog may be in the fault,
But will shout for the dog on top.
But for me, I shall never pause to ask
Which dog may be in the right,
For my heart will beat, while it beats at all,
For the under dog in the fight.

underground; underground railroad. Since about 1815, abolitionists helped slaves escape from the South. By the early 1830s, railroads were becoming common in the United States and the term *underground railroad* came into being. Though there was no real underground railroad, the term persisted and underground railroad was even shortened to railroad. These railroads even had stations, where the slaves hid during the day, and conductors who guided them from place to place in the dark. By the time of the Civil War, thousands of slaves had been freed in this way.

underground sanitation expert. A euphemistic term for a sewer worker used by Ed Norton, played by Art Carney in the 1950s television series *The Honeymooners*.

underhanded. We know that four centuries ago card sharks were as proficient at palming cards, holding extra cards under their hands, as sharpsters are today. Such cheating, widespread as it has always been, may have suggested the expression *underhanded*, “in a secret or stealthy manner,” though the first writer to use the word in this sense (1545) refers to a plain thief “stealing under hande or craftily.”

undertaker. *Undertaker* has been used since at least 1698 for what is in the U.S. euphemistically called a mortician. Perhaps the term originated as a joke (for an undertaker does *take* someone *under* the ground), but there is no proof of this. *Undertaker* is recorded three centuries earlier in the sense of “one

who undertakes a task or enterprise,” and an *undertaker* meant “a publisher,” and, to be fair, “an author,” before it came to mean one who arranged funerals.

under the counter. During World War II, dishonest merchants often stored rationed or hard-to-get items under the counter and sold them at inflated prices to dishonest customers. Before the war ended, this practice led to expressions like *under the counter* for any illegal or shady transaction.

under the doctor. To say someone is “under the doctor” in the U.S. would be a bit risqué. Here we say someone is “under the doctor’s care,” but the British prefer the shortcut.

under the hammer. The Romans used to stick a spear into the ground on consummating a sale, which led to their expression *under the spear*, for something sold or about to be sold. By the 18th century the English, having fewer spears around, were using the expression *under the hammer* for something on the auction block, anything from a painting to an entire estate. The *hammer* in the phrase is of course in reference to the small wooden hammer or gavel that an auctioneer brings down when a bid on an item has been accepted.

under the rose. See SUB ROSA.

under the table. An odd New York character named George Washington “Chuck” Connors, the so-called Bowery Philosopher from the late 1890s into the early years of the 20th century, is said to have coined the expression *under the table* for dead drunk. He is also thought to be responsible for the catchphrases *oh, forget it* and *the real thing*. For another use of *under the table* see ABOVEBOARD.

under the umbrella of. This phrase means under the protection, dominion, or influence of someone. In various Asian and African countries the umbrella was a symbol of rank or state, an emblem of sovereignty, and the expression may be an allusion to this. As far back as the early 17th century, English writers were commenting on the practice of servants carrying umbrellas to shade sultans from the sun. But the expression could be home-grown, too; just as early, there were figurative references in English to umbrellas as a means of protection. Perhaps the phrase is simply an extension of the earlier *under the aegis of*, which means the same. The *aegis* was the storm and thundercloud of the Greek god Zeus, who sometimes put it between a favorite and his enemies to protect his favorite. A bright, blazing shield fringed with gold tassels, it had at its center the head of Medusa, a glimpse of which could turn men to stone.

under the weather. Ik Marvel, a pseudonym that resulted from a misprinting of J. K. Marvel, was the pen name of American author Donald Grant Mitchell. In his *Reveries of a Bachelor* (1850) Ik Marvel is the first to record *under the weather*, which has been a synonym for everything from “ill and indisposed” to “financially embarrassed” and “drunk,” and has even been a synonym for “the discomfort accompanying menstruation.”

under the window. Says William F. Macy: “Nantucketers always sit *under* the window, never *at* the window. The reason is obviously that Nantucket windows usually are rather high from the floor [and] we sit under them.”

under the wire. See JUST UNDER THE WIRE.

underworld. Since about 1608, when the term is first recorded, *underworld* had meant hell, or the nether world of the dead beneath the earth. But in the 18th century the word was applied to the world of criminals, who were considered “beneath” proper society. By the 1920s *underworld* was being used in this second sense only to describe organized crime, which the word generally means today.

under your hat. See TALK THROUGH ONE’S HAT.

under your own nose. Right in front of someone, as in “He cheated you here, right under your own nose.” The expression dates back to at least 1548 and usually refers to “an action that is done in defiance of a person without his perceiving it,” in the words of the *OED*. Variations on the phrase are *right under your nose* and *under your very nose*.

undine. An *undine* is a female water spirit, one of the elemental spirits, the spirit of the waters. The word was coined by Paracelsus from the neo-Latin *unda*, “a wave.” *Undine*, in the 1811 tale of the same name by German author Friedrich de la Motte Fouqué, obtains a soul by marrying a mortal and bearing him a child.

Uneasy lies the head that wears a crown. See HANG BY A THIN THREAD.

unicorn. Medieval writers represented this mythical animal as having “the legs of a buck, the tail of a lion, the head and body of a horse and a single horn—white at the base, black in the middle and red at the tip—its body white, head red, and eyes blue.” It takes its name, of course, from the most distinctive of its features, the single horn in the center of its forehead, from the Latin *unum cornu*, “one horn.” Described as early as 400 B.C., the mythical beast was thought to be the only animal able to defeat an elephant—by ripping the elephant’s belly with its sharp hooves. It could be caught only by “placing a young virgin in its haunts”—the unicorn would lie down placidly at her feet.

Union Jack. *Jack* has meant a small flag used as a mark of distinction on a ship since the early 17th century. It may be that the Union Jack, the national flag of Great Britain, takes its last name from this *jack* flown aboard ships. Other possibilities are the French *Jacques*; James, for King James I introduced the Union flag; or a leather surcoat called the *jack* that was often “emblazoned with the cross of St. George.”

union suit. Still heard occasionally, as a comic or euphemistic term for men’s underwear, the union suit was probably so named because top and bottom were “united” in one piece. However, some authorities say the underwear, dating back to

the early 19th century, got its name because it was made of a “united” mixture of flax and cotton called “union.”

United Nations. Before Winston Churchill suggested the name *United Nations* to President Roosevelt the world body was called the *Associated Powers*. Churchill took the name from a poem by Lord Byron, which he quoted to FDR:

Millions of tongues record thee, and anew
Their children’s lips shall echo them and say—
“Here, where the sword united nations drew,
Our countrymen were warring on that day!”
And this is much, and all which will not pass away.

United States of America. Thomas Paine, the author of *Common Sense*, a popular tract that attracted many to the side of the American Revolution in 1776, coined the name *United States of America* for his adopted country. The name was first used in the subtitle of the Declaration of Independence: “The Unanimous Declaration of the Thirteen United States of America.” However, before the Articles of Confederation was ratified in 1781 the nation was known as The Congress. Under the Articles it was called The United States in Congress Assembled and under the Constitution was finally called Paine’s United States of America. It should be added that from as early as 1617 to as late as 1769 the kingdom or republic of Holland was called the United States. See SUMMER SOLDIER AND SUNSHINE PATRIOT.

united we stand, divided we fall. The commonly-quoted words are originally from “The Liberty Song,” by John Dickman, first published in the *Boston Gazette*, July 18, 1768: “Then join hand in hand, have Americans all! / By uniting we stand, by dividing we fall.”

Univac. *Univac* is an acronym for *universal automatic computer system*. This early computer gave its name to its manufacturer, which was taken over by another company in the early 1950s and became a division of the Sperry Rand Corporation.

University of Adversity. See UNCLE TOM.

Unknown Child. Canadian sailors buried an unidentified infant who died in the sinking of the *Titanic* (1912) in a Halifax graveyard, where his grave became known over the years as the Grave of the Unknown Child. In 2002, DNA tests identified the child as Eino Panula, 13 month old, whose mother and four brothers and sisters also died in the tragedy. The grave has since been visited by other members of his family. See UNKNOWN SOLDIER.

Unknown Soldier; Unknown Warrior. The Unknown Soldier is the body of an unidentified American soldier killed in France during World War I and buried in the National Cemetery at Arlington, Virginia, his grave a national shrine. The *Unknown Warrior* is his British counterpart, “buried among the kings” in Westminster Abbey. There are similar shrines in Paris and Berlin for French and German unknown soldiers, all from that bloody war. Since 1958 unknown soldiers who died in World War II, Korea, and Vietnam have been buried in the

Tomb of the Unknown Soldier at Arlington. See UNKNOWN CHILD.

unmentionables. Few if any people would use this expression today, but it was a humorous term for both trousers and underwear in Victorian times. *Inexpressibles*, *unutterables*, and *unwhisperables* were other such terms.

unmuzzled. British prime minister Gladstone used *unmuzzled* in 1865 to describe a former government officeholder no longer restrained from speech by his position. Shakespeare was the first to use the word figuratively (it had been used previously of dogs) in *As You Like It* (1599): “Ay, marry, now unmuzzle your wisdom.”

unputdownable. A book, article, story, poem, etc., so suspenseful or interesting that it is hard to put down.

unreconstructed southerner. A term applied to a southerner not reconciled to the results of the Civil War; first recorded in 1867, it is still used today. *Unreconstructed rebel* is a later variation. For a stanza of “A Good Old Rebel (Unreconstructed)” by Innes Randolph (1837–87), see GOOD OLE BOY.

until a shrimp learns to whistle. Never. This Russian proverb gained worldwide currency when Soviet premier Nikita Khrushchev (1894–1971) used it in a 1955 speech: “If anyone believes that our smiles involve abandonment of the teaching of Marx, Engels, and Lenin he deceives himself. Those who wait for that must wait until a shrimp learns to whistle.”

until the last dog is hung. This colorful Americanism was appropriately first recorded in an old-fashioned western, Stuart Edward White’s *The Blazed Trail* (1902), in which the hanged dogs referred to hanged men. Today the words are usually heard in reference to someone staying at a party, bar, event, etc., until the very last, as in “We were there until the last dog was hung.”

unusual vowels. Among the French author Georges Perec’s most unusual works was a novel in which the most common vowel wasn’t used, and another novel in which *e* was the *only* vowel used. He also wrote an anagrammatic poem using only the 10 commonest letters in the alphabet—*e, s, a, r, t, i, n, u, l*, and *o*. He claimed that a palindrome he wrote of 5,000 characters was the longest in the world. See VOWEL.

unvarnished truth. An unembellished account without any evasions. This is a variation on *unvarnished tale*, meaning the same, which is said to have been invented by Shakespeare in *Othello* (1602): “Yet, by your gracious patience, / I will a round unvarnished tale deliver.”

upas. According to fable a foul vapor rises from the Javanese upas tree (*Antiaris toxicaria*) and “not a tree, nor blade of grass is to be found in the valley or surrounding mountains near it, not a beast or bird, reptile or living thing lives in the vicinity.” A Dutch physician noted in 1783 that “on one occasion 1,600 refugees encamped within fourteen miles of it and but 300 died

within two months.” Such legends inspired the use of the word *upas*, for “a corrupting or evil influence.” Legends aside, the milky juice of the upas contains a virulent poison that is used for tipping arrows.

up a tree. Unable to make up one’s mind, as in “I’m still up a tree.” This old Americanism is used in John Ford’s *Young Abe Lincoln*.

upblown; unupblown. Regarding a rumor that a British nurse had been killed in an Italian air raid on Ethiopia, author Evelyn Waugh’s newspaper editor cabled him “Send two hundred words upblown nurse.” Finding that the story had no basis in fact, Waugh cabled back, “Nurse unupblown.”

up Green River. When American mountain men killed a man a century ago they sent him *up Green River*, this referring not directly to Wyoming’s Green River but to the common Green River knives used in many a fight. They were called that because they were made at the Green River works and stamped with that designation.

upholsterer. An upholsterer was originally a worker hired by a merchant to “hold up the goods” so that they could be seen by prospective buyers—he was a “holder upper” and was, in fact, first called an *upholder*. Over the years, this same worker came to repair the goods he had held up. By the 17th century he was being called an *upholsterer*, his work consisting of repairing, finishing, or making articles of furniture.

up in the paints. “She is up in the paints as regards age,” Damon Runyon wrote in a short story. The expression means “high up.” I’ve been unable to find the origin of this phrase but guess it derives from the slang *paints* for playing cards, *up in the paints* referring to the higher valued cards in the deck.

up one’s alley. Very suitable to someone’s likes or abilities, as in, “Let me play, this game is right up my alley.” Eugene O’Neill must have known the expression was common about 1924, when he put it in quotes in a letter. It is infrequently heard as “down one’s alley.”

up one’s sleeve; laugh up one’s sleeve. Fifteenth-century garments had few if any pockets, so men often carried whatever things couldn’t be hung from their belts in their full sleeves. It is probably from this source, rather than magicians with rabbits up their sleeves, that we derive our expression for having an alternative plan or something in reserve, although the phrase in its sense of a scheme or trick was most likely influenced by magicians concealing their professional paraphernalia. Another expression deriving from the same source is to laugh up (or in) one’s sleeve, “to ridicule a person secretly.” A man wearing a garment with capacious sleeves was quite literally able to conceal a laugh by hiding his face in his sleeve.

upper class. *Class* was used as early as the mid-17th century in England for a division of society, *higher* and *lower orders*

being previously used. The term *lower class* was employed as early as 1772, while *upper class* is recorded about half a century later in 1826 and *middle class* in 1830. *Upper* and *upper ranks* (1825) are also first recorded in England, while little-used *upper 10* or *upper 10,000* (1844) originated in the U.S., as did the UPPER CRUST (1850) for the upper classes or aristocracy. Often these terms do not indicate wealth but social status, as when Maupassant writes in his story “How He Got The Legion of Honor”: “They lived in Paris, like many rich middle-class people.”

upper crust. “Kutt the upper crust [of the loaf] for your souerayne [sovereign],” an arbiter of good manners wrote in about 1460. He was referring to the old custom, or proper etiquette, of slicing the choice top crust off a loaf of bread and presenting it to the king or the ranking noble at the table. This practice led to the expression *upper crust*, for “rich or important people,” those who ate the upper crust, though this meaning isn’t recorded until the mid-19th century. See also UPPER CLASS.

uppercut. An uppercut can be both a blow directed upward to an opponent’s chin in boxing and a play in bridge of a higher trump than necessary. The boxing term, recorded in 1840, probably came first.

upper hand. See GETTING THE UPPER HAND.

up periscope! Originally used by the English on land to see over hills and bushes, its use recorded as early as 1822, the periscope became forever linked with submarines during World War I. At the time, *up periscope!* became a familiar command, and “feather” became the word for a periscope’s wake. The word *periscope* itself is a learned coinage from the Greek *peri*, “near,” and *scope*, “an instrument for observing.”

upper 10. See UPPER CLASS.

upset the apple cart. Just as Shakespeare improved the ancient curse *son of a bitch* by making it *son and heir of a mongrel bitch*, some anonymous English wit in the late 18th century transformed an old Roman phrase into *upset the apple cart*. The Roman expression *Perii, plaustrum perculi* (“I am undone, I have upset my cart”) meant the same thing, “to ruin carefully laid plans,” and might have been changed by some schoolboy who translated the line from Plautus’s *Epidicus*. Why the Romans didn’t think of using a specific fruit in the expression to make it more graphic is a mystery. They certainly knew all about apples; in fact, the famous French *api* variety of apple (our “Red Lady”) is named after the legendary Roman gourmet Apicius, who is said to have produced it by grafting.

upshot. As far back as the early 16th century, an *upshot* meant the last shot in an archery contest, the shot that often determined the outcome of a match by forcing one archer to drop out and another to raise himself up in the standings. By the end of the century the now obsolete archery term had wider currency and came to mean any result or conclusion. Shakespeare, in fact, was one of the first to use the new word, in *Hamlet*: “So shall you hear . . . of accidental judgements . . . and in this upshot, purposes mistook.”

upstage. *Upstage*, in theatrical talk, refers to the back of the stage, while *downstage* refers to the part of the stage nearest the audience. The expression *to upstage*, “to divert attention or praise from,” comes from the practice of an actor overshadowing another actor by moving upstage and forcing him to play with his back to the audience. The expression dates back to the early 20th century.

up the creek, etc. *Up the creek* means in a bad predicament, on the spot, behind the eight ball. Sometimes the expression is *up Salt Creek*, or even *up Shit Creek*—often *without a paddle*. The expression goes back about 100 years and was probably first *up Salt Creek*, if we are to judge by the popular 1884 political campaign song “Blaine up Salt Creek.” A salt creek is a creek leading through the salt marsh or marshland to the ocean and best explains the phrase, for it is very easy to get stuck in one and, without a paddle, a boatman would have no way to get out. The excremental version conveys the same idea, but makes the situation even worse.

up the river. See SENT UP THE RIVER.

up the spout. *Spout* in this sense is a 19th-century slang word for an elevator on which pawnbrokers lifted hocked goods upstairs to be stored. Pawned articles thus went up the spout and were often never seen by the customer again. In time, the expression came to mean something gone forever.

uptick. Though it has more complicated technical meanings on Wall Street, *uptick* has come to mean an upsurge or a pickup, especially when referring to the state of the economy. A 1980s term, it of course has its roots in the Street’s stock ticker or ticker tape machine.

up to par. Someone performing or feeling *up to par* is performing or feeling much like he always does. But *par* is a U.S. golf term, from the Latin *par*, “equal,” dating to about 1898 and meaning “the score an expert is expected to make on a hole or course, playing without errors, without flukes, under ordinary weather conditions.”

uranium; Uranus. English astronomer Sir William Herschel first named the planet Uranus Georgium Sidus after England’s absurd King George III, this name later changed, more appropriately, to Uranus by German astronomer Johann Bode, so it would be in conformity with other planetary names from classical mythology. *Uranus* is the Latin name of the Greek god of heaven, who was both son and husband of Gaea, goddess of the earth, whose name gives us *geography*, *geology*, and other words relating to the earth. The children of Uranus and Gaea, 12 male and female giants called Titans, have their name honored in *titanic*, “anything of great size or force,” and the element *titanium*, discovered in 1795. The element uranium, so important in today’s world, is also in the family, named for Uranus in 1789.

urbi et orbi. *Urbi et orbi* is the traditional solemn blessing given by popes from the balcony of St. Peter on special occasions such as the election of a pope, though in modern times

the custom has fallen into disuse. The words mean “To the city [Rome] and to the world.”

urchin. Englishmen have often been poor at spelling French words and stumbled badly over the synonym for “hedgehog” that the Normans brought to England, spelling *hurcheon* a number of ways before finally settling on *urchin*. They called the hedgehog an *urchin* for a time and also applied the name *urchin* to a mischievous child, because the urchin, or hedgehog, was popularly believed to be a mischievous elf in disguise. People eventually stopped using *urchin* as a synonym for “hedgehog,” but not for an impish child. Neither was the name *sea urchin* abandoned. This spiny creature was originally named for its resemblance to the urchin, or hedgehog, and once was called the *sea hedgehog*.

Urginea. Ben Urgin, not a man but an Arabian tribe in Algeria, gives its name to the genus *Urginea*, comprising about 75 species belonging to the lily family and native to the Mediterranean, the East Indies, and South Africa. The bulbs of *U. maritima*, the only species found in the Mediterranean, are known in medicine as *squills*. Generally gathered for their drug properties, they are used in Sicily for making whiskey. These bulbs often weigh up to four pounds and yield a fluid once considered valuable medically as an expectorant, a diuretic, and for its digitalis-like action on the heart. The first specimen of *Urginea* was found in the territory of the Ben Urgin tribe and named by the German botanist Steinheil.

Uriah Heep. Uriah Heep, the name of the smooth, deceptive law clerk in Dickens’s *David Copperfield* (1849), has become over the years a synonym for any “sanctimonious hypocrite, full of sharp practices.”

urinate. See PISS.

Uruguay. Coming from the native Guaraní language, the name of this South American country means “river that makes the sea.”

uscuse-me. See EXCUSE-ME-PEOPLE.

used up; wasted. *Wasted*, for “killed,” is a slang of recent times, dating back to about 1955, at least in the sense of “to completely destroy,” *to lay waste to*. Far older is *used up*, also meaning “killed,” which originated in 1740 at the battle of Cartagena when General John Guise sent a message to his commander in chief asking him to send more grenadiers, for those he had were all “used up.” All of the 1,200 men Guise had sent to attack the castle of St. Lazar had been killed or badly wounded within a couple of hours.

use him as though you loved him. It’s not true that Izaak Walton said of the worm, as bait for fish: “Use him as though you loved him, that is harm him as little as you may possibly, that he may live the longer.” He was referring to the frog when he wrote this in his classic *The Compleat Angler, or the Contemplative Man’s Recreation* (1653), but his words became misin-

terpreted over the years, probably because fishermen use worms more than frogs.

use it up, wear it out, make it do. An old American proverb illustrating native thriftiness.

Useless Parliament. A name given to the Parliament convened by Charles I in June 1625, which was dissolved early in August after “having done nothing but offend the king.” In the U.S. various Congresses have been given derogatory names; Harry Truman, in an election year, called one Republican-dominated Congress the Do-Nothing Congress.

using a race horse to plow a field. Foolishly wasting one’s resources. An early humorous American proverb rarely heard anymore.

U.S. Navy. America had a colonial navy until the Revolution, which was replaced by the 53-ship continental navy in 1776 after the break with Great Britain. Commodore Esek Hopkins was appointed its commander in chief (the only time a navy head has held that title except for presidents). This became the U.S. Navy in 1794.

Utah. Utah takes its name from the fierce proud tribe called the Utes that resided there and whose name meant “hill dwellers.” In 1850 the area encompassing present-day Utah was constituted the Utah Territory, the colorful Mormon name for it, *Deseret*, or “honeybee,” being rejected by Congress.

utopia. Sir Thomas More’s utopia, described in his 1516 book of that name, is probably the most famous of all utopias. More invented the name of his fictional island where everything is perfect, using the Greek for “nowhere” (*ou*, “not,” and *topos*, “a place”). His book, translated from English into all the chief European languages, gave us the name for any ideal, visionary place. But “Utopia” is only one of a great many utopias invented by writers over the centuries. Among the first of them was Plato’s “Republic,” which he described in *The Republic*. Other famous utopias include Tommaso Campanella’s *City of the Sun*; James Harrington’s *Oceana*; Thomas Spencer’s *Spenconia*; Edward Bellamy’s *Boston* (in the year 2000); H. G. Wells’s *Utopia*; Aldous Huxley’s *Pala*; James Hilton’s *Shangri-la*; B. F. Skinner’s *Walden II*; Ernest Callenbach’s *Ectopia*; Austin Tappan Wright’s *Islandia*; and Samuel R. Delany’s *Triton*.

Utopian Turtletop; Edsel. The esteemed poet Marianne Moore in 1955 was commissioned by Henry Ford to create a name for a new Ford car. Moore came up with *Utopian Turtletop*, which, of course, Ford didn’t use, though he thoughtfully sent the poet a dozen roses. It soon became apparent that Moore was lucky not to have become linked with the car, which as the Edsel (named after Ford’s son Edsel) is unfairly remembered due to its supposed defects as the most laughable car in automotive history. See EDSSEL.

U Tratturi. A nickname of Bernardo Provenzano, long the head of the Sicilian Mafia, the Supreme One, the boss of bosses.

Provenzano had been on the lam for over 43 years before he was captured, an old ailing man, on April 13, 2006. He was nicknamed U Tratturi (the tractor) because like a tractor he left not so much as “a blade of grass in his wake,” according to one writer. Some believe that other Mafia leaders were responsible for U Tratturi’s capture. In any case, as an Italian proverb says, “When one pope dies, another is made.”

Uzi. This widely used, highly reliable submachine gun bears the nickname of its inventor, Israeli arms expert Uziel Gal (1923–2002). An employee of the government-owned Israeli military industries, Gal invented the 9-millimeter, 9-pound weapon but received no royalties on the estimated 11/2 million Uzis sold around the world. It is said that he protested when the state agency named the machine gun for him. *See* TOMMYGUN.

V. *V*, along with *j*, is one of the two youngest letters in the English alphabet, not coming into the language until after Shakespeare's time, in about 1630. It previously shared its form with *u*. In Roman numerals it represents five.

“V” (for victory sign). In *The Do's and Taboos of Body Language Around the World* (1991) Roger E. Axtell advises that this common gesture could get you into trouble in England, where it means “up yours!” if the palm and fingers face inward. “There may be a connection between the two meanings dating back 500 years,” he writes, “when the French used to cut off the middle finger and forefinger of the English archers they captured in battle. After the battles of Agincourt and Crécy, so the story goes, where the French were heavily defeated by the expert English archers, the surviving French were marched off the battlefield to the taunts of the victorious English. The English added further insult to the French by holding up their hands, forefinger and middle finger stiffly upright, palms inward, to show both fingers fully intact.”

vaccine, vaccination. Words coined in 1798 by English country doctor Edward Jenner (1749–1823), whose book *An Inquiry Into the Causes and Effects of the Variolae Vaccinae* has saved millions of people throughout the world. Jenner, who observed that milkmaids infected with cowpox were immune to smallpox, began vaccinating with his volunteer James Phipps in 1796. Despite Jenner's defeat of the world's deadliest infectious disease of the times, there were still many who distrusted the discovery.

vade mecum. A vade mecum is generally a manual or handbook someone carries for ready reference, such as a travel guide, but can be anything a person carries for frequent use. The term, first recorded in 1629 as the title of a book of theological essays, is from the Latin *vade mecum*, “go with me.”

vagina. *Vagina*, for “the female sexual organ,” the word first recorded in 1682, comes from the Latin *vagina*, “a sheath, a scabbard.” Vanilla, the plant that produces the vanilla bean, de-

rives from the same source, being a scientific Latin reshaping of the Spanish *vainilla* (from the Latin *vagina*), meaning “little sheath,” in reference to the bean's pod. See VANILLA.

valance. Some authorities believe that the short curtain or drapery called a valance takes its name from the Old French *avalant*, “hanging down.” But the word more likely comes from the Old French town of Valence, once famed for its manufacturers, including curtain makers.

Valentina Tereshkova. This Russian cosmonaut (b. 1937) became in June 1963 the first woman in space.

valentine. There were at least two St. Valentines, legend tells us, both Christian martyrs who were put to death on the same day, one an Italian priest and physician and the other the bishop of Terni. Butler's *Lives of the Saints* recounts the priest's story, which is almost identical to the bishop's: “Valentine was a holy priest in Rome, who . . . assisted the martyrs in the persecution under Claudius the Goth. He was apprehended and sent by the emperor to the prefect of Rome who, on finding all his promises to make him renounce his faith ineffectual, commanded him to be beaten with clubs, and afterwards to be beheaded, which was executed on February 14, about the year 270.” February 14 had been associated with the mating of birds in ancient times, making St. Valentine's Day, which accidentally fell on this date, an excellent choice for a day for lovers, the day also being fairly close to spring, when as Tennyson wrote, “a young man's fancy lightly turns to thoughts of love.” It became the custom to draw lots for sweethearts, or *valentines*, for the ensuing year on St. Valentine's Day, this practice probably deriving from a similar Roman custom said to be taken from either the feast of Lupercalia, the feast of Februata, or the day honoring the goddess Juno, all of which fell around St. Valentine's Day. By the end of the 18th century, the exchange of gloves and other gifts that accompanied the drawing of lots became the exchange of letters, which were sometimes secret and often humorous or insulting. These letters evolved into the valentines that we know today.

Valentino. To say silent screen star Rudolph Valentino was a sex symbol is to put it mildly. Italian born Rodolpho Alfonzo Raffaello Pierre Filibert Guglielmo di Valentina d'Antonguolla came to the United States in 1913, and after working as a gardener, a cabaret dancer-gigolo, and then a bit player in Hollywood, he zoomed to stardom under his stage name in *The Four Horsemen of the Apocalypse* (1921), which was followed by hits like *The Sheik*. Valentino became the embodiment of romance and sex to women all over the world, his name still a synonym for a handsome lover. Yet despite his dark good looks, this star of stars was a timorous lover, a superstitious man who tried to bolster his sexual powers with aphrodisiacs and magic amulets, who always preferred food to women and found his neurotic, clamorous admirers completely undesirable. Valentino died of peritonitis caused by a bleeding ulcer when only 31 years old. Over 50,000 people, overwhelmingly women, attended his funeral in New York in 1926, and even today admirers come to mourn at his crypt in the Los Angeles cemetery where he is buried. Some 250 women have claimed publicly that "The Sheik" fathered their love children, many of whom were born years after Valentino's death. See MATINEE IDOL; STAR.

valerian. The small fragrant white and lavender flowers of valerian (*Valeriana officinalis*) were common in the Roman province of Valeria, for which the plant may have been named (most sources say it was named for the Roman emperor Valerian). At one time a drug called "Valerian" made from its root was used as a nerve sedative and antispasmodic.

Valhalla. In Norse mythology, the souls of heroes slain in battle spend eternity feasting and rollicking in the celestial hall of Valhalla. *Valhalla* comes from the Old Norse *valholl*, "the hall of the slain," and is sometimes applied to buildings such as Westminster Abbey, where a nation's great men are buried. See VALKYRIES.

Valium; Librium. These brand names have become synonymous with *tranquilizer* since 1960, when Librium was introduced, and the year after, when Valium came on the scene. Neither name, both arbitrary coinages by Roche Laboratories, is Latin, even though they both sound as if they were. *Librium* may have been suggested by *liberating*, and *Valium* could have been inspired by *value*, but there is no proof for any derivation.

Valkyries. The ancient Norse believed that the 12 nymphs of VALHALLA rode into battle with them and chose those heroes destined to die, escorting them back to their honored place in Valhalla. These nymphs were called the *Valkyries*, taking their name from the Old Norse for "choosers of the slain."

vamoose. Leave quickly, as in "He vamoosed out of there." From the Spanish *vamos* (let's go).

vamp. The name of a bookseller in Samuel Foote's play *The Author* (1757) became synonymous with an avaricious publisher, because the character Vamp held that binding was more important than the contents of a book: "Books are like women; to strike they must be well-dressed. Fine feathers make fine birds. A good paper, and elegant type, a handsome motto, and

a catching title, have driven many a dull treatise through three editions." *Vamp* was later used as the name of a critic in Thomas Peacock's novel *Melincourt* (1817) and is supposed to be a caricature of the bitter author, editor, and critic William Gifford. Peacock also satirized Gifford, Coleridge (Mr. Mystic), Malthus (Mr. Fox), and Wordsworth (Mr. Paperstamp) in his book. *Vamp* is more commonly used today to mean an unscrupulous woman of seductive charm. Both terms are probably short for VAMPIRE.

vampire. Vampire is one of the few English words of Hungarian origin. It comes from the Magyar *vampir* and is infrequently spelled that way, although its ultimate source may be the Turkish *uber*, "witch." This word for a creature of the living dead, "a reanimated corpse" that spends its nights searching for human blood to quaff, is first recorded in English in 1734, and is the same in Russian, Polish, Czechoslovakian, Serbian, and Bulgarian. The term vampire was popularized by Bram Stoker's *Dracula* (1897) and some 47 spinoffs on the novel.

vanadium. The grayish metallic element vanadium, used in many alloys, is named for Freya, the fair Scandinavian goddess of love, one of her other names being Vanadis. See also FRIDAY.

Van Allen Belt. The Van Allen Belt, or Van Allen Radiation Belt is "a zone of high intensity radiation surrounding the earth," beginning at altitudes of about 621.4 miles. It was discovered by James A. Van Allen (b. 1915).

Vancouver. Vancouver, the largest city and chief port in British Columbia, Vancouver Island, the largest island off the west coast of North America, and the city of Vancouver, Washington, are all named for English navigator and explorer George Vancouver (1757–98). Capt. Vancouver, who sailed with Capt. James Cook on his second and third voyages, explored and surveyed the northwest coast of America aboard *Discovery* in 1792. Puget Sound is named for Vancouver's Lt. Peter Puget, who helped the captain's brother finish his book *A Voyage of Discovery to the North Pacific Ocean and Round the World* (1798).

vandalism. In the year 455 A.D. the Vandals, all 80,000 of them, were led by their King Genseric into Rome, which they captured easily and sacked thoroughly, loading their ships with plunder and sailing off to new conquests. The savage Teutonic tribe finished off the Roman Empire before falling from power almost a century later, after persecuting Christians and extorting their sacred treasures. The Vandals destroyed many precious cultural objects when they sacked Rome and it is probably from their later behavior that the word *vandalism* derives, meaning as it does wanton destruction of property, especially works of art. It is interesting to note that a French churchman first used the word *vandalisme* in this sense at the end of the 18th century. The name Vandal literally means "the wanderers." Before they sacked Rome the tribes had wandered across the Rhine to France, Spain, and Africa, making conquests all the while.

vandyke. When only 19, Flemish artist Sir Anthony Van Dyck became Rubens's assistant and pupil. One of 12 children

of a wealthy silk merchant, the artist had shown great talent from his early youth and learned much from his Flemish master. Later he went to England where he married a Scotswoman and was knighted by Charles I, becoming one of the most noted portrait and religious painters of his day. Vandyke, as his name was spelled by the English, lived a life of luxury, keeping numerous mistresses, and had to paint prolifically to maintain his lifestyle. He is known to have done at least 350 portraits in England alone and overwork is often cited as the reason for his early death—he died in 1641, 42 years old. Van Dyke turned out masterpieces on a kind of assembly-line basis. He trained assistants to paint a sitter's clothes, used special models for the hands (in the painting of which he excelled), and would never allot more than an hour at a time to a sitting. Van Dyck depicted noblemen attired in wide collars adorned with V-shaped points forming an edging or border, and his subjects often wore sharp V-shaped beards similar to his own. The large points on the *Vandyke capes* or *collars* were called *Vandykes*, the verb *to vandyke* meaning to adorn a collar with such points, and the characteristic beards were and are still known as *vandykes*.

Vanessa. A legendary English literary lover. Esther Vanhomrigh (pronounced “Vanummery”) met Jonathan Swift in 1708, fell deeply in love with him, and followed him to Ireland, where she later proposed marriage to him. Dean Swift gently rejected her in his 1713 poem “Cademus and Vanessa.” Vanessa was his pet name for Esther (composed of *Van* of her last name plus *Essa* for Esther), and Cademus is an anagram of *Decanus*, Latin for Dean: When in 1723 Swift broke off their relationship, due to her jealousy, she is said to have died of a broken heart. She had preserved his poem among her papers, and it was published three years later.

vanilla. Vanilla was thought to be wickedly aphrodisiac in Elizabethan England because the pod of the plant resembled the vagina. In fact, the word *vanilla* comes from the Spanish for “little vagina.” Queen Elizabeth I used vanilla to flavor her marzipan, making it a favorite flavoring for candy ever since, and Thomas Jefferson was the first to introduce it as a flavoring in America. Today, however, natural vanilla is in short supply and we generally use a synthetic; there isn't enough natural vanilla in the world to flavor the vanilla ice cream made in America alone. Needless to say, natural vanilla is much more flavorsome than the synthetic product. See AVOCADO; VAGINA.

vanish. See PULLING A CRATER.

vanish into thin air. When Shakespeare used this phrase in *The Tempest* to describe ghosts “Melted into air, into thin air,” it was already in common use. All air was considered thin at the time, nothing being known about its varying density, and *thin air* was simply employed as an intensive. Other similar phrases of the day were *vanished* (or *melted*) *into smoke*, *wind* and even *into liquid tears*—all meaning the same, “to disappear.”

vaquero. A direct borrowing of the Spanish word for a ranch hand or cowboy that westerners were using as early as 1800. *Buckaroo*, meaning the same, is an English corruption of *vaquero* also used in the West, though in Texas the buckaroo is

a roaming bachelor cowboy and in California a buckaroo is a cowboy born or raised on a ranch and living there with his family.

Vardon grip. Harry Vardon (1870–1937), who won the British Open a record six times as well as the U. S. Open, is one of the outstanding golfers of all time. Born on the Channel Island of Jersey, Vardon also won eponymous fame for the *Vardon grip*, the overlapping grip used by most golf players today. The *Vardon trophy*, named in his honor, is awarded to the golfer with the lowest yearly average for the pro tour.

variety is the spice of life. William Cowper's poem “The Task” (1785) is the source of this well-known expression: “Variety is the very spice of life,/ That gives it all its flavors.”

varlet. A servant or a rascal or knave, as in the old Hollywood standby: “Unhand her, varlet!” The word comes from the Old French.

varmint. *Varmint* is not an American word, as one would think from scores of westerns. The word for an animal pest or a despicable person is a corruption of *vermin* and of British origin. *Vermin* comes from the Latin *vermis*, “worm.”

varnish. See COMA BERENICES.

varsity. *Varsity*, for the first-string team of a U.S. college or any school, is simply a shortened form of “university,” the *varsity team* initially meaning the university team. In England, where the word is first recorded in 1846, *varsity* (formerly *ver-sity*) means Oxford University or Cambridge University.

Vaseline. Among those flocking to America's first oil strike near Titusville, Pennsylvania in 1858, was Robert A. Chesebrough, a Brooklyn chemist, who noticed that workmen with cuts, bruises, and burns used as a soothing ointment a waxy substance from the pump rods bringing up the oil. Gathering some of the oily residue, Chesebrough took it back to Brooklyn and made a jelly-like product from it. This he patented at once, giving it the trademark *Vaseline*, a word he formed from the German *Wasser* (pronounced “vasser”) “water” and the Greek *elaion*, “olive oil.”

vaudeville. In its heyday from 1885 to 1928, there were as many as 20,000 acts playing American vaudeville. *Vaudeville* derives from the village of Vire in 15th-century Normandy, where a group of performers was called the *Compagnons du Vau de Vire* (the Companions of the Vire Valley). Their popularity spread, and soon the word *ville* (town) was substituted for Vire, the name of the original village. *Vaudeville* came to mean “valley town songs” and then the acts that featured them. Much later, in the mid-19th century, Americans borrowed the French word to describe variety shows offering musical and comedy acts on the same bill—also called “olios.” Such shows, often coarse at first, initially played in saloons and honky-tonks around the country but did not become tremendously popular until the establishment of the B. F. Keith national circuit in 1883. Vaudeville featured many famous stars of musical

comedy and the legitimate theater, including the Barrymores and Sarah Bernhardt, but relied mainly on its own star comics and song-and-dance acts, such as Weber and Fields, Gallagher and Shean, Harry Lauder, Harrigan and Hart, the Marx Brothers, Will Rogers, the Seven Little Foys, Fanny Brice, Al Jolson, Eddie Cantor, and Jimmy Durante, many of whom later left vaudeville for the theater or movies. The most prestigious theater a vaudevillian could play was New York's Palace Theater, built by Martin Beck on Broadway between 46th and 47th Streets in 1913; "playing the Palace" became the dream of every "two-a-dayer." The Palace was converted to a movie theater and later a legitimate theater after vaudeville's demise, which came in the early 1930s with the perfection of radio and sound films. *See* BURLESQUE.

Vauxhall. It is very rare for an English word to be adopted in Russian as anything more than a slang expression. But that is just what happened with the Vauxhall railroad depot in London, which became the Russian *voksal*, their generic word for railroad station. The London depot was named for the Vauxhall district in London, which contained the famous Vauxhall gardens, a popular pleasure resort from 1661 to 1859. The gardens, in turn, took their name from Falkes or Fulkes de Breante, who was lord of a manor called Falkes Hall on the site in the early 13th century. Pepys mentions the public gardens, which soon came to be called Vauxhall, and Thackeray described them later before the gardens were closed and the site built over. From manor to garden to district to depot to Russian word—many stops along the line, but so it is that the communists, who would not consciously pay homage to royalty, honored an early Norman knight.

vaya con Dios. Go with God. A Spanish term commonly heard in the Southwest for over a century now.

VE Day; VJ Day. Both these designations were coined by U.S. director of war mobilization James F. Byrnes in the same 1944 speech. He called the eventual date of Germany's surrender "VE Day," Victory in Europe Day; and designated Japan's eventual surrender as "VJ Day," Victory over Japan Day. VE Day came the next year on May 8, 1945, and VJ Day, the end of World War II, came on September 2, 1945.

veep. From the common abbreviation V.P. for the vice president of the United States came the informal word *veep*, which was coined about 1949. The first person to be called a *veep* was Harry S Truman's vice president Allen William Barkley (1877–1956), who held office from 1949–53. A variation on it is *vee-pee*.

veg. Like VEGGIES, *veg* (or *vedge*) is a relatively new word; in fact, it probably isn't even 21 yet. It means to loaf, relax, do nothing strenuous, and is apparently an abbreviation of *vegetate*: "Let's order some drinks and veg around the pool for a while." A variation is *veg out*.

vegan. A strict VEGETARIAN who doesn't eat any food of animal origin, including fish, cheese, and eggs. The word wasn't coined until 1944, in Britain, some 105 years after *vegetarian*.

vegetable. Vegetables have usually been highly prized, right from the beginning, too, the word *vegetable* itself deriving from the Latin *vegetabilis*, which meant animating or life-giving. The Greeks venerated vegetables, making small gold and silver replicas of the most prized ones. The Roman Fabii, who took their name from the *faba*, or bean; the Piso clan, who derived theirs from the *pisa*, or pea; the *Lentuli*, who named themselves after the *lente*, or lentil; and the great house of Cicero, which took its name from the *cicer*, or chickpea—these are only a few noble Roman families whose patronyms honored widely hailed vegetables.

vegetable lamb. In medieval times the Far Eastern fern *Dicksonia barometz* was thought to be a hybrid animal and vegetable, mainly because of its woolly rootstalk. The down of the plant is used in India to staunch wounds. It is called the *Tartarian* or *Scythian lamb*, as well as the *vegetable lamb*.

vegetarian. *Vegetarianism* (which is a relatively recent word, used in 1895 by a British health magazine in describing the eating habits of a Chinese sect and modelled after *unitarianism*, etc.) may or may not be the thing for you, though it certainly was for Pythagoras, Aristotle, Epicurus, Diogenes, Cicero, Plato, Socrates, Buddha, Montaigne, Wesley, Pope, Wagner, Swedenborg, Shelley, Tolstoy, Shaw, Gandhi, Mussolini, Hitler, and many other famous, infamous, and obscure people who only ate vegetables.

veggies. This "cute" word for vegetables apparently arose in the early 1960s, for it is first recorded in 1966. Obviously a shortening and rearrangement of *vegetables*, it is used by young and old alike.

veil. *See* YASHMAK.

vein of my heart. *See* CUSHLAMACHREE.

velaric ingressive bilabial stop; kiss. A sound from the southern Bushman language that has been called the rarest speech sound in any language. This sound, written *!xo* and described by the term above is a click articulated with both lips, essentially a kiss.

Velcro. Swiss inventor Georges de Mestral, the inventor of Velcro, is said to have been inspired by the way the burrs of the weed burdock stuck to people's clothing. He invented the trademark fabric "touch and close" fastener in 1957 and named it from French *velours*, "velvet," and *croche*, "hooked." The fastener is actually two nylon strips, one made up of little hooks and the other consisting of small loops. When the two nylon strips are pressed together, the hooks grasp the loops, fastening the strips. The material is used on hundreds of products and made Georges de Mestral a fortune.

vendetta. *Vendetta* is used loosely to describe the sworn vengeance of anyone against another person, but the word, which comes from Latin *vindicta*, "vengeance," and dates back at least two centuries, strictly means vengeance against the

murderer of a person in one's family, requiring the murder of that murderer. This blood vengeance and feuds based on it are common in Sicily and Corsica.

vending machine. The term *vending machine* seems to have been introduced either by the Adams' Gum Company (now part of American Chicle) in the 1880s to describe the machine the company used to sell tutti-fruitti gumballs on New York City elevated train platforms, or at about the same time by the Frank H. Fler Gum Company. At that time Fler's founder agreed to an experiment proposed by a young vending machine salesman. The salesman argued that vending machines were so great a sales gimmick that people would actually drop a penny in them for nothing. Frank Fler agreed to buy several machines if the young man's pitch proved true, and the experiment was conducted at New York's Flatiron Building. The salesman set up a vending machine there, with printed instructions to "drop a penny in the slot and listen to the wind blow." He got Fler's order when hundreds of people contributed their pennies and continued to do so until New York's Finest hauled the machine away.

venerable monosyllable. The *monosyllable* has been used since about 1715 as slang for the "female pudend," as Partridge puts it, or "a woman's commodity," as it is defined in the 1811 edition (called *Lexicon Balatronicum*) of Captain Francis Grose's *Classical Dictionary of the Vulgar Tongue*. The *Venerable Monosyllable*, dating to about 1785, means the same, Grose defining it here as "the pudendum muliebre." Both terms are practically obsolete except as encountered in literature.

venetian blinds. The slatted window shades called venetian blinds are named after the early Venetian traders who introduced them to Europe, but they were invented by the Persians, from whom the Venetians bought them. They are, in fact, called *persiani* by Italians.

Venezuela. Spanish explorers in the area of this country found the inhabitants living along canals that reminded them of Venice, Italy. They accordingly named the area *Venezuela*, "little Venice."

Vengeance is mine, saith the Lord. This biblical saying, from Rom. 12:19, doesn't bless or condone human vengeance, as is often thought. This is made abundantly clear by the pertinent passage: "Dearly beloved, avenge not yourselves, but rather give place unto wrath: for it is written, Vengeance is mine; I will repay, saith the Lord." Not only does the whole passage advise against human revenge, it goes on to say: "Therefore if thine enemy hunger, feed him; if he thirst, give him drink: for in so doing thou shalt heap coals of fire on his head. Be not overcome of evil, but overcome evil with good."

venial sin. A venial sin, in the Catholic church, is one that doesn't forfeit grace, a sin that may be pardoned, hence its name from the Latin *venia*, "grace, pardon." Its opposite, a mortal sin, is a sin that deserves everlasting punishment, a deadly sin, hence its name from the Latin *mort*, "death."

Venice glass. Long considered to be perfection among glassware, Venice glass has been known since the Middle Ages, when it was frequently used for drinking glasses—because poisonings were common at the time and it was widely believed the Venice glass was so sensitive that it would break into slivers if poison touched it.

Venice of the North. A popular name for Stockholm, Sweden, which was founded in 1255 and has been the country's capital since 1523.

venison. *Venison* comes from the Latin *venatio*, "hunting," and was formerly applied to the flesh of any animal killed in the hunt and used as food. The word is first recorded in the early 14th century and gradually came to mean only the meat of deer. The venison mentioned in Genesis is wild goat.

veni, vidi, vici. The laconic words of Julius Caesar when he told his friend Amintius of his victory over Pompey's ally Pharnaces at Zela in 47 B.C., the phrase is Latin for "I came, I saw, I conquered." So Plutarch says, but Suetonius doesn't ascribe the words to Caesar, noting only that they were displayed before his title after his victories at Pontus.

venom. Though it means "poison," *venom* began life as the love potion, *venenum*, that the Roman goddess Venus used to infect human hearts. The Latin *venenum* eventually became the basis of words meaning poison in several languages, our English *venom* being first recorded in 1220 as *venim*.

vent one's spleen. When a person vents his or her spleen, he is feeling low or acting spitefully. The expression is first recorded in 1641 and derives from the ancient belief that the human gland called the spleen caused low spirits or melancholy.

Venus de Milo, etc. The Venus de Milo, now in the Louvre and possibly the finest example of ancient art extant, dates from about 400 B.C., but was discovered in 1820 on the Greek island of Milo, or Milos. Other famous statues of the goddess of love are the Venus de' Medici, so called because it was once kept in Rome's Medici Palace; the Venus Genetrix, a symbol of fecundity, its last name meaning "she that produces"; and the lost nude Venus of Cnidus, purchased from Praxiteles by the Cnidians, an ancient copy of which is in the Vatican. The Venus Callipyge is a late Greek statue standing in the Museo Nazionale at Naples. There is no good reason for connecting this statue with Venus and its last name translates as "beautiful buttocks," to use a euphemism.

Venus flytrap. This odd plant is said to have been discovered by the governor of North Carolina, Arthur Dobbs, in 1760 and named Fly Trap Sensitive. One of the few plants that wreak revenge on insects, the Venus flytrap was officially named *Dionaea muscipula* by English naturalist John Ellis in 1770. This translates as "Aphrodite's mousetrap," indicating sensual love. However, shortly afterward Ellis also coined the common name Venus flytrap for the plant, this being very similar, as Venus is simply the Roman version of Aphrodite or Dionaea. *Mousetrap* or *flytrap* is understandable, but why was the vegetable animal-eater named after Venus or Aphrodite when it is not particularly

beautiful? Though neither etymological nor entymological reference books make any mention of it, John Ellis clearly referred to the similarity of the plant's leaves to the human vagina when he named it for the goddess of love. The Venus flytrap, a perennial native only to North and South Carolina, is widely grown indoors by gardeners.

Venus mercenaria. Like many seafoods, clams are often regarded as a potent aphrodisiac, especially the common hard-shell clam *Venus mercenaria*. This quahog gets its last name from the Indian wampum beads used in commerce. It probably boasts its suggestive first name because Venus has often been depicted standing in a large seashell. A good example is Sandro Botticelli's famed *The Birth of Venus*, sometimes jocularly called "Venus on the Half Shell."

Venus's looking-glass, etc. Their strikingly beautiful purple flowers are responsible for all species of the blue-bell family (*Specularia*), especially the bellflower, or *Campanula*, being named for Venus, the Roman goddess of beauty. Other plants named after Venus include Venus basin bath, the wild teasel; Venus's-comb, the shepherd's needle; Venus's-golden apple (*Atlantia monphylla*); Venushair, the maidenhair; Venus's-lover; Venus-navel; Venus's-pear; Venus's pride, blue houstonia; and Venus's-slipper, the lady slipper.

verbed. Shakespeare often coined verbs as well as nouns. According to Ben Yagoda, author of *If You Catch an Adjective, Kill It: The Parts of Speech, for Better and for Worse*, a couple of Shakespeare-coined verbs included *season* (as in "season your imagination"), and *dog* (as in "dog them at the heels").

verbicide. *Verbicide*, "word murder," the act of destroying the sense or value of words, or the perversion of a word from its proper meaning, has been applied in our time to political speechmaking and government gobbledegook or officialese. But the word seems to have been coined by Oliver Wendell Holmes, who patterned it on *homicide*, and applied it to punning in his *The Autocrat of the Breakfast-Table* (1858).

verb. sap. See A WORD TO THE WISE.

verdigris. This greenish or blueish patina, formed on copper and other surfaces when they are exposed to the atmosphere for long periods, takes its name from Old French *vert de grece*, "green of Greece." The reason for the name is not known, nor is the reason why people later called the patina the "Spanish green." The word *verdigris* can be traced to the 14th century in Europe.

Verdi! Verdi! The Austrians occupying northern Italy in the 19th century couldn't understand why the chant *Verdi! Verdi!* at the end of operas written by Italian composer Giuseppe Verdi frequently inspired anti-Austrian riots. They finally learned that *Verdi* was also an acronym for the name of the man Garibaldi was advocating as head of a united Italy: Vittorio Emanuele, *Re d'Italia* ("Victor Emmanuel, King of Italy"). After the Austrians were expelled in 1857 Victor Emmanuel was crowned king.

verme. The *verme* is a legendary fish of the Ganges, which was said to be able to reach up out of the Indian river, seize *elephants* in its jaws and destroy them. The fish was named for the Latin *vermes*, "worm," perhaps by error, perhaps because the fish was thought to be eel-like. The word is first recorded in 1572.

vermicelli. Few diners would want to dwell on the etymology of this word for a very thin pasta. For *vermicelli* means "little worms" in Italian, deriving from the Latin *vermis*, "worm, maggot, or crawling insect."

vermilion. Why does this bright red take its name from the Latin *vermis*, for "worm, maggot, or crawling insect"? It seems that in days past *vermilion* dye was made from scarlet body fluid of cochineal insects.

vermin. See VARMIN.

Vermont. *Vermont* had been called New Connecticut before being named from the French *vert*, "green," plus *mont*, "mountain." The Green Mountain State was admitted to the Union in 1791 as our 14th state.

Vermont charity. According to Hugh Rawlins in *Wicked Words* (1989), this is "a symbol of cheapness . . . what hoboes call sympathy which is accompanied by nothing else." The same source gives *Vermont kindling* as "rolled-up newspapers used in place of wood."

Vermont psalm. Psalm 121 from the Bible, a psalm often used to start funeral services in Vermont: "I lift my eyes unto the hills." This was noted in a *New York Times* news story on May 2, 1994, from Woodstock, Vermont: "Psalm 121 . . . They call it the Vermont Psalm here."

vernacular. The vernacular is the everyday or native language of a country, as opposed to the formal language of its learned people. The Latin *vernaculus*, "native" or "domestic," is the basis for the word, this in turn deriving from the Latin *verna*, "a native slave, a slave born in a country."

vernier; vernier caliper, etc. A vernier is any small, auxiliary movable scale attached to another graduated instrument. It is often attached to the transit, sextant, quadrant, and barometer for very accurate measurements. French mathematician Pierre Vernier (1580–1637) invented the scale, describing it in a treatise he wrote in 1631. Vernier was commandant of the castle in his native town of Ornans in Burgundy and later served the king of Spain as a counselor. His invention estimates the nearest 10th of the smallest division on the scale it is attached to. It was originally an improvement on a scale called the nonius, invented by the Portuguese scientist Nunez, and proved to be a milestone in the techniques of precise measurement. The vernier caliper, the vernier compass, both incorporating verniers, and the vernier engine, a small rocket engine that corrects the heading and velocity of a long-range missile, also bear the French inventor's name.

vernis Martin. See COMA BERENICES.

veronica. The classic Spanish bullfighting cape movement called the *veronica* takes its name from St. Veronica, who in ancient legend was the woman who wiped the face of Christ as He carried the cross, her handkerchief retaining an imprint of Christ's face. The cape movement is swung so slowly and near to the face of the bull that it suggested St. Veronica using her handkerchief.

Verrazano-Narrows Bridge. This 1964 suspension bridge connects Brooklyn and Staten Island over New York Bay. Its 4,260-foot center span is the longest in North America. The Verrazano, as it is usually called by New Yorkers, is named for another Italian navigator and explorer, Giovanni da Verrazano (c. 1480–1529), who sailed in New York waters 85 years before Henry Hudson. Verrazano was later killed by Natives while exploring the West Indies. See AMERICA; COLUMBIA; HUDSON RIVER.

vers de société. The French expression translates literally as “society verse,” which is a type of light, often satirical verse dealing with contemporary fashions and foibles. Many poets have written such verse, including the English Alexander Pope, W. S. Gilbert, and Hilaire Belloc, and the Americans Ogden Nash, Phyllis McGinley, and Richard Armour.

verse. Poems are of course almost always written in straight lines across a page, each line turning at the end into a new line. This suggested the synonym for “poem,” *verse*, which comes from the Latin *versus*, a form of the Latin *vertere*, “to turn.” *Verse* is recorded in English as far back as 1200 and today often means light pieces of poetry.

vertically challenged. Among the latest of politically correct terms, *vertically challenged* describes a person who is short. Used mainly in a humorous sense.

very. *Very*, which ultimately derives from the stem of the Latin *verus*, “true,” is not one of the 10 most frequently used English words (these are *I*, *the*, *and*, *to*, *of*, *in*, *we*, *for*, *you*, and *a*, in that order). But *very*, first recorded 10 centuries ago, bears the distinction of being the only foreign (not Anglo-Saxon) word, as well as the only word of more than one syllable, to have any rank at all in the “highest-frequency” category of words used, ranking within the top-50 according to one expert.

very close veins. Heard in the southern U.S. for *varicose veins*, this folk etymology has some sense to it. Not only does *varicose veins* sound like *very close veins*, the location of these blood vessels is just under the skin!

Very light: Very pistol. American naval officer Edward Wilson Very (1847–1910) was an admiral by the time he retired in 1885. The rank came mainly as a reward for his invention of the Very light, the important illuminating flare signal that was fired from the Very pistol, which he also invented.

very poor man's dinner. An appropriate name for this Maine dish made of thinly sliced potatoes and onions fried in the

grease of salt pork. A similar dish made in Massachusetts is called “Necessity Mess.”

vespasienne. Roman emperor Vespasian (A.D. 9–79) taxed his people inordinately to build public urinals, improving the *pissoirs* even more by selling the urine collected in them to launderers, who used it for bleaching clothing. His obsession with public urinals led the witty French to name them *vespasiennes* after him. See CRAPPER; FONTAGE; FURPHY; MONEY DOESN'T STINK; OLIVER; SACHEVERELL; TWISS.

Vesuvius. See RINGING EARS.

Veteran's Day. See REMEMBRANCE SUNDAY.

veterinarian. This word, for “an animal doctor,” derives from the Latin *veterinarius*, “belonging or pertaining to beasts of burden,” which in turn comes from *veterina animalia*, “beasts of burden”—showing that the veterinarians originally cared exclusively for farm animals. Several rare names for a veterinary used through history are *emplastrist* (for the plasters they used), *unguentarian* (for their ointments), and *hippologist* (though this strictly means anyone well versed in the study of horses). Other names that are rarely if ever used anymore are horse doctor and horse leech. In the 17th century *veterinarian* was also the name for a man who rented out horses or mules, like Hobson of HOBSON'S CHOICE. Vet, a synonym for *veterinarian* today, has in recent years become a verb meaning to treat or cure as a veterinary does, as, for example, an editor who vets a manuscript.

veto. *Veto*, for “a head of state's power to annul a law passed by a lower body,” is the Latin for “I forbid,” and was the word used by the Roman tribunes to oppose measures of the Roman Senate. *Pocket veto* is a U.S. term, meaning the veto of a bill by the President or a state's governor in the closing days of a legislative session by retaining it unsigned, by “pocketing” it; it was first employed by Andrew Jackson. France's Louis XVI and Marie Antoinette were called Monsieur and Madame Veto because they vetoed so many decrees of the Constituent Assembly in 1791.

V for victory sign. The V sign made by two fingers, palm outward, seems to have first been used during the early years of World War II. The British prime minister used it often, making it famous, but he did not invent it, that rare genius as of yet unknown. When the V sign is made palm inward by a Briton it means “fuck you.” Said Winston Churchill in 1941: “The V sign is the symbol of the unconquerable will of the occupied territories, and portent of the fate awaiting the Nazi tyranny.”

Via Dolorosa. The Via Dolorosa, “the Dolorous, or Anguished Way, the Way of the Cross,” is the mile-long road in Jerusalem over which Christ carried the cross to Golgotha. It has also come to mean any painful path.

Viagra. This drug for the treatment of male impotence by stimulating blood flow to the penis was introduced by the Pfizer Company in 1998. Its name is said to come from Niagara Falls,

which is vital and powerful, like anyone who takes Viagra. Viagra's generic name is sildenafil citrate (its active ingredient). The drug's chief competitor is Levitra, which takes its name, most appropriately, from elevate.

vials of wrath. In Revelation 15:7 seven angels pour upon the earth "seven golden vials full of the wrath of God." This later became the expression *vials of wrath* for stored-up anger, vengeance, or the execution of wrath upon the wicked.

Vicar of Bray. A *Vicar of Bray* is someone who holds onto his office or position no matter who is in power and will go to any length to do so. The term refers to a semi-legendary Vicar of Bray, Berkshire, in England who became twice a Roman Catholic and twice a Protestant under four different monarchs between 1520 and 1560, in the words of one contemporary writer "being resolved, whoever was king, to die Vicar of Bray."

Vicar of Hell. Henry VIII playfully gave this title to his "poet laureate," John Skelton, the term being a pun on Skelton being the rector of Diss in Norfolk. *Dis* is a Roman name for Pluto, the mythological ruler of the infernal regions.

vichyssoise. The soup has a French name but was created by a chef at New York's Ritz-Carlton hotel in 1917. *Vichyssoise* means "cream soup" in French. It is specifically a cream soup of potatoes and leeks, usually served cold and garnished with chives.

Vichy water. Originally *Vichy* was natural mineral water from springs at Vichy in central France. The term came into use in about 1855 but lost its capital over the years when the name was applied to other natural and artificial mineral waters. Such waters are mostly called *vichy water* or *mineral water* today. The city of Vichy was also the capital of unoccupied France during World War II and all of unoccupied France was frequently called *Vichy*.

Victorian. Myriad things have been named after Britain's Queen Victoria, who reigned an amazing 63 years, from 1837–1901. A plum, a cloth, a large water lily, and a pigeon all bear the name *victoria*, as does the low carriage for two with a folding top and an elevated driver's seat that was designed in France and named in her honor. Victoria is also the capital of both British Columbia and Hong Kong and a state in Australia; there is a Lake Victoria in East Africa; the Great Victoria Desert in Australia; a Mount Victoria in New Guinea; a Victoria Falls between Zambia and Zimbabwe; a Victoria Island in the Arctic Ocean; and Victoria Land, a region in Antarctica. Then we have Victoria Day, a Canadian national holiday in late May; the Victorian box, a tree; the victorine, a ladies' fur tippet; and the Victoria Cross, a military decoration first awarded "for valor" by Victoria in 1856. And that isn't nearly a complete list. *Victorian* means of, or pertaining to, the queen or the period of her reign and adds a score of terms, such as Victorian sideboard, to the total. *Victorian* alone often refers to the smugness and prudery characteristic of the period, especially concerning sex.

victory garden. The victory garden was a home vegetable garden popular in the United States during World War II; such gardens were encouraged by the government to increase food production during a time of shortages. The idea helped revive the idea of home vegetable gardens, once known as kitchen gardens, among many Americans who had lost touch with the land.

video. *Video*, the Latin for "I see," has been used as a term for television or TV since the 1950s. In addition to serving as shorthand for *videocassette*, another recent coinage, dating to the early 1960s, is the videophone, or picturephone, a telephone with a small TV screen on which callers can see each other. The system has so far proved too expensive to put into general use, but promises to be commonplace in the future.

vie. In the 16th century, *envy* meant to challenge someone to a gambling contest. The word's contraction, *vie*, became popular in gambling houses, meaning to back up one's hand with a bet. One *vied* at cards in this way, that is, "contended or strived against others," and the term later came to mean contending or striving in any sense.

Vienna. Beethoven, Mozart, Haydn, and Schubert were musical geniuses who lived and worked in Austria's capital city, Vienna. So was Johann Strauss (1825–99), whose waltzes transformed a city that was originally a Celtic town called Vindolona.

Vietcong; Charlie. This name of the Communist guerrillas in Vietnam was first recorded when the French were fighting there in 1957 but probably dates back to the early 1950s. *Vietcong* translates roughly as "Vietnamese Communist." U.S. forces called them "Charlie" or "Mr. Charlie" (among other appellations), a name they gave to North Vietnamese soldiers as well. *Charlie* may derive from *Victor Charlie*, the radio code for VC (Vietcong). Or it may come from the World War II derogatory military slang *Charlie* for a Japanese soldier, whose origins are unknown, though the movie detective Charlie Chan has been nominated as the source. See R.O.K.

vigorish. Many people have paid usurious rates of interest to loan sharks. The margin of profit in such transactions, 20 percent or more a week, late payment penalties, and other fees, is called vigorish, which also means the percentage set by a bookmaker in his own favor. *Vigorish* is one of the few English words with Russian roots, deriving from the Russian *vyigrish*, "gambling gains or profit," which first passed into Yiddish early in 20th-century America as *vigorish* and was reinforced by its similarity to *vigor*.

Viking. These Scandinavian explorers may derive their name from the Old English *vicing*, "pirate," although this etymology is disputed and some experts hold that Viking comes from the Old English *wic*, "camp," because these Scandinavians set up temporary camps while carrying out raiding expeditions.

the village idiot. The Russian poet and novelist Boris Pasternak (1890–1960) survived the darkest years of Stalinism in the Soviet Union even though he was a staunch anti-Stalinist and won the Nobel Prize in literature (which he was forced to decline). According to Russian poet Andrei Voznesensky, Pasternak survived because for some unknown reason Stalin had given the order, “Don’t touch this village idiot.”

villain. *Villain* derives from the Latin *villanus*, “a serf,” and the first *villains*, the word recorded early in the 14th century, were serfs in feudal England. From its meaning of a poor low-born rustic, *villain* within half a century came to mean a base person disposed to criminal acts. The word was first applied to a play’s antagonist by Charles Lamb in 1822.

vim. *Vim* is an Americanism first recorded in 1843 and usually regarded as the accusative singular of the Latin *vis*, “strength or energy,” though it may possibly be, judging by some of its earliest uses, of imitative or interjectional origin (“He drove his spurs . . . *vim* in the hoss’s flank,” 1850). The word is usually heard in the alliterative expression *vim and vigor*.

Vincent’s infection. See BRIGHT’S DISEASE.

a vintage year. A *vintage year* is a year notable for anything. The phrase originated with and still mainly refers to the year in which a good *vintage*, “gathering,” of grapes was made into an excellent wine. *Vin ordinaire* is a cheap wine that can be good but is rarely excellent, while *vin de goutte* is an inferior wine made from the last pressing of the grapes.

violet. The word *violet* derives from the classical Latin name for this flower, *viola*. There are blue, white, reddish-purple, lilac, yellow, and gold violets. In 1324, a golden violet was offered as a prize for the best poem written in the Provençal language:

And in that golden vase was set
The Prize—the golden violet.
See also CORPORAL VIOLET.

VIP. This commonly used acronym for a very important person only dates back to World War II, when it was coined in England by a British officer in charge of arranging flights for important military leaders. He used the acronym in order to conceal the identity of these very important people from spies.

V.I.P. dummy. The name given to the first automotive crash-test dummy in 1968 by U.S. inventor Samuel W. Alderson (1914–2005). Such dummies have been used to test automotive safety features like seat belts and air bags, which are estimated to have saved over 329,000 lives to date. Before dummies were so employed, cadavers were used for the same purpose. Today, the far more sophisticated Hybrid III crash dummy has replaced V.I.P.

virago. *Virago* meant a “man-like or heroic woman, a female warrior” when first attested to in about 1000, deriving from the Latin *virago*, meaning the same. Such a woman was likely to be bold and strong-willed, which led to the derogatory use of *vira-*

go for “a bold impudent woman, a shrew, a termagant, a scold,” this later use first recorded by Chaucer in 1386.

Virgilian. Virgil (70–19 B.C.), called the Mantuan Swan because he was born near Mantua, Italy, is considered the greatest poet of ancient Rome and in medieval times was regarded as the wisest of poets, a magician and enchanter. His name lives on, however, mainly as a synonym for the simple, pastoral beauty described in his poetry, which is Virgilian, or has a Virgilian charm. See SWAN.

Virgil’s fly; Virgil’s gnat. According to an old legend the Roman poet Virgil’s (70–19 B.C.) “pet housefly” was given a funeral that cost over \$100,000. Musicians, mourners, and eulogists were hired and Virgil’s mansion was declared the fly’s mausoleum. Later it was discovered that Virgil buried the fly so that he could prevent the state from confiscating his estate and distributing it to war veterans as payment for service—all family cemetery plots and mausoleums being exempt from such confiscations. History confirms that Virgil’s property was confiscated and that he got it back, but tells us nothing about his pet housefly. Many medieval legends arose about Virgil, and though this story may be partly true, it probably is an exaggerated version of Virgil’s real troubles with his property, plus a tale that he allegedly wrote called the “Culex.” Spenser wrote a poem called “Virgil’s Gnat,” based on the “Culex,” in which a sleeping shepherd is stung by a gnat, which has bitten him only to warn him that he is about to be attacked by a serpent. The shepherd kills that gnat and then slays the serpent, but the next night the gnat reproaches him for his cruelty and the remorseful shepherd builds a monument honoring the gnat.

Virginia. That gallant of gallants, Sir Walter Raleigh, suggested that what became Virginia be named after England’s Elizabeth I, the Virgin Queen, when in 1584 he founded his colony there, probably on what is now Roanoke Island. (The island, which is in North Carolina, was originally part of the great area from Florida to Newfoundland that Virginia encompassed.) Virginia, the Old Dominion state, was the site of the first permanent English settlement, at Jamestown in 1607, and the scene of the British surrender in the American Revolution at Yorktown. Called the Mother of Presidents, the state sent Washington, Jefferson, Monroe, Madison, Tyler, William Henry Harrison, Taylor, and Wilson to the White House, and is renowned for many historic shrines. As to the state’s exact naming, one writer tells us that “Queen Elizabeth graciously accorded the privileges proposed by Raleigh, giving to this new land a name in honour of her maiden state, and it was called Virginia. Raleigh was knighted for his service and given the title of ‘Lord and Governor of Virginia.’”

Virgin Queen. See ELIZABETHAN AGE.

visa. A visa is an endorsement of a person’s passport by an agent of another country testifying that his passport has been examined and he is permitted entry into that country. *Visa* is short for the Latin *carta visa*, “the document [has been] examined.” It was originally a French term that came into English early in the 19th century.

visiting fireman. A distinguished visitor from out-of-town. Here *fireman* is not related to a firefighter but to a Native American dignitary responsible for lighting his tribe's fires.

vitamin. American biochemist Casimir Funk coined the word *vitamin* (or, rather, *vitamine*) in 1912, at which time he was credited with the discovery of the existence of vitamins, organic substances necessary for normal health. Funk constructed the word from the Latin *vita*, "life," and *amine*, from the Greek *ammoniakon*, because he believed that an amino acid was present in vitamins. *Vitamine* was stripped of its *e* when it was found that amino acids were not involved.

vitex. A family of ornamental shrubs and trees often planted to attract bees, vitex is named from the Latin *viteo*, "to bind with twigs," in reference to the flexible nature of its twigs. One vitex, *Agnus castus*, is called the chaste tree because the Romans considered it an aphrodisiac that calmed the body, and Athenian maidens who wished to remain chaste often strewed their couches with its leaves.

vittles. Victuals, food. This back-country southern word is actually a very old, proper English one, and *victuals* is a pedantic misspelling of it.

vixen. Why should a female fox be a *vixen*? The word arose as a corruption in southern English dialects, with their predilection for *v*, of the Old English *fyxen*, "female fox." First recorded in the early 15th century, it took almost 200 years before the word was applied to an ill-tempered woman or shrew, Shakespeare using it thus in *A Midsummer Night's Dream*.

viz. *Viz*, meaning "namely," represents the Latin word *videlicet*. It needs no period after it. The abbreviation was being used by writers as early as 1540.

vocabulary. *Vocabulary* comes from the Latin *vocabularius*, meaning the same, and is first recorded in the early 16th century. As for the English vocabulary, there are well over a million scientific names for animals, a million for insects, well over 7.4 million for chemical compounds alone; more than 350,000 names are registered as trademarks in the U.S. Patent Office; and one general dictionary lists over 650,000 entries. That alone totals over 10 million English words and with scientific words from many other disciplines, jargons of professions and trades, and slang expressions from England and America, the total must come to at least between 15 and 20 million. But of the millions of English words the average person uses only about 2,800 in everyday conversation, the most extensive individual vocabulary being about 60,000 words. Here are some other word counts:

Webster's Second International Dictionary—650,000 words
Oxford English Dictionary—450,000
 Shakespeare's Complete Works—19,000–25,000
New York Times (Sunday edition)—ca. 25,000
 Chaucer's Works—8,000
 Milton's Works—8,000
 King James Version of the Bible—6,000

vodka. This alcoholic drink, made from rye, barley, and even potatoes, among other fruits and vegetables, takes its name from the Russian *voda*, meaning "water." The unaged, colorless drink does look something like water, but is so named because such spirits were once thought to be as essential to life as water—*whiskey* and the Scandinavian *aquavit* also derive from words meaning "water." *Vodka* is first recorded in English in 1801, though the drink is of course many centuries older. See MARTINI; SCOTCH; WHISKEY.

voice mail. *Voice mail*, first recorded in 1980, was coined by American inventor and entrepreneur Gordon Matthews (1937–2002). According to his *New York Times* obituary (2/26/02), Matthews was inspired to invent the system when "he was stuck in heavy rain and noticed in a nearby dump a large bunch of pink 'While You Were Out' message slips. This gave him the idea that an apparatus permitting callers to record substantial messages in their own voices could help do away with the multitudes of message slips . . . that were burdening modern communications, notably in corporations." Today, over 8 percent of American corporations use voice mail.

volcano. The Roman god of fire and blacksmiths Vulcan was believed to live and work at his forge inside Mount Etna, which was said to belch his fire and flame periodically. Over the ages all mountains that erupted like Etna came to be called volcanoes after Vulcan. Vulcan is also honored in the *vulcanization* process for making rubber more useful, invented by American Charles Goodyear in 1839. In 1845 the astronomer Leverrier gave the name Vulcan to a planet he believed was even closer to the sun than Mercury. Astronomers, however, never located the new planet, and in 1915 Albert Einstein proved that it did not exist.

Volkswagen. Hitler himself drove (or had himself driven) in a Mercedes, but he ordered this little car, costing about \$250, built for the little man. The first Volkswagen, "people's car" in German, with its air-cooled rear engine, was made in 1936. The VW has become one of the best-selling cars around the world, but some people refuse to buy it because of its history.

volleyball. When William Morgan, the YMCA director in Holyoke, Massachusetts, invented the game we call volleyball in 1895, for some unknown reason he called the new sport *mint-onette*, Morgan, a Springfield College student himself, encouraged young people to play the sport and, as the volleying of the ball seemed the most exciting part of the game, its name was changed to volleyball. But a far better story anyway is playwright Arthur Kopit's apocryphal origin of the game, noted in Willard Espy's *Thou Improper, Thou Uncommon Noun* (1978): ". . . every evening in King Louis XV's prison compound a court official named Jacques de Vollet supervised eight nude chambermaids as they, four to a side, batted a loaf of sour bread hither and thither across a line draped with their underclothing. The bouncy play of the young ladies greatly agitated the manacled prisoners looking on. When the bread had been beaten into morsels too small to bat, the chambermaids tossed the remnants to the inmates for supper. Hence, logically, *volleyball*."

Volstead Act. Minnesota congressman Andrew Joseph Volstead drafted and introduced the *Volstead Act* (1919), which

provided for the enforcement of the 18th Amendment to the U.S. Constitution forbidding the manufacture, sale, and import or export of liquor. In spite of the strict law, enforcement proved impossible and there followed a period of unparalleled drinking and lawbreaking that some commentators claim marked the beginning of a moral breakdown in society. In 1933 the 21st Amendment, repealing Prohibition, was ratified. Under the Volstead Act an intoxicating beverage was defined as one that contains more than .5 percent of alcohol by volume.

volt; voltaic pile. Count Alessandro Giuseppe Antonio Anastasio Volta invented Volta's pile or the voltaic pile in 1800, this the first electric battery or device for producing a continuous electric current. Volta, the son of an Italian Jesuit priest who left the order to marry, was something of a prodigy as a child. His voltaic pile consisted of zinc and silver plates stacked alternately with moist pads and touched with a conductor to produce an electric force. He also invented an electric condenser and devised the electrochemical series. Before his death in 1827, aged 82, the scientist had reaped honors in almost every country in Europe, had statues erected to him and kings contending for his presence. Napoleon, who once visited his classroom to praise him, made Volta a member of France's National Institute and a count and senator from the Kingdom of Lombardy in 1801. It is said that Bonaparte so admired the great pioneer that he once crossed out the last three letters from the phrase "*Au grand Voltaire*" inscribed on a wall of the National Institute library. Today the unit of electrical force called the *volt* sings electrically of his fame.

Voltaire's revenge. French critic Élie Catherine Fréron (1719–76) made the mistake of attacking Voltaire and the encyclopaedists. Voltaire, not a man to be tampered with, attacked him in a barrage of wicked epigrams, in his tragedies, in the virulent satire *Le Pauvre Diable*, and in an anonymous work called *Anecdotes sur Fréron* (1760). What hurt the critic most was Voltaire's making him the principal character in his comedy *L'Écossaise*. In this comedy Fréron's magazine *L'Année Littéraire* (*The Literary Year*) is called "*L'Anée Littéraire*" (*The Literary Ass*). The play also depicts Fréron as a scoundrel, spy, toad, hound, snake, lizard, and a man with a heart of filth, among other things. Voltaire later circulated a quatrain about the critic:

The other day, down in a valley,
A serpent stung Fréron.
What think you happened then?
It was the serpent that died.

volume. Early books consisted of parchment rolled on sticks, just as religious books sometimes are today. Thus the Latin *volumen*, "a coil or roll," from the Latin, *volvere*, "to roll," became the French and English *volume*, for "a book."

voluminous. Sufficient to fill a large volume (book) or many volumes. First recorded in 1611, *voluminous* derives directly from the English word *VOLUME*. That the word sometimes has a derogatory connotation is witnessed by a story about the British historian Edward Gibbon. Gibbon noted that author and politician Richard Brinsley Sheridan had complimented him. "Sheridan said," he exulted, "that if you search the history

of the world . . . read all the past histories, peruse the annals of Tacitus, read the *luminous pages of Gibbon* . . ." Gibbon, however, was not so happy when he heard Sheridan's reply to his exultations. "I did not say *luminous*," he told a fellow parliamentarian, "I said *voluminous*."

volunteer plant. A volunteer plant is any plant that grows without being seeded, planted, or cultivated by a person; it is one that springs up spontaneously. The expression goes back at least to the turn of the century. Among mountain folk it is also a euphemism for an illegitimate child.

Volunteer State. A nickname for Tennessee since the Mexican War in 1847, when 30,000 men from the state enlisted. It has also been called the Lion's Den (possibly after border ruffians nicknamed lions), the Hog and Hominy State, from the Tennesseans' reputed liking for fatback and cornmeal (grits), and the Big Bend State, after the big bends in the Tennessee River. At the time of the Scopes "Monkey Trial" there in 1925 Tennessee was called the Monkey State.

V-1, V-2. Toward the end of World War II the Nazis as a desperation measure unleashed their newly developed *Vergeltungswaffe* ("reprisal weapon") against Britain. Between June 1944 and March 1945 the pilotless jet rocket with explosive warhead killed more than 5,500 people, mostly London civilians. The V-2 was an improved version that became the basis for postwar rocket design. Both were also called "buzz bomb" (for their buzzing noise on approach), "robot bomb," "doodlebug," and "flying bomb."

voodoo. The *Waldensians*, followers of Peter Waldo or Valdo (d. 1217), were accused of sorcery and given the name *Vaudois* by the French. French missionaries later remembered these "heretics" when they encountered the witch doctors who preached black magic in the West Indies. They called the native witch doctors *Vaudois* and the name was soon applied to any witchcraft similar to the magic spells they cast, *Vaudois* eventually being corrupted to *voodoo*. This is the view of Ernest Weekley and some other respected etymologists on the origin of *voodoo*; however, the *Oxford English Dictionary* and a majority of authorities believe the word derives from the African *vodun*, a form of the Ashanti *obosum*, "a guardian spirit or fetish." Today the West African religion is practiced in its best-integrated form in the villages of Haiti, voodoo having been brought to the New World by slaves as early as the 1600s.

Vote for Boyle, a son of the soil. Hal Boyle, a columnist for the Associated Press, drove into Tunis soon after it fell to the Allies in World War II shouting: "Vote for Boyle, a son of the soil: Honest Hal, the Arab's Pal." Arabs picked up the former part of the phrase, without having any idea what it meant, and kept repeating it as a greeting to puzzled new troops from 1943 through 1944.

Votian. See HEARTH LANGUAGES.

à votre santé! *À votre santé* is the most familiar, and one of the oldest, of French drinking toasts. Dating back to the 18th century or earlier, it means simply "To your health!"

vowel. Our word *vowel* comes ultimately from the Latin *vocalis* and is first recorded in the late 13th century. The most common vowel sound in English is the upside down *e* (;sw) of the International Phonetic Alphabet, the unaccented syllable that is found in so many English words—as in the first syllable of *attend*, *observer*, and *alleviate*; in the last syllable of words like *custom* and *sofa*; and in most pronunciations of the indefinite article, such as *a man*. Alistair Cooke makes this point in discussing the lack of phonetic training in England and America, venturing that 99 scholars in 100 wouldn't know it. Few would know, either, that *w* and *y* are also letters that can represent vowel sounds, of which there are as many as 23 in English. Fewer still would know that the English word with the most consecutive vowel sounds is *queueing*, lining up, which has five. The word with the most consonants in a row? Maybe the six in *latchstring*. In order of use, the seven most frequent vowel sounds are ;sw, a, ai, o, u, w, and y. When a certain Dr. Vowel died in the early 19th century, a certain Dr. Barton Warren commented to a friend: "Thank Heaven it was neither *you* nor *I*!"

vox populi. Latin for "the voice of the people," the majority. This term can be traced back to the mid-16th century. Much older is *vox populi*, *vox Dei*, "the voice of the people is the voice of God," which is first recorded in about 800. However, the Anglo-Saxon theologian Alcuin wrote: "And those people should not be listened to who keep saying the voice of the people is the voice of God, since the riotousness of the crowd is always very close to madness." Or, as Union Civil War general Sherman put it: "Vox populi, vox humbug"

voyageur. An expert boatsman, woodsman, and guide, often French-Canadian, who transported people or goods in the early Northwest. The word is a borrowing from the French.

Vulcan; vulcanization. See volcano.

vum. An old-fashioned word that means vow, or swear, as in the expression of surprise, "Well, I vum!" The old term derives from the verb *vum*, dating back to the 18th century.

W

W. *W* takes its name from “double *U*.” The 23rd letter of the alphabet is simply two *V*'s (*VV*) joined together. *V* in centuries past was the symbol of both *V* and *U*, being pronounced as a *U* whenever it represented that letter.

W. Several presidents have been called by their initials, including F.D.R. (Franklin Delano Roosevelt) and J.F.K. (John Fitzgerald Kennedy), but only one has been called by *one* initial: President George W. Bush (the *W* stands for Walker), who was dubbed *W* (pronounced Dubya) by the press.

Waa hoo! A cowboy yell that the prolific western writer Zane Grey (1872–1939) explained in *The Last of the Plainsmen*: “We’ll use a signal I have tried and found far-reaching and easy to yell. Waa hoo!”

wabenzi people. Rich people, that is, people who own Mercedes-Benz cars. The term is a combination of Swahili and English used in West Africa.

waddy. Any honest cowboy, though *waddy* originally meant a cattle rustler. The word’s origin is unknown. It is first recorded in the mid-19th century.

waffle. The waffle takes its name from the Dutch *wafel* for the crisp batter cake baked in a waffle iron. But folklore holds that it was created by a knight who had returned to England from the Crusades in 1204. Sir Giles, it is said, came into the kitchen where his wife was baking cakes and accidentally sat on one while wearing his full suit of chain armor. He smashed the cake flat as a pancake but with rows of little indentations—the imprint of his armor. These proved excellent for holding butter and syrup and the waffle was born. According to this tongue-in-cheek story, the delectable dish was called the waffle “because waffle is a word that is easy to pronounce when one’s mouth is full!”

wag. *Waghalters* were mischievous young men, merry rogues, who were so called in medieval times because it was facetiously

said that all such jokers would wind up wagging in a halter on the gallows instead of wagging their tongues. The word was shortened to *wagge*, then *wag*, and came to mean a humorist, most *wags* today being unaware that their name means “a gallows bird.”

wailing like a banshee. A wailing banshee is in Irish folklore a spirit in the form of a woman—often beautiful, but sometimes an old hag—who appears to or is heard by members of a family as a warning that one of them will soon die. *Banshee* is from the Gaelic *bean sidhe*, “woman of the fairies,” and *wailing like a banshee* has come to mean someone, especially a woman, screaming shrilly.

the Wailing Wall. One of the most sacred sites in Judaism. It is also the most visited site in Israel.

wake me up when Kirby dies. Theater buffs will be interested in this old catchphrase not heard anymore but whose story is well worth hearing. The tale is told in Charles Hemstreet’s *When Old New York Was Young* (1902): “Something more than sixty years ago [in about 1840] the attention of theatergoers was directed to a young actor who appeared at intervals in the Chatham Theatre. He was J. Hudson Kirby. His acting had not much merit, but he persisted in a theory that made him famous. It was his idea that an actor should reserve all his strength for scenes of carnage and death. The earlier acts of a play he passed through carelessly, but when he came to death scenes he threw himself into them with such force and fury that they came to be the talk of the town. Some of the spectators found the earlier acts so dull and tiresome that they went asleep, taking the precaution, however, to nudge their neighbor, with the request to wake them up for the death scene. And for long years after Kirby’s time, the catch-phrase applied to any supreme effort was ‘Wake me up when Kirby dies.’”

wake-up call. An expression that originated in U.S. hotels about 1835, long before the telephone. At the time clerks

from the front desk would knock at your door, calling you whenever you wanted to be awakened in the morning. Over the years the telephone ring replaced the knock on the door, and the expression also took on the figurative meaning of waking a person or people up from lethargy or unpreparedness.

Wales. See WELSH.

walk down the aisle. Americans have been using *walk down the aisle* as a synonym for “getting married” for almost a century now. A bride who literally “walked down the aisle,” however, would be walking along either side of the church and might confuse everyone. The passageway the bride walks “down” to the altar is actually called the nave, though there is no chance that this will alter the expression in the slightest.

walker. An old term still used to an extent for a man who escorts a woman to society functions in place of her husband, usually because her husband doesn’t want to attend the function.

walk good. A Jamaican catchphrase made famous by Jamaican poet and folklorist Louise Bennett-Coverley (1919–2006). Mrs. Bennett-Coverley, the author of several books of poetry, drama, and folklore, also played the character of Aunty Roachy on the radio. She wrote many poems and stories in dialect. See WALK HEAVY.

walk heavy. Walk like someone who has power, who is in control and acts like he is the boss. See WALK GOOD.

walking off with the persimmons. See EATIN’ A GREEN SIMMON.

walk like Agag. The phrase, meaning to walk softly, remembers the biblical King Agag (I Samuel 15:32), of whom the Bible says, “And Agag came to him [Samuel] delicately,” which did him no good, for Samuel hewed him to pieces anyway. Agag, an Amelekite king, had previously been captured and spared by Saul.

walk on water. This expression refers in a humorous way to Christ walking on the sea, in Matthew 14:15, Mark 6:48–51, and John 6:19–21. “He thinks he can walk on water” and similar phrases are usually said of someone who thinks he is divine. One time the powerful newspaper publisher Lord Beaverbrook (William Maxwell Aitken) was called upon by British statesman David Lloyd George. “Is the lord at home?” Lloyd George asked the butler. “No, sir, the lord is out walking.” “Ah,” replied Lloyd George. “On the water, I presume.”

(he) walks between the raindrops. Describes a person who can’t be harmed, leads a charmed life. “He’s won the lottery twice; he walks between the raindrops!”

walk softly and carry a big stick. See ANANIAS.

walk the chalk. As far back as the 17th century it was customary in the American navy for a straight line to be drawn along the deck of a ship as a test for drunkenness. Any sailor

who couldn’t walk the whole line, placing each foot on it in turn, was adjudged drunk and punished accordingly—often by flogging. Thus, to *walk the chalk*, first recorded in 1823, came to mean to walk a line of sobriety, to obey the rules.

walk the plank. Probably no pirate ever forced anyone to walk the plank into the ocean—except in swash-buckling books and movies. The expression most likely originated in the yarn of an old salt or from the pen of a 19th-century magazine writer. Pirates did feed captives to the fishes or told them they were free to “walk home” while far out at sea, but no planks were used. The common practice was to maroon prisoners and pirate offenders on a desert island. The offenders were simply put ashore without clothes or provisions. See SWASHBUCKLER; PIRATES.

wall-eyed. A wall-eyed person has an eye or eyes with unusually large white areas, making for defective sight. Shakespeare uses the old term, which dates back to the 14th century and is a corruption of the Icelandic *vald eystr*, “having a beam in the eye,” and has nothing to do with walls, though no one really knows what the “beam” in the Icelandic word means.

wallflower. The prosaic explanation for this word, describing a girl who sits to the side at a dance or party because she is shy or without a partner, is simply that it originated with some poor girl who sat against the wall during a party. But the romantic story is nicer. This holds that such girls are named after the common wallflower of Europe (*Cheiranthus cheiri*), a sweet-scented, yellow spring flower that grows wild on walls and cliffs. Indeed, the English poet Robert Herrick (1591–1674) claimed that the flower itself is named after such a girl, his delightful derivation telling of a fair damsel who was long kept from her lover and finally tried to escape to him:

Up she got upon a wall
 ’Tempting down to slide withal;
 But the silken twist untied,
 So she fell, and, bruised, she died.
 Love in pity of the deed,
 And her loving luckless speed
 Turned her to this plant we call
 Now the “Flower of the wall.”

walls have ears. Some walls really did have ears. Dionysius, the Greek tyrant of Syracuse (430–367 B.C.), had a narrow tube inserted from his palace room to the walls of the prison below so that he could overhear the prisoners—and the listening post that he put his ear to in his wall was even shaped like a human ear. In the 16th century Catherine de Médicis, queen of France’s Henry II, is said to have had several rooms in the Louvre constructed similarly, so she could overhear any plots against her. In any event, the expression *the walls have ears*, meaning “you’d better take care, there are spies everywhere,” is an old one, first recorded in English in 1620 and probably dating back much further. The *ears have walls* is a recent twist on the old phrase, meaning that some people, especially those in authority, are incapable of listening. It was coined in the late 1960s.

Wall Street. Wall Street, which is both a street and a term symbolizing the American financial world in general, is located in downtown Manhattan at the southern end of the island and takes its name from the wall that extended along the street in Dutch times. The principal financial institutions of the city have been located there since the early 19th century. *Wall Streeter*, *Wall Street broker*, *Wall Street plunger*, and *Wall Street shark* are among terms to which the street gave birth. We find *Wall Street broker* first used as early as 1836, and Wall Street being called *The Street* by 1863.

Wall Street Journal. This daily newspaper was founded in 1889 by Dow Jones and Company, a financial news agency at the time. In 1901 it was purchased by newspaperman Clarence Walker Barrow, who started it on its way from a journal of business items to the influential international newspaper it is today. In 2007 the *Journal* was subjected to takeover attempts by several rivals. Rupert Murdoch finally bought *The Wall Street Journal* in December 2007.

Wallstreet Panic. Among the most humorous names in American fiction. William Faulkner created or recorded the unusual name in his novel *The Hamlet* (1940). As Ech Snopes explains therein: “. . . [We] figured if we named him Wallstreet Panic it might make him get rich like the folks that run that Wall Street panic [in 1928].” Other humorously named Faulkner characters, all from his Snopes family, include Admiral Dewey and Montgomery Ward. See SNOPEsIAN; SARTORIS.

walnut. See WELSH.

walrus. Walrus comes to us from the Dutch *walrus*, for the animal, which may have been suggested by the Dutch *wolvisch*, “whale.” The word is first recorded in about 893. The walrus was often called the sea horse and morse in ancient times. The Eskimos, closer to nature, have at least six words for *walrus*, ranging from *nutara*, “baby walrus,” to *timartik*, “large male walrus,” and *naktivilik*, “mature walrus.” See SNOW; TOOTH WALKER.

Walrussia. See ALASKA.

Walter Mitty. An ordinary person who has vivid dreams and daydreams of exciting adventures in which he is a hero, like the main character of the short story and film “The Secret Life of Walter Mitty” by American author James Thurber (1894–1961).

Walter Winchell. A sensationalist New York newspaper columnist who coined or popularized many slang terms from the 1920s to 1950s. Damon Runyon used him as the model for Waldo Winchester in “Romance and the Roaring Forties” (1929), his first Broadway story and probably the first story with a newspaper columnist of the Winchell type as the central character. Winchell had many admirers, but many detractors as well. While they were fishing in the gulf of California, John Steinbeck and his friend Doc Ricketts noticed a little fish that lived in the cloaca of the sea cucumber and kept darting in and

out of the creature’s anus. They named the hitherto unrecorded fish *Proctophilus winchilli* after the gossip columnist who got all the latest dirt.

Waltzing Matilda. *Matilda* in this century-old Australian song refers to the pack a tramp carries, but no one seems to know the origin of the term. *Waltzing* describes the way a tramp ambles along, his pack flopping up and down.

wampum. *Wampumpeak* was a name American Indians in New England gave to shell money. Like most Indian names—including the longer forebears of *squash*, *hickory*, and *racoon*—the colonists found *wampumpeak* too long and shortened it to *wampum*, which it remains today. All Indians didn’t have the same name for shell money. Virginia Indians called wampum *roanoke*; the Mohave Indians called it *pook*; in northern California it was called *ali-qua-chick*; and in the Northwest it was *hiaqua*. But only *wampum* remains well known today.

wampus. A mythical creature of the mountains. “She told him that the night mountains were walked by wampus cats with great burning eyes and which left no track even in the snow.”

wan. This Chinese family name, whose Chinese character means “10,000,” has an apocryphal story attached to it. It’s said that when soothsayers advised the emperor Ch’in-Shih-Huang-Ti that he would not be able to finish the Great Wall of China until 10,000 more men were buried in it, the tyrannical emperor found a man named Wan, had him buried in the Wall, and went on about his work. *Wan* for sad comes from the Old English *wann*, dark, gloomy.

war. *War* is an Old High German word, long used (at least since 1154) instead of the Latin *bellum*. *Bellum* is a poor word for war because of its similarity to *belle*, “beautiful.”

war birds. U.S. planes that served as combat fighters and bombers in World War I. They were many, including the P-51 Mustang, the P-40 Warhawk, and the B-25 Mitchell.

war correspondent. “Since the first gun discharged at Fort Sumter awoke the American world to arms, War Correspondence on this side of the Atlantic has been as much an avocation as practicing law or selling dry goods . . . The War Correspondent is the outgrowth of a very modern civilization.” So wrote the first observer to record *war correspondent*, in 1861, when the term, if not the profession, came into being.

ward heeler. A *ward heeler* is a political hanger-on of a ward boss in American politics, the *heeler*, coming from the comparison of such a man to a dog that “heels” for its master, that is, follows behind submissively in its master’s footsteps. The term is first recorded in 1888.

warfarin. A chemical compound that is used both to kill rats and medically to thin the blood. It derives from the initials of the research foundation where it was discovered, the Wisconsin Alumni Research Foundation, plus *arin*. The letters *arin* are

from *coumarin*, a substance extracted from the tonka bean that is used in making the chemical compound.

War for the Blacks. See ABE LINCOLN WAR.

war game. A simulation of a military operation done physically or electronically. It was perfected from his father's invention in 1824 by a Lieutenant von Reisswitz of the Prussian army under its German name *Kriegsspiel*.

war horse. The original *war horse*, which has been used to describe an experienced veteran of anything from military operations to peace negotiations (!), was Confederate general James Longstreet, whose men nicknamed him War Horse. Since the 17th century, the term has been used for a horse by the military. It is often heard as *old war horse*.

war is cruelty and you cannot refine it. See WAR IS HELL.

war is hell. Union general William Tecumseh Sherman said this in an 1880 Columbus, Ohio, speech after the Civil War: "There is many a boy here who looks on war as all glory, but, boys, it is all hell." "Red" Sherman (red-haired and red-bearded) had however said the equivalent throughout the war. "War is cruelty and you cannot refine it," he said of his destruction of Atlanta, and "You might as well appeal against the thunderstorm as against these terrible hardships of war." "Cump" or "Uncle Billy," as his "Yankee Bummers" often called him, was called the "Hun," the "Burner," the "Killer," and "Human Fungus" by Southerners as he marched through Georgia to the sea. For more Sherman coinages see HOLD THE FORT and SHERMAN'S HAIRPINS.

warmonger. In the Latin dialect spoken by Roman soldiers in western Europe *mangones* were conniving dealers or traders in anything. This word passed into English as *monger* and was used for many compound words, including *fishmonger*. As early as 1590 one who traffics in war (for one reason or another) was called a *warmonger*, by Edmund Spenser in *The Faerie Queene*.

warm the cockles of one's heart. The most popular explanation for the *cockles* here says that late-17th-century anatomists noticed the resemblance of the shape of cockleshells, the valves of a scallop-like mollusk, to the ventricles of the heart and referred to the latter as *cockles*. Whether this is the case or not, *cockles* isn't used much anymore except in the expression *to warm the cockles of one's heart*, "to please someone immensely, to evoke a flow of pleasure or a feeling of affection." Behind the expression is the old poetical belief that the heart is the seat of affection.

Warning: The Surgeon General Has Determined That Cigarette Smoking Is Dangerous To Your Health. Since 1973 this well-known warning has by law appeared on the side panel of all cigarette packs. From 1971 up until 1973 the words were somewhat different, advising that cigarette smoking "... May Be Dangerous To Your Health."

War of Jenkins' Ear. Carrying his left ear back to London in a leather case, master mariner Robert Jenkins claimed that

Spanish sailors boarded his brig, the *Rebecca*, which had been peacefully trading in the West Indies, rifled her, and that their commander had lopped off the ear as a further humiliation. Jenkins sent his ear to the king and brought the matter before Parliament, which decided that this was one cutting Spanish insult too many. Jenkins' ear became the major cause of the war between England and Spain that led the War of the Austrian Succession. The conflict (1739–41) was popularly called *the War of Jenkins' Ear*, which is definitely the oddest name of all wars and surely the only one ever initiated by an ear. Admiral Sir Edward Vernon put down the Spaniards at Portobelo and "One-Eared" Jenkins was given command of another ship in the East India Company's service. He later rose to company supervisor.

War of the Giants. The War of the Giants was a mythological one in which the giants revolted against Zeus and were put down by the gods with the help of Hercules. The Battle of the Giants took place on September 13, 1515, when the French under Francis I defeated the Swiss mercenaries defending the city of Milan at Mulagnano.

War of the Roses. In 1551 the red and white variety of the damask rose (*Rosa damascena versicolor*) was popularly named "York and Lancaster" to memorialize the English Wars of the Roses between the houses of York and Lancaster. This 30-year struggle for the throne of England began in 1455; the house of York adopted a white rose for its emblem and the house of Lancaster chose a red rose. The war ended only when the two houses were united through marriage.

War of the Stray Dog. The War of the Stray Dog in 1925, a conflict not much more stupid than most wars, took place when a Greek soldier ran after his dog, which had strayed across the border in Macedonia. A Bulgarian sentry shot the soldier and Greek troops invaded Bulgaria in retaliation. Before the League of Nations intervened over 50 men were killed. Almost as foolish was the Emu War. This took place in 1935 when west Australian farmers, enraged at ostrichlike emus trampling their wheat fields, demanded government help. The government sent troops with machine guns after the birds, which led the soldiers on a wild chase through the back country for over a month. Twelve emus were killed and several soldiers injured.

war on rats. Sweden's Queen Christina (1626–89) so hated the fleas of rats and other animals that she officially declared war on them. She packed tiny cannonballs into a specially made four-inch cannon (today on exhibit in the Stockholm Arsenal) and fired at the fleas whenever they came by.

war paint; war dance; on the warpath. These are all well-known expressions that originally referred to Native Americans but are used figuratively today. *War council* and *war cry* did not originate with any Indian tribe. See WAR GAME.

warren. Just as George Bernard Shaw's play *Mrs. Warren's Profession* resulted in the coining of COMSTOCKERY, it also gave rise to the word *warren*, for "a prostitute," after the title character in the play. The earlier *warren*, for "a brothel," origin un-

known but dating back to the late 17th century, may have reinforced the usage.

Warren Commission. An inquiry into the assassination of John F. Kennedy (1917–63), 35th president of the United States. The Warren Commission (1964) found that only one assassin, Lee Harvey Oswald, killed J.F.K. but the U.S. House of Representatives Assassinations Committee (1979) claimed more than one gunman conspired to kill the president.

war to end all wars. World War I. The expression is not from Woodrow Wilson's address to Congress calling for a declaration of war against Germany in 1917, as many people believe. What Wilson said then was: "The world must be made safe for democracy." *The war to end all wars* was suggested by H. G. Wells's book *The War That Will End War* (1914). In announcing the end of World War I, Britain's prime minister Lloyd George told the House of Commons: "I hope we may say that thus . . . came to end all wars."

War to Free the Slaves. See ABE LINCOLN WAR.

war to make the world safe for democracy. See WAR TO END ALL WARS.

warts and all. The roots of *warts and all* reach way back to a remark Oliver Cromwell (1599–1658) made to an artist painting his portrait: "Mr. Lely, I desire you would use all your skill to paint my picture truly like me, and not flatter me at all; but remark all these roughnesses, pimples, warts, and everything as you see me, otherwise I will never pay a farthing for it." The story may be apocryphal, though it does sound like Cromwell, and historians believe that the Lord Protector, if he did say this, was speaking to Samuel Cooper rather than Sir Peter Lely, who painted less realistic full-length portraits of Cromwell from a miniature Cooper had done.

war-warring instead of jaw-jawing. An invention of British prime minister Winston Churchill, this phrase means that nations are fighting (war-warring) one another instead of talking (jaw-jawing) about how they can solve their problems without fighting.

war will be over by Christmas. An expression—which always comes in the form of a rumor around Christmas time—that has been heard by U.S. troops in every war from the Civil War (1861–65) to the present. In no war have the words ever been true.

Washington. *Washington* is the most popular place name in the United States, recorded in the nation's capital, Washington, D.C., the state of Washington, at least 29 counties, and numerous towns. Washington State, the only state named for an American, was admitted to the union on February 22, 1889, appropriately on George Washington's birthday. Other terms honoring the "Father of his country," first in war, first in peace, first in the hearts of his countrymen, are *the bird of Washington* (the American eagle), *the American Fabius* (see FABIAN TACTICS), *Washingtonia* (a California palm tree), the *Washington*

thorn, the *Washington lily*, and *Washington pie*. A *George Washington*, for an honest person, derives from the famous cherry-tree story apparently invented by M. L. (Parson) Weems in his biography of the first president written in about 1800. See I CANNOT TELL A LIE.

Washington's a dirty diaper—it's time for a change. A slogan coined in 2007 by Democratic adviser James Carville.

Washoe. The former name of the territory that became Nevada; from the name of the Washoe Indians of the region.

wash one's hands of a matter. Pontius Pilate's washing his hands at the trial of Jesus was a favorite scene in biblical dramas presented by strolling players in medieval times. Pilate was portrayed washing his hands in a basin (although the passage in Matt. 27:24 just says, "He took water and washed his hands") while denying any responsibility for Christ's death sentence. From these dramas and the biblical story of the Crucifixion, *to wash one's hands of a matter* came into popular use as an expression for abandoning something entirely after having been concerned in the matter, for a public disavowal disclaiming all accountability for something, or for disowning all associations with someone.

washout. Not all word derivations are CUT AND DRIED. Sometimes the same expression arises in two or more places from different sources, which may be the case with *washout*, both British and American slang for "a failure." British usage of this term derives from military slang on the rifle range. After one squad had finished shooting at an iron target, the bullet marks in the bull's-eye were painted over with black paint and the rest of the target whitewashed to prepare it for practice by the next squad. A shot completely off the target was called a *washout*, because it went off into the air, washed itself out, so to speak, and the military slang for a missed shot, common in about 1850, became slang for a failure some 50 years later during the Boer War. However, before this, probably as early as the 1860s, *wash out* was an American term for the washing away by heavy rains of part of a road or railway. Some writers claim that this term independently suggested American usage of the expression *washout* for a failure, but there are no recorded instances of the figurative usage here until the 1920s. By that time British and American forces had come in close contact during World War I. It seems likely that American soldiers borrowed the term for a failure from British slang without even realizing it, the washout of roads and railways being so familiar to them!

Was it Eliot's toilet I saw? This famous but possibly apocryphal palindrome is said to have been uttered in mock awe by an American publisher on visiting the London office of Faber and Faber, where the renowned poet T. S. Eliot worked.

WASP. A disparaging acronym for *White Anglo-Saxon Protestant*, WASP has been commonly used in America since the early 1960s to describe the nation's "ruling class," who are supposed to be white, of British descent, Protestant, and waspish, too. During World War II, WASP was also an acronym for *Women's Auxilliary Service Pilot*. See DAGO; HARP; KIWI; WELSH.

Wasserman test. Many medical tests, including the Pap test for cancer and the Schick test for diphtheria, are named for the physicians who devised them. The Wasserman test was invented in 1906 by August von Wasserman (1866–1925), a German physician and bacteriologist. This laboratory blood test for the diagnosis of syphilis, also known as the cardiolipin test, has been perfected to the point where it is 99 percent effective on normal persons. The test is based on the presence of antibodies in the blood. In most cases a positive Wasserman reveals that the patient has syphilis, although vaccination procedures and several diseases, such as leprosy, also produce a positive Wasserman. August von Wasserman, who began his career as a physician in Strasbourg, won international fame for his discovery. He became director of Berlin's Kaiser Wilhelm Institute in 1913.

waste not, want not. A proverb that dates back only to about the late 1800s, so far as is known. However, at least one source attributed the saying to a poem by one Rowland Howard, about whom little is known. Howard wrote a poem, published in *Peterson's Magazine* (1876), that seems to play with maxims and is entitled “*You Never Miss The Water.*”

Waste not, want not, is a maxim I would teach
Let your watchword be dispatch, and practice what you
preach;
Do not let your chances like sunbeams pass you by,
For you never miss the water till the well runs dry.

a watched pot never boils. A proverb dating from at least the 19th century and warning that the more impatient and anxiously someone pays attention to something, the longer it will seem to take.

watercress. Both watercress and land cress are herbs of the mustard group. Cress takes its name from the German *kresse*, for the salad green, this word perhaps deriving from an older German word that meant “to creep or crawl” and described the plant's way of growing.

watered stock. To water a stock is to increase its number of shares without increasing the value of its assets; it is thus diluted or watered down. According to one old story, the expression originated with Wall Street speculator Daniel Drew, who was a cattle dealer after the Civil War. Drew sold his cattle by weight, of course, and did so immediately after they finished drinking a large quantity of water.

Watergate. See DEEP THROAT.

Waterloo. One who *meets his Waterloo* suffers a complete and final defeat, just as Napoleon did in 1815 at the Battle of Waterloo, about nine miles from Brussels in Belgium. The battle was actually fought a few miles south of Waterloo, between Mont-Saint-Jean and Bellefontaine.

watermelon. Originating in Africa, watermelon has been cultivated for thousands of years, but seems to have been so named only since 1605. There were many old names for the melon, including names in Arabic and Sanskrit. The watermel-

on is an important water source in many arid regions but considered a fruit dessert in most places. Mark Twain considered it “chief of the world's luxuries. . . . When one has tasted it, he knows what angels eat.” The Chinese call the watermelon the *west-melon* (shih-quah).

water of jealousy. Under Mosaic law a woman who had committed adultery was to be stoned to death. But if a husband only suspected his wife of adultery she was given the water of jealousy to drink (Deut. 22:22) before the Sanhedrin. The dust from the sanctuary was mixed with the water and the priest said: “If thou hast gone aside may Jehovah make this water bitter to thee, and bring on thee all the curses written in this law.” He then wrote down the curses, sprinkled the water on this writing, and gave the woman the rest of the water of jealousy to drink.

Water Poet; waterman. Eccentric British poet John Taylor (1580–1653) was known as the Water Poet because of the nature of many of his rollicking poems and because he was a river waterman, a boatman who transported passengers along the River Thames. He claimed that he knew no grammar, though he had written over 80 books. One time he set out from London to Queensborough in a cardboard boat, using two cured fish tied to canes for oars, and nearly drowned when the boat sank moments after he launched it.

watt. There is probably no truth in the charming old tale that James Watt watched his mother's teakettle boiling as a child, and later invented the steam engine as a result. Watt, born in Scotland of poor parents, did, however, get off to an early start in his scientific endeavors. In 1765 the inquisitive Scotsman launched into a study of steam when a model of Thomas Newcomen's steam engine was brought to him to repair. He soon invented the first economical steam engine, which was initially used only for pumps in mines but eventually brought steam power to industry on a large scale. Watt devoted his life to perfecting and producing his new engine, manufacturing it with Matthew Boulton of Birmingham. He died in 1819, aged 83. Toward the end of the century the International Electrical Congress named the watt, the unit of electrical power—736 watts equal to about one horsepower—in the inventor's honor. His name is also remembered by the kilowatt, one thousand watts; the kilowatt hour, a measurement by which electricity is sold; the watt-hour meter, which measures kilowatts; the watt-meter, an instrument for measuring a power load; and the watt-second, a unit of work. Wattage is power measured in watts, and “wattless” is an electrical term meaning without watts or power.

wave. The wave takes place in a crowded stadium for sports or music events and involves successive groups of spectators standing and raising their arms.

wave a red flag at a bull. Though the bullfight matador waves his traditional red-lined cape to make the bull charge, it is the motion of the cape, not the color, that irritates the animal, as bulls are colorblind. Nevertheless, the image of the red cape long ago inspired the expression *to wave a red flag at a bull*, meaning to provoke or enrage someone. *Cloth* or *rag* are sometimes substituted for *flag* in the phrase.

Waves. See WRENS.

wave the bloody shirt. Used in both the North and the South from after the Civil War until the present to indicate any means employed to stir up hostility between the North and the South. "The G.A.R. [Grand Army of the Republic] waved the Bloody Shirt in many a political campaign, advising its boys in blue to 'vote as you shoot!'" wrote Jerome Kerwin, *Civil Military Relationships in American Life*, 1948.

the way of all flesh. Death, as in the first recorded use of the phrase, English playwright John Webster's *Westward Ho* (1607): "I saw him now going the way of all flesh." Three hundred years later, in 1903, British author Samuel Butler made the words famous again with the posthumous publication of his novel *The Way of All Flesh*, which he had actually finished writing in 1886. Originally called *Ernest Pontifex*, after its main character, the book is in some respects autobiographical.

we. See THE ROYAL WE.

we-all. Early during World War II, Thomas J. Watson, the president of I.B.M., borrowed this expression from southern mountain talk to use in full-page newspaper advertisements throughout the country. He proclaimed: "'T' represents only one person. 'We' may mean only two or a few persons. Our slogan now is WE ALL. . . . President Roosevelt, our Commander-in-Chief, can be certain that WE-ALL are back of him."

weapon of the silent death. A Chinese name for the American Springfield 03 rifle, much valued in the 20th century, especially as a sniper rifle.

wear a two-inch belt and Big Jim suspenders. To be very cautious. This cowboy variation is more colorful than the more common American expression *wear a belt and suspenders*, which means the same.

we are not amused. It has been said that this reproof often attributed to Queen Victoria is "not in keeping with Queen Victoria's conversation or character" and that she never used the royal "we" save in official proclamations. However, J. A. Fuller-Maitland wrote about an 1884 concert in *A Doorkeeper of Music*: "Alick Yorke sang comic songs, one of them in a flannel petticoat bestowed upon him by the Queen after she had insisted on his giving his famous impersonation of herself in her own presence, as a *douceur* [kindness] after the reproof she felt bound to utter in words that have often been quoted." Another story, one of many more, has the queen saying "we are not amused" upon seeing an imitation of herself by the Honorable Alexander Grantham Yorke, her groom-in-waiting. Richard the Lion-Hearted, incidentally, was the first king to use the royal *we* in place of *I*.

we are such stuff as dreams are made on. From Shakespeare's *The Tempest* (1611): "We are such stuff as dreams are made on; and our little life is rounded with a sleep."

wearing calluses on his elbows. *Western Words* (1961) by Ramon F. Adams defines *wearing calluses on his elbows* as "spending time in a saloon." Similarly, an *elbow bender*, another term from the Old West, means a "drinking man," because he bends his elbow to convey his glass to his lips.

wear it in good health. One of those expressions everyone hears a hundred times over the years, but whose inventor will never be known. It is thought to be a Yiddish contribution or to at least have been influenced by Yiddish, and is commonly said to someone who buys or is given clothing of some kind.

wear one's heart on one's sleeve. To make one's feelings obvious. Shakespeare probably coined the phrase in *Othello* (1604): "I will wear my heart upon my sleeve / For daws [crows] to peck at . . ." But it may have originated in medieval tournaments when contestants sported knots of ribbon ladies they loved gave them to wear on their sleeves in competitions.

wear the willow. See WILLOW.

weasel words. "Weasel words are words that suck all of the life out of the words next to them just as a weasel sucks an egg and leaves the shell," a writer explained in the June 1900 issue of the *Century Magazine*. The writer then gives an example: "The public should be protected. 'Duly protected,' said Gamage, 'that's always a good weasel word.'" The term was applied to politicians in this first recorded use and has often been associated with politicians since then.

weather breeder. A New England name for an unusually clear, cloudless day when there is extraordinary visibility. Folklore holds that such days are always followed by severe storms.

Weathermen. "You don't need a weatherman to know which way the wind blows," goes a well-known line in a Bob Dylan song. A revolutionary U.S. group appropriated "Weathermen" for the name of their group in 1970.

weber; Weberian apparatus; Weber's law. The *weber* is the practical unit of magnetic flux, named after German physicist Wilhelm Eduard Weber (1804–91). While a professor at the University of Göttingen, Weber worked with Karl Gauss on terrestrial magnetism, devised an electromagnetic telegraph, and did valuable research on electrical measurements—the *coulomb*, in fact, being once known as the *weber*. A politically committed teacher, he was dismissed from the university for protesting the king's suspension of the constitution. Weber's two brothers were also noted scientists. Wilhelm Eduard collaborated with his younger brother Eduard in 1833 on a study of human locomotion. With his elder brother Ernst he wrote a well-known book on wave motion published in 1825. This same Ernst Heinrich Weber (1795–1878), a physiologist and early psychophysical investigator, is the author of Weber's law, a mathematical formulation showing that the increase in stimulus necessary in producing an increased sensation depends on the strength of the preceding stimulus. The Weberian apparatus, small bones connecting the inner ear with the air bladder in certain fishes, honors Ernst too.

webfoot. See BEAVER STATE.

webfooter. See BEAVER STATE.

the web of life. Meaning the destiny of a person from birth to death, *the web of life* is an old expression that alludes to the three Fates of Roman mythology. These Fates are supposed to spin the thread of life, that is, the pattern in which events will occur.

Webster's. Noah Webster's name has become a synonym for a dictionary since he published his *Compendious Dictionary of the English Language* in 1806 and his larger *An American Dictionary of the English Language* 22 years later. But the "father of American lexicography" was a man of widespread interests, publishing many diverse books over his long career. These included his famous *Sketches of American Policy* (1785), on history and politics; *Dissertations on the English Language* (1789), advocating spelling reform; and *A Brief History of Epidemic and Pestilential Diseases* (1799). Webster also found time to edit *The American Magazine* and the newspaper *The Minerva*. Beginning in 1806, he lived on the income from his speller—which sold at the rate of over 1 million copies a year—while he took the 22 years needed to complete his monumental dictionary. *Webster's*, as it came to be called (it is now published as *Webster's Dictionary* by Merriam) helped standardize American spelling and pronunciation and recorded many Americanisms.

Wedgwood. See ODE ON A GRECIAN URN.

we dig our grave with our spoon. An old medical saying warning patients to eat moderately if they want to stay healthy.

wedlock. See DEADLOCK.

Wednesday. Traditionally a good day for planting crops in ancient times, *Wednesday* is named for Woden, the Old English name of Wotan, the Scandinavian god of agriculture, war, wisdom, and poetry. The Old English *Wodensdaeg*, or *Woden's day*, became our Wednesday.

Wednesday's child. See MONDAY'S CHILD.

weed. "What is a weed? A plant whose virtues have not yet been discovered," Ralph Waldo Emerson wrote in *Fortune of the Republic* (1878). But James Russell Lowell seems to have expressed the same sentiment 30 years earlier in *A Fable for Critics* (1848): "A weed is no more than a flower in disguise." Later, Ella Wheeler Wilcox wrote in her poem "The Weed" (1872): "A weed is but an unloved flower." In any case, these sentiments are the ancestors of our current expression *a weed is just an uncultivated plant*. Poet Mildred Howells spoke less admiringly of weeds in her poem "The Difficult Seed" (1910):

And so it criticized each flower
This supercilious seed
Until it woke one summer hour,
And found itself a weed.

While a weed is really only an uncultivated plant, weeds are generally regarded as unwanted pervasive plants to be rooted out from gardens. The word *weed*, recorded in one form or another since the ninth century, comes from the Old English *wiod*, a variant of an early Saxon term for "wild." Nevertheless, plants regarded as weeds change from century to century. The tomato was considered a pernicious weed in cornfields until the Mayans began cultivating it. Similarly, rye and oats were once known as weeds in wheat fields. Today, experts regard the world's worst land weeds as purple nutsedge, Bermuda grass, Cogan grass, and lantana. Some weeds aren't plants but simply clothing of any kind, deriving from the Anglo-Saxon word *waede*, "garment." *Widow's weeds* are mourning garments, the black often worn by widows. The expression contributes the only use of the word *weeds* for clothing remaining in English, but *weeds* was used by Spenser, Shakespeare, and many other writers to mean everyday clothing for both men and women.

weekend. A relatively recent word, first recorded in England in 1879 and rarely used in America until the mid-1930s. Until that time the great majority of Americans didn't know what a weekend was. For the most part they worked long six-day, 60-hour weeks, steelworkers (1923) and then Ford employees (1926) being the first five-day, 40-hour workers.

weekend warrior. The term was originally, and still is, a nickname for a National Guardsman who serves weekends in the military for a certain time. Now the words are also used to describe professionals who work nine to five during the week and then go wild on the weekend, either with partying or by playing sports.

Weeping Philosopher. The Greek Heraclitus (d. ca. 475 B.C.) was called the Weeping Philosopher, this AGELAST so labeled because he grieved at the folly of mankind. His opposite was Democritus of Abdera (fifth century B.C.), called the *Laughing Philosopher* because he laughed contemptuously at mankind's feeble powers.

Weeping Saint. St. Swithin of ST. SWITHIN'S DAY fame is called the *Weeping Saint* because of the tradition of 40 days' rain if it rains on his day, July 15.

weeping water. A colorful term for a waterfall that is a translation of Maori *waitangi* and has become part of New Zealand English.

weevil. See BOLL WEEVIL.

we fly away. See THREE SCORE AND TEN.

we have met the enemy and he is us. Another way of saying we (humankind) are our own worst enemies. Cartoonist Walt Kelly invented the expression for his *Pogo* comic strip. Centuries before him, poet John Milton wrote in *Religio Medici* (1642) "yet is every man his greatest enemy, and, as it were, his own executioner."

we have plowed the sea. Said to be Simon Bolivar's dying words. See BOLIVIA.

We have the receipt of fern seed, we walk invisible. These words, from Shakespeare's *Henry IV, Part I, iv, 4*, were widely believed in medieval times. Because the seed of some fern species was invisible to the naked eye, it was thought to confer invisibility on anyone who carried it.

weigela. The long-popular *Weigela* genus of the honeysuckle family, containing some 12 species, is named for German physician C. E. Weigel (1748–1831). *Weigela*, sometimes spelled *weigelia*, is often grouped with the *Diervilla* genus, the bush honeysuckle, but its bushes have larger, much showier flowers than the latter. *Diervilla* itself is named for a Dr. Dierville, a French surgeon in Canada. Native to Asia, the weigela bush is easily cultivated in America and Europe. Its funnel-shaped flowers are usually rose-pink but vary in color from white to dark crimson.

weigh anchor. *Weigh* in this phrase derives from the Old English *wegan*, “to carry or move,” which later came to mean “lift” as well. Thus the expression means to lift or haul up the anchor. It is more correct, however, to say *under way* than *under weigh* to describe a ship in motion.

welfare. *Welfare*, in the sense of financial assistance for the poor and needy, goes back only about 90 years. It seems to have first been used in this sense in Dayton, Ohio, in 1904, according to the *Westminster Gazette* (January 28, 1905) and Ernest Weekley's *Something About Words* (1935).

well, back to the old drawing board. Few would suppose that this very common expression for a resigned unruffled reaction to the failure of plans of any kind derives from a cartoon caption. It almost certainly does: from a 1941 Peter Arno cartoon in *The New Yorker* which shows an airplane crash, the plane mangled, rescue squads working frantically, and the plane's designer, plans under his arm, musing aloud, “Well, back to the old drawing board.” Partridge says it's used “when one has to make an agonizing re-appraisal” and traces it “probably” to World War II aircraft designers.

Well, I declare! This expression is hardly used today, but was common among our grandparents, who also used *I declare to goodness!*, which was considered a rather strong term! Both expressions probably date back to 16th-century England, or earlier.

Well, if that don't take the rag off the bush! A southern Americanism originating in the late 19th century, this expression refers to outrageous behavior, as lowdown as stealing the rags or clothes someone in the swimmin' hole has left spread out on a bush.

well-heeled. Before *well-heeled* meant “well provided with money” in American slang, it meant “well provided with weapons.” Back in frontier days men who went “heeled” carried a gun, the expression apparently deriving from a cockfighting term meaning to provide a fighting cock with an artificial spur before he went into the pit. *Well-heeled* is recorded in this sense as early as 1867 and it wasn't until over a decade later that it took on the meaning it has today, perhaps because men found that it was easier and safer to protect themselves with money

than with guns. In any case, *well-heeled* is not simply the opposite of *down at the heels*, someone so hard pressed for money that his shoes are run down at the heels. *Down at the heels* may even be traced back to Shakespeare, who wrote in *King Lear* (1600): “A good man's fortune may grow out at the heels.”

wellies. A shortened form of Wellingtons (qv), an English boot first designed by the duke of Wellington.

Wellington. Napoleon's greatest adversary fares as well in the dictionaries as he did on the battlefield. Arthur Wellesley, the first duke of Wellington, who began his army career in India and was knighted for his victories there, drove the French from Spain during the Peninsular War and completely crushed Napoleon at Waterloo in 1815. One of England's greatest soldiers, “the Iron Duke” served as prime minister from 1828–30 and in 1842 was made commander in chief of the British armed forces for life. About the only blemish on his record was his aristocratic opposition to parliamentary reform, which caused his ministry to fall. Wellington died in 1852, an idolized old man of 83, and it is said that even death “came to him in its gentlest form.” A number of hats, coats, and trousers were named after the great soldier, as were two types of boots: the full Wellington riding boots, which were tight-fitting and came up slightly over the knee, and the half-Wellington, which came half-way up the calf, having a boot made of patent leather and a top of softer material. One apocryphal story has it that Queen Victoria once asked the duke the name of the boots he was wearing. When he replied that they were called *Wellington's*, she remarked, “Impossible! There could not be a *pair* of Wellington's!” The capital of New Zealand is also named for Wellington, as well as the *Wellingtonia*, a New Zealand sequoia. The duke took his title from the town of Wellington in England, where a statue of him stands today. See BEEF STROGANOFF; BEEF WELLINGTON.

well-made play. Apparently this expression, for “an entertaining, carefully constructed play with more attention given to plot than characters,” is a literal translation of the French *pièce bien faite*, which was applied to the well-made plays of Scribe and Sardou in the 19th century.

Welsh. England's native Celts were called *wealhs*, “foreigners”—by the invading Saxons, of all people—and driven off into the western hills. *Wealhs* became Welsh in time and these inhabitants of Wales suffered almost as much abuse at the hands and tongues of the English as did the Scots or Irish. Their traditional enemies used *Welsh* to signify anything poor, such as a *Welsh comb*, the fingers, a *Welsh carpet*, a painted floor, and *Welsh rabbit*, melted seasoned cheese poured over buttered toast. To *welsh*, or *renege*, on a bet is another contemptuous English reference to the Welsh. The most common explanation is that there were thought to be a great many crooked Welsh bookmakers at the racetracks in the 19th century, *Welshers* or *welshers*, who did not pay when they lost. Names of individual bookmakers, such as a Mr. Bob Welch, have also been suggested, but with no positive proof or identification. *Walnut*, an ancient word, comes from the Anglo-Saxon *wealhhnutu*, meaning “the foreign or Welsh nut.” Kinder terms using the Welsh prefix include three breeds of dogs—the *Welsh corgi*, *springer spaniel*, and *terrier*; the *Welsh poppy*, with its pale

yellow flowers; and the small sturdy *Welsh pony*, originally raised in Wales. See WELSH RABBIT.

Welsh rarebit; Welsh rabbit. *Welsh rarebit* is entirely wrong as the name for melted seasoned cheese poured over buttered toast. But rather than being an affected, mannered corruption of the correct Welsh rabbit, it is a well-meaning, if misdirected, attempt to remove a slur on Welshmen from the language. The term *Welsh rabbit*, an example of country humor dating back to Shakespeare's time, conveys the idea that only people as poor and stupid as the Welsh would eat cheese and call it *rabbit*, while the much later *Welsh rarebit* of restaurant menus makes the Welsh dish a rare and tasty bit. *Rarebit*, therefore, is an artificial, invented word used in no other connection. See WELSH.

Weltschmerz. German for "the sorrow over the many evils of the world."

We Polked you in '44; we shall Pierce you in '52! This is my favorite of the interesting political slogans interspersed throughout this book. It was the slogan of the Democratic Party in 1852, when dark horse Franklin Pierce did indeed "pierce" the Whigs to become the 14th President of the U.S., just as James Polk had beaten them in 1844.

werewolf. See WOLFMAN.

"We Shall Overcome." This anthem of the Civil Rights movement was written by folk singer Pete Seeger and set to the music of an old Baptist hymn. Its first line is not "We shall overcome," but "We shall end Jim Crow some day, . . ."

West. Generally used in the United States today to mean the region west of the Mississippi River. The term *westerner* for someone who lives in the region west of the Mississippi is first recorded in 1835.

West-by-God-Virginia. This humorous name for West Virginia is said to have been coined by an irate native when it was said that he came from Virginia. Replied the man: "Not Virginia, but *West* by God!, Virginia!" See WEST VIRGINIA.

westerling. American pioneers in the 19th century coined this term meaning to travel West, but it had been used in England six centuries before.

western sandwich. A sandwich made of an omelet with onions, green peppers, and chopped ham between slices of bread or toast; also called a *Denver sandwich*.

Westinghoused. To be put to death in the electric chair. Thomas Edison championed DC (direct current) over the AC (alternating current) that his competitors preferred to use in converting the world to electricity. AC eventually triumphed, but not before Edison campaigned stubbornly against it over the years. The Wizard of Menlo Park even went so far as to coin *Westinghoused* (after the name of his rival the Westinghouse Company) as a replacement for the word *electrocuted*, in reference to criminals put to death in the (AC) electric chair. The

coinage didn't live long but did have some currency. See ELECTROCUTE.

West Virginia. West Virginia is composed of 40 western mountain counties that seceded from Virginia at the outbreak of the Civil War, these counties voting not to secede from the Union and forming their own state government. After rejecting New Virginia, Kanawha, and Alleghany, the new state settled on West Virginia for a name, an ironic choice since Virginia extends 95 miles farther west than it does. West Virginia had considered seceding from Virginia several times, due to unequal taxation and representation, and the Civil War provided an excellent excuse. Its constitution was amended to abolish slavery and President Lincoln proclaimed *West Virginia* the 35th state in 1862, justifying his action as a war measure. Called the Panhandle State, it has an odd outline, leading to the saying that it's "a good state for the shape it's in." See VIRGINIA.

wetback. A disparaging term for an illegal Mexican immigrant or worker who crosses the Rio Grande into the United States, sometimes swimming to get across. The term is a relatively recent one, first recorded in 1948.

wet behind the ears. *He's still wet behind the ears* would refer to someone as innocent in the ways of the world as a newborn baby. The American expression goes back at least a century and refers to the traditional belief, which may be true, that the last place to dry on newborn animals such as calves and colts is the small indentation behind each ear.

wet blanket. *Wet blanket* in reality probably refers to a water-soaked blanket used to smother a fire. Figuratively, the term is a name for someone who throws a damper over anything, who depresses others at a gathering because of a depressed lack of enthusiasm, a real "party pooper." The expression is British in origin and was first recorded in 1830. See BLANKET; TOSS IN A BLANKET.

wet hen. See MAD AS A WET HEN.

We the people of the United States, in order to form a more perfect Union. . . . These words that begin the preamble of the U.S. Constitution were, appropriately enough, taken from a Native American document, a 1520 treaty that established the Iroquois Confederacy, which begins, "We, the people, to form a union . . ."

wet one; wet ship. *Wet one* in sailor's talk refers to a vessel liable to ship water over the bow or gunwale. Wrote Captain Frederick Marryat in *Newton Fortes or the Naval Service* (1832): "She was what sailors term rather a *wet one*, and the sea broke continually over her bows." *Wet ship* is British naval slang for a ship that has a reputation for heavy drinking aboard.

wet one's beak. The Roman historian Suetonius mentions a boy whose nickname was Beak. For untold centuries *beak* (of an animal) has been a humorous synonym for the human nose. Even the expression *to dip one's beak*, "to take a drink," is over 150 years old. The expression *to wet one's beak*, "to partake of

an enterprise,” usually a criminal activity, was not recorded in English until Mario Puzo’s *The Godfather* (1970): “After all, this is my neighborhood [he said] and you should let me wet my beak.’ He used the Sicilian phrase of the Mafia, *‘Fari vagnavie a pizzu.’ Pizzu* means the beak of any small bird such as a canary. The phrase itself was a demand for part of the loot.”

wet one’s whistle. To take a drink. Whistle has been a humorous word for the mouth or throat since at least Chaucer’s day.

wetting a commission. *Wetting a commission* was an old naval custom, dating back over a century, which consisted of giving a party to a naval officer who had just received his commission. The parchment commission was formed into a cornucopia, filled with champagne, and drunk from as it was passed from hand to hand.

wet your whistle. *Whistle* has been slang for the mouth (because we whistle with it) since Chaucer’s time—“So was her jolly whistle wely-wet,” he wrote in “Reeve’s Tale” (ca. 1386). This explains the phrase *wet your whistle*, “have a drink,” very simply, but although the derivation is certain, people keep inventing stories for the expression—all very interesting, all untrue. One old theory makes “wet” a corruption of “whet,” while another conjures up an imaginary tankard that whistled for more liquor when it was empty—to *wet your whistle*, according to this yarn, deriving from the pouring of more liquor into the tankard to stop its damn whistling.

We who are about to die salute you. Roman gladiators did not originate these words in a Roman arena, hoping for a “thumbs up” from the emperor or the crowd. According to historian Fik Meijer in *The Gladiators* (2005), “It was not gladiators who uttered the immortal salute, but 9,000 prisoners about to engage in a mock sea battle on Lake Fucino organized by the emperor Claudius. . . .” Longfellow used the words in his poem *Morituri Salutamus* (1875): “‘O Caesar, we who are about to die/ Salute you!’ was the gladiators’ cry / In the arena, standing face to face / With death . . .”

we wuz robbed. When Jack Sharkey won a decision over Max Schmeling in 1932 to take the world heavyweight championship, Schmeling’s manager Joe Jacobs grabbed the radio fight announcer’s mike and shouted “We wuz robbed!” to a million Americans, his words still a comic protest heard from losers in any endeavor. Jacobs’s *I should of stood in bed* is even more commonly used in fun. He said it after leaving his sickbed to watch the 1935 World Series in Detroit. According to John Lardner’s *Strong Cigars and Lovely Women* (1951), *Bartlett’s* is wrong in saying Jacobs made the remark to sportswriters in New York after returning from Detroit, and it had nothing to do with his losing a bet that Detroit would win the Series. Jacobs made the remark, Lardner says, in the press box during the opening game of the Series, when “an icy wind was curdling his blood” at the coldest ball game anyone could remember.

Whalemen’s Chapel. The Seamen’s Bethel, a famous church in New Bedford, Massachusetts, with many memorials to New England whalemen. Wrote Melville in *Moby-Dick* (1851): “In this same New Bedford there stands a Whalemen’s Chapel, and

few are the moody fishermen, shortly bound for the Indian Ocean or Pacific, who fail to make a Sunday visit to the spot. I am sure that I did not.”

whaling. Two centuries ago a *whaling*, “a terrible beating,” was one given with a whalebone whip. Or possibly, both the whalebone whip and the wales it raised on the skin contributed to the phrase, making it more vivid. Riding whips were commonly made of whalebone in the 18th and 19th centuries and were used to beat more than horses. *Whalebone*, incidentally, is a misnomer: It’s not made from the bone of a whale but from a substance found in the whale’s upper jaw.

wham bam (thank-ye-ma’am). *Thank-ye-ma’am* is an American courtship term that dates back to the 19th century. Roads at the time had diagonal earthen ridges running across them that channeled off rainwater from the high to the low side and prevented washouts. Rural Casanovas driving their carriages along these rude roads made sure that they hit these ridges hard so that their female companions would bounce up in the air and bump into them. With the head of his sweetheart so close, the gentleman could steal a kiss and usually express his gratitude with a *Thank-ye-ma’am*, that expression becoming synonymous for a quick kiss or for any hole in the road that caused riders to bump up and down. It wasn’t long before some wit took this innocent phrase to bed, or to the side of the road somewhere, and elaborated on it, for in 1895 we find recorded the related expression *wham bam (thank-ye-ma’am)* for quick coitus. As a matter of fact, the first recorded use of both expressions occurs in that year.

What am I, chopped liver? A half-humorous complaint that a person is being regarded as trivial or unimportant. The phrase was first recorded in a routine of American comedian Jimmy Durante.

What a revoltin’ development this is! A catchphrase often used by William Bendix playing Chester Riley in *The Life of Riley*, a popular radio and television show of the 1940s and 50s. See LIFE OF RILEY.

What are you, a man or a mouse? There are similar phrases in German and many other languages, and this expression, in a rudimentary form, dates back at least to 1541, when it came from the mouth of a woman, as it often still does today: “Fear not, she saith unto her spouse, a man or a Mouse whether ye be.”

What a way to run a railroad. A U.S. saying dating back to the late 19th century. Said of any poorly managed business. Eric Partridge tells of a 1932 *Ballyhoo* magazine cartoon “showing a railway signalman watching two trains about to collide head-on and saying ‘Tch-tch—what a way to run a railway.’”

What can’t be cured, must be endured. An ancient proverb recently used in Robert Russo’s novel *Empire Falls* (2003). It is found as far back as Rabelais’s *Works*, book V, ch. 15 (1552).

What Cato did, and Addison approved, cannot be wrong. This old saying has an interesting story behind it. A prolific

man of letters who contributed to the *Spectator*, the *Tatler*, and the *Guardian* and later published and edited his own weekly, the *Bee*, Eustace Budgell was a confidant of Joseph Addison, who was his mother's cousin, as well as other English literary notables. Budgell, however, was an extravagant eccentric who lost over 20,000 pounds in the infamous South Sea stock scheme and spent huge amounts of money to get elected to Parliament. When his friend and fellow deist Dr. Matthew Tindal died, it seemed that Budgell's financial worries were over, for a legacy of some 2,000 pounds was left him in Tindal's will. But Tindal's nephew charged that Budgell had inserted the bequest in the will, and the courts agreed. Budgell was ridiculed in Pope's satire *Epistle to Dr. Arbuthnot* (1735): "Let Budgell charge low Grub Street in his quill, / And write whate'er he pleased—except his will." Scandal plagued him for two years as he vainly tried to prove his innocence in various lawsuits. Finally, on May 4, 1737, after filling his pockets with rocks from the beach, he hired a boat at Somerset-Stairs and, while the waterman rowed them under the bridge there, threw himself overboard. Budgell had tried to persuade his daughter, the actress Anne Eustace, to kill herself with him, but she had refused. Found on his desk was a slip of paper on which he had written of his act of suicide: "What Cato did, and Addison approved, cannot be wrong." See PHAEDO; SUICIDE BOMBER

whatchamacallit. See DINGBAT.

whatcheer. In John Bartlett's *Dictionary of Americanisms* (1848), he defines this term as "the shibboleth of the people of the State of Rhode Island." He goes on to say that "when Roger Williams, the founder of the ancient colony, pushed his way from Salem, Massachusetts, in the year 1636, through the wilderness, he embarked in a canoe with five others, on Sekonk river, and landed near the present site of the city of Providence. As the party approached the shore, they were saluted by a company of Indians with the friendly interrogation of 'What cheer?' a common English phrase which they had learned from the colonists, equivalent to the modern How do you do? and meant by the natives as Welcome! The cove where the party landed is called *Whatcheer Cove*, which term is also applied to the lands adjacent; besides which there is in Providence a *Whatcheer Bank*, a *Whatcheer Church*, *Whatcheer hotels*, a *Whatcheer Insurance Company*, and, last of all a *Whatcheer Lager Beer Saloon!*" (John Bartlett, *Dictionary of Americanisms*, 1848).

what doesn't kill me (him) makes me (him) stronger. Said of a punishment, usually physical or mental torture, that doesn't kill a person. I'd guess that this is an Americanism dating back about a century, but the earliest reference I've found to it is in the film *Runaway Train* (1980).

What do you know about that? An Americanism meaning "isn't that amazing, I would never have believed it," etc. Sometimes heard as "Well, what do you know," or "How about that!" The earliest appearance of the expression in print was the 1914 novel *Perch of the Devil* by American author Gertrude Atherton.

what every schoolboy knows. A phrase apparently coined by Jonathan Swift in *The Country Life*. It is a common put-

down of someone who takes himself too seriously. "How haughtily he cocks his nose / To tell what every schoolboy knows."

What fools these mortals be. See PUCKISH.

What hath God wrought? These words constitute the first public telegram, sent by Samuel F. B. Morse over an experimental 40-mile line constructed between Washington, D.C. and Baltimore, Maryland on May 24, 1844. There had been telegraphs before Morse's but his was the first electromagnetic telegraph. See TELEGRAPH.

What goes around comes around. A U.S. proverb from the late 20th century.

What goes up must come down. A U.S. catchphrase that seems to have entered the language in about 1870.

what's good for General Motors is good for the country. Former head of General Motors Charles E. Wilson didn't say this when testifying before a Senate committee in 1953 when nominated for secretary of defense. The words have become proverbial, but what Wilson said was less arrogant: "I thought that what was good for our country was good for General Motors, and vice versa."

What's new?; What's with you? The greeting *What's new?* has been traced back to 1880s New York. It is thought to be a translation of the *was ist los?* ("what's the matter?") of German immigrants, as is the similar expression *what's with you?*

What's the good word? John Kendrick Bangs used the catchphrase in his poem "The Answer" (1913):

What's the good word
Now that's a phrase I truly love to hear,
Ane when tis heard,
I always smile and promptly answer 'CHEER' . . .

Bangs apparently did not coin the American expression, meaning "what's the news?" which is first recorded about three years earlier. Other similar American greetings include *What's up?* and *What do you say?* (both from about the 1800s) and *What's cooking?* (the 1940s).

What's up, Doc? Bugs Bunny first said this to Elmer Fudd in his famous cartoon series launched in 1937, though it may be an old western expression suggested by Tex Avery, one of the cartoon's animators. It is said that when Mel Blanc, the voice of Bugs Bunny in the cartoons, emerged from a coma in 1983, he looked at his physician and asked, "Er, what's up, Doc?" See also BUGS BUNNY; GRRRRREEEAT!; THAT'S ALL, FOLKS!; WILEY E. COYOTE.

what's what. See KNOW WHAT'S WHAT.

what the dickens. A euphemism for *what the devil* that may have been coined by Shakespeare in *The Merry Wives of Windsor* (1600s). See DICKENS.

what the hey. A popular catchphrase invented by comedian Milton Berle on his television variety program in the 1950s. *See also I'LL TELL YOU WHAT I'M GONNA DO!*

What time does the next swan leave? According to the old story, a boat drawn by a swan used in a performance of Wagner's *Lohengrin* was pushed onto the stage before the actor playing Lohengrin could get into it. The perfectly composed tenor quipped: "What time does the next swan leave?" This famous remark has been attributed to a number of famous singers over the years, but it actually goes back to the first tenor to sing the role, over a century ago.

what we gave, we have. These wise old words are a loose translation of lines by the Roman poet Martial, which seem to have first appeared as an epitaph on "the good Earl of Courtenay" in the 17th century:

What wee gave, wee have;
What wee spent, wee had;
What wee left, wee lost.

what we have here is failure to communicate. The "Cap'n" in the film *Cool Hand Luke* (1967) famously says this to the incorrigible Luke, played by Paul Newman.

what will be will be. *See STORE.*

wheatear. The name of this Old World thrush originally had nothing to do with "wheat" or "ears." First recorded in 1591, *wheatear* comes from the Anglo-Saxon *hwitt*, "white," and *eeres*, "ass," in reference to its white rump. *Wheat* later replaced *hwitt* in its name because the bird "came when the wheat was yearly reaped."

wheat germ. *See GERM.*

wheel. I remember my father telling me to get my wheel out and we'd go for a ride. This synonym for a bicycle isn't heard much any more—at least I haven't heard it in years—but it is recorded as far back as 1880, probably suggested by the large front wheel of early bicycles, or, less likely, by unicycles, which date back 20 years or so earlier. There was, in fact, a bicycle manufacturer called the Chicopee Overman Wheel Company, which is also remembered in sports history for making the first basketballs at a time (about 1894) when soccer balls were being used in the infant game. *See BASKETBALL.*

wheelbarrow fashion. *See quote from Yankee Magazine, April 1828: "They were . . . ordered to kiss each other 'wheelbarrow fashion'—You would then see a young man and a girl meet on the floor, close their right and left hands, on both sides; and with a whirl . . . turn through their arms, bring the back part of their shoulders in contact—each with the head resting upon the other's right shoulder, their mouths meeting."*

wheeler dealer. In gaming houses of the 18th-century American West a big wheeler and dealer was a heavy bettor at cards and the roulette wheels. Through this tradition, and the association of a *big wheel* as the man (or wheel) who makes the vehi-

cle (things) run, the expression came to mean a big-time operator by the early 1940s, usually with an unsavory connotation, the *wheeler dealer* being the type who runs over anything in his path with no regard for rules of the road.

when a dog bites a man . . . Crusty old *New York Sun* editor John B. Bogart (1845–1921) is said to have originated in conversation the old saw "When a dog bites a man, that is not news, because it happens so often; but if a man bites a dog, that is news." However, the adage may be based on an old story.

when chickens have teeth. A 19th century Americanism meaning "never, it won't happen," as in "She'll be on time when chickens have teeth." Chickens, of course, have no teeth.

when hemp is spun, England's done. Francis Bacon, despite his scientific training, gave the following interpretation of the above prophecy, which he had heard as a child. *Hempe*, he explained, is an acrostic, a word formed from the first letters of the names of five of England's rulers: *Henry, Edward, Mary with Philip, and Elizabeth*. When the last one of them, Elizabeth, died in 1603—when Hempe was spun, or finished—England was done, for the new king, James, was not called king of England, but the king of Great Britain and Ireland.

when in doubt win the trick. *See ACCORDING TO HOYLE.*

when in Rome do as the Romans do. This was St. Ambrose's advice to St. Augustine when the latter consulted him as to the proper day of the week to fast. He and his mother were confused because in Rome Italians fasted on Saturday, whereas in Milan they chose another day, and St. Ambrose said: "When I am in Milan, I do as they do in Milan; but when I go to Rome, I do as Rome does!"

when it hits the fan. This expression "indicative of grave consequences" is of course an expurgated version of *when the shit hits the fan*. Common in the U.S. since about 1930, it is traced by some to the punch line of an old joke. Partridge, however, says the original reference is to "an agricultural muck-spreader," without further elaboration.

when my ship comes in. *When my ship comes in* dates from several centuries ago, when shipping completely dominated commerce. Many merchants made great profits selling cargo for which they had traded in distant parts of the world and from which they were assured of fortunes if their ships made it back into home port.

When one door shuts another opens. People have been consoling themselves with this proverb since the late 1600s.

when the cat's away the mice will play. *See CHINESE LANGUAGE CONTRIBUTIONS TO ENGLISH.*

when the Cocqigrues come. In French legend the *Cocqigrues* (kok-se-groo) are fantastic creatures unlike animals anybody has ever seen. Thus when the French say *A la venece des Cocqigrues* ("at the coming of the Cocqigrues") they mean

“never.” The same meaning is conveyed in English with *When the Cocqigrues come*. The word is sometimes spelled *Cocquecigrue*.

When the going gets tough, the tough get going. A favorite saying of American president John F. Kennedy, who learned it at the knee of his tough-minded industrialist father Joseph P. Kennedy (1888–1969), who, in turn, may have coined the expression—or at least believed he had.

when the rubber hits the road. When things get started, when action begins. Apparently a relatively new expression, heard on the political discussion program *Evans, Novak and Shields* (9/22/01). It refers to a car starting out on a trip or journey.

when the shit hits the fan. A common expression meaning “when big trouble breaks out.” The saying apparently derives from the old story, dating to the 1930s, about a man who hurried upstairs to the bathroom in a bar and found no toilet. After using a hole in the floor, he went back downstairs and found the crowded bar almost empty. “Why isn’t anybody here?” he asked. Replied the bartender: “Where were you when the shit hit the fan?”

when the world grows honest. In other words, never. An expression dating back to at least late 19th-century England. *Not in a month of Sundays* says the same.

when two people ride a horse, one must ride behind. A late 16th-century saying advising that when two people are working on a project, one of them must take a secondary position.

when you call me that, smile! A famous now-national expression often heard as *Smile when you call me that* (or *say that*). It has its origins in one of the most famous scenes in American literature, in Owen Wister’s *The Virginian* (1902), whose eponymous cowboy hero became the basis for American heroes like John Wayne. When called a “son-of-a—” by the saddlebum Trampas, “the Virginian’s pistol came out, and his hand lay on the table, holding it unaimed. And with a voice as gentle as ever, the voice that sounded almost like a caress, but drawing a little more than usual, so that there was almost a space between each word, he issued his orders to the man Trampas: ‘When you call me that, smile!’ And he looked at Trampas across the table. Yes the voice was gentle. But in my ears it seemed as if somewhere the bell of death was ringing.” Trampas, of course, backs down, “failing to draw his steel.”

when you seek revenge, dig two graves—one for your enemy, one for yourself. A Mideast proverb heard during the Palestinian-Israeli conflict in 2002. Quoted by Laura Blumenfeld, author of *Revenge: A Story of Hope* (2002).

Where Have All the Flowers Gone? An antiwar song written by Pete Seeger, which was very popular during the Vietnam War. According to Robert Lissauer’s *Lissauer’s Encyclopedia of Popular Music* (1991, published in an expanded three-volume edition by Facts On File in 1996), the song’s title came from

Russian novelist Mikhail Sholokov’s novel *And Quiet Flows the Don*. See HAPPY BIRTHDAY . . . ; I’M A CRANKY OLD YANK.

Where’s the beef? Actress Clara Peller delivered this line hundreds of times in a 1984 television ad campaign for the Wendy’s hamburger chain comparing the beef content of its burgers with that of its competitors. The words soon became a catchphrase meaning “where’s the real substance of a plan, or an idea, or an issue.” It is still heard, often in political circles, as when Walter Mondale used it in his unsuccessful run for president in 1984.

Where’s the fire? “What’s your rush?” this phrase inquires when directed at a rather busy person or someone hurrying along. The Americanism is first recorded in the 1920s, but must have been in use before this. *Where’s the fire?* may even date back before the invention of the gasoline fire engine in the 1890s, to the days of horse-drawn “fire engines.”

“Where’s the rest of me?” The famous line future U.S. president Ronald Reagan, playing a small-town playboy, cried out on awaking from surgery in the film *King’s Row*, during which a sadistic doctor amputated his legs. See THE GREAT COMMUNICATOR.

where the hoot owl hollers at noon. A faraway place, so distant and deep in the dark southern woods that even the nocturnal owl can’t tell day from night. The expression is from the late 19th century.

Where there’s smoke, there’s fire. An old proverb dating back to at least the 1500s. It means that all rumors or reports have some foundation to them.

wherewithal. Money or the necessary (financial) means, as in “I don’t have the wherewithal to compete with his TV ads.” The term dates back at least to the early 16th century.

whig. England’s Whig political party, supplanted by the Liberal Party in the late 19th century, was the party opposed to the TORIES, being generally a less conservative group in favor of more democratic government. Its name derives from the obsolete *whiggamore*, a nickname for Scots who drove wagons to Leith to purchase corn, *whiggamore* deriving from *whiggam*, a Scottish expression meaning “Git up!,” addressed to horses. Bishop Burnet explained the origin of the term in *Our Times* (1723): “The south-west counties of Scotland have seldom corn enough to serve them all the year round, and, the northern parts producing more than they used, those in the west went in summer to buy at Leith the stores that came from the north. From the word *whiggam* used in driving their horses, all that drove were called the *whiggamores*, contracted into *whigs*. Now, in the year before the news came down of Duke Hamilton’s defeat, the ministers animated their people to rise up and march to Edinburgh; and they came up, marching to the head of their parishes with an unheard of fury, praying and preaching all the way as they came. . . . This was called the ‘Whiggamor’s Inroad’; and ever after that, all who opposed the court came in contempt to be called *whigs*. From Scotland the word was brought

into England, where it is now one of our unhappy terms of disension.” There was also a Whig Party in the U.S. from 1824–54, headed by Henry Clay and Daniel Webster.

Whip City. An old nickname for Westfield, Massachusetts, which in 1900 had 40 whip factories that turned out 90 percent of the world’s supply of horse whips. Its days of glory are now over.

whip of God. Charles O. Locke describes the term in *The Hell Bent Kid* (1957): “With the men and the horses and the steers mingling and the ground near shaking with the rush, and the dust rising, a strange thing happened. This was that a red scud of blood like a hell-red rainbow came up from the center, shooting to the sky, then bending over and fanning away south. Some horn had slashed a big artery in a cow or horse. Times later I told a Mex about it, and he rolled his eyes and said it was the Whip of God. Said he had seen similar. It is possible he had.”

whippet. A fast-as-a-flash racing dog bred in England that is similar to the greyhound except for its superior height. The whippet probably takes its name from the sound of a snap of a whip. Whippets called “bullies” are much more muscular than the ordinary whippets due to variant genes.

whipping boy. Because royalty was considered sacred, or possibly because he was born frail and sickly, the son of England’s Henry VIII, the young prince who became King Edward VI when only nine years old, had a whipping boy to take all his punishments for him. Barnaby Fitzpatrick, a sturdy lad, was flogged every time Edward deserved chastisement, whether it be for botching his Greek lessons or insulting an archbishop. Despite this early form of national health insurance, Edward died of consumption in 1553 at the age of 16, the commoner Fitzpatrick surviving all his floggings and living to a comparatively old age. Anyway, the practice of princelings employing commoner whipping boys wasn’t unusual in Europe four or five centuries ago; Fitzpatrick is only England’s first recorded one. When the common practice ceased in more democratic times, it left us with the expression *whipping boy* for a scapegoat, someone punished for mistakes committed by another—especially an official or worker punished for the wrongs of his superior.

Whiskers. See G-MEN.

whiskey. *Whiskey*, first recorded in 1715, is the spelling used by the Irish, Americans, and French, while the English spell the stuff *whisky*, as do the Germans. Call for whiskey in almost any country in the world and you’ll get what you want—a truly universal word that is an Anglicized version of the Gaelic *uisce beathadh*, “water of life.” See MARTINI; SCOTCH; VODKA.

whiskey courage. See POT VALOR.

the whiskey is all right but the meat is weak. Computers will never take the place of human translators, as the above illustrates. It is said to have been produced recently by an elec-

tronic translator as a translation of *the spirit is willing but the flesh is weak!*

whistle for it. See GO WHISTLE FOR IT.

Whistler’s Mother. A widely used name for a painting by American artist James Abbott McNeill Whistler (1834–1903). Actually the painting is entitled *Arrangement in Grey and Black* (1872).

whistling in the dark. At least two similar expressions may precede this. John Dryden has “Whistling to keep myself from being afraid,” in *Amphitryon* (1690), and Robert Blair has “Whistling aloud to bear his courage up” in *The Grave* (1743). Whistling in the dark also means to be optimistic against all odds, but the year in which it is first recorded is unclear.

whistling up the wind. Talking wishfully. The expression has its origins in the superstitious practice of sailors in the days of sail whistling for a wind during a calm.

white bread. Relatively recent slang, *white-bread* means “bland,” or “white middle-class values.” It goes back to the 1970s, first recorded in 1977, when *Newsweek* reported that a top black comedian walked off a Las Vegas stage “fed up with doing white bread humor.” The expression may have black origins, but this is not certain. It may also be partly a pun of *white-bred*, but it mostly refers to the synthetic white bread of the supermarket, without flavor or character.

White Christmas. Irving Berlin wrote the song “White Christmas,” but the term “White Christmas” was created by British writer Charles Kingsley in *Two Years Ago* (1857).

white cliffs of Dover. The white cliffs of Dover on the Kent coast of England only became white when a huge white ship the size of a mountain tried to pass through the Strait of Dover and scraped the cliffs that color in its passage, according to ancient legend. Scientists have ruined a good story by establishing that the formation and color of the famous cliffs are due to Foraminifera plankton. The chalk cliffs have been a British patriotic symbol at least since the World War II song by Nat Burton: “There’ll be bluebirds over the white cliffs of Dover . . .”

white-collar worker; blue-collar worker. *White-collar worker*, dating back to about 1920, means anyone who performs nonmanual labor; it especially indicates salaried office workers and lesser executives who haven’t been unionized. His or her opposite in America is the *blue-collar worker*, anyone who works with his or her hands, is usually unionized, and often works for an hourly wage. The *white-collar worker’s* counterpart in Britain is called a “black coat.” All of these designations were obviously suggested by working attire, just as a “hard-hat,” a construction worker, takes his or her name from the protective helmets such workers wear.

whited (painted) sepulchre. Someone who pretends to be morally better than he really is. The expression is from the

Bible (Matt. 23:27): “Woe unto you, scribes and Pharisees, hypocrites! for ye are unto whited sepulchres, which indeed appear beautiful outward, but are within full of dead men’s bones, and of all uncleanness.”

white elephant. The king of Siam, who held the title Lord of the White Elephants, was once considered the owner of all the rare albino elephants in his kingdom, and since they were sacred to him, only he could ride or work one of them. When he wanted to punish a courtier he simply gave a white elephant to him—the beast eating his luckless victim out of house and home. This story is thought to be the source of our expression *a white elephant*—any possession, especially a big house, that is useless, eats up money, and can’t be gotten rid of—even though no one has ever found any firm evidence of a king of Siam indulging in any such maleficent munificence.

White Fleet. In 1907 the United States decided to show the world we were a great naval power by sending 16 battleships and four destroyers on a world cruise. Because all these ships were painted white, they were popularly called the White Fleet, or Great White Fleet.

white-glove inspection. See G.I. PARTY.

White Graveyard of the Atlantic. This poetic name belongs to the famous shifting shoals of Race Point, Nauset, and Monomoy on Cape Cod, where so many sailing ships were wrecked over the past three centuries.

white hats and black hats. Early western silent movies dressed the hero in a white hat and the villain in a black hat to make it easier for the audience to follow the plot. Observed Louis L’Amour in a 1982 interview: “They joke about the black hats and the white hats, but there were very few grays in the West . . . There were a few men who shifted from one side of the law to the other, but by and large that was not true, they were just what they seemed to be.”

White Horses. See O’DONOHUE’S WHITE HORSES.

White House. Designated the palace by its architect, the Washington, D.C., residence of U.S. presidents was painted white after being gutted by a fire that darkened its gray Virginia limestone. The designation *White House* is first recorded in 1811, but Teddy Roosevelt made the term an official title by using it on his stationery. Today, of course, it is also a synonym for the presidency and the U.S. executive branch.

The White House is also the nickname of the Russian parliament building.

white knuckle driving. High-speed, dangerous driving during which the steering wheel is held so tightly that the knuckles turn white. White knuckle can also mean anybody tense and frightened, while a white knuckle is also an anxious airplane flight. The terms may date back to the 1970s.

white lie. A harmless lie, often one that is told to spare someone’s feelings. The term, dating back several centuries, has its

roots in the traditional belief that white is the color of purity. *Little white lies* is a frequent variation.

white list. See BLACKLIST.

white-livered. See LILY-LIVERED.

white man’s burden. Rudyard Kipling (1865–1936), the first English writer to receive the Nobel Prize, was often accused of jingoism and prejudice. Kipling contributed many expressions to the language in his novels, poems, and stories, including the well-known *white man’s burden*, which depicts black, brown, and yellow people in Great Britain’s colonies at the time as backward children the white man must take care of. The derogatory term is rarely heard anymore.

white meat. A Victorian term still often used in America for the breast meat of a chicken or turkey, which the British call breast. “May I have some breast?” Winston Churchill once asked his American hostess at a buffet luncheon. “In this country, Mr. Churchill, we say *white meat* or *dark meat*,” his hostess replied, a little prissily. Churchill apologized and the next day sent her an orchid along with a card reading, “I would be most obliged if you would pin this on your white meat.” *White meat* and *dark meat* are also derogatory slang terms applied to white or black men and women, usually in a sexual sense.

White Mountains. Famous mountains in New Hampshire. Wrote Nathaniel Hawthorne in *Sketches from Memory* (1835): “We had been loitering towards the heart of the White Mountains—those old crystal hills, whose mysterious brilliancy had gleamed upon our distant wanderings before we thought of visiting them.”

The White Queen. This designation has nothing to do with Mary Queen of Scots’ complexion. She is called *The White Queen* because she wore white mourning clothes after the death of her French husband Francis II.

white rhinoceros. The white rhinoceros of Africa is misnamed, for it is slate gray in color. The white rhino takes its first name from the Dutch *wijd*, “wide,” for its wide upper lip and muzzle, this corrupted to *white* over the years. See also RHINOCEROS.

white shark. The great white shark (*Carcharodon carcharias*) grows up to 23 feet long, but more important to humans is the fact that it is the only shark that feeds regularly on marine mammals. See SHARK.

white slavery. *The White Slave*, an 1882 play by Barley Campbell, popularized the term *white slavery* for prostitution. The term is also used as a synonym for the widespread indentured servitude (a form of slavery) of whites in Colonial America.

white thumb. People who are gifted with a great talent for baking are called *white thumbs*, an expression probably modeled on the older phrase *green thumb* (qv).

whitey. A derogatory term for a white man that doesn't appear to have been much used by blacks before the early 1960s, when Black Muslims began preaching about *white devils*. The first recorded use of the term, however, dates back to 1828, when an Australian writer employed the terms *blacky* and *whitey* in referring to Australian aborigines and white men. See also HONKIE; OFAY; PALEFACE; PECKERWOOD; REDNECK; WASP.

whiz. See ONOMATOPOEIA.

whodunit. Two writers for the show business paper *Variety* are usually proposed as the coiners of the word *whodunit*, for "a mystery story": Sime Silverman, in 1936, or Wolfe Kaufman in 1935. But the term wasn't invented by either of them. Daniel Gordon used *whodunit* in the July 1930 *American News of Books* and probably used it first.

Who he? Writers often find these traditional words scribbled on manuscript pages next to names unknown to their editors. The first editor to do this seems to have been Harold Ross of *The New Yorker*. On one of Robert Benchley's manuscripts Ross, who had a "profound ignorance," according to Dorothy Parker, wrote "Who he?" in the margin opposite a rather obscure name. Benchley wrote below: "You keep out of this."

whole ball of wax. Everything sticks to wax and leaves an impression on touching it. Therefore, *whole ball of wax* (sometimes *ball of wax*) has come to mean "everything, the whole lot, the whole kit and caboodle." That is possibly the origin of this common Americanism, first recorded in 1953 and still common on Madison Avenue, although several more complicated explanations have been suggested by word and phrase Hawkshaws. One such guess involves wax balls used in a complicated drawing for the distribution of estates; another claims *whole ball of wax* is a corruption of *whole bailiwick*. No one is sure.

whole enchilada. See BIG ENCHILADA.

whole hog. See GO WHOLE HOG.

whole kit and caboodle. The *caboodle* in this American expression meaning "the whole lot," is the same as the word *boodle*, for "a pile of money," deriving from the Dutch *boedal*, "property." The *whole kit*, of course, means entire outfit. The phrase doesn't read "the whole kit and boodle" because Americans like alliteration in speech and added a "k" sound before *boodle* in the phrase.

whole megillah. See MEGILLAH.

whole nine yards. For at least 45 years this expression has meant "all of it, everything," as in "Give me the whole nine yards." It did not arise in the garment business but possibly among construction workers, the *nine yards* referring to the maximum capacity a cement-mixer truck can carry—nine cubic yards of cement. There is no firm proof of this or any other derivation, however. But other unproved suggestions include cloth length in suit manufacture, the old phrase dressed to the nines (qv), football yardage, the customary length of a burial

shroud among Appalachian people, and nine as a perfect number in numerology.

wholesale; retail. Both of these terms have their origins in the cloth trade. *Wholesale* initially meant to sell whole pieces of cloth, while *retail* derives from a French word meaning to cut up (*tailor*, similarly, means "a cutter"), *retailer* coming to mean anyone who sold anything in small, cut-up lots. According to the real estate brokers Cushman and Wakefield, the world's most expensive location for a retail store is Manhattan's 57th St. from Fifth Avenue to Park Avenue, with rents averaging \$700 a square foot annually. New York's Fifth Avenue between 49th and 59th St. is in second place (\$650 a square foot), and third place goes to Causeway Bay in Hong Kong (\$523 a square foot).

whole shebang. The earliest recorded use of *shebang* is by Walt Whitman in *Specimen Days* (1862), and Mark Twain used it several times as well. Meaning a poor, temporary dwelling, a shack, this Americanism possibly derives from the Anglo-Irish *shebeen*, "a low illegal drinking establishment," older than it by a century or so. In the expression *the whole shebang*, first recorded in 1879, *shebang* means not just a shack but anything at all, that is, any present concern, thing, business—as in "You can take the whole shebang," you can take all of it.

whole shooting match. Large crowds gathered at frontier shooting matches in America to watch marksmen compete in hitting targets, snuffing out candles, etc. *The whole shooting match* thus came to mean "the whole crowd in attendance" and, by extension, "the totality, everything, the whole thing." An earlier British phrase *the whole shoot*, meaning the same but with a different origin, may have strengthened the usage.

whom the gods love die young. See O MENANDER . . .

whoopi; whoopi cushion. Comedian Whoopi Goldberg (her name is Caryn Johnson, Whoopi is her stage name) got the pseudonym Whoopi because she often "got a little gassy" when performing on stage and had to "let it go," there being no other alternative. People took to saying she sounded like a whoopi cushion, hence the nickname Whoopi. See the *New York Times*, August 20, 2006.

Whoops! Traced only to 1925 by the *O.E.D.* (Volume IV, Supplement, 1986), *whoops* may be considerably older, though there is no proof of this. It is, of course, an exclamation of dismay or surprise when one stumbles or recognizes a mistake one has made. The expression first appeared in a *New Yorker* cartoon, in the form of *whoops-a-daisy*; it isn't recorded as *whoops* until 1937, in one of Ezra Pound's letters, of all places.

whoop ti do. A cowboy cry, as in this old cowboy song quoted by Edna Ferber in *Cimarron* (1930):

Hi rickety whoop ti do,
How I love to sing to you.
Oh, I could sing an' dance with glee,
If I was as young as I used to be.

whoosh. *Whoosh*, as an exclamation evocative of a sudden explosive rush of sound (it is used by one television sportscaster presently to indicate a basketball shot going through the hoop), is first recorded in 1899 and is probably older. The term is an Americanism with limited British usage and is an example of ONOMATOPOEIA.

whore. *Hore*, the first English spelling of *whore*, was recorded at the beginning of the 12th century, deriving from Norse *horr* and Gothic *hors*, meaning “adulterer,” the word *hore*, strangely enough, related to Latin *carus*, “dear,” which gives us terms of endearment such as *caress* and *cherish*. *Whore* is still regarded as a terrible insult to a woman, more so even than *prostitute*, *HARLOT*, and *TRAMP*, not to mention many “softer” terms such as *courtesan*, *HOOKER*, *hustler*, *call girl*, *sporting girl*, *painted woman*, *lady of the night*, and *streetwalker*. Obsolete U.S. synonyms include *soiled doves* and *calico queens*. In extended use *whore* is applied to anyone who sells out his or her principles for personal gain.

“Who reads an American book?” British author Sydney Smith almost set off a full-scale literary war when he asked this famous sardonic rhetorical question in a book review he wrote for the *Edinburgh Review* in 1820. Smith, however, had been reviewing the *Statistical Annals of the United States* by Adam Seybert and was on his way toward making an ironic point that has little to do with literature, as the last paragraph of his essay shows: “In the four corners of the globe, who reads an American book? or goes to an American play? or looks at an American picture or statue? What does the world yet owe to American physicians or surgeons? What new substances have their chemists discovered? or what old ones have they analyzed? What new constellations have been discovered by the telescopes of Americans? What have they done in mathematics? Who drinks out of American glasses? or eats from American plates? or wears American coats or gowns? or sleeps in American blankets? Finally, under which of the tyrannical governments of Europe is every sixth man a slave, whom his fellow creatures may buy, and sell, and torture?”

whortleberry. *Whortleberry* originated as the dialect form of *hurtleberry* in southwestern England. *Hurtleberry*, however, remains a mystery etymologically speaking, though there have been attempts to link the *hurt* in the word to the fact that the blue berry could resemble a small black and blue mark or “hurt,” on a person’s body. Both words refer to the berry *Vaccinium myrtillus* of the blueberry family, and our word *huckleberry* probably derives from *hurtleberry*—which makes Mark Twain’s famous character, perhaps aptly, “Hurt” Finn.

Who’s afraid of the big bad wolf? One British critic claimed that “This is the song that helped Americans lick the depression of the early 1930s.” It was written by songwriter Ann Ronnell for Walt Disney’s *Three Little Pigs* (1933) and its title became a catchphrase of courageous defiance.

Who’s Afraid of Virginia Woolf? Playwright Edward Albee (1928–) has said that he got the title of his famous 1962 play from a line of graffiti he saw in Manhattan. A leading figure of the new drama of the absurd, Albee won a Pulitzer Prize for his play *Three Tall Women* (1994).

Who’s buried in Grant’s Tomb? See GRANT’S TOMB.

who watches the watchdogs? These ancient words take many forms, but derive from the Roman saying *Quis custodiet custodes?*, which means “the shepherd watches over the sheep, but who keeps watch over the shepherds?” The expression is used to indicate doubt about the integrity of someone in a position of trust.

who won’t be ruled by the rudder must be ruled by the rock. This nautical saying isn’t found in the *Oxford English Dictionary*, *Bartlett’s Familiar Quotations*, or any other major collection of quotations. Dating back at least a century in the U.S., it means “those who won’t listen to reason must suffer the consequences,” like a ship that runs upon a rock if it doesn’t answer the helm.

Why did the chicken cross the road? Among the oldest of jokes still told (by children), the answer being “to get to the other side.” The words date back at least to mid-19th-century England. They are also used by adults as a reply to what seems to be an unanswerable question. A recent gangster film, *Heist* (2001), has the lines: “Why did the chicken cross the road?” “Because the road crossed the chicken.”

Why should the devil have all the good tunes? English composer Charles Wesley (1707–88) reputedly said this. The author of over 6,500 hymns, Wesley put the words of them to popular tunes of the day to insure their popular appeal. Many of these hymns, including the famous “Hark! the Herald Angels Sing,” and “Christ, the Lord, is Risen Today,” are still great church favorites.

Wichita. The Wichita Indians, and thus Wichita, Kansas, which is named for the tribe, may take their name from the tribe’s word *wichita* (waist-deep). One old story, which I can’t verify, says that these Indians pushed their squaws out into rivers to see how deep they were. If a place was safe for crossing, the squaws would cry out “wichita” to the relatively timid braves on shore, who proceeded to ford the river. If they sank, presumably, the river wasn’t safe to cross.

wickiup. Indians in Colorado and California sometimes lived in crudely constructed huts called *wickiups*, improvised structures made of brush, saplings, or both. Cowboys often used the word in referring humorously to their own homes.

wide-awakes. *Wide-awakes* were young Republicans, some 400,000 in number throughout the country, who avidly supported Abraham Lincoln for president in 1860. The group originated in Hartford, Connecticut, and was named for the hat members wore. The hat was made of a fabric that contained no “nap”—hence the pun *wide-awake*.

wide of the mark. An ancient expression dating at least to the 1600s, this phrase means “inaccurate or erroneous, irrelevant.” It probably comes from the sport of archery, referring to an archer’s unsuccessful shot at the mark or target.

wide place in the road. Truckers popularized this synonym for a very small town. But the phrase was born over a century ago in the American West, where there were many towns so small they were not even on the map.

Widow. *The Widow* is often encountered in literature as slang for champagne, the words a translation of the name of the excellent Veuve Cliquot brand. This usage dates back to Victorian times, when the *widow* was also slang for “the gallows.” A real Widow Cliquot may have run the brand’s vineyard.

widow and orphan makers. A name given to the famed Pennsylvania rifles that American backwoodsmen used in the Battle of New Orleans (1815) in the War of 1812. The accurate rifle and these sharpshooters were a lethal combination.

widow maker. Rudyard Kipling is the first writer to record *widow maker* as a synonym for the sea, in *Puck of Pook’s Hill* (1906): “What is a woman that you forsake her . . . To go with the old grey Widow-maker?” *Widow maker* was used by Shakespeare for a killer in general, however, and it seems likely that the term was used before Kipling to describe the great elementary force that made widows of so many sailors’ wives. *Widow maker* can also describe trees or limbs that fall on people.

widow’s peak. A point formed by the hair growing down and meeting in the middle of the forehead is called a widow’s peak. The term, which dates back at least to the 19th century, derives from the earlier *peak*, for “the point of a beard,” and possibly from the pointed or peaked hoods that old women sometimes wore. Superstition had it that women with widow’s peaks would become widows at an early age.

widow’s walk. A widow’s walk is an elevated observatory on a dwelling, usually with a railing and affording a good view of the ocean. These watchtowers, often seen on the roofs of old houses, date back to Colonial times and were so named because many women walked in vain on them, waiting for incoming ships that never returned. Taking the form of a cupola, railed-in deck, or balcony, they have also been called, less poetically, the walk, the captain’s walk, the observatory, and the lookout.

widow’s weeds. See WEED.

wigging. To be dressed down, reprimanded by a superior. The phrase dates back to the 18th century, when most important people wore wigs. Scoldings from such people were, of course, commonplace.

wild and wooly West. First came *wild West*, recorded in 1851 and so called because the American West was relatively lawless compared with the “civilized” East. Some 30 years passed before the more alliterative *wild and wooly West* was invented by some unknown poet, the *wooly* in the phrase perhaps referring to uncurried wild horses or the sheepskin chaps some cowboys wore, or perhaps to the bragging of cowboys in a popular song:

I’m a wooly wolf and full of fleas,
I never been curried below the knees—
And this is my night to howl!

The first use of the expression, in an 1885 book called *Texas Cow Boy*, has *wild and wooly* referring to a herd of steers.

Wild Bill Hickok. Any fabled gunfighter; after James Butler “Wild Bill” Hickok (1837–76), army scout, gambler, and town marshall of Abilene, Kansas. Though a handsome dandy, with long blond hair hanging over his shoulders, Hickok was first called “Duck Bill” after his long nose and protruding lip. He met his violent end at the hands of a paranoid rival who shot him in the back of the head while he was playing poker. See DEADMAN’S HAND.

wild card. The term *wild card* has been known in card games since the early 16th century, meaning “a card whose value is determined by the players in a particular game.” Since then it has taken on special meanings in several sports, including tennis and football, and has come to mean generally anything outside of the normal rules or categories, an unpredictable person, thing, or event.

wildcat. A wildcat venture, such as a wildcat oil well, is generally a speculative one. The word *wildcat* here comes from the term *wildcat bank*, which originally referred to a Michigan bank that went bankrupt in the 1830s and had on its banknotes a prominent picture of a panther or wildcat.

Wildean. For the British writer and wit Oscar Wilde (1854–1900). His much publicized affairs and trial made his first name a British slang expression for a homosexual, *to Oscar*, *Oscarizing*, and *Oscar-Wilding*, in fact, meaning active homosexuality. Wilde is also represented by *Wildean*, referring to his razor-sharp wit. In this respect he was probably even greater than George Bernard Shaw. Once Wilde told a customs inspector that he had nothing to declare but his genius; another time he remarked to some proud chamber of commerce types that Niagara Falls “would be more spectacular if it flowed the other way.”

The Wilderness. One of the bloodiest battles of the Civil War, this area in northern Virginia was named for its thick, tangled woods and dense brush. Herman Melville wrote in *Battle-pieces*: “In glades they meet skull after skull/ Where pine cones lay—the rusted gun,/ Green shoes full of bones,/ the mouldering coat/ and huddled-up skeletons.”

wild-geese chase. Englishmen in the late 16th century invented a kind of horse race called the wild-geese chase in which the lead horse could go off in any direction and the succeeding horses had to follow accurately the course of the leader at precise intervals, like wild geese following the leader in formation. At first the phrase *wild-geese chase* figuratively meant an erratic course taken by one person and followed by another; Shakespeare used it in this sense. But later the common term’s origins were forgotten and a *wild-geese chase* came to mean “a pursuit of anything as unlikely to be caught as a wild goose,” any foolish, fruitless, or hopeless quest.

wild man of Borneo. P. T. Barnum coined the name of this sideshow attraction, as he did many others. In the mid-19th

century, Barnum displayed the Wild Man in his Brooklyn-based American Museum of Curios. The name holds on today as a humorous description of someone unkempt and disheveled, as in “Is that what you’re going to wear—you look like the Wild Man of Borneo!” See THERE’S A SUCKER BORN EVERY MINUTE.

wild oats. See SOW ONE’S WILD OATS.

wild pork. Bear meat. According to an old recipe the way to cook wild pork (a slang term for bear meat) is drop several hot rocks in a pot of boiling water with the meat for several hours. Then, throw the meat away and eat the rocks.

wild rice. The seed of an aquatic grass rather than a true rice, wild rice was grown and eaten by American Indians. The words were first recorded in 1778. Wild rice was earlier called water oats and water rice and has also been known as Indian rice and Meneninee, after a Chippewa subtribe that grew it. See also CAROLINA RICE; PIEDMONT RICE.

Wild West show. A circus of cowboys and Indians performing various feats ranging from riding to shooting, the words first applied to William F. (Buffalo Bill) Cody’s Wild West Show, which opened at Omaha, Nebraska May 17, 1883.

Wiley E. Coyote. The name of this famous cartoon character, who has become synonymous with ineptitude and humiliation for his futile efforts to get Roadrunner, was coined by cartoonist and director Chuck Jones (Charles Martin Jones, 1912–2002) when he invented the Coyote-Roadrunner series in 1949. There is no dialogue except “beep beep” in the cartoon. The animator claimed Mark Twain’s *Roughing It* inspired his invention. Mr. Jones also solely created the skunk Pepe Le Pew, sketched Bugs Bunny for more than 50 years, and helped create Daffy Duck, Elmer Fudd, and Porky Pig, among other beloved cartoon characters. His autobiography is entitled *Chuck Amuck: The Life and Times of an Animated Cartoonist* (1989). See WHAT’S UP DOC?

Williamson. “The terrible Williamsons” have fleeced so many people in recent years that their name has become a generic term for itinerant hustlers. An inbred clan of gyp artists numbering about 2,000, the family descends from Robert Logan Williamson, who emigrated from Scotland to Brooklyn in the 1890s and soon imported his relatives. Today the wandering clan makes its headquarters and major burial grounds in Cincinnati, a crossroads city, or at least they meet there once a year in the spring to bury their dead, exchange notes, and renew friendships. There is not a nonviolent hustler’s trick unknown to the Williamsons, from resurfacing a homeowner’s driveway with crankcase oil—and departing across the county line with the payment before the next rain washes the “black-top” away—to an attractive Williamson woman selling her “dead mother’s valuable Irish linen” door to door in order to “buy milk” for a baby conveniently bawling in her arms. The family still does well, despite many newspaper and magazine exposés of their cons.

William Tell’s apple. According to fable, William Tell was a famous marksman and the champion of Swiss independence

when Switzerland was ruled by Austria in the 13th century. Tell refused to salute the imperial governor and was sentenced to shoot an apple from his son’s head. After doing this, another arrow fell from his coat and the governor demanded to know what it had been intended for. “To shoot you with, had I failed in the task imposed upon me,” Tell told him and he was cast in prison, from which he was rescued and went on to lead his country to freedom. There are at least 10 earlier versions of the tale involving other countries and heroes, the oldest found in the Old Norse *Vilkinia Saga*.

William the Conqueror was [came] before Richard the Third. With the passing of time there have been many variations, one more risqué than the other, on the old joke about Shakespeare, actor Richard Burbage, and their lady friend. The incident may or may not have occurred, but here is the original story from the diary of 17th-century English author John Manningham:

Upon a time when Burbage played Richard the Third there was a citizen grew so far on liking him, that before she went from the play she appointed him to come that night unto her by the name of Richard the Third. Shakespeare, overhearing their conversation, went before, was entertained and at his game ere Burbage came. Then, message being brought that Richard the Third was at the door, Shakespeare caused return to be made that William the Conqueror was before Richard the Third.

Will it play in Peoria? The origin of the phrase is explained by author Mel Watkins in a *New York Times* obituary of comedian Richard Pryor (1940–2005), who was born in Peoria. “I lived among an assortment of relatives, neighbors, whores, and winos,” Pryor once wrote, “people who inspired a lifetime of comedic material.” Wrote Watkins: “His parents and grandmother ran a string of bars and bordellos that catered to a constant influx of transients who moved in and out of town which was such an important stop on the black and white vaudeville circuit that it inspired the expression, ‘Will it play in Peoria?’” See PODUNK.

willow. The willow is a lovely tree with a lovely name full of /’s and w’s. As Ivor Brown wrote in *A Word in Your Ear* (1945): “The willow has ever been as much the poet’s joy as a symbol of mourning and melancholy. It both weeps and bewitches. ‘Sing, willow, willow, willow,’ Always it sings . . . so lovely is the tree, in all its forms, not least *Salix babylonica*, the weeping willow.” To wax prosaic, a few species of the *Salix* genus yield the drug *salicin*, used in making aspirin. *Wearing a willow* means to be in mourning, especially for a wife or sweetheart, the weeping willow from earliest times having been a symbol of sorrow. In the Book of Psalms the Jews in captivity are said to hang their harps on willow branches as a sign of mourning. Shakespeare’s famous song in *Othello* has the refrain “Sing willow, willow, willow”:

The fresh streams ran by her, and murmur’d her moans;
Sing willow, willow, willow
Her salt tears fell from her and softened the stones;
Sing willow, willow, willow.

To wear the green willow means to be sad or disappointed in love.

willy-willy; willywaw. A willy-willy is a severe tropical cyclone common to Australia that can be seen approaching in a high column of dust from a great distance. The word is probably an Australian Aboriginal term for the phenomenon, but Partridge suggests that *whirlwind* became *whirl*, which became *wil*, which became *willy!* Willywaw are squalls in the Straits of Magellan, but light, variable winds elsewhere at sea, the word either deriving from *willy-willy* above or as a corruption of *whirl-whirly*.

Wilson's petrel. Alexander Wilson (1766–1813) was a Scottish-born American ornithologist whose *American Ornithology* (1808–14) is a classic in its field. Not only Wilson's petrel, but Wilson's phalarope, plover, snipe and thrush are named in his honor.

wimp. Weak, unmanly, indecisive men have been called wimps since the 1970s and the term is still frequently used. Although the *Popeye* cartoon character Wimpy (of hamburger fame) may have influenced the coinage, it more likely comes from *whimper*.

Wimpy. J. Wellington Wimpy, a hamburger-loving character in the *Popeye* comic strip, gave the Wimpy hamburger chain its name about 1939. J. Wellington Wimpy could eat scores of burgers at a sitting; it was the only thing he could do better than Popeye, who specialized in SPINACH.

Winchester. The Model 73 Winchester rifle, made in 1873, is the prototype for all the famous Winchester models now extensively used for hunting. The first Winchester, however, was made in 1866. Oliver F. Winchester (1810–80) manufactured the rifle at his plant in New Haven, Connecticut, the weapon based on a number of patents the industrialist had acquired from different inventors. This early repeater became generic for any repeating rifle and was widely used on the frontier. Its design, a lever-action rifle with a tubular magazine in the forestock, became the standard repeating rifle mechanism; the Winchester Arms Company, which still operates today, has been eminent in its field for many years.

Winchester geese. In the 16th century prostitution and geese raising were two major Winchester industries and British prostitutes were called Winchester geese, probably because they seemed almost as ubiquitous in the area as the birds. The first part of their name may honor the bishop of Winchester, however, as the brothels in Southwark were under his jurisdiction, and the Church received rent from many establishments based in houses he owned. These revenues, incidentally, helped found and maintain a number of esteemed Oxford colleges. A Winchester goose also came to mean a venereal bubo (sore), or anyone infected with venereal disease.

windfall. Unexpected good fortune has been called a windfall since the early 16th century. The expression has its origins in the medieval English law that forbade commoners from cut-

ting down trees but allowed them to keep any trees or branches that the wind blew down.

windfucker. An old name for the kestrel that is recorded as early as 1599 by English author Thomas Nashe: "The Kestrelles or windfuckers that filling themselves with winds, fly against the winde euermore." The kestrel (*Falco tinnunculus*) is a small falcon noted for hovering, its head facing into the wind. Exactly why its name also came to mean a worthless or disgraceful person is not known—probably because of the name "windfucker" itself.

windjammer. *Windjammer* meant a "horn player," then came to mean a "talkative person or windbag," and finally, at the end of the 19th century, was the name for any ship with sails. It seems that windy defenders of sailing vessels at the beginning of the age of steamships boasted so much about the superiority of sail that they were called *windjammers* and their name soon became attached to the sailing ships they bragged about.

windmills in one's head. See TILT AT WINDMILLS.

window. "An eye of the wind" is the meaning of the Old Norse *vindauga* (*vinde*, "wind," plus *auga*, "eye"), which gave us our word *window*. The poetic word appropriately suggests a window's function of letting in both air and light. Shakespeare made *window* a verb in *Antony and Cleopatra* when he had Antony ask: "Wouldn't thou be windowed [put in a window] in great Rome?" The Old English for *window* was *eyethirl*, "eye hole."

window; window of opportunity. A period of time favorable for beginning or completing something: "I'd say you have a window of about three more months to invest before interest rates rise." Also window of opportunity and period of opportunity. The expression dates back to 1965, when it was first used in the U.S. space program.

window and windrow. "In all the proof that has reached me," author Gordon Dorrance (1890–1957) wrote to his publishers, "windrow has been spelled window. If, in the bound book, windrow still appears as window, then neither rain nor hail nor gloom of night nor fleets of riot squads will prevent me from assassinating the man who is responsible. If the coward hides behind my finding, I shall step into Scribner's and merrily shoot up the place Southern style."

window-shopping. A. T. Stewart's cast-iron palace, built in 1862, was the first store encountered when walking north along New York's Ladies Mile. At the top of this stretch of Broadway and Sixth Avenue between Ninth and 23rd Streets was Stern Brothers. Many early American department stores, such as R. H. Macy's, Lord and Taylor, and B. Altman, lined the elegant, cobblestoned streets of this shopping district, which played host daily to exquisitely clad ladies in flowing gowns and feathered bonnets who alighted from their horse-drawn carriages and floated toward the grand emporiums or came on the Sixth Avenue El. Women promenaded in their best here up until the end of the century, when the shopping district began to move

uptown, but many of the old buildings that housed the stores still remain. So does the term *window-shopping*, which may have been inspired by the women who strolled by the displays these great stores designed for them. The Ladies Mile Historic District extends from Union Square at 23rd Street. For early photographs of the stores see my *The Grand Emporiums* (1978). See LADIES MILE.

Windsor. The name of the British royal family was, on July 17, 1917, changed from Saxe-Coburg-Gotha to Windsor by King George V, because the previous name sounded too Germanic at the time.

Windsor knot. The neat triangular knot in a tie is named for England's fashionable duke of Windsor (1894–1972), who became the Edward VIII in 1936 and abdicated the throne later that year so that he could marry American divorcée Mrs. Wallis Simpson: “I have found it impossible to carry the heavy burden of responsibility and to discharge my duties as King as I would wish to do, without the help and support of the woman I love.”

Windy Cap. Laplanders of yore and many other ancient peoples made a profitable trade in selling favorable winds to mariners, as did individuals like Bessie Millie of the Orkney Islands, who sold winds to sailors for sixpence as late as 1814. These people undoubtedly had knowledge of the weather that others didn't have at the time, but the belief persisted that they could actually influence the winds. It is said that King Eric of Sweden was so familiar with the “evil spirits” that controlled the winds that wherever he turned his cap, the wind would blow. Olaus Magnus, a Swedish historian, says he was commonly known as *Windy Cap*.

Windy City. A nickname for Chicago that was first recorded in the late 19th century. It is said to have been coined by a *New York Sun* reporter who was put off by Chicagoans' windy bragging during the 1896 World's Fair. Chicago is not an especially windy city, so the blustering theory seems tenable.

wine book. According to an October 31, 1989 article in the *New York Times*, a wine book is a ledger in which the crew leaders or bosses of migrant workers “record the claims that they make on the worker's wages, beyond the \$40 or \$50 per week that they charge for their meals. The name of a worker is written at the top of each page, which, except for the occasional date and odd notation is nothing but a list of numbers showing dollars and cents. But the crew leaders know what transaction each charge represents.” Transactions often include wine, of course, and also cocaine and crack, the crew leaders rarely telling a worker the high price of the drugs until the money is deducted from his salary. Such are the more subtle ways of debt servitude today. The expression *wine book* has been around at least two or three decades but is not often recorded.

wine of ape. Surly or obnoxious drunkenness. Brewer tells us: “There is a Talmud parable which says that Satan came one day to drink with Noah, and slew a lamb, a lion, a pig, and an ape, to teach Noah that man before wine is in him is a lamb, when he drinks moderately he is a lion, when like a sot he is a

swine, but after that any further excess makes him an ape that senselessly chatters and jabbers.” Other sources say Satan killed and buried the animals near vines Noah was planting. Why Satan would give Noah any advice is not explained.

wine, women, and song. Despite Thackeray's tongue-in-cheek attribution, this famous phrase, and the couplet of advice to men that it comes from wasn't written by Martin Luther! German poet Johann Heinrich Voss wrote the little poem in about 1775:

Who does not love wine, women and song
Remains a fool his whole life long.

And Byron wrote:

Let us have wine and women
mirth and laughter
sermons and soda-water the day after.

wing it. To do something without preparation or without much preparation. This was first a 19th-century theater expression that originated with actors who went on stage without knowing their lines, usually in taking the place of an absent actor. They depended on prompters in the wings to get them through the performance.

win hands down. A jockey who wins a race *hands down* is so far ahead of the field that he doesn't have to flick the reins to urge his horse forward and crosses the finish line with his hands down, letting up on the reins. From racetrack slang toward the end of the 19th century the metaphor *to win hands down* passed into general use for any easy, effortless victory, a walkover.

winning isn't everything, it's the only thing. The cynical remark is almost always attributed to Green Bay Packers coach Vince Lombardi in the 1960s. It should be credited to a Hollywood scriptwriter, having first been uttered by John Wayne when playing a football coach in *Trouble Along the Way* (1953)

win one for the Gipper. This one is so well known, of course, because President Ronald Reagan played George Gipp, or the Gipper, in a movie about Knute Rockne and his football team at Notre Dame (*Knute Rockne, All American*, 1940). Rockne urged his team to go out and “win this game for the Gipper,” who on his deathbed had requested that the team win a game in his honor—and Notre Dame proceeded to do it. Actually, Gipp had made this request of Rockne in 1920 when dying of pneumonia and the coach had used the same appeal several other times before the 1928 game with heavily favored Army that is depicted in the film.

win one's spurs. The allusion here is not to cowboys of the American West but to those days four centuries before when knighthood was in flower and young men dubbed knights by their lords were presented with a gilded pair of spurs. Since then the expression *to win one's spurs* has been extended from the idea of a knight performing a valorous act and winning honor to anyone performing any deed and gaining honor among his peers—from a doctor delivering his first baby to an author publishing his first book.

win, place, and show. Terms for horses that finish first, second, and third in a race. *Win, place, and show* originated at early United States racetracks where small boards were used to record the names of the first three finishers of every race. These boards were so small that only the names of the first two finishers were “placed” on the first board, *place* thus designating the number two horse. A second board was used to “show” the name of the third finisher, and *show* became the term for third place.

winter bloom. See WITCH HAZEL.

winter golf. Thousands of golfers don’t let northern winters interfere with their outdoor golf games, braving the severest weather to play on the links. *Winter golf* is said to have been invented by British author Rudyard Kipling, a devoted golfer who painted his golf balls red so that he could play in the snow, but there were probably others who went to such extreme lengths before him.

wireless. This is an old British name for the radio that never really caught on in the U.S., although it has had limited use here. The word derives directly from the name of the Marconi Wireless Telegraph Company. Guglielmo Marconi (1874–1937) was an Italian inventor in the field of wireless telegraphy and his company tried to establish a monopoly in the North Atlantic. Eventually the British applied the name for his wireless telegraph to the wireless radio, though now they too generally say *radio*. Marconi is remembered more directly for the marconigram, a radiogram, and the Marconi mast, once used for the mast for a radio antenna and now any elaborately rigged mast on a ship. See also RADIO; TELEGRAPH; TELEPHONE; TELEVISION.

wirepuller. See SPOILS SYSTEM.

Wisconsin. Wisconsin takes its name from the Algonquian name for a river within its boundaries that translates as either “place of the beaver” or “grassy place.” The Badger State was admitted to the Union in 1848 as our 30th state.

wisdom teeth. See CUT ONE’S EYETEETH.

wisacre. See ACRE.

wisecrack. A witty, often caustic remark, the word possibly coined in the early 20th century by vaudevillian CHIC SALES. *Wisecrack* is sometimes heard today as *crack wise*.

wiseguy. Originally, since the early 1900s, *wiseguy* meant “a smug know-it-all, a shrewd person.” It has since become another name for a member of the Mafia, made famous in Nicholas Pileggi and Henry Hill’s book *Wiseguys* (1985), which became the movie *Goodfellas* (1990).

wisest man of Greece. Socrates was declared the wisest man of Greece by the Delphic oracle. He said he deserved the honor “because I alone of all the Greeks know that I know nothing.” His remark may be the basis of many similar sayings, such as the commonly heard *The longer I live the more I realize how little I know*.

wish book. A rural name a century ago for the Montgomery Ward and Sears catalogs, both no longer published to the regret of many.

wisteria. A spelling error made by Thomas Nuttall, curator of Harvard’s Botanical Garden, led to the accepted misspelling of this beautiful flowering plant—*wisteria* being the common spelling today even though *wistaria* is correct. Nuttall, who named the plant after Dr. Caspar Wistar, had meant to write “wistaria,” but his slip of the pen was perpetuated by later writers, and *wisteria* has become accepted. All attempts to remedy the situation have failed, even Joshua Logan’s play *The Wistaria Trees*, in which the author purposely spelled the word with an *a*. A Philadelphia Quaker, Caspar Wistar (1761–1818) taught “anatomy, mid-wifery, and surgery” at what was then the College of Pennsylvania. The son of a noted colonial glassmaker, Dr. Wistar wrote America’s first anatomy textbook, succeeded Jefferson as head of the American Philosophical Society, and his home became the Sunday afternoon meeting place of many notable Philadelphians. Anyone in the vicinity of Sierra Madre, California in the late springtime should see the giant Chinese wisteria near the Los Angeles State and County Arboretum. During its five-week blooming period this giant species becomes a vast field filled with over one and a half million blossoms, the largest flowering plant in the world. Planted in 1892 the fabulous vine covers almost an acre, has branches surpassing 500 feet in length, and weighs over 252 tons.

Witch City. A nickname for Salem, Massachusetts, where in 1692 a wave of hysterical witch-hunting led to the hanging of 19 innocent people. This was the beginning of witch-hunting in America, but the practice had been common elsewhere since ancient times. Thousands were executed worldwide from 1450 to 1650. In England “Witch-Finder General” Matthew Hopkins (1621–47), as he named himself, hanged more than 100 people in one year. Since about 1920 *witch-hunting* has been applied to any effort to expose subversion or disloyalty, usually based on little evidence.

witches’ broom. An abnormal brushlike growth of weak, thin, closely clustered shoots or branches on a tree. They are caused by fungi or viruses.

witches’ knickers. There is no term in American English for all those white plastic bags that get caught in trees and wave and flap in the wind. In Britain they are called *witches’ knickers*, *knickers* being short for *knickerbockers* and meaning panties. See DON’T GET YOUR KNICKERS IN A TWIST; KNICKERS.

witches weigh less than a Bible. When Jane Wenham was tried as a witch in 1712 she was set free because people at her trial insisted that she be weighed. A true witch always weighed less than a Bible, according to British superstition, and Jane weighed considerably more than the 12 pound church Bible of the day.

witch hazel. Witch hazel solution is extracted from the leaves and bark of the witch hazel shrub. This plant, in turn, might take its first name from the fact that its branches were often used as divining or dousing rods to locate water. The *O.E.D.*

however, believes that the *witch* here comes from the Anglo-Saxon *sych*, meaning a tree with pliant branches. Witch hazels (*Hamamelis*) are not true hazel trees. They are also called winter bloom because they bloom from October to April when their twigs are bare. The cuckold hazel, also called the beaked hazel, is a true hazel of the genus *Corylus*, and takes its name not because wives betrayed their husbands under it but because of its long hornlike fruits, which someone centuries ago compared to a cuckold's horns.

witch-hunting. See WITCH CITY.

with a heart and a half. A lovely old Irish expression of thanks, first recorded in 1636. "Once more to you with a heart and a half," wrote the first man to record this expression, in ending a letter to his sweetheart.

with all deliberate speed. Chief Justice Earl Warren used these words in the historic *Brown v. Board of Education* decision of May 17, 1954, when the Supreme Court ruled that all public schools be integrated and racial discrimination be ended in them "with all deliberate speed." Oliver Wendell Holmes, however, recorded the words first, in 1912.

wither on the vine. Anyone who has seen grapes shrivel and dry up on the vine when left unpicked has a good picture of the source of this phrase. It means "neglected and wasted" and has been used in this figurative sense for several centuries.

within an ace of. Dice, not cards, gave us this expression for "coming as close as one can get," the "ace" in the phrase referring to the ace, or small point, on a single die. Originally the expression was *within ambace of*, "ambace" being a mispronunciation of the Old French for the lowest possible throw in dice—*ambes as* ("both aces"). But by the 17th century "ambace" was further corrupted to "an ace" and the phrase became *within an ace of*. *Ambace* itself was long a figurative term for bad luck. Today *snake eyes* is better known as the lowest throw in dice.

without a pot to piss in. Having not a thing to one's name, not even a chamber pot. *Piss pot* for a chamber pot dates back to the early 15th century and *piss* itself goes back a few centuries earlier, deriving from the Latin *pissiare*.

without rhyme or reason. Francis Bacon wrote that Sir Thomas More, chancellor to Henry VIII, once told a friend who had versified a rather poor book he had written: "That's better! It's rhyme now, anyway. Before it was neither rhyme nor reason." But More's witty remark isn't the basis for our expression meaning lacking in sense or any other justification, fit for neither amusement nor instruction. Used in English since the early 16th century, the phrase is simply a translation of the medieval French saying, *na rhyme ne raison*.

with tail between legs. When the expression was figuratively applied no one knows, but it must have been long ago, for as early as 1400 writers have described frightened dogs with their tails between their legs. The attitude of scared, cowardly dogs

was transferred to any thoroughly cowed and abased person who stands back *with tail between legs*. The word *coward* is ultimately from the Latin *cauda*, "tail"; it may be an allusion to an animal cowering with its tail between its legs or "turning tail" and running.

witticism. John Dryden coined *witticism* in his play *The State of Innocence, and Fall of Man* (1677), a dramatic version in rhymed couplets of *Paradise Lost* said to be written with Milton's permission, but which was never performed, though the immoderate Dryden considered it "undoubtedly one of the greatest, most noble and most sublime poems which either this age or nation has produced." The first official poet laureate and royal "historiographer" was immoderate in his wit, too—but he did not pen the acid remarks about John Wilmot, the second earl of Rochester, that Wilmot thought Dryden had written in 1679. Thinking he had, however, the furious Wilmot hired a band of masked thugs who severely cudged the poet. The prolific Dryden based *witticism* on the earlier *criticism*, writing: "A mighty Witticism (if you will pardon a new word!) but there is some difference between a Laughter and a Critique."

wives and mistresses. When a friend implored Anton Chekhov to drop medicine and devote all his time to writing, Dr. Chekhov piquantly replied, "Medicine is my lawful wife and literature is my mistress. When I get tired of one, I spend the night with the other."

WMD. Weapons of mass destruction. The term, in its abbreviated form, was first used in connection with the Iraq War.

woe-begone. Woe-begone people, those oppressed with misfortune, distress, or sorrow, have been so called since before Chaucer's time. The word is a combination of *woe* and *bigon*, "beat," as is illustrated by the Old English sentence "Me is woe bigon" ("I am beset with woe").

woe is me. *Woe*, first recorded in about 725, has been called "a truly international exclamation of sorrow." The world has always been full of woes, including the Latin *vae* (*vae victus*, "woe unto the conquered!"), the Welsh *gwoe*, the Gothic *wai*, the Armenian *vae*, and the Old Persian *avoi*, among many, many others. The still common expression *woe is me!* is first recorded in 1205 and is probably much older.

wog. Arabs, Indians, and Orientals were called *wogs* by the British during the heyday of their empire, or at least since about 1830, the derogatory appellation *wog* said to be a word formed from the first letters of *wily* (or *westernized*) Oriental gentleman. Another *O.E.D.* suggestion is *gollywog*, "with reference to frizzy or curly hair," *wog* "indeed being a nursery shortening of *golliwog*."

wolffia. Said to be the smallest flowering plant in the world, *wolffia*, of the genus *Wolffia*, is named in honor of German physician and botanist Dr. J. F. Wolff, who over a short lifetime—he died in 1806 when only 28—made many valuable botanical contributions. See ZINNIA.

wolf in sheep's clothing. One of the oldest of expressions, still used in many languages, *a wolf in sheep's clothing* dates back to biblical times, being recorded in Matt. 7:15: "Beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravaging wolves."

wolf man. Werewolves have been the subject of legend throughout the world for centuries, but the most memorable film portrayal of one was by Lon Chaney, Jr., in *The Wolf Man* (1941). Chaney played a lycanthrope who turned into the beast after being bitten by a real wolf (played by Bela Lugosi) and could be killed only by a silver bullet. He thought it was the best performance of his career, calling it "My Baby," and it contributed the term *wolf man*, in this popularized sense, to the language. *Wolf man*, however, dates back to the 16th century, while *lycanthrope*, which comes from Greek *lukos*, "wolf," and *anthropos*, "man," goes back to ancient times. The word *were-wolf* derives from Old English *were*, "man," and *wolf*.

wolfsbane. This species of poisonous aconite, *Aconitum vulparia*, may have been called wolfsbane because meat soaked in its juices is poisonous to wolves. But it could have arisen through an involved etymological error, as explained by a 19th-century writer: "Bane is a common term for poisonous plants, and some early botanist translated it into the Greek *kuamos*, meaning bean. The plant has a pale yellow flower and was thus called the white-bane to distinguish it from the blue aconite. The Greek for white is *leukos*, hence *leukos-kuamos*, but *lukos* is the Greek for wolf, and by mistake got changed to *lukos-kuamos* (wolf bean). Botanists, seeing the absurdity of calling an aconite a bean, restored the original word bane but retained the corrupt word *lukos* (a wolf) and hence we get the name wolf's bane for white aconite." See also ACONITE.

wolverine. See DEVIL BEAR.

Wolverine State. A nickname for Michigan since the 1830s, though no one knows why since there were no wolverines in what was Michigan at the time. Michigan has also been called the Lake State because it borders on the Great Lakes.

Wolves of the Air. A poetic name for raptor hawks. The little bird of prey, its name from the Latin for "one who seizes," is an accomplished predator despite its size.

woman. Etymologically, *woman* has no connection with *man*. The word *woman* derives not from *man*, but from the Old English *wif-man*, *wif* meaning "female" and *man* meaning "human being." *Man* derives from the Old English *mannian* meaning the same. See UMMERN.

a woman is only a woman. See THE FEMALE OF THE SPECIES.

woman of Babylon. See BABBLE.

a woman's place is in the home. Perhaps the Greek dramatist Euripides (484–406 B.C.) foreshadowed this proverbial Victorian saying when he wrote in a fragment of the *Meleager*: "A

woman should be good for everything at home, but abroad good for nothing." But *a woman's place is in the home* found its way into print for the first time in the mid-19th century. When she ran for Congress in 1970, women's rights activist Bella Abzug campaigned under the slogan "This woman's place is in the House—the House of Representatives!" She won, serving three terms.

woman's work is never done. The old saying, author unknown, is properly "Man may work from sun to sun, but woman's work is never done." It comes from a time when the great majority of people lived on farms, dating back perhaps to the 16th century.

women and children first. For more than a century this saying has been part of the unwritten law of the sea—women and children shall be saved before anyone else in the event of a disaster—and in the vast majority of cases, the words have been gallantly honored. The saying seems to have arisen, anonymously, after H.M.S. *Birkenhead* went down off the Cape of Good Hope in 1852 and 491 men were lost while all the women and children aboard were saved, and a great tradition was born.

Wonder State. A nickname for Arkansas officially adopted by the state in 1923. Arkansas is sometimes called the Bear State and the Hot Water State (after Hot Springs, Arkansas). Residents of Arkansas are called *Arkansawyers*. See also BOWIE KNIFE.

wong. *Wong* here is not a Chinese word, as might be expected, but an Old English word meaning meadowland, often used as a commons, that derives from the German *wang*, "mountain slope." First recorded in *Beowulf*, the word's only use today is in British place names and designations of certain fields and common lands.

won hands down. Won effortlessly, easily, as in "She won the race hands down." An Americanism familiar to horse-racing enthusiasts, dating back to about 1870.

won't hold water. Said of an argument that is wrong, that is like a boat with leaks, that won't bear close inspection. The expression dates back to the 19th century or further.

woodchuck. A New England name for the groundhog (*Marmota monax*), *woodchuck* probably derives from a New England Algonquian Indian word meaning the same. "A boy always had woodchuck holes to explore after the leaves were down in the fall . . ." Mayden Pearson wrote in *New England Flavor*, 1961. See also GROUNDHOG.

wooden nickels. See DON'T TAKE ANY WOODEN NICKELS.

Wooden O. Shakespeare described London's famous Globe Theatre as the "wooden O," and his playhouse did have a doughnut shape. The Globe was built from timbers used in the construction of London's first theater, which was built in 1576 on the north side of the Thames by actor James Burbage and

torn down when Burbage's sons decided in 1599 to build the Globe on Bankside in Southwark. Shakespeare had a share in the Globe and performed there. The auditorium of the Globe was an old inn yard. Shilling patrons sat onstage near the actors, three-penny patrons rated stools in the balcony, while one-penny customers stood in the yard. Because the huge stage jutted into the yard, the actors found themselves with an audience pressing on three sides. The balconies and stage were roofed, but the center inn yard was open to the sky. The original Globe burned to the ground in 1613. There are replicas today in London; Stratford, Ontario, Canada; Stratford, Connecticut; San Diego, California; Berlin, Maryland; and Odessa College, Odessa, Texas.

wooden walls. *Wooden walls* is an old term for England's warships, which protected the country from invasion like a great wooden wall in the water that the enemy could not get by. The term, however, had been used long before the English first recorded it in 1598, for Themistocles called the ships of ancient Athens "wooden walls." *Our watery and wooden walls* was an English variation on the phrase.

woodman, spare that tree.

Here on my trunk's surviving frame,
Carved many a long-forgotten name . . .
As love's own altar, honor me:
Spare woodman, spare the beechen tree.

—Thomas Campbell,
"Beech Tree's Petition" (1807)

Smooth-skinned beech trees, as the old poem above shows, have always been the favorite of lovers carving their names or initials inside a heart. The beech tree lines quoted above are the real source of the familiar proverb "Woodman, spare that tree," not the following more famous poem by George Pope Morris written in 1830, 23 years later:

Woodman, spare that tree!
Touch not a single bough!
In youth it sheltered me,
And I'll protect it now.

See also BOOK.

Woodstein. "Their surnames became a single swashbuckling compound noun: Woodstein," Todd S. Purdum wrote in the *New York Times* (June 3, 2005). He was referring to investigative reporters Bob Woodward and Carl Bernstein, who helped crack the Watergate scandal in 1972 with the help of their source "Deep Throat" (qv).

woolgathering. In the past, and perhaps even today, people wandered the countryside gathering bits of wool from hedges and bushes that sheep had brushed against. These actual "woolgatherers," often children, went about their work aimlessly, often frolicking in the fields, never able to do their job systematically because the sheep were scattered all over. There wasn't much money to be gained in such an occupation, either. So as far back as the 16th century this literal woolgathering suggested our expression *woolgathering*, meaning unprofitable or trivial employment, absentminded inattention, purposeless thinking, or aimless reverie.

Woolton pie. Many considered this British vegetable pie, thickened with oatmeal and often topped with potato, almost inedible. Named in 1941 for minister of food, F. J. Marquis, the first earl of Woolton (1883–1964), it is described in Maureen Waller's *London 1945: Life in the Debris of War* (2005). Other ingredients that could be used in the meatless pie included carrots, turnips, and cauliflower.

Woolworth's. The great American retailer Frank W. Woolworth's death in 1919 was an ironic one, for the same W. H. Moore who had given him his start was indirectly responsible for his death. Moore had had all his teeth removed by a dentist late in life and died in the dentist's office of a stroke. Woolworth refused all dental care from that day on and subsequently died of septic poisoning. See FIVE-AND-TEN.

wop. See DAGO.

word association test. See JUNGIAN.

word for word. As one would expect, this is a very old expression for "exactly" or "precisely," Chaucer first recording it in about 1385: "I could folwe word for word Virgile."

word of honor. One might think that this phrase, for "a solemn promise," goes back to those days when knighthood was in flower. But so far as is known it only dates to 1814, when it is recorded in Donat H. O'Brien's *Narrative Containing an Account of His Shipwreck, Captivity and Escape from France*: "They suspected we were deserters . . . We assured them upon our word of honour, they were very much mistaken."

word of mouth. Honoré de Balzac spread the rumor that the premier of his play *Les Ressources* was sold out, hoping to spur demand by exaggerating the play's popularity. His plan backfired, however, when hordes of would-be attendees returned home, disappointed, before reaching the theater.

word processor. A term that came into the language about 1975 for a computer system specifically designed for or capable of word processing (the creation, input, editing, and production of texts by means of computer systems). For surely the most beautiful tribute ever written to a word processor, read the Prologue to Henry Roth's *From Bondage* (1996), which was written on a word processor.

words at war. In ancient times "word contests" were often quite literally wars with words. The most colorful example of this were those poets who led pre-Islamic Arabs into combat, hurling curses at the enemy, who usually had poets who cursed back just as colorfully.

words into thought. In an 1851 letter to an editor, Nathaniel Hawthorne wrote: "I am glad you think my style plain. I never, in one page or paragraph, aimed at making it anything else, or giving it any other merit—and I wish people would leave off talking about its beauty. If it has any, it is only pardonable as being unintentional. The greatest possible merit of style, is, of course, to make the words absolutely disappear into the thought."

word to the wise. So old is this expression that it probably goes back beyond the Latin *verbum sapienti* that it is a translation of. *Verbum sapienti* is so well known in British university usage that it is commonly rendered as *verb. sap.* there. *A word to the wise (is enough)* is recorded in English as early as the 15th century. An old variant is *a word to the wise suffices*.

workaholic. American pastoral counselor Wayne Oates coined the word *workaholic* for “an uncontrollable need to work incessantly,” in 1971, from *work* and *alcoholic*. Himself a workaholic who discovered his sickness only when his “five-year-old son asked for an appointment to see him,” Oates published his *Confessions of a Workaholic* in 1972. There have since been many similar but less popular constructions, including *bookaholic* (1977), *wordaholic* (1978), and *hashaholic* (1973), someone who uses a lot of marijuana or hashish.

Workers of the world, unite! The communist slogan has its counterpart in every language of the world. It comes from the final page of *The Communist Manifesto* (1848) by Karl Marx and Friedrich Engels.

work into a lather. When we tell someone “Don’t work yourself into a lather” over something, we mean don’t get hot and bothered, don’t get angry or worried. *Lather* derives from the Anglo-Saxon word for washing soda or foam and has long been used to describe the flecks of foam on a heavily perspiring horse. From the notion of a horse worked into a hot and bothered state came our expression, probably in the mid-19th century.

work like a navy. To work hard at physical labor. The word is *navvy* here, not *navy*, and means laborer. A *navvy* was a man who worked on the many canals that were excavated in England starting in the mid-18th century. These canals were called “navigations” and a laborer working on one was dubbed a “navigator,” this soon being shortened to *navvy*.

work like a Trojan. See A REGULAR TROJAN.

world-class. An athlete who competes in the Olympics or holds world records or approaches world records in a sport is said to be world-class. In recent times the term has been applied to people outstanding in anything, even negatively, as in “He’s a world-class liar.”

The world doesn’t make sense, so why should I paint pictures that do. Said by artist Pablo Picasso to a visitor. “I am only an entertainer who understands his age.”

the world is my oyster. All the pleasures and opportunities of life are open to someone because he is young, rich, handsome, successful, etc. Shakespeare invented or popularized this expression in *The Merry Wives of Windsor* (1600): *Falstaff*: I will not lend thee a penny. *Pistol*: Why, then, the world’s mine oyster which I with sword will open.

World Series. This term is, of course, still used in baseball and has been extended to cover any highest-level contest, from

the *world series* of poker to the *world series* of go-cart racing. The first World Series in baseball called the *World Series* was held in 1889, the term a shortening of the World Championship Series. This was a series of post-season games held each year between the pennant winners of the National League and the American Association beginning in 1884. But the first World Series between two major league teams came in 1903, when the American League was recognized as a bona fide major league. The American League’s Boston Pilgrims (later the Boston Red Sox) beat the National League’s Pittsburgh Pirates in this best-of-nine game series, which fans paid one dollar a game to see. See also MAJOR LEAGUE.

World’s Largest Store. The slogan of New York’s Macy’s, and it is no hype. Macy’s Herald Square store covers a full 55.5 acres, containing 2.2 million square feet of floor space. A good-size house has 2,000 square feet, so you could put 10,000 houses in Macy’s. The store opened in 1902 on a site that had been occupied by, among other enterprises, a few quality brothels and a music hall where Thomas Edison first projected a movie. Harrods, the largest store in the United Kingdom, is only half as big as Macy’s.

World’s Oldest Newspaper. Founded by Queen Christina in 1645, Sweden’s *Post-Och Inrikes Tidningar* (or *POIT*) holds the title. A conservative paper, it is the official organ of the Swedish government, as it has been since its founding. Sometimes it is called “the world’s oldest newspaper still in publication.” Recently, it has gone digital, hoping to at least win more than the 1,500 subscribers its print version has.

the world’s worst playwright. On the basis of his one and only play, many would agree that the world’s worst playwright was, of all people, the great artist Pablo Picasso. The legendary Spanish painter wrote the fortunately little-known play *Desire Caught by the Tail* (1941). One of its stage directions instructed that the character Tart, played by a blond stripper, “go to the front, face the audience and urinate and syphilize for a full five minutes.” What syphilize means no one knows, but Tart urinated on stage for a while in what was the dramatic highlight of the play, which is supposed to be about food, money, and sex. Amazingly enough, Albert Camus directed this avant-garde piece, which featured Jean-Paul Sartre and Simone de Beauvoir, among numerous Parisian notables. Other characters included Fat Anxiety, Thin Anguish, and Big Foot. Slides of Picasso’s paintings, flashed on a screen while Tart stripped, the artwork redeeming her act somewhat. At the play’s conclusion come two good lines from Big Foot, which seem to speak of the impending doom of Europe at the time. “We sprinkle the rice powder of angels on the soiled bed sheets and turn the mattresses through blackberry bushes. And with all power the pigeon flocks dash into the rifle bullets! And in all bombed houses, the keys turn twice around in the locks!”

World Trade Center. See TWIN TOWERS.

World Trade Center cough. A general hacking and congestion that workers suffered after working at the World Trade Center site after the 9/11 terrorist attack. New, even more serious disorders are now being discovered among workers and visitors.

World War I. No one *knew* that World War I was only the first world war until 1939, when World War II started, but wise men and cynics began using the term even before World War I was over, the phrase being coined in 1918 before the armistice! World War I had another common name: **THE WAR TO END ALL WARS**. Over 10 million killed and 20 million wounded in *The Great War*, as it was also called, is a conservative estimate, yet this was less than half of those to be killed in World War II. Before the U.S. entered World War I in 1917 it was called The Great European War.

World Wide Web. System of Internet servers that support formatted documents, allowing users to click from one document to another.

worm. The lowly worm's name has a grand history. *Worm* derives from the Latin *vermis*, which first meant "dragon" or "serpent." In time, however, it came to include the garden worm as well. Today worms are often raised on worm farms and sold to fishermen and to gardeners who use them to help aerate the soil.

wormwood. Since there is nothing wormy about it, why is the herb so named? The best theory is that the "worm" in the word is from the Teutonic *wer*, for "man" and the "wood" from *mod*, the Teutonic for "courage." By this account the word was originally *wermood*, meaning "man's courage," in reference to the herb's supposed aphrodisiacal and healing properties. Absinthium, the classical wormwood, is an ingredient of absinthe, which has probably killed more people than it has sexually inspired. Tarragon is also one of the wormwoods.

worry. *Worry* derives from the Old English *wyrgran*, "to strangle," which became the Middle English *worien*. In Middle English the word came to describe the way dogs or wolves kill prey by grasping it with their teeth and shaking it. By the 16th century, *worry* had evolved and meant to harass. By the time another century had passed, *worry* was being used for bother or distress.

worship the golden calf. One who worships the golden calf sacrifices his or her principles for money or personal gain. The expression is biblical in origin, referring to the golden calf made by Aaron that the Israelites worshipped while Moses was absent on Mount Sinai (Exodus 32), a sin for which they paid dearly.

worth his weight in gold. At present gold prices a person weighing 150 pounds who was literally worth his weight in gold would be worth nearly \$1 million. To say someone is *worth his weight in gold* is to say he is an extremely valuable person to the enterprise at hand. The phrase has been traced back to at least 1705, when Joseph Addison, writing about a statue in Italy, said: "It is esteemed worth its weight in gold."

would God I had died for you. Part of the famous biblical lament for an erring, beloved son uttered by David over his son Absalom, widely praised for his brilliance and beauty ("without

blemish"), who had marched against his father's army and was killed. David's commander, Joab, sent a messenger to David telling of his victory and his son's death, David then crying out his anguished words: "O my son Absalom, my son, my son Absalom! Would God I had died for thee, O Absalom, my son, my son!" (Sam. 28:33). *Absalom! Absalom!* (1936) is the title of a novel by William Faulkner. Absalom's death is one of the strangest in the Bible. After his defeat by his father David, he galloped off, but his long hair caught in the low branches of an oak tree, trapping him so that David's commander Joab could kill him. An even stranger but similar death is that of Milo of Croton, who won six victories in wrestling at Olympia in 500 B.C. Milo is said to have killed a heifer with a single blow of his fist and have eaten the animal in the course of a day. He was trying to split open a tree trunk with his bare fists when his hands got caught in the falling trunk. There was no one to call for in the wilderness and he was soon devoured by a pack of wolves.

wouldn't harm a fly. The fly has long been considered an insignificant creature, and therefore anyone who wouldn't hurt one, as in this old proverb, would be considered a gentle, kindly person. These words are the last in the Alfred Hitchcock film *Psycho*, coming when Norman Bates (and the mother he has made himself) says she/he "wouldn't even harm a fly."

wouldn't touch it with a 10-foot pole. This expression may have been suggested by the 10-foot poles that river boatmen used to pole their boats along in shallow waters. Possibly the expression was first something like *I wouldn't touch that with the 10-foot pole of a riverman* and that this shortened with the passing of pole boats from the American scene. However, the image first appears in the Nantucketism *can't touch him with a 10-foot*, meaning "he is distant, proud, reserved." In the sense of not wanting to get involved in a project or having a strong distaste for something, the words aren't recorded until the late 19th century.

Wow! As an exclamation of surprise, admiration, etc., *wow* derives from Scottish *wow!* meaning the same, an exclamation that dates back to the early 16th century. For some 10 years *a wow* has meant "something excellent," and *to wow* has meant "to gain great approval," especially from an audience.

wowser. There has been much speculation over the years about the origin of this term for a puritanical person, a blue-nose, or a fanatic. The word appears to have been coined in 1890s Australia to describe fanatic prohibitionists, perhaps even from the initials of a reform organization's slogan: "We Only Want Social Evils Righted." The *O.E.D.* quotes *The Nation's* (5/11/12) definition of *wowser*: "... one who wants to compel everybody else . . . to do whatever he thinks right, and abstain from everything he thinks wrong." To all of which I'll only add that D. H. Lawrence wrote a satirical poem entitled "The Little Wowser," probably learning of the word on a visit to Australia in 1922. The little wowser is in this case the penis. Lawrence's poem begins:

There is a little wowser
John Thomas by name

and for every bloomin', mortal thing
that little blighter's to blame . . .

And ends four stanzas later with:

I think of all the little brutes
as ever was invented
that little cod's the holy worst,
I've chucked him, I've repented.

See also JOHN THOMAS.

Wreck of the Hesperus. A huge submerged rock off the coast of Gloucester, Massachusetts caused so many shipwrecks in the 18th century that it was called Norman's Woe. Wrote Henry Wadsworth Longfellow in his diary for December 17, 1837: "News of shipwrecks horrible on the coast. 20 bodies washed ashore near Gloucester, one lashed to a piece of wreck. There is a reef called Norman's Woe where many of these took place; among others the schooner *Hesperus* . . . I must write a ballad upon this." The ballad proved to be "The Wreck of the Hesperus," which became so well known that "wreck of the *Hesperus*" also became an expression for any battered or disheveled thing, as in "You look like the wreck of the Hesperus."

Wrens; Waves; Spars. An acronym for the Women's Royal Naval Service, *Wrens* was coined in Great Britain during World War I and is the first acronym invented for a woman's naval unit. The *Waves*, Women Accepted for Voluntary Service, seems more labored but worked during World War II. The most ingenious of such inventions is *Spar*, an acronym for the Woman's reserve of the U.S. Coast Guard Reserve (World War II), which was constructed from the Coast Guard motto: Smppter Paratus, Always Ready. See PASSION KILLERS.

wrestling; Pancration. *Wrestling* was recorded before 1100 in English, but the sport goes back to prehistoric times though differing widely in its rules and regulations. In the Olympian Games, for example, the Pancration, a brutal rough-and-tumble form of wrestling combined with boxing, allowed almost any way of defeating an opponent. This later became known as the "catch-as-catch-can" style. Today we have a variety of wrestling styles that might be called "TV wrestling" or "entertainment wrestling," which many people take seriously. Purer forms of the sport are still widely practiced in schools and colleges, including the Greco-Roman style of ancient Rome, in which the wrestlers can't trip, tackle, or use holds beneath the waist. The Greek philosopher Plato, whose name means "broad-shouldered" in Greek, wrestled for sport, as did Abraham Lincoln (in some 300 matches) and George Washington, among many other notables.

Wright Flyer. See FLYING MACHINE.

write like a fool. English dramatist Nathaniel Lee (1643?-92) was institutionalized twice in his short life. "'Tis very difficult to write like a madman," he told a friend while confined in Bedlam, "but 'tis a very easy matter to write like a fool."

write like an angel. Isaac D'Israeli in his *Curiosities of Literature* (1791-93) says that the phrase *to write like an angel* originally had nothing to do with literary style, but referred to fine

penmanship. According to D'Israeli (Prime Minister Disraeli's father) a "learned Greek" named Angelo Vergecie immigrated to Italy and then to France, where his beautiful handwriting attracted attention; Francis I, in fact, modeled a Greek typeface on it. *To write like an Angelo* became synonymous with exquisite calligraphy, and *Angelo* was shortened to *Angel* at which point the meaning was expanded to include literary style. A good story even if it can't be confirmed.

writing a là diable. A literary term from the French. It means always writing without any plot or plan of action. The French author George Sand customarily wrote in this style from 10 at night to five in the morning.

writ in water. Said of somebody whose work has come to naught, is ephemeral, inconsequential. Still heard because the phrase was carved on the gravestone of the great English poet John Keats. His grave is at the Protestant Cemetery in Rome. Here is his epitaph:

This Grave
Contains all that was Mortal
of a
YOUNG ENGLISH POET
Who
on his Death Bed
in the Bitterness of his Heart
at the Malicious Power of his Enemies
Desired
these words to be engraven on his Tomb Stone
HERE LIES ONE
WHOSE NAME WAS WRIT IN WATER
Feb. 24th 1821

wrong side of the bed. See GET UP ON THE WRONG SIDE OF THE BED.

wrong side of the tracks. This American expression arose in the 19th century when railroad tracks, which sometimes split a town in two, provided a clear social demarcation—well-to-do people living on the right side of the tracks and the poor living on the wrong side, in the slums or seedy area of town. Today the expression *to be born on the wrong side of the tracks*, "to be born poor and disadvantaged," hangs on despite the fact that the physical distance between rich and poor has increased and that they now tend to live in different towns or counties altogether.

Wrong-Way Corrigan. Douglas "Wrong-Way" Corrigan *may* have gone the wrong way unintentionally. The 31-year-old pilot flew from California to New York in a record time of less than 28 hours and took off the next day in his battered plane to return to California. His plane had no radio, beam finder, or safety devices, and had failed safety inspections, which would indicate that he had no plans for a publicity stunt. But even though extra gas tanks blocked his view, it is hard to explain how, after he took off in a westerly direction over Jamaica Bay, near the present Kennedy International Airport in New York, he swung his plane in a wide arc and crossed the Rockaway Peninsula, heading out over the Atlantic Ocean. Presumably, he flew through a thick fog, convinced he was California-bound until

the fog lifted that fine morning of July 18, 1938, and he looked down at the grass roofs and cobblestoned streets of Ireland! Corrigan told officials at Dublin's Baldonnell Airport that he had accidentally flown the wrong way, and he promptly became known as *Wrong-Way Corrigan*. As a result he became a hero, made close to \$100,000, and even played himself in *The Flying Irishman*, a movie based on his "mistake." When asked recently if he had really meant to fly to California, Corrigan replied, "Sure . . . well, at least I've told that story so many times that I believe it myself now."

wrong-way driver; ghost drivers. They are called *wrong-way drivers* in the United States and *ghost drivers* in Austria, among other names around the world. Whatever name they go by, they cause more accidents every year. In just the United States, for example, they result in a thousand fatal accidents, most of the wrong-way errors made at openings along parkways.

Wrong-Way Riegels. Like WRONG-WAY CORRIGAN, Roy Riegels (1909–93) won fame by going the wrong way. Riegels, playing center for the University of California in the 1929 Rose Bowl, took off in the right direction on recovering a Georgia Tech fumble, but after spinning away from tacklers, he turned and ran 67 yards toward his own goal line before an alert teammate stopped him and Georgia Tech players tackled him on the one-yard line. California tried to punt out from that terrible field position, but Georgia Tech blocked the punt for a safety

and edged ahead 2–0. Both teams went on to score a touchdown (California scoring an extra point as well), but Georgia Tech's two-point safety proved to be their margin of victory.

wuzzy. A good example of how the English have fractured French over the centuries is the London teenage slang *wuzzy*, for "a girl." It was coined in the 1960s from the French word for bird (*bird* being English slang for "girl"), which is *oiseau*.

Wyatt Earp. A fabled gunfighter; after Wyatt Barry Stapp Earp (1848–1929), most famous for his part in the 1879 gunfight at the O.K. Corral in Tombstone, Arizona. Considered quick on the draw (from a leather-lined, waxed coat pocket), Earp was never bested and died quietly in his sleep, one of the two legendary western gunfighters who definitely didn't meet a violent end (Bat Masterson was the other).

Wyoming. *Wyoming* comes from the Algonquian *Mache-weaming*, meaning "place of the big flats," actually a west Pennsylvania valley where a pre-Revolutionary Indian massacre had occurred that was celebrated in the popular sentimental poem "Gertrude of Wyoming." It became the name of several U.S. counties and in 1890 that great name-giver Congressman James M. Ashley bestowed it upon our 44th state ("The Equality State") because it was "a beautiful name," never thinking that "place of the big flats" hardly suited this mountainous western state.

X

X. The 24th letter in our alphabet represents the 14th letter of the Greek alphabet, *xi*. The Romans used *X* to denote the number 10 and *x* in mathematics generally means “an unknown quantity.” One theory holds that the *X* stands for a kiss because it originally represented a highly stylized picture of two mouths touching—*x*. Furthermore, in early times illiterates often signed documents with a St. Andrew’s cross of *X* and kissed that *X* to show their good faith (as they did with any cross or the Bible), which reinforced the association. But these explanations may be folk etymology, as may the story that mathematically the *X* is a “multiplier”—in this case of love and delight.

Xanthippe. Legend paints Socrates’ wife Xanthippe as the classic shrew and her name has become proverbial for a quarrelsome, nagging, shrewish woman. In *The Taming of the Shrew* Shakespeare writes: “Be she as foul as was Florentius’ love,/ As old as Sibyl, and as curst and shrewd/ As Socrates’ Xanthippe, or a worse,/ She moves me not.” The gossips in Athens talked much of Xanthippe’s terrible temper and she may have literally driven Socrates out into the open and his marketplace discussions. But then Socrates may have been a difficult husband, and by most accounts is said to have been unusually ugly and uncouth in appearance. Xenophon writes that Xanthippe’s sterling qualities were recognized by the philosopher, and various historians, including Zeller in his *Vorfrage and Abhandlungen* (1875), argue that she has been much maligned, that Socrates was so unconventional as to tax the patience of any woman, as indeed would any man convinced that he has a religious mission on earth. See HENPECKED.

Xanthos. Xanthos or Xanthus of Lydia was one of the *logographi*, the early Greek chroniclers who were the predecessors of true historians. The name takes on a different meaning in Henry Miller’s *Tropic of Capricorn* (1939), when he writes: “. . . I felt alone in the world . . . When I say that I was at Far Rockaway [a popular beach resort town at the time in New York City’s Queens County] I mean that I was standing at the end of the earth, at a place called Xanthos, if there be such a place, and surely there ought to be a word like this to express

no place at all . . . I used the word Xanthos before. I don’t know whether there is a Xanthos or not, and I really don’t care one way or another, but there must be a place in the world, perhaps in the Grecian islands, where you come to the end of the known world and you are thoroughly alone and yet you are not frightened of it but rejoice, because at this dropping off place you can feel the old ancestral world which is eternally young and new and fecundating. You stand there, wherever the place is, like a newly hatched chick beside its eggshell. This place is Xanthos, or as it happened in my case, Far Rockaway.” Miller’s coinages (new meanings for both *Xanthos* and *Far Rockaway*) are recorded here for the first time in any dictionary; it seems likely that he had read of the Greek chronicler Xanthos and forgotten him, but there is no absolute proof of this.

Xanthus. In the *Iliad*, Achilles’ immortal horse Xanthus, who takes his name from the Greek for “reddish gold,” weeps when Achilles’ gentle friend Patroclus, who had taken Achilles’ place on the battlefield, is killed by Hector while leading the Myrmidons into battle. When Achilles reprimands him for leaving Patroclus on the field of battle, Xanthus reproachfully tells his master that he will soon die, through no fault of his horse but by the decree of inexorable destiny. It is not likely that Xanthus gave his name to the Xanthus River, the ancient name of the Scamander. The river was probably called Xanthus because legend held that it colored the fleece of sheep washed in its waters a reddish gold. See PERITAS AND BUCEPHELA.

x as a baseball symbol. The letter *x* is used as an English language symbol in many ways, including baseball scoring. When an unusual or extraordinary play occurs in a baseball game, the scorer marks it on his scorecard with an *x*.

xat. This familiar crossword puzzle and Scrabble word hails from the northwestern U.S. It is a Haida Indian word for the carved totem pole of many North American Indian tribes.

x-chaser. British naval slang since about 1910 for an officer with high qualifications, especially as to his scientific education. The *x* in the phrase is “the *x* which figures so disturbingly in mathematics,” according to one slang authority.

xebec. Xebec is a small three-masted vessel once used by pirates on the Mediterranean. Also called zebec, or chebec, and deriving ultimately from the Arabic word *shabbak*, the vessel is today used to a small extent in commerce.

xeme. The xeme (pronounced “zem”) is the fork-tailed arctic gull familiar to maritime explorers and adventurers. It was first observed in Greenland by a British mariner in 1832.

xenia. Xenia were the gifts, usually delicacies from the table, that subjects in the Middle Ages presented to their prince when he passed through their estates. The Romans and Greeks had a similar custom, offering xenia to guests and strangers passing by, and the word, in fact, derives from the Greek for “guest or stranger.” The singular is *xenium*.

Xenocratic. The Greek philosopher Xenocrates (396–314 B. C.) was not a great thinker, but this disciple of Plato was of a noble character and led an ascetic life, his Xenocratic ways an example to all. It is said that even the famed courtesan Lais could not tempt him.

xenophobia. Meaning an unreasonable fear or hatred of anyone or anything foreign or strange, *xenophobia* derives from *xeno*, a learned borrowing from Greek meaning “alien” or “strange,” and *phobia*, fear. The word is a relatively new word, first recorded in 1912.

xenotine. When this mineral was discovered it was thought to be a new metal, but that thought proved to be in vain. Thus it was named, a short time later in 1832, from the Greek word for “empty, vain,” in reference to the dashed hopes of its discoverer.

Xer. See GENERATION X.

Xerox. U.S. inventor Chester Carlson invented the Xerox machine in 1938 and *Xerox* remains a trademark of the company that makes it, its name deriving from *xero*, a learned borrowing from the Greek for “dry,” and *graph*, an element from the Greek meaning “drawn, written.” Inventor Carlson became a multimillionaire from royalties on his dry copier, the rights to which he sold to what is now the Xerox Corporation in 1947. See PHOTOSTAT.

Xerxes’ tears. The Persian conqueror Xerxes I was a despot with a great heart, according to one legend. When he was about to invade Greece he is said to have reviewed his huge army and wept at the thought of the slaughter about to take place, saying sadly, “Of all this multitude who knows how many will return?” *Xerxes’ tears* came to mean a commander’s concern for the lives of his troops.

Xipe. Here in the Americas gardeners might do better to erect shrines to Xipe than to Saint Fiacre. Xipe (pronounced

she-pay) was the Aztec god of sowing and planting. Another name for this patron saint of gardeners is *Xipe Totec*. See also ADAM’S PROFESSION.

XIT. A 3-million-acre Texas ranch in the Panhandle. It was started by 10 Chicago investors in the 1870s (thus the initials XIT, “Ten in Texas”), but went out of business in 1901.

X marks the spot. Now a catchphrase applied to any triviality, *X marks the spot* began life as a common caption under crime photographs in newspapers indicating the exact spot where the murder, etc., occurred. The expression dates back to England early in this century.

Xmas. *Xmas* is neither an abbreviation nor a “vulgar commercial invention” of recent vintage. *X* has been used to symbolize the syllable “Christ” in English since at least 1100, when it was recorded in *Xianity*, for “Christianity.” The Old English word for Christian recorded in the 12th-century *Anglo-Saxon Chronicle* begins with an *X*, and the word *Xmas* itself was used as early as 1551. The Greek word that gives us the English word Christ begins with the letter *chi*, or *X*, leading some writers to believe that the *X* in *Xmas* symbolized the cross.

X rated. In 1968 the Motion Picture Association of America began to rate films as a guide for moviegoers. Their system ranged from *G*, “general, all ages permitted,” to *X*, “restricted, no one under 17 admitted.” The *X* rating referred to explicit sex and violence in a movie and became so common that *x-rated* almost immediately became a term for anything pornographic or sexy, from a film to a book or even a person!

X-ray. See ROENTGEN RAY.

XX. *XX* was slang for a twenty-dollar bill back in the 19th century. The term seems to have originated in about 1850, a variation on it being the *double X*.

XXX. Bottles marked with *Xs*, for “booze in cartoons,” have their basis in reality. Nineteenth-century British breweries marked bottles *X*, *XX*, or *XXX* to indicate alcoholic content—the more *Xs*, the more kick. See *x* for *XXXs* used for kisses. Another use of three *x*’s that isn’t noted in any dictionary, William A. Strockbine writes that he was “told years ago by the redoubtable Ronald W. Siegal, formerly of the State University of New York at Stony Brook, that *XXX* (thirty) was used by telegraphers to indicate the end of a transmission because that combination of letters could not be found in any word and was easily recognized for its symmetry. It could be interspersed in the transmission of a string of messages that might not otherwise be so clearly separated.”

xylophage. Any *xylophage*, which takes its name from the Greek *xylo*, “wood,” and *phagein*, “to eat,” is a wood-eating insect, such as a termite. The adjective *xylophagous* means “feeding on wood” and usually refers to the teredo worm and other crustaceans, mollusks, and fungi that perforate or destroy timber.

xylophone. *Xylophone*, the word first recorded in 1866, is composed of the Greek *xylo*, “wooden,” plus *phone*, “voice or

sound,” the “wood,” of course, referring to its flat wooden bars, which are played by a small mallet. When tubular resonators are attached to these bars the instrument is called a marimba.

xyst. A xyst (pronounced *zist*) is a garden walk planted with trees, or a covered portico in a garden used as a promenade. Both were common in Roman villas and take their name from the Latin *xystus*, “garden terrace.”

X.Y.Z. There’s a story that back in the late 19th century a writer using the pseudonym X.Y.Z. frequently advertised in the *Times* of London offering to do any kind of literary work for

low wages. As a result his pen name became synonymous for “a hack of all work.”

XYZ affair. In 1797 President John Adams sent three representatives to France to negotiate a maritime treaty that would prevent French pirates from attacking American ships. But three of Talleyrand’s agents (identified only as X, Y, and Z) intercepted them and demanded a \$1-million “loan” for France before they would be received by the French government. The agents refused to negotiate on these terms and returned home. One of them, Charles Cotesworth Pinckney, allegedly uttered the slogan “Millions for defense, sir, but not one cent for tribute.” Pinckney, however, always claimed he only said: “No, no, no! Not a single sixpence!”

Y

Y. Our letter *y* can be traced back to the Greek alphabet, the Greeks having added it to the Phoenician alphabet. It is called the Samian letter after Pythagoras (the Samian Sage, born at Samos in the sixth century B.C.) because the Greek philosopher employed the letter (also called the Letter of Pythagoras) as his emblem of the straight and narrow of virtue, “which is one, but, if once deviated from, the farther the lines are extended the wider becomes the breach.”

yacht. Yachts were originally pirate ships. This pleasure craft takes its name from a type of speedy German pirate ship of the 16th century called the *Jacht* that was common on the North Sea. British royalty found that this type of vessel made excellent pleasure boats a century later, spelling the German word *Yaught*, which finally became *yacht*.

yackety yack. The British used the imitative word *yack* for “a snapping sound” as early as 1861 and were soon after using it to mean “to talk about.” It took almost a century before Americans began to use *yack* and then *yackety yack* as terms for incessant talk or laughter.

yada, yada, yada. A catchphrase (qv) popularized by the television show *Seinfeld*. Yada, yada, yada is akin to blah, blah, blah in meaning and usage: “We exchanged greetings, went to lunch, yada, yada, yada, and signed the deal.”

yahoo. Bestial or brutish people are called yahoos, after the Yahoos in Jonathan Swift’s satire *Gulliver’s Travels*, nauseating hateful beasts in human form who prefer “nastiness and dirt.” Eric Partridge suggested that Swift may have coined the word after *yah!* and *who?*—“*yah!* being typical of coarse ignorance and brutality, and *who?* of defiance.” Other possibilities are (1) the name of “the Cariban tribe the Yahos, on the coast near the borderline of Brazil and French Guiana”; (2) “the name of a degraded East African tribe often mentioned by early travelers”; and (3) “a learned pun by Swift on

a Greek word sounding like *yahoo* that meant sleepy or dopey.”

yak. See POLO.

yakka. Only a handful of Australian Aboriginal words have come into the English language. One such word is *yakka*, meaning “work,” a term frequently used in Australia. *Hard yakka* means hard manual labor. Other Aboriginal words heard in the Land Down Under include: *yabber*, “to talk”; *cooee*, “within calling distance in the bush”; *woomera*, “a wooden stick or club”; *dingo*, “a wild dog domesticated by the Aborigines”; and many place names, including *Canberra*, the capital’s name, which is said to mean “Women’s Breasts,” after two local hills.

Yale blue; Yale lock. Yale blue, a reddish blue, takes its name from the Yale University colors. It is the royal blue of the Egyptian Rameses dynasty, also called Rameses. *Yale lock* has no connection with the school. American inventor Linnus Yale (1821–68) invented numerous locks, including the trademarked key type with a revolving barrel that bears his name. Linnus founded a company to manufacture locks at Stamford, Connecticut the same year that he died.

Yale University. Yale University, ranking after Harvard and William and Mary as the third oldest institution of higher education in the United States, is named for English merchant Elihu Yale (1649–1721). Founded in 1701 as the Collegiate School of Saybrook, Connecticut, the school was named Yale College at its 1718 Commencement, held in the first college building at New Haven. It became a university in 1887. Yale might have been called Mather University, for Cotton Mather suggested naming it so in return for his financial support, but Elihu Yale won out when he donated a cargo of gifts, books, and various goods that brought about 562 pounds when sold. Yale had been born in Boston in 1649, but returned with his family to England three years later. He served with the British East India Company, and as governor

of Fort St. George in India until scandals in his administration led to his removal in 1692.

y'all. See YOU-ALL.

yam. *Yam* can be traced back to the Senegal *nyami*, meaning "to eat," and was introduced to America via the Gullah dialect *njam*, meaning the same, in 1676. The word, however, had come into European use long before this. See also DIOSCOREA.

yank. *Yank*, to pull abruptly or vigorously, is of uncertain origin. A U.S. invention, probably originating in New England early in the 19th century and much used since then, it has nothing to do with the word YANKEE for a New Englander. It may be akin to the English dialect word *yerk*, a variant of *jerk*, but there is no proof of this.

yank. Bird watchers named this Carolinian bird (*Sitta carolinensis*) the yank because its blue coat suggested the Yankee (Union) Civil War uniform. It is also known as the nuthatch.

Yankee. The source of *Yankee* has long been disputed and its origin is still uncertain, despite all the research devoted to it. Candidates, among many, have included a slave named Yankee offered for sale in 1725, a Dutch sea captain named Yanky, the Yankos Indians, the Dutch name Janke ("Johnny"), which the Dutch applied to the English, and an Indian mispronunciation (*Yengees*) of the word *English*. The most popular explanation, also unproved, is that Yankee comes from *Jan Kees*, a contemptuous Flemish and German nickname for the Dutch that the English first applied to the Dutch in the New World. In any case, *Yankee* seems to have been first applied to Americans by British soldiers serving under General James Wolfe in the French and Indian War prior to 1758. A letter written by Wolfe himself in that year uses the word as a contemptuous nickname for Americans: "My posts are not so fortified that I can afford you two companies of Yankees, and the more as they are better for ranging and scouting than either work or vigilance . . . [they] are in general the dirtiest most contemptible cowardly dogs that you can conceive. There is no depending on them in action. They fall down dead in their own dirt and desert by battalions, officers and all. Such rascals as those are rather an encumbrance than any real strength to an army." Wolfe's low opinion of the Americans and further contemptuous use of *Yankee* is seen in a 1775 chronicle, which is also notable as an early description of the practice of "mooning": "They [British soldiers] abused the watch-men on duty, and the young children of Boston by the wayside, making mouths at them, calling them Yankeys, shewing their posteriors, and clapping their hands thereon."

It wasn't until the Battle of Lexington, the first battle of the Revolution in 1775, that Americans began applying the nickname *Yankee* to themselves and making it respectable. Soon after, the process of dignification began and the story about the Yankos Indians was invented. In this tale a mythical tribe of Massachusetts Indians are said to have been defeated by a band of valorous New Englanders, the defeated Yankos so admiring the bravery of their victorious adversaries that they gave them their name, *Yankos*, which meant "Invincibles" and was soon corrupted to *Yankees!* *Yankee* has been an

admirable or contemptuous nickname for Americans ever since, depending by whom and in what context it is used. At any rate, *Yankee* described a New Englander by the middle 18th century and was used by the British to designate any American during the Revolution, the most notable example found in the derisive song *Yankee Doodle*. Nowadays the British still use the word for an American, southerners use it for northerners (see DAMN YANKEE) and northerners use it for New Englanders, who, despite its early history, remain proud of the designation.

Yankee cheesebox on a raft. A widespread derisive description of the U.S. armored warship the *Monitor*, which fought the famous Civil War battle against the Confederate *Merrimac*. The *Monitor* was also called a cheesebox upon a plank.

Yankee Clipper. One of sport's best-known nicknames, *Yankee Clipper* honors New York Yankee centerfielder Joe DiMaggio, one of baseball's greatest players, who hit safely in 56 consecutive games, a record that still stands. The popular song "Joltin' Joe DiMaggio" was written in his honor. DiMaggio was also called the Yankee Clipper both for the way he "clipped" the ball and for his grace as a fielder, moving as effortlessly as a clipper ship (or possibly the popular Yankee Clipper plane of the 1930s) across the field to make even the hard catches seem easy.

Yankee Doodle. Legend has it that during the French and Indian War, the shabbily dressed troops of Colonel Thomas Fitch of Norfolk, Connecticut, inspired a British army surgeon with musical talents, a Dr. Sheckburgh or Shackburg, to write the derisive song "Yankee Doodle." The story is recounted in the *Federal Writer's Project Connecticut* (1938): "According to local tradition, Elizabeth Fitch, on leaving the house to bid goodbye to her brother [Colonel Fitch], was dismayed by the ill-sorted costumes of the 'cavalry.' Exclaiming, 'You must have uniforms of some kind,' she ran into the chicken yard, and returned with a handful of feathers announcing, 'Soldiers should wear plumes,' and directed each soldier to put a feather in his cap. When Sheckburgh saw Fitch's men arriving at Fort Crailo, Rensselaer, New York, he is reputed to have exclaimed, 'Now stab my vitals, they're macaronis!' sarcastically applying the slang of the day for fop, or dandy, and proceeded to write the song, which instantly caught popular fancy." There is no firm proof of this theory about the origin of the song, which ironically came to be a popular song of patriot troops during the Revolutionary War. There are said to be hundreds of verses to the song. Before the Civil War, the tune, identified with New England, was often hissed off the stage in the South. See FROZEN YANKEE DOODLE.

"Yankee Doodle Dandy"; "Over There." These patriotic songs were both written by George M. Cohan (1878–1942) to support America and her allies in World War I. Both the "Over There" lyrics ("The Yanks are coming, the Yanks are coming") and "Yankee Doodle Dandy" lyrics ("a real live nephew of my Uncle Sam, born on the Fourth of July . . .") have been used as titles for novels and movies, most recently the film *Born on the Fourth of July*. Enrico Caruso lent his great tenor voice to an early recording of "Over There." For more patriotic songs see GOD BLESS AMERICA.

Yankee Notion State. See quote from the *Hartford Courant* (October 29, 1904): “The Yankee Notion State, as Connecticut has often been called, earned its title in the early part of the 19th century, when there was a great impetus given to the manufacture of almost all sorts of implements for the farm and the household.”

Yankee peddler. “The whole race of Yankee Peddlers,” wrote a British observer of American character in 1833, “are proverbial for dishonesty. They go forth annually in the thousands to lie, cog, cheat, swindle; in short to get possession of their neighbor’s property in any manner it can be done with impunity.” In fact, the name “damn Yankee,” coined long before the Civil War, probably came from Yankee peddlers who worked the rural South. Yankee peddlers were known as far away as Europe for their trickery and sharpness, especially for their wooden nutmegs (it took an expert wood carver a full day to make just *one* in a recent experiment) when these kernals of an evergreen tree cultivated in the Spice Islands sold for less than a penny apiece. But whether carved wooden nutmegs ever existed (no one has yet turned up an authentic one), many country people did believe that Yankee peddlers sold them, along with carved wooden hams painted pink (“Basswood Hams”), carved cigars, and wooden pumpkin seeds. Connecticut is still called the Nutmeg State for this reason, and the warning *don’t take any wooden nutmegs* probably influenced the coining of the still current phrase DON’T TAKE ANY WOODEN NICKELS. An old rhyme went: “There is in Yankeeland / a class of men called tin-peddlers, / A shrewd, sarcastic band / Of busy meddlers.” And an old joke went: “Know how to revive a Yankee peddler when he drowns?” “Just turn out his pockets!” But though they were well-versed in chicanery and the Yankee art of giving people “a steer in the wrong direction,” as P. T. Barnum put it, Yankee peddlers helped settle America, carrying the materials of civilization to sparsely inhabited regions. Wherever a man swung an ax in the wilderness, an old saying went, a Yankee peddler would show up in the clearing the next day.

yap. *Yap* is an echoic word that first meant only the barking of a small dog. The word is first recorded in this sense in 1603, and it apparently took over two centuries before *yapping* was applied to a person who yaps as well as a dog that yaps. In the process *yap* also became American slang for the mouth, as in *shut your yap*, recorded in about 1900, and American slang for a stupid person. The Yap Islands in the West Pacific, noted for the stone money long used by the Micronesians there, are not named from the English *yap*, taking their name instead from a native language.

yapp. A book binding featuring a cover with soft edges that project beyond and fold over the edges of the pages to protect them. Invented by London bookseller William Yapp about 1880 for Bibles and prayer books, it also goes by the terms *circuit binding*, *divinity circuit binding*, and *yapp binding*. *Yapp* has lost its capital over the years.

Yarborough. Little is known about Charles Anderson Worsley, the second earl of Yarborough, aside from the fact that he was a knowledgeable card player and made himself a small for-

tune, giving 1,000 to 1 odds that his bridge-playing companions held no cards higher than a nine. The odds were with the English lord, for the chances of drawing such a 13-card hand are actually 1,827 to 1 against. Yarborough, born in the early 19th century, died in 1897, an old and probably rich man. Since his wagers, a *Yarborough* has been any hand in whist or bridge with no card higher than a nine, although the term also means a hand in which there are no trumps.

yardarm. A ship’s yard (from the Anglo-Saxon *givid*) is a long, thin spar hung crosswise to the mast to support a square sail. The yardarm is simply one arm or part of this yard.

yare. Properly pronounced to rhyme with *care* (though one often hears it pronounced to rhyme with *car*), *yare* is usually applied to a sailing vessel and means shipshape, ready, deriving from the Old English *gearu* meaning the same. “Our ship is tyte and yare,” wrote Shakespeare in *The Tempest*. Katharine Hepburn pronounced it to rhyme with *car* in *Philadelphia Story*.

yarmulke. *Yarmulke*, the skullcap worn by Jewish males, is said by most dictionaries to be a Yiddish word that derives from a Tartar word, which in turn comes from the Polish word for skullcap. However, in an article published in the *Hebrew Union College Annual* (V.26, 1955) Dr. W. Gunther Plaut concludes that *yarmulke* derives ultimately “from the Latin *almucia* or *armucella*, the amice (vestment) worn by the priest.” The theory that *yarmulke* derives from a Hebrew word meaning “awe of the king” is a nice story but only folklore. The skullcap is worn, of course, as a sign of respect before God, this a custom not only among Jews but practiced by many people of the East. Hebrew scholar Professor Howard Marblestone advises me that the *yarmulke* etymology he finds most convincing is found in a Hebrew book, *The Origin of Hebrew Words* by Abraham Stahl (Tel Aviv, 1999), which he translates here: “The word originates in the Turkish *yagmurluk*, ‘rain coat,’ from *yagmur*, ‘rain,’ with the suffix *luk*, indicating pertaining to. It passed via the Balkans to the Slavic and Romance languages in various senses, such as coat or hat. The Jews took it over, apparently from Ukrainian or White Russian, and applied it to the covering they wear on their heads.”

yarn. To *spin a yarn* was originally naval slang dating back to the early 19th century for “to tell a long, often incredible story.” Its obvious source is the yarn lofts ashore where yarn was spun to supply ships with rope, work that took a long time and in which the threads of a rope were interwoven like the elements of a good story. Eventually *yarn* became a synonym for a story or tale itself.

yarrow. A plant with whitish flowers, yarrow has often been used as a medicine and love tonic. According to one old superstition, the drinking of such potions insured “seven years love for wedded couples.” Strictly speaking, *Achillea millefolium* is an herb, named for the legendary Achilles, who is supposed to have used one species to heal his wounds. It is sometimes called “Old Man’s Pepper,” to which family it does not belong, although it may make old men peppery. American folklore gives us the following advice concerning the plant: “Pick a sprig of yarrow, put the stem up your nose and say: *Yarrow, yarrow, if he*

loves me and I love he, / A drop of blood I'd wish to see. If blood appears, it shows that you are loved." Yarrow is called the carpenter's herb in France, because it was once widely used there to heal cuts made by carpenters' tools.

yashmak. In case you've been looking for the word for the white or black double veil used to cover the whole face of Muslim women in public, or to hang just below their eyes, this is that word. *Yashmak*, from the Arabic *yashmaq*, for the same, isn't attested to in English until 1844. The first English writer to record the word noted that "the yashmak . . . is not a mere semi-transparent veil, but rather a good substantial petticoat applied to the face." *Veil*, first recorded in 1276, comes ultimately from the Latin *velum* for "covering."

Yat. A dialect heard in sections of New Orleans, Louisiana, said to take its name from the pronunciation of the greeting "What are you?": *What yat*. *Yat* has some similarities with Brooklynese, or New Yorkese.

yawp. Walt Whitman famously wrote that he would "sound my barbaric yawp over the roofs of the world." *Yawp* refers to a sharp cry, a bark, a yelp; or loud, coarse talk. *Yawp* is sometimes used as the cry of a gull lifting its head and letting loose, sqwarking at the universe. Gulls often make a cacophony of sounds while floating in the water or flying high: yawping, barking, yelping, mewling, even cawing like crows.

Yazoo fraud; Yazoo claims; Yazoo purchase. Expressions pertaining to Georgia's 1795 sale of lands near the Yazoo River to four crooked companies who profited immensely from their resale to the U.S. government.

yclept. *Yclept* is the only survivor, and a weary one at that, of many words formed with the prefix *y* in Middle English. *Y* was simply used to make past participles, and so *yclest* was blessed, *yclad* was clothed, etc. *Yclept*, the last of these irregular English verb forms is just *y* attached to the old verb *clepe*, "call" and means "called (so-and-so), named, styled." It is abundant in the works of many Elizabethan poets and is occasionally still used humorously, when the writer knows he is affecting a literary archaism. John Taylor the Water Poet has a poem on birds *yclept* "Wheat ears" (1653):

The name of Wheat ears on them is yclep'd
Because they come when wheat is yearly reaped.

ye; ye olde gift shoppe. *Ye* served in the past as both the plural of "you" and as a mark of respect when talking to a single person, but has never meant "your" in English. The "Ye's" on those signs adorning half-timbered Tudor-style establishments that read *Ye Olde Gifte Shoppe*, *Ye Olde Hot Dogge House*, etc., should actually be pronounced "the," not "ye," for that was what they meant in *Ye Olde Englishe* times. The letter *Y* in "ye" really is not a *Y* but a "thorn," the Anglo-Saxon symbol for "th." This Anglo-Saxon diphthong was originally written something like a *P*, but careless writers and sign painters in later years left it partially open at the side so that it came to resemble a *Y*, and early printers printed it as such. The "ye" in old manuscripts and signs was never pronounced as anything but "the" until modern times.

yeah. *Yeah* is not a modern corruption of "yes" as many people believe. It is an old form of the affirmative still used in England's East Anglia dialect.

yeah, yeah. It is said that about 30 years ago English philosopher Stuart Hampshire observed that "in all languages a double negative made a positive, but not the reverse," and American philosopher Sidney Morganbesser was heard to reply "Yeah, yeah." Another good reply would have been the current sarcasm, "*Yeah, right.*" A *no-no*, something impermissible, is also an exception to Professor Hampshire's rule.

yegg. *Yegg* can mean a safecracker, an itinerant burglar, a thief, or an insignificant criminal. The most common explanation has the word deriving from the surname of John Yegg, a late 19th-century American safe-blower whose life remains a blank. The word first appeared in print as *yeggmen*, "tramps," in 1901. Other suggestions for its source are the German *Jager*, meaning "hunter"; *yekk*, a Chinese dialect word once used in San Francisco's Chinatown that means beggar; and the Scottish and English dialect *yark* or *yek*, "to break."

ye gods and little fishes! An old-fashioned, humorous U.S. expletive dating back to the 1820s and rarely heard today. It is famously used by the Tallulah Bankhead character in Alfred Hitchcock's film *Lifeboat*.

yellow azalea. A yellow poisonous "yolk of egg" azalea that poisoned the troops of Cyrus the Younger in his expedition along the seacoast. The expedition is recounted in the *Anabasis* of Xenophon. See RHODODENDRON.

yellowbacks. See GREENBACKS.

yellow-dog contract. The yellow dog, generally considered to be a cowardly common cur or mongrel, has long been a symbol of utter worthlessness in America. The term *yellow dog* has been used in expressions of contempt since at least 1833, when it is first so recorded, and toward the late 19th century it began to be heard in the term *yellow-dog contract*, a contract in which company employees do not or cannot join the union. Though outlawed by the Wagner Act in 1935, yellow-dog contracts still persist.

yellow-dog Democrat. A term applied to loyal Democrats, so named, according to the old story, because they would vote for a yellow dog before voting for any Republican. The designation dates back to post-Civil War days.

yellowhammer. This bird is named not for any hammer but from the earlier *yellow-ham* (Old English *geolu*, "yellow" plus *hama* "covering"), in reference to its bright yellow markings. The European yellow bunting, as it is also called, was once believed to be cursed because it fluttered about the Cross and was stained by Christ's blood, which colored its plumage and marked its eggs with red forever after. In times past children were encouraged to destroy its "cursed eggs."

yellow journalism. *Yellow* has been used to describe sensational books and newspapers in the U.S. since 1846, the "yellow"

referring to the cheap yellow covers some sensational books were wrapped in. *Yellow journalism* was first used in 1898, when the phrase was applied to the sensational stories that appeared in Hearst's *New York Evening Journal* and Pulitzer's *New York World* about Spanish atrocities in Cuba. Hearst's cartoon character the "Yellow Kid" could also have figured in the coining.

yellow pages. The classified ad sections in telephone books which are printed on yellow paper in contrast to the white pages of the rest of the phone book, have been so called since 1906 when the Michigan State Telephone Company of Detroit first included such pages in its directory. *Yellow pages* has led to such recent coinages as the *Silver Pages*, telephone numbers of particular interest to older people or "senior citizens." *Yellow pages* used to be a trademark of the Bell Companies.

yellow peril. Late in the 19th century fears arose in Germany that China and Japan would vastly increase in population within a few decades and would invade nations all over the globe, massacring the inhabitants. These irrational fears spread throughout Europe and America during the 1890s under the name *Yellow Peril*.

yellow rose of Texas. The yellow rose of Texas, which is part of the state's folklore and even has a famous song written about it, actually originated in the 1830s on a farm in New York City near the present-day Pennsylvania Station. There a lawyer named George Harrison found it as a seedling growing among other roses on his property and began cultivating it. Settlers soon took the yellow rose west with them, and legend has it that Texans finally claimed it as their own when Mexican general Santa Anna, the villain of the Alamo, "was distracted by a beautiful woman with yellow roses in her hair." We have this nice story on the authority of Stephen Scanniello, rosarian of the Crawford Rose Garden in the New York Botanical Garden, who told it to the *New York Times* (6/19/92). See also BLUSHING THIGH OF AN AROUSED NYMPH.

Yellowstone National Park. The *Yellowstone* here is an anglicization of the French *roche jaune*, "yellow rock," which was probably a translation of the Minnataree Indian name *Mitsiad-azi*, meaning the same.

Yemen. This republic in southwest Arabia takes its name from the Arabic for "to the right," that is, to the right of Mecca, the holy city in Arabia that is the birthplace of Muhammad. In ancient times it was called *Arabia Felix*, due to a mistranslation of *Yemen* by Ptolemy.

yen. The *yen* meaning an intense craving and the *yen* that is a Japanese monetary unit could both derive from Chinese words. The *yen* for a craving possibly comes from the Pekinese *yen*, "opium" (though it may be an alteration of the noun *yearn* or *yearning*), and is first recorded in America toward the beginning of the 20th century. The *yen* that has been the Japanese monetary unit since 1875 derives from the Chinese *yuan*, "a circle or round object," hence a coin.

yenta. Yiddish for a gossipy woman who talks too much, who talks nonstop relentlessly and can't keep a secret, *yenta*

may derive from the name of some unknown blabbermouth called Yenta. The proper name Yenta for a woman probably derives from the Italian *gentile*. A talkative character named Yenta Talabenta in a play by Sholom Aleichem popularized this term.

yeoman; yeoman service. The word *yeoman* is most likely a shortening of young man. A yeoman was originally a member of a former class of small freeholding farmers in England. Weekley says such landowners were trusted to attendants and fighting men "of lower rank, the order being knight, squire, yeoman, knave." Today a yeoman can be anything from a ceremonial yeoman of the guard (a Beefeater) attending the British sovereign to a petty officer performing chiefly clerical tasks in the U.S. Navy. The word figures in several phrases, including yeoman service, used by Shakespeare in *Hamlet* and meaning loyal, effective, reliable service.

yeomanette. A name given to female sailors during World War I. The last of these women was Charlotte Winters who died in 2007, age 109. They much preferred the designation *yeoman*, as the men were called, finding *yeomanette* a demeaning term.

Yerba Buena. An old name for San Francisco; so named from the Spanish for "good grass" because the area had excellent pasturage for animals.

Yersinia pestis. The ferocious *Yersinia pestis* bacillus, which causes bubonic plague or the Black Death, as it is known throughout history, is among the oldest living things on Earth, dating back three thousand billion years, 30 times older than the oldest mammal. Dr. Alexandre Emile Jean Yersin, a brilliant if unconventional Swiss-born French bacteriologist investigating a plague epidemic in Hong Kong, discovered the rod-shaped plague organism in the swellings of victims and named it *Bacillus pestis*. At about the same time in the same place the Japanese microbiologist Dr. Shibasaburo Kitasato also isolated the plague agent, and he named it *Pastuerella pestis* after Louis Pasteur, which it was called until 1970, when it was officially named *Yersinia pestis* after Dr. Yersin. Yersin's discovery, it was determined, preceded Kitasato's by several months but had been published in a French research journal less widely read than the English journal in which Kitasato had published his findings. Unfortunately, he did not live to see the bacillus officially named in his honor, dying in 1943 at the age of 80.

yes, we have no bananas. Originally, this was the title of a song written by Americans Frank Silver and Irving Cohen in 1923. One story has the team borrowing the first line from wordsmith Tad Dorgan and creating the song with the refrain "Yes, we have no bananas, / We have no bananas today." Another more dramatic account has Silver getting the idea for the song when he heard a Greek fruit peddler yell up to a woman at a New York City tenement window, "Yes, we have no bananas!" Whatever the case, the song became immensely popular, and, according to H. L. Mencken, *yes, we have no bananas* became the most widely used catchphrase of the 1920s, even spreading across the sea to England. In his book *The Illiterate Digest* (1924) Will Rogers wrote, "I would rather have been the Author of that Banana Masterpiece than the author of the Constitution of the United States."

yes-man. In a 1913 cartoon the great sports cartoonist T. A. Dorgan depicted a newspaper editor and his assistants looking over sheets fresh from the press. The assistants, all praising the edition, are labeled *yes-men*, leading many authorities to credit TAD with the coinage. The expression quickly became a name for assistant directors in Hollywood (Wilson Mizner's "land where nobody noes"), *Variety* labeling one unfortunate director "super-yes-man," and was well known enough in general speech for *Yes-Man's Land* to be used as the title for a book in 1929. Another theory is that *yes-man* may be of German origin, a translation of *Jaherr*, "a compliant person, one unable to say no," which was used by a German author who wrote about America in 1877. In any case, Dorgan certainly popularized the expression.

yesteryear. The *OED* advises that *yesteryear*, "last year," or "time past," was coined in 1870 by British painter and poet Dante Gabriel Rossetti (1828–82) as an English equivalent for the French word *antan* (from Latin *ante annum*) in a poem of François Villon's. This resulted in the famous translated line in Villon's poem "But where are the snows of yesteryear?" However, *yesterday*, *yestereven*, *yestermorning*, and *yesternight* were all recorded long before Rossetti's *yesteryear*. It is said that Rossetti practiced his poetic craft by playing the once popular versifying game bouts-rimes (rhymes without lines) in which lines are composed for certain given rhymes. He could write a sonnet from such lines in five to eight minutes.

yet I am learning. Two centuries ago Isaac D'Israeli wrote of the artist Michelangelo's outlook on life: "Michelangelo preserved his creative genius even in extreme old age; there is a device said to be invented by him, of an old man represented in a go-cart, with an hourglass upon it: the inscription *Ancora imparo—YET I AM LEARNING!*"

yet is this strength labor and sorrow. See THREE SCORE AND TEN.

ygdrasil. In Scandinavian mythology the *ygdrasil* is the *world tree*, an ash whose roots and branches bind together in heaven, hell, and earth. Sitting in this fabulous tree from which honey drips, are an eagle, a squirrel, and four stags; at its base is a fountain of wonders.

Yiddish; Yinglish. Yiddish, which has contributed many words and expressions to English, is an entirely separate language from Hebrew. The word *Yiddish* is an Anglicized form of the German word *judisch*, "Jewish," referring to a Jewish-German language. Yiddish therefore is an Indo-European language like German and English. Hebrew belongs to the Semitic language family, as does Arabic. *Yinglish* is a blending of *Yiddish* and *English* to make a word.

Yiddish words in English. Among the Yiddish words that have become part of American English are the common kosher, kibitzer, chutzpah, schlemiel, schnook, schmuck, pastrami, matzo, lox, borscht, bagel, blintz, knish, nosh, gelt, mavin, mazeltov, mazuma, megillah, mensch, meshuga, nebbish, schlock, schmaltz, schnozzola, shamus, shekel, yenta, zaftig and many,

many more, some of which are treated at length in these pages. See HEBREW WORDS IN ENGLISH.

yinz. A Pittsburgh expression that means the same as the Southern y'all, as in "Where d' yinz live?"

yippie. A coinage from the initials of the *Youth International Party* that is said to have been coined by Paul Krassner in 1967. It has nothing to do with the much earlier (c. 1920) exclamation of delight of excitement *yippi!*, or for the cowboy cry *yippi-ki-yi-yay*. The *Yippies* were formed to protest the Vietnam War. Outside the Democratic National Convention in Chicago in 1968, they nominated a pig (Pigasus) for president. See YUPPIE.

yippie-ki-yi-yay. A cry of cowboys, perhaps in part suggested by the cry of a coyote. *Yip* for a short high-pitched human cry is first recorded in the West, while *yip* for a dog's bark is recorded as early as 1400 in England.

yips. Also called *golfer's dystonia* this ailment is described in *The Merck Manual* (1997): "In the golf world, a bad case of dystonia is known as the yips. The muscles of the hands and wrists spontaneously contract, making it nearly impossible to putt. What was supposed to be a 3-foot putt can end up as a 15-foot putt when a golfer loses control because of the yips. The famous golfer Ben Hogan was afflicted with the yips; these muscle spasms are partly to blame for ending his career."

y'know. See UH, OH.

Yo. Often used to indicate someone is "present" or "here," especially in answer to a roll call. This widely used U.S. expression is often considered to be recent slang, but it can be traced back to 14th-century England. *Yo* can also be used like *hey*, to get someone's attention, as in "Yo, John." Other times it means "Here I am!" In this last case someone might call "John!" and John would call back, "Yo!"

yob. A young person who is a rude, offensive, and often violent lout is sometimes called a "yob" in Britain and Australia. The term's origin is the word *boy* spelled backward. This process is called back slang. It has produced hundreds of slang words but very few that are commonly spoken. Another more complicated one is *ecilop*, "police," which is often modified to *slop* ("Here come the slop!")

Yogiism. Any saying of Yogi Berra, beloved New York Yankee catcher and later manager and coach of several teams. Of Yogiisms he once said, "I really didn't say everything I said." See CAN'T ANYONE HERE PLAY THE GAME; GOD SHOULD JUST BE ALLOWED TO WATCH THE GAME; GOLDWYNISM; STENGELESE.

yoked. *Yoked* is today a synonym for "mugged." It arose with 19th-century "Jumper Jacks," or muggers, who preyed on seamen, who *yoked* a sailor by grabbing him from behind by the yoke of his tight collar and twisting his neckerchief.

yokel. The English green woodpecker was named the yokel because its call sounds like "yo-KEL, yo-KEL." Toward the

beginning of the 19th century, people in England began calling country bumpkins *yokels* because they lived where the yokels sang.

Yoknapatawpha County. Certainly the most famous sustained fictional setting in American literature, this county was created by William Faulkner and based on Lafayette County in Mississippi. It appears in 14 Faulkner novels and many stories, beginning with *Sartoris* in 1929. The fictional county, according to Don Doyle's excellent *Faulkner's Country: The Historical Roots of Yoknapatawpha County* (2002), takes its name from the Chickasaw Indian word meaning "divided or split apart land." The name *Yoknapatawpha*, in abbreviated form, also survives as the name of a real local river. Faulkner actually drew a map of the county for one of his books on which he indicated that it covered 2,400 square miles, had 6,298 whites and 9,313 blacks, and had as its capital Jefferson (based on Oxford, Miss.). Ernest Hemingway caustically called Faulkner the creator of ONOMATOPOEIA COUNTY.

yonks. A word that may derive from DONKEY'S YEARS, also meaning a very long time, as in "I haven't seen him in yonks." The term was first recorded in the late 1960s and is mainly used by the British.

Yooper; Yoopanes. Someone who lives on the Upper Peninsula of Michigan. The name was born in 1962 when residents there formed the U.P. (Upper Peninsula) Independence Association, their aim to give the Upper Peninsula statehood, and lower Michiganders dubbed them *Yuppies*, which soon became *Yoopers*. *Yoopanes* is the dialect of the Yoopers, which is based somewhat on Finnish, both in phrases like "let's go store" instead of "let's go to the store," and in the substitution of "da" for "the" or "dat" for "that."

York. NEW YORK is named for a duke of York who ruled over York in England. The name *York* itself comes from the Celtic *Eburacon*, "the place of the yew trees." This became the Latin *Eburacum*, but to the Anglo-Saxons who ruled England after the Romans *Eburacum* sounded like *Eoforwic*, their "boar town," and to the Vikings who invaded after them *Eoforwic* sounded like *Iorwik*. Over the years *Iorwik* was shortened to *Iork*, which was finally transliterated into *York*.

Yorkshire pudding. Not a dessert pudding, but an unsweetened baked batter made of flour, salt, eggs, and milk that is often put under roasting meat to catch its drippings. *Yorkshire pudding* honors the county in northern England where it was invented or perfected, its name being first recorded in a 1747 cookbook.

Yosemite. Yosemite Valley and Yosemite National Park are said to take their name from a distortion of the Miwok Indian *uzamaiti* (grizzly bear), a word the Indians never used for the area.

you. See QUAKER.

You ain't heard (seen) nothin' yet! No one has had much luck finding the source of this phrase still commonly used to-

day. It is an Americanism and the title of a 1919 popular song; but probably dates back 50 years or more before that. It was popularized in Al Jolson's movie *The Jazz Singer* (1927) and again in the 1940s in two film biographies of Jolson's life.

you ain't nothin' but a hound dog. See HOUND DOG.

you-all. The plural of "you" in American southern dialect. *You-all* (often pronounced *y'all*) is widely considered the *ne plus ultra* of southern dialect, but this expression, used throughout the South, is much misunderstood. Mainly applied to two or more people, *you-all* can be used when the speaker is addressing one person, but only when the sentence implies plurality. Except for some speakers in the Ozarks and rural Texas, only a ham of a stage southerner would use *you-all* so indiscriminately as to say "That's a pretty dress you-all are wearing." But a southerner might well say "How you-all?"—the question intended to inquire of the health of you and your entire family or group. Further, the inflection of the phrase is all important. When the *you* in *you-all* is accented, as in "You-all must come," this means that the group near the speaker is invited. The contraction of *you-all*, *y'all*, is always used in this plural sense. Recently the American southernism *y'all* (or *yawl*) has been explained, though hardly to the satisfaction of everyone, as a calque (a filling in of an African structure with English material) from the West African second person plural *unu*, which is also used in the American black Gullah dialect. This interesting theory is advanced in a study by Jay Edwards in Hancock's and Decamp's *Pidgins and Creoles* (1972): "In the white plantation English of Louisiana the form *y'all* (semantically *unu*) was probably learned by white children from black mammies and children in familiar domestic situations." In any case, the closest thing that has been found in English to the collective second person plurals *you-all* and *you-uns* is the collective second person *you-together* that is sometimes heard in England's East Anglia dialect today.

you are my sunshine. The phrase is from the long-popular song of that name written by Louisiana governor Jimmie Davis, who died at the age of 101 in 2000. According to the *New York Times* (March 22, 2004), Davis "wrote 'You Are My Sunshine' [and] had five Top Five country singles during his first term as Louisiana's governor from 1944 to 1948." The song by now enjoys the status of a folk song.

You bet!; You betcha!, etc. *You bet!* means "surely, without a doubt, certainly" and has been a popular-American expression of affirmation since the mid-19th century, the variants *you betcha!*, *bet your sweet ass!* and *you bet your sweet life!* being not much younger. The expression arose with the gambling-pioneering spirit in 19th-century America. Wrote Mark Twain in "Buck Fanshaw's Funeral" (1872): "Slang was the language of Nevada . . . Such phrases as 'You bet!' . . . and a hundred others, became so common as to fall from the lips of a speaker unconsciously." *You bet your bippy!* is a comical play on the expression dating back to the 1960s, with the nonsense word "bippy" probably a euphemism for "ass." I believe the expression was invented for, or popularized by, Rowan and Martin's *Laugh In*—a television comedy show.

you better believe. Surprisingly enough, this popular phrase was first recorded in the *Yale Literary Magazine* about a century and a half ago. Oliver Wendell Holmes is among the literary greats who used it.

you can bet your bottom dollar. Originating out West in about 1857, these words, meaning to bet one's last dollar or money, referred originally to the last silver dollar in a stack or hoard of coins and came eventually to mean to bet the last of one's resources.

you can play with my dog, you can play with my wife, but you'd better leave my gun alone. A humorous Texas saying, possibly of recent vintage.

you can run but you can't hide. Rated by many as the greatest fighter of all time, Joe Louis didn't talk as much as many fighters (he let his fists do the talking, as someone said), but he does have the distinction of being one of the few boxers to have coined a phrase. When Louis was preparing for his championship fight with Billy Conn in 1946, he was asked how he would deal with the challenger's fancy footwork. "He can run, but he can't hide," the champion said. See JOE LOUIS; THE REAL MCCOY.

You can say that again! An emphatic agreement with what a previous speaker has said. Originally a U.S. expression probably originating in the early 20th century, it is now heard in Britain, Australia, and New Zealand as well. In *Strong Cigars and Lovely Women* (1951), John Lardner wrote: "This year's drought has got real significance, and don't tell me I can say that again. I know I can. It has got real significance."

you can take it to the bank. Someone who says you can take it to the bank is saying a proposition he makes, or he himself, is solid and reliable.

you can't cheat an honest man. W. C. Fields is responsible for this by now proverbial expression, not P. T. Barnum, as is sometimes reported. Fields did manage to cheat an honest man once in a while.

you can't con me. See CON.

you can't have your cake and eat it too. An old saying recorded in John Heywood's *The Proverbs of John Heywood* (1546) It was originally: *Would you both eat your cake and have your cake?*

you can't judge a book by its cover. An early 1900s American saying meaning "not to judge things from surface appearances." In writing a review of Stephen King's *Everything's Eventual: 14 Dark Tales* (2002), *New York Times* critic Janet Maslin praised the jacket illustration by artist Mark Stutzman and turned the old saying around: ". . . a tranquil restaurant scene on the front cover with just a wee trace of blood in one water glass. But turn to the back, and all hell has broken loose. You can tell the book by its cover."

you can't keep a squirrel on the ground. It's futile to force someone to do something he's not naturally suited to do. The saying probably dates back to the early 1900s.

you can't make an omelet without breaking eggs. The end justifies the means; sometimes evil must be done to accomplish good. Russian communist leader V. I. Lenin is said to have originated the saying, though this is far from certain.

you can't make a silk purse out of a sow's ear. By painstakingly using both silk fibers and the skin or hair of a sow's ear, a man actually did make a silk purse out of a sow's ear a few years back. But the expression means you can't make something good out of something naturally inferior in quality. George Herbert was the first to record an approximation of the old saying in his *Jacula Predentum or Outlandish Proverbs* (1633), but Jonathan Swift first recorded it fully in *Polite Conversations* (1768). The French variation on the saying is "There's no way to turn a buzzard into a hawk," while the Russians say "If you're born to crawl, you won't fly," and the Spanish instruct "You can't find pears on an elm tree."

you can't win 'em all. Baseball legend attributes the saying *you can't win 'em all* to Boston pitcher Clifton G. Curtis—who is a good choice, having lost 23 games in a row during the 1910–1911 seasons—but it probably goes back further. It is often used as a rueful expression said after one has failed at anything, or as a consoling remark to someone who has failed.

you can whistle for it. See GO WHISTLE FOR IT.

you could have heard a pin drop. An expression synonymous with complete silence. The saying probably dates back to at least the late 18th century. *Pin-drop silence* is a synonym. "A pin-drop silence strikes o'er the place" Leigh Hunt wrote in *The Story of Rimini* (1816).

you couldn't detect my interest with a high-powered telescope. Sometimes used to indicate that the speaker couldn't care less about something, that one has no interest in it at all. I've found no proof of this, but the expression may derive from Algonquin wit George S. Kaufman's reply to popular singer Eddie Fisher on a TV show when Fisher asked him what he could do about women refusing to date him because he looked so young. "Mr. Fisher," Kaufman said, "on Mount Wilson there is a telescope that can magnify the most distant stars up to twenty-four times the magnification of any previous telescope. This remarkable instrument was unsurpassed until the construction of the Mount Palomar telescope, an even more remarkable instrument of magnification. Owing to advances and improvements in optical technology, it is capable of magnifying the stars to four times the magnification and resolution of the Mount Wilson telescope—Mr. Fisher, if you could somehow put the Mount Wilson telescope *inside* the Mount Palomar telescope, you *still* wouldn't be able to detect my interest in your problem."

You don't want to go there. You don't want to pursue a certain subject or line of questioning because doing so might prove dangerous. The expression seems to have originated in New York City a century or so ago.

"You furnish the pictures and I'll furnish the war." In 1898 Hearst sent combat artist Frederick Remington to Cuba. "There

is no trouble here,” Remington advised in a telegram, wanting to come home. Hearst (who later denied the story) supposedly replied: “You furnish the pictures and I’ll furnish the war.”

You Gotta Believe. A New York Mets slogan coined by relief pitcher Frank “Tug” McGraw, who helped the underdog Amazin’ Mets win their first World Series in 1969. McGraw’s parents gave him the nickname *Tug* after the way he tugged at things around the house.

you have money, give money; you don’t have money, give yourself (volunteer). Heard in New York’s Chinatown, said to be an old Chinese saying.

you have the words, but you don’t have the music. You don’t have the essence of something. The phrase can be traced back to Mark Twain. In a foul mood one morning and unable to find a clean shirt fit to wear, he unleashed a string of expletives only he could have strung together. His wife, Livy, standing in the doorway, decided to teach him a lesson and slowly repeated each curse he had uttered. But when she was done, Twain simply sighed and said, “My dear, you have the words, but you don’t have the music.”

you know it makes one feel rather good deciding not to be a bitch. See BUNG-O!

you might as well appeal against the thunderstorm. See WAR IS HELL.

you never miss the water till the well runs dry. See WASTE NOT, WANT NOT.

youngberry. The youngberry is generally considered to be a hybrid variety of dewberry, which, in turn, is simply an early-ripening prostrate form of blackberry. The large, dark purple sweet fruit has the high aroma and flavor of the LOGANBERRY and native blackberry. The youngberry was developed by Louisiana horticulturist B. M. Young about 1900 by crossing a southern dewberry and trailing blackberry, or several varieties of blackberries. Its long, trailing canes are generally trained on wires. Popular in the home garden, the berry is extensively planted in the American Southwest, South, Pacific Northwest, and California.

Young Folk of the Pear Garden. An ancient name for any Chinese actor. About A.D. 720 Chinese emperor Ming Huang visited the Moon, according to Chinese legend, and was royally entertained there by plays and players. This inspired the emperor to establish a lavish theater and the world’s first school of acting in the Pear Garden of the Imperial Park. Perhaps Ming Huang visited the Moon in his dreams—no astronaut has reported resident actors there—but he did build his theater and dramatic academy. His actors were called “Disciples (or Young Folk, or Students) of the Pear Garden,” and, indeed, all Chinese actors were so called up until the mid-20th century. The term is still heard occasionally today, but the theater no longer exists. See THEATER.

young in (at) heart. This expression, meaning those emotionally and spiritually youthful, only dates back to the 1920s

and is probably American in origin, but no more is known about it. A movie so entitled popularized the phrase in 1939.

Young Turk. A *Young Turk* is an insurgent within any group, such as a political party, supporting progressive policies. The phrase derives from the Turkish reform party that dominated Turkish politics from 1908–18. Many modern European methods were introduced by these Young Turks, who succeeded in making Turkey a republic.

young whippersnapper. A derogatory term for any young person who is a pretentious know-it-all with no respect for his elders. An old-fashioned expression that dates back to about 1665 and probably derives from the even older dialectical *snip-persnapper*, which means about the same.

you pays your money and you take your choice. This expression meaning “to proceed in a regular or orthodox manner” sounds as if it originated with a carnival show where one paid an admission price to see one of several shows offered. It may have, but the first recorded American use of the phrase is in the *Sacramento Union* (January 5, 1864): “The reader ‘pays his money and can take his own choice.’” Note the quote marks, however, as if the phrase was commonly used at the time. Possibly it derived from a line in a short poem published in the British magazine *Punch* in 1846.

your all’s. A Texan variation of *you all’s*. “I’ll get your all’s bread,” says a waitress in Cormac McCarthy’s *All the Pretty Horses* (1992). It is also found in the same author’s *Blood Meridian, or, The Evening Redness in the West* (1985): “‘Where’s your all’s horses?’ said Glanton.”

You’re darn tootin’. You’re absolutely right. *Darn* here is a euphemism for damn. The phrase seems to have originated in Canada about 1908.

you’re not the only pebble on the beach. You’re not the only woman or man available. This 19th-century expression became a common one with Harry Braistel’s 1896 song of the same title.

your epitaph. A famous epitaph written by Bob Thaves in his comic strip *Frank and Ernest*:

“What would you like your epitaph to say?”
“... to be continued.”

you’re pulling my leg. Early English hangmen were so inept that friends or relatives were permitted to pull on a victim’s dangling body to end his suffering. This gruesome practice was once thought to be the origin of the humorous phrase *you’re pulling my leg*, meaning you’re fooling me, making fun of me, putting me on. Several word detectives worked overtime to establish the round-about explanation for this, to no avail in the end, for it turned out that the phrase didn’t go back to the days of blundering English hangmen at all; that misconception had been fostered by the misdating of the first quotation using the phrase, which appears now to have originated no earlier than the mid-19th century. Instead of being real gallows humor, the phrase seems to be connected somehow with tripping a person up. One theory is that British footpads or muggers worked in

pairs, including a specialist known as a “tripper up.” Using a cane with a curved handle or piece of wire, this tripper up would trip his victim so that his accomplice could pounce on him and relieve him of his wallet. Since this was a ruse and a leg was actually being pulled, it gave rise to the expression *you’re pulling my leg*. This, too, is only a theory, however. The most we can say is that the phrase probably has some relation to somebody being tripped up or fooled.

Your Majesty. All English kings and queens are called Your Majesty, but the custom did not begin until the reign of Henry VIII. Previously, titles such as His Grace, His Excellent Grace, His Highness, and High and Mighty Prince had been used.

yourself. A reflexive pronoun that is often used by the Irish instead of the personal pronoun, as in “Is it yourself who wants it?” *Herself* is used the same way (“Was it herself that went?”), as is *himself* (“Himself knows best”).

youse. A very common word used primarily in New York but heard in other eastern cities and even in the Midwest. *Youse*—the so-called generous plural—is usually employed when a speaker is referring to the second person plural, helping the speaker differentiate between one person in the group and the group as a whole. It is the New York counterpart of the southern *y’all*. *Youse* is also a feature of Irish speech, as is *yis* (“Is he in there with yis?”)

you should see the other guy. A response by someone teased because he has been badly roughed up or wounded in a fight. The expression, implying that the other participant got the worst of it, probably dates back to the late 19th century. In Britain the words are usually *you should see the other fellow* (or *chap*).

you-uns. See YOU-ALL.

you want it bad, you get it bad. Things hurried are usually unsatisfactory, defective. “There is an old saying in the acquisition world: ‘You want it bad, you get it bad,’ said Tom Till in the *New York Times* (April 24, 2005) on the hurried production of the heralded Acela trains for Amtrak. Mr. Till added: “That’s exactly what happened with Acela.”

yo-yo. Yo-yo, for the child’s toy that spins up and down on a string, was once a trademark. In 1929 a Chicago toymaker patented the toy and was granted the trademark Yo-Yo. The manufacturer had noticed a Filipino youth playing with such a toy on the streets of San Francisco and purchased it from him. In his application for the trademark he claimed that he had coined the word *Yo-Yo* after noticing that children often shout “You! You!” to each other when playing some games. All he had done was to strike the *u* from these words, he explained. In any case, the novelty sold millions, until a competitor marketed the same product under the same name. The Chicago manufacturer quickly brought suit for infringement of his trademark, but after hearing the evidence the court ruled against him. It seems that his competitor offered incontrovertible proof that he had been raised in the Philippines and as a boy had often played with a toy called a yo-yo. There was no doubt that the toy was of ancient Oriental origin and that it was long called by the Philippine name *yo-yo*.

The court ruled that the trademark should never have been issued and today any manufacturer can use the term *yo-yo*.

Ypocras. See HIPPOCRATIC LOOK.

Ypres. Poison gas was first used in the World War I battle of Ypres in 1915. The first bitter battle of Ypres was fought in 1914, and in 1917 the final battle, or slaughter, of Ypres took place. Ypres is a town in Belgium, bordering France. Its name is pronounced *e* (as in *be*), *pr* (as in *proof*), and *a* (as in *about*).

ytterbium. Swedish scientist Carl Gustaf Mosander (1797–1858) coined the name of this metallic chemical element in 1879. He named it for the town of Ytterby, where the element was discovered.

Yttria. See GADOLINITE.

Yucatán. Though not proven, *Yucatán*, meaning “I don’t understand you,” is supposed to be the answer the Spanish explorer Francisco Fernández de Córdoba received and recorded as a place name in 1517 when he asked a native the name of the area we know today as Yucatán. See INDRI; KANGAROO; LLAMA; LUZON; NOME.

yucca. Any plant of the genus *Yucca* native to the Southwest. *Yucca*, the state flower of New Mexico, has pointed sword-shaped leaves and bears clusters of white waxy flowers on tall stalks. Weekley says that according to a *Notes & Queries* correspondent, *yucca* (Spanish, from the native language of Haiti) “is among the very earliest native American words on record. It is quoted by Amerigo Vespucci in his famous ‘First Letter’ dated 1497.”

yuen. A Chinese borrowing meaning a vegetable garden, the word is sometimes heard on the West Coast but is unrecorded in the rest of the country.

Yugo. A small, relatively inexpensive car. Sometimes used in comparisons, as in: “If so-called ‘wild’ caviar is the Rolls Royce of the caviar world, farmed sturgeon roe is a *Yugo*.”

yule. *Yule*, which is akin to *jolly*, meant December or January in English before it meant Christmas, the word first recorded in 1726. In this sense it derives from an Old Norse word meaning one of the winter months. As a word for Christmas it probably derives from the Old Norse *jol*, the name of a heathen festival at the winter solstice.

yuppie. A slang term that has been around for over a decade and threatens to stay longer. It is generally a disparaging term meaning Young Urban Professional, especially one who puts getting ahead ahead of everything, and was first recorded in 1983 by syndicated columnist Bob Greene, who overheard it in a bar. As Green explained the word’s origin: “While [Gerry Rubin] and Abbie Hoffman once led the Yuppies—the Youth International Party—one social commentator has ventured that Rubin is now attempting to become the leader of the Yuppies—Young Urban Professionals.” See YIPPIE.

Z

Z. Z has been called “izzard,” “zed,” and “zee” in English. It has been considered useless by many writers, including Shakespeare, who wrote: “Thou whoreson Zed! Thou unnecessary letter!” It is the last letter in the Roman as well as the English alphabet.

zack. A major difference between Australian and American English. Australians use the term *zack* to mean five cents, just as Americans use the word *nickel*.

zaftig. Said of a woman who is full-bodied, well-proportioned, pleasantly plump. Deriving from the German word for “juicy” and first recorded in about 1935 in America, the word is pronounced, and sometimes spelled, *zoftig*.

Zaluzania; Zaluzianskya. Polish physician Adam Zaluziansky von Zaluzian probably never dreamed that his long tongue twister of a name would be given to anything, yet it became the scientific designation for not one but two plant genera. *Zaluzianskya* (often spelled with an “ie” ending) is the beautifully fragrant night-blooming phlox, the genus embracing about 40 South African species. While all such nocturnal flowers may bloom in the daytime, on overcast days, or toward evening, their finest flowering and greatest fragrance comes long after sunset. The Prague doctor, who published an important herbal, *Methodus Herbariae* (1602) has his last name honored by the genus *Zaluzania*, comprising about seven species of small shrubs with white or yellow flowers that are mainly grown in the greenhouse outside their native Mexico. Strangely enough, despite their long, scientific designations, neither genus seems to be known by any popular common name.

Zamboni. A machine used in resurfacing ice-skating rinks. The Zamboni was invented by California entrepreneur Frank Zamboni in 1949. Driven at a top speed of about 9 miles an hour, it shaves and removes poor, inferior snow and ice and lays down hot water that bonds quickly with the solid existing ice below.

Zamzummin. Zamzummin is a synonym for giant ignored by American dictionaries, though the word has been used allusively and figuratively by writers like Sir Thomas More and Richard Burton for centuries. The original Zamzummins were a race of giants, “a people great, and many, and tall” mentioned in Deuteronomy.

zanella. Antonio Zanelli was a great Italian authority on fabrics who published *Le Lone Italiane* (The Italian fabrics) in 1878. This fabric of cotton and worsted often used for linings and umbrellas is named in his honor.

zanja. A ditch or trench. The Spanish word is used in the American West and Southwest. Louis L’Amour wrote in *The Lonesome Gods* (1983): “I led my horse to the zanja for water. . . .”

zany. *Zanni* in Italian is the pet form of the proper name Giovanni (John). As early as the 16th century *zanni* meant a silly fool in Italian, perhaps for some Giovanni no longer remembered. In any case, the word *zanni* came into English, corrupted to *zany*, and became our word for the same and for anything ludicrously or whimsically funny.

zap. The exact origin of *zap* is unknown, but the term possibly arose during World War II, as an onomatopoeic word imitating the sound of a rifle shot hitting someone. According to the *New Dictionary of American Slang* (1986), the word began life as an exclamation deriving from “the sound of a ray gun in the old comic strip Buck Rogers in the Twenty-fifth Century.” Since then the word has taken on wider meanings. As slang for “to kill or strike violently,” *zap* probably dates back to the Vietnam War. It is also used for “to cook” when food is being prepared in a microwave oven (a common synonym of this is *to nuke*).

Zapata mustache. Mexican revolutionary and reformer Emiliano Zapata (1878–1919) wore this mustache that curves

downward on each side and which came to be named in his honor.

Za vasheh! This Russian drinking toast has some currency in the U.S. and England. *Za vasheh!* translates as “To yours.”

zealot. The Jewish sect called the Zealots fiercely resisted the Romans until the fall of Jerusalem in A.D. 70. Their name thus came to describe a fanatical person who immoderately pursues his goals with great passion, the word *zealot* recorded in this sense as early as 1638. *Zealot* is ultimately from the Greek *ze-loun*, to be zealous.

zebra. The African cross between a horse and ass could be named for the wind god Zephyrus, because of the animal's swiftness, but *zebra* most likely comes from the Abyssinian word *zebra*, for “the striped beast.” Referees in several sports, including football and basketball, wear black-and-white striped shirts while officiating games. Because of these colors, fans have been calling them zebras since about 1975. In medical jargon *zebra* means an unlikely or obscure diagnosis, a shortening of the old advice to doctors: “If you hear horses' hoofbeats going by, don't look for zebras.”

zed. During World War II, American and Canadian men evading the draft often blended in on opposite sides of the border. However, immigration agents from both countries found one way to tell where they came from, even though they generally looked, dressed, and talked alike. Agents made the suspects recite the alphabet, because Americans had been taught to recite the last letter of the alphabet as “zee,” while Canadians had learned to say “zed.” See *z*.

Zeitgeist. German for “the spirit of the time, the taste of a generation.”

Zemke's Wolfpack. A renowned fighter group during World War II named after its commander, Colonel Hub Zemke. The group included Lt. Colonel Francis Gabreski, the leading American ace in Europe, who shot down 28 German planes. The leading American pilot of World War II was Major Richard Bong, who shot down 40 Japanese planes.

zenadia bird. See BONAPARTE'S GULL.

zenith. In some obscure way unknown to scholars the Arabic *samt* in the term *samt ar-rar*, “way or path over the head,” became the Greek *zenith*, which ultimately became the English term for the point of sky directly overhead, or, figuratively, “the highest point, the acme, the culmination or climax.” The word is first recorded in 1387.

zep. Short for *zeppelin* and one of the many names for the Italian hero sandwich or hero in America. These names include *hoagies* (in Philadelphia), *submarines* or *subs* (in Pittsburgh and elsewhere), *torpedos* (Los Angeles), *wedgies* (Rhode Island), *Garibaldis* (Wisconsin), *bomber* (upstate New York), *wedge* (downstate New York), *Cuban sandwich* (Miami), *Italian sandwich* (Maine), *an Italian* (Midwest), *grinder* (New England),

rocket (New York State), and *poor boy* (New Orleans), though this last one is made with French instead of Italian bread. *Blimpie*, though it's a tradename and is on a shorter roll, might also qualify, as might *Dagwood sandwich*, for any large sandwich—after *Blondie* comic strip character Dagwood Bumstead's mid-night snack creations. That's 20 in all—and there must be more. Is the *Italian hero* possibly the most numerous-named thing in English? See HERO.

zephyr. A *zephyr* is a soft, gentle breeze, taking its name from Zephyrus, the Greek god of the west wind. Shakespeare makes the first recorded mention of the word in this sense in 1611: “They are as gentle as zephires blowing below the violet, / Not wagging his sweet head.”

zeppelin. After a career as a soldier that included a volunteer stint with the Union army during the Civil War, the intrepid German adventurer Count Ferdinand von Zeppelin retired from the German army with the rank of general and devoted himself to the development of dirigible airships. Zeppelin, inspired by a balloon ascent he made in St. Paul, Minnesota, built and flew his first rigid airship in 1900 when 62 years old, the initial flight lasting 20 minutes. But he had to build and test four *Luftschiff Zeppelins* in all before convincing the German government that his invention was militarily sound. Zeppelins came to be used extensively by the Germans in World War I, some 88 of them constructed by their inventor at his factory in Friedrichshafen. Nevertheless, they didn't work out. Although they attained speeds of up to 36 miles per hour and were used to bomb Paris and London, the airships ultimately proved too unwieldy in combat. Count Zeppelin died in 1917, aged 79, the term *zeppelin* being used by then to mean any dirigible. See BALLOONATIC.

zero. *Zero* derives from the Arabic *cifr*, meaning the same, which passed into Italian as *zefiro*, finally becoming *zero* in French and English. The word wasn't used in English for the arithmetical figure 0 until the early 17th century. The Arabic *cifr*, in turn, came from a Sanskrit word meaning “empty, nothing.” Our word *cipher*, which meant “zero” before it meant a code, also derives from *cifr*.

zero hour. In World War I, *zero hour* among the Allied forces meant the time chosen for the commencement of an assault on the enemy lines. Brought home by veterans, the term soon came to mean any deadline.

zest. In the 17th century the French called a piece of lemon or orange peel added to a drink to give it flavor a *zest*, a term that may have derived from the Latin *scistus*, “cut.” *Zest* passed into English and came to mean anything agreeable or piquant in flavor and, finally, hearty enjoyment or gusto.

zeugma. *Zeugma* is the Greek word for “yoking” or “joining” and in English means a figure of speech in which a verb is used with two subjects or two objects, or an adjective is used to modify two nouns—although the verb or adjective is appropriate to only one noun. *Zeugma* is often unintentional, as in “She caught a cold and a husband” but it is a common satirical device. An example often quoted is Dickens's phrase in the *Pickwick Papers*: “Miss Bobo . . . went straight home, in a flood of tears, and a sedan chair.”

Z-gram. Chief of U.S. Naval Operations Admiral Elmo Zumwalt issued terse, direct memos that were models of conciseness and clarity. These were dubbed *Z-grams* in the 1960s and became naval slang for such model memos, a thing rare in the armed services.

zhlub. *Zhklub* has during the past 15 years or so been slang for an insensitive, boorish person. It derives from the Yiddish *zh-lub*, meaning the same, which, in turn, comes from a Slavic word. A variation is *zhlob*.

zigged when I should have zagged. This expression entered the language on April 17, 1939, when Jack Roper was knocked out in the first round of his fight with Joe Louis in Los Angeles. Roper, an unknown fighter in one of Louis's "bum of the month" bouts, had zigged and zagged, trying to dodge Louis's punches. When he came to, the fight's radio announcer asked him how he got tagged. "*I zigged when I should have zagged,*" he explained.

zigzag. To *zigzag*, to make frequent sharp turns from side to side, probably comes from the German *Zickzack*, which is an echoic word possibly formed of the elements *ziche*, "to dodge about" and *zacke*, "a serrated edge." The word came into English, from the French *zigzag*, in the early 18th century.

zigzag course. This term probably arose during World War I. A *zigzag course* is a ship's course first to the right of the base course and then to the left. It was originally used in avoiding enemy submarines, but the term is now applied to any devious action.

zilch. *Zilch*, "nothing," is an Americanism that has been traced back to the 1920s when a *Joe Zilch* meant a good for nothing college boy. Other sources, however, trace the expression to a character called Mr. Zilch in a *Ballyhoo* magazine cartoon series of the 1930s, in which Mr. Zilch was never seen but scantily clad, wide-eyed girls, reacting to things he had obviously done, cried "Oh, Mr. Zilch!" Since Mr. Zilch wasn't depicted, according to this theory, he came to represent nothing, or *zilch*.

zillionaire. *Zillionaire*, for someone with wealth of mythical proportions, is an Americanism that appears to date back only to the late 1940s or early 1950s. See MILLIONAIRE.

zinc. The German *Zinc* is the direct ancestor of our metal *zinc*, first attested to in 1651, but the origin of the German word is obscure—though it may be linked with the German *Zin*, for "tin."

zing. *Zing*, in the sense of "to cause to move with a sharp, singing noise," may derive from baseball, where a pitcher often zings a fastball over the plate. There's no firm proof of this, though. The word, first recorded in 1910, might also derive from the sound of an arrow shot in archery, or even that of a rifle shot.

zinnia. *Youth and old age*, the *zinnia* species *elegans* is called, and anyone who has seen how profusely the annual flower

blooms and how quickly it succumbs to the first frost will appreciate the folk name. The same applies to all the zinnia genus, which Linnaeus named for Johann Gottfried Zinn, whose life was as bright and brief as his namesake's. Zinn, a German botanist and physician who was a professor of medicine at Göttingen, died in 1759 when barely 32. In 1753 he had published what is said to be the first book of the anatomy of the eye. There are about 15 species of the zinnia, which is the state flower of Indiana. Most modern tall forms, with flowers in many colors, come from the Mexican *Zinnia elegans* introduced in 1886 and growing to heights of about three feet. Another explanation for *elegans*'s youth-and-old-age nickname may be the stiff hairs on the stem or the coarse plant itself, in contrast to the soft flowers, or the plant's tendency to develop the powdery mildew disease when poorly cultivated. But the spring frost analogy is nicer.

Zionist. A Zionist is a supporter of the policy of Zionism, that is, the settlement of Jews from all over the world in Palestine. *Zion* is the name of a hill in Jerusalem of great historic religious significance to Jews as the home of David and his successors.

zip; zipper. *Zip* is common American slang for zero, nothing, and probably derives in part from the *z* sound in *zero*. The story that American soldiers in Vietnam named Vietnamese Zips from an acronym for *Zero Intelligence Potential* is unlikely—it probably derived from the earlier *zip*. *Zip* for zero is not related to *zipper*; this slide device for fastening clothing, once a trademark, takes its name from *zip* for fast, which is first recorded in about 1855 and is imitative of the sound *zip*. The zipper was invented in 1893 by Whitman L. Judson, who called it the Universal Fastener. An anonymous executive at the B.F. Goodrich Company changed the name to Zipper, but Goodrich did not protect its trademark and the word is not capitalized today.

Zip-a-Dee-Do-Dah. In January 2002 an Englishman legally changed his name to Zippity-do-dah, because he thought his previous name was too difficult to pronounce. Mr. Zippity-do-dah had to obtain permission from the Disney Corporation, for "Zippity-do-dah" is the title of a popular Disney song, whose lyrics begin "Zip-a-Dee-Do-Dah, zippity-a, my oh my what a wonderful day. . . ." Zip-a-Dee-Do-Dah is also used sarcastically in conversations after someone has said something quite obvious that doesn't need saying: "Well, Zip-a-Dee-Do-Dah." Composer Allie Wrubel and lyricist Roy Gilbert won an Academy Award for the song in 1948. See NORFORK HOWARD; THE OFFICIAL MONSTER RAVING LOONY PARTY.

zip code; zip. The *zip* in *zip-code* is an acronym for *zone improvement plan*, an acronym that was invented to convey the idea of speed—zip! The system and name for it were introduced by the U.S. Post Office in 1963. The actual inventor of the code was postal employee Robert A. Moon (1918–2000), who first submitted his idea in 1944 but waited almost 20 years to see it accepted. Mr. Moon's contribution consisted of the first three digits of the zip code—those referring to the general regions of the U.S. The last two digits—identifying smaller delivery areas—are credited to others. At the time of his death Mr. Moon was said to be working on a zip code plan for interplanetary mail.

ziti. Familiar to Americans in the form of the tasty Italian dish baked ziti, the word *ziti* is the name of a tubular pasta that derives from the obsolete Italian word *ziti*, meaning “boys.” The phallic shape of the pasta may have suggested the “boys” appellation.

zizzer. Since at least 1930, *zizz* has meant “to sleep” in the British navy because the word is suggestive of snoring. From this came the naval slang *zizzer*, for “bed,” mainly confined to British English.

zob. Zob is the name of an old game played among officers in the British Navy to decide which of two people will pay for drinks, but the game is now common outside England, where it’s often known as “Rock, paper, scissors.” The players face each other, repeating the word *zob* three times. Each then makes a closed fist, an open palm, or two fingers extended like a pair of scissors. The game is decided on this basis: “Scissors can cut paper, stone can blunt scissors, and paper can wrap up a stone.” Thus, a player who holds out two fingers (a scissors) beats a player who holds out an open palm (a piece of paper); a player who holds out a closed fist (a stone) beats a player who holds out two fingers (a scissors), etc. The player who loses two out of three zobs pays for the drinks.

zodiac. Many people know the signs of the zodiac: Taurus, the bull; Pisces, the fishes, etc. But few know the origin of the word *zodiac* itself. *Zodiac* derives from the Greek *zoon*, “animal,” being so named, of course, because most of the signs were named for animals.

Zoilost. Not many authors would want the fourth-century-B.C. Greek philosopher Zoilus as a critic. The cynical Zoilus was nicknamed “Homeromastix,” “the scourge of Homer” for his severe criticism of the poet, though he was just as scathing about Plato and Isocrates, too. The spiteful but witty Zoilus called the companions of Homer’s Odysseus “weeping porkers” (Circe turned them into swine). So scathing were his words that his name is still used for a spiteful, envious, malignant, carping critic.

zombie. Zombie was originally the snake god worshipped in West Indian voodoo ceremonies based upon the worship of the python god in West Africa. Since dead people were said to be brought to life in these ceremonies, such imagined corpses shuffling along half dead and half alive were called zombies. By the 1920s this word naturally became applied to any oafish “dummy” without much intelligence or spirit. It is also the name of a cocktail that makes one feel like a zombie.

zone. Short for the Combat Zone, a seedy area of topless bars, porno shops, and the like in Boston. “Just to wear that with a ponytail took a bit of nerve, but to wear it into the Zone meant the son of a bitch was from another planet.”

Zon-gun. Here’s a new word from the vineyard county of Long Island’s North Fork area, a word that hasn’t been recorded in any of the big dictionaries, or any dictionary at all so far as I know. A *Zon-gun* is a big gun timed to go off at intervals in vineyards, its sound scaring birds away from ripening grapes.

Since the loud guns are sometimes set to go off every 20 seconds for the entire day, seven days a week, their use is not appreciated by neighboring homeowners, who haven’t failed to express their displeasure. Some vineyards have turned to netting their grapes, but *Zon-guns* (also called *birdguns*) are much cheaper, costing only about twelve cents a day to operate each, and many growers still use them.

Zonta Club. Zonta Club is one of many service clubs composed of businesswomen. Its members are devoted to promoting world peace and fellowship. The club, founded in 1919, takes its name from the American Sioux Indian word *zonta*, meaning “to be trusted.”

zoom. See ONOMATOPOEIA.

zoopraxiscope. One of the earliest motion picture projectors, the zoopraxiscope was built by photographer Eadweard Muybridge in about 1880 to project sequential pictures he had taken a few years earlier of a running horse—the pictures taken for railroad tycoon Leland Stanford, who had bet (correctly) \$25,000 that a running horse sometimes had all four feet off the ground at the same time. Muybridge coined the word from the Greek elements *zoi*, “living” plus *praxis*, “action” plus *skopein*, “viewing instrument.” He seems to have first called the instrument the zoogyroscope.

zoot suit. A men’s clothing style of the 1930s and early 1940s featuring peg trousers, jacket with padded shoulders, wide-brimmed hat and wide tie, among other flamboyant items of apparel, all in bright colors. A good example of the style can be seen in the film *Malcolm X* (1993). *Zoot suit* is probably a rhyming phrase, *zoot* an alteration (!) of suit.

Zoot Suit Riots. A name for the Los Angeles rioting in 1943 primarily between U.S. sailors and soldiers and Mexican-American youths who wore the ZOOT SUITS. Twenty-three of the zoot-suiters were arrested, though their side seems to have been subjected to the most violence, servicemen even stripping them of their clothing and burning it. The trial was a travesty, but the guilty verdict was overturned on appeal.

Zoroastrianism. A religion founded by the Persian prophet Zoroaster (also called Zarathustra) in the sixth century B.C. Zoroastrianism was one of the world’s great religions for over 13 centuries but is largely confined to India today. Its founder was called the prophet of light and good triumphing over evil and darkness. Some scholars believe that his name means “old camel,” but no one knows if this is true or why he would be so named. The German philosopher Friedrich Nietzsche’s greatest work was *Thus Spake Zarathustra*.

zoster. Zoster means a belt or girdle in Latin or Greek and is also called *herpes zoster*. Its most common usage is *shingles*, a very painful disease.

zotz. Apparently first used among college students, *zotz* means “nothing, zero, zip, zilch,” as in “He’s completely zotz as a teacher.” The word seems, like *zip* and *zilch*, to be based on the *z* in *zero*, though it may have been suggested by *squat*,

which it sounds like and which also has a meaning of nothing or zero. *Zotz* has recently come to mean “kill” or “hit” in underworld talk; since *zotz* means “nothing or zero,” *to zotz* refers to making a person nothing, to kill that person.

Zounds! An offensive contraction of (*God’s*) *wounds* (the wounds of Christ on the cross) that can be traced back to Shakespeare’s day.

Zoysia grass. For some odd reason few of the major dictionaries include *Zoysia grass*, which is commonly planted today, especially for play areas and for lawns in the deep South. The popular grass, generally planted from bits of rootstock called *Zoysia* plugs, is named for Austrian botanist Karl von Zois. There are only four species of the creeping grass. *Zoysia* takes a lot of wear and tear, forming a dense, tough turf, but has one major drawback—it turns a haylike color in the late fall and is among the slowest of grasses to green up again in the spring. Some zealous *Zoysia* lawn keepers give nature a tender, loving hand by painting their grass with green latex and other preparations in the off-seasons. Yet another reason why anyone reincarnated in suburbia wouldn’t do badly if he came back as a lawn.

z’s. *Z’s* is American slang for sleep. Originating within the last 35 years or so, the term probably derives from the *Z’s* indicating snoring in comic strip and cartoon captions, which themselves represent the sound of snoring.

Zulu. See INDABA.

zwieback. *Zwieback* is a hard dry toast popular with adults and even made specifically for babies. The word, first recorded here in 1894, is a German one meaning “twice baked.”

Zwinglian. Pertaining to Huldrych Zwingli or his doctrines. Huldrych or Ulrich Zwingli (1484–1531), a Swiss Protestant reformer, served as chaplain and standard bearer to troops fighting against Catholic sections of Switzerland that did not accept the official recognition of the Reformation. He was killed at the battle of Kappel. Zwingli’s views were close to Martin Luther’s, except for his purely symbolic interpretation of the Lord’s Supper, which estranged the two men and made a united Protestantism impossible.

zyzzyva. Often destructive to plants, the *zyzzyva* (pronounced ziz-ih-vuh) weevil is a leaf-hopping insect of tropical America that provides one of the best examples of onomatopoeia at work in the creation of words. Although most dictionaries give its origin as “obscure,” if they give it at all, the word probably derives from the Spanish *ziz, zas!*, which is “echoic of the impact of a blow,” the reference being, of course, to the noise made by these cicada-like insects.

ZZZ. *ZZZ* has been used by cartoonists to represent the sound of snoring for 50 years or so. It can also represent the sound of locusts or an electric saw. In any case, the last possible word with which to end an alphabetically arranged word book is *ZZZ*, unless there is somewhere an unrecorded *ZZZZ . . .*
